By the ſtatute of the 12th of Queen Anne, ſeveral commiſſioners were conſtituted for the diſcovery of the longitude at ſea, and for examining and judging of all propoſals relating to the ſame; and it was enacted, that the ſaid commiſſioners, or any five of them, ſhould have power to receive propoſals for diſcovering the longitude: and in caſe they ſhould be ſo far ſatisfied of the probability of any ſuch diſcovery, as to think it proper to make experiment thereof, they ſhould certify the ſame to the commiſſioners of the navy, together with the perſons names who were authors of ſuch propoſals: and the ſaid commiſſioners were required to make out bills of ſums of money not exceeding 2000 l. as the ſaid commiſſioners for the longitude ſhould think neceſſary for making the experiments, payable by the treaſurer of the navy; which ſums he was to pay to ſuch perſons as ſhould be appointed by the commiſſioners for the longitude, out of any money that ſhould be in his hands unapplied.

That after experiment made of any propoſal, the commiſſioners ſhould declare how far the ſame were found practicable.

That the firſt diſcoverer of any ſuch method, his executors, adminiſtrators, and aſſigns, ſhould have a reward of 10,000 l. if it determines to one degree of a great circle or 60 geographical miles; 15,000 l. if it determines the ſame to two-thirds of that diſtance; and 20,000 l. if it determines the ſame to one half of the diſtance; that one moiety of ſuch reward ſhould be paid when the commiſſioners agreed that ſuch method extended to the ſecurity of ſhips, within 80 geographical miles of the ſhores, which are places of the greateſt danger; and the other moiety when a ſhip, by the appointment of the commiſſioners, ſhould thereby ſail from Great Britain to any ſuch port in the Weſt Indies, as thoſe commiſſioners ſhould chuſe for the experiment, without loſing their longitude beyond the limits before mentioned.

That if any ſuch propoſal ſhould not be found of ſo great uſe as afore-mentioned; yet if the ſame, in the judgment of the commiſſioners, was found of conſiderable uſe to the public, the authors ſhould have ſuch leſs reward as the commiſſioners ſhould think reaſonable, to be paid by the treaſurer of the navy.

By the ſtatute of the 14th of Geo. II. it was further enacted, That the ſaid commiſſioners, or any five of them, ſhould have full power to apply ſuch part of the ſum of 2000 l. granted for making experiments on any propoſals for finding the longitude, as was not before laid out, in experiments as they ſhould think neceſſary, for the making a ſurvey of the coaſts of Great Britain and Ireland.

Mr. John Harriſon laid propoſals before the commiſſioners, who thought proper to put them to an experimental proof, for which purpoſe they paid him 1250 l. The commiſſioners alſo appointed Mr. William Whiſton to ſurvey and determine the longitude and latitude of the chief ports and headlands on the coaſt of Great Britain and Ireland, and the iſlands and plantations thereto belonging; for which purpoſe they paid him 500 l. ſo that only 250 l. remained for further experiments: but by the laſt mentioned act a further ſum of 2000 l. was granted for that purpoſe; the act mentioning that by encouraging ſuch propoſals, and trying ſuch experiments, to diſcover the longitude, ſuch diſcoveries may at length be produced as will effectually anſwer that end, and thereby contribute very much to the advantage of the trade and honour of Great Britain. The governor of Greenwich hoſpital, the judge of the high court of admiralty, the ſecretary of the admiralty, the ſecretaries of the treaſury, and the comptroller of the navy, for the time being, are alſo appointed commiſſioners.

LONGO *Iſland*. See *Coos*.

LOOF, or as it is uſually pronounced, *luff*, a term uſed in conducting of a ſhip—thus:

Loof *up*, is to bid the ſteerſman keep nearer to the wind.

Loof *into an harbour*, is to ſail into it cloſe by the wind.

To ſpring the Loof, is when a ſhip, that was going large before the wind, is brought cloſe by the wind.

When a ſhip ſails on a wind, that is, on a quarter wind, they ſay to the ſteerſman, *keep your luff, veer no more, keep her to, touch the wind, have a care of the lee latch*; all which words ſignify much the ſame thing; and bid the man at the helm to keep the ſhip near the wind.

Loof *of a ſhip*, denotes that part of her aloft, which lies juſt before the cheſs-trees: hence, the guns which lie here are called *loof pieces*.

LOOKING-*glaſs*. See *Glaſs*.

PEN. A corn meaſure uſed at Riga, 46 of which ke a laſt.

P-*holes*, in the ſea language, are holes made in the mings of the hatches of a ſhip, to fire muſkets through a cloſe fight.

INER. One whoſe buſineſs is to make bridle-bits, l ſpurs.

NERS *company of London*, appears to be an ancient fra- nity; yet they were only incorporated by letters-patent the 10th of Queen Anne, dated the 3d of December 12, by the appellation of The maſter, wardens, aſ- tants, and commonalty of loriners, London. They governed by a maſter, 2 wardens, and 24 aſſiſtants, th a livery of 69 members, whoſe fine is 10 l. having ſmall but convenient hall at London-wall to diſpatch eir affairs in.

RRAIN and *Bar*. Once part of the circle of the Upper hine in Germany, is bounded by the dutchy of Luxem- rg on the north; by Alſace, the duchy of Deux-points, d the palatinate of the Rhine on the eaſt; by the unty of Burgundy or Franche-Compte on the ſouth; d by Champaign on the weſt; being almoſt round, d upwards of 100 miles over either way. It is ſubdi- ded into three parts; 1. Lorrain proper; 2d, The tchy of Bar, or Bar-le-Duc; and 3d, French Lorrain, ntaining the biſhoprics of Mets, Toul, and Verdun; is laſt diviſion being confirmed to France by the treaty Munſter in 1648. Lewis XIV. made himſelf maſter Lorrain three different times; but it was reſtored its own Duke by the treaty of Utrecht in 1714. In e war between France and the Emperor Charles VI. hich ended in a peace concluded in the year 1735, one the articles was, that the Duke of Lorrain ſhould eld his country to France; at leaſt that Staniſlaus King Poland, and father to the Queen of France, who had en obliged to relinquiſh his crown to Auguſtus Elector Saxony, ſhould have the dominion of Lorrain during is life; and that after his deceaſe, it ſhould be annexed the crown of France: the Duke of Lorrain, in con- deration thereof, was conſtituted Grand Duke of Tuſ- ny after the death of the then reigning Duke, which ppening in 1737, the Duke of Lorrain took poſſeſſion Tuſcany, of which he is now ſovereign, as alſo huſ- and to the Queen of Hungary, and has ſince been elected mperor of Germany.

The principal rivers are the Maeſe, the Moſelle, and the arre. The Eaſt part of the country is mountainous; nd on the N. W. are ſome uncultivated foreſts: but the eſt of the country has a fertile ſoil, producing plenty of orn, wine, and excellent paſture. The hills have mines f ſilver, copper, lead, and iron; and their ſalt-pits yield revenue of 200,000 l. a year.

Nancy is the capital city, ſituated in 6 deg. of E. lon. and 8 deg. 44 min. of N. lat. 150 miles E. of Paris, 5 N. W. of Straſburgh, and 70 S. of Triers.

There are but few woollen manufactures either in Lor- ain or Bar, and none of ſilk: but that brave and reſolute rince Charles III. intended to eſtabliſh a ſilk manufacture t Nancy: he had even ſet the project on footing before e quitted his ſtates in 1670; when the abſence of its rotector made this eſtabliſhment fall to the ground, hich ſince his time was never revived.

St. Nicholas and St. Mary, two towns in the mines, are he only places for the woollen manufactures; but the loths made there are very coarſe, little eſteemed, and of mall vent.

At Nancy there is a manufacture of a kind of tapeſtry, ittle different from the ordinary ſort made at Rouen in Normandy.

Thread-lace is not only the moſt conſiderable manufacture of this country, but even the only one that merits any attention. Miricour, Vezelize, Neufchateau, with ſome villages adjacent to theſe towns, are the places where the greateſt quantities of lace are made, which employ five or ſix hundred women. Theſe laces are coarſe; but being good for Spain, the vent is pretty conſiderable, and ſeveral thouſand pieces are ſent there yearly.

Coarſe linen, canvas, buckram, ſtockings, woollen night- caps, hats after the manner of Caudebec, cords and ropes, nails, and paper, are alſo manufactures eſtabliſhed in Lor- rain and Bar; but the foreign commerce of theſe goods is of ſo little conſequence, and they are even ſo inſufficient for home conſumption, that they appear not ſo much for enriching the inhabitants of Lorrain, as to make their in- duſtry known, and how far they are capable of all kinds of manufactures, if they would but apply themſelves to labour.

Their moſt important commerce conſiſts in ſalt, iron, alum, and ſaltpetre; in wood, cattle, wool, rape oil, wax, honey, Barrois wines, brandies of Pont-a-Mouſſon, furs, and glaſs; the ſilver mines having been ſhut up ſince the year 1670.

Salt pits are found in ſeveral places of Lorrain, where there are about twelve reckoned fit for the production of ſalt; yet there are only three of them worked, one at Rozieres, 12 miles S. E. of Nancy, another at Chateau- ſalins, and a third at Dieuſe; the reſt being upon the banks of the Sarre. The ſalt of theſe three ſalts-pits is more than ſufficient for the conſumption of the country; ſo that there are great quantities ſent to Alſace, the pa- latinate, the arch-biſhoprics of Triers and Mentz, Worms, and the other territories of Germany, ſituated on this ſide the Rhine.

The iron mines in the mountains of Voſga, and in ſeveral places of the flat country, are very numerous, and keep a great number of forges employed: the iron manu- factured there being ſold in the country, and in ſome of the neighbouring provinces.

The alum mines are found only in the Voyvre near Lon- gwy, 10 miles S. W. of Luxemburg; but they are of little or no uſe to the inhabitants of Lorrain, who are neither acquainted with the art of extracting or preparing the alum.

The ſalt-petre is gathered along old houſes, and other antique edifices.

The timber is felled in the mountains of Voſga, and in ſome other parts of the flat country. It is ſawed where it is felled, and ſold in planks conveyed to Nancy and Verdun, by the Maeſe. There is alſo ſome timber felled there fit for ſhip-building.

The glaſs-houſes are eſtabliſhed in the foreſts of Arnay, and St. Michael; as alſo in the village of Tavoy, nine miles from Nancy; it being in theſe glaſs-houſes that the thick flat glaſſes for coaches and poſt chaiſes were firſt made.

The brandies are made at Pont-a-Mouſſon, on the Mo- ſelle, 15 miles N. of Nancy; though not by burning the wines, as in Anjou, Britany, and elſewhere; but in making uſe of the grape when the liquor is preſſed out, which almoſt every where elſe is thought uſeleſs, and only good for burning, when dry. This traffic, which is very conſiderable, has paſſed into the dutchy of Bar, and all the places of the three biſhoprics, where there are vineyards; and great quantities of wood are conſumed to make theſe brandies, which are ſold in Germany, parti- cularly in the neighbourhood of Mentz and Worms.

The furs, particularly the ſkins of bears, which are taken in great numbers in the mountains and foreſt of Voſga, are ſold at Straſburg, Baſil, Metz, and Nancy, from whence they are ſent into the adjacent countries.

'Tis alſo to the dealers of theſe four towns that a part of the cattle are ſold, which are fattened in the moun- tains and paſtures of Lorrain: but the greateſt ſale for them is in the fairs of Voſga, to the Germans and Swit- zers, who come there to purchaſe oxen, cows, and young bulls.

Corn grows there, and is reaped in abundance, but its ſale is inconſiderable; unleſs the French foragers, in war time, buy up the grain to ſtock their magazines.

The inhabitants of Lorrain are eſteemed ſome of the beſt founders in Europe, eſpecially for cannon, mortars, and bells; upon which account they are uſually employed in the founderies of France and other ſtates: but the inha- bitants of the villages of Leveſcour, Outremecour, and Breranne, are moſt in reputation.

LOTTERY. A kind of game at hazard, wherein ſeveral lots of Merchandiſe, or ſums of Money, are depoſited as prizes, for the benefit of the fortunate.

The deſign of lotteries, and the manner of drawing them, are too well known to need a deſcription: they are very frequent in England and Holland, where they cannot be ſet on foot without the permiſſion of the government; but there are alſo frequently ſeveral lotteries in France in favour of their hoſpitals.

M. le Clerc has compoſed a treatiſe of lotteries, wherein is ſhewn what is laudable, and what blameable in them. Gregorio Leti has alſo a book on the ſubject of lotteries. F. Meneſtrier has a treatiſe on the ſame, publiſhed in 1700, where he ſhews their origin, and uſe among the Romans: he diſtinguiſhes ſeveral kinds of lotteries, and takes occaſion to ſpeak of chances, and reſolves ſeveral caſes of conſcience relating thereto.

All lotteries are of a pernicious nature; and the ſtatute of the 10th and 11th of William III. declares them to be public nuſances; as alſo that all patents for lotteries are void and againſt law: but the ſtatute only meant private lotteries; though little can be ſaid in favour of thoſe erected by authority; however, the neceſſity of the times has made them very frequent of late.

The firſt lottery eſtabliſhed by parliament was in the 4th year of King Geo. II. when an act was paſſed, whereby a yearly ſum of 24,000 l. was granted out of the additional duties on ſtamped vellum, parchment, and paper, as a fund for annuities at 3 *per cent.* to contributors in a lottery, until redemption by parliament, to be paid half yearly at Chriſtmas and Midſummer to the caſhier of the bank. And the ſaid annuities were thereby erected into one capital or joint ſtock, called "the joint ſtock or "lottery annuities for the year 1731." After which, there were ſeveral other lotteries for advancing money to the government, and alſo for the building of Weſtminſter bridge; as likewiſe one for the purchaſe of Sir Hans Sloane's Muſæum. See *Annuity*.

LOUIS D'OR. A French coin, current for 24 livres, or 19 s. 6 d. ſterling.

LOUISIANA, or *New France*. See *French* America.

LOUNG. A drug for painting yellow, uſed in China, Cambodia, and in ſeveral parts of the Eaſt Indies; the Chineſe, who export it from the kingdoms of Cambodia and Siam, gaining by it almoſt *cent. per cent.*

LOUREBRANDER. A port-town of the Hither India in Aſia, ſituated at the mouth of the river Indus, in 67 deg. of E. lon. and 25 deg. of N. lat.

LOUVAIN. A city of the Auſtrian Netherlands, in the province of Brabant, ſituated in 4 deg. 35 min. of E. lon. and 51 deg. of N. lat. See Auſtrian *Netherlands*.

LOW-*Countries*. See *Netherlands*.

LUBANSKER *Sea*. A lake in the ſouth of Livonia, near the confines of Poland.

LUBEC. A city and port-town of Germany, in the circle of Lower Saxony, and dutchy of Holſtein, ſituated in 10 deg. 35 min. of E. lon. and 54 deg. of N. lat. See *Germany*, and *Hanſe* towns.

LUBLIN. A trading town of Poland, in the province of Little Poland, ſituated in 16 deg. 20 min. of E. lon. and 51 deg. 24 min. of N. lat.

LUBS, or *Schilling Lubs*, is a coin and money of accompt, at Hamburgh and in ſeveral other places of Germany, being 1 $\frac{1}{8}$ d. ſterling.

The lub ſchilling of Denmark is alſo of the ſame value.

LUCAR, *St.* A port-town of Spain, in the province of Andaluſia, ſituated at the mouth of the river Guadalquivir, in 6 deg. 38 min. of W. lon. and 36 deg. 42 min. of N. lat.

LUCAYA. See *Bahama* Iſlands.

LUCCA. A city of Italy, capital of the republic of Lucca, ſituated in 11 deg. 20 min. of E. lon. and 43 deg. 45 min. of N. lat.

LUCIA *Iſland*. One of the Caribbee iſlands, ſituated in 61 deg. of W. lon. and 13 deg. 30 min. of N. lat.

LUCIA, *St.* One of the Cape Verd iſlands in Afric ſituated in 25 deg. of W. lon. and 16 deg. 30 min. N. lat. See Cape *Verd* iſlands.

LUCONIA, or *Manilla*, the chief city of the Philipp iſlands, ſituated between 117 and 123 deg. of E. and between 12 and 19 deg. of N. lat. See *Philipp* Iſlands.

LUMBER, in the common acceptation of the word, plies houſhold goods of ſmall value, and that are w out: but, in a commercial ſenſe, it ſignifies wood, timber, cut down, or ſawed by mills, in New Engl Rhode Iſland, and other colonies in America, which carried to the ſugar colonies, and there exchanged the product of thoſe iſlands: this ſort of lumber con ing in deals, timber-balks, barrel-boards, clap-boa pipe-boards, or pipe-holt, white boards for ſhoe-mak boom, and cant ſpars, bow ſtaves, cap-ravens, clap-b ebony-wood, heading for pipes, hogſheads, and barr hoops for coopers, oars, pipe, hogſhead, barrel, and fir ſtaves, trunnels, ſpeckled wood, ſweet wood, ſmall ſp oak, plank, wainſcot, and lignum vitæ, which, by ſtatute of the 8th of Geo. I. and the 1ſt of Geo. whether wrought or unwrought, of the product of Britiſh plantations in America, may be imported direc from thence into Great Britain, free of all duties.

LUNDY *Iſle*. A little iſland in the mouth of the Bri channel, ſituated in 4 deg. 50 min. of W. lon. and deg. 25 min. of N. lat.

LUSTRE, ſignifies the gloſs or brightneſs appearing on thing, particularly the manufactures of ſilk, wool, or h

LUSTRE, is alſo uſed for a certain compoſition, or man of giving that gloſs.

The luſtre of ſilks, in which their chief beauty conſi is given by waſhing them in ſoap, then in clear wat and dipping them in alum-water cold.

The luſtre of black taffety is given by double brewed b boiled with orange or lemon juice; and that of colou taffeties with water of gourds diſtilled in an alembic.

Curriers give a luſtre or gloſs to their leather ſeve ways, according to the colour to be illuſtrated. blacks, the firſt luſtre is with juice of barberries; ſecond with gum arabic, ale, vinegar, and Flanders gl boiled together: for coloured leathers they uſe the w of an egg beaten in water: moroccos have their lu from juice of barberries, and lemon or orange.

For hats, the luſtre is frequently given with common ter, ſometimes a little black dye is added. The ſa luſtre ſerves ſkinners, except that in white furs they ne uſe any black dye. For very black furs they ſometi prepare a luſtre of galls, copperas, Roman alum, marrow, and other ingredients. Luſtre is given to cl and mohairs by preſſing them under the calender.

LUSTRING, or *Luteſtring*. A particular ſort of gl wearing ſilk, invented by the French or Genoeſe.

LYME. A borough and port-town of Dorſetſhire, ſitu in 5 deg. of W. lon. and 50 deg. 44 min. of N. lat.

LYNN *Regis*. A port-town of Norfolk, ſituated at mouth of the German ſea, in 33 min. of E. lon. and deg. 46 min. of N. lat.

LYONS. A town of conſiderable trade, and capital of Lyonnois in France, ſituated at the confluence of rivers Rhone and Soane, in 4 deg. 55 min. of E. and 45 deg. 50 min. of N. lat. See *France*.

LYS. A ſilver coin ſtruck in Savoy, being about 2 s. ſterling.

LYSPONDT. A kind of weight, which weighs mo leſs according to the places where it is uſed.

At Hamburgh the lyspondt is of 15 pounds, or 1 11 oz. Engliſh avoirdupois.

M.

MAAYPOOSTEN. A kind of ſilk ſtuff, brought into Europe by the Dutch Eaſt India Company. When the company vends its merchandiſes, the lots or ſhares of the maaypooſten are uſually 50 pieces; each piece being about the value of 15 s. ſterling.

MACAO. A Chineſe Iſland in Aſia, in the principality of Canton; ſituated at the mouth of the Ta, in 110 deg. of E. lon. and 23 deg. of N. lat. See *China*.

MACARONI, or *Macaroon*. A delicious cake paſte, or ſweetmeat, made with the flour of rice, being ſomewhat thicker than the little finger. There is a great trade made of this paſte in all parts of Italy: but, in general, all the paſtes made of rice flour are called farinelli.

MACASSAR *Iſland*. See *Celebes*.

MACE. A medicinal bark, or rind; being the ſecond of the three which cover the nutmeg. See *Nutmeg*.

The mace has the ſame properties with the nutmeg; and the Dutch, who drive on a conſiderable trade with it, eſteem it much more than the other.

It is of an aſtringent and drying nature; being uſed as a corrector in cardiac and cathartic compoſitions: but an oil is alſo extracted from mace of various uſes in medicine.

When the dutch Eaſt India company ſells ſpice, each lot or ſhare of mace uſually weighs 600 lb. But it is ſold at Amſterdam by the pound, and is paid in bank-money; its price being about 1 s. 9 d. ſterling.

MACER. A tree which grows in the Eaſt Indies, and Barbary; whoſe bark is ſucceſsfully uſed for the cure of the dyſentery. This bark, which is taken from the trunk of the tree, is thick, reddiſh, and of a bitter taſte; but druggiſts ſometimes ſubſtitute mace for it; though the fraud is eaſily diſcovered.

MACHIAN. A ſmall iſland of the Moluccas; ſituated under the equator, in 125 deg. of E. lon. See *Moluccas*.

MACHO, or *Quintal-macho*, is a term in Spain, for a weight of 150 lb. that is, of 50 lb. more than the common quintal, which is only 100 lb.

MACKAREL, and *Mackarel-Fiſhery*. See Mackarel *Fiſhery*.

MACOUTE. A kind of money of accompt, or manner of accompting, uſed by the negroes in ſome parts of the coaſt of Africa, particularly at Loango upon the coaſt of Angola; being equivalent to ten, and 10 macoutes make the 100, which is alſo among them another money of accompt.

To form an eſtimation of their purchaſes, and ſales, or rather of their exchanges, they fix on one ſide the number of macoutes they are willing to have for a negroe; and on the other, at how many macoutes they are willing to take each kind of merchandiſe they deſire for a negroe.

Suppoſe then, that they have fixed the value of their ſlave at 3500, which amount to 305 macoutes; to make this number of macoutes in merchandiſes, each kind of goods is valued alſo in macoutes; as two Flemmiſh knives are reckoned one macoute; one copper baſon of 7 lb. and 12 inches diameter 3; one fuſee 30, one piece of blue ſalam pouris 120, and ſo on.

At Malimbo, and Cabindo, about 30 leagues farther, they reckon by the piece, and in other places by the bar.

MACRO, or *Macroniſſa*. An iſland of the Turkiſh Archipelago, near the coaſt of Achaia, 20 miles E. of Athens.

MADAGASCAR, or the iſle of St. *Lawrence*, is an iſland of Africa, ſituated between 43 and 51 deg. of E. lon. and between 12 and 26 deg. of S. lat. 300 miles S. E. of th continent of Africa; being about 1000 miles long from N. to S. and generally about 2 or 300 miles broad.

It abounds in corn, cattle, fiſh, and fowl; with all manner of animals, and vegetables, that are to be found on the continent of Africa. It has a great variety of hills, vallies, woods, and champains; being well watered with ſprings and rivers; nor does there want good harbours: and yet no European nation has thought it worth while to plant or continue colonies there, it producing no merchandiſe that will bear the expence of ſo long a voyage, except negroes, which are purchaſed here as well as on the continent by trading ſhips. Beſides negroes, there are white men, and a tawny generation upon the coaſt, who are deſcended from the Arabs, as is evident from their language and religious rites, having a mixture of mahometaniſm, judaiſm, and paganiſm.

The country is divided among a great many petty ſovereigns, to whom the ſeamen who touch there give the title of Kings and princes, who making war upon each other, ſell their priſoners for ſlaves to the Europeans; taking cloathing, utenſils, and other things in return.

The country being thus divided, would make it an eaſy conqueſt, if the ſoil produced any thing to incite the avarice or ambition of the European powers to attempt.

It was once expected, that the pirates would have made a ſettlement in this iſland, and have uſurped its dominion, having 6 or 7 ſail of ſhips, with which they uſed to infeſt the Indian ſeas, and carry their prizes into a place of ſecurity on the N. E. part of Madagaſcar; where they poſſeſſed themſelves of a harbour of difficult acceſs, and defended from ſtorms by the little iſland of St. Mary's, which lies before it in 17 deg. of S. lat. but what is now become of them is uncertain.

The Portugueſe diſcovered this iſland towards the end of the 15th century, and examined all its coaſts in 1508. Other European nations, who afterwards doubled the Cape of Good Hope in their road to the Eaſt Indies, often landed in it; being either driven there by ſtreſs of weather, or having an occaſion to take in water and refreſhments; but none among the Europeans, except the French, attempted to make a ſolid and permanent eſtabliſhment in the iſland; that of the Engliſh being only of a ſmall continuance.

The firſt projecting of this French colony was in 1640, and 1642. Ricault, a captain of a French man of war, who had obtained its conceſſion for 10 years, ſent there a a ſhip freighted at the expence of the Eaſt company, by which he procured letters patent for himſelf and his aſſociates.

France has ever ſince claimed the poſſeſſion of this iſland, and ſeemed to have a deſire of promoting its commerce, by making it part of the conceſſion made by Lewis XV. to the grand India company in 1719, under the government and protection of Philip Duke of Orleans regent of the kingdom.

The European merchandiſe proper for the trade of this iſland are painted linens, ſilver, copper, and tin bracelets, ſmall hard and haberdaſhery wares, glaſs beads of all colours, particularly blue; brandy, Spaniſh and French wines, coral, long and oval cornelian ſtones, braſs wire, chains of the ſame metal, nails, ſeveral inſtruments for ſmiths, carpenters, and moſt kind of lock-work.

The merchandiſes which may be had in exchange, conſiſt in divers gums either for medicine, painting, or perfumes, as cancanum, or white gum of ants, dragon's blood of ſeveral ſorts, gum gutta, tachamacha, and ſeveral others; different kinds of wood for dying, and inlaid work; for dying, as the vahatz, which makes a fine fire colour, and a golden yellow, by adding the decoction of citron; and the tambonbitſi, which yields a very perfect orange; for inlaid work, black, and grey ebony; the mandrize, of a violet marbled; the mohogany of a red-brown; the ſandraha, blacker than ebony, and receiving a better poliſh;

aloes

The deſign of lotteries, and the manner of drawing them, are too well known to need a deſcription: they are very frequent in England and Holland, where they cannot be ſet on foot without the permiſſion of the government; but there are alſo frequently ſeveral lotteries in France in favour of their hoſpitals.

M. le Clerc has compoſed a treatiſe of lotteries, wherein is ſhewn what is laudable, and what blameable in them. Gregorio Leti has alſo a book on the ſubject of lotteries. F. Meneſtrier has a treatiſe on the ſame, publiſhed in 1700, where he ſhews their origin, and uſe among the Romans: he diſtinguiſhes ſeveral kinds of lotteries, and takes occaſion to ſpeak of chances, and reſolves ſeveral caſes of conſcience relating thereto.

All lotteries are of a pernicious nature; and the ſtatute of the 10th and 11th of William III. declares them to be public nuſances; as alſo that all patents for lotteries are void and againſt law: but the ſtatute only meant private lotteries; though little can be ſaid in favour of thoſe erected by authority; however, the neceſſity of the times has made them very frequent of late.

The firſt lottery eſtabliſhed by parliament was in the 4th year of King Geo. II. when an act was paſſed, whereby a yearly ſum of 24,000 l. was granted out of the additional duties on ſtamped vellum, parchment, and paper, as a fund for annuities at 3 *per cent.* to contributors in a lottery, until redemption by parliament, to be paid half yearly at Chriſtmas and Midſummer to the caſhier of the bank. And the ſaid annuities were thereby erected into one capital or joint ſtock, called "the joint ſtock or "lottery annuities for the year 1731." After which, there were ſeveral other lotteries for advancing money to the government, and alſo for the building of Weſtminſter bridge; as likewiſe one for the purchaſe of Sir Hans Sloane's Muſæum. See *Annuity*.

LOUIS D'OR. A French coin, current for 24 livres, or 19 s. 6 d. ſterling.

LOUISIANA, or *New France*. See *French* America.

LOUNG. A drug for painting yellow, uſed in China, Cambodia, and in ſeveral parts of the Eaſt Indies; the Chineſe, who export it from the kingdoms of Cambodia and Siam, gaining by it almoſt *cent. per cent.*

LOUREBRANDER. A port-town of the Hither India in Aſia, ſituated at the mouth of the river Indus, in 67 deg. of E. lon. and 25 deg. of N. lat.

LOUVAIN. A city of the Auſtrian Netherlands, in the province of Brabant, ſituated in 4 deg. 35 min. of E. lon. and 51 deg. of N. lat. See Auſtrian *Netherlands*.

LOW-*Countries*. See *Netherlands*.

LUBANSKER *Sea*. A lake in the ſouth of Livonia, near the confines of Poland.

LUBEC. A city and port-town of Germany, in the circle of Lower Saxony, and dutchy of Holſtein, ſituated in 10 deg. 35 min. of E. lon. and 54 deg. of N. lat. See *Germany*, and *Hanſe* towns.

LUBLIN. A trading town of Poland, in the province of Little Poland, ſituated in 16 deg. 20 min. of E. lon. and 51 deg. 24 min. of N. lat.

LUBS, or *Schilling Lubs*, is a coin and money of accompt, at Hamburgh and in ſeveral other places of Germany, being 1 $\frac{1}{8}$ d. ſterling.

The lub-ſchilling of Denmark is alſo of the ſame value.

LUCAR, *St.* A port-town of Spain, in the province of Andaluſia, ſituated at the mouth of the river Guadalquivir, in 6 deg. 38 min. of W. lon. and 36 deg. 42 min. of N. lat.

LUCAYA. See *Bahama* Iſlands.

LUCCA. A city of Italy, capital of the republic of Lucca, ſituated in 11 deg. 20 min. of E. lon. and 43 deg. 45 min. of N. lat.

LUCIA *Iſland*. One of the Caribbee iſlands, ſituated in 61 deg. of W. lon. and 13 deg. 30 min. of N. lat.

LUCIA, *St.* One of the Cape Verd iſlands in Afric ſituated in 25 deg. of W. lon. and 16 deg. 30 min. N. lat. See Cape *Verd* iſlands.

LUCONIA, or *Manilla*, the chief city of the Philipp iſlands, ſituated between 117 and 123 deg. of E. l and between 12 and 19 deg. of N. lat. See *Philipp* Iſlands.

LUMBER, in the common acceptation of the word, plies houſhold goods of ſmall value, and that are w out: but, in a commercial ſenſe, it ſignifies wood timber, cut down, or ſawed by mills, in New Engl Rhode Iſland, and other colonies in America, which carried to the ſugar colonies, and there exchanged the product of thoſe iſlands: this ſort of lumber con ing in deals, timber-balks, barrel-boards, clap-boar pipe-boards, or pipe-holt, white boards for ſhoe-mak boom, and cant ſpars, bow ſtaves, cap-ravens, clap-b ebony-wood, heading for pipes, hogſheads, and barr hoops for coopers, oars, pipe, hogſhead, barrel, and fir ſtaves, trunnels, ſpeckled wood, ſweet wood, ſmall ſp oak, plank, wainſcot, and lignum vitæ, which, by ſtatute of the 8th of Geo. I. and the 1ſt of Geo. whether wrought or unwrought, of the product of Britiſh plantations in America, may be imported dire from thence into Great Britain, free of all duties.

LUNDY *Iſle*. A little iſland in the mouth of the Bri channel, ſituated in 4 deg. 50 min. of W. lon. and deg. 25 min. of N. lat.

LUSTRE, ſignifies the gloſs or brightneſs appearing on thing, particularly the manufactures of ſilk, wool, or ſt

LUSTRE, is alſo uſed for a certain compoſition, or man of giving that gloſs.

The luſtre of ſilks, in which their chief beauty conſi is given by waſhing them in ſoap, then in clear wat and dipping them in alum-water cold.

The luſtre of black taffety is given by double brewed b boiled with orange or lemon juice; and that of colour taffeties with water of gourds diſtilled in an alembic.

Curriers give a luſtre or gloſs to their leather ſeve ways, according to the colour to be illuſtrated. blacks, the firſt luſtre is with juice of barberries; ſecond with gum arabic, ale, vinegar, and Flanders g boiled together: for coloured leathers they uſe the w of an egg beaten in water: moroccos have their lu from juice of barberries, and lemon or orange.

For hats, the luſtre is frequently given with common ter, ſometimes a little black dye is added. The ſa luſtre ſerves ſkinners, except that in white furs they ne uſe any black dye. For very black furs they ſometi prepare a luſtre of galls, copperas, Roman alum, marrow, and other ingredients. Luſtre is given to cl and mohairs by preſſing them under the calender.

LUSTRING, or *Luteſtring*. A particular ſort of gl wearing ſilk, invented by the French or Genoeſe.

LYME. A borough and port-town of Dorſetſhire, ſitu in 5 deg. of W. lon. and 50 deg. 44 min. of N. lat.

LYNN *Regis*. A port-town of Norfolk, ſituated at mouth of the German ſea, in 33 min. of E. lon. and deg. 46 min. of N. lat.

LYONS. A town of conſiderable trade, and capital of Lyonnois in France, ſituated at the confluence of rivers Rhone and Soane, in 4 deg. 55 min. of E. and 45 deg. 50 min. of N. lat. See *France*.

LYS. A ſilver coin ſtruck in Savoy, being about 2 s. ſterling.

LYSPONDT. A kind of weight, which weighs mo leſs according to the places where it is uſed.

At Hamburgh the lyſpondt is of 15 pounds, or 1 11 oz. Engliſh avoirdupois.

M.

MAD

MAAYPOOSTEN. A kind of ſilk ſtuff, brought into Europe by the Dutch Eaſt India Company. When the company vends its merchandiſes, the lots or ſhares of the maaypooſten are uſually 50 pieces; each piece being about the value of 15 s. ſterling.

MACAO. A Chineſe Iſland in Aſia, in the principality of Canton; ſituated at the mouth of the Ta, in 110 deg. of E. lon. and 23 deg. of N. lat. See *China*.

MACARONI, or *Macaroon*. A delicious cake paſte, or ſweetmeat, made with the flour of rice, being ſomewhat thicker than the little finger. There is a great trade made of this paſte in all parts of Italy: but, in general, all the paſtes made of rice flour are called farinelli.

MACASSAR *Iſland*. See *Celebes*.

MACE. A medicinal bark, or rind; being the ſecond of the three which cover the nutmeg. See *Nutmeg*.

The mace has the ſame properties with the nutmeg; and the Dutch, who drive on a conſiderable trade with it, eſteem it much more than the other.

It is of an aſtringent and drying nature; being uſed as a corrector in cardiac and cathartic compoſitions: but an oil is alſo extracted from mace of various uſes in medicine.

When the dutch Eaſt India company ſells ſpice, each lot or ſhare of mace uſually weighs 600 lb. But it is ſold at Amſterdam by the pound, and is paid in bank-money; its price being about 1 s. 9 d. ſterling.

MACER. A tree which grows in the Eaſt Indies, and Barbary; whoſe bark is ſucceſsfully uſed for the cure of the dyſentery. This bark, which is taken from the trunk of the tree, is thick, reddiſh, and of a bitter taſte; but druggiſts ſometimes ſubſtitute mace for it; though the fraud is eaſily diſcovered.

MACHIAN. A ſmall iſland of the Moluccas; ſituated under the equator, in 125 deg. of E. lon. See *Moluccas*.

MACHO, or *Quintal-macho*, is a term in Spain, for a weight of 150 lb. that is, of 50 lb. more than the common quintal, which is only 100 lb.

MACKAREL, and *Mackarel-Fiſhery*. See Mackarel *Fiſhery*.

MACOUTE. A kind of money of accompt, or manner of accompting, uſed by the negroes in ſome parts of the coaſt of Africa, particularly at Loango upon the coaſt of Angola; being equivalent to ten, and 10 macoutes make the 100, which is alſo among them another money of accompt.

To form an eſtimation of their purchaſes, and ſales, or rather of their exchanges, they fix on one ſide the number of macoutes they are willing to have for a negroe; and on the other, at how many macoutes they are willing to take each kind of merchandiſe they deſire for a negroe.

Suppoſe then, that they have fixed the value of their ſlave at 3500, which amount to 305 macoutes; to make this number of macoutes in merchandiſes, each kind of goods is valued alſo in macoutes; as two Flemmiſh knives are reckoned one macoute; one copper baſon of 7 lb. and 12 inches diameter 3; one fuſee 30, one piece of blue ſalam pouris 120, and ſo on.

At Malimbo, and Cabindo, about 30 leagues farther, they reckon by the piece, and in other places by the bar.

MACRO, or *Macroniſſa*. An iſland of the Turkiſh Archipelago, near the coaſt of Achaia, 20 miles E. of Athens.

MADAGASCAR, or the iſle of St. *Lawrence*, is an iſland of Africa, ſituated between 43 and 51 deg. of E. lon. and between 12 and 26 deg. of S. lat. 300 miles S. E. of th continent of Africa; being about 1000 miles long from N. to S. and generally about 2 or 300 miles broad.

It abounds in corn, cattle, fiſh, and fowl; with all manner of animals, and vegetables, that are to be found on the continent of Africa. It has a great variety of hills, vallies, woods, and champains; being well watered with ſprings and rivers; nor does there want good harbours: and yet no European nation has thought it worth while to plant or continue colonies there, it producing no merchandiſe that will bear the expence of ſo long a voyage, except negroes, which are purchaſed here as well as on the continent by trading ſhips. Beſides negroes, there are white men, and a tawny generation upon the coaſt, who are deſcended from the Arabs, as is evident from their language and religious rites, having a mixture of mahometaniſm, judaiſm, and paganiſm.

The country is divided among a great many petty ſovereigns, to whom the ſeamen who touch there give the title of Kings and princes, who making war upon each other, ſell their priſoners for ſlaves to the Europeans; taking cloathing, utenſils, and other things in return.

The country being thus divided, would make it an eaſy conqueſt, if the ſoil produced any thing to incite the avarice or ambition of the European powers to attempt.

It was once expected, that the pirates would have made a ſettlement in this iſland, and have uſurped its dominion, having 6 or 7 ſail of ſhips, with which they uſed to infeſt the Indian ſeas, and carry their prizes into a place of ſecurity on the N. E. part of Madagaſcar; where they poſſeſſed themſelves of a harbour of difficult acceſs, and defended from ſtorms by the little iſland of St. Mary's, which lies before it in 17 deg. of S. lat. but what is now become of them is uncertain.

The Portugueſe diſcovered this iſland towards the end of the 15th century, and examined all its coaſts in 1508. Other European nations, who afterwards doubled the Cape of Good Hope in their road to the Eaſt Indies, often landed in it; being either driven there by ſtreſs of weather, or having an occaſion to take in water and refreſhments; but none among the Europeans, except the French, attempted to make a ſolid and permanent eſtabliſhment in the iſland; that of the Engliſh being only of a ſmall continuance.

The firſt projecting of this French colony was in 1640, and 1642. Kicault, a captain of a French man of war, who had obtained its conceſſion for 10 years, ſent there a a ſhip freighted at the expence of the Eaſt company, by which he procured letters patent for himſelf and his aſſociates.

France has ever ſince claimed the poſſeſſion of this iſland, and ſeemed to have a deſire of promoting its commerce, by making it part of the conceſſion made by Lewis XV. to the grand India company in 1719, under the government and protection of Philip Duke of Orleans regent of the kingdom.

The European merchandiſe proper for the trade of this iſland are painted linens, ſilver, copper, and tin bracelets, ſmall hard and haberdaſhery wares, glaſs beads of all colours, particularly blue; brandy, Spaniſh and French wines, coral, long and oval cornelian ſtones, braſs wire, chains of the ſame metal, nails, ſeveral inſtruments for ſmiths, carpenters, and moſt kind of lock-work.

The merchandiſes which may be had in exchange, conſiſt in divers gums either for medicine, painting, or perfumes, as cancanum, or white gum of ants, dragon's blood of ſeveral ſorts, gum gutta, tachamacha, and ſeveral others; different kinds of wood for dying, and inlaid work; for dying, as the vahatz, which makes a fine fire colour, and a golden yellow, by adding the decoction of citron; and the tambonbitſi, which yields a very perfect orange; for inlaid work, black, and grey ebony; the mandrize, of a violet marbled; the mohogany of a red-brown; the ſandraha, blacker than ebony, and receiving a better poliſh;

aloes

aloes wood; the tarantantilla, a kind of box; the lencafatrahé green veined; the mera, and the endra-chendrach, both yellow, and ſome others. From Madagaſcar may be alſo brought wax, green hides, ſugar, tobacco, pepper, cotton, indigo, ambergreaſe, frankincenſe, benzoin, oil of *palma chriſti*, green balſam for wounds, ſaltpetre, ſulphur, white cinnamon, civet, rock cryſtal, blood-ſtone, touch-ſtone, terra ſigillata, ſeveral boles for painting, and medicine, with reed, flax, and even ſilk mats. But the culture of all theſe things are much neglected by the natives of this iſland.

Some alſo reckon among the natural productions of this iſland, gold, ſilver, and precious ſtones; but as to the two former, it is very uncertain whether there are any mines of them in the iſland; what is found in the hands of the natives being brought to them by the Rohandrians, that is, the grandees of the country, when they paſſed over there from Arabia, and the reſt coming to them from the wreck of ſome ſhips on their coaſts; as to the precious ſtones, though it is true they are found there, they are ſo imperfect, and of ſuch an ill quality, as not to be worth the time loſt in ſeeking after them.

Though the inhabitants of Madagaſcar ſeem little diſpoſed to keep up a regular commerce with the Europeans, upon account of their ill uſage to them; however it ſeems, as the French have often experienced, that they are more fit for trade than ſeveral other nations of Africa; having among them, for the facility of trade, the greater part of the things which the beſt poliſhed nations, and moſt devoted to trade, have invented for promoting it in a commodious and profitable manner.

They underſtand arithmetic; have the uſe of pens, ink, and paper; as alſo of weights, and meaſures, with ſuch of the arts and trades as are moſt neceſſary for life.

Their manner of accompting is not different from that of Europe; having received it from the Arabians, as well as the Europeans; ſo that they perform their calculations from units to a million, and have proper terms for expreſſing each different combination of numbers which compoſe all ſorts of ſums.

Their writing is likewiſe in the manner of the Arabs; their paper, which is the middlemoſt bark of a tree, they call avo; their ink is a decoction of wood, called arandranto; and their pens are bits of reeds, called voulou.

Though the inhabitants of Madagaſcar have weights, they uſe none but for gold, and ſilver; ſeldom exceeding the dram, as they have neither the ounce, nor the pound, and having no terms for expreſſing them: the dram is called ſomai, the half dram vari; the ſcruple, or penny-weight ſacar; the half ſcruple nanqui; the ſix grains, nanque; though they have no denomination for the grain. All other merchandiſe, or commodities, are exchanged by eſtimation, and not by weight.

Their meaſures of contents are a kind of buſhels, called troubahouache, or Moncha, which contains ſix pounds of clean rice; the voule, which contains but half a pound; and the zatou, containing 100 voules, or 25 lb. avoirdupoiſe.

They have but one long meaſure, which they call refe, and which is much the ſame with the European fathom: they alſo know what the ſpan is, and they uſe the opening of the hand for meaſuring it.

Arts, and trades, they have brought to a perfection which may be admired in ſuch uncivilized people; their ſmiths melt down the iron mine, and forge hatchets, hammers, anvils, knives, razors, ſeveral ſorts of arms, and all ſorts of houſhold utenſils out of it.

Their goldſmiths, having reduced the gold into ingots, make ear pendants, and other trinkets which ſerve for ornaments.

Their potters bake, and varniſh their ware as well as in Europe, but in a different manner, with different drugs.

Their turners turn all ſorts of wood, and make canoes for ſailing either upon the ſea, or upon rivers.

Their carpenters, and joiners, worked by line and level, even before Europeans came among them; and ſince their knowledge of other inſtruments, their works are not inferior to thoſe of Europe.

Their cord-makers make cords of all ſizes and lengths of the bark of trees, almoſt as good as thoſe of hemp. As for the art of weaving, none but women are employed in this branch of trade, the men thinking it beneath them; ſo that it is the women who prepare, and execute all their ſorts of ſtuff made for the moſt part of ſilk, and cotton, and ſometimes of the bark of trees, or the filaments of ſeveral ſorts of plants; all which, in faſhion, deſign, and colour, are little inferior to ſome of the works of European weavers, and dyers.

It is by all theſe kinds of work, as alſo by all the natural productions of their country, that they carry on their whole trade; not after the manner of Europeans by purchaſe and ſale, but by exchange; having no other uſe for the gold and ſilver money which Europeans give them, but to convert them into ornaments; though it may be ſaid, ſince their knowledge of Europeans, they make all ſmall wares ſerve for current money, with which they purchaſe and pay for ſeveral ſorts of commodities.

It is remarkable, that they have neither fair, nor market for all this trade; and that the perſon who has an occaſion for any thing, goes for it where it is to be had in abundance, or ſtays at home till ſome one or other comes to take away whatever ſuperfluous work or commodity he has, and brings him in exchange thoſe he may want.

The MADERA, or *Madeira Iſlands*, lie in 16 deg. of W. lon. and between 32 and 33 deg. of N. lat. ſituated in the Atlantic ocean, 300 miles N. of the Canary iſlands, and 300 W. of Sallee in the empire of Morocco in Africa; they were diſcovered by the Portugueſe in 1410, or, as others pretend, not till 1420.

The Portugueſe who firſt inhabited theſe iſlands found them covered in all parts with ſuch an impenetrable foreſt that they were obliged to ſet them on fire before they could eſtabliſh themſelves, and cultivate them.

This expedient, which ſucceeded afterwards very well, at firſt endangered the lives of all thoſe who then compoſed this infant colony, who had like to have periſhed with thirſt in their barks, where they retired, and remained while the iſland continued on fire; but, at laſt having made their eſtabliſhment, theſe iſlands became very fertile and populous.

MADERA, or *Madeira*, called alſo *Mattera* by the Portugueſe from its being covered with wood, is the largeſt of theſe iſlands; being 120 miles in circumference.

The chief towns are *Funchal*, *Santa Cruz*, and *Manchico*. *Funchal*, the capital, is ſituated on a bay at the S. part of the iſland. The town of *Santa Cruz* is ſituated on the N. E. part of the iſland; and *Manchico* lies to the S. W.

The next in magnitude of the Madeira iſlands is that of *Porto Sanito*, ſituated 6 or 8 leagues N. E. of Madeira proper. It is about 18 miles in circumference, abounding in the ſame kind of wine and fruits as the former. Several other ſmall rocks or iſlands lie about theſe, which go under the name of the Maderas; but they are neither inhabited, nor cultivated.

Wine, ſugar, corn, gums, honey, wax, leather; ſorts of freſh, dry, or confected fruits, particularly citrons, lemons, pomegranates; laſtly yew and cedar trees, are the principal commodities of theſe iſlands. The goods imported there are ſeveral ſorts of the Engliſh woollen manufacture, and other European commodities.

Madeira wines are generally eſteemed by the Engliſh and Dutch, who buy up moſt of them; and great quantities are tranſported to Portugal, from whence European nations export them, if unwilling to trade directly to Madeira.

The Vine plant which produces theſe wines was brought from Candia; each bunch of grapes being not leſs than two feet in length, and as much in thickneſs: but experience has proved that the wines of the firſt year are not perfectly good, and that they have not their real flavour till the third leaf.

This wine has the particular good quality, to keep beſt in the hotteſt weather, and the hotteſt climates, where other wines turn ſour; but it is beſt in Europe, after it has been taken to the Weſt Indies, and brought into the European ſtates.

ugar grows there in abundance, which is very good, d was for a conſiderable time preferred to all other rts; tho' at preſent, the ſugar of the Antilles, and ſome ther parts of America, is eſteemed to be of equal, if not perior goodneſs.

The corn trade is ſometimes conſiderable, great quantities eing exported from theſe iſlands in plentiful years; though times of ſcarcity they are ſupplied from the Azores.

The yew, and cedar planks, ſawed by ſeveral mills built pon rivulets with which this iſland abounds, are ſent to ortugal, where they are much eſteemed, and but few of hem are exported by ſtrangers.

The confected fruits are bought up chiefly by the Engliſh nd Dutch, for the moſt part at Madeira, but ſometimes Liſbon, where they are imported by Portugueſe ſhips.

s to gums, dragon's blood is the principal, and the trees roductive of it ſhed it in this iſland more abundantly an in any other part of the world.

Theſe iſlands alſo ſupply the Engliſh, French, and Dutch, ith freſh water in their voyages to America.

ut what enhances the reputation of the Madeira trade, is e freedom, and honeſty which the inhabitants ſhew ſtrangers; the ſame being ſeldom met with in the other ortugueſe ſettlements, where the inhabitants generally af- ect a kind of haughtineſs which is pretty uſual with this ation. See *Portugal*.

DDER. A red, bitter, aſtringent root of a plant, called y botaniſts *Rubia Tinctorum*; much uſed by dyers, to ive a ſtrong and rich red colour; it has alſo its uſes in medi- ine, being found of ſervice in obſtructions of the viſcera, nd cachectic conſtitutions, and is generally made up in ecoctions of diet-drinks, and medicated ales.

is cultivated in great quantites in Flanders, Holland, and ermany; being a conſiderable object of commerce for all eſe places.

DIPOLLAM. A Britiſh factory in India; ſubordi- ate to the government of fort St. George.

DOUIN. The Piedmonteze piſtole, worth 13 livres f the country, or 16 s. 3 d. ſterling.

DRAS-*a-Patan*. See Fort St. *George*.

DRID. Capital of the kingdom of Spain; ſituated in deg. 15 min. of W. lon. and 40 deg. 30 min. of N. lat. ee *Spain*.

ES. A river riſing in Burgundy, and running N. thro' orrain and Champaign into the Netherlands, having paſſed y Toul, Verdun, Sedan, and Dinant, receives the Sam- re at Namur; after which it runs N. E. by Liege, Maeſtricht, Venlo, and Grave; then W. to Wercom; nd having joined the Waal runs W. to Dort; diſchar- ing itſelf into the German Sea, a little below the Briel.

GADOXA. Capital of a territory of the ſame name n the Coaſt of Anian in Africa, ſituated in 5 deg. 45 in. of E. lon. and 51 deg. 10 min of N. lat.

GAZINE. A ſtore houſe for merchants, and more eſpe- ially for military preparations; where they are either made, r kept continually, to be ready for uſe upon all occaſions.

GDELENA. A great river of S. America, riſing near e Equator, and running N. through the Terra Firma, ins its waters with the river Canee; when it obtains the ame of the river Grande, and falls into the North ſea elow the town of Madre de Popa.

GELLAN *Straits*, or ſtraits of *Magellan*, are ſituated etween 76 and 84 deg. of W. lon. and between 52 and 4 deg. of S. lat. upwards of 300 miles in length from e Atlantic to the Pacific ocean; but of very unequal readth, in ſome places ſeveral leagues over, and in o- ers not half a league; the land on both ſides being moun- ainous. Theſe were diſcovered, and paſſed, by Ferdi- and Magellan, a Portugueſe, in the ſervice of Spain, in e year 1520, in his attempt to find a way to the Eaſt dies by the W. which he effected; but, being killed in e Molucca iſlands, his ſhip returned by the Cape of Good ope, round Africa, and was the firſt that ever ſurroun- d the globe. Admiral Drake paſſed them alſo in his oyage round the world; but ſhips that have gone to the ea of late years have paſſed round Cape Horn, in which ey find fewer inconveniencies than in paſſing the ſtraits. e *Ocean*.

GGIORE *lake*, is a lake ſituated partly in the dutchy of lan, and partly in the country of the Griſons, being a- bout 35 miles long, and 6 broad; the river Teſin run- ning thro' it.

MAGISTERY, in chemiſtry, is a very fine powder, made by ſolution and precipitation; or a precipitate of ſome ſolution made by a ſalt, or other body, which breaks the force of the diſſolvent; ſuch as the magiſteries of biſ- muth, of lead, and others. Magiſtery is alſo uſed in ſpeaking of reſins, or reſinous extracts of ſcammony, ja- lap, turbith, and other things; which are made by diſ- ſolving the matter in ſpirit of wine, and precipitating it with water.

MAGNA-VACCA. A port-town of Italy, in the duchy of Ferrara, and territory of the Pope; ſituated on the gulph of Venice, in 13 deg. of E. lon. and 44 deg. 50 min. of N. lat.

MAGNET, or the *Loadſtone*. A ſort of ferruginous ſtone, in weight and colour reſembling iron ore, though ſome- what harder and more heavy, endued with ſeveral extra- ordinary properties, attractive, directive, and inclinatory. The magnet is uſually found in iron mines, and ſome- times in very large pieces, half magnet, half iron; its co- lour being different, according to the different countries it is brought from. Norman obſerves, that the beſt are thoſe brought from China and Bengal, which are either an irony or ſanguine colour; thoſe of Arabia are reddiſh; thoſe of Macedonia blackiſh; and thoſe of Hungary, Germany, and England, the colour of unwrought iron. Neither its figure nor bulk are determined, but is found of all forms and ſizes.

The moſt diſtinguiſhing properties of the magnet are, that it attracts iron, points to the poles of the world, and in other circumſtances alſo dips or inclines to a point beneath the horizon, directly under the pole; and that it communicates theſe properties by touch to iron: on which foundation are built the mariners needles, both ho- rizontal and inclinatory, or dipping needles. See *Needle*.

The variation of the MAGNET, or its declination from the pole, was firſt diſcovered by Sebaſtian Cabot, a Vene- tian, in 1500; and the variation of that variation by Mr. Gellibrand, an Engliſhman, about the year 1625.

Laſtly, the dip, or inclination of the needle, when at li- berty to play vertically, to a point beneath the horizon, was firſt diſcovered by Mr. R. Norman, about the year 1576.

MAGNETICAL *Amplitude*, is an an arch of the horizon, contained between the ſun at its riſing and ſetting, and the eaſt or weſt point of the compaſs.

MAGRABINES. A linnen manufactured in ſeveral parts of Egypt, and ſold at Cairo.

MAIDAN, or *Maydan*, is a term in almoſt all parts of Aſia, and particularly in Perſia, for the public places deſ- tined for the trade, and ſale of merchandiſe; the maidan of Iſpahan paſſing for the moſt magnificent of the eaſt.

MAIDIN. A ſilver coin, ſtruck and current in Egypt, worth a penny ſterling.

MAIL. The bundles, bags, or parcels of letters, that are brought by the poſt.

MAILLE, or *Obolus*. A ſmall imaginary money uſed in France, and computed to be the half of a denier tour- nois, or the 24th part of a ſol tournois, the ſol being ſomewhat leſs than a halfpenny ſterling; but the maille is ſubdivided into two pites, and each pite into two half pites.

MAINE. A river of Germany, riſing on the eaſt-ſide of the circle of Franconia; and running from eaſt to weſt through that circle, paſſes by the cities of Bamberg, Wurtſburg, Aſchaffenburg, Hanau, and Frankfort, diſ- charging itſelf into the Rhine at Mentz.

MAINLAND. The chief of the iſlands of Shetland in Scotland.

MAIN-MAST. The great or middlemoſt maſt of a ſhip, which is raiſed perpendicularly in the middle of the ſhip. See *Maſt*.

MAJORCA. A Spaniſh iſland in the Mediterranean, ſi- tuated about 80 miles ſouth of the coaſt of Catalonia, and 100 miles eaſt of Valencia; being about 60 miles long, and 45 broad. See *Spain*.

MAIRE *ſtrait*, or *Strait le Maire*, ſituated between Terra del Fuego in South America, and Staten iſland, a paſ ſage to Cape Horn; which being diſcovered by Le Maire obtained his name; but it is little uſed at preſent, ſhips

going round Staten iſland as well as Cape Horn into the South ſea.

MAIZE. Indian or Turky corn, brought to Europe in long ears, of 10 or 12 inches, round and thick; reſembling peas or horſe-beans, and affording a very white flower; though the rind of ſome kinds inclines to a black colour.

A great part of the inhabitants of America, before the Europeans diſcovered that country, uſed maize, both for their own nouriſhment, and that of animals; as alſo for a ſmall money.

It is eſteemed very nouriſhing, refreſhing, and fattening.

MAKELAER, is a term in Holland, and particularly at Amſterdam, for brokers for the bank, and the ſale o merchandiſes.

MALABAR *Coaſt*. See *India*.

MALABATHRUM. See *Folium* indicum.

MALACCA. A country and city of the Eaſt Indies. See *India*.

MALAGA. A city and port-town of Spain, in the province of Granada, ſituated on the Mediterranean, in 4 deg. 45 min. of W. lon. and 36 deg. 40 min. of N. lat. See *Spain*.

MALAMOCCO. A little iſland and port-town in the Lagunes of Venice in Italy, ſituated 5 miles ſouth of that city.

MALDA. A town of India, in the province of Bengal; ſituated on the river Ganges, in 87 deg. 50 min. of E. lon. and 24 deg. 39 min. of N. lat. where ſome European nations have their factors.

MALDER, or *Mulder*. A corn meaſure, uſed in ſome parts of Germany; as alſo in Alſace, and the neighbouring countries. At Hamburg, the malder of wheat weighs 300 lb. of maſlin corn 298, and of rye 280, avoirdupoiſe weight.

The MALDIVES, *Maldivia*, or *Maldivy iſlands*, are a great number of ſmall iſlands, not leſs than 1000, extending from the 2d degree of S. lat. to the 7th of N. lat. about 500 miles S. W. of the continent of India, and the iſland of Ceylon.

They are divided into 13 attolons, or diviſions, by ſeveral channels; each attolon being ſo near each other, that in low water perſons may paſs from the one to the other, the water being no more than knee deep.

Theſe iſlands are generally flat, low land, ſurrounded by rocks and ſand, and were probably planted by the Arabians, the people being of the ſame complexion, and of the Mahometan religion, governed by one ſovereign.

The greateſt commerce of theſe iſlands conſiſts in little white ſhells, called coris, which ſerve for ſmall money in almoſt all parts of the Eaſt Indies, and of which great quantities are brought to the coaſt of Africa for the Negro trade. See *Coris*.

The Dutch carry on the greateſt part of this trade; but the iſlanders themſelves bring conſiderable quantities of theſe ſhells to the Dutch ſettlements in the iſland of Ceylon, and to ſome places on the coaſt of Malabar; from whence a great part are ſent to Surat, and other parts of India.

The merchandiſes given to the Maldivians, in exchange for theſe ſhells, are coarſe cotton cloths, rice, and ſome other neceſſaries of life, not produced in theſe iſlands.

The tree which bears the cocos furniſhes them alſo with ſome commodities, which they ſell to ſtrangers; this admirable tree, for the diverſity of its uſes, growing better in the Maldives, than in any other part of the Indian world. See *Cocos*.

MALLEMOLLE, or *Mulmul*. An Indian cotton cloth, or muſlin, white, clear, and very fine; the piece containing 16 ells in length, and 3-4ths, 5-16ths, 7-8ths, and 15-16ths in breadth; being brought particularly from Bengal.

MALMOE. A port-town of Sweden, in the province of Gothland, ſituated on the Baltic, in 13 deg. 20 min. of E. lon. and 55 deg. 20 min. of N. lat.

MALMSEY, or *Malvaſy*. A rich, luſcious kind of wine, brought from Greece or Candia; ſo called from Malvaſia, a city of Peloponneſus, the antient Epidaurus, from whence this celebrated liquor was firſt brought to Europe; but the Candia malmſey is now eſteemed the beſt.

It is alſo the name of a kind of Muſcadine wine brought from Provence in France.

MALO, *St.* A city and port town of France, in the province of Britany, ſituated on a rock in the Engliſh channel, in 2 deg. of W. lon. and 48 deg. 40 min. of N. lat. See *France*.

MALT, denotes barley cured, or prepared, to fit it for making beer or ale; and it is alſo uſed by diſtillers in the making of ſpirituous liquors. See *Beer*, *Ale*, *Spirits*, *Corn*, *Exciſe*, and *Starch*.

By the ſtatute of the 13th and 14th of William III. and ſeveral ſubſequent ſtatutes, malt imported from beyond the ſeas, before the 24th June yearly, is to be forfeited or the value.

If made in Scotland, and brought into England, Wales or Berwick upon Tweed,

By ſea, muſt be entered with the proper officer of the port, and the 6 d. *per* buſhel paid before landing; unleſs certificate be produced that the 3 d. *per* buſhel has been paid in Scotland; in which caſe only 3 d. muſt be paid on forfeiture or the value.

By land, muſt paſs through Berwick or Carliſle, and be there entered, and the like duty of 6 d. or 3 d. *per* buſhel paid in ready money; on forfeiture, or the value.

But if brought by land beyond the ſaid towns, without entry, or payment of duty, the ſame is forfeited, or the value.

If exported, not to draw back the exciſe.

If barley, oats, or other grain unmalted, are mixed therewith for exportaton, the forfeiture is 5 s. *per* buſhel.

If entered and made for exportation only, not to be charged with exciſe.

If deſigned to be made for exportation, previous notice muſt be given to the malt-officer of the quantity of corn intended to be contained in each ſteeping, and of the hour when it is deſigned to be taken off the kiln: but ſuch corn is to be kept ſeparate, upon forfeiture of 5 *per* buſhel; and each ſteeping to be kept ſeparate and meaſured, upon forfeiture of 50 l.

Malt, when fit for exportation, muſt be meaſured in the preſence of an officer, and carried directly on ſhipboard or elſe locked up ſeparately, under the joint locks of the proprietor and officer, till delivered out for exportation upon forfeiture of 50 l.

If the locks or doors are opened, or entrance made into the ſtorehouſe where ſecured, or any quantity of the malt conveyed away without the knowledge or conſent of the officer, the penalty is 100 l.

The ſtorehouſes are to be cleared, and all the malt therein exported within every nine months after the beginning to make uſe of them, upon penalty of 50 l.

When deſigned to be removed for exportation, four hours previous notice muſt be given to the officer, that he may ſee the ſame meaſured and delivered out; and remain on board the veſſel till it is cleared out. The officer to give a certificate, directed to the officer at the place of exportation, expreſſing the quantity, maker's name and place of abode; and if ſuch certificate is not delivered the forfeiture is 50 l.

When deſigned to be ſhipped, at leaſt forty-eight hours previous notice muſt be given to the officers, on forfeiture of 5 s. *per* buſhel; and during the time of ſhipping when goods are not actually putting on board, the hatches muſt be locked down, with two locks to each hatch; one to be provided at the charge of, and to be kept by the proprietor, and the other by the officer; the hatches to be kept ſo locked down from the time of being firſt loaded, till the time of ſailing out of port.

And makers are to be allowed 3 d. *per* quarter, in conſideration of the charges of ſtorehouſes, meaſuring, &c.

From the exciſe of London, a computation may be made what a duty of 3 d. *per* buſhel upon all the malt in England would produce.

There was brewed in London, the year ending the 29th of June 1689, 1,212,550 barrels of ſtrong beer and ale, and 827,544 barrels of ſmall beer; ſo, of both ſorts of drink, there were brewed 2,040,094 barrels. To every ſtrong beer and ale, there is allowed three buſhels to a barrel, and to the ſmall, one; but much ſmall beer being brewed after the ſtrong, it may be a reaſonable medium to allow to both drinks, one with another, two buſh-

to the barrel; at which rate, to reckon by round numbers, there is uſed in London 4,000,000 of buſhels of malt.

The people of England, by the neareſt computations that can be made, are reckoned ſeven millions; of which London is accounted a tenth part; ſo that there may be in London 700,000 people: divide the 4,000,000 by 700,000, and there will be found to each man 5 buſhels 7-tenths of a buſhel. But the allowance of two buſhels to the barrel being rather of the leaſt, we may reaſonably allow to each man's conſumption fix buſhels of malt in a year, which would be 4,200,000 buſhels, that is, about three barrels a year; which to the maſs of the people blended together, will be about a quart a day.

So that if London, which is a tenth part of the people, conſume 4,200,000 buſhels of malt, the whole kingdom, which are ſeven millions, may conſume 42,000,000 of buſhels; which, at 3d. *per* buſhel, would produce, according to this calculation, 520,000 l. *per annum*; but the malt-duty is now an annual tax, as well as the land-tax, and produces about 700,000 l. a year. See *Duties*, and *Tax*.

MALTA. An iſland in the Mediterranean, ſituated in 15 deg. of E. lon. and 35 deg. 15 min. of N. lat. 60 miles ſouth of Cape Paſſaro in Sicily, and 200 eaſt of Tunis in Barbary. It is of an oval figure, 20 miles long, and 12 broad

This iſland is not ſo remarkable for trade, as for the military order of St. John of Jeruſalem; which has been in poſſeſſion of it ſince the year 1530, eight years after this order had been deprived of the iſland of Rhodes by Soliman the great Emperor of the Turks.

Trade however is pretty conſiderable there, though not in the natural productions of the iſland; which being almoſt a rock, furniſhes the inhabitants with few of the neceſſaries of life, and ſtill leſs for ſtrangers: but this trade is carried on by ſeveral Engliſh, Dutch, French, and Italian ſhips, which bring there all ſorts of merchandiſe, or thoſe which the Malteſe merchants uſually freight for corn, and other neceſſaries, in the ſeveral ports of Italy, eſpecially in Sicily.

However, in this iſland may be had cotton, which grows there in abundance; wax, and honey; the latter of which is ſo much eſteemed, that from hence the iſland received the Latin name of *Melita*. Beſides, there are ſeveral refreſhments and fruits, among others figs, melons, and raiſins; which are as excellent there as in any other part of the world: however, theſe raiſins are only for eating freſh or dry; experience having taught the Malteſe that they could not make wine of them.

The principal place is the city of *Malta*, ſituated in 15 deg. of E. lon. and 35 deg. 15 min. of N. lat. conſiſting of three towns, ſeparated by channels, which form ſo many peninſula's of ſolid rock, riſing a great height above the ſea, and have ſecure harbours in them capable of receiving whole fleets. Beſides the city, there are 26 pariſhes in the iſland, and between 30 and 40 villages, containing 50,000 people; of which one half are military men, and unmarried, ſubject to the grand maſter of the order, who has under him ſeven grand priors, and ſeveral knights of the order; all of them being obliged to ſuppreſs pirates; ſo that they are in a perpetual ſtate of war with the Turks, and the ſtates of Barbary.

MALVASIA, or *Napoli di Malvaſia*. A city and port-town of European Turky, in the province of Morea, ſituated on the Archipelago, 30 miles eaſt of Miſitra, and 30 of Setines.

MALVÁSY. See *Malmſey*.

MAMMUT. A monſtrous animal, whoſe bones and teeth are found in ſome parts of Muſcovite Tartary, which afford a kind of ivory.

MAMOTBANI. White, fine, and ſtriped muſlins, brought from the Eaſt Indies, particularly from Bengal; the pieces of which are 8 ells in length, and 3-4ths, 5-6ths in breadth.

MAMOUDI, or *Mamodie*. A ſilver coin current in Perſia, and in ſeveral parts of the Eaſt Indies, worth 8 d. ſterling.

MAMOUDIS. Painted callicoes, brought from the ſtates of the Grand Mogul, by the way of Surat.

MAMOUDIS, are alſo fine and white linnens brought from Mecca to Smyrna.

MAN *iſland*, or the *Iſle of Man*, is ſituated in the Iriſh ſea, in 4 deg. 30 min. of N. lat. See *Britiſh* iſlands, under the article Great *Britain*.

MAN, or *Mem*. A weight uſed in the Eaſt Indies. See *Maund*.

MAN *of war*, is a ſhip of battle, either bearing a royal commiſſion, or acting as a privateer. See *Fleet*, and *Navy*.

MAN. A merchant-ſhip is ſaid to be well manned, when ſhe has double the men abſolutely neceſſary barely to ſail her; ſo to employ as many men as are ſufficient to do any work on board, is called manning; as manning the capſtan, manning the top, manning the boat, and the like.

MANAR. An iſland in the Indian ſea, in Aſia, between the iſland of Ceylon and the continent, ſituated in 79 deg. of E. lon. and 9 deg. of N. lat. See *Ceylon*.

MANDRAGORA, or *Mandrake*. A medicinal plant, which makes a principal ingredient in the unguentum populneum.

There are two kinds of mandragora, male and female, each bearing a kind of apples; thoſe of the male, as well as the leaves, roots, and branches, being twice as large as thoſe of the female; but the juice of each is a narcotic poiſon equally violent.

Naturaliſts tell ſtrange ſtories of this plant: but, ſetting aſide its ſoporiferous virtue, the modern botaniſts will ſcarce warrant any of them, not even that human figure ordinarily aſcribed to its roots, eſpecially ſince the diſcovery of the artifice of Charletan's in faſhioning it, to ſurpriſe the credulity of the people.

Druggiſts ſell only the bark of the root; which muſt be choſen new, greyiſh within, reddiſh without, and covered with a little rind ſomewhat gravelly.

Chineſe MANDRAGORAS, is the plant ginſeng; which is ſo much in eſteem among them, that a pound of its root is valued at three pounds weight of ſilver. See *Ginſeng*.

MANDRENAQUE. A kind of cloth; the warp being of cotton, and the woof of the thread of the palm-tree, manufactured abundantly in ſeveral of the Philippine iſlands, and a great article of trade for the inhabitants.

MANEQUE. A name given by the Dutch to a kind of nutmeg, as long, and as big again as the ordinary ſort; which is not imported by them into Europe, in order to ſell it to more advantage in Perſia, and the Eaſt Indies; where it is uſed for ſuddenly ſtopping the courſes of women, without any danger, which in all probability would prove mortal to European women.

MANFREDONIA. A city and port-town of Italy, in the kingdom of Naples, ſituated in 16 deg. 40 min. of E. lon. and 41 deg. 20 min. of N. lat.

MANGALIS. A ſmall Eaſt Indian weight, of about 5 grains, uſed for the weighing of diamonds, emeralds, and other precious ſtones.

MANGALOR. A port-town of the Hither India, ſituated on the Malabar coaſt, in 76 deg. of E. lon. and 13 deg. of N. lat.

MANGANESE. A kind of iron ore, uſed in the glaſs manufactures.

MANGELIN. A weight uſed for weighing diamonds in the mines of Raolconda and Gani, in the Eaſt Indies; being 1 carat and 3-4ths. There are alſo mangelins in the kingdoms of Golconda and Viſapour, which weigh 1 carat and 3-8ths. The mangelins of Goa uſed by the Portugueſe, weigh only 5 grains, and are commonly called mangalis. See *Mangalis*.

MANGO. An Eaſt India fruit, much like ſmall melons, or large cucumbers; which is pickled in a particular manner, and of late imported into Europe.

MANIFEST, is a writing delivered by a captain of a ſhip on his entering a port, to the huſband, declaring the nature of his cargo.

MANIFESTO, is a public declaration, or reaſon, exhibited by a king or prince, whereby he ſhews the reaſon for his doing or forbearing any thing, for or againſt another prince, ſtate, or potentate; which ſometimes have great effect upon trade.

MANIFESTO, is alſo a term among the Engliſh, Dutch,

and French, in the Levant, for what is otherwiſe called a declaration.

The regulations of the Engliſh nation import, that the officers of their ſhips ſhall be obliged to deliver and produce faithful manifeſtos of their cargo, under the penalty of being puniſhed as ſmugglers, and expelled the ſervice: and by the regulations for the commerce of the Dutch nation, the captains, pilots, and clerk, are ordered to deliver their manifeſtos to the treaſurer, both at their arrival, and before their departure; as alſo to make oath that they are true and exact, under the penalty of 1000 crowns, and expulſion from employment; which manifeſtos are ſent yearly by the treaſurer to the directors of the Levant at Amſterdam, for the proving of their accompts.

MANIGUETTE. A kind of pepper brought from the coaſts of Africa; though that of Jamaica alſo bears the ſame name, but improperly.

MANILLA, or *Luconia*. See *Luconia*, or *Philippine*.

MANILLE, or *Menille*. One of the principal commodities carried by Europeans to the coaſts of Africa, to traffic with the Negroes in exchange for ſlaves; conſiſting of a large braſs ring, in form of a bracelet, either flat or round, plain or engraven; which the natives uſe to deck themſelves with, putting them on the ſmall of the leg, and the thick part of the arm above the elbow.

The better ſort among the Negroes wear ſilver and gold manilles; but theſe are of their own manufacture; moſt of the money they receive for their other merchandiſes being melted into manilles.

MANNA. A medicinal drug, of great uſe in the modern practice, as a gentle purgative, and cleanſer of the firſt paſſages. It may be ranked among the number of gums, which exſuding from the juice of a tree, and mixing with ſome ſaline particles of the air, is condenſed into thoſe flakes, in which it is brought to England.

The Italians gather three kinds of manna: manna di corpo, which oozes ſpontaneouſly from the branches of the aſh-tree, in the month of July: manna forzata, or forzatella, which is not gathered till Auguſt, after an inciſion of the tree, when the flux of the firſt has ceaſed: manna di fronda, which iſſues of itſelf, in little drops, like a kind of ſweat, from the nervous part of the leaves of the aſh, and gathers into grains about the bigneſs of thoſe of wheat, which are hardened by the ſun in Auguſt; the leaves being found ſo loaden with theſe grains, that they ſeem covered with ſnow.

The Syrian manna was formerly moſt in repute, but now gives way to the Calabrian: that moſt eſteemed is in tears, which many take to be factitious, and the work of the Jews at Leghorn; but it is by ſome imagined to be natural; and what gives it this figure is, that they put ſtraws and ſlips of wood in the inciſions; along which the manna gliding is condenſed as it comes out, and aſſumes this form.

The manna begins to run from the woods of aſh, or, as they ſay in the ſcripture-ſtile, to rain, the beginning of Auguſt; and if the ſeaſon proves dry, they gather it five or ſix weeks: from which his Sicilian Majeſty has ſo large a revenue, and is ſo extremely jealous of it, that, during the ſeaſon, the woods are guarded by his ſbirri, or ſoldiers, who even fire upon people that come into them; and the King makes the ſtealing of the liquor, death. However, we are aſſured, by Robert More of Lindley, in the county of Salop, Eſq; a very ingenious gentleman, who lately made the tour of Italy, that the Neapolitans have many ways of counterfeiting the ſeveral appearances of manna; and that the moſt common is with Glauber's ſalt, and ſugar, with a ſmall mixture of manna.

The price of manna at Naples is 4 carlins, or 1 s. 6 d. ſterling, for every retolo, or 32 ounces.

MANNA *of incenſe*. See *Frankincenſe*.

MANS. A weight of about 12 lb. uſed in Perſia, particularly in the neighbourhood of Tauris.

MANS, is alſo a city of France. See *France*.

MANTE. A French town, remarkable for the excellency of its wine. See *France*.

MANTUA *duchy*. See *Italy*.

MANTUA, or *Mantoe*, is alſo a woman's gown, made in the moſt exact manner to fit her ſhape or perſon.

MANUFACTURE, or *Manufactory*. The place where ſeveral workmen or artizans aſſemble for working at one kind of work; but the term alſo ſignifies ſtuffs, cloths, and ſuch like. As this cloth is of a good manufacture, it is well wrought, or well made. See *Journeyman*.

By the ſtatute of the 1ſt of Richard III. points, leather laces, purſes, pouches, pins, gloves, knives, hangers, taylors ſheers, ſciſſars, andirons, cupboards, tongs, fire-forks, gridirons, ſtock-locks, keys, hinges, and garnets, ſpurs, painted glaſs, painted papers, painted forcers, painted images, painted cloths, beaten gold, or ſilver wrought in papers for painters, ſaddles, ſaddle-trees, horſe-harneſs, boots, bits, ſtirrups, buckles, chains, latten nails with iron ſhanks, turnets, hanging candle-ſticks, holy water ſtops, chafing-diſhes, hanging lavers, curtain-rings, cards for wool, Roan cards, except clasps for garnets, ſheers, buckles for ſhoes, broches or ſpits, bells, hawk-bells, tin, and leaden ſpoons, wire of latten and iron, iron candleſticks, grates, horns for lanthorns, or any of the ſaid wares made and wrought pertaining to the crafts of girdlers, point-makers, pinners, purſers, glovers, joiners, painters, card-makers, wire-mongers, weavers, horners, bottle-makers, or copper-ſmiths, may not be imported by ſtrangers to be ſold, upon forfeiture of the value.

It is an infallible maxim in every trading country, that the more their importation of foreign merchandiſe exceeds the exportation of their own, ſo much more unavoidable will be their miſery and ruin at laſt; and the damage ſuch a traffic uſually brings upon a whole kingdom, are even greater than any that have been felt by the moſt devouring locuſts. Some nations, France and Holland in particular, have conſtantly their great diſadvantage in their eye; and, to prevent their fatal conſequences, employ that wiſe and prudent meaſure of raiſing the duties upon foreign commodities imported into the country, as much, and ſometimes more, than treaties of peace allow of, never conſenting to any abatement or indulgence whatſoever; while, at the ſame time, they give leave to export their own manufactures, requiring only a moderated duty, and letting ſome ſorts go out entirely free. To prove the truth of this point, it may be neceſſary here to produce a few examples.

By the tariff which Lewis XIV. aſſiſted by the great penetration and ſkill of his vigilant miniſter John Baptiſt Colbert, publiſhed in the years 1664 and 1667, all foreign cloths imported into France paid a duty of above 25 *per cent*. while thoſe manufactured in his own kingdom were allowed to go abroad, paying only 1 *per cent*. and other commodities were exported free of all duty.

This appears from the edicts above mentioned, and other circumſtances; and it may be added, to encourage the other manufactories of that large and plentiful country of Languedoc, the government of France ſettled a premium of about 1 l. 10 s. ſterling, to be given to the maſter for every piece of fine cloth, meaſuring 30 French yards, that they ſhould manufacture and ſend abroad.

In regard to materials, they obſerve a rule ſo contrary, but equally advantageous, that they impoſe heavy duties upon the exportation of them, and ſometimes prohibit them entirely, under rigorous penalties, as in England with wool, that their own country may reap the benefit of the large gain which ariſes from working it up. But they lay very ſmall duties, often none at all, upon the importation of materials, which they are in want of, eſpecially for their manufactures. This is practiſed in Holland, in reſpect of Spaniſh wool, which is imported free, as appears from their own tariff, publiſhed at Amſterdam in 1710; for ſo dextrous are they, and attentive to the general intereſt of the ſtate, that they have conſtantly their eye, and gather the fruits of a piece of experience that this is a mine more fruitful of gain than thoſe of Potoſi; ſince, by working up into cloth a certain portion of wool, that lies them in a hundred guilders, they reduce from it the amount of 500; for they calculate, that in a yard of fine cloth, the wool it is made of amounts to a fifth of its value; and the reſt is labour, dying, and other expences. So that there remains, as it were, to the manufacturer an intereſt of 4-5ths; and a million of

ney in materials he can improve to the value of five millions.

This ſhews how expedient it is to encourage manufactures, in order to trade, in a great meaſure at leaſt, without native commodities.

To ſhew how exciſes, cuſtoms, and ſalt-duties, increaſe the expences of the people, and conſequently ruin the trade of Great Britain, the following account may not be improper; which is extracted from a book, entitled, *An eſſay on the cauſes and decline of the foreign trade, &c. of Britain.*

1. The duties themſelves.

The net produce of the taxes following, was before the war computed to be, one year with anothor, as under.

Exciſes,	about	*L.* 2,800,000
Cuſtoms,	about	1,700,000
Salt,	about	150,000
		4,650,000
The charges of raiſing theſe duties are about 10 *per cent.* -		465,000
		5,115,000

2. The advanced price of thoſe goods the above dutes are laid on.

Woeful experience teaches us, that every ſmall duty laid on commodities, raiſes the prices of them conſiderably to the conſumer, beyond the groſs duty.

By the fees given to officers, the tyrants of traders.

By tradeſmens loſs of time in attending upon exciſemen or at cuſtom-houſes: a trader's time is his bread.

By taking away a quarter part of our traders ſtocks for duties, and forcing them to take as great profit on 3-4ths of their ſtocks laid out in goods, in order to live, as they would on the whole if duty free.

By tradeſmens profits on the duty and advances in all the hands all taxed goods come through to the conſumer; as for example:

Suppoſe there ſhould be no other tax but that on leather, let us ſee how many advances that would make on the price of our ſhoes.

The grazier lays (1) on the beaſt he fats his advanced price of ſhoes; he ſells to the butcher, who takes (2) his profit on the grazier's advanced price of the beaſt, and raiſes (3) on the hide his advanced price of ſhoes; he ſells to the tanner, whoſe journeymen raiſe (4) their wages on account of their advanced price of ſhoes: the tanner pays (5) the tax of 2 d. *per* pound on leather; takes (6) his profit on the before mentioned five advances, and raiſes (7) on the tanned hide his advanced price of ſhoes; he ſells to the leather-cutter, who takes (8) his profit on the before mentioned ſeven advances, and raiſes (9) on the hide he cuts his advanced price of ſhoes; he ſells to the ſhoemaker, whoſe journeymen raiſe (10) their wages on account of their advanced price of ſhoes; the ſhoemaker takes (11) his profit on the before mentioned ten advances, and raiſes (12) on the ſhoes he makes the advanced price of the

Brought over	5,115,000

ſhoes he wears; he ſells to the conſumer with all theſe twelve advances, highly magnified beyond the bare duty.

So much for the tax on leather only: but the grazier, butcher, tanner, leather-cutter, and ſhoemaker, uſe ſoap; that ſoap like leather is taxed, and like that leather-tax muſt be raiſed; but that cauſed twelve advances on our ſhoes, true, place therefore twelve advances more on ſhoes for the ſoap-tax. Theſe tradeſmen uſe candles, twelve advances more for the tax on them; and the ſame for every other tax on neceſſaries. All which duly conſidered, might be computed at above *cent. per cent.* on the groſs produce of the duties; but though the large duties cauſe ſome farther advance on all the goods they are laid on, charged with profit upon profit through every hand they paſs; yet as they keep not pace with the ſmall duties, and all calculations appear faireſt when moderate, I chuſe to abate in the advances, and to ſet them only at 50 *per cent.* 2,557,500

The amount of the advanced price of the goods the above duties are laid on. - - 7,672,500

Let us ſee how this 7,672,500 l. circulates through the people, advances the prices of our goods, conſequently ruins our trade.

1ſt, This dearneſs of all neceſſaries, which raiſes the firſt coſt of goods, muſt advance the price of all labour.

The Spectator, N°. 200. computes, that the people without property, who work for their daily bread, conſume 2-3ds of our cuſtoms and exciſes; therefore they pay 2-3ds of them, and their conſequences. As theſe people live but from hand to mouth, whatever is laid on them, they muſt therefore ſhift off, or they can't live; and ſince theſe various taxes have been projected, they muſt earn enough when they work to pay the taxes, the advanced price of taxed goods, and the advanced prices of all other neceſſaries, *viz.* meat, bread, clothing, or whatever they can uſe, not only for the conſumption of the days they are employed, but for thoſe alſo that they are not; therefore they are the cauſe of raiſing the wages of the working people $\frac{2}{3}$ of 7,672,500 l. the amount of the advanced price of the goods the above duties are laid on; which makes 5,115,000

2dly, This dearneſs of all neceſſaries forces the maſter-tradeſmen to raiſe on their cuſtomers the taxes and advances on their conſumption.

The above Spectator allows 1-3d conſumption of our cuſtoms and exciſes to the people with property; but as theſe may be divided into two claſſes, *viz.* in trade, and out of trade; and the

Brought over 5,515,000

proportion conſumed by each not being aſcertained by any author, I ſhall compute them at half and half. Therefore the maſter-tradeſmen, or people with property in trade, *viz.* merchants, manufacturers, mechanics, farmers, wholeſale dealers, and retailing ſhopkeepers, muſt each lay on the goods they ſell, the advanced price of the taxed goods they conſume, whether food, cloathing, or utenſils: their 1-6th conſumption of 7,672,500 l. the amount of the advanced price of the goods the above duties are laid on, makes 1,278,750

6,393,750

3dly, Tradeſmen paying advanced prices on their goods, muſt have advanced profits; for whether they lay out their ſtocks of money in goods that bear their natural value only, or goods that bear double that value by taxes, ſtill a living profit muſt be obtained on the ſtocks they employ.

For the wages of the manufacturer, the mechanic, the labourer, and the expences of the maſter-tradeſman, being of neceſſity raiſed, the firſt coſt of goods muſt be ſo too; and conſidering the various tradeſmens hands that goods paſs through from the workman or labourer to the conſumer, charged with profit upon profit by each of them, which in the little trades muſt be very great, otherwiſe their returns being ſmall, they could not live, the advance thereby occaſioned may, at a moderate rate, be computed at 50 *per cent.* to the conſumer on the above two articles, which raiſes the firſt coſt of goods, and makes 3,196,875

9,590,625

People with property out of trade, their 1-6th conſumption of 7,672,500 l. the amount of the advanced price of the goods the above duties are laid on, makes 1,278,750

Total advance 10,869,375

This is part of the amount of the conſequences of raiſing 4,650,000 l. for the government, by our preſent manner of taxing goods.

Our other taxes are, the land-tax, the groſs produce, at about 4 s. in the pound, is about 1,960,000

The ſtamps, windows, poſt-office, &c. their computed groſs produce about - 500,000

The poor's tax is computed, on a middling rate, to equal the land-tax; but muſt be much more when trade is reduced, and the price of proviſions high: however, to reckon it at no more than the land-tax, or 1,960,000

General amount of all our taxes, and part of their conſequences, before the war 15,289,375

Let us ſee now the amount of our taxes, with regard to our expences. The Britiſh Merchant, vol. 1. p. 165. computes our people at ſeven millions, and their expences at 7 l. *per* head; but as neceſſaries are grown dearer ſince the year 1713, when he wrote, and the number of people increaſed, I ſhall

compute the people at eight millions, and their expences at 8 l. *per* head; which makes our total expence annually - 64,000,000

Of which ſixty-four millions the people pay for the taxes, and their conſequences, as above - - 15,289,375

Which being ſubtracted, their expences, if untaxed, would be only - 48,710,625

15,289,375 l. charged on 48,710,625 l. is a tax of above 31 *per cent.* on the expences of the people, which must add a prodigious artificial value to our goods, conſequently render them leſs ſaleable, and ruin our trade. If it be aſked, whether foreigners, for what goods they take of us, do not pay on that conſumption a great portion of our taxes?

The anſwer is, That it muſt be admitted they do; but that was originally intended and expected to continue the ſame as at the firſt laying on of our taxes, it will be the ſtrongeſt argument againſt them; for as our taxes on neceſſaries are proved to be ſo burdenſome and extenſive, by raiſing the prices of our goods, foreigners take leſs of them yearly; and when the demand is reduced, the people having leſs work, find leſs money to pay, and must have their taxes proportionably increaſed on them as they loſe their trade; for as the government abates neither expences nor taxes, and if one method of taxing fails, another is tried, what foreigners ceaſe to pay, we must; or, in other words, the leſs trade and money, the more taxes; and the more our taxes are, the leſs and leſs trade and money we know we muſt expect. Is not this like adding to a horſe's burden, and diminiſhing his meat? and muſt we wonder if he ſinks under his load? Perhaps figures may explain this ſtill clearer, by ſtating a ſimilar account through thirty years.

Suppoſe that in the year 1710, all our taxes, and part of their conſequences, were as they are now, 15,289,375 l. that foreigners paid then 1-7th of them, and our own people 6-7ths; that foreigners going to cheaper markets ſince, have ceaſed taking goods from us yearly, in proportion to 1 *per cent.* only on their former 1-7th part of our taxes, and their conſequences, the account every five years will ſtand thus.

	Foreigners paid of our taxes, &c.	Our own people paid
Anno 1710	*L.* 2,184,196	*L.* 13,105,179
1715	2,074,987	13,214,388
1720	1,965,778	13,323,597
1725	1,856,569	13,432,806
1730	1,747,360	13,542,015
1735	1,638,151	13,651,224
1740	1,528,942	13,760,433

By this it plainly appears in what manner our preſent taxes drive away our trade, and burden our people, we have by this account 655,254 l. more to pay in 1740 than they had in 1710, with 3-10ths leſs trade to pay it. To conclude this head: two of our greateſt authors clearly foreſaw, at the laying on our numerous exciſes, cuſtoms, &c. that theſe unhappy conſequences muſt neceſſarily follow; and their arguments are a full proof of what has been already advanced.

Mr. Locke, in his Conſiderations, &c. p. 90, ſays, That for raiſing three millions on commodities, and bringing much into the Exchequer, there muſt go a great deal more than three millions out of the ſubjects pockets, for a tax of that nature cannot be levied by officers to watch every little rivulet of trade without a great charge, eſpecially at firſt trial; but ſuppoſing no more charge in raiſing it than a land-tax, and that there are only three millions to be paid, it is evident, that to do this out of commodities, they muſt to the conſumer be raiſed proportionably in their price; ſo that every thing to him that uſes them muſt be a quarter dearer. Let us ſee now who, in the long-run, muſt pay this quarter, and where it will reſt. It is plain the merchant and broker neither will nor can; for if he pays a quarter more for commodities than he did, he will ſell them at a price proportionably raiſed; the poor labourer and handicraftſman cannot, for his

lives from hand to mouth already; and all his food, cloathing, and utenſils, coſting a quarter more than they did before, either his wages muſt riſe with the price of things to make him live: or elſe, not being able to maintain himſelf and family by his labour, he comes to the pariſh.

And afterwards he proves, that in the home-conſumption the whole burden falls on land at laſt.

Dr. Davenant, in his Eſſays on trade, vol. 3. p. 30. aſſerts, that as to manufactures, high exciſes in time of peace are utterly deſtructive to that principal part of England's wealth; for if malt, coals, ſalt, leather, and other things, bear a great price, the wages of ſervants, workmen, and artificers, will conſequently riſe, for the income muſt bear ſome proportion to the expence; and if ſuch as ſet the poor to work find wages for labour, or manufactures advance upon them, they muſt riſe in the price of their commodity, or they cannot live; all which would ſignify little, if nothing but our own dealings among one another were thereby affected; but it has a conſequence far more pernicious in relation to our foreign trade; for it is the exportation of our own product that muſt make England rich.

And in p. 31. "But the conſequence of ſuch duties, in times of peace, will fall moſt heavily upon our woollen manufactures; of which moſt have more value from the workmanſhip than the materials; and if the price of this workmanſhip is enhanced, it will in a ſhort courſe of time put a neceſſity upon thoſe we deal with of ſetting up manufactures of their own, ſuch as they can, or of buying goods of the like kind and uſe from nations that can afford them cheaper."

Beſides the miſfortunes ariſing from our taxes, we have ſome monopolies very deſtructive to a trading nation, and inconſiſtent with a free one; which encourage idleneſs, villainy, and extravagant demands for wages or goods, whereby the many are deprived of their rights, without having committed any crime to forfeit them, and for the benefit of a few only: a country that ſuffers them cannot ſend its goods ſo cheap to a foreign market as its neighbours, for never yet was a monopolized trade extended to the degree of a free one; therefore any country abounding in monopolies muſt decline in trade.

MANURE, or *Compoſt*, is that matter which is uſed for the improvement of land; as dung, marle, lime, peat, ſoot, ſalt, and ſea-ſhells. See *Agriculture*.

MAO, or *Main*. A weight uſed in ſome parts of the Eaſt Indies.

The mao of Akgbar, a town in the Mogul's territories, weighs 50 lb. avoirdupoiſe; and that of Ziamger, another Indian town, 60 lb.

MAON, or *Mahon*. A port-town of Minorca, ſituated on a fine bay in the Mediterranean, in 4 deg. 6 min. of E. lon. and 39 deg. 50 min. of N. lat. See *Minorca*.

MAP. A repreſentation of the whole globe, or any part of it. See *Chart*, and *Globe*.

MARACAIBO. A city and port-town of South America, in the province of Terra firma, ſituated in 76 deg. of W. lon. and 10 deg. 45 min. of N. lat.

MARACAIBO *Lake*, on which the town ſtands, is near 200 miles long, and 100 broad; which running from ſouth to north, diſcharges itſelf into the north-ſea.

MARAVEDIS. A ſmall Spaniſh copper coin, of little currency, though uſed by the Spaniards in all their accompts, conſidered either as a real coin, or money of accompt; of which 34 make 1 rial de vellon, and 68 the rial de plata or ſilver, or $10\frac{3}{4}$ d. ſterling.

Foreigners eſtabliſhed in Spain keep their books as much for their own conveniency, as for a proportion with the coins of other countries in maravedis, and rials of plata; whereas the Spaniards almoſt always keep them in maravedis, and rials de vellon, or copper, which makes almoſt a difference of one half in the totals.

MARBLE. A fine kind of ſtone, found in great maſſes, dug out of pits or quarries; being of a conſtitution ſo hard and compact, and again ſo fine, as readily to take a beautiful poliſh; much uſed in ornaments of buildings, as columns, ſtatues, altars, tombs, chimney-pieces, tables, and the like.

There are infinite numbers of different kinds of marble, uſually denominated, either from their colour, their age, their country, their grain, their degree of hardneſs, their weight, or their defects. Some are of one ſimple colour, as white, or black; others variegated with ſtains, clouds, waves, and veins; but all opake, excepting the white, which, when cut into thin pieces, becomes tranſparent.

Some under the genus of marble, comprehend alſo porphyry, ſerpentine, granate, and alabaſter.

MARCASITE. A ſort of metallic mineral; making a kind of ſeed or firſt matter of metals; on which principle there ſhould be as many different marcaſites as metals: and this is true in effect; the name being applied to every mineral body that has metallic particles in its compoſition; though not enough to make it worth working; in which caſe it would be called an ore.

There are only three kinds in the ſhops; marcaſite of gold, of ſilver, and of copper; though ſome repute the loadſtone, marcaſite of iron; biſmuth, marcaſite of tin; and zink, or ſpelter, marcaſite of lead; but this ſhould be left to chemiſts. See *Loadſtone*, *Biſmuth*, *Spelter*, and *Zink*.

Marcaſite of gold is in little balls, or nodules, about the bigneſs of nuts; nearly round, heavy, and of a brown colour without.

Marcaſite of ſilver is like that of gold, only paler coloured: within, the colour differs very much, the one having a gold colour, and the other a ſilver one, both ſhining and brilliant. The marcaſite of copper is about the bigneſs of a ſmall apple; round, or oblong; brown without, yellow and cryſtalline within, brilliant and ſhining.

Marcaſites are found in mines of metals; all of them containing ſulphur, and a vitriolic ſalt, eſpecially that of copper; ſome of them alſo contain antimony and biſmuth.

MARCO. A weight uſed by the Portugueſe of Goa, for amber, coral, ſilver, gold, muſk, civet, and other precious merchandiſes; being equivalent to eight ounces.

MARDIKE. A port-town of the French Netherlands, ſituated 4 miles weſt of Dunkirk, in 2 deg. 20 min. of E. lon. and 51 deg. of N. lat. See French *Netherlands*.

St. MARGARET. An iſland on the coaſt of Provence in France. See *French* iſlands.

MARGARETTA *Iſland*, is one of the largeſt of the Leeward iſlands, ſituated in 64 deg. of W. lon. and 11 deg. 30 min. N. lat. See *Spaniſh* America.

MARGATE. A port-town of Kent, ſituated in 1 deg. 22 min. of E. lon. and 51 deg. 24 min. of N. lat.

The MARIAN, or *Ladrone Iſlands*, are a great number of ſmall iſlands, lying in 140 deg. of E. lon. and from the latitude of 12 deg. to about 28 north; about 8000 miles weſt of Acapulco in North America, and about 1800 eaſt of Canton in China.

The principal iſlands are *Guam*, or *Iquana*, which lies in the latitude of 13 deg. 21 min. according to Dampier; and 7302 miles to the weſtward of Cape Corientes, in the kingdom of Mexico. *Sarpanta* is in lat. 14. *Buenviſta* in lat. 15. *Saeſpar* in lat. 15. 40. *Anatan* in lat. 17. 20. *Saragan* in lat. 17. 25. *Guagan* in lat. 18. *Alamaguam* in lat. 18. 18. *Pagon* in lat. 18. the burning mountain of *Griga* in lat. 19. 33. *Tinian*, and *Manga*, in lat. 20. 45. *Urrac* in lat. 20. 55. *Iſle de Patas* in lat. 25. 30. *La Diſconocida* in lat. 25. 50. and *Malabrigo* in lat. 27. 40.

Europeans have had a knowledge of theſe iſlands ſince 1520, when Magellan diſcovered them, after having paſſed from the North into the South ſea, through the ſtrait called by his name. He gave them the name of the Thieves, or Ladrone iſlands, upon account of the iſlanders ſtealing from him ſome trifles, particularly hails, and old ſcraps of iron; as alſo the iſlands de las Velas, upon account of the great number of canoes with one ſail which ſurrounded his ſhip.

But they were afterwards called the Marian iſlands from Mary-Ann of Auſtria, Queen of Spain, who ſent miſſionaries there in 1665, after the Spaniards had taken poſſeſſion of them.

They lie to the extremity of the Eaſt in that great extent

tent of ſea, ſituated between Japan, the Philippines, and Mexico.

There is an opinion that they had always ſome trade with the Tartars; but it is certain, that before Magellan arrived there, they believed themſelves the only inhabitants of the earth, not knowing even the uſe of fire, which they firſt took for a devouring animal, dangerous to be approached.

Since the eſtabliſhment of the Spaniards in Guam, and ſome other of theſe iſlands, there is a trade carried on to the Philippines, about 200 leagues from them; and the Acapulco ſhips put in there annually for refreſhments, which they exchange for linnens, iron, hard and haberdaſhery wares; but this trade is of little conſideration; though, by their ſituation between Aſia and America, they favour the trade which may be carried on by the South ſea into the Eaſt Indies.

MARIEN-GROS. A money of accompt, uſed by the traders of Brunſwick, and divided into 8 pennings, 36 making the rix-dollar, or 4 s. 6 d. ſterling.

MARIGALANTE. One of the leaſt of the Caribbee iſlands, ſituated in 61 deg. of W. lon. and 16 deg. 20 min. of N. lat. See *French* America.

MARIGNAN. A port-town of Brazil, in South America, ſituated in 44 deg. of W. lon. and 2 deg. 15 min. of S. lat. See *Portugueſe* America.

MARINER. A ſeaman, or ſailor, whoſe buſineſs is going to ſea, in order to tranſport goods or perſons from one country to another. See *Seaman*.

MARINES. Soldiers who are carried in ſhips of war, to defend them againſt the enemies boarding them, or for acting by land.

MARITIME. Any thing belonging to the ſea.

MARITIME *Law*. See *Civil* law, and *Admiralty*.

MARITIME *Powers*, is a term given to ſuch nations as are moſt conſiderable for their naval armaments, and commercial intereſt; but it is more peculiarly applied to Great Britain, and the States-General of the United Provinces, who have long acquired and ſupported this character; though the French ſeem now to be intitled to a ſhare in it.

Upon the fall of the Roman empire, the trade of Europe ſeemed to be in ſome meaſure extinguiſhed; but very ſoon revived again among the Saxons, who, when they became maſters of England, eſtabliſhed a vaſt maritime power there; which however did not continue long, the Danes, by their great ſuperiority, making themſelves maſters of the country in this reſpect. After ſome ages, commerce and maritime power retired ſouthward; and were in a manner wholly poſſeſſed by the Italian ſtates, particularly by the Venetians and Genoeſe, who ſhared between them the traffic of the Eaſt, which enabled them to draw the wealth of other nations to themſelves.

But in the 13th century, ſeveral free cities in Germany began to league together for the ſupport and maintenance of their trade, and ſoon made their confederacy known to the world, by the title of the *Hanſeatic league*. As their trade brought them in immenſe riches and power, it rendered them haughty and inſolent, which by degrees brought on their ruin; to which however other circumſtances contributed: for in the 15th century the Portugueſe perfected a new plan in the Eaſt Indies, by the Cape of Good Hope; and about the ſame time the Spaniards diſcovered America; which threw the maritime trade of Europe, and its chief naval power, into the hands of theſe nations; who, if they had known how to cultivate it with ſkill, and to uſe it with moderation, might have raiſed it much higher, and have made it much more laſting than it proved; eſpecially when both the trade of the Eaſt and Weſt Indies was in the hands of the ſame prince; which happened by the acceſſion of Philip II. of Spain to the crown of Portugal.

But as almoſt all evils point out, and in time produce their own remedies; ſo the boundleſs ambition and cruel oppreſſion of the Spaniards conſtrained the United Provinces to throw off their yoke, and enraged their inhabitants, and the Engliſh, to endeavour by their expeditions in both Indies, to ſhare in thoſe riches, which were the great ſource of the Spaniſh power; and from this very particular, thoſe which are now called the maritime powers originally aroſe. The progreſs of the Dutch was amazingly quick; for in the ſpace of little more than half a century, from having hardly any ſhips at all, they came to have more than all Europe put together.

Since that time the inhabitants of Great Britain, by extending their commerce, and eſpecially by multiplying their colonies, have raiſed their maritime power greatly ſuperior in every reſpect to the Dutch, as all intelligent writers, and particularly foreigners, agree. This of late induced the partizans of the French court to ſuggeſt to the ſtates, that they are in more danger from the growing trade, and naval power of Great Britain, than from the ambitious deſigns of all their other neighbours: yet the French themſelves have of late years laboured with great diligence, not only to raiſe a maritime power, but to extend their trade into all parts of the world; in which they have been very ſucceſsful: for though the late general wars, in a great meaſure, ruined their navy; yet their commerce is even at this juncture, or was at leaſt after the breaking out of the laſt war, in a better condition than ever. So that the maritime affairs of Europe have in this laſt century ſuffered a very great change, though very probably they may ſuffer more.

The like attention to commerce and maritime power has, within theſe 50 years, appeared in almoſt every nation of Europe. The Swedes, Danes, and Pruſſia, have ſet up Eaſt India companies. The Ruſſians have opened a new advantageous traffic, as well on the Caſpian as the Black ſea. The houſe of Auſtria ſhewed a great deſire of reviving the antient commerce of the Low Countries; and when that was found impracticable, made ſome regulations at Trieſt and Fiume. The Genoeſe have within theſe few years erected a company of inſurance, on purpoſe to encourage their ſubjects to venture upon long voyages, and, if poſſible, to recover their old reputation as a maritime power. Nay, even the Spaniards themſelves, who in this reſpect have ſlept for ſuch a number of years, have at laſt opened their eyes, erected ſome, and have under conſideration the erecting ſeveral other companies, for the encouragement and extenſion of trade through their European and American dominions.

We may ſafely infer from theſe inſtances, that the navigation and ſhipping of the Europeans in general is, within the laſt 50 years, greatly increaſed. And as a farther proof of this, we need only conſider the numerous fleets and great embarkations of different powers; ſuch as the Ruſſians, Swedes, and Danes, in the north; the invaſion of Sicily and Africa, by the Spaniard, and many others.

Sir Walter Raleigh made a very ingenious calculation of the maritime power of Europe in his time; and Sir William Petty, from better lights, gave us another calculation, which has been conſidered as the ſtandard ever ſince. He thought the Dutch had about 900,000 tons of ſhipping; Great Britain, 500,000; Sweden, Denmark, and the towns in Germany, 250,000; Portugal and Italy, 250,000 likewiſe; and France about 100,000. But ſince that time things have been very much altered, inſomuch that the Britiſh ſhipping was, before the breaking out of the laſt war, at leaſt double to what it might be at the concluſion of the peace of Utrecht. It is acknowledged a very difficult thing to pretend to give with any degree of exactneſs the preſent proportions of maritime power: however, till a better can be furniſhed and formed, the following table may have its uſes.

If the ſhipping of Europe may be divided into twelve parts, then Great Britain hath - 6

The United Provinces - -	6
The ſubjects of the northern crowns	2
The trading cities and ſea-ports of Germany, and the Auſtrian Netherlands	1
France - -	2
Spain and Portugal -	2
Italy, and the reſt of Europe	1

The grounds upon which this calculation ſtands, would require a great deal of room to explain; and, after all, it might prove no eaſy taſk to perſuade thoſe who are not acquainted with the commerce only of this or that particular country, to admit that the computation is fairly made: but, however, it will be found that ſuch as are concerned with any particular country, will allow the table to be right enough as to the reſt; which is as much as any one can well expect. But beſides ſhewing the ſtate of commerce at this day, there is another uſe to which this computation may be applied; and that is, by way of ſtandard, to ſee how far one part riſes, or another ſinks, in this reſpect; for if ever it ſhould come to paſs, that theſe proportions ſhould vary conſiderably, it is plain that this muſt produce very great and ſenſible alterations in the general ſtate of affairs.

Thus, for inſtance, if the houſe of Bourbon ſhould ever acquire as great a proportion of trade and naval power as either of the maritime powers, it would be an acquiſition of much more conſequence than they have hitherto made in point of territories or dominions: but at the ſame time we muſt be aware of another thing; which is this, not only the proportion, but the total of maritime power, may alter; and in that caſe the growth of any particular ſtate, though advantageous to itſelf, would not render it more formidable to others.

This computation likewiſe ſhews how much it is the intereſt of the maritime powers, to ſuſtain their characters in that reſpect, at all events; ſince by this means only they can preſerve their independency, protect their ſubjects where-ever they may be ſettled and diſperſed, and aſſiſt their allies, notwithſtanding the ſuperior, as well as boundleſs ambition of any aſpiring neighbour. We need not wonder then at a common notion which prevails, as if we had a right to preſcribe to ſome other nations the bounds of their naval greatneſs. We cannot pretend to vindicate the exerciſe of ſuch a prerogative; but it would be no ill ſtroke of policy, ſhould any ſtate, really miſtreſs of ſuch power, exert it upon extraordinary occaſions, though under ſuch colour and pretences as might effectually hide it: for it may be laid down as a thing certain, that nothing is ſo dangerous to a maritime power as pride; and, in conſequence of that pernicious principle, an ill uſe of it.

What is before ſpoken of trade or commerce, may very well anſwer the ends expected from it in an hiſtorical light, and teach us tolerably well of the nature, extent, and comparative ſtrength of what is called the maritime power. But, in a political ſenſe, this will not by any means ſuffice. If we will really judge of things as they are, we muſt be thoroughly acquainted with their inſides, and not content ourſelves with the bare conſideration of appearances. We ſee and know, that whatever ſtate and power is poſſeſſed of extenſive trade, muſt have a great naval force, the effects of which will render her conſiderable; yet it is very requiſite to know how this ariſes, and why the ſtrength and dominion of a maritime power is firmer and more durable than that which ariſes from a great extent of territory, multitudes of ſubjects, and rich and fruitful countries.

Firſt, then, trade is extremely ſerviceable to any nation, let the form of its government be what it will; becauſe it introduces induſtry and arts, by which the manners of a people are entirely altered; for it is not abſolutely the number of ſubjects, but the number of uſeful ſubjects, that makes any ſtate powerful. In the next place, it introduces property; for without ſecurity with reſpect to that, it is impoſſible that trade ſhould flouriſh; and in this reſpect it leſſens ſome, and takes away many inconveniencies, to which every kind of government is from its nature liable. And, laſtly, it draws an almoſt inconceivable flux of people, where-ever it is thoroughly fixed.

Hence we may eaſily aſſign the true cauſes of the long duration of republicks famous for trade, ſuch as Tyre and Carthage in antient times, and the Venetians and Genoeſe in later ages. It is impoſſible that a nation, active and induſtrious, rich and populous, and at the ſame time living under a mild government, ſhould not exert a greater force when employed in attacking others, and have much greater reſources in caſe ſhe is attacked herſelf, than other ſtates that want theſe advantages. Hence it may appear how the ſtate of Holland roſe to ſuch vaſt power, in ſo ſhort a time, and how her ſubjects have been able to thrive and grow rich under taxes and impoſitions, which muſt have beggared them in any other ſituation than that of a trading republic.

Secondly, trade alters the comparative ſtrength of ſtates and kingdoms; becauſe where-ever it reſides, it creates ſo many and ſo great advantages, and begets ſuch relations and connections, as render a trading ſtate infinitely ſuperior to her neighbours. For ſuch a ſtate, if on the continent, can fortify her great towns ſo as to reſiſt a power ten times ſtronger in reſpect to people: ſhe can maintain, if it be requiſite, great numbers of regular troops, and on any emergency can hire more from her neighbours, beſides what ſhe may be able to do by the help of her maritime force. Hence ariſes that ſtrength and real power ſhewn by trading republicks, when attacked by ambitious princes, or even by powerful confederacies.

Thus the Venetians have often been too hard for the Turks, the Genoeſe for the moſt powerful princes in Italy; and, in earlier times, the Lubeckers for the greateſt powers in the north. Hence the famous league of Cambray, which was formed for the deſtruction of the ſtate of Venice in 1509, came to nothing, though the greateſt princes of that time engaged in it; though the Venetians themſelves were guilty of ſome indiſcretions, and though they had been much exhauſted by foreign wars. Thus alſo the famous confederacy between France and Great Britain againſt Holland in 1672 proved abortive; though at the firſt even the Dutch themſelves thought their affairs deſperate; but ſtill their love of liberty encouraged them to reſiſt, and their trade furniſhed them with the means of getting tolerably out of that war.

Thirdly, trade has not only a very great influence on the particular affairs of nations ſeparately conſidered, and is almoſt the ſole cauſe of a comparative difference in the ſtrength and forces of moſt of the powers of Europe; but it is alſo of infinite advantage to this quarter of the globe in general; keeps us free from all apprehenſions of being over-run by thoſe barbarous empires, which the Mahometan religion has eſtabliſhed in the world, and alſo brings us every thing that is rich and coſtly, every thing that is curious and valuable, even from the remoteſt quarters of the earth; ſo that to trade alone is, ſtrictly ſpeaking, due that ſuperiority which Europe has over the other parts of the world. In a word, it is to commerce that the people of Europe owe their freedom and independency, their learning and arts, their extenſive colonies abroad, their prodigious riches at home, and, above all, that maritime power, which ſo much ſurpaſſes any thing of the ſame kind in other parts of the world, and whatever was attempted that way in former ages.

MARK, in matters of commerce and manufacture, is a certain character ſtruck, or impreſſed, on various kinds of commodities, either to ſhew the place where they were made, and the perſons who made them; or to witneſs they have been viewed and examined by the officers or magiſtrates charged with the inſpection of that manufacture; or, laſtly, to ſhew the duties impoſed thereon have been regularly acquitted.

Thus cloths, leathers, cutlery-ware, paper, plate, weights, and meaſures, are to be marked.

MARK, is alſo a particular ſign or character, known only to the trader who pitches on it; whereby, being fixed to any commodity, he recollects the price it coſt him.

Theſe marks, otherwiſe called *numeros*, are taken according to the fancy of thoſe who uſe them; but are ordinarily choſen from among the letters of the alphabet, each having a relation to ſome particular number of figures; which are of ſo much uſe in trade, that it may be neceſſary to inſert a little table, ſerving as a model for their conſtruction.

A	B	C	D	E	F	G	H	I	K	L	M
0	1	2	3	4	5	6	7	8	9	10	20

One example will give the whole uſe of this table. Suppoſe a tradeſman ſhould put on a piece of ſtuff, that it coſt 37 s. 6 d. *per* ell. He puts an M for 20 s. an L for 10 s. an H for 7 s. and a G for 6 d.; ſo that the ſeveral letters wrote after each other, obſerving always to ſeparate ſhillings from pounds and from pence by points, will make this mark M. L. H. G. equal to 37 s. 6 d. However, the mark may be diverſified infinitely, by adding other figures to the letters inſtead of theſe.

MARK, or *Marc*, alſo denotes a weight uſed in ſeveral ſtates of Europe; and for ſeveral commodities, eſpecially gold and ſilver in France.

The mark is divided into 8 ounces, or 64 drachms 192 pennyweights, or 4608 grains. See *Drachm.*

When gold or ſilver are ſold by the mark, it is divided into 24 carats, the carat into 8 pennyweights, the pennyweight into 24 grains, and the grain into 24 primes.

MARK, was likewiſe formerly uſed in England for a money of accompt, and in ſome countries for a coin.

The Engliſh mark was 2-3ds of a pound ſterling, or 13 s. 4 d. and Matthew Paris obſerves it was of the ſame value in 1194. The antient Saxons called the mark, mancus, or mancuſa, and meare; among them it was equivalent to 30 d. that is, 7 s. 6 d. of the preſent money.

The mark of Hamburg is alſo a coin and money of accompt, equal to 1 s. 6 d. ſterling.

The Daniſh mark is 9 d. ſterling; the ſilver mark of Sweden is $4\frac{2}{3}$ d. ſterling, and the copper mark $2\frac{1}{4}$ d.

MARKET. A place where all ſorts of goods and proviſions are publickly ſold. Bracton obſerves, that one market ought to be diſtant from all others at leaſt ſix miles and a half, and a 3d of a half; but as the people increaſed, ſo did the privilege of keeping markets, which are now reſtrained, eſpecially in cities and great towns, almoſt to proviſions only, every ſhop being a kind of market for other manufactures. See *Fiſh*-market.

In former times, it was cuſtomary to have moſt fairs and markets kept on a Sunday, in the church-yards; ſo that matters of buſineſs and devotion were tranſacted together. This cuſtom was effectually ſuppreſſed by Henry VI. and though there are ſome remains of this practice ſtill in the moſt northern parts of the kingdom, many laws, with ſevere penalties, have been ſince made to regulate the markets, to prevent monopolizing, foreſtalling, and other inconveniences; which not duly executed, occaſion too many of theſe practices to paſs unpuniſhed, to the great detriment of induſtrious houſekeepers, and the fair trader.

The number of market-towns, at this time, in South Britain, amounts to 803, excluſive of thoſe in Scotland: but in London and Weſtminſter alone, there are a greater number of markets, than in any other city throughout the univerſe.

Theſe following being for meat; Bloomſbury; the Borough market, in Southwark; Brooks market; Cavendiſh market; Clare market; Fleet market; Honeylane market; Hoxton market; Marlborough market; Hungerford market; Leadenhall market; Newgate market; Newport market; St. James's market; Shadwell market; Shepherd's market; Spittlefields market; Whitechapel market; and Weſtminſter market. There are alſo the following markets for cattle; Knight's-bridge, Mile-end, and Smithfield. The following are for corn; Bear-quay; Queenhithe; and White-horſe inn, near Holborn-bridge. Billingſgate is a market for fiſh; and there is alſo another lately eſtabliſhed in Weſtminſter; but Billingſgate is likewiſe a market for coal. The following are for coals, hay, and ſtraw; Biſhopſgate market; Hay-market, Pallmall; and St. Margaret's hill. Blackwall is the great cloth-market; and Wood's cloſe is a market for ſheepſkins; the whole number being 33.

Theſe markets are ſo properly ſtocked with all kinds of proviſions, induſtry is ſo well rewarded, and money ſo plentiful in this metropolis, that, with the bleſſing of providence, there is no occaſion for ſuch a dearth oppreſſing the inhabitants as that which happened in the year 1595, when wheat was ſold at 2 l. 13 s. 4 d. the quarter; and other proviſions ſo exceſſively dear, that butter was ſold at 7 d. a pound; eggs for one a penny; and the prices of fiſh and fleſh in proportion; which very extraordinary, when money was ſo ſcarce; for in year 1549, King Edward VI. ordered, that the beſt ox ſhould be ſold for 2 l. 5 s. and one of the inferior ſteers at 16 s. the beſt heifer for 1 l. 2 s. and one the inferior ſort at 13 s. 4 d. the beſt fat wedder for and one of the inferior ſort at 2 s. 4 d. the beſt fat at 2 s. 6 d. and one of the inferior ſort at 1 s. 8 d.

Clerk of the MARKET. An officer, whoſe buſineſs take care that all the weights and meaſures uſed in market, are agreeable to the King's ſtandard kept in exchequer. See *Weight*, and *Meaſure.*

MARLBRO *Fort.* An Engliſh factory on the weſt co of the iſland of Sumatra, ſituated in 101 deg. of E. and 4 deg. 15 min. of S. lat. 3 miles E. of Bencoo and 300 N. of Batavia, ſubordinate to the government Fort St. George. See *India*, and *Sunda* iſlands.

MARLE. A kind of dry, ſoft, foſſile earth, harſh to touch, uſed to be caſt on land to make it more fruit of which there are ſeveral ſorts, of different colours qualities; the principal being white and red. Too m marle thrown on the earth is found to burn it; but of uſe in making lime, being burnt like other ſtone. *Manure.*

MARMALADE. A confection made of the juice or of ſome fruit.

MARMORA. A little iſland of Turky, ſituated in ſea of Marmora, between Aſia and Europe, in 28 of E. lon. and 40 deg. of N. lat. See *Turky.*

MARMORA *ſea*, formerly called the *Propontis*, is ſitu between the Helleſpont and Boſphorus, or between Dardanells and the ſea of Conſtantinople; havi communication with the Black ſea on the N. E. and the Archipelago on the S. W. being about 120 m. l and 50 broad; through which all European ſhips ſa their way to Conſtantinople.

MAROSCH, or *Meriſh.* A great river, riſing in the pathian mountains, and running from N. to S. thro Tranſilvania; after which it turns weſt, and, running Hungary, falls into the river Teyſe at Segedin.

MARQUE, or *Letters of Marque*, are granted to reta any injury committed by the ſubjects of one ſtate on others, contrary to the law of mart. See *Letter* of Mar It appears by the treatiſe of naval trade, and other bo that the goods of others may be taken upon the ſe letters of marque, and *jus repriſalium*; but the ſame not be done by any private authority, only by the po of that prince or ſtate whoſe ſubject the injured pe is; nor is it grantable by authority, but where the p damaged has juſtice denied him, or the ſame is illeg delayed. This law, or cuſtom of repriſals, was co tuted by the conſent of nations; and, without it cence would be given and tolerated for the committi depredations; eſpecially if only the goods of rulers made liable, who ſeldom poſſeſs any thing the inj can come at for ſatisfaction.

But princes, by the law of nations, are anſwerable for lic injuries; and ſhould, by the moſt prudent ways ginable, prevent thoſe that are private, not ſuffering reigners, if poſſible, to receive wrongs in their c tries: nor ſhould the prince of the injured value his fortune at ſo low a rate, as to deny him letters of requeſt ſatisfaction; and if juſtice be denied after ſuch requeſt is reaſonable to arm him with power, to take ſatisfa by repriſe and military force. There are uſually two or three letters of requeſt, according to the ſati tion returned in anſwer, before the repriſal is awar and ſuch letters generally aſſign a time certain for dam to be repaired; if not, repriſals to iſſue forth. See ter of *Requeſt.*

King Charles I. after the maſſacre at Amboyna, gr letters of requeſt to the ſtates of Holland for ſatisfa within eight months, otherwiſe letters of repriſal to follow. King Charles II. on the petition of Goulor and Canham, granted one Lee letters of re to the Great Duke of Tuſcany, for redreſs againſt government of Leghorn. In the year 1674, the prince iſſued out letters of requeſt to the King of S requiring ſatisfaction for the depredation committe

the ſhip and goods of Mr. Stampe, who was robbed and murdered at the Havanna. He alſo publiſhed a proclamation in the following year, promiſing a reward for apprehending the offenders dead and alive.

In the proſecution of letters of requeſt and repriſal, there muſt be, 1. The oath of the party injured, or other ſufficient proof touching the pretended injury, and of the certain loſs and damage thereby ſuſtained. 2. A proof of due proſecution, or ſolicitation for obtaining ſatisfaction in a legal way. 3. The deferring or denial of juſtice. 4. A complaint to his own prince or ſtate. 5. Requiſition of juſtice by him or them, made to the ſupreme head or ſtate, where juſtice in the ordinary courſe was denied. 6. Perſiſtency ſtill in the denial of juſtice. After all which, letters of repriſal under ſuch cautions, reſtrictions, and limitations, as are conſonant to law, and as the ſpecial caſe requires, may iſſue not only by the civil, but by the ancient municipal laws of England; when the prince of that country, againſt whom the ſame are awarded, muſt repair the damage out of his or their effects who committed the injuries; or, if that proves deficient, it ought to fall as a common debt on his country.

The repriſals grantable by the laws of England are of two ſorts, ordinary and extraordinary. The ordinary repriſals are either within the realm, or without the ſame; and the firſt are grantable where any Engliſh merchants have ſuffered in their perſons or goods, and their merchandiſes are ſpoiled or taken from them in parts beyond the ſeas, by merchants ſtrangers, and the Engliſh merchants upon ſuit, or the King's demanding of juſtice by his ambaſſadors, &c. cannot obtain ſatisfaction to the perſons injured; then the parties proving they have proſecuted the offenders in a due courſe of juſtice, and have been denied or delayed illegally to have right done them, ſhall in ſuch caſe have a writ out of chancery to arreſt the merchant ſtrangers of that nation, or their goods here in England. And the Lord Chancellor, in this caſe, has always the approbation of the King or council, or both, for ſo doing.

The other repriſals without the realm are always by patent under the great ſeal, and cannot be ordinarily revoked; becauſe, after the perſon injured has petitioned, and according to law proved his loſs, obtained letters of requeſt, and no reparation has been made; as ſoon as the letters-patent are ſealed, the ſame immediately creates and veſts a national debt in the grantee, to be ſatisfied in ſuch manner, and by ſuch means, as the ſaid letters-patent direct, out of the goods and eſtates of that prince's ſubjects, who refuſed or illegally delayed juſtice. But if the ſupreme power thinks the execution of theſe letters of repriſal cannot be well effected without endangering the peace of both ſtates, it may be reſpited till a more convenient time; and princes are careful in granting ſuch letters-patents, to have them made ſo as they may not be reckoned a breach of the peace; but the granting of them for particular ſatisfaction does not in the ordinary way amount to a breach.

As to the extraordinary repriſals, they are by letters of marque, for reparation at ſea, or any place out of the kingdom, granted by the ſecretaries of ſtate, with the like approbation of the King and council; but they are only during the King's pleaſure, and generally in time of war; ſo that they may at any time be revoked.

The caſes where repriſals will or will not lie, are thus ſtated: On wrong judgment given in a proſecution abroad, in matters not doubtful, which might have been redreſſed, either by the ordinary or extraordinary power of the country or place, and the which was apparently perverted or denied, repriſal may be granted; though, if the matter be doubtful, it is otherwiſe; for in cauſes dubious, there is preſumption that juſtice was truly adminiſtered. If an Engliſhman proſecutes a perſon in any legal court beyond the ſeas, whereupon the military governor oppoſes the ſuit, and by his means the debtor and his goods are conveyed away, but a ſentence or judgment is obtained, by this the execution is fruſtrated, and letters of repriſal ſhall be had.

And yet if a merchant of England ſhall commence a ſuit in the courts of law beyond the ſeas, and judgment paſſes againſt him, from which he appeals to the ſupreme court, and there the firſt judgment is confirmed and allowed; though the complainant hath received a judgment contrary to the right of the cauſe, here he ſhall not have letters of repriſal; but it may, in an extraordinary caſe, if there be ſtrong circumſtances for the ſame, occaſion letters of requeſt to have a rehearing.

If any perſon ſhall be killed, wounded, or any way damaged in a hoſtile manner, in the territories or places of any king or potentate, to whom letters of requeſt are tranſmitted, and no ſatisfaction ſhall be made to the perſon injured, there is no compulſion to reſort to the ordinary proſecution, but letters of repriſal ſhall be iſſued: but where misfortunes happen to perſons or their goods reſiding in a foreign country in time of war, repriſals are not to be granted. In this caſe they muſt be contented to ſit down under the loſs; for they are at their liberty to relinquiſh the place on the approach of the enemy, when they foreſee the country is ſubject to ſpoil and devaſtation; and if they continue, they muſt partake of the common calamity.

It is not the place of any man's nativity, but of his habitation, that ſubjects him to repriſe, for the law does not conſider ſo much where he was born, as where he lives: therefore if letters of repriſal ſhould be awarded againſt the ſubjects of the Duke of Tuſcany, and a native of Florence, but denizened or living in England, ſhould have a ſhip on a voyage for Leghorn, if in ſuch caſe a caption be made of this ſhip, it is not lawful, nor can the ſame be made prize. And there are certain perſons, as well as ſhips and goods, that are exempted or privileged from repriſals; ſuch as ambaſſadors and their retinue, coming from him who awarded the repriſe; travellers through a country, ſtaying but a little while there; eccleſiaſtical perſons, &c. And a merchant of another place, than againſt which repriſals are granted, although the factor of his goods were of that place, is not ſubject to repriſals.

Where ſhips are driven into port by ſtorm or ſtreſs of weather, they have an exemption from the law of repriſals, according to common right. But by the laws of England it is ſaid to be otherwiſe, unleſs expreſsly provided for in the writ or commiſſion; and if ſuch ſhip flies from her own country to avoid confiſcation, or for ſome other fault, and is driven in by ſtreſs of weather, ſhe may then become ſubject to be prize. But it is unlawful to make ſeizure of ſhips for repriſal in any ports, except in that prince's who awarded the repriſals, or his againſt whom the ſame are iſſued: the ports of other princes or ſtates are not to be diſturbed, but be peaceably maintained.

If a ſhip having letters of marque or repriſal, ſhall take the ſhips and goods of that nation againſt whom they are awarded, and bring the ſame into a neuter port, the owners may there claim and ſeize her; or the admiral may make reſtitution, according to law, of the ſhip's goods to the owners, and the captives to their liberty; for that the ſame ought firſt to have been brought *infra præſidia* of that prince or ſtate, by whoſe ſubjects they were taken; and if it be not ſo done, it has been reſolved, that ſuch ſhips cannot become lawful prize, nor are the owners of ſuch a caption diveſted of their property.

When any ſhip that has letters of repriſe attacks a veſſel, and ſhe refuſes to yield, ſhe may be aſſaulted and entered; and if it falls out, that by accident ſome of thoſe which make reſiſtance are ſlain, the fault will be at their own doors, for hindering the execution of what is legal, and granted by authority. But in caſe a letter of marque ſhall wilfully and knowingly take a ſhip and goods belonging to another nation, againſt whom the commiſſion is not awarded, but of ſome other ſtate in amity, this amounts to downright piracy; whereupon the offenders will incur a forfeiture of their veſſel, &c.

Though if ſuch letters of marque be aſſigned to another perſon, who takes any ſuch ſhip or goods of another nation, on a violent preſumption that it belonged to the right of him againſt whom repriſals are granted; here, if the ſufferers recover their goods and ſhip, yet the captors are not to be puniſhed criminally, nor the grantees of the letters-

letters-patent civilly. The captors nevertheleſs may not be excuſed from anſwering the damages; but the grantees are excuſable, both as to that and puniſhment, unleſs they are privy to the caption. It is like unto the caſe of an officer arreſting a wrong perſon; he is liable to anſwer the damage to the party arreſted, but not the perſon that employed him.

A ſhip being lawfully taken, and brought into port, the captor muſt exhibit all his ſhip papers, and captive mariners, to be examined, in order to adjudication; till when, and the goods are legally condemned, bulk ought not to be broken; nor may the captain permit an embezzlement of the lading, or ſell, barter, or diſpoſe of any part, without commiſſion; for the King hath a proportion in all prizes: and the common profits of prizes are to be equally divided among all the ſhips preſent, and not be ſolely to the captor; ſo that if letters of repriſal are granted to two ſhips, and they happen both of them at ſea to meet a prize, and the one attacks, and enters her, by means whereof ſhe becomes conqueror; although the other did nothing in the engagement, he hath right to an equal diſtribution with the captor, becauſe the preſence of the other veſſel, armed and prepared for battle, becomes a terror, and will occaſion a ſhip the ſooner to yield.

If the caption of any ſhip or goods be by men of war, the property will immediately be in the captors; except it be loſt again, and the ſhip or goods are recovered by the perſons from whom they were taken, or be in battle regained. And by the law of nations, the dominion of the things taken by thoſe to whom letters of marque are granted, become the captors, till the debt and coſts, that is, the original damage and ſubſequent charges, are ſatisfied; which being done, the reſidue ought to be reſtored: and ſo the Venetians uſed their equity, having taken the ſhips of Genoa, they did not ſpoil any of the lading, but preſerved the ſame very carefully, until the debt was paid; and then they made reſtitution of the things entirely, without diminution.

In caſe the King of England ſhould be in enmity with the ſtates of Holland, and one of their ſhips of war takes an Engliſh merchant-man; and afterwards another ſhip of war of England meets the Dutch ſhip and his prize, and regains the ſame; there reſtitution is commonly made, the owners paying the ſalvage: ſo where the prize is recovered by a friend in amity, or comes into his ports, reſtitution is to be made. And the taking of ſhips and goods by force and arms is ſo odious, that if by any poſſibility the right owners may have reſtitution, the ſame hath been granted.

Where, for the fault perhaps of a few, a debt becomes national, the goods of the guiltleſs and innocent become liable, if taken, for ſatisfaction; but ſuch ought to have contribution by the law of England, as when one is put to the whole burden, and more are bound to do one thing: though when depredations have happened in England to foreign merchants, and complaint hath been made concerning them, commiſſions have been often iſſued to inquire of the ſame, and award ſatisfaction. And upon the petition of ſome merchants of Genoa, who complained againſt the inhabitants of the iſle of Guernſey for a depredation, in taking away and detaining their merchandiſe and goods to a very conſiderable value, out of a ſhip wrecked by tempeſt near the ſaid iſle; on this a commiſſion was granted, by which the commiſſioners were empowered to puniſh the offenders, and make a reſtitution and ſatisfaction for the damages ſuſtained. For as the Engliſh ſubjects may have their goods by way of repriſe, for the ſatisfaction of a debt from foreigners; ſo they may have the benefit of theſe commiſſions to make themſelves whole out of the ſtates of the offenders.

But he that will ſue to have reſtitution in England for goods taken at ſea, muſt prove that the ſovereign of the party was in amity with the King of England, &c. and letters of repriſals make no war or enmity between nations.

MARQUETRY. Inlaid work, or fineering; being a plane of oak, or well dried fir, covered with ſeveral pieces of fine hard wood of various colours, in the forms of birds, flowers, knots, and ſometimes intermixed with tortoiſe-ſhell, mother of pearl, ſilver, and other things; ſometimes compoſed of various colours; and ſometimes of precious ſtones, or curious marbles, when it is called *Moſaic work*.

MARROQUIN, or *Morocco*. The ſkin of a beaſt. See *Morocco*.

MARSALA. A port-town of Sicily, in the province of Mazara, ſituated in 12 deg. 6 min. of E. lon. and 37 deg. 50 min. of N. lat.

MARSALQUIVER. A port-town of Algiers, ſituated on a bay of the ſea, oppoſite to Oran.

MARSEILLES. A port-town of France, in the province of Provence, ſituated on a fine bay of the Mediterranean, in 5 deg. 20 min. of E. lon. and 43 deg. 15 min. of N. lat.

MART, *letters of mart*. See *Letters* of mart, and *Marque*.

MART, is alſo a free open market, for all perſons to buy and ſell commodities; but more eſpecially applied to ſuch cities as Frankfort, and other places in Germany, where the great fairs are kept.

MARTABAN. A port-town of the further India, ſituated on the eaſt-ſide of the bay of Bengal, in 97 deg. of E. lon.

MARTHA, *St.* A port-town of South America, ſituated on the North ſea, at the mouth of the river Gayra, in 74 deg. 30 min. of W. lon. and 11 deg. 45 min. of N. lat.

MARTIAL *courts at ſea*, or *Courts-martial*, is trying a perſon by the martial law, or the law of war or arms, depending upon the King's pleaſure, or that of his admirals, under certain reſtrictions, which are regulated by an act of parliament paſſed in the 22d year of King George II. entituled, "An act for further regulating the proceedings up" "on courts-martial in the ſea-ſervice; and for extending" "the diſcipline of the navy to the crews of his Majeſty's" "ſhips, wrecked, loſt, or taken; and for continuing to" "them their wages upon certain conditions." See *Court* martial.

MARTIGUES. A port-town of France, in the province of Provence, ſituated on a bay of the Mediterranean, in 5 deg. of E. lon. and 43 deg. 20 min. of N. lat.

MARTIN *Cape*, or *Cape Martin*. A promontory of Valencia in Spain, on the Mediterranean ſea, 40 miles S. E. of the city of Valencia.

MARTINETS, in a ſhip, are ſmall lines faſtened to the legs, on the leetch of the ſail, appearing like crows feet; the uſe of them being to bring that part of the leetch of the ſail, which is next the yard-arm, up cloſe to the yard when the ſail is fardelled.

MARTINICO, is the chief of all the French Caribbee iſlands, ſituated in 61 deg. W. lon. and between 14 and 15 N. lat. See *French* America.

MARYLAND. A province of North America, ſituated between 74 and 78 deg. of W. lon. and between 3 and 40 of N. lat. See *Britiſh* America.

MASBATE. One of the Philippine iſlands, almoſt in the center of the reſt, ſituated in 120 deg. of E. lon. and 13 deg. of N. lat. See *Philippine* iſlands.

MASCARENHA *iſland*. See *Bourbon*.

MASLIN. A mixture of wheat and rye.

MASON. A workman employed to do the ſtone-part of a church, palace, or other large building.

MASONS *company of London*, by the arms granted by William Hanckeſtow, Clarencieux king at arms, in the year 1474, appears to be of conſiderable antiquity: however it was only incorporated by letters-patent of the 29th of Charles II. dated the 17th of September 1677, by the name of The maſter, wardens, aſſiſtants, and commonalty of the company of maſons of the city of London; the ſociety conſiſting of a maſter, 2 wardens, 22 aſſiſtants, and 70 liverymen; who have a convenient hall in Maſon alley, Baſinghall-ſtreet, where the buſineſs of the company is tranſacted; and their fine is 5 l. on admiſſion.

MASSA. A city of Italy, in the kingdom of Naples, ſituated in 15 deg. of E. lon. and 40 deg. of N. lat. on the ſouth-ſide of the gulph of Naples, 20 miles ſouth of that capital.

MASSA, is alſo the capital of the dutchy of Maſſa Carrara.

in Italy, ſituated between the territories of Lucca and Genoa, in 10 deg. 40 min. of E. lon. and 43 deg. 55 min. of N. lat. 3 miles weſt of the Tuſcan ſea.

MAST *of a foreſt*. The fruit of a ſpecies called *glandiferous* or *maſt-bearing*; as beech, oak, and cheſnut, being fit for feeding of ſwine.

MAST, in navigation. A large pole, or long piece of round wood, raiſed in veſſels, for the yards and ſails to be faſtened to, in order to their receiving the wind neceſſary for navigation.

To large veſſels the number of maſts is four; their names being the main-maſt, the fore-maſt, the mizen-maſt, and the boltſprit; to which ſome add a fifth, called a counter-mizen.

The *main-maſt* is the chief maſt, ſtanding upright in the middle, or waſte of the veſſel; bearing the main-yard and main-ſail.

The *fore maſt* is between the main-maſt and the head.

The *mizen-maſt* is between the main-maſt and the ſtern.

The *boltſprit* lies upon the beak, in the prow, or head of the ſhip.

The *counter-mizen*, in large veſſels and galleons, is in the ſtern.

The word *maſt* is alſo uſed to ſignify thoſe diviſions, or additional pieces, in the maſts placed over one another. The main-maſt and fore-maſt have each of them two, as the main-maſt, main-top-maſt, main-gallant-maſt; the fore-maſt, fore-top-maſt, fore-top-gallant maſt; the mizen-maſt has only one, called the mizen-top-maſt.

For the proportion of maſts, Sir H. Manwaring gives theſe rules. Whatever the breadth of a ſhip be in feet, multiply 4-5ths of that breadth by 3, the product is the length of her main-maſt in feet. Thus, if a ſhip be 30 feet at the midſhip-beam, 4-5ths of 30 is 24; therefore the main-maſt of that ſhip muſt be 24 yards, or 72 feet, in length. Then for its bigneſs, he allows an inch to every yard in length; and therefore this maſt muſt be 24 inches thick. The fore-maſt of a ſhip muſt be 4-5ths of the length of the main-maſt, that is in this caſe $19\frac{1}{5}$ yards; and it muſt be near 24 inches thick. The boltſprit is always the ſame length and bigneſs with the fore-maſt; and the mizen-maſt muſt be juſt half the length of the main-maſt, and half as thick. See Naval *Stores*.

MASTERS *of ſhips*. Officers to whom is committed the direction of a merchant-veſſel; who command in chief, and are charged with the merchandiſe aboard: but in the Mediterranean the maſter is called *patron*, and in long voyages *captain*.

The proprietors of the veſſel appoint the maſter; but the maſter provides the equipage, and hires the pilot and ſailors. He is likewiſe obliged to keep a regiſter of the names and officers on board, the terms of their contract, the receipts and payments, and in general every thing relating to his commiſſion. See *Ship*.

MASTIC. A clear and ſweet reſinous gum, iſſuing from the trunk and large branches of the maſtic tree, or lentiſcus, either without or with inciſion. See *Lentiſcus*.

Maſtic is temperate in heat, and of a dry binding quality; that it ſtrengthens the ſtomach, ſtays vomiting, ſtops fluxes of blood, and tickling coughs and catarrhs: it ſtrengthens the reins, is a good cleanſer, and therefore deſcribed in ſeminal weakneſſes.

Jewellers mix maſtic with turpentine and black ivory, and lay it under their diamonds, to give them a luſtre.

Maſtic is chiefly the product of Chios, an iſland in the Turkiſh Archipelago; where the trees that yield it are cultivated with as much care as the vines; and it brings a yearly revenue of about 2000l. ſterling to the Grand Signior.

There is alſo a kind of black maſtic brought from Egypt, which ſerves to ſophiſticate camphor.

The gum maſtic is in ſmall granules, being white if good, though age makes it turn yelloviſh.

MASTIC, is alſo a name given to artificial camphor. See *Camphor*.

MASTRE. A Turkiſh city, and port, on the Black ſea. See *Turky*.

MASULIPATAN. A city and port-town of the Hither India, in the province of Golconda, ſituated on the weſt ſide of the bay of Bengal, in 81 deg. of E. lon. and 16 deg. 18 min. of N. lat.

MATAPAN *Cape*, or *Cape Matapan*, in the Morea, is the moſt ſouthern promontory of Europe, ſituated in 22 deg. of E. lon. and 36 deg. of N. lat.

MATCH. A kind of rope ſlightly twiſted, and prepared to retain fire, for the uſes of artillery, mines, fire-works, and ſuch other purpoſes: but ſince fuſees have been introduced in lieu of match-lock muſkets, the compoſition of match has been much leſs conſiderable than before.

MATERAN. The capital of the kingdom of the ſame name, ſituated on the ſouth coaſt of the iſland of Java, in 110 deg. of E. lon. and 45 deg. of S. lat. See *Sunda* Iſlands.

MATHEMATICS, among the ſciences, compoſe arithmetic, aſtronomy, geometry, and muſic: the firſt is eſſential to trade; and the ſecond to navigation.

MATRICE, with dyers, is applied to the five ſimple colours, from whence all the reſt may be compoſed, which are black, white, blue, red, and yellow. See *Dying*.

MATRICES, with the letter-founders, are the copper moulds, in which are ſtamped, or punched, the letters wanted to be caſt.

MATTHEW, *St.* A little iſland in the Atlantic ocean, ſituated in 9 deg. of W. lon. and 2 deg. 30 min. of S. lat. 700 miles S. of Cape Palmus, on the coaſt of Guinea in Africa, planted by the Portugueſe, but deſerted. See the iſland of St. *Thomas*.

MAUG-BUND. A kind of ſilk, of the growth of the Mogul's territories, and the worſt of the ſix kinds which are yearly gathered there.

MAUND. A weight uſed in the Mogul's territories, equivalent to 55 lb. avoirdupois of England.

MAURA, *St.* One of the Mediterranean iſlands, ſituated in 21 deg. of E. lon. and 38 deg. 50 min. of N. lat. between the continent of Epirus, and the iſland of Cephalonia, ſubject to Venice.

MAURES. A gold coin ſtruck at Surat, and in other ſtates of the Grand Mogul.

MAURIS, called otherwiſe *Percale*. A kind of white cotton cloth brought from the Eaſt Indies. See *Percale*.

MAURITANIA. The ancient name of the coaſt of Barbary.

MAURITIUS, or *Maurice Iſland*. See *Iſle* of France.

MAXY. See *Mundick*.

MAY. A little iſland at the mouth of the Frith of Forth, near the coaſt of Fife in Scotland.

MAY, or *Mayo*. One of the Cape Verde iſlands, ſituated in 23 deg. of W. lon. and 15 deg. of N. lat. See Cape *Verde* iſlands.

MAYOR, or *Maior*, the chief magiſtrate, or governor, in the cities, and moſt corporation towns of England, choſen annually by his peers out of the number of the aldermen.

The mayor of the place is the King's lieutenant, and, with the aldermen and common council, can make laws, called bye laws, for the government of the place: he has alſo the authority of a kind of judge, to determine matters, and to mitigate the rigour of the law.

King Richard I. in 1189 firſt changed the bailiffs of London into Mayors, by whoſe example others were afterwards appointed.

MAZAGAN. A port-town of Morocco in Africa, ſituated in 10 deg. of W. lon. and 33 deg. of N. lat.

MAZARA. A port-town of Sicily, ſituated on the S. W. coaſt, in 12 deg. 30 min. of E. lon. and 37 deg. 42 min. of N. lat.

MEACO. A large city of great trade in the iſland of Niphon in Japan, ſituated in 135 deg. of E. lon. and 35 deg. 20 min. of N. lat. See *Japan*.

MEAD. A wholſome agreeable liquor, prepared of honey and water. See *Methoglin*.

One of the beſt methods of preparing mead is as follows: into 12 gallons of water, ſlip the whites of 6 eggs, mixing theſe well together, and to the mixture adding 20 pounds of honey; let the liquor boil an hour, and when boiled add cinnamon, ginger, cloves, mace, and a little roſemary. As ſoon as it is cold, put a ſpoonful of yeaſt to it, and turn it up, keeping the veſſel filled as it works;

letters-patent civilly. The captors nevertheleſs may not be excuſed from anſwering the damages; but the grantees are excuſable, both as to that and puniſhment, unleſs they are privy to the caption. It is like unto the caſe of an officer arreſting a wrong perſon; he is liable to anſwer the damage to the party arreſted, but not the perſon that employed him.

A ſhip being lawfully taken, and brought into port, the captor muſt exhibit all his ſhip papers, and captive mariners, to be examined, in order to adjudication; till when, and the goods are legally condemned, bulk ought not to be broken; nor may the captain permit an embezzlement of the lading, or ſell, barter, or diſpoſe of any part, without commiſſion; for the King hath a proportion in all prizes: and the common profits of prizes are to be equally divided among all the ſhips preſent, and not be ſolely to the captor; ſo that if letters of repriſal are granted to two ſhips, and they happen both of them at ſea to meet a prize, and the one attacks, and enters her, by means whereof ſhe becomes conqueror; although the other did nothing in the engagement, he hath right to an equal diſtribution with the captor, becauſe the preſence of the other veſſel, armed and prepared for battle, becomes a terror, and will occaſion a ſhip the ſooner to yield.

If the caption of any ſhip or goods be by men of war, the property will immediately be in the captors; except it be loſt again, and the ſhip or goods are recovered by the perſons from whom they were taken, or be in battle regained. And by the law of nations, the dominion of the things taken by thoſe to whom letters of marque are granted, become the captors, till the debt and coſts, that is, the original damage and ſubſequent charges, are ſatisfied; which being done, the reſidue ought to be reſtored: and ſo the Venetians uſed their equity, having taken the ſhips of Genoa, they did not ſpoil any of the lading, but preſerved the ſame very carefully, until the debt was paid; and then they made reſtitution of the things entirely, without diminution.

In caſe the King of England ſhould be in enmity with the ſtates of Holland, and one of their ſhips of war takes an Engliſh merchant-man; and afterwards another ſhip of war of England meets the Dutch ſhip and his prize, and regains the ſame; there reſtitution is commonly made, the owners paying the ſalvage: ſo where the prize is recovered by a friend in amity, or comes into his ports, reſtitution is to be made. And the taking of ſhips and goods by force and arms is ſo odious, that if by any poſſibility the right owners may have reſtitution, the ſame hath been granted.

Where, for the fault perhaps of a few, a debt becomes national, the goods of the guiltleſs and innocent become liable, if taken, for ſatisfaction; but ſuch ought to have contribution by the law of England, as when one is put to the whole burden, and more are bound to do one thing: though when depredations have happened in England to foreign merchants, and complaint hath been made concerning them, commiſſions have been often iſſued to inquire of the ſame, and award ſatisfaction. And upon the petition of ſome merchants of Genoa, who complained againſt the inhabitants of the iſle of Guernſey for a depredation, in taking away and detaining their merchandiſe and goods to a very conſiderable value, out of a ſhip wrecked by tempeſt near the ſaid iſle; on this a commiſſion was granted, by which the commiſſioners were empowered to puniſh the offenders, and make a reſtitution and ſatisfaction for the damages ſuſtained. For as the Engliſh ſubjects may have their goods by way of repriſe, for the ſatisfaction of a debt from foreigners; ſo they may have the benefit of theſe commiſſions to make themſelves whole out of the ſtates of the offenders.

But he that will ſue to have reſtitution in England for goods taken at ſea, muſt prove that the ſovereign of the party was in amity with the King of England, &c. and letters of repriſals make no war or enmity between nations.

MARQUETRY. Inlaid work, or fineering; being a plane of oak, or well dried fir, covered with ſeveral pieces of fine hard wood of various colours, in the forms of birds, flowers, knots, and ſometimes intermixed with tortoiſe-ſhell, mother of pearl, ſilver, and other things; ſometimes compoſed of various colours; and ſometimes of precious ſtones, or curious marbles, when it is called *Moſaic work*.

MARROQUIN, or *Morocco*. The ſkin of a beaſt. See *Morocco*.

MARSALA. A port-town of Sicily, in the province of Mazara, ſituated in 12 deg. 6 min. of E. lon. and 37 deg. 50 min. of N. lat.

MARSALQUIVER. A port-town of Algiers, ſituated on a bay of the ſea, oppoſite to Oran.

MARSEILLES. A port-town of France, in the province of Provence, ſituated on a fine bay of the Mediterranean, in 5 deg. 20 min. of E. lon. and 43 deg. 15 min. of N. lat.

MART, *letters of mart*. See *Letters* of mart, and *Marque*.

MART, is alſo a free open market, for all perſons to buy and ſell commodities; but more eſpecially applied to ſuch cities as Frankfort, and other places in Germany, where the great fairs are kept.

MARTABAN. A port-town of the further India, ſituated on the eaſt-ſide of the bay of Bengal, in 97 deg. of E. lon.

MARTHA, *St.* A port-town of South America, ſituated on the North ſea, at the mouth of the river Gayra, in 74 deg. 30 min. of W. lon. and 11 deg. 45 min. of N. lat.

MARTIAL *courts at ſea*, or *Courts-martial*, is trying a perſon by the martial law, or the law of war or arms, depending upon the King's pleaſure, or that of his admirals, under certain reſtrictions, which are regulated by an act of parliament paſſed in the 22d year of King George II. entituled, "An act for further regulating the proceedings up" "on courts-martial in the ſea-ſervice; and for extending" "the diſcipline of the navy to the crews of his Majeſty's" "ſhips, wrecked, loſt, or taken; and for continuing to" "them their wages upon certain conditions." See *Court* martial.

MARTIGUES. A port-town of France, in the province of Provence, ſituated on a bay of the Mediterranean, in 5 deg. of E. lon. and 43 deg. 20 min. of N. lat.

MARTIN *Cape*, or *Cape Martin*. A promontory of Valencia in Spain, on the Mediterranean ſea, 40 miles S. E. of the city of Valencia.

MARTINETS, in a ſhip, are ſmall lines faſtened to the legs, on the leetch of the ſail, appearing like crows feet; the uſe of them being to bring that part of the leetch of the ſail, which is next the yard-arm, up cloſe to the yard when the ſail is fardelled.

MARTINICO, is the chief of all the French Caribbee iſlands, ſituated in 61 deg. W. lon. and between 14 and 15 N. lat. See *French* America.

MARYLAND. A province of North America, ſituated between 74 and 78 deg. of W. lon. and between 3[illegible] and 40 of N. lat. See *Britiſh* America.

MASBATE. One of the Philippine iſlands, almoſt in the center of the reſt, ſituated in 120 deg. of E. lon. and 13 deg. of N. lat. See *Philippine* iſlands.

MASCARENHA *iſland*. See *Bourbon*.

MASLIN. A mixture of wheat and rye.

MASON. A workman employed to do the ſtone-part of a church, palace, or other large building.

MASONS *company of London*, by the arms granted by William Hanckeſtow, Clarencieux king at arms, in the year 1474, appears to be of conſiderable antiquity: however it was only incorporated by letters-patent of the 29th of Charles II. dated the 17th of September 1677, by the name of The maſter, wardens, aſſiſtants, and commonalty of the company of maſons of the city of London; the ſociety conſiſting of a maſter, 2 wardens, 22 aſſiſtants, and 70 liverymen; who have a convenient hall in Maſon's alley, Baſinghall-ſtreet, where the buſineſs of the company is tranſacted; and their fine is 5 l. on admiſſion.

MASSA. A city of Italy, in the kingdom of Naples, ſituated in 15 deg. of E. lon. and 40 deg. of N. lat. on the ſouth-ſide of the gulph of Naples, 20 miles ſouth of that capital.

MASSA, is alſo the capital of the dutchy of Maſſa Carrara.

in Italy, ſituated between the territories of Lucca and Genoa, in 10 deg. 40 min. of E. lon. and 43 deg. 55 min. of N. lat. 3 miles weſt of the Tuſcan ſea.

MAST *of a foreſt.* The fruit of a ſpecies called *glandiferous* or *maſt-bearing*; as beech, oak, and cheſnut, being fit for feeding of ſwine.

MAST, in navigation. A large pole, or long piece of round wood, raiſed in veſſels, for the yards and ſails to be faſtened to, in order to their receiving the wind neceſſary for navigation.

To large veſſels the number of maſts is four; their names being the main-maſt, the fore-maſt, the mizen-maſt, and the boltſprit; to which ſome add a fifth, called a counter-mizen.

The *main-maſt* is the chief maſt, ſtanding upright in the middle, or waſte of the veſſel; bearing the main-yard and main-ſail.

The *fore maſt* is between the main-maſt and the head.

The *mizen-maſt* is between the main-maſt and the ſtern.

The *boltſprit* lies upon the beak, in the prow, or head of the ſhip.

The *counter-mizen*, in large veſſels and galleons, is in the ſtern.

The word *maſt* is alſo uſed to ſignify thoſe diviſions, or additional pieces, in the maſts placed over one another. The main-maſt and fore-maſt have each of them two, as the main-maſt, main-top-maſt, main-gallant-maſt; the fore-maſt, fore-top-maſt, fore-top-gallant maſt; the mizen-maſt has only one, called the mizen-top-maſt.

For the proportion of maſts, Sir H. Manwaring gives theſe rules. Whatever the breadth of a ſhip be in feet, multiply 4-5ths of that breadth by 3, the product is the length of her main-maſt in feet. Thus, if a ſhip be 30 feet at the midſhip-beam, 4-5ths of 30 is 24; therefore the main-maſt of that ſhip muſt be 24 yards, or 72 feet, in length. Then for its bigneſs, he allows an inch to every yard in length; and therefore this maſt muſt be 24 inches thick. The fore-maſt of a ſhip muſt be 4-5ths of the length of the main-maſt, that is in this caſe $19\frac{1}{5}$ yards; and it muſt be near 24 inches thick. The boltſprit is always the ſame length and bigneſs with the fore-maſt; and the mizen-maſt muſt be juſt half the length of the main-maſt, and half as thick. See Naval *Stores*.

MASTERS *of ſhips.* Officers to whom is committed the direction of a merchant-veſſel; who command in chief, and are charged with the merchandiſe aboard: but in the Mediterranean the maſter is called *patron*, and in long voyages *captain*.

The proprietors of the veſſel appoint the maſter; but the maſter provides the equipage, and hires the pilot and ſailors. He is likewiſe obliged to keep a regiſter of the names and officers on board, the terms of their contract, the receipts and payments, and in general every thing relating to his commiſſion. See *Ship*.

MASTIC. A clear and ſweet reſinous gum, iſſuing from the trunk and large branches of the maſtic tree, or lentiſcus, either without or with inciſion. See *Lentiſcus*.

Maſtic is temperate in heat, and of a dry binding quality; by that it ſtrengthens the ſtomach, ſtays vomiting, ſtops fluxes of blood, and tickling coughs and catarrhs: it ſtrengthens the reins, is a good cleanſer, and therefore deſcribed in ſeminal weakneſſes.

Jewellers mix maſtic with turpentine and black ivory, and lay it under their diamonds, to give them a luſtre.

Maſtic is chiefly the product of Chios, an iſland in the Turkiſh Archipelago; where the trees that yield it are cultivated with as much care as the vines; and it brings in a yearly revenue of about 2000l. ſterling to the Grand Signior.

There is alſo a kind of black maſtic brought from Egypt, which ſerves to ſophiſticate camphor.

The gum maſtic is in ſmall granules, being white if good, though age makes it turn yellowiſh.

ARTIFICIAL, is alſo a name given to artificial camphor. See *Camphor*.

CONSTANTINOPLE. A Turkiſh city, and port, on the Black ſea. See *Turky*.

MASULIPATAN. A city and port-town of the Hither India, in the province of Golconda, ſituated on the weſt ſide of the bay of Bengal, in 81 deg. of E. lon. and 16 deg. 18 min. of N. lat.

MATAPAN *Cape*, or *Cape Matapan*, in the Morea, is the moſt ſouthern promontory of Europe, ſituated in 22 deg. of E. lon. and 36 deg. of N. lat.

MATCH. A kind of rope ſlightly twiſted, and prepared to retain fire, for the uſes of artillery, mines, fire-works, and ſuch other purpoſes: but ſince fuſees have been introduced in lieu of match-lock muſkets, the compoſition of match has been much leſs conſiderable than before.

MATERAN. The capital of the kingdom of the ſame name, ſituated on the ſouth coaſt of the iſland of Java, in 110 deg. of E. lon. and 45 deg. of S. lat. See *Sunda* Iſlands.

MATHEMATICS, among the ſciences, compoſe arithmetic, aſtronomy, geometry, and muſic: the firſt is eſſential to trade; and the ſecond to navigation.

MATRICE, with dyers, is applied to the five ſimple colours, from whence all the reſt may be compoſed, which are black, white, blue, red, and yellow. See *Dying*.

MATRICES, with the letter-founders, are the copper moulds, in which are ſtamped, or punched, the letters wanted to be caſt.

MATTHEW, *St.* A little iſland in the Atlantic ocean, ſituated in 9 deg. of W. lon. and 2 deg. 30 min. of S. lat. 700 miles S. of Cape Palmus, on the coaſt of Guinea in Africa, planted by the Portugueſe, but deſerted. See the iſland of St. *Thomas*.

MAUG-BUND. A kind of ſilk, of the growth of the Mogul's territories, and the worſt of the ſix kinds which are yearly gathered there.

MAUND. A weight uſed in the Mogul's territories, equivalent to 55 lb. avoirdupois of England.

MAURA, *St.* One of the Mediterranean iſlands, ſituated in 21 deg. of E. lon. and 38 deg. 50 min. of N. lat. between the continent of Epirus, and the iſland of Cephalonia, ſubject to Venice.

MAURES. A gold coin ſtruck at Surat, and in other ſtates of the Grand Mogul.

MAURIS, called otherwiſe *Percale*. A kind of white cotton cloth brought from the Eaſt Indies. See *Percale*.

MAURITANIA. The ancient name of the coaſt of Barbary.

MAURITIUS, or *Maurice Iſland*. See *Iſle* of France.

MAXY. See *Mundick*.

MAY. A little iſland at the mouth of the Frith of Forth, near the coaſt of Fife in Scotland.

MAY, or *Mayo*. One of the Cape Verde iſlands, ſituated in 23 deg. of W. lon. and 15 deg. of N. lat. See Cape *Verde* iſlands.

MAYOR, or *Maior*, the chief magiſtrate, or governor, in the cities, and moſt corporation towns of England, choſen annually by his peers out of the number of the aldermen.

The mayor of the place is the King's lieutenant, and, with the aldermen and common council, can make laws, called bye laws, for the government of the place: he has alſo the authority of a kind of judge, to determine matters, and to mitigate the rigour of the law.

King Richard I. in 1189 firſt changed the bailiffs of London into Mayors, by whoſe example others were afterwards appointed.

MAZAGAN. A port-town of Morocco in Africa, ſituated in 10 deg. of W. lon. and 33 deg. of N. lat.

MAZARA. A port-town of Sicily, ſituated on the S. W. coaſt, in 12 deg. 30 min. of E. lon. and 37 deg. 42 min. of N. lat.

MEACO. A large city of great trade in the iſland of Niphon in Japan, ſituated in 135 deg. of E. lon. and 35 deg. 20 min. of N. lat. See *Japan*.

MEAD. A wholſome agreeable liquor, prepared of honey and water. See *Metheglin*.

One of the beſt methods of preparing mead is as follows: into 12 gallons of water, ſlip the whites of 6 eggs, mixing theſe well together, and to the mixture adding 20 pounds of honey; let the liquor boil an hour, and when boiled add cinnamon, ginger, cloves, mace, and a little roſemary. As ſoon as it is cold, put a ſpoonful of yeaſt to it, and turn it up, keeping the veſſel filled as it works;

when it has done working ſtop it up cloſe, and when fine bottle it off for uſe.

MEASURE, in a legal, commercial, and popular ſenſe, denotes a certain quantity, or proportion, of any thing bought, ſold, valued, or the like.

Meaſures then are various, according to the various kinds and dimenſions of things meaſured; hence ariſe lineal or longitudinal meaſures for lines or lengths; ſquare meaſures for areas or ſuperficies; and ſolid or cubic meaſures for bodies and their capacities: all which are very different according to the difference of countries, ages, and commodities.

In treating of meaſures it is proper to ſhew, 1ſt, thoſe of Europe; 2d, thoſe of Aſia; and, 3d, thoſe of Africa.

1. *The* MEASURES *of Europe.* Edgar, who was King of England in the 959, made a law that the ſame weights and meaſures ſhould be obſerved throughout the realm; and Canute, who was King of England in the year 1017, made good laws for weights and meaſures: but by magna charta, in the 9th year of Henry III. it was ordained, That one meaſure of wine, ale, and corn, ſhould be throughout the land; being the quarter of London; and one breadth of dyed cloth, ruſſets, and haberjects, or 2 yards within the liſts; and it ſhould be of weights as of meaſures.

By the ſtatute of the 31ſt of Edw. I. an Engliſh penny, called a ſterling, ſhould weigh 32 wheat corns in the midſt of the ear, and 20 pence ſhould make an ounce, 12 ounces a pound, 8 pounds a gallon of wine, and 8 gallons a London buſhel, which is the 8th part of a quarter.

By the ſtatute of the 27th of Edw. III. one weight, one meaſure, and one yard, ſhould be thro' all the land; and wools, and all goods of weight, ſhould be weighed by the ballance, ſo that the ballance be even: which was confirmed by ſeveral other ſtatutes.

But as proper weights and meaſures were neglected, it was enacted, by the ſtatute of the 11th of Henry VII. That there ſhould be delivered to the knights and citizens of every ſhire and city, barons of the five ports, and certain burgeſſes, one of every weight and meaſure of braſs according to the ſtandard in the Exchequer, to be conveyed by them to ſuch places as mentioned in the act, being Appleby, Newcaſtle, Carliſle, Lincoln, Derby, Nottingham, Leiceſter, Coventry, Uppingham, Northampton, Bedford, Buckingham, Cambridge, Huntingdon, Norwich, St. Edmund's Bury, Chelmsford, Hertford, Weſtminſter, Maidſtone, Guilford, Lewes, Oxford, Reading, Shrewſbury, Stafford, Hereford, Glouceſter, Worceſter, Saliſbury, Wincheſter, Ilcheſter, Dorcheſter, Exeter, Leſtwithiel, London, Briſtol, Dover, Southampton, and Cheſter; to remain there, in the keeping of the mayor, bailiff, or other head officer, as the King's ſtandard. That the inhabitants of all cities, boroughs, and market-towns, ſhould cauſe to be made common meaſures and weights, according to the weights and meaſures above ſaid, the ſame to be examined and marked by the mayor, bailiff, or other head officer, in whoſe poſſeſſion the ſtandard ſhould remain. That no perſon within any city, borough, or market-town, ſhould buy or ſell with any weight or meaſure, except ſo marked; nor any other perſon out of ſuch places, except it be equal with the ſtandard; and every perſon ſhould buy and ſell with a buſhel ſealed. That all mayors, and other head officers of every city, ſhould cauſe twice in the year, or oftener, all weights and meaſures to be brought before them; and ſuch as they found defective ſhould be broke and burnt, and the parties offending ſhould forfeit 6 s. 8 d. for the firſt time, 13 s. 4 d. for the ſecond, and 20 s. for the third time, and be ſet upon the pillory. That two juſtices of the peace, whereof one of the quorum, ſhould have authority to hear and determine the defaults of the mayors and other head officers, and alſo of all buyers and ſellers acting contrary to this ſtatute, and to ſet fine and amercement upon the offenders. That there ſhould be but 8 buſhels ſtricken to the quarter of corn, 14 lb. to the ſtone of wool, and 26 ſtone to the ſack; provided that this act ſhould not extend to any perſon buying or ſelling by water-meaſure within ſhip-board, and the ſaid water-meaſure ſhould only contain five pecks after the ſaid ſtandard ſtricken.

And by the 12th of Henry VII. it was enacted, That the meaſure of the buſhel ſhould contain 8 gallons of wheat, every gallon 8 lb. troy, every pound 12 ounces, every ounce 20 ſterlings, and every ſterling 32 corns of wheat in the midſt of the ear; which is called the Winchester meaſure, and took this name from the ſtatute made at Wincheſter 16th Richard II. whereby the clerk of the market was directed to have all his weights and meaſures ready, according to the ſtandard of the Exchequer.

By the 22d of Charles II. it was enacted, That water-meaſure ſhould be repeated, as to the meaſuring of corn ground or unground, or ſalt, which ſhould be ſold only by Wincheſter meaſure, under forfeiture of 40 s. That at the charge of ſuch perſons who ſhall have the profit of any market, there ſhould be one meaſure of braſs provided and chained in the public market places, upon forfeiture of 5 l. and all conſtables were required to ſearch if any perſons uſed any other meaſure, or ſold or bought by a meaſure unſealed.

By the 22d and 23d of Ch. II. every perſon who ſhould ſell or buy any corn or ſalt by the bag, or without meaſuring being thereto required, ſhould forfeit, beſide the former penalties, all ſuch corn or ſalt, or the value thereof, to the perſon complaining.

By the ſtatute of the 13th and 14th of William III. every round buſhel with a plain bottom, 18 ½ inches wide throughout, and 8 inches deep, ſhould be a legal Winchester buſhel, according to the ſtandard in the Exchequer.

By the ſtatute of the 1ſt of Queen Anne, the water meaſure ſhould be round, and in diameter 18 ½ inches within the hoop, 8 inches deep, and ſo in proportion, being five pecks; every water-meaſure, by which apples and pears were ſold, ſhould be heaped as uſually; and whoever ſhould ſell or buy apples or pears by other meaſure ſhould forfeit 10 s. but not to extend to any meaſure ſealed by the fruiterers company of London in the city, or 3 miles diſtance of the ſame.

As to liquid meaſures, by the 1ſt of Richard III. no perſon ſhould bring into the realm any butt of malmſey to be ſold unleſs it contained 126 gallons; nor no veſſels with wines or oil unleſs every ton contained 252 gallons, every pipe 126 gallons, every tertian 84 gallons, every hogſhead 63 gallons, every barrel 31 ½ gallons, and every runlet 18 ½ gallons.

By the ſtatute of the 23d of Henry VIII. the barrel of beer ſhould contain 36 gallons, the kilderkin 18, and the firkin 9 gallons of the King's ſtandard: the barrel of ale ſhould contain 32 gallons, the kilderkin 16, and the firkin 8 gallons. But, when the exciſe was laid on beer and ale in the 12th year of Charles II. 36 gallons were only reckoned as a barrel of beer, and only 32 ſuch gallons a barrel of ale: though, by the 1ſt of Will. and Mary, ſuch gallons of vinegar, and of beer or ale ſtrong or ſmaller, without the bills of mortality, were declared to be a barrel: all other exciſable liquors being to pay according to the wine gallon, which contained only 231 cubic inches, whereas the ale gallon held 282; the former holding 8 lb. 1 oz. 4 dr. avoirdupois of rain water; the latter, 10 lb. 3 oz. or a little more: ſo that the wine meaſures are ſmaller than thoſe of ale and beer; 4 gallons of ale and beer being near equal to 5 gallons of wine. Two pints of both 2 pints make a quart, 2 quarts a pottle, 2 pottles a gallon; but the gallon for dry meaſure contains 272 ¼ inches, and holds 9 lb. 13 oz. 12 ½ dr. avoird.

By the ſtatute of the 16th and 17th of Charles II. all coals brought into the river Thames are to be meaſured by the chaldron of 36 buſhels heaped, according to a buſhel ſealed for that purpoſe in Guildhall, London. And coals ſold by weight are to be ſold by the hundred of 112 lb. under forfeiture of the coals, and double value.

All meaſures are either receptive, or applicative.

Receptive Meaſures, or meaſures of capacity, are diſtinguiſhed by liquid and dry meaſures; the liquid

for wine, rum, brandy, ſpirits, vinegar, cyder, beer, ale, and ſuch other goods: the dry for corn, ſalt, coals, and ſuch kind of commodities.

Applicative Meaſures, are either the yard, or ell, aun, canes, varas, cavadoes, braces, aſhins, picos, covids, and others, for linen and woollen cloths, ſilks, laces, ribbons, and ſuch ſort of goods: or the inch, foot, &c. for wood; and other longer meaſures of that nature, for land, &c.

Engliſh Meaſures. The meaſures generally in uſe at this time throughout England are of three ſorts; 1ſt, the yard, containing 16 nails, or 36 inches; by which all ſorts of woollen cloths, wrought ſilks, moſt linens, tapes, garterings, and ſuch other things are meaſured. 2d, the ell, containing 20 nails, or 45 inches; which is uſed only in meaſuring ſome few particular linens, as hollands, dowlas, &c.

3. The Flemiſh ell, for meaſuring tapeſtry, containing 12 nails, or 27 inches.

There has been alſo another meaſue, called a goad, only uſed in meaſuring Welch frizes and frizadoes, containing 55 inches; but this laſt meaſure is now entirely out of uſe.

Meaſures for fuel, which according to ſtatute are coals and wood.

Of coals 36 buſhels go to a chaldron; but on ſhipboard 21 chaldrons are reckoned to a ſcore; 112 lb. avoirdupois is an hundred weight; and 8 chaldrons at Newcaſtle make at London about 15 chaldrons.

Wood fuel is aſſized into ſhids, billets, faggots, falwood, and cord wood. A ſhid is to be 4 feet long, and according as they are marked and notched, their proportion muſt be in the girth; that is, if they have but one notch, they muſt be 16 inches in girth, if 2 notches 23 lnches, if 3 notches 28 inches, if 4 notches 33 inches, and if they have 5 notches they muſt be 38 inches about.

Billets are to be 3 feet long, whereof there ſhould be 3 ſorts; a ſingle, a caſk, and a caſk of two. The firſt is 7 inches, the ſecond 10 inches, and the third 14 inches about; being all ſold by the hundred, five ſcore to the hundred.

Faggots are to be 3 feet long, and at the band 24 inches about, beſides the knot: of which faggots 50 go to a load.

Falwood, bavins, and ſpray wood, are ſold by the hundred, and 100 are accounted a load.

Cord wood is the bigger ſort of fire wood, meaſured by a cord, or line, of which there are two meaſures; that called the 14 feet cord, is to be 14 feet in length, 3 feet in breadth, and 3 feet in the height; but the other is 8 feet long, 4 feet high, and in breadth 4 feet.

Meaſures for Corn. The gallon is found by the ſtatutes of England to hold 8 pints, and to weigh 8 lb. troy weight:

2 Gallons, a peck, or 16 lb. or pints, or 2 gallons.
4 Pecks, a buſhel, or 64 lb. or pints, or 8 gallons.
2 Buſhels, a ſtrike, or 128 lb. or pints, or 16 gallons.
2 Strikes, a comb, or 256 lb. or pints, or 32 gallons.
2 Combs, a quarter, or 512 lb. or pints, or 64 gallons.
6 Quarters, a wey, or 3072 lb. or pints, or 384 gallons.
10 Quarters, a laſt, or 5120 lb. or pints, or 640 gallons.

However, a ton of wheat in London commonly weighs, avoirdupois weight, between 2200 and 2500 lb. Of rye, between 2100 and 2240 lb. Of barley, between 1709 and 1800 lb.

Corn is uſually ſold in England by the quarter, 5 quarters being commonly reckoned to a ton in freight: and, according to the above troy weight, a ton of corn weighs 2400 lb. avoirdupois weight.

Meaſures for ſalt. Of this commodity, great quantities of late years have been made in England, and tranſported to ſeveral places beyond the ſeas; being uſed to be bought and ſold by meaſure, as corn is at preſent: but at this time it is ſold from the pits only by weight, reckoning 7 lb. avoirdupois to a gallon, 56 lb. to the buſhel, and 42 buſhels to the ton for freight; 5 buſhels being one ſack, and 4 C. weight is one quarter.

Meaſures for timber, horſes, and land; called long meaſure. For timber, horſes, &c. 3 barley-corns is one inch, or a finger's breadth, 4 inches is one hand in horſe meaſure, 12 inches is one foot, 5 feet a geometrical pace, 6 feet a fathom, and 16 ½ feet a pole or perch, 40 poles a furlong, and 8 furlongs is one mile ſtatute meaſure: but the pole and perch differ from the above meaſure in ſeveral parts of the kingdom.

For land meaſure, 9 ſquare feet is one ſquare yard, 272 ſquare feet is one ſquare pole or perch, 40 ſquare poles is one ſquare rood, 4 ſquare roods is one ſquare acre, and 640 ſquare acres is one ſquare mile, according to the ſtatute meaſure of this kingdom.

The difference of miles uſed by the Europeans.

The French, Spaniſh, and Portugueſe mile is two Engliſh miles, called by them a league.

The German mile is more than three Engliſh miles, or five Italian miles.

The Dutch miles are between the French and German mile.

The Poliſh and Daniſh miles are like the German mile, more than three Engliſh miles.

The Gothick and Swediſh mile is no leſs than five or ſix, and ſometimes eight Italian miles; the Italian mile and half, being one Engliſh mile.

The Switzers, by reaſon of their mountains, reckon their tedious journies more by the ſpace of hours, than by diſtance of miles.

The Ruſſians reckon by the verſt; being about three quarters of a mile.

The Turks have no diſtinction of ways by miles, nor days by hours.

The Perſians make uſe of their pariſanga or farſach, each contains 30 ſtadia or furlongs, or about four miles.

The Chineſe uſe the meaſure of Ychan, being the journey of one day; as alſo of the courſe or coſe, a meaſure among the Eaſt Indians, containing a mile and a half, and ſometimes two miles.

Meaſures for ale and beer; of ale two pints make one quart, 4 quarts one gallon, 2 firkins a kilderkin, 2 kilderkins a barrel, and 12 barrels a laſt.

Of beer, 9 gallons is a firkin, 2 firkins a kildkerkin, 2 kilderkins a barrel, 1 ½ barrel is a hogſhead, 2 hogſheads one pipe or butt, and 2 pipes or butts a tun.

Meaſures for wine, brandy, cyder, &c. Two pints make one quart, 2 quarts one pottle, 2 pottles one gallon, 18 gallons one ſtatute runlet, 42 gallons one tierce, 1 ½ tierce, or 63 gallons, one hogſhead, 84 gallons one puncheon, 126 gallons, or 2 hogſheads, one pipe or butt, and 4 hogſheads, or 2 pipes, or 252 gallons, is one ton of wine, brandy, cyder, vinegar, &c. according to ſtatute meaſure. And it is ſaid that any veſſel that holds 50 lb. weight of rain water, will hold 53 lb. of river water; or, 45 lb. of butter or oil, 39 lb. of linſeed oil, 35 lb. of honey, and 850 lb. of quickſilver.

In Scotland and Ireland the meaſures are the ſame as in England; only the Iriſh land meaſure has more acres to the mile.

All goods and merchandiſe pay duties in England, either by tale, weight, meaſure, or gauge: but goods delivered by meaſure are under three different regulations at the cuſtom-houſe.

1. Such as linens particularly, which are meaſured by running meaſure; being no more than taking the length of the piece from one end to the other.

2. Such as pictures, grave and paving ſtones, and marble tables particularly, which are meaſured by ſquare or ſuperficial meaſure.

3. Such as marble blocks and timber particularly, which are meaſured by ſolid or cubical meaſure.

But wines, and all exciſeable liquors, are meaſured by gauge. However, the cuſtom of London in many commodities diſagrees with the ſtatute meaſures; as in oil it is obſerved, that 236 gallons, by merchants called the civil gauge, is ordinarily ſold for a tun, and not 252 gallons, as above mentioned. Of eels, 25 is a ſtrike, and 10 ſtrikes is a band. Of herrings, there is ſix ſcore to the hundred, 1200 is a barrel, and 12 barrels a laſt. Of furs, flitches, greys, gennets, martens, mincks, and ſable ſkins, 40 ſkins make a timber, and ſome other ſkins five ſcore to the hundred. Of paper, 24 ſheets is a quire, 20 quires a ream, and 10 reams a bale. Of parchment, 12 ſkins is a dozen, and 5 dozen a roll.

A TABLE of the conformity of LONG MEASURES of the most considerable places in Europe.

	Ells of Holland.	Ells of Brabant.	Ells of England, France, &c.	Ells of Hamburg, Francfort, &c.	Ells of Breslaw.	Ells of Dantzic.	Ells of Bergen.	Ells of Sweden.	Linen ells of St. Gall. The ell of England is equal to that of France and Osnaburg; the ell of Nuremberg to that of Amsterdam, Rotterdam, and other cities of Holland; and the ell of Bern and Basil, to that of Hamburg, Francfort, and Leipsic.

By observation at the Custom-house in London, 100 auns of Flanders and Holland make 58⅘ ells English in London; 100 auns of Germany, and the East Countries, 49 ells in London; 100 ashins from Russia, 57 ells in London; and 100 Turky pico's, 43½ ells in London.

Proportions of the long measures of several nations to the English foot.

The Engliſh ſtandard foot being divided into 1000 equal parts, the other meaſures will have the proportion to it, which follow.

The Engliſh foot from the ſtandard in Guildhall	1000
The Paris royal foot, in the Chatelet -	1068
The Rhinland foot, of Snellius - -	1033
The Venetian foot - - - -	1162
The ell of Antwerp - - - -	2283
The ell of Amſterdam - - -	2268

The palm of the architects at Rome -	494¼

MEASURES *of Holland, and the other United Provinces.*

The Dutch meaſure for linen and woollen goods is the ell, or aun, which is ſomething more than 27 ½ inches in length; ſo that 1 Engliſh ell is about 1 ⅝ of the Dutch ell; or 100 auns of Amſterdam is equal to 58½ ells of London.

The Dutch meaſures for wine, are the vertel or virge, 2 ½ of which make a ſteckan, 2 ſteckans is 1 anchor, 4 anchors 1 awm, and 14 awms of Amſterdam is 1 ſeoder; the awm being equal to the Engliſh tierce, and containing 42 gallons.

The Dutch meaſure for brandy is the butt, containing from 27 to 32 vertels; the vertel being ſomewhat more than 2 Engliſh gallons.

The Dutch meaſure for ſalt, is the great hundred of 404 ſcheppels, being 7 laſts, or 14 ton, or 28,000 lb. weight; which is alſo counted 208 ſacks, and is ſold by the pound Flemiſh.

The Dutch meaſures for corn, are the ſcheppel, 3 of which is one ſack; 4 ſcheppels 1 muid; 36 ſacks, or 27 muids 1 laſt, weighing 4000 lb. weight, and making about 10 ¼ quarters of London. But the Dutch land laſt is not the ſame in all places: the laſt of Amſterdam commonly weighs of wheat between 4200 and 4800 lb. of rye, between 4000 and 4200 lb. and of barley between 3200 and 3400 lb. and in Rotterdam, Delft, Haerlem, Hoorn, Enchuyſen, Muiden, Merden, Leyden, Alckmaer, and Schedam, the laſt is 2 *per cent.* more than that of Amſterdam.

The Dutch meaſure for oils is the butt or pipe, containing from 20 to 25 ſteckans, or from about 100 to 125 Engliſh gallons: but coarſe fiſh oil is kept in barrels, containing from 15 to 20 ſteckans; or from about 75 to 100 Engliſh gallons; and the meaſure for honey is the ton, conſiſting of 6 awms, or 252 Engliſh gallons.

3. *The Meaſures of Flanders and Brabant, or the Netherlands.* The Antwerp meaſure for linen and woollen goods is the aun, or ell, 100 of which make 75 yards of London. The corn meaſure is the vertel, 37 ½ of which make 10 ¼ quarters of London. The wine meaſures are the ſtoop, awm, and butt; the ſtoop is 6 lb. weight, 50 ſtoops an awm, and 152 ſtoops a pipe or butt; 6 awms being the ton of 252 gallons Wincheſter meaſure: and the beer meaſure is the barrel of 52 ſtoops; the ſtoop containing 7 pints, and the awm about 42 gallons wine meaſure of London.

Or theſe meaſures may be ſtated as follows:

100 yards of London has made, in Holland,	Awms.
in general - - - -	133
In Antwerp - - -	134
In Bruges - - - -	126
In Dunkirk and Middleburgh - -	135
In Ypres - - - -	130
In Liege - - - -	151
In Maeſtricht and Guelderland -	139
In Liſle, Cambray, and Doway -	125
In Ruremond - - -	132
In Artois in general - -	131
In Tournay - - -	144

About 10 ¼ quarters corn meaſure of London make in Bruſſels 10 ½ muids, and different in moſt places of Brabant. In Ghent 4 muids, 7 halſters, reckoning 7 halſters to a muid. In Bruges 7 ½ hoedts. In Dunkirk 18 raiſers. In Middleburgh 40 ſacks.

4. *The Meaſures of Germany.* The meaſures at Vienna are of two ſorts; for linen and woollen, 103 auns for the former making 100 yards in London, and 113 for the latter making 100 yards in London; and 100 ells of Breſlaw make about 68 yards in London.

110 Ells of Frankfort, Hamburgh, and Leipſic, make between 63 and 64 yards in London; 100 ells of Noremburg make 75 yards in London.

5. *The Meaſures of Poland and Dantzick*, are both for linen and woollen: the former is ſold by the ſhock, containing about 57 ½ Engliſh ells: the latter by the aun, which is about half an ell, or 100 of ſuch ells make 63 ¾ yards of London: but the corn of Dantzic is ſold by the ſheffel, of which 60 are a laſt, or about 82 buſhels of London.

6. *The Meaſures for woollen cloth at Riga and Koningſburgh*, are the ſame as in Poland; but the Riga laſt of corn makes about 72 buſhels Wincheſter meaſure; and in Koningſburgh linen cloth and wood are both ſold by the ſhock, containing 60 auns of linen, and 60 pieces of wood to the ſhock; though in narrow linens there are 120 auns to the ſhock.

7. *The Meaſures of Pruſſia*, are the aun for linen, 100 of which make about 52 ells Engliſh: for beer, the fat, containg 180 ſtoops, or about 68 gallons Engliſh; and the corn meaſure is the ſame as at Dantzic.

8. *The Meaſures of Denmark and Norway*, for cloth is the aun, about half an Engliſh ell, or 100 of theſe ells make 67 1/12 yards in London: the meaſure for corn is a ton, being about 4 buſhels in London; and their meaſure for liquor is the kan, and the pot; 4 pots being a kan, which holds about an Engliſh gallon Wincheſter meaſure.

9. *The Meaſures of Sweden*, for woollen cloth is the Brabant aun, or ſomething leſs than ¾ of an Engliſh yard; 100 Swediſh ells being about 65 yards in London.

10. *The Meaſures of Ruſſia*, are for linen and woollen, the arſheen; which is divided into 60 veſhcoves, or 28 inches London meaſure; ſo that 7 Engliſh yards make 9 arſheens, or 100 arſheens make 56 ells Engliſh: the meaſures for corn are the chetwert, and chetweric; 8 chetwerics being 1 chetwert, or 5 3/20 buſhels Wincheſter meaſure.

11. *The Meaſures of Turky*; at Conſtantinople the meaſure is called the pico, which is of three ſorts; the firſt for linen, 6 of which make about 9 yards Engliſh; the ſecond for woollen goods, of which 16 are about 12 yards Engliſh; the third for camblets and grograms, 12 of which make about 8 yards Engliſh. Corn is ſold by the killow, which weighs about 20 oaks; and 8 ⅔ killows are about 1 quarter London meaſure: wine and oil are ſold by the meter, of 7 oaks, or ⅔ of a Wincheſter gallon.

At Aleppo, the measure for linen, woollen, and silks, is the pico of one sort, being about $\frac{3}{4}$ of a yard English.
In Candia, the pico is of two kinds; the one for silk, 100 of which are about 61 $\frac{1}{2}$ yards in London; and the other for cloth, 100 of which make about 65 $\frac{1}{2}$ yards in London.
In the Morea, the measure for oil is the levor, weighing about 7 $\frac{1}{2}$ lb. 10 levors make the barrel, which contains 15 English gallons, and weighs 112 $\frac{1}{2}$ lb. English avoirdupois.

12. *The Measures of Italy.* In Venice, the measure for linen and silk is the brace, of two sorts; 5 braces of silk make something less than 3 English ells; and the brace for linen is about half an English ell. The wine measure is the amphora, which contains 4 bigorzas; each bigorza is 4 quarts, each quart 4 sachies, and each sachie 4 leras: but by wholesale the amphora is about 14 English quarts, and the bigorza 3 $\frac{1}{2}$ quarts. Oil is sold by weight and measure; the mizaro being 40 meros, and the mero about 3 $\frac{1}{4}$ English pints. And corn is sold by the staras, 19 of which are equal to 10 $\frac{1}{4}$ quarters of London.
In Rome, the measure for woollen goods is the cane of 8 palms; 100 of which make about 227 English yards: that for linen being the brace, which is 3 $\frac{1}{2}$ palms of the cane: but corn is sold by the rugio of 412 lb.
In Ancona, the measure for linen and woollen is the brace, being about 27 $\frac{1}{2}$ inches in London.
In Ferrara, the brace is about an English ell.
In Naples, the measure for linen and silk is the cane of 8 palms; or about 2 $\frac{1}{4}$ yards in London. Oil and liquors are sold by the salmo of 16 tomolos; 5 $\frac{1}{2}$ salmos being a ton of 236 gallons of oil in London.
In Tuscany, the measure for silk and cloth is the brace, 4 of which are a cane; and 100 braces make 51 $\frac{1}{2}$ ells English, or 64 $\frac{1}{2}$ yards in London: but wrought silks and corn are sold in Florence only by weight. Wine is sold by the cognio of 10 barrels; 1 barrel is 20 flasks, and 1 flask is 2 mittidels. Oil is sold by the oxio of 32 mittidels: but at Leghorn corn is sold by measure, which is the stax; 3 stax make 1 sack, and 8 sacks a mogio, 5 sacks making somewhat less than 10 English bushels; or 100 sacks make about 40 bushels Winchester measure.
In Savoy and Piedmont, the measure for woollen cloth and silk is the ras, about 23 inches in length.
In Genoa, and Novi, the measure is the cane of different sorts: for woollen, the cane is 8 palms, for linen 10, and for silks the brace is 2 $\frac{1}{3}$ palms: 109 Genoese canes being about 245 $\frac{1}{4}$ yards in London. Wine is sold by the miserold, containing 2 barrels; 5 miserolds making a botta divina, or about 100 pints English. Corn is sold by the mina, 20 of which make a ton of 40 bushels Winchester measure. And oil is sold by the barrel, 14 of which make a ton of 236 gallons of London civil gauge.
In Milan, the measure for cloth and silk is the brace; of which 160 for linen, and 188 for silk, make about 100 yards in London.
In Mantua and Modena, the measure for linen and woollen is the brace, of about $\frac{1}{2}$ ell English.
At Bologna, the measure for linen and silk is the brace of about 25 inches in London; or 100 braces make about 53 ells in London.
In Sicily, the measure for woollen, linen, and silk, is the cane of about 8 palms, or 24 inches long. Corn is sold by the salmo, of which there are two sorts; the great one and the small one: but the latter is the common measure, being about 7 $\frac{1}{9}$ bushels Winchester measure, and about 17 *per cent.* less than the former. And oil is sold by the cantar, which holds about 2 $\frac{3}{4}$ barrels of Florence.

13. *The Measures of Switzerland*, are generally as at St. Gall, where the linen measure is the ell; 100 of which are about 67 $\frac{3}{4}$ yards in London: but 100 ells of woollen measure make about 100 yards in London.
At Geneva, 100 ells are equal to 97 $\frac{1}{2}$ yards English.

14. *The Measures of Portugal*, for long measure, are of two kinds: the vara, or bara, which is about an English ell; or 81 $\frac{1}{3}$ are about 100 yards in London. The measures for wine, oil, and all other liquors, are the almond, or almuda, which contains 2 alquiers, or 12 canadas, or 4 $\frac{1}{2}$ gallons Winchester measure. And the measures for corn and salt are the alquier, 60 of which make a muid, or moy, being about 3 English quarters, or 2 $\frac{1}{2}$ alquiers make an English bushel.

15. *The Measure of Spain*, for cloth, is the bara, or vara; 100 of which are about 107 English yards. The measure for wine and other liquors is the Zambre, containing 4 quartiles, or little more than 2 English quarts. And the measure for salt is the fannaque, containing 16 salamines; but 12 salamines is 1 fannaque for corn, and 15 fannaques is about 8 bushels English.
But the measures are different in several parts of Spain: the above are in use at Madrid: but at Malaga, 100 baras make 100 yards of London; and oil measure is the rove of 25 lb.
At Alicant, the measure for cloth and silk is the cane of 73 of which are about 75 yards of London; only 5 of the fannaques of corn make about 8 bushels or 1 quarter English: and the cantar for wine contains about 2 gallons Wincheſter measure.
At Bilboa and St. Sebastian's, the measure for cloth is the barra, 81 of which make 75 yards in London; and the measure for silk is the aun, 108 of which are equal to 75 yards in London.
At Seville, St. Lucar, Cadiz, and Gibraltar, there are two baras; one for woollen goods, which is the same as that at Bilboa; and one for silks, 83 $\frac{1}{3}$ of which make 75 yards in London: besides, there is the aun for linen, 108 of which are equal to 75 yards in London. Oil is sold here by the rove, 40 or 41 of which make a pipe; 2 pipes make 25 or 26 Florence barrels, or 252 gallons English: but a Seville gauge is accounted only 236 gallons in London.
At Barcelona, the measure is the cane of 8 palms, 43 of which make about 75 yards in London: but corn is sold by the quarter, which is the same as the quarter at London; 4 of these Barcelona quarters making a salmo, and 2 $\frac{1}{2}$ quarters a cargo or load of 360 lb. weight.

16. *The Measures of France*, are different in many places: at Paris the measures for corn are the litron, 4 of which make a peck, 4 pecks a bushel, 3 bushels a minot, 3 minots a mine, 2 mines a septier, and 12 septiers a muid; 19 septiers of corn being equal to about 10 $\frac{1}{4}$ quarters of London: but 24 bushels go to the septier of oats, and 12 septiers to the muid. At Abbeville, the septier is the same as that at Paris; but at Boulogne, 8 septiers make 7 of Paris; each septier weighing 270 lb.; and in other places the septier is different.
The salt measures of Paris are the litron, 16 of which make a quarter, 4 quarters a minot, 4 minots a septier, and 10 septiers a muid; the muid being 4 $\frac{1}{9}$ quarters of London measure: but though salt is sold by the muid all over France, this measure is different in many places.
The charcoal measures of Paris used by the merchants are the litron, 2 of which make a peck, 4 pecks a bushel, 8 bushels a minot, 2 minots a mine, and 16 mines a muid; but by the city measure 20 mines go to a muid. Of the coal measure, 4 litrons make a peck, 4 pecks a bushel, 6 bushels a minot, and 15 minots a voye. Of lime measure, 3 bushels is a minot, and 48 minots a muid; or 3 bushels make a sack, and 36 sacks a muid.
The wine measures of Paris, are the posson, 4 of which make a demi-septier, or pot; 4 pots 1 chopin, 2 chopins a pint, 2 pints a quart, 4 quarts a septier, and 36 septiers a muid of clear wine: or one muid contains 3 half muids, or 3 fuillets, or 300 pints, with the lees: but the muid is also divided into pipes or puncheons, quives, and half quives.
The silk, linen, and woollen measure of Paris, is the aune or ell, which is the same as the English ell, or about 1 $\frac{1}{4}$ yards in London: and this ell is used in Rochel, Bordeaux, and Nantes.
The Paris tois for building contains 6 feet, the foot 12 inches, the inch 12 lines, and the line 12 points.
At Thoulouse, and Montpelier, the measure for silk and cloth is the cane of 8 palms; 100 of which make 199 $\frac{3}{4}$ yards in London: and the septier of corn is 21 quarters in London.
At Bourdeaux, an hogshead of wine contains 110

with the lee, or 100 pots clear meaſure: and 38 buſhels of corn make about 10 ¼ quarters in London.

At Rochel and Cognia, 42 corn buſhels make 10 ⅓ quarters in London.

At Lions, the ell is 1 *per cent.* ſhorter than at Paris; and the corn meaſure is the aſſnee, containing 6 buſhels; 14 ⅝ aſſnees being about 10 quarters of London meaſure.

At Roan the corn meaſure is the muid, containing 12 ſeptiers, or 7 ⅜ quarters of London.

At Toulon, the common meaſure is the ſcandal, containing 4 ½ gallons Wincheſter meaſure. Oil is ſold by the millroe, containing 18 gallons, 2 millroes make a charge, 4 charges a butt, and 2 butts a ton, or 252 gallons. The wine meaſure is the ſame millroe: and the meaſure for linen and woollen is the cane of 8 palms; 100 of theſe canes making 214 ½ yards in London. The corn meaſures are the muid, minot, and load; the muid containing 24 minots, or 8 ½ quarters of London.

At Marſeilles, the cloth and ſilk meaſure is the cane, 100 of which make about 214 ½ yards in London. The corn meaſure is the load of 4 emines, which weighs 300 lb. of Marſeilles, or 243 lb. mark weight, which is equal to 1 ½ muid of Amſterdam, 1 ſeptier of Paris, 2 buſhels of Bourdeaux, and 4 ½ buſhels of London.

At Calais, the meaſure is the aun or ell of Paris: and the corn meaſure is the ſeptier, 12 of which make 13 ſeptiers of Paris, and ſomething leſs than 7 quarters of corn London meaſure.

Upon the whole, it ſhould be obſerved, that 100 French ells are 205 ¼ in Hamburgh, 213 ¾ in Breſlaw, 166 ⅔ in Brabant, 136 ⅘ baras in Spain, 171 cavadoes in Portugal, 175 braces in Venice, 199 ⅔ braces in Florence and Leghorn; as alſo equal to 100 ells in England, and 128 ¼ yards in London.

I. *The* MEASURES *of Aſia.*

1. *The Meaſures of Turky* are deſcribed under thoſe of Europe.

2. *The Meaſures of Arabia*, particularly at Mocha, for ſilk and cloth, is the covid, of 2 ſorts; the hand covid, being ½ yard Engliſh; and the iron covid, about ¾ of a yard Engliſh: there is alſo the tomond, containing 40 keltas, or 165 lb. Engliſh avoirdupois weight; and the pico about 26 ½ inches Engliſh.

3. *The Meaſures of Perſia*, for ſilk and linen, is the covid, equal to half an Engliſh yard: and the guz, 41 of which are about 44 yards Engliſh.

4. *The Meaſures of India*, are as follows. At Surat, the covid for ſilk and linen, being ½ yard Engliſh.

At Bombay, 5 pecks is a parah, and 25 parahs a morah, of uncertain meaſure.

At Fort St. George, 3 pints make a meaſure, 8 meaſures a mercal, 5 mercals a parac, and 80 paracs a garſe, of uncertain meaſure: but one corge is 20 pieces, and a covid ½ a yard.

At Bengal, the covid is the ſame as at Surat and Fort St. George.

At Bencoolen, one bamboo is an Engliſh gallon.

At Bantam, the covid is ½ yard; and the dry meaſure is the ganting, about 21 lb. Engliſh avoirdupois.

At Goa, the meaſures for length are the ſame with thoſe of Portugal: but the meaſure for corn is the medida, 24 of which make a maund, and 20 maund a candel, or about 14 buſhels Engliſh.

5. *The Meaſure of China*, for cloth and ſilk, is the covid, about 14 ⅛ inches Engliſh.

6. *The Meaſure of Japan*, for cloth, is the tattany, or ichan, of 2 ½ yards Engliſh; and the dry meaſure is the gant, containing ſix coca's, or 3 Engliſh pints.

II. *The Meaſures of Africa, are as follow:*

1. *In Egypt*, particularly at Grand Cairo, and Alexandria, the meaſure is the pico of two ſorts; that for cloth and ſilks being the pico, containing about 25 ⅛ inches Engliſh; and the other uſed in the ſale of wrought ſilks, gold cloth, and other ſtuffs, is the Turky pico, of which 165 make 100 yards of London.

2. *In Barbary*, particularly Tripoli and Tunis, the meaſure for cloth and ſtuffs is the pico, about 26 ½ Engliſh inches: but the ſilk pico is 1/10 ſhorter than the cloth pico, and the linen pico about ¼ ſhorter than the ſilk pico. The meaſure for oil is the meetar of 5 gallons Engliſh: but the meetar of wine is only half as much. The meaſure for corn is the ſaw, the weab, and the coffice; 12 ſaws are a weab, and 18 weab a coffice, or about 10 buſhels Engliſh. At Algier, the long meaſure is of two ſorts; the Turkiſh pico, and the Moriſco pico: the former is divided into 16 parts, every 8th part being called a robo; 1 ½ of theſe picos being about an Engliſh yard, by which all ſilks, ſtuffs, and woollen goods are ſold: but the latter is the common meaſure of the country, being about ¾ of the Turkiſh pico: and the meaſure for grain is the tarri, which is about 5 Engliſh gallons.

3. *In Morocco*, the meaſure for ſilk and cloth is the cavedo, or covid, 12 of which make a cane, and 182 canes make 100 yards of London.

4. *On the coaſt of Guinea*, the meaſures uſed by Europeans are generally the ſame as uſed in their reſpective countries in Europe: however, the Negroes have a meaſure for cloth, called a jacktam, being about 4 yards Engliſh, which they cut in half, and ſell their linen in ſuch ſmall quantities; but in woollen goods they ſeldom meaſure above a hand's breadth, which they cut for girdles.

MECCA. The capital of Arabia Felix, where Mahomet was born, ſituated in 43 deg. 30 min. of E. lon. and 21 deg. 20 min. of N. lat. 30 miles E. of Siden, the port-town of it on the Red ſea, 200 miles S. E. of Medina.

MECHANICS. See *Manufacture*, *Labour*, and *Journeyman*.

MECHLIN, or *Malines*. Capital of the lordſhip of Mechlin in the Auſtrian Netherlands, ſituated in 4 deg. 22 min. of E. lon. and 51 deg. 10 min. of N. lat. See Auſtrian *Netherlands*.

MECHOACAN, called alſo *white jalap*, *white rhubarb*, and *American ſcammony*, is a medicinal root, taking its name from a province of New Spain, from whence it is brought. Mechoacan was known and uſed as a purgative before jalap; tho' the latter is now in more general uſe, as being found more efficacious; yet mechoacan is the ſweeter and more gentle of the two, and on that account preferable. See *Jalap*.

The ſeat of its action is chiefly in the extreme parts, for which reaſon it is accounted good in arthritic pains: it has the advantage of needing no preparation or corrective, and of purging in its own proper ſubſtance ſuch as it grows.

M. Boulduc found by analyſing it, that it contains twelve times as much ſalt as reſin; but neither the ſaline nor reſinous extract purge ſo freely as the ſubſtance, even tho' taken in larger doſes; nor do they yet purge ſo gently.

In the choice of mechoacan, prefer thoſe pieces which are the browneſt within, and whoſe ſubſtance is the cloſeſt and moſt compact.

MECKLENBURGH *Duchy*. A province of Germany, in the circle of Lower Saxony. See *Germany*.

MECON. A great river, riſing in the north of Aſia, and running ſouth thro' the kingdoms of Laos and Cambodia, falls into the Indian ocean, in 10 deg. of N. lat. oppoſite to the iſland of Pulo-Condor.

MECONIUM. The juice of the poppy, drawn by expreſſion and dried. See *Poppy*.

Meconium differs from opium; the latter oozes out ſpontaneouſly after an inciſion made in the heads of the poppies; whereas the former is drawn by violence both from the heads and leaves, and even from the whole plant bruiſed and preſſed together. See *Opium*.

MEDAL. A ſmall figure, or piece of metal, in the form of a coin; deſtined to preſerve for poſterity the portrait of ſome great man, or the memory of ſome illuſtrious action.

The commerce of medals is chiefly among virtuoſos to enrich their cabinets of curioſities: however, it may be ſaid, that there are antiquary merchants in ſeveral of the chief cities in Germany, who make it their buſineſs to collect medals and reſell them with profit: but this traffic is not without its frauds, and a perſon to ſucceed therein ſhould be very well ſkilled in antique coins.

MEDALION, imports a medal of an extraordinary bigneſs.

MEDENBLICK. A port-town of the Netherlands, ſituated on the Zuyder ſea, in the province of Holland, in 5 deg. of E. lon. and 52 deg. 50 min. of N. lat.

MEDITERRANEAN *Sea*, is that large ſea which flows between the continents of Europe and Africa, entering by the ſtraights of Gibraltar, and reaching into Aſia, as far as the Euxine ſea, and the Palus Mæotis. See *Sea*.

The Mediterranean was anciently called the Grecian ſea, and the Great ſea; and is now cantoned out into ſeveral diviſions, which bear ſeveral names. To the weſt of Italy it is called the Liguſtic, or Tuſcan ſea; near Venice the Adriatic; towards Greece, Ionic, and Egean; between the Helleſpont and Boſphorus, the White ſea, as being very ſafe; and beyond, the Black ſea, the navigation being dangerous: but the Arabs call the Mediterranean ſea, the chamber-pot, by reaſon it ſeems of that figure.

The commerce of this ſea is greatly interrupted by the Corſairs of Barbary: but theſe piratical ſtates have concluded treaties of commerce with Great Britain, France, and the States General, whereby the ſubjects of theſe nations are permitted to trade in ſecurity, on producing proper paſſes. See *Treaty*, *Gibraltar*, *Spain*, and *Barbary*.

By an act paſſed in the 4th of Geo. II. the counterfeiting, altering, and eraſing of Mediterranean paſſes, or knowingly uttering, or publiſhing ſuch counterfeited, altered, or eraſed paſſes, is felony without benefit of clergy. See *Forgery*.

MEDWAY. A river, riſing in Aſhdown foreſt, in Suſſex, and taking its courſe generally N. E. by Penſhurſt, Tunbridge, Maidſtone, and Rocheſter, in Kent, beyond which it is divided into two branches by the iſle of Sheppy; the one called the E. Swale, and the other the W. Swale: the W. Swale, the chief entrance into this river, is defended by the fort of Sheerneſs: the E. Swale leads to Milton and Feverſham, where there are the fineſt oyſter fiſheries in the world: but what this river is moſt conſiderable for, is its being the ſtation for the royal navy, moſt of the firſt and ſecond rate men of war being built and laid up at the town of Chatham.

MEGERE. A corn meaſure uſed at Caſtres in Languedoc, 4 of which make a buſhel.

MEHAIGN. A river of the Auſtrian Netherlands, which riſes in the province of Namur, runs eaſt thro' that country, and falls into the Maes, a little weſt of Huy.

MEHON, or *Mau*. A medicinal plant, whoſe root enters the compoſition of the theriaca.

Its leaves are like thoſe of fennel, but much ſmaller: its ſtalk is about a foot in heigth, having on its extremity ſome umbrellas of white flowers, compoſed of five ſmall leaves, after which ariſes a brown and indented grain: its root is of the bigneſs of the little finger, blackiſh on the outſide, whitiſh within, long, accompanied with ſome ſmaller roots, a little bitter, and of an aromatic odour.

It is ranked among alexitaries and ſudorifics, and is proper alſo for exciting urine. The beſt comes from the Alps and Pyrenean mountains; though ſome of the ſame kind is alſo met with in the mountains of Auvergne in France.

MEIDIN, or *Maidin*, called alſo *Parat*, *Para*, and *Paraſi*, a ſmall ſilver coin very light; ſtruck by the baſhaws of Cairo in the name of the Grand Signior; and current throughout Egypt, where it is uſed in all payments, 33 meidins being worth 3 s. 7 d. ſterling.

MEIN. A weight uſed in the Eaſt Indies, particularly at Agra, being about 56 lb. avoirdupois.

MELANTERIA. A ſort of mineral vitriolic matter, commonly called chalcihs, or colcothar. See *Vitriol*, *Chalcihs*, and *Colcothar*.

MELASSES. See *Meloſſes*.

MELIDA. An iſland in the gulph of Venice, ſituated on the coaſt of Dalmatia, in 18 deg. 30 min. of E. lon. and 42 deg. 30 min. of N. lat. ſubject to Raguſa.

MELIKTU-ZIZCAR. An officer in Perſia, who has the general inſpection of all the trade in the kingdom, particularly of Iſpahan; who decides all the differences ariſing among merchants; and has alſo the direction of all the brokers charged with the King's merchandiſe, or who trade therewith in foreign countries.

MELINDA. A port-town of Zanquebar in Africa, ſituated on the Indian ocean, in 39 deg. of E. lon. and 3 deg. of S. lat.

MELIORAT, is a term at Amſterdam for one of the three ſorts of the Bologna orgenzins which are ſold there.

MELITITES. A greyiſh ſtone, which, when pulverized, yields a milky liquor, of a taſte ſomewhat like honey; whence it takes its name.

It is found in mines of metals, and ſeems to partake pretty much of the nature of lead; having a ſweetneſs ſomewhat like the ſal ſaturni, but much fainter: and it only differs from the galactite, in that it is milder to the taſte.

MELLILA. A port-town of the coaſt of Barbary, in the province of Fez, ſituated in 3 deg. of W. lon. and 35 deg. 50 min. of N. lat.

MEMBERS *of a port*, is a name for an inferior port being under the direction of the ſame officers which belong to a ſuperior one. See *Port*.

MEMCEDA. A liquid meaſure uſed at Mocha in Arabia, containing 3 Engliſh pints.

MEMEL. A port-town of Poland, in the province of Samogitia, ſituated on the Baltic, in 21 deg. 30 min. E. lon. and 56 deg. of N. lat.

MEMPHITES. A ſort of ſtone, mentioned by Dioſcorides, Pliny, and other hiſtorians; ſuppoſed to be found in Egypt not far from the city of Cairo, the ancient Memphis; whence it received this denomination.

MENAN. A great river of the further India, in Asia, which, riſing north of the kingdom of Siam, runs thro' that kingdom from N. to S. paſſes by the city of Siam, and falls into a bay of the Indian ocean, below Bancock.

MENCAULT, or *Maucaud*. A corn meaſure uſed in ſome parts of Flanders; particularly at Landrecy, Queſnoy, and Caſteau. At Landrecy the mencault of wheat is 97 lb. avoirdupois; of maſlin-corn 94, of rye 90, and of oats 72. At Queſnoy, of wheat 80, of maſlin-corn 76, of rye 79, of oats 71. At Caſteau-Cambreſy, of wheat 85, of maſlin-corn 80, of rye 72, and of oats 6[illegible].

MENON. A quadrupede land animal of the goat kind, found particularly in the Levant, of whoſe ſkin the morocco leather is made.

MENSURATION, is a certain way of meaſuring the works of builders and other mechanics; as alſo of land.

MENTZ *Electorate*. See *Germany*.

MENUF. A kind of flax which grows in Egypt, and is ſold at Cairo for about 1 l. 6 s. ſterling the hundred.

The property it is famed for, is, that being pulverized and ſmeared on any part of the body to be cut off, it deadens it ſo, as that the patient ſhall perceive no pain from the operation.

MEOTIS *Palus*, or *Palus Meotis*, is a ſea of Turkey, which divides Europe from Aſia, extending from Crim Tartary to the mouth of the river Don, or Tanais, being about 200 miles long and 100 broad; to which there is no other paſſage than thro' the ſtraights of Kaffa, from the Black ſea; of both which ſeas the Turks have the ſole navigation ſince the demolition of the fortifications of Aſoph, at the mouth of the river Don.

MERCANTILE. Any thing belonging to the buſineſs of a merchant.

MERCANTILE *Affairs*. Any tranſaction that belongs to a merchant: but for Mercantile accompts, ſee *Book-keeping*.

MERCATOR'S *Chart*, or *Projection*. For the conſtruction, uſe, advantages, &c. hereof, ſee Mercator's *Chart*.

MERCATOR'S *Sailing*, is that performed loxodromically by means of mercator's charts. See Mercator's *Sailing*.

MERCER. A tradeſman that ſells ſilks of all ſorts ready wrought; and ſometimes ſtuffs, and other articles.

MERCER'S *company of London*, was incorporated by letters patent of the 17th of Richard II. in 1393. by the name of The wardens and commonalty of the myſtery of the mercers of the city of London, with a licence to purchaſe in mortmain an eſtate of 20 l. *per annum*, which by numerous gifts, and additional grants, is ſo vaſtly increaſed, that when the company in the year 1698 accepted of Dr. Aſhton's project for providing a maintenance for clergymens widows, they ſettled for that purpoſe a fund of about 14,000 l. *per annum*, and for ſecuring to the widow of each ſubſcriber 30 l. *per cent. per annum* during life: but the company ſoon perceiving that this was more than they could afford to pay, reduced the ſame

ime to 20 l. *per annum* for each 100 l. after which there vas ſo great a deficiency in theſe annuities, that tho' hey amounted to 7,500 l. a year, the eſtate belonging o the company did not exceed 4,150 l. a year. and the ar- ears due to the annuitants at Michaelmas 1747, amounted o 96,128 l. but as they were due to the widows of poor lergymen, and other widows, the parliament in 1748, ranted 3000 l. a year for 35 years, towards the relief of heſe annuitants, payable out of the duty of 6 d. on every halduron of coals imported into the port of London, ranted for the relief of the orphans and other creditors of he city.

This fraternity is governed by a prime and three other wardens, and 40 aſſiſtants, with 230 liverymen, who pay a fine on their being admitted as above mentioned: they have a ſtately hall in Cheapſide to manage their affairs in.

ERCHANDISE. Any ſort of vendable goods, or com- modities; as alſo any trade, or buſineſs of traffic.

ERCHANT. A general term, ſignifying a perſon oc- cupied in ſome commercial employment, for the purchaſe, ſale, and exchange of commodities; by wholeſale, or re- tail; by land, or by ſea; or both conjointly.

A merchant in England is one that buys and trades in any thing: and as merchandiſe includes all goods and wares expoſed to ſale in fairs or markets; ſo the word mer- chant anciently extended to all ſorts of traders, buyers, and ſellers. But every man who buys and ſells goods, is not at this day under the denomination of a merchant; only thoſe that traffic in the way of commerce, by im- portation and exportation, or carry on buſineſs by way of emption, vendition, barter, permutation or exchange, and who make it their living to buy and ſell, by a con- tinued aſſiduity, or frequent negotiation, in the myſtery of merchandiſing, are eſteemed merchants: a banker, and ſuch as deals by exchange, is regularly called a merchant.

It has been obſerved, that there is no profeſſion in which more courage is required than in this; for merchants who trade to foreign countries, encounter and ſtrive among men, and ſometimes againſt the four elements together; which is the ſtrongeſt proof that can be of the reſolution of man. And as affairs of merchandiſing at ſea can only be executed by the rich, ſome perſons have wiſhed that noblemen, who are commonly the richeſt in eſtate, might be permitted to practice themſelves in commerce, without prejudice to their condition, which would be more ho- nourable unto them than to be uſurers, as in Italy; or to impoveriſh themſelves, in doing nothing but to ſpend and make conſumption of their fortunes.

The ſeveral qualifications of a merchant, are to write a good hand, to be a good accomptant, to be acquainted with all coins, weights, and meaſures; to have a know- ledge of the places of all manufactures, the goodneſs of a manufactured piece, its length and breadth; the re- ſpective commodities of all countries, and ſuch whoſe importation and exportation are permitted, or prohibited; the price of exchange purſuant to the currency of dif- ferent places; the duties of imports and exports, accord- ing to the uſage of places, tariffs, and regulations; the price, and manner of freightage, and inſurances; foreign languages reduced to three principal ones; the Spaniſh underſtood and uſed in almoſt all parts of the Eaſt, par- ticularly on the coaſts of Africa from the Canaries to the Cape of Good Hope; the Italian in the Levant, and the high Dutch in all northern countries; conſular juriſpru- dence; and laſtly geography, and the art of navigation. See *Commerce*, *Company*, *Trade*, *Navigation*, *Alien*, and *Denizen*.

The bartering of goods ſignifies to exchange one com- modity for another, or truck wares for wares by mer- chants; ſo it is mentioned in the ſtatute, 1ſt Rich. III. cap. 9. And exchange was the original and natural way of commerce precedent to buying; for there was no buying till money was invented, tho' in exchanging both parties are as buyers and ſellers, and they equally warrant. In foreign countries, the uſual method of buying and ſell- ing of commodities, between merchants, is now by bills of debt, or bills obligatory, which by the law-merchant are there alienable or aſſignable over.

In former times it was a received opinion, that thoſe laws, which were prohibitory againſt foreign goods im- ported, &c. did not bind a merchant ſtranger: tho' it hath been a long time ſince adjudged otherwiſe; for in the leagues that are eſtabliſhed between nation and nation, the laws of either kingdom are excepted; and as the Engliſh merchants in France, or in any other nation in amity, are ſubject to the laws of that country where they reſide, ſo muſt the people of France, or any other country, be ſubject and liable to the laws of England, when reſi- dent there.

By the common law, merchants were always parti- cularly regarded in England; but the municipal laws of the kingdom, or indeed of any realm, are not ſuffi- cient for the ordering and determining the affairs of traf- fick, and matters relating to commerce; merchandiſe being ſo univerſally extenſive, that it is impoſſible: there- fore the law-merchant, ſo called from its univerſal con- cern, all nations take ſpecial knowledge of; and the common and ſtatute laws of England leave the cauſes of merchants, in many caſes, to their own peculiar law.

In the reign of King Edw. IV. a merchant-ſtranger made ſuit before the King's privy council, for ſeveral bales of ſilk feloniouſly taken from him; wherein it was moved, that this matter ſhould be determined at common law; but it was anſwered by the Lord Chancellor, that as this ſuit was brought by a merchant, he was not bound to ſue according to the law of the land.

Merchants abroad are very circumſpect and careful in giving characters one of another, leaſt unawares they thereby become ſureties. And a merchant at a mart-fair in Germany, being in a merchant's warehouſe, where was another merchant of his acquaintance, cheapening a parcel of ſilk wares, unknown to the ſeller; and the ſel- ler aſking him, whether he were a man of good credit, who anſwered he was; upon which the bargain was made, and the goods delivered to the buyer to a conſiderable value, taking his bill obligatory for the ſame, payable at the next fair following: here the buyer not appearing at the time, demand of the money was made of the mer- chant that gave the buyer the character; but he refuſing to pay it, a ſuit was thereupon commenced, and he was adjudged to pay the money; and all the recompence he had to reimburſe himſelf, was the buyer's bill obligatory aſſigned over to him, which was of no value, as the buyer became inſolvent.

This determination was according to the civil law, and general law and cuſtom between merchants; tho' the opinion of ſome merchants being demanded, they were divided therein: and it was by all agreed, that if the party had ſaid of the buyer of the goods, he is taken or reputed to be a good man of credit, or I take him to be ſo, without affirming it, he had been cleared by the law and cuſtom of merchants; which may be a good caveat for merchants and all men. See *Bankrupt*.

The wares, merchandiſes, debts, or duties, that mer- chants have as joint-traders or partners, on the deceaſe of either of them, are not to go to the ſurvivor, but to the executor of the deceaſed; and the ſurviving merchant is obliged to join in an action with the executor for re- covery thereof. But it has been told, that if two joint- merchants make a perſon their factor, if one of them dies leaving an executor; this executor and the ſurvivor can- not join, for the remedy ſurvives, but not the duty or intereſt; and therefore on recovery, he muſt be account- able to the executor for that. 2 Salk. 444.

If there are two merchants partners in trade, who are in- debted, and one breaks, the other may not be charged with the whole; but the eſtate belonging to the joint- trade ought to be divided, *&c.* But where there are two partners, and one dies, the ſurvivor ſhall be charged for the whole debt. 1 Mod. 45. Acts diſcharging bankrupts, ſhall not diſcharge any partner in trade, or one jointly bound with the bankrupt. 1 Danv. Abr. 686.

In caſe two joint-merchants occupy their ſtock, goods, and merchandiſe in common, to their common profit, one of them naming himſelf a merchant, ſhall have an account againſt the other, naming him a merchant, and ſhall charge him as a receiver: and if two merchants are

found in arrear upon an accompt with another, and they promiſe to pay it at certain days, but do not; then either of them may be charged for the whole ſingly; and an action of the caſe will lie on the cuſtom of merchants. 1. Co. Inſt. 172. 2 Roll. Abr. 702.

If one merchant draws a bill of exchange upon another, either at home or abroad, if it be by way of exchange, the acceptance of the bill by the party ſhall bind him to that party to whoſe uſe the money in the bill is to be paid, and he may bring his action in his own name *per legem mercatoriam:* and ſo it is if a third perſon, that is a ſtranger to the bill, ſhall accept the ſame for the honour of the drawer, it will bind him as effectually, as if he upon whom it was drawn had done it. 2. Cro. Rep. 7. And where two merchants have a joint trade, and one of them only accepts a bill of exchange, if he do not pay it, an action lies againſt the other; but the regular method is to proceed againſt both.

The exception in the ſtatute 21 Jac. I. of limitations concerning merchandiſe, as to actions of accompt, being brought within the time limited, extends only to accompts current between merchants, betwixt which and an accompt ſtated there is a diverſity; for when the accompt is ſtated and balanced, the certainty of the debt appears, and all the intricacy of accompt is out of doors: and the action muſt be brought within ſix years after the accompt is ſtated. But it was here ſaid, if after an accompt is ſtated, upon the balance of it a ſum appear due to either of the parties, which is not paid, but is afterwards thrown into a new accompt between the ſame parties, it is then ſlipped out of the ſtatute again: and the reaſon of the exception in this ſtatute was, becauſe merchants are often out of the realm, and cannot always proſecute their actions in due time. 1 Mod. Rep. 268, 270.

In England, merchants, traders, and others, deſiring to end any ſuit or controverſy, for which there is no other remedy but by perſonal action, or ſuit in equity, by arbitrament may agree, that their ſubmiſſion of the ſuit to the award or umpirage of any perſon or perſons, ſhall be made a rule of any of his Majeſty's courts of record, which the parties ſhall chuſe, and may inſert ſuch their agreement in their ſubmiſſion, or the condition of the bond or promiſe; and when upon filing the proper affidavit thereof, the ſame is entered of record, and a rule of court thereupon made, the parties ſhall ſubmit to, and be finally concluded by ſuch arbitration or umpirage; and in caſe of diſobedience thereto, the party refuſing to perform the ſame ſhall be ſubject to the penalties of contemning ſuch rule of court; and proceſs of attachment, &c. ſhall iſſue accordingly.

By the ſtatute 7th Anne, cap. 12. no merchant or trader, within the deſcription of any of the ſtatutes of bankrupt, putting himſelf under the ſervice of any ambaſſador, &c. here from abroad, ſhall have any benefit by this act to be privileged from arreſts, &c.

The ſtatutes in general, relating to merchant-ſtrangers and others, are the following:

By Magna Charta, 9 Hen. III. cap. 30. all merchant-ſtrangers, if they are not openly prohibited before, ſhall have ſafe conduct of coming into, going out of, and remaining in England, to buy and ſell, without being exacted upon by any manner of exceſſive tolls, except in time of war, and they be of our enemies country; and altho' they be of a land making war againſt us, ſo long as our merchants are well uſed there, they ſhall have the like good uſage here.

The act of 9th Edw. III. cap. 1. ordains, that merchant-ſtrangers may freely buy and ſell goods within the realm, except they be alien enemies: and if any diſturbance or abuſe be offer'd to them, or any other merchant in a corporation, and the head officer there do not, upon requeſt, provide a remedy, the franchiſe ſhall be ſeiſed into the King's hand, and the diſturber, on being attainted thereof, ſhall anſwer double damages to the party grieved, ſuffer one year's impriſonment, and be ranſom'd at the King's will: and if the diſturbance be out of a franchiſe, the lord, or his bailiff, &c. neglecting to provide remedy, are liable to the ſame penalty.

By the ſtatute of 27th Edw. III. cap. 2. ſafe conduct

ſhall be granted to merchant-ſtrangers, except alien enemies, to come and dwell in this realm, and return when they pleaſe; as alſo to ſell their commodities, without having them taken from them againſt their will, on any colour or pretence whatſoever. And officers, or others offending againſt this law, ſhall be arreſted by the head officer of the place, if it be out of the ſtaple; and if within it, then by the mayor and miniſters of the ſtaple; and ſhall be proceeded againſt according to the ſtaple-law, and not at the common law; and on conviction of the offence, incur double damages to the party grieved, and as much to the King.

By the 27th Edw. III. ſtat. 2. c. 11. & 17. all merchants may freely ſell their merchandiſe at the ſtaple by groſs, or by retail, without challenge or impeachment; but it ſhall be felony to foreſtall, buy, or give earneſt for any merchandiſes, before they come to the ſtaple or port, or to enter ſhips for that purpoſe. No merchant may be impleaded for another's treſpaſs, debt, &c. And if any difference ariſe between the King, and any foreign prince who hath merchants here, thoſe merchants his ſubjects ſhall have, by proclamation, forty days given them to depart; and if for any juſt cauſe they cannot leave the kingdom ſo ſoon, they ſhall have longer time allowed until they may conveniently go; and in the mean time may ſell their merchandiſe, if they can do it.

And by 38th Edw. III. cap. 2. it is ordained, That a merchant may uſe more merchandiſes than one, notwithſtanding the ſtatute of 37th Edw. III. cap. 5. by which merchants were prohibited to do it; and all merchants as well aliens as denizens, may buy all manner of merchandiſe, and freely carry them out of the realm, paying the cuſtoms, &c. except that Engliſh merchants ſhall not go abroad with wool, or woolfells, &c.

The 5th Rich. II. cap. 1. enacts, That all merchant-ſtrangers, of whatſoever kingdom or country they may be, being in amity with us, coming into England, ſhall be welcome, and friendly entertained and treated here, in all parts within this kingdom, with their merchandiſe and all manner of goods, without being diſturbed. But by the ſtatute of 16th Richard II. it is enacted, That no merchant-ſtranger, an alien, ſhall buy or ſell, or merchandiſe within the realm with another merchant-ſtranger, to ſell again; nor ſell any merchandiſe by retail, but victuals only wine he ſhall ſell by whole veſſels, and ſpicery by whole bales, and in no other manner.

By the 4th Henry IV. cap. 15. merchant-ſtrangers and denizens, that bring merchandiſes into England, and the ſame do ſell here and receive Engliſh money for the ſame, ſhall beſtow ſuch money upon other merchandiſe of England, to carry the ſame out of the realm, without carrying any gold or ſilver in coin or maſs, excepting the reaſonable coſts.

And the 5th Hen. VI. cap. 9. ordains, that for the better keeping of gold and ſilver within this kingdom, and for the increaſe of our commodities and manufactures, merchant-ſtrangers ſhall give ſecurity to the King's cuſtomers and controllers, to employ their money on the commodities of this realm; which they ſhall do, in pain to forfeit the ſame money: alſo merchant-ſtrangers were to ſell their merchandiſe within a quarter of a year next after their arrival; but this clauſe is repealed by a ſubſequent act. And by this ſtatute, the head officer of the place where a merchant-ſtranger ſhall arrive, ſhall aſſign him a ſufficient hoſt or inn, at which and with whom he ſhall reſide, and in no other place; and the hoſt ſo aſſigned ſhall take for his pains as hath been accuſtomed.

The ſtatute of 8th Henry VI. cap. 24. ordains, That no merchant alien ſhall conſtrain any of the King's ſubjects by promiſe, covenant, or bond, to pay him in gold for any debt, which to him may be due for any merchandiſe ſold; nor refuſe to receive payment thereof in ſilver upon pain of forfeiting double the value of the ſame; and to prevent loſs to the Engliſh merchants having dealings with foreigners here, no Engliſhman ſhall ſell within this realm, to any merchant-alien, any manner of merchandiſe, but for ready money paid preſently, or for other merchandiſe preſently delivered.

By the 1ſt Rich. III. cap 9. the Italian merchants trad-

either ſhall ſell their goods and merchandiſe at the port where they land them, and in groſs, not by retail, or ſhall forfeit the full value thereof: they are alſo to ſell their commodities within eight months time, and in that ſpace lay out and employ the money received upon Engliſh commodities, their expences deducted, and not make over the money by exchange; and if within that time they cannot diſpoſe of their goods, in two months after the eight months they ſhall convey them out of the realm; in pain to forfeit the money made over by exchange, and the merchandiſe ſold after eight months, and not conveyed away as aforeſaid, or the value of the ſame. Theſe merchants may tranſport their merchandiſe from one port to another, ſo as they ſell them within the ſaid eight months: but no ſuch merchant ſhall buy and ſell any wool in this realm; nor ſhall he make any woollen cloth, or deliver wool to that end, upon pain of forfeiture. By the 3d Hen. VII. cap. 8. it is enacted, That every merchant of Ireland, Jerſey, or Guernſey, that brings any merchandiſes into England, ſhall lay out the money received for the ſame merchandiſe, his reaſonable expences being deducted, upon the commodities of this land, or without fraud employ the money in due payment here; the ſame to be proved by writing, from the merchant or merchants to whom he hath paid the money by him received, witneſſing that he hath ſo done, or by ſuch other proof as ſhall be thought reaſonable to the cuſtomer or controller of the port; on pain of forfeiting the value of the merchandiſe ſo brought into this kingdom; the one half of the ſaid forfeiture to go to the King, and the other half to the party that will ſue for the ſame. And by this act, the 17th Edw. IV. is made perpetual; which ſtatute ordains, that merchant aliens guilty of theſe offences, ſhall forfeit all their goods found within this realm, and ſuffer a year's impriſonment.

The 2 d of Hen. VIII. cap. 7. ordained, That no merchant ſhall lay on land out of a ſhip any French wine, between the feaſt of St. Michael, and the Purification, on pain of forfeiture thereof: and the Lord Chancellor and other great officers, have authority to ſet the price of French and other wines, by the butt, barrel, &c. and perſons ſelling at greater prices, ſhall forfeit 40 l. alſo the price of retailing wines is limited by this ſtatute.

By the 1ſt Eliz. cap. 11. no merchants, or other perſons, are to lade or unlade into, or out of any ſhip or veſſel, any goods, wares, or merchandiſe whatſoever, except fiſh taken by Engliſhmen, but only in the day-time, and at certain ports and places appointed; in pain to forfeit the goods, wares, or merchandiſe otherwiſe laden or unladen, or the value; the places aſſigned, to be London, Southampton, Briſtol, Newcaſtle, Weſt-cheſter, &c.

The ſtatute of 12th Car. II. cap. 4. which grants the cuſtom-duties of tonnage and poundage to be paid by merchants to the King, and declares what particular things may be tranſported, paying the ſaid duties; provides and enacts, That all manner of wines imported in the port of London, or elſewhere, ſhall be freed from the impoſition of exciſe.

By the 1ſt Will. and Mary, cap. 34. If any merchant, wine-cooper, or other perſon, ſelling wines by wholeſale or retail, ſhall corrupt or adulterate any wine, or utter wine corrupt or adulterated, they ſhall forfeit 300 l. for every offence; one moiety to the King, the other to the proſecutor, to be removed by action of debt, bill, plaint, or information, &c. and be impriſoned for three months.

And by the 9th of Q. Anne, cap. 8. merchants importing French wine, are to do it in ſhips of 70 tons burthen, and ſo as the ſame comes directly from France into Ireland, and from thence to England: but before ſuch ſhips return to France, they are to be loaden with Engliſh goods to the value of the wines; and oath is to be made before a cuſtom-officer, that the goods are intended to be landed in France, &c. See *Cuſtoms*.

The general complaint of the decay of trade, and a humour which has been obſerved among the better ſort of people in England, to make a kind of aukward and ill-grounded excuſes for breeding their children up to it; together with a tendency to prefer, what we call the profeſſions, as law, divinity, and phyſic, to merchandiſe; has put ſome perſons upon examining on what foundation this way of judging was erected. The more they looked into it, the leſs cauſe they really ſaw for ſo feeble a way of thinking; being fully convinced, that there is not only leſs likelihood for a man to raiſe himſelf to any great degree of eminence in the profeſſions, than by trade; but alſo that the road to honour and preferment is as open, where the merit is equal, in trade, as in law, divinity, or phyſick; and that many more conſiderable eſtates are acquired, and even with leſs obloquy, from the one than from the others.

In a pamphlet lately publiſhed, the author ſays, "Suppoſing an eminent trader arrives only at the office of Lord Mayor; in that capacity alone he is Right Honourable, and inveſted with the ſacred character of a judge, both in capital and civil matters, preceding even the Chancellor, and all other judges and officers of the crown in his own juriſdiction. And in caſe of an interregnum, is the chief magiſtrate in the realm. Great and wiſe traders have arrived at the dignity of Lord Chancellor; have been created peers of the realm, knights of the garter and bath, bannerets, and privy counſellors; which is as much as can be affirmed of either lawyers or divines, and more than can be proved in any one ſingle inſtance of the profeſſors of phyſick.

Trade, by the conſtitution of our country, both with reſpect to its public and private, its ancient and modern, its general and particular laws, is certainly no degradation whatever; and it may with ſtrict truth be affirmed, that commerce is that alone by which our nation keeps up its head, and what renders us of that conſequence with foreign powers as we are. And if the following of trade had here ever degraded, which in effect it never did, yet the brave ſtand which was lately made by the citizens of London, to ſupport the credit and honour of the nation, and the proteſtant ſucceſſion, ſhould be a ſufficient cauſe alone to make traders eſteemed by all degrees, as gentlemen of worth; and not only ſo, but as a people and body of men, the moſt reſpectable and fitteſt to be encouraged of any in theſe realms, and a full proof, to all intents and purpoſes, that merchandiſe is a worthy and honourable employment.

Having ſhewn what honour and reſpect the Jews, Greeks, and Romans, paid to trade, the author proceeds to examine on what footing of honour trade ſtood with our anceſtors, and how it now is, or ſhould be eſteemed by us. To begin then with our legiſlative power. There is no body of people, who have ſo large a ſhare allotted in it as traders. Our houſe of commons conſiſts of knights and burgeſſes; but the former, who are to be conſidered the landed intereſt, are but few when compared with the latter. There are no more than two allowed for any county, for many, only one; but moſt trading towns ſend one, or more burghers to parliament, to look to their trading intereſt; and theſe the law, which is termed right and reaſon, intends to be ſuch in the reſpective towns as live there, and underſtand the intereſt, and are concerned in the benefit of the manufacture eſtabliſhed in that burgh or town for which they are choſen, and not ſtrangers, who, perhaps, are too often elected for their money. This was the juſt ſcheme of our wiſe anceſtors, and evidently proves how high a value is ſet on our trade by us: nor is this all, for trade, neither by the laws of the land, or honour, in the leaſt detracts from gentility; but on the contrary, great traders have been frequently admitted by our princes into the upper houſe of parliament; have been appointed privy counſellors for their wiſdom; and have been created not only knights, but baronets, barons, and earls; which muſt fully demonſtrate that trading was not only formerly, but is, even now, of the greateſt conſequence to the Engliſh nation; and never did, or can, by our laws or cuſtoms, detract from a man, or family; but on the contrary, that a great part of our nobility are immediately deſcended from great traders. Verſtegan the Engliſh antiquary, in his titles of honour, mentions, That in old times, if a merchant ſo thrived, that he was able to croſs the ſeas thrice, he was ever after reputed a right worthy *Thein*, and capable of higher advancement: ſo that from hence it appears that traffic at

that time of day ennobled its followers, who were not ſo before. Nor let any one conceit it to be a new or extraordinary matter, that wealth alone ſhould entitle a man to honour, ſince it was a law of old in the moſt flouriſhing ſtates. Among the Romans, the cenſus ſenatorius, or eſtate of a ſenator, was affixed by Auguſtus at 120,000 ſeſterces; he who had 100,000 ſeſterces was ranked as a decurio, or kind of ſenator in the provinces, as Pliny obſerves in his letters; and he was a Roman knight, whoſe eſtate amounted to 400,000 ſeſterces compleat; which Dr. Middleton, in his life of Tully, ſays, made 3229 l. of our money. And with us till lately was a law of this kind: every man who had 40 l. a year in land was qualified to be a knight; and from hence came the term of a knight's fee with us: but as King Charles greatly miſuſed this law in his wants, compelling every man that had that qualification in land to become a knight, or to compound; it was for that cauſe ranked among the chief grievances of his reign, and therefore was aboliſhed by act of parliament at the reſtoration, as may be found in the hiſtories and ſtatutes of thoſe days.

The learned Cambden notes, that Richard II. advanced Michael de la Pole, a merchant, to the honour of Earl of Suffolk, and made him Chancellor of England: he was the ſon of William de la Pole, the firſt Mayor of Kingſton upon Hull; who, on account of his great wealth, had the dignity of a baronet conferred upon him; and was alſo made ſecond baron of the exchequer by Edward III. "However," ſays Cambden, "his being a merchant did no "how detract from his honour: for who knows not "that even our noblemens ſons have been merchants? "Nor will I deny that he was nobly deſcended, tho' a "merchant." This Michael was alſo knight of the garter, as Vincent in his review of Brooke obſerves; and that he could not have been ſo at that time of day, by the ſtatutes of the order, had he not been a gentleman of three deſcents, as he was, being the ſon and grandſon of a knight; but that ſon a merchant. From whence, ſays he, it follows, "that *mercatura non derogat nobilitati*," that is, trade is no abatement of honour. And as it here may be aſked, What conſtitutes a gentleman with us? So, the reply is eaſy, being a gentleman, is being entitled to bear arms. And Mr. Cambden obſerves, that the diſtinction of a gentleman of coat armour, or a gentleman of blood, is the bearing of arms from his grandfather; and that he who bears arms from his grandfather, is to all intents and purpoſes a gentleman of blood; for which cauſe it is requiſite by the ſtatutes of the Bath, that every knight before his admiſſion proves that he is ſo qualified. And when a knight of the Bath has thus evidenced his qualification for that moſt honourable order, it carries with it, if his merit be equal to the thing, a paſſport alſo to the order of the garter. "The King "having ordered and ordained, that for the great love, "favour, and confidence, he bears towards the knights "of the Bath, that a ſpecial regard ſhall be had to the "preferring, advancing, and preſenting them to be companions of the moſt noble order of the Garter."

Guillim, in his chapter of gentlemen, ſays, they have their beginning either of blood, as that they are born of worſhipful parents; or, that they have done ſomething in peace or war, whereby they deſerve to bear arms and be accounted gentlemen. He farther ſays, if a gentleman be bound apprentice to a merchant, or other trade, he hath not thereby loſt his gentility; and he deſires it may be remembered for the honour of trade, that Hen. VIII. thought it no diſhonour to him, when he quitted his queen, to take to wife Anne, the daughter of Thomas Bullen ſometime Mayor of London. To which may be added, the thought that the firſt William, who founded our royal race, was only the grandſon of a tanner.

The number of great traders, who have been advanced to high honours, or poſts of truſt, which might be here mentioned, are ſufficient inſtances to prove, that England has few better houſes among the nobility than ſome of thoſe families, many of which titles ſtill live in their deſcendents.

As therefore it cannot be doubted, but commerce is of the greateſt advantage to a nation, ſo the more country gentlemen breed their younger children to it, the likelier ſuch families are to be continued, and become uſeful to the public. The importance of an idle younger brother is very finely ſet forth by Mr. Addiſon in his character of Will. Wimble, who greatly laments the folly of ſome great families, that had rather ſee their children ſtarve like gentlemen, than thrive in a profeſſion or trade that they think is beneath their quality. "This humour, ſays he, "fills ſeveral parts of Europe with pride and beggary; "but it is the happineſs of a trading nation, like ours, "that the younger ſons, tho' incapable of any liberal "art or profeſſion, may be placed in ſuch a way of life "as may, perhaps, enable them to vye with the beſt of "their family." And here it may not be amiſs to ſet down his further opinion in this affair.

"When I have been, ſays he, upon the Exchange, "have often fancied one of our kings ſtanding in perſon "where he is repreſented in effigy, and looking down "upon the wealthy concourſe of people with which "that place is every day filled. In this caſe, how would "he be ſurpriſed to hear all the languages of Europe "ſpoke in this little ſpot of his former dominions, and "to ſee ſo many private men, who in his time would "have been the vaſſals of ſome powerful baron, negociating like princes for greater ſums of money, than "were formerly to be met with in the royal treaſury! "Trade, without enlarging the Britiſh dominions, has "given us a kind of additional empire; it has multiplied "the number of our riches, made our landed eſtates infinitely more valuable than they were formerly, and "added to them an acceſſion of other eſtates, as valuable "as the lands themſelves." And in another place he ſays, "It is the great advantage of a trading nation, "as there are very few in it ſo dull and heavy, who "may not be placed in ſtations of life, which may give "them an opportunity of making their fortunes. "well regulated commerce is not like law, phyſic, "divinity, to be overſtocked with hands; but on the "contrary, flouriſhes by multitudes, and gives employment to all its profeſſion: fleets of merchantmen are "ſo many ſquadrons of floating ſhops, that vend the "wares and manufactures in all the markets of the "world, and find out chapmen under the Tropicks."

The learned biſhop of Cambray gives alſo his ſentiments on this ſubject, in his character of Narbal, in account of the Phenicians, by whom, it is ſuppoſed, the learned archbiſhop means the Engliſh. "You ſee, ſays he, "the power of the Phenicians, who have rendered "themſelves puiſſant to all their neighbouring nations "by the grandeur of their fleets. Trade, which they "carry to the furtheſt quarters of the earth, has ſo enriched them, that they ſurpaſs the moſt flouriſhing "people in glory." And again, inſtructing Telemachus how to eſtabliſh a flouriſhing trade in Italy: "Do, ſays "he, "as thoſe people do; receive with kindneſs and "with eaſe all ſtrangers; let them find in your harbours "ſafety and convenience free from reſtraint, and never "ſuffer yourſelf to be overcome, at any time, either "with pride or avarice: the true way to get much is "never to be covetous, and even ſometimes to forego "gain. Make yourſelf beloved of all ſtrangers, and "even bear with ſlight inconveniencies from them; "to excite jealouſies from your pride; be ſteadfaſt to "follow the laws of commerce, which are ſimple and "eaſy; and ſuffer not your ſubjects on any account "infringe them. Keep a ſtrict hand over the fraud, negligence, or vain glory of the merchants, which ruin "commerce, in ruining the trade themſelves; and, above "all things, never attempt to confine commerce to your "own proper intereſt."

This, continues our author, is ſufficient to ſhew, how clearly this great prelate ſaw the advantage accruing from a free trade; and his countrymen the French have greatly increaſed theirs, by following many of theſe maxims, to the infinite diſadvantage of the Britiſh nation. But even foreigners themſelves make a very great diſtinction and difference in our favour, betwixt an Engliſh trader, and thoſe of other nations. To this effect writes the Baron of Polnitz, a perſon well known in

of the courts of Europe. "In England, ſays he, the "nobility intermix with traders daughters, as they do "in France: however, a great diſtinction ſhould be "made betwixt the one and the other. In England, "merchants are ſometimes ſprung of the greateſt houſes "of the kingdom; and it has often happened that "younger branches of noble families, who have been "brought up to trade, by the right of ſucceſſion have "become peers. And frequently it falls out, that when "a lord eſpouſes a merchant's daughter, ſhe may be his "couſin, or at leaſt a lady of a good family. Whereas "in France, it is always the daughter of a roturier, "which means, born of the dregs of the people."

By the ſtatute of the 12th of Car. II. it was enacted, That no alien, or perſon not born within the allegiance of the King, or naturalized, or made a free denizen, ſhould exerciſe the occupation of a merchant or factor in any plantations or territories to his majeſty belonging, in Aſia, Africa, or America, upon pain of forfeiture of all his goods, or which are in his poſſeſſion, one third to his Majeſty, one third to the governor of the plantations, and the other third to him that ſhould inform or ſue for the ſame in any of his Majeſty's courts in the plantations; and all who ſhould be made governors of ſuch plantations by his majeſty, ſhould, before their entrance into their government, make an oath to do their utmoſt that the above clauſe ſhould be punctually obſerved.

In France there are court merchants for ſummarily deciding all controverſies in trade; and ſeveral Engliſh merchants, particularly Mr. Carey, p. 26. ſays, that the eſtabliſhment of court merchants in England would be of great ſervice to trade; and Sir Joſiah Child was of the ſame opinion. To which may be added what another public-ſpirited merchant has lately ſaid, That as there is now found to be more room in the Manſion-houſe than the Lord Mayors have need of, a convenient apartment ſhould be allotted for a public mercantile library, to be conſulted by all the citizens, as occaſion may require.

I need not, ſays the author, inform you, of the various branches ſuch a library ſhould conſiſt of. Yet for the ſake of ſome, it may not be amiſs to give a ſummary of them.

1. All the ſtatutes, and alſo the principal hiſtories of Britain, Ireland, and our colonies, with their geography and itinerary deſcriptions.

2. The hiſtories, geography, and topography, of all the other parts of the univerſe; with maps, globes, and ſea-charts; as alſo the principal voyagers.

3. A collection of whatever has been written, in any language, on navigation, commerce, manufactures, plantations, fiſheries, mines, metals, minerals, gems, foſſils, drugs, agriculture, gardening, manual-arts, &c.

4. The charters, by-laws, uſages, and hiſtories of London; and alſo of all home and foreign ſea-ports, and of other trading corporations at home and abroad.

5. Reports, law-deciſions, &c. relating to every branch of commerce, navigation, manufactures, inſurances, &c.

6. All the particular rules and uſages of the Britiſh revenues of the cuſtoms, exciſe, &c. with whatever elſe may relate to commercial affairs, in the moſt extenſive ſenſe.

Were once a beginning made to ſuch a library, it would, in all probability, ſoon ſwell to a conſiderable bulk, both by donations from the living, and legacies of the dead. On this ſuppoſition, the author ſays, he would engage to bequeath ſuch a ſet of old, ſcarce, curious, and valuable tracts and treatiſes, on the hiſtory, &c. of commerce, the product of many years collections, as he humbly conceives are not to be found in many private hands.

As ſuch a public repoſitory of mercantile knowledge would be the firſt of its kind probably in all Europe, it would be therefore the more worthy of the firſt commercial city in the univerſe.

And with reſpect to a ſuitable ſalary for the librarian, he makes very little doubt of finding the means for it, were but once ſo noble a deſign ſet on foot.

MERCHANT-*Adventurers*. See Merchant-*Adventurers*, and *North* companies.

MERCHANT's *Waterworks*. See *Waterworks*.

MERCHANT-*Taylors company of London*, was anciently denominated taylors and linen-armourers, and was incorporated by letters-patent of the 5th of Edw. IV. in 1466. But many of the members of the company being great merchants, and Henry VII. a member thereof; for their greater honour, by his letters-patent of the 18th of his reign, in 1503, he re-incorporated the ſame, by the name of the maſter and wardens of the merchant-taylors of the fraternity of St. John the Baptiſt in the city of London.

They conſiſt of a maſter, four wardens, thirty-eight aſſiſtants, and 394 liverymen, whoſe fine is 20 l. when admitted: to whom belongs a ſpacious and ſtately hall in Threadneedle-ſtreet, in which the buſineſs of the company is tranſacted. They are poſſeſſed of a great eſtate, out of which they pay to charitable uſes, purſuant to the wills of the reſpective donors, about 2000 l. a year: ſo that they are, at this day, a very conſiderable company, though their appellation is ſomewhat contemptible, and the occupation by the vulgar deſpiſed and ignominiouſly treated. See *Taylor*.

MERCHANTABLE. Any ſort of goods that are in ſuch a condition as the market will vend; faſhionable, in good order, and fit for uſe.

MERCHANT-*man*, among ſeamen, is a ſhip fitted out not only with the neceſſaries for a voyage, but with commodities for trade, to which it is peculiarly appropriated, and ſo has ſeldom more hands than what are ſufficient to work the ſhip, or conduct it through its voyage, without regard to fighting or defence; unleſs in dangerous places, or in times of war, where convoys are not to be procured,

MERCURY, denotes a fluid mineral matter, perfectly reſembling ſilver in fuſion.

The chief mines of mercury are thoſe of Hungary, Spain, Italy, and Peru. The greateſt part of our quick-ſilver is brought us from Friuli in Italy, where there are abundance of mines belonging to the emperor, tho' now mortgaged to the Dutch. It is found under three ſeveral forms; 1ſt, in ruddy glebes or clods called cinnabar; 2d, in hard ſtony glebes, or a mineral ſubſtance of a ſaffron, and ſometimes a blackiſh colour; 3d, it is alſo found pure: for upon opening holes in the beds of ſtones, &c. there ſometimes guſhes a vein or ſtream of pure mercury, called virgin mercury. This laſt ſort is moſt valued: Paracelſus, and Baſil Valentine, prefer it far to any other ſort, for chemical preparations. Dr. Brown aſſures us in his travels, that enquiring of one of the directors of the quick-ſilver mines, wherein the difference between this and common mercury conſiſted, he was anſwered, that virgin mercury, mixed and amalgamated with gold, renders the ſulphur of the gold volatile: but this has been ſeveral times tried without ſucceſs.

The uſes of mercury are very conſiderable in gilding, making looking-glaſſes, refining gold, but eſpecially in medicine.

Mercury ſhould be choſen white, fluid, clean, quick, and of a beautiful water colour; if, on the contrary, the colour is brown and leady, if it ſticks to the hands, if it runs in minute globules, it is a ſign that it is not pure, that there is ſome mixture of lead, and conſequently that it is good for nothing.

Mercury is ſold at Amſterdam for about 34 s. ſterl. *per* lb. and is weighed with the bags which hold it, without any allowance for deduction.

MERK. A river of the Auſtrian Netherlands, which riſes in the province of Brabant, and running north by Breda, afterwards turns weſt, and falls into the ſea, oppoſite to the iſland of Overflakee in Holland.

MERIDIAN, in geography, is a great circle paſſing thro' the poles of the earth. Hence, 1ſt, as the meridian inveſts the whole earth, there are ſeveral places ſituated under the ſame meridian. 2d, As it is noon tide whenever the center of the ſun is in the meridian of the heavens, and as the meridian of the earth is in the plane of the former, it follows that it is noon, at the ſame time, in all places ſituated under the ſame meridian. 3d, There are as many meridians on the earth, as there are points conceived in the equator. In effect the meridians always change as you change the longitude of the place, and

may be ſaid to be infinite: each ſeveral place from eaſt to weſt having its reſpective meridian.

Firſt MERIDIAN is that from which the reſt are accounted, reckoning from weſt to eaſt. The firſt meridian is the beginning of longitude. See *Longitude*.

The fixing of a firſt meridian is a matter merely arbitrary; and hence different perſons, nations, and ages, have fixed it differently; whence ſome confuſion has aroſe in geography. The rule among the ancients was to make it paſs thro' the place fartheſt to the weſt that was known; but the moderns knowing, that there is no ſuch place in the earth as can be eſteemed the moſt weſterly, the way of computing the longitudes of places from one fixed point is much laid aſide.

Ptolemy aſſumed the meridian that paſſes thro' the fartheſt of the Canary iſlands as his firſt meridian; that being the moſt weſtern place of the world then known. After him, as more countries were diſcovered in that quarter, the firſt meridian was removed farther off. Some fixed it to the iſland of St. Nicholas, near Cape Verd: Houdius to the iſle of St. James; and others to the iſland of Del Corvo, one of the Azores. The lateſt geographers, particularly the Dutch, have pitched on the pike of Teneriff; others on the iſle of Palm, another of the Canaries; and laſtly the French, by command of their King, on the iſland of Fero, another of the Canaries.

But, without much regard to any of theſe rules, geographers frequently aſſume the meridian of the place where they live, or the capital of their country, for a firſt meridian, and thence reckon the longitudes of their places.

Aſtronomers in their calculations uſually chuſe the meridian of the place where their obſervations are made, for their firſt meridian; as Ptolemy at Alexandria; Tycho Brahe at Uraniburg; Riccioli at Bologna; Mr. Flamſted at the royal obſervatory at Greenwich; and the French at the obſervatory at Paris.

In the *Philoſophical Tranſactions* there is a ſuggeſtion, that the meridians vary in time. This ſeems very probable, from the old meridian line in the church of St. Petronio at Bologna, which is found to vary no leſs than eight degrees from the true meridian of the place at this time, and from that of Tycho at Uraniburg, which M. Picart obſerves, varies 18 minutes from the modern meridian. If there is any thing of truth in this hint, Dr. Wallis ſays, the change muſt ariſe from a change of the terreſtrial poles, here on earth, of the earth's diurnal motion, not of their pointing to this or that of the fixt ſtars; for if the poles of the diurnal motion remain fixed to the ſame place on the earth, the meridians which paſs thro' theſe poles muſt remain the ſame.

But the notion of the changes of the meridian ſeems overthrown by an obſervation of M. Chazelles, of the French academy of ſciences, who, when in Egypt, found that the four ſides of a pyramid built 3000 years ago, ſtill looked very exactly to the four cardinal points. A poſition which can never be looked upon as fortuitous.

Magnetical MERIDIAN is a great circle paſſing thro' or by the magnetical poles; to which the magnetic needle, or needle of the mariners compaſs, if not otherwiſe hindered, conforms itſelf. See *Magnet* and *Compaſs*.

MERIDIONAL *diſtance*, in navigation, the ſame with departure, or eaſting and weſting; being the difference of longitude between the meridian, under which the ſhip now is, and any other meridian ſhe was under before. See *Longitude*

MERIDIONAL *parts*, *miles*, or *minutes*, in navigation, are the parts by which the meridians in Mercator's chart increaſe, as the parallels of latitude decreaſe. See *Chart*.

The co-ſine of the latitude of any place being equal to the radius, or ſemi-diameter of that parallel, therefore in the true ſea-chart, or nautical planiſphere, this radius being the radius of the equinoctial, or whole line of 90 degrees, the meridional parts at each degree of latitude muſt increaſe as the ſecants of the arch contained between that latitude and the equinoctial decreaſe.

The tables therefore of meridional parts in books of navigation, are made by a continual addition of ſecants, calculated in ſome books for every degree and minute of latitude; and theſe will ſerve, either to make or graduate a Mercator's chart, or to work the Mercator's ſailing.

To uſe them you muſt enter the table, with the degree of latitude at the head, and with the minute on the firſt column towards the left hand; and in the angle of meeting, you will have the meridional parts.

Having the latitudes of two places, to find the meridional miles or minutes between them: conſider whether the places be, one under the equinoctial, and the other wide thereof; or the one on the one ſide the equinoctial, and the other on the other; or whether they both lie on the ſame ſide.

If one place lies under the equator, the meridional minutes next under the degree of latitude of the other place is the meridional difference of latitude, or latitude enlarged.

If one be in north, and the other in ſouth latitude, the meridional minutes correſponding to the ſecond latitude added together, give the meridional minutes between them.

Both places lying towards the ſame pole; ſubtract the meridional parts anſwering to the leſs latitude from thoſe of the greater, the remainder gives the meridional minutes.

MERIGAL. A kind of gold coin current at Sofalo, and Monomotapa, in Africa; worth about 18 s. ſterling.

MERSEY. A river which empties itſelf into the ſea at Liverpool in Lancaſhire.

MERUE. The north branch of the river Maes, near its mouth, on which the city of Rotterdam in Holland is ſituated.

MESANIO. A ſort of coral, brought by Europeans to the Levant.

MESCAL. A ſmall Perſian weight, about the 100th part of 1 lb. avoirdupoiſe weight; 600 meſcals making the batman of Tauris, which weighs 5 lb. 14 oz. See *Batman*.

MESEEN. A port-town of Ruſſia, ſituated on the coaſt of the White ſea, in 46 deg. of E. lon. and 66 deg. N. lat.

MESSALINES. A linen manufactured in Egypt, ſold at Cairo and Alexandria.

MESSETERIA, or *Meſſetena*. A duty of entry paid at Conſtantinople for the merchandiſes that arrive there, particularly furs, and coffee; which duty was eſtabliſhed for the Sultana Valida, or Queen mother.

MESSIEURS. A French title of honour and civility, now frequently made uſe of in England for perſons trading in partnerſhip, whether merchants, bankers, or tradeſmen.

MESSINA. A city and port-town of Sicily, ſituated on the ſtraight, or Pharo of Meſſina, in 15 deg. 40 min. E. lon. and 38 deg. 30 min. of N. lat.

MESS-MATE, on board of a ſhip, one that aſſociates with another in eating.

METAL. A ſimple, ponderous, ſhining, fixt, foſſil body that fuſes, and becomes fluid, by fire, and by cold coagulates and hardens into a ſolid maſs, capable of being diſtended under the hammer.

Thoſe who hold preciſely to this definition of metals allow but of ſix, as gold, ſilver, lead, tin, iron, and copper. But chemiſts, perſons who uſually wrap up all things in myſtery, and who would fain have the number of metals ſquare with that of the planets, add thereto quickſilver for a ſeventh, though neither hard nor ductile; thus according to them gold anſwers to the ſun, ſilver to the moon, lead to Saturn, tin to Jupiter, iron to Mars, copper to Venus, and quickſilver to Mercury.

Proportion of the weights of metals among themſelves.

	Ounces.	Drachms.
A cubic inch of gold weighs	12	2
Of mercury - -	8	6
Of lead - -	7	3
Of ſilver - -	6	5
Of copper - -	5	6
Of iron - -	5	1
Of tin - -	4	6

By the proportion of theſe weights, that of their bulk or volume may be calculated.

Biſmuth is a kind of metal, or half metal, diſcovered first in Bohemia; and, as it is pretended, is a medium between lead and tin.

The regulus of antimony and ſputer paſs alſo for half metals.

th METAL, called alſo *Princes Metal*, is a kind of factitious metal, compoſed of the fineſt and pureſt braſs mixed with tin, or rather with ſome mineral as zink, whereby it becomes more diſpoſed to receive a poliſh, luſtre, &c. as alſo fitter to be gilt. It is ſaid to have been invented by Prince Rupert, from whom it receives its name. See *Zink*.

ll-METAL is a compoſition of copper and tin melted together. See *Bell*.

The ordinary proportion is 22 or 23 pounds of tin to 100 weight of copper. Some add lead and braſs to the compoſition. See *Braſs*. See likewiſe the nature, characters, production, uſes, &c. of all metals under their proper articles.

By acts paſſed in the 28th of Edw. III. 33d Hen. VIII. 2d and 3d Edw. VI. 5th and 6th Will. and Mary, 9th and 10th Wil. III. 12th Anne, and 13th Geo. I. braſs, copper, latten, bell metal, or ſhruff metal, clean or mixed, except tin, lead, and foreign copper in bars, and alſo except iron, copper, or mundick metal of Britiſh ore, may not be exported, upon forfeiture of double the value, and 10 l. for every 1000 lb.

By an act of 2d and 3d Edward VI. metal is not to be laden coaſtwiſe in any port, or creek, where the cuſtomer or his deputy are not reſident, on forfeiture thereof, and 10 l. for every 1000 lb. Carried coaſtwiſe, if bond be taken without date, the cuſtomer and comptroller forfeit their office, and the value of the metal; and the cuſtomer or ſearcher knowingly ſuffering the ſame to be ſhipped, and not ſeizing it, forfeit office, and the value; as alſo maſters, owners, &c. of ſhips, willingly permitting the illegal ſhipping, or not diſcloſing it within three days to the cuſtomer, or comptroller of the port, are to forfeit double the value.

ETALIC, or *Metaline*, an adjective applied to ſome thing that bears a relation to metals.

Painting in enamel is performed with metallic colours, that is, with ſuch as come from metals, or are made with metals; no other being able to endure fire.

ETALLURGIA. The art of metals, that is, of preparing and working metals, from the glebe or mineral to the utenſil.

The metallurgia includes what relates to the finding of the metalic glebe, or ore in the mine, the judging of its kind, richneſs, and the proportion of metal therein; the digging and ſeparating it from the earth, and other matters, and the purifying and diſpoſing it into a compleat, pure, malleable metal. See *Mine*.

Boerhaave divides metallurgia into four parts. The firſt teaches how metals grow in the mine, how they are diſcovered, and how procured out of the ſame. The ſecond how to ſeparate the metalic, from the other matter of the ore. The third, how to reduce the ſeparated matter to its ſimplicity and ductility. The fourth, to work, gild, poliſh, and imitate the finer metals in the coarſer.

ETECAL. A kind of gold ducat ſtruck at Morocco, and in ſome other towns of that empire, worth about 1s. 9d. ſterling.

ETEDORS. A Spaniſh term, particularly in uſe at Cadiz, where it ſignifies certain adventurers, who favour the exportation of the ſilver bars which the Engliſh merchants are obliged to land there, on the arrival of the galeons and flota.

Theſe metedors are generally the younger ſons of good families, who have no fortune, and who, for one *per cent.* of all the effects they ſave for merchants, expoſe themſelves to the riſques, which may accompany this contraband trade.

ETHEGLIN. A drink prepared of honey; one of the moſt pleaſant and general drinks the northern parts of Europe afford, and much uſed among the ancient inhabitants. See *Mead*.

There are divers ways of making it, one of the beſtwhereof follows. Put as much live honey naturally running from the comb, into ſpring water, as that when the honey is thoroughly diſſolved, an egg will not ſink to the bottom, but be juſt ſuſpended in it. This liquor boil for an hour or more, till ſuch time as the egg ſwim above the liquor about the breadth of a groat; when very cool, next morning, it may be barreled up; adding to each 15 gallons an ounce of ginger, as much of mace and of cloves, and half as much cinnamon, all groſly pounded: a ſpoonful of yeſt may be alſo added at the bung-hole, to promote the fermenting. When it has done working, it may be cloſely ſtopped up, and after it has ſtood a month, may be drawn off into bottles.

METKAL, or *Mitkal*. A weight uſed by the Arabs, 12 of which make 1 ounce.

METRICOL. A ſmall weight, the ſixth part of an ounce, uſed by Portugueſe druggiſts in the Eaſt Indies. Under the metricol is the metricoli, which weighs but the eighth part of an ounce.

MEXICO. See *Spaniſh* America.

MICONA. One of the iſlands of the Turkiſh archipelago. See *Turkiſh* iſlands.

MIDDLE *latitude*, in navigation, is half the ſum of two given latitudes.

MIDDLE *latitude ſailing*, is uſed for a method of working the ſeveral caſes in ſailing, nearly agreeing with Mercator's way, but without the help of meridional parts.

MIDDLEBURG. The capital of the province of Zealand in the United Provinces, ſituated in 3 deg. 30 min. of E. lon. and 33 deg. 30 min. of N. lat.

MIDDLEFAR. A Daniſh town on the iſland of Funen. See *Denmark*.

MIDSHIP-*men*, are officers aboard a ſhip, whoſe ſtation, when they are on duty, is, ſome on the quarter-deck, others on the poop, and in other parts; their buſineſs being to mind the braces, to look out, and to give about the word of command from the captain, and other ſuperior officers: but they alſo aſſiſt on occaſion both in ſailing the ſhip, and in ſtowing and rumaging the hold; though they are uſually gentlemen, who, having ſerved their time as volunteers, are upon their preferment.

MILAN *dutchy*. See *Italy*.

MILAZZO. A port-town of Sicily, ſituated on a promontory of the Mediterranean, in 15 deg. 5 min. of E. lon. and 38 deg. 36 min. of N. lat.

MILE. A long meaſure, whereby the Engliſh, Italians, and other nations, uſe to expreſs the diſtance between places: in which ſenſe mile amounts to much the ſame with league uſed by the French and other nations for the like purpoſe. See *League*.

The mile is of different extent in different countries: the geographical or Italian mile contains 1000 geometrical paces, *mille paſſus*, whence the term milo is derived.

The Engliſh mile conſiſts of eight furlongs, each furlong of 40 poles, and each pole of 16 feet one half.

Caſimir has made a curious reduction of the miles, or leagues, of the ſeveral countries in Europe into Roman feet, which are equal to Rhinland feet, generally uſed throughout the north.

	Feet.
The mile of Italy	5000
of England	5454
of Scotland	6000
of Sweden	30000
of Muſcovy	3750
of Lithuania	18500
of Poland	19850
of Germany, the ſmall	20000
The middle	22500
The largeſt	25000
of France	15750
of Spain	21270
of Burgundy	18000
of Flanders	20000
of Holland	24000
of Perſia, called alſo Paraſanga	18750
of Egypt	25000

MILFORD-HAVEN, is ſituated on a bay of the Iriſh ſea, in the S. W. part of Pembrokeſhire in Wales, at the north entrance of Briſtol channel, and eſteemed one of the moſt ſecure and commodious harbours in Europe; having

having 13 roads, 5 bays, and 16 creeks, all known by ſeveral diſtinct names.

MILL, is applied to all machines whoſe action depends on a circular motion: of which there are various kinds, acquiring different names, according to the different manners in which the moving power is applied: however, they may all be reduced to three; namely, wind-mills, water-mills, and hand-mills; under which laſt are alſo comprehended all thoſe worked by horſes, or other animals.

Water-MILLS, are thoſe turned by the force or fall of a river or brook; of which there are two kinds; thoſe, where the force of the water is applied above the wheel, called over-ſhot mills; and thoſe, where it is applied below the wheel, called under-ſhot mills.

Wind-MILLS, are thoſe turned by the force of wind gathered in their ſails: of theſe ſome are called vertical, others horizontal, according to the poſition of the ſails; or rather according to the direction of their motion, with regard to the horizon.

Portative, or *Hand*-MILLS, are thoſe kept in motion by the hand; or whoſe mill-ſtones are turned, or piſtons driven, by the force of horſes or other beaſts.

The uſe of mills and mill-ſtones, according to Pauſanias, was firſt invented by Myla, ſon of Meleges, the firſt King of Sparta: tho' Pliny attributes the invention of every thing belonging to bread and baking to Ceres. Polydore Virgil was not able to diſcover the author of this uſeful machine; and it is doubted whether or no water-mills were known to the Romans; there being no mention made in the Digeſt but of mills turned by ſlaves and aſſes. Salmaſius and Gothofred, however, will not allow water-mills to be unknown to the ancient Romans, tho' they were not in ordinary uſe. Wind-mills are of a much more modern invention; the firſt model of which was brought from Aſia into Europe, in the time of the holy wars.

MILL is alſo uſed for any machine which, being moved by ſome external force, ſerves to give a violent impreſſion to things applied thereto. In this ſenſe they are machines of vaſt uſe in the manufactures, arts, and trades, for the making and preparing various kinds of merchandiſes, of which the principal are thoſe that follow.

Fulling-MILL, is a water-mill which raiſes and beats down large wooden piſtons in proper veſſels, called peels, or troughs, in order to full, cleanſe, and ſcour woollen ſtuffs. See *Fulling*.

Linen-MILLS, are not much different from fulling-mills; their uſe being to ſcour linens, after having been firſt cleanſed, and taken out of the lixivium or lye. See *Bleaching*. Some of theſe go by water, but the generality by horſes.

Paper-MILL, is a water-mill furniſhed with ſeveral large hammers, which beat, or pound the rags, in a kind of wooden trough; and thus, by reducing them to little pieces, turn them into a ſort of pulp, by means of water conveyed into the troughs by a pipe for that purpoſe. See *Paper*.

MILL, in coinage, is a machine uſed to prepare the laminæ, or plates of metal, to give them the proper thickneſs, hardneſs, and conſiſtence, before they are ſtruck or ſtamped. This machine has not been long known in England, but is of ſome ſtanding in Germany, and conſiſts of ſeveral wheels, indented like thoſe of clocks, which move two cylinders of ſteel, between which the metal is paſſed, to be brought to its proper thickneſs; this machine was firſt turned by water, ſince by horſes.

MILL, among gold wire-drawers, is a little machine conſiſting of two cylinders of ſteel, ſerving to flatten the gold, or ſilver wire, and reduce it into laminæ, or plates. See *Gold wire*.

They have alſo mills to wind the gold-wire, or thread, upon ſilk, compoſed of ſeveral rows of bobbins all turned at the ſame time.

Forge-MILLS, turned by water, ſerve to raiſe, and let fall one or more large hammers, to beat and form the iron into bars, anchors, or other maſſive works.

Gun powder-MILLS, are thoſe uſed to pound, and beat together the ingredients, of which gun-powder is made. See *Gun-powder*.

This is done in a ſort of iron or braſs mortar, by means of iron peſtles worked by a wheel, without ſide the mill, turned by the water falling on it.

Leather-MILLS, are uſed to ſcour, and prepare with oil, the ſkins of ſtags, buffaloes, elks, and bullocks, to make what we call buff-leather, for the uſe of military men. This is effected by means of ſeveral large piſtons, riſing and falling on the ſkins, in large wooden troughs, by means of a wheel on the outſide, turned by the force of water.

Oil-MILLS, whether turned by water, men, hand, or horſes, ſerve to bruiſe, or break the nuts, olives, and other fruits, or grains, whoſe juice is to be drawn by expreſſion, to make oil.

Sawing-MILLS, are water-mills ſerving to ſaw ſeveral planks or boards, at the ſame time; which are frequent in France, eſpecially in Dauphiné. They were lately prohibited in England, where they were begun to be introduced, from a view to ruin the ſawyers, which muſt have enſued.

Silk-MILLS, for ſpinning, throwing, and twiſting ſilks, are large round machines in form of turrets, five or ſix feet high, and ſix yards in diameter; which being turned either by the force of water, or that of men, work, at the ſame time, an infinity of bobbins faſtened thereto, whereon the ſilk had been wound to be here ſpun, and twiſted. There are abundance of mills of this kind in France, eſpecially about Lyons and Tours; ſome of which are ſo diſpoſed, as that three of them will go at the ſame time, and by one wheel, worked by water, or by hand. That in the Hoſpital de la Charité at Lyons, is wonderful indeed, a ſingle man working no leſs than forty-eight of theſe mills.

Stamping-MILL, or *Knocking Mill*, is an engine in tin works to bruiſe the ores ſmall.

Sugar-MILL, is a machine that ſerves to bruiſe the ſugar canes, and expreſs the liquor or juice contained therein. The ſugar mills are very curious contrivances; of which there are four kinds, being turned by water, wind, men, or horſes. Thoſe turned by the hand were firſt in uſe, but are now laid aſide, as being an intolerable hardſhip among the poor negroes, who were doomed thereto; beſides the ſlowneſs of their progreſs.

Wind mills are the moſt modern, tho' as yet ſomewhat rare, except in St. Chriſtophers and Barbadoes, and among the Portugueſe. Theſe make good diſpatch, but have one inconvenience, which is, that they are not eaſily ſtopped; which often proves fatal to the negroes that feed them.

Tan, or *Bark*-MILLS, worked by water, or horſes, ſerve to cut certain barks into a coarſe ſort of powder, proper for the tanning of the hides of beaſts.

MILLS, for ſword-blades, are alſo moved by water, and are frequent at Vienne in Dauphiny. By working heavy hammers, they forge thoſe excellent blades called blades of Vienne.

MILLENER. A perſon who trades principally in women's toys, and attire, ſuch as head-cloths, ribbands, necklaces, gloves, and the like. See *Haberdaſhers* company.

MILLEPEDES, *Wood lice*. A ſort of little inſects, with a multitude of feet, uſually of a dark colour, and which when touched roul up into a ball; being of conſiderable uſe in diſorders of the reins, obſtructions of the viſcera, and particularly in the jaundice.

There are ſeveral chemical preparations of millepedes, ſpirit, volatile ſalt, oil, and wine of millepedes.

MILLET. A ſmall and numerous ſeed in the pod, which it is produced, uſed like rice for puddings and bread.

MILLING. See *Fulling*.

MILLION. The number of ten hundred thouſand, or a thouſand times a thouſand.

The revenues of princes are now only computed in millions. A million of gold, or million of money, is ſometimes underſtood of a million of pounds, and ſometimes a million of crowns.

MILLONES, is a ſubſidy in Spain, which commenced in the year 1601, by a grant of the kingdom, upon wine, fleſh, oil, tallow, candles, and ſoap.

MILL-REE, or *Mille-ray*, a Portugueſe gold coin, current for ſomewhat more than the Spaniſh piſtole, or about 16 ſterling.

The mill ree is thus called as conſiſting of 1000 rees: it is alſo called a St. Stephen, from the figure of that martyr impreſſed thereon.

They have alſo a mill-ree of the little croſs, which in reality is only half the former; and whoſe value is that chiefly uſed in computations.

MINDANAO. The largeſt of the Philippine iſlands, ſituated between 120 and 126 deg. of E. lon. and 5 deg. 10 min. of N. lat. See *Philippine* iſlands.

MINDORA. One of the Philippine iſlands, lying S. W. of the iſland of Lyconia, and ſubject to the Spaniards. See *Philippine* iſlands.

MINE. A place under ground, where metals, minerals, or even precious ſtones are dug up.

The matter dug out of mines being various, the mines themſelves muſt acquire various denominations; as gold-mines, ſilver-mines, copper-mines, iron mines, diamond-mines, ſalt-mines; mines of antimony, of alum, and others.

For gold and ſilver mines, the richeſt and moſt celebrated are thoſe of Peru and Chili in America. Iron-mines are more abundant in Sweden than elſewhere. Copper mines are chiefly in Sweden and Denmark. Lead and tin mines abound moſt in England: quick-ſilver mines in Hungary and Spain, diamond mines in Golconda, and ſalt-mines in Poland.

The Engliſh, in the reign of Queen Elizabeth, having but little knowledge in the diſcovering and working of mines, the Queen, by the advice of her council, ſent for many Germans experienced in ſuch works, and thoſe of ſmelting and refining of minerals; who, on their arrival, were no ſooner naturalized, than the Queen, by her letters-patent of the 10th of October 1564, granted to Thomas Thurland and Daniel Houghſetter, and their heirs for ever, licence to ſearch for gold, ſilver, copper, and quickſilver, in the ſeveral counties of York, Lancaſter, Cumberland, Weſtmorland, Cornwal, Devon, Glouceſter, and Worceſter, and the principality of Wales, for their ſole uſe and profit; other than that her Majeſty reſerved to herſelf the tenths of all gold, ſilver, and quick-ſilver ores, and the re-emption of refined gold and ſilver, the former at 8 d. and the latter at 1 d. *per* ounce, lower then the current price of the ſaid metals; and 2 s. 6 d. for every hundred weight of copper.

Thurland and Houghſetter having, by virtue of the powers granted them, ſold divers parts, or ſhares, of their ſaid privileges, they were, with the purchaſers, by letters-patent, bearing date the 28th of May 1568, incorporated by the ſtile of governors, aſſiſtants, and commonalty of the mines royal. The ſhares of this company at firſt conſiſted of twenty-four; which have ſince been increaſed to ninety-ſix.

MINE, is alſo a corn meaſure uſed in France, conſiſting of 6 buſhels.

MINEHEAD. A port-town of Somerſetſhire, ſituated on the Briſtol channel, in 3 deg. 40 min. of W. lon. and 51 deg. 18 min. of N. lat.

MINERAL, is ſometimes uſed in general for *foſſil*, and applied to any body ſimple or compound, dug out of a ſubterraneous place or mine; from which it takes the denomination. In this ſenſe metals, ſulphurs, foſſil ſalts, ſemi-metals, &c. are minerals, which are divided into two claſſes; the one fuſible and malleable, properly called metals; the other deſtitute of theſe properties, and therefore in a ſtrict ſenſe called minerals.

Some divide minerals into ſimple and compound: to the firſt belong ſtones, ſalts, as alum, nitre, &c. inflamable minerals, as ſulphur and bitumen; and metals, as gold, &c.

Other more accurate writers, reſtrain the word mineral to what is otherwiſe called ſemi-metal; and, in this laſt ſenſe,

MINERAL may be defined a compound foſſil, wherein there is ſomething diſcovered, in all reſpects like metal, only that it is not malleable, joined, or compounded with ſome other foſſil, as ſalt, ſulphur, ſtone, or earth. Such are antimony, cinnabar, biſmuth, calaminaris, vitriol, pyrites, marcaſites, cobalt, oker, the magnet, lapis hæmatitis, armenus, cryſtal mineral, and ſtellatus. See each under its proper article.

MINERAL *Agaric*. See *Agaric*.

MINERAL *Waters*, are thoſe which, at their ſpringing forth from under ground, are found impregnated with ſome mineral matter; as ſalt, ſulphur, vitriol; ſuch are hot baths, ſpaws, and purging ſprings.

MINGLE. A Dutch liquid meaſure, which in general weighs about 2 lb. 4 oz. avoirdupoiſe.

MINGRELIA. See *Perſia*.

MINHO. A great river of Spain, which riſes in the N. E. of the province of Galicia, and running S. W. thro' that principality, paſſes by Lugo, Ortenſe, and Tay; then dividing Galicia from Portugal, falls into the Atlantic ocean at Caminha, to the northward of Viana.

MINIUM. A mineral colour, called alſo red lead, being a preparation of lead performed by fire: which is uſed by painters, and illuminers: it is alſo an ingredient in an officinal compoſition, called *Emplaſtrum de Minio*, uſed as a deſiccative and cicatrizer. See *Vermillion*.

MINORCA, is an iſland in the Mediterranean ſea, about 60 leagues to the ſouthward of the coaſt of Catalonia in Spain. In its neighbourhood are Majorca, Yvica, and Formentera, which, together with this, conſtituted the ancient kingdom of Majorca. The lat. of Port-mahon is 39 deg. 40 min. north. Minorca is upwards of 33 m. long, and varies in breadth from 10 to 13 miles and more; ſo that it is nearly of the ſame bigneſs as the iſle of Wight, and is divided into four terminos; the termino of Mahon, the termino of Alaior, the united terminos of Mercadel and Fererias, and the termino of Guidadella. Theſe four terminos, of which that of Mahon is by far the moſt conſiderable, contain in all about 27,000 inhabitants. Their chief towns are thoſe from which the ſeveral terminos take their denomination.

The ſituation of Gibraltar and Port-Mahon are extremely commodious for vending ſeveral ſorts of commodities in Spain and Barbary; and the iſland of Minorca is no leſs happily ſituated, for carrying on an advantageous commerce with ſome parts of France and Italy; as it is by means of the neighbouring iſland of Majorca with Spain. Several ſorts of coarſe woollen ſtuffs, and Mancheſter goods, would be acceptable in Barbary, provided they could be had reaſonably cheap; which can never be, till they are all made free ports. Several ſorts of the manufactures of Mancheſter and Spittlefields would be very agreeable to the taſte of the Spaniards, French, and Italians: but above all Birmingham ware, cutlery, razors, and ſciſſars, watches and chains, locks, metal buttons, ſnuff-boxes, toys, and all the *Bijoux d' Angleterre*, as the French call them, which they are inexpreſſibly fond of, would find a prodigious vent in all theſe countries. The leaſt account of the whole trade, that might be carried on by means of theſe ports, were they made free, would be 100,000 l. *per anuum*, and ſurely ſuch a ſum is worth the getting, eſpecially by a nation 80,000,000 l. in debt.

If a ſcheme of this kind was to take place in the iſland of Minorca, it would then alſo ſtand a fair chance to be peopled by Engliſh families, or by ſuch as are well affected to the Engliſh government; whereas, at preſent, there are ſcarce any, except the garriſon, but biggotted Spaniards, who at the firſt taking of the place, would be glad to have parted with their poſſeſſions for a trifle, and to have retired into Spain. But now they are got immenſely rich, and their lands are ſaid to be more than five times their former value; yet their bigottry and averſion continue as ſtrong as ever. See *Gibraltar*.

MINOT. A French dry meaſure, containing three buſhels.

MINT. The place where the King's money is coined, which is at preſent in the Tower of London; though formerly there were mints in moſt cities of England.

Officers of the MINT, are, 1. The warden, who is the chief, and is to receive the bullion, and over-ſee all the other officers. 2. The maſter-worker, who receives the bullion from the warden, cauſes it to be melted, and delivered to the moneyers, and takes it from them again when coined. 3. Comptroller, who is to ſee that the

money be made to the juſt aſſize, and to overſee the officers. 4. The aſſay-maſter, who weighs the ſilver and gold, and ſees whether it be ſtandard. 5. The auditor, who takes all the accounts. 6. The ſurveyor of the melting, who is to ſee the ſilver caſt out, and that it be not altered after it is delivered to the melter, that is, after the aſſay-maſter has made trial of it. 7. The clerk of the irons, who is to ſee that the iron be clean and fit to work with. 8. The graver, who engraves the dies and ſtamps for the coinage of the money. 9. The melters, who melt the bullion before it comes to coining. 10. The blanchers, who anneal, or boil and cleanſe the money. 11. The porters, who keep the gate of the mint. 12. The provoſt of the mint, who provides for all the moneyers, and overſees them. And, laſtly, the moneyers, ſome whereof ſhear the money, ſome forge it, ſome ſtamp or coin it, and ſome round and mill it. See *Coinage*.

MIRZEOU. A town of India. See *India*.

MISACOMBY. An iſland in the Indian ocean. See *Celebes*.

MISSEIT. A drug for dying; which grows, and is cultivated in Arabia; being brought to Surat by the return of the ſhips which the Mogul's ſubjects ſend every year to Aden. The Europeans buy up but little of it; becauſe it is almoſt all conſumed at Surat, and in other parts of Guzarat, where it is employed for the printing and painting of cotton cloths.

MISSELTOE. See *Miſtletoe*.

MISSEN-*maſt*, or *Mizzen-maſt*, of a ſhip, is a maſt, or round long piece of timber, ſtanding upright in the ſternmoſt part.

MISSEN-*ſail*, is that belonging to the miſſen-yard. When at ſea they uſe the word *miſſen* alone, they always mean the ſail, and not the maſt.

Some great ſhips require two miſſens; in which caſe, that next the main-maſt is called the *main-miſſen*, and that next the poop the *bonaventure miſſen*.

Change the miſſen, is to bring the miſſen-yard over to the other ſide of the maſt.

Peek the miſſen, is to put the miſſen right up and down the maſt.

Spell the miſſen, is to let go the ſheet, and peek it up.

MISSISSIPI. A country of North America; ſo called from a river of the ſame name, which riſes in Canada, and runs ſouthward above 2000 miles, till it falls into the gulph of Mexico. See *French* America.

MISSISIPI *Company*. See French *Weſt* India companies.

MISSITAVIA. A duty of entry paid at Conſtantinople by Chriſtian ſhips, for which they are exempted from the duties of exportation.

MISTLETOE. A plant of the paraſite kind; growing not on the ground, but on other trees, as the oak, apple-tree, pear-tree, white thorn, aſh, lime, willow, elm, &c.

Miſtletoe, by phyſicians, &c. called *viſcus*, grows to the height of about two feet, conſiſting of ſeveral ſtems, uſually covered with a greeniſh, ſometimes a yellowiſh bark, about a finger's thickneſs; hard, woody, and divided by knots, whence ſpring the leaves; which lie two and two oppoſite to each other; oblong, thick, of a greeniſh or yellowiſh colour, veined their whole length, and rounded at the end. Its flowers grow by three and three, trefoil-wiſe, at the extremes of the branches; each flower being a yellow calyx, one third of an inch in diameter, divided into four parts.

The fruit likewiſe grows by three and three, at the extremes of the branches: they are a kind of white oval berries, not unlike little pearls, filled with a flattiſh ſeed in form of a heart, covered with a fine ſilvered membrane, and encloſed by a viſcid, glutinous humour, of a whitiſh colour, wherein the ſeed naturally buds or germinates, and puts forth two eyes. From this juice it is that the Latins denominate the plant *viſcus*; but the fruit grows on different branches from the flowers.

For the virtues of miſtletoe, it ſeems of the moſt efficacy in the epilepſy; againſt which ſome will have it ſpecific. Dr. Colbatch has wrote expreſsly to prove it ſuch. It is alſo preſcribed in apoplexies, lethargies, and vertigos; and wore about the necks of children to prevent convulſions, and eaſe the cutting of their teeth.

The beſt is the miſtletoe of the oak; though it is not this which is commoly uſed, but that of the apple or pear tree.

M. Perrault obſerves, that the miſtletoe is full of a poiſonous juice, which weakens the tree whereon it grows; and that the fruit has always a diſagreeable taſte while it ſticks on.

MISY. A name given by the antients to a kind of vitriolic mineral matter, called now chalcitis. See *Chalcitis*, and *Vitriol*.

MITE. A ſmall coin, formerly current, equal to about one third part of a farthing. See *Money*, and *Coin*.

MITE, alſo denotes a ſmall weight uſed by moneyers, equal to the 20th part of a grain, and divided into 24 doits. See *Weight*.

MITHRIDATE. An antidote, or compoſition, in form of an electuary; ſerving either as a remedy, or a preſervative againſt poiſons. It is one of the capital medicines in apothecaries ſhops, being compoſed of a great number of drugs, as opium, myrrh, agaric, ſaffron, ginger, cinnamon, ſpikenard, frankincenſe, caſtor, pepper, gentian, and others, and accounted a cordial, opiate, ſudorific, and alexipharmic. Matthiolus ſays it is more effectual againſt poiſon than Venice treacle, though eaſier to be made.

It takes its name from its inventor, Mithridates King of Pontus, who is ſaid to have ſo fortified his body againſt poiſons with antidotes and preſervatives, that when he had a mind to diſpatch himſelf, he could not find any poiſon that would take effect. The receipt of it was found in his cabinet, written with his own hand, and was carried to Rome by Pompey. It was tranſlated into verſe by Damocrates, a famous phyſician, and was afterwards tranſlated by Galen, from whom we have it; though there is room to imagine it has undergone conſiderable alteration ſince the time of its royal preſcriber.

MIXTURE, in matters of drapery, denotes the union or blending of ſeveral wools of different colours, not yet ſpun; hence a mixture or mixed ſtuff, is that whoſe woof and warp are of wools of different colours dyed and mixed before they were ſpun.

MOCO, *Mocha*, or *Mocca*. A port town of Arabia Felix, ſituated near the ſtraits of Babelmandel, in 45 deg. of E. lon. and 13 deg. of N. lat. See *Arabia*.

MODENA. See *Italy*.

MODON. A port-town of Turky in Europe, ſituated in the province of Morea, in 21 deg. 30 min. of E lon. and 37 deg. of N. lat.

MOEDA. See *Moidore*.

MOFUMA. A large tree, growing in ſeveral parts of Lower Ethiopia, particularly near rivers, and in marſh grounds; which is a kind of cork, its timber ſerving for the making of canoes: the principal commodity it produces is a ſort of cotton or wool, with which its trunk and branches are entirely covered.

MOGULSTAN, or *Indoſtan*. See *India*.

MOHABUT. A coloured cotton cloth, brought from the Eaſt Indies; the piece being of ſeven ells and a half and 3-4ths breadth.

MOHAIR. The hair, or wool, of an animal, very common in Turky, called a mo, and like the Engliſh ſhag. The hair is uſed for covering buttons, and in other manufactures; particularly it is frequently uſed in making rukes; but it is prohibited to be exported from Turky on pain of death, unleſs it is manufactured in ſtuff, however, under the ſanction of the Muſſulmen and Greek prieſts, it is commonly exported raw.

MOHAIR, is alſo a kind of ſtuff, ordinarily of ſilk, both woof and warp, having its grain wove very cloſe.

There are two kinds of mohair; the one ſmooth and plain, the other watered like tabbies; the difference between the two conſiſting only in this, that the latter is calendered, the other not. There are alſo mohairs, both plain and watered, whoſe woof is woollen, cotton or thread.

The Chineſe mohairs are but very indifferent: thoſe manufactured at Paris are much in eſteem; but thoſe of England are by far better.

MOH

OHILA. One of the Comora iſlands, in the Indian ocean, ſituated in 43 deg. 30 min. of E. lon. and 12 deg. of S. lat. See *Comora* Iſlands.

OHOC *Country*. One of the five nations of the Iroquois. See *Indian* America.

OIDORE. A Portugueſe gold coin, ſtruck for 4 milrees, and current in England for 27 s.

OIETY. The half of any thing.

OLDAU. See *Muldaw*.

OLOSSES, or *Melaſſes*. That groſs, yet fluid matter, remaining of ſugar, after refining; which no boiling will bring to a conſiſtence more ſolid than that of ſyrup; hence alſo called *ſyrup of ſugar*. See *Sugar*.

Properly, moloſſes are only the ſediment of one kind of ſugar called *chypre*, or brown ſugar, which is the refuſe of other ſugars, not to be whitened, or reduced into loaves. Moloſſes are much uſed in Holland among poor people, for the preparation of tobacco, and inſtead of ſugar.

There is alſo a kind of brandy, or ſpirit, made of moloſſes; but by ſome held exceedingly unwholſome, and therefore diſcouraged. See *Brandy*, and *Spirits*.

e MOLUCCA'S, or *Clove Iſlands*, are ſituated in the Indian ocean, ſouth of the Philippines, in 125 deg. of E. lon. and between 1 deg. ſouth, and 2 deg. of N. lat. comprehending the iſlands of Bachian, Machian, Motyr, Ternate, Tydore, and Amboina.

The Spaniards diſputed their poſſeſſion for ſome time; but, by the treaty of 1520 between the two nations, the Moluccas were ceded to the Portugueſe, who poſſeſſed them till 1601; when the Dutch entirely expelled them theſe iſlands, which they commonly called the ſpice-iſlands, upon account of the nutmeg, ſpice, and cloves, which ſeveral among them produce in abundance, not found in any other part of the world.

The land of the five firſt iſlands is much elevated; each of them conſiſting of one only mountain, beginning from the coaſts, and raiſing its ſummit very high.

They are all very ſmall; Ternate the principal being but ſeven leagues in circumference, Machian about ſix, Motyr only four; Bachian is larger, but half waſte.

The King of Ternate reigned formerly, not only over theſe five iſlands, but alſo over ſeveral others of the Celebes, and others, to the number of 72. His ſubjects were then obliged to bring their ſpice into his capital; where foreign merchants, ſuch as the Javans, Maleſe, Chineſe, and Portugueſe, came to furniſh themſelves.

A little time after the arrival of the Portugueſe in the Eaſt Indies, this great power of the Ternateſe began to be ſhaken; for the inhabitants of Macaſſar, Tydore, and ſeveral other iſlands, having revolted, and entered into a league with each other, marched in a body to attack their King. The Portugueſe, attentive to all that might extend their empire and conqueſts in the Indies, interfered very ſoon in the quarrel; and taking advantage of the preſent ſituation of things, eſtabliſhed themſelves in Ternate, even with the King's conſent, and afterwards by right of conqueſt; as alſo in Tydore, Machian, Amboina, Banda, Timor, and Solor, where they erected forts, and made themſelves maſters of the ſpice-trade.

In 1605, the Dutch appeared at Ternate; when the Ternateſe, tired of the Portugueſe power, received and permitted them to build the fort of Terluco, one of the firſt they had in the Indies.

This change of maſters not having made the Ternateſe ſervitude more eaſy, who to the yoke of the Portugueſe had added that of the Dutch, they ſtrove ſeveral times to ſhake off that of the latter, but always unſucceſsfully, being obliged to make divers treaties in 1609, 1612, and laſtly in 1638; which tending to deprive them of the little liberty they had, excluded ſtrangers entirely from the Moluccas, and aſcertained ſolely to the Dutch all the clove-trade of theſe iſlands.

By this treaty, which reſtored to the King of Ternate all the places the Dutch had poſſeſſed themſelves of in the war of 1638, it was ſtipulated, that all the ſubjects of the King ſhould evacuate Amboina; and that this prince ſhould renounce for ever in favour of the Dutch, all right and title to this iſland.

That no Indian or European trader ſhould be received in his ports, without a paſſport from the governor-general of Batavia; and that thoſe arriving with a paſſport ſhould put in at Amboina, no where but under the fort of the Victory; and at Hitou, Hou, and Cambelles, in the iſland of Ceram, no where but under the redoubts.

That thoſe who ſhould weigh anchor in theſe places might negotiate their merchandiſe; but not take in cloves, under the penalty of confiſcation, and life.

That thoſe who ſhould arrive there without a paſſport ſhould pay the fines regulated by the treaty.

That for hindering a contraband clove trade, it ſhould be in the option of the Dutch to make entrenchments and forts where they ſhould judge proper, and that the Ternateſe ſhould be obliged to work at them.

That the crimes and miſdemeanors of the King's ſubjects ſhould be judged by the Dutch governor at Ternate, as having the principal authority.

That the cloves ſhould not be delivered to any but to the company's factors.

Laſtly, that in caſe of nonperformance of this article, all the countries and inhabitants depending on the King of Ternate ſhould belong to the company; which notwithſtanding reſerved to itſelf the liberty of taking in ſago at Ceram, and other places reſtored to the Ternateſe.

Since this treaty the Dutch have remained abſolutely in poſſeſſion of theſe five iſlands; in which they have ſeveral forts, and ware-houſes for the clove-trade.

The forts of Ternate are three in number, namely, Maloya, or Orange fort, near which the King reſides; Tolucco, called alſo Holland, to the eaſt of the iſland; and Tacomma, which the Dutch call Villemſtad.

The iſland of Machian has likewiſe three, Taffalo, Noſtagnia, and Tabillola.

Motyr has but one fort.

The forts of Bachian are Labora on the coaſt, and Gemmedoura up the country.

Laſtly, the compāny has three forts at Tydore.

All theſe iſlands are ſcarce productive of any thing but cloves; which is almoſt the only trade of the Dutch in theſe parts.

Ternate affords, one year with another, 4 or 500 bars of cloves, and about 1000 in the plentiful ſeaſon, which happens once in ſeven years, each bar belng 550 lb. avoirdupoiſe.

Tydore 300 bars, Motyr only 100, Machian 300, and Bachian about 100; but in plentiful ſeaſons they yield more.

Beſides cloves, ſome tortoiſe-ſhells are brought from Ternate. An abundance of coarſe cottons are imported there, particularly from Guinea; beſides other cotton cloths and handkerchiefs, called tamettes, brought from Bouton; ſeveral ſtuffs, and other European merchandiſe, for the Dutch; and proviſions from Batavia, particularly rice and ſago.

The iſland of *Amboina* is ſituated in 126 deg. of E. lon. and 3 deg. 40 min. of S. lat. 300 miles S. W. of Ternate, and 100 N. W. of the Banda iſlands, being about 70 miles in circumference; and the iſthmus, dividing it into two parts, being very narrow, makes it appear as two iſlands.

When the Portugueſe took poſſeſſion of it in 1517, it belonged to the King of Ternate. The Dutch took it in 1603 or 1605, and kept it only till 1620; but having afterwards retaken it, they have ever ſince kept it; pretending, that beſides the right of conqueſt, it alſo belonged to them by the ceſſion which the King of Ternate made thereof by the treaty of 1638.

Beſides the great iſland of Amboina, there are ſome ſmall ones near it, where the Dutch have planted clove-trees, which grow and produce fruit, as well as at Amboina. Theſe iſlands are Oma, Ulcaſter, Noſslaw, Onima, Maſſalon, Mulana, and Octava, where the company has forts and factories, both for keeping the inhabitants in awe, and for hindering a clandeſtine trade.

The Dutch have three forts at Amboina, namely, the Victory, Hitou, and Low.

The fort of the Victory has four baſtions, and is ſituated two leagues in the bay, defended by 60 pieces of cannon, and a garriſon of 600 men. It is the reſidence of the

governor, and the ſecond of the great governments of the Dutch India company, which keeps there a council of 15 perſons, for regulating the affairs of the iſland, and its commerce, but ſubordinate to the council of Batavia.

When the Dutch made themſelves maſters of this iſland, there were but few clove-trees in it; but they planted ſuch a number there, that it furniſhes alone more than all the other Moluccas.

The greateſt crop is at Hitou, Lohor, Cambell, and Liſſedi; as alſo at Natua, Cayola, Caboar, Lariſque, Vaſqueſia, Ouri, and Aſſelouli, in the ſmall iſlands.

The whole iſland of Amboina is divided into ſeveral villages, and each village has ſeveral orchards, equally cultivated by the Dutch, the Metives, and the iſlanders; each of whom is obliged to plant 10 clove-trees every year; which has extremely multiplied them, and leaves ſcarce any room for the culture of other fruits, legumes, and neceſſaries of life, which are brought from other parts, particularly from Batavia.

Nutmegs have been planted in this iſland, but with little or no ſucceſs.

At Victoria there are large warehouſes always ſtored with ſtuffs, cloths ready made, cotton cloths, and other Indian and European merchandiſe, which the inhabitants furniſh themſelves with according to their wants, and by which the company has conſiderable profits.

The proviſions, ammunition, and merchandiſe, come there from Batavia every year, in two of the company's ſhips, which return entirely laden with cloves; there being ſometimes ſuch an abundance of this ſpice, that they are obliged to be burnt, or caſt into the ſea; and this happens by the treaty of the Dutch with the inhabitants, to take all their cloves at the fixed price.

At Amboina are reckoned upwards of 60,000 inhabitants, including the Dutch, who are much the ſmaller part: ſo that there is a neceſſity of behaving with circumſpection, and of holding great garriſons to keep the natives in reſpect, if they were not duly ſatisfied for their cloves.

The Engliſh had formerly factories and ſettlements in this iſland as well as the Dutch: but the latter, under pretence that the former were concerned in a plot againſt them, fell upon the Engliſh merchants and factors, tortured them by all the cruel methods they could invent, in order to oblige them to confeſs a plot, and then cruelly put them to death, in 1622; ſince which time the Dutch have monopoliſed the fine ſpices, and excluded all the reſt of the world from them.

The Little MOLUCCAS, or the *Iſlands of the Celebes*. See *Celebes*.

MOMBAZA, or *Monbaſa*. A city and iſland on the eaſt coaſt of Africa, ſituated in 48 deg. of E. lon. and 4 deg. of S. lat.

MONA. An iſland of the Baltic, ſituated S. W. of the iſland of Zeland, in 12 deg. 30 min. of E. lon. and 55 deg. 20 min. of N. lat. ſubject to Denmark.

MONACO. An Italian ſilver coin, worth 1 s. 7½ d. ſterling, and current in the principality of Monaco.

MONACO. A port-town of Italy, in the territory of Genoa, ſituated in 7 deg. 18 min. of E. lon. and 43 deg. 53 min. of N. lat. but ſubject to the prince of Monaco, who is a general in the French ſervice. See *Italy*.

MONDEGO. A river of Portugal, which runs from E. to W. through the province of Beira; and having paſſed by the city of Coimbra, falls into the Atlantic ocean 30 miles below that city.

MONDILO. A corn-meaſure uſed at Palermo; 4 of which make the tomolo, and 16 tomolos the ſalmo, or 7½ buſhels Wincheſter meaſure.

MONEY. A piece of metal marked for coin with the arms of a prince or ſtate, who make it circulate or paſs at a fixed rate, for things of different value, to facilitate the buſineſs of commerce.

Paulus the lawyer defines money, a thing ſtamped with a public coin, and deriving its uſe and value from its impreſſion rather than its ſubſtance.

Monſieur Boizard defines money a piece of matter to which public authority has affixed a certain value and weight, to ſerve as a medium in commerce.

The æra of the invention of money is not eaſy to be ſettled. There is no room to doubt, but that in the earlieſt ages the ordinary way of traffic among men was by trucking or exchanging commodity for commodity. Thus in Homer, the golden armour of Glaucus was valued at 100 cows, and that of Diomedes at ten. See *Exchange*. But, in courſe of time, it was found neceſſary in the way of commutative juſtice, to have ſome common meaſure or ſtandard, according to which all other things ſhould be eſtimated. This, as ſome gather from Joſephus, was firſt invented by Cain; though the firſt we hear of it, is in the time of Abraham, who paid 400 ſhekels for a burying place. On the foot money now ſtands, it may be divided into real or effective, falſe and imaginary.

Real money includes all coins, or ſpecies of gold, ſilver, copper, and the like, which have courſe in commerce, and really exiſt: ſuch are guineas, crowns, piſtoles, pieces of eight, ducats, &c.; which ſee under their proper heads, as alſo under *Coin*.

Real money, civilians obſerve, has three eſſential qualities, as matter, form, and weight or value. For matter, copper is thought to have been firſt coined, afterwards ſilver, and laſtly gold, being the moſt beautiful, ſcarce, cleanly, diviſible, and pure, of all metals.

The degrees of goodneſs are expreſſed in gold by carats, and in ſilver by pennyweights; becauſe there are ſeveral reaſons for not coining them pure and without alloy, as the great loſs and expence in refining them, the neceſſity of hardening them to make them more durable, and the ſcarcity of gold and ſilver in moſt countries. See *Alloy*.

Among the antient Britons, iron rings, or iron plates, were uſed for money; among the Lacedemonians, iron bars, quenched with vinegar, that they might not ſerve for any other uſe. Seneca obſerves, that there was anciently ſtamped money of leather, *corium formâ publicæ impreſſum*. And the ſame thing was put in practice by Frederic II. at the ſiege of Milan; to ſay nothing of an old tradition, that in the confuſed times of the barons wars, the like was done in England: but the Hollanders coined great quantities of paſte-board in the year 157[illegible]. Numa Pompilius made money of wood and leather; nor does it appear that the Romans were much acquainted with the art of ſtriking money in metal during the time of their kings; the firſt ſilver money they coined being in the year of Rome 484, and their firſt gold money in 546. See *Coinage*.

As to the form of money, it has been more various than the matter; under this being comprehended the weight, figure, impreſſion, and value.

For the impreſſion; the Jews, though they deteſted images, yet ſtamped on the one ſide their ſhekel, the golden pot which had the manna, and on the other Aaron's rod; the Dardans, two cocks fighting; Alexander, as is held by ſome, his horſe Bucephalus; though this may be doubted of, in regard the horſe is found frequently on the coins of ſeveral of the Kings of Macedon, his predeceſſors, as on his. The Athenians ſtamped their coins with an owl, or an ox; whence the proverb on bribed lawyers, *Bos in lingua*: the inhabitants of Egina, with a tortoiſe; whence that other ſaying, *Virtutem et ſapientiam vincunt teſtitudines*. For the Romans, the monetarii ſometimes impreſſed the images of men that had been eminent in their families on the coins; but the head of no living perſon was ever ſtamped on a Roman coin till after the fall of the commonwealth: from that time they bore the Emperor's head on one ſide; and hence the practice of ſtamping the prince's image on coins, has obtained among all civilized nations, the Turks and other Mahometans alone excepted; who, in deteſtation of images, inſcribe only the prince's name, with the year of the tranſmigration of their prophet.

As to the figure, it is either round, as in England; multangular or irregular, as in Spain; ſquare, as in ſome parts of the Indies; or nearly globular, as in moſt of the reſt.

After the arrival of the Romans in Britain, the Britons imitated them, coining both gold and ſilver with

images of their kings ſtamped on them: but when the Romans had ſubdued the kings of the Britons, they alſo ſuppreſſed their coins, and brought in their own; which were current from the time of Claudius to that of Valentinian the younger, about the ſpace of 500 years.

Camden obſerves, that the moſt ancient Engliſh coin he had known was that of Ethelbert King of Kent, the firſt Chriſtian King in the iſland; in whoſe time all money-accompts began to paſs by the names of pounds, ſhillings, pence, and mancaſes.

Pence ſeems borrowed from the Latin *pecunia*, or rather from *pendo*, on account of its juſt weight, which was about 3 d. ſterling; theſe being coarſely ſtamped with the King's image on the one ſide, and either the mint-maſter's, or the city's where it was coined, on the other: 5 of theſe pence made their ſcilling, probably ſo called from *ſcilingus*, which the Romans uſed for the 4th part of an ounce: 40 of theſe ſcillings made their pound, and 400 of theſe pounds were a legacy, or a portion for a King's daughter, as appears by the laſt will of King Alfred. See *Penny*.

By theſe names they tranſlated all ſums of money in their old Engliſh Teſtament; talents, by pounds; Judas's 30 pieces of ſilver, by 30 ſcillinga; tribute-money, by penining; and the mite, by feorthling.

It muſt be obſerved they had no real money, but pence only; the reſt being imaginary monies, that is, names of numbers or weights: 30 of theſe pence made a mancus, which ſome take to be the ſame with a mark; manca, as appears by an old MS. being *quinta pars unciæ*. See *Mark*.

Theſe manca's, or mancus's, were reckoned both in gold and ſilver; for, in the year 680, Ina, King of the Weſt Saxons, obliged the Kentiſhmen to buy their peace at the price of 30,000 manca's of gold. In the notes on King Canute's laws, there is this diſtinction, that mancuſa was as much as a mark of ſilver, and manca a ſquare piece of gold, valued at 30 pence.

The Danes introduced a way of reckoning money by ores, *per oras*, mentioned in Domes-day book; but whether they were a ſeveral coin, or a certain ſum, does not plainly appear. This, however, may be gathered from the abbey book of Burton, that 20 ores were equivalent to two marks.

They had alſo a gold coin called bizantine, or bezant, as being coined at Conſtantinople, then called Bizantium; the value of which coin is not only now loſt, but was ſo entirely forgot, even in the time of King Edward III. that whereas the Biſhop of Norwich was fined a bizantine of gold, to be paid to the Abbot of St. Edmond's Bury, for infringing his liberties, as it had been enacted by parliament in the time of the conqueror, no man then living could tell how much it was; ſo it was referred to the King to rate how he ſhould pay; which is the more unaccountable, becauſe but 100 years before, two hundred thouſand beſants were exacted by the ſoldan for the ranſon of St. Lewis of France, which were then valued at one hundred thouſand livres.

Though the coining of money is a ſpecial prerogative of the King, yet the antient Saxon princes communicated it to their ſubjects; inſomuch that in every good town there was at leaſt one mint, but at London eight; at Canterbury, four for the King, two for the Archbiſhop; one for the Abbot at Wincheſter; ſix at Rocheſter; at Haſtings two, &c.

The Norman Kings continued the ſame cuſtom of coining only pence, with the prince's image on one ſide, and on the other the name of the city where it was coined, with a croſs ſo deeply impreſſed, that it might be eaſily parted, and broken into halves; which ſo broken they called halfpence; or into four parts, which they called fourthings, or farthings.

In the time of Richard I. money coined in the eaſt-parts of Germany came in ſpecial requeſt in England, on account of its purity, and was called Eaſterling money, as did the inhabitants of thoſe parts were called Eaſterlings. And ſhortly after ſome of thoſe people ſkilled in coining were ſent for to England, to bring the coin to perfection; which ſince has been called Sterling, for Eaſterling. See *Sterling*.

King Edward I. who firſt adjuſted the meaſure of an ell by the length of his arm, herein imitating Charles the Great, was the firſt alſo who eſtabliſhed a certain ſtandard for the coin; which is expreſſed to this effect by Greg. Rockley, mayor of London, and mint-maſter.—A pound of money containeth 12 ounces; in a pound there ought to be 11 ounces, 2 eaſterlings, and 1 farthing; the reſt alloy. The ſaid pound ought to weigh 20 s. and 3 d. in accompt and weight. The ounce ought to weigh 20 d. and a penny 24 grains and a half. — *Note*, That 11 oz. 2 dwt. ſterling ought to be of pure ſilver, called leaf-ſilver; and the minter muſt add of other weight 17 d. halfpenny farthing, if the ſilver be ſo pure.

Falſe or *baſe money*, is either that ſtruck by an unqualified perſon, and of unſtatutable metals; or that which has loſt of its weight, either by being clipped on the corners, or filed on the edges; or laſtly, by having ſome of its ſurface peeled off; if gold, by aqua regalis; if ſilver, by aqua fortis.

Another kind of baſe money, is that made of pieces of iron, copper, or other metal, covered on each ſide with a thin plate or leaf of gold or ſilver, neatly ſoldered and joined around the edges, and ſtruck like other coin, with figures, legends, &c. only to be diſtinguiſhed from them by the bulk, weight, and ſound.

Imaginary money, or *money of accompt*, is that which has never exiſted, or at leaſt which does not exiſt in real ſpecie; but is a denomination invented, or retained, to facilitate the ſtating of accompts, by keeping them ſtill on a fixed footing, not to be changed like current coins, which the authority of the ſovereign raiſes or lowers according to the exigencies of ſtate; of which kind are pounds, livres, marks, maravadies, &c.

Money of accompt, according to Boizard, is a ſum of money, or a certain number of ſpecie, which may change in ſubſtance and quantity, but never in quality: thus 50 l. conſiſts of 50 pieces called pounds, which are not real, but may be paid in ſeveral real ſpecies, as in guineas, crowns, ſhillings, &c. which are changeable, as guineas, ſometimes higher, ſometimes lower.

Monies of accompt, or manners of reckoning money in Europe and Aſia.

It is here neceſſary to confine the ſubject to the monies of thoſe two parts of the world: America having none; the reſpective monies of accompt of the Europeans, who have made ſettlements there, being eſtabliſhed with them. As to Africa: in the cities of Barbary and Egypt, where the Europeans traffick, they reckon much after the ſame manner as in the Levant, and in the dominions of the Grand Signior: for the reſt, throughout that vaſt extent of coaſt where Europeans trade for negroes, gold duſt, elephants teeth, wax, leather, &c. either the miſerable inhabitants know not what money of accompt is; or, if they have any, it is only what ſtrangers, ſettled among them, have introduced. The macoute, however, and the piece, which are manners of accompting among theſe people, will be mentioned in their place.

Perſian monies of accompt. In Perſia they accompt by the toman, called alſo man and tumein, and the dinar biſti. The toman is compoſed of 50 abaſſis, or 100 mamodies, or 200 chapes, or 10,000 dinars, which amounts to about 3 l. 12 s. 6 d. ſterling the toman. They alſo accompt by larins, eſpecially at Ormus, and on the coaſts of the Perſian gulph; the larin being equivalent to 11 d. ſterling; and on that footing uſed alſo in Arabia, and a great part of the Eaſt Indies.

Chineſe monies of accompt, are the pic, picol, and tael; which, though in effect weights, likewiſe ſerve as monies of accompt, obtaining in Tonquin as well as China. The pic is divided into 100 catis, ſome ſay 125; the cati into 16 taels, each tael equal to 1 ounce 2 drachms: the picol contains 66 cotis 3-4ths; and the tael is equivalent to 6 s 8 d. ſterling.

Japoneſe monies of accompt, are the ſehuites, cockiens, oebans or oubans, and taels.

Mogul monies of accompt. At Surat, Agra, and the reſt of the eſtates of the Great Mogul, they uſe lacres, acres, or leeths; implying a hundred thouſand: thus a lacre of rupees is a hundred thouſand rupees.

Monies of accompt of other iſlands and coaſts of India. Throughout Malabar, and at Goa, they uſe tangas, vintins, and pardos xeraphin. The tanga is of two kinds, good and bad alloy. Hence their cuſtom is to count by good or bad money; the tanga of good alloy being 1-5th better than the bad; ſo that 4 tangas good being allowed the pardos xeraphin, there will be required 5 of the bad; 4 vintins good make a tanga likewiſe good; 15 barucos, a vintin; the good baruco equal to a Portugueſe ree, a French denier, or 1-13th of a penny ſterling. In the iſland of Java, they uſe the ſonta, ſapacou, fardos, and catis; which laſt, together with the leeth, or lacre, is much uſed throughout all the Eaſt Indies: the ſanta is 200 caxas, or little pieces of that country hung on a ſtring, equal to 10-12ths of a penny ſterling; 5 ſantas make the ſapacou; the fardos equal to 2 s. 8 d. ſterling; the cati contains 20 taels; the tael 6 s. 8 d. ſterling.

There are iſlands, cities, and ſtates of the Eaſt Indies, whoſe monies of accompt are not here expreſſed; partly becauſe reducible to ſome of thoſe above mentioned, and partly becauſe there is no certain conſiſtent accompt of them.

African monies of accompt. From Cape Verd to the Cape of Good Hope, all exchanges and valuations of merchandiſe are made on the foot of the bar, macoute and piece; which, though no monies of accompt, ſerve in lieu thereof; for thoſe people having no real monies, need no imaginary ones to eſtimate them by. At Loango de Boirie, and other places on the coaſt of Angola, the eſtimations are made by macoutes; and at Malimbo and Cabindo, on the ſame coaſt, the negroes reckon by pieces. Among the firſt, the macoute is equivalent to 10; and 10 macoutes make 100; which likewiſe leaves a kind of imaginary money. To eſtimate any purchaſe, exchange, &c. they fix on the one ſide the number of macoutes required; as ſuppoſe for a negro; on the other, for how many macoutes they agree to receive of each kind of merchandiſe for the negro; ſo that there are ſeveral bargains made for one. Suppoſe the ſlave to be fixed at 3500, this amounts to 350 macoutes; and to make up this number of macoutes in merchandiſes, they fix the price of each in macoutes. Two Flemiſh knives are accounted 1 macoute, a copper baſon two pounds weight 3, a barrel of gun-powder 3, &c. For the piece, it ſerves in the like manner to eſtimate the value of goods, duties, &c. on either ſide. Thus the natives require 10 pieces, or bars, for a ſlave; and the Europeans put a fuſee at 1 piece; a piece of Salampoures blue, at 4 pieces, &c. Belloni obſerves, that money, with relation to commerce, is no more than a certain determinate meaſure of ſuch things as can be bartered or ſold, invented to ſupply the place of any aſſignable quantity of a commodity, when that cannot be exchanged in kind.

When there was no money, as is before obſerved, men uſed to barter one commodity for another; a cuſtom which ſtill obtains among the ſavage, unpoliſhed nations of Chili, on the South ſea, in the land of Jeſſo in the Eaſt Indies, and other barbarous countries. But as ſuch a method of bartering commodities was on many occaſions attended with great difficulty, and always inconvenient, men agreed to make choice of one commodity: which being in general and conſtant eſteem, an equivalent quantity of it might always remove the difficulty of bartering in kind.

The ſame opinion concerning the origin of money, we find expreſſed very much to our purpoſe in the firſt book of Ariſtotle's politics, chap. vi. "As all uſeful things, "ſays he, could not without great difficulty be tranſ- "ported from place to place, it was reſolved by common "conſent, that in bartering commodities they ſhould "reciprocally give and receive ſome ſubſtance, which, "being in its nature applicable to the purpoſes of life, "might at the ſame time be eaſily carried about." From which words of Ariſtotle, it is very plain, that the introduction of money was owing to the difficulty of bartering, as human ſociety could not ſubſiſt without the exchange of neceſſaries; nor could this matter be managed without the uſe of money.

The Athenians not having at firſt the uſe of metals, made uſe of oxen, as the meaſure and ſtandard of trade; and the Romans of ſheep, for the ſame purpoſe: but this was extremely inconvenient, ſeeing one ox is not the ſame as another, in the manner that two pieces of metal may be the ſame. Herodotus, lib. 1. tells us, the Lydians were the firſt, who, for the facility and convenience of commerce, coined money of gold and ſilver, and the Greeks learned it of them. The Athenian coin had the impreſſion of their ancient ox. One of theſe pieces is to be ſeen in the Earl of Pembroke's collection. *Spirit of Laws*, b. xxii. c. 2.

To determine therefore this ſubſtance, that ſhould be in univerſal and conſtant eſteem, they made choice of gold and ſilver, not only becauſe they were more valuable than other metals; but alſo becauſe, in the various uſes to which they might be applied, they were particularly adapted to the ſupport and improvement of human life. But becauſe there was a conſiderable difference in the nature of theſe two metals, and gold was more precious than ſilver, both by its intrinſic worth and greater ſcarcity, and alſo far exceeded the other in the expence that was neceſſary for working it, as appears by the tax that is paid to the ſovereign lords of mines, who require no more than 5 l. *per cent.* for gold; whereas they exact 20 l. *per cent.* for ſilver; therefore a greater value was aſcribed to gold: and becauſe the baſer metal ought to be given in greater meaſure, that what was wanting in value might be made up in quantity, it was neceſſary to fix the proportion between them by a certain determinate rule.

Hence it is, that in the practice of commerce, though formerly the proportion of gold to ſilver was ſettled at ten to one; yet at preſent the matter is ſo regulated, almoſt over all Europe, that one ounce of gold is reckoned equal in value to fifteen of ſilver, or thereabout.

Now, when the ſubſtance was agreed upon at firſt, the particular quantities of it were originally determined by their bulk and weight only; but afterwards, to ſave the trouble and expence of providing this weight upon every occaſion, it was coined into a certain form by public authority, and impreſſed with a mark of diſtinction, expreſſing the quantity each piece contained; ſo that it ſhould always have the ſame determinate value, and be every where the ſame, both for matter and weight. But now in order to inquire more particularly into the nature of money, and the better to illuſtrate what may be further offered concerning the effects it produces in trade, and the various advantages and diſadvantages of one kingdom in reſpect to another, ariſing from money, it muſt be conſidered, that we are to diſtinguiſh two ſorts of value in money; the one intrinſical, conſiſting of the matter itſelf, its weights and quantity; the other extrinſical, founded on the rate or value, according to which it uſed to paſs. And though in different places, on ſeveral preſſing occaſions, the intrinſical value of money may be raiſed higher, at the diſcretion of the ſupreme power; ſuch is the nature of commerce, that in it money is never eſtimated but at its intrinſic value; ſo that in the courſe of trade, money can have no higher value than a maſs of the ſame metal and quantity would have, if given in barter for any ſort of goods. We muſt alſo obſerve further, that ſuch is the cuſtom of well regulated kingdoms, that when money is ſuffered to paſs current therein, ſo much is deducted from the intrinſical value, as is neceſſary for defraying the charge of coining, and it never paſſes for more than its intrinſic value. And the intention of this regulation is, that the money of the ſtate itſelf, which bears the ſtamp and authority of the prince, may always have the preference. From all which conſiderations it is extremely plain, that it is a matter of the utmoſt conſequence, that the ſyſtem of money be ſettled under ſome fixed regulations, as it may conſtantly keep pace with the courſe of trade, and never in the leaſt deviate therefrom; it being certain, that no variation can ever happen in this reſpect, but it will at the ſame time produce a remarkable alteration in commerce.

fter all, however certain it may ſeem, that money is at which alone conſtitutes the riches of a nation, and cannot be denied, that, conſidered in itſelf, it has this erogative; nevertheleſs it will never diſcover its effects, it is not put in motion by commerce; ſo that as the ody of a planet being in itſelf opake, would never diſco- r to us its form and figure, if, according to that hypo- eſis, it did not revolve round the ſun, whoſe light eſents it to our view, we muſt form the very ſame dgment concerning money, which, it is certain, has in ſelf no power at all to encreaſe and multiply, and hereby to form the riches of a kingdom, or even, on the ontrary, to reduce it to poverty; for if a proſperous or nfavourable motion were not communicated thereto by ommerce, we ſhould never be ſenſible of its effects. nd becauſe we can no otherwiſe arrive at a clear and iſtinct knowledge of theſe effects, but by a fixed and cer- ain rule, which can ſhew with accurate exactneſs the ituation of any kingdom with regard to its internal and xternal commerce; that is, whether the balance of trade ands in equilibrio, or is inclined to either ſide: there- ore, ſeeing there is not a more infallible rule by which his knowledge can be attained than the courſe of ex- hange, ſee *Exchange*, and *Coin*.

European accompts are kept in the following manner.

In England,

By pounds, ſhillings, pence, and farthings.

1 Pound	is equal to	20 ſhillings.
1 Shilling		12 pence.
1 Penny		4 farthings.

In Scotland, Value in ſterling money.

Formerly by pounds, ſhillings, and pennies. s. d. f.

1 Pound	was equal to	20 ſhillings	1	8	0
1 Shilling		12 pence	0	1	0
1 Penny			0	0	0 1/5

But ſince the union their money of accompt is the ſame as in England.

In Ireland,

By pounds, ſhillings, pence, and farthings.

1 Pound	was equal to	20 ſhillings	15	0	0
1 Shilling		12 pence	0	9	0
1 Penny		4 farthings	0	0	3
1 Farthing			0	0	0 3/4

But the Engliſh pound is now 1 l. 1 s. 8 d. Iriſh money; the Engliſh ſhilling is a thirteen, or 1 s. 1 d. Iriſh; aud the others in propor- tion.

In Holland, and the other United Provinces,

By florins or guilders, ſtivers, and penningens.

1 Florin or guilder	is equal to	20 ſtivers	0	1	9
1 Stiver		16 penningens	0	0	1 1/20
1 Penningen			0	0	0 21/320

In Flanders and Brabant,

By pundis, ſchellings, and pennings. s. d.

1 Pundi	is equal to	20 ſchellings	11	3
1 Shelling		12 pennings	0	6 3/4
1 Penning			0	0 1/2 1/8

In ſome places by florins, ſtivers, and pen- ningens, as in Holland: and in others by livres, ſols, and deniers, as in France.

In Germany. At Vienna, Francfort, Nurem- berg, &c.

By rixdollars, creuxers, and pennins.

1 Rixdollar	is equal to	100 creuxers	4	8	
1 Creuxer		8 pennins	0	0	7/15
1 Pennin			0	0	7/60

In Hamburgh, Berlin, &c.

By rixdollars, marc-lub, ſchelling-lub, denier-lub or phenning.

1 Rixdollar	is equal to	3 marcs	4	6	
1 Marc		16 ſchellings	1	6	
1 Schelling			0	1	1/8

In Leipſick and Naumburgh,

By ſpecie dollars, groſs, and phennings. s. d.

1 Dollar	is equal to	32 groſs	4	8	
1 Groſs		12 phennings	0	1	3/4
1 Phennlng			0	0	7/32

In Poland, Dantzic, Riga, Koningſberg, and Pruſſia,

By rixdollars, groſs, and deniers.

1 Rixdollar	is equal to	90 groſs	4	6	
1 Groſs		18 deniers	0	0	3/4
1 Denier			0	0	3/2 1/15

In Denmark and Norway,

By rixdollars, hors, and ſchellings; or by rixdol- lars, marc, and ſchellings.

1 Rixdollar	is equal to	4 hors	4	6	
1 Hors		12 ſchellings	0	1	1/2
1 Schelling			0	0	9/16
1 Rixdollar	is equal to	6 marcs	4	6	
1 Marc		16 ſchellings	0	9	
1 Schelling			0	0	9/116

N. B. A Lubeck ſchelling, &c. is double to thoſe of Denmark.

In Sweden,

By rixdollars, copper dollars, and runſtucs.

1 Rixdollar	is equal to	9 copper dollars	4	8	
1 Copper dollar		32 runſtucs	0	6	2/9
1 Runſtuc			0	0	7/36

In Ruſſia,

By rubles, grivenas, and copecs.

1 Ruble	is equal to	10 grivenas	4	6	
1 Grivena		10 copecs	0	5	1/2
1 Copec			0	0	2 7/36

In Turky,

By abukeſb or dollars, and aſpers.

1 abukeſb	is equal to	80 aſpers	3	4	
1 aſper			0	0	1/2

A purſe of ſilver	£	112	10	0
Ditto in gold		6750	0	0

In *Candia* the ſame as in *Venice*.

In Italy. In Venice,

By livres, ſolidis, and denier pichilis or current.

1 Livre	is equal to	20 ſolidi	0	7	
1 Solidi		12 pichili	0	0	1/12
1 Pichili			0	0	5/84

In Bergamo, Genoa, Mantua, Milan, Modena, and Novi,

By livres, ſolidis, and deniers.

1 Livre	is equal to	20 ſolidis	0	10	2/5
1 Solidi		12 deniers	0	0	1/2
1 Denier			0	0	1/24

In Rome, Ancona, and Ferrara,

By crowns, julios, grains, and quartrines.

1 Crown	is equal to	10 julios	5	0	
1 Julio		8 grains	0	6	
1 Grain		4 quartrines	0	0	3/4
1 Quartrine			0	0	6/16

In Naples,

By ducats, tarins, and grains.

1 Ducat	is equal to	5 tarins	3	4	
1 Tarin		20 grains	0	8	
1 Grain			0	0	2/3

In Sicily and Malta,

By ounces, tarins, carlins, grains, and picholis.

1 Ounce	is equal to	30 tarins	12	6	
1 Tarin		2 carlins	0	5	
1 Carlin		10 grains	0	2	1/2
1 Grain		6 picholis	0	0	1/4
1 Picholi			0	0	1/24

In Switzerland,

By rixdollars, florins, kreuxers, and kellers.

1 Rixdollar	is equal to	1 3/10 florins	4	6	
1 Florin		60 kreuxers	2	6	
1 Kreuxer		8 kellers	0	0	1/2
1 Keller			0	0	1/10

In

In Portgual,

By millrees and rees; ſeparating the former from the latter thus, 540 : 820; which imports 540 millrees and 820 rees.

			s.	d.
1 Millree	is equal to	1000 rees	5	7 1/2
1 Ree			0	0 27/46

In Spain,

By dollars or piaſtres, rials, and quartos.

1 Dollar	is equal to	8 rials	3	7
1 Rial		17 quartos	0	5 3/7
1 Quarto			0	0 43/136

Or by maravedis; of which 68 are equal to 1 rial, or 1 maravedis to 0 0 43/544

In France,

By livres, ſols, and deniers.

1 Livre	is equal to	20 ſols	0	10 1/2
1 Sol		12 deniers	0	0 1/2
1 Denier			0	0 1/24

They keep their accompts throughout all the Engliſh ſettlements in America, in pounds, ſhillings, pence, and farthings, the ſame as they do in London; but their pounds, ſhillings, and pence, which they keep their books in, is what is called *currency*; and the difference between the pounds, ſhillings, and pence, of London, and their currency, is between 20 and 800 *per cent.* They often draw upon London. If it be from any of the iſlands of the Weſt Indies, they give from 125 to 170 l. of their currency, to receive 100 l. in London: but if it be from New England, Carolina, or on the continent, they give from 170 to 800 l. and upwards, of their currency, for 100 l. in London, becauſe gold and ſilver is ſo very ſcarce among them.

By an act of parliament made in the 6th year of Queen Anne, for aſcertaining the value at which foreign coins ſhould paſs in the Britiſh colonies, it was regulated as follows.

	Weight. dwt.	gr.	true val. s.	d.	curr. value. s.	d.	f.
Pieces of 8/8, old plate, of Sevil	17	12	4	6	6	0	0
Ditto of new - -	14	0	3	7 1/4	4	9	2 2/3
Mexico ditto -	17	12	4	6	6	0	0
Piller ditto - -	17	12	4	6 3/4	6	0	0
Peru ditto, old plate -	17	12	4	5	5	10	2 1/3
Croſs dollars - -	18	0	4	4 3/4	5	10	1 1/3
Ducatoons of Flanders	20	21	5	6	7	4	0
French crowns or ecus	17	12	4	6	6	0	0
Cruſadoes of Portugal -	11	4	2	10 1/4	3	9	2 2/3
Three gilder pieces of Holland	20	7	5	2 1/4	6	10	3 1/3
Old rixdollars of the empire	18	10	4	6	6	0	0

The half quarters, and other parts in proportion to their denominations, and light pieces to their weights.

And to remedy the inconveniencies which was cauſed by the different rates at which pieces of the ſame ſpecies was current, it was ordered by proclamation, and confirmed by the ſaid act of parliament, that no Piller, Mexico, or Sevil pieces of eight, though of full weight as above, ſhould be received or paid at above 6 s. a piece; and the half, quarters, and the other leſſer pieces, in proportion.

And the currency of all the other pieces above mentioned are not to exceed the ſame proportion.

And the ſaid act enjoins, That if any one ſhall receive or pay any of the ſaid pieces for any more than as above, they ſhall forfeit 10 l.

Moneyed Intereſt of Great Britain, means the public funds, or moneyed property; which is a term uſed in oppoſition to the landed intereſt. See National *Debt*, *Fund*, and *Taxes*.

MONGOPOES. A cotton cloth manufactured in the Eaſt Indies, and bought by the Engliſh of Madras in great quantities, who ſend them to the Manilles.

MONGUL, or *Mogul*. A name for the Emperor or King of India; which is derived from a country of the ſame name in Tartary, where Tamerlane governed. See *India*.

MONKS-HOOD. See *Aconite*.

MONKS *Rhubarb*. See *Rhubarb*.

MONKS *Seam*, among ſailors, is when the ſelvedges of ſails are laid a little over one another, and ſewed on both ſides.

MONOEMUGI. See *Ethiopia*.

MONOMOTAPA. See *Ethiopia*.

MONOPOLY, is an allowance of the King, by grant, commiſſion, or otherwiſe, to any perſon or ſons, for the ſole buying, ſelling, making, working uſing of any thing, by which other perſons are reſtra of any freedom or liberty that they had before, or dered in their lawful trade. Though a monopoly be more truly defined to be, a kind of commerce buying, ſelling, exchanging, or bartering, uſurped few, and ſometimes but by one perſon, and foreſt from all others, to his or their private gain, and to hurt and detriment of other men; whereby of co or by authority, the liberty of trade is reſtrained, the monopoliſt enabled to ſet what price he pleaſe commodities.

Theſe monopolies uſed in England, have been di guiſhed in three parts; 1ſt, Reaſonable, of things trifles for pleaſure, ſuch as cards, lute-ſtrings, tob or the like; 2dly, Unreaſonable, as of fleſh, fiſh, ter, cheeſe, or other needful things for the ſuſten of man, without which he can hardly live; 3dly, L ferent, of velvets, ſilks, ſpices, and other delica and curioſities, which are indifferent to be uſed or But all monopolies are contrary to the ancient and damental laws of the realm, being againſt the free of trade. Upon which ground it hath been held, the King's grant to any corporation of the ſole impor tion of any merchandiſe, is void by the common law.

Some men are ſatisfied, if a prohibition of any commo be made by act of parliament, and they will not call monopoly, though it be ſo in effect; as when a ſociety private merchants have a privilege to themſelves only, ſell certain commodities, or to import them, and all ot ſubjects are excluded, although they were neither the coverers nor firſt inventors thereof: but if it be done the King's prerogative, then they take it to be a mon poly. There are others who would have all things large in the courſe of traffic, and that there ſhould be ſocieties or corporations of merchants for any places trade; for by way of partnerſhip merchants might aſ ciate themſelves, to make or enterpriſe any voyages, in ſending any goods or merchandiſe abroad, witho having regard to companies for carrying on trade, for whereof are of great antiquity. And other perſo make a difference between companies or aſſociation dealing in a joint ſtock or apart; affirming the manag ment of a joint ſtock to be within the compaſs of a mon poly; nevertheleſs they would be contented to toler the ſame for the employment outward, but for retur homeward they would have a particular diviſion of t commodities which they receive.

The learned judge Vaughan ſays, that if the exportatio or importation of a commodity, or the exerciſe of a trad be prohibited generally by parliament, and no cauſe ex preſſed of the prohibition, a licence may be granted b the King to one or more perſons, without limitation, t export or import, or to exerciſe the trade: for by ſuch general reſtraint, the end of the law is no more than t limit the over-numerous exporters, importers, or trade in that kind, by putting them to the difficulty of procuri licences; and therefore ſuch general licences ſhall not b accounted monopolies: in which caſes the law impli that the King may licenſe, as well as if the prohibitor law had been, that no ſuch exportation, &c. ſhould b without the King's expreſs licence.

Theſe are the various opinions of different men, concernin what is a monopoly or not ſo: but it is now proper to tak particular notice of the great caſe of monopolies in th reign of Queen Elizabeth, as tranſmitted down by tha excellent lawyer Sir Edward Coke. Queen Elizabeth in tending that her ſubjects, being able men fit for huſbandry ſhould be exerciſed therein, and not employ themſelve in making playing cards, which had not been any an tient manual occupation within the realm; and conſi dering that by making a multitude of cards, card-playing was become more frequent, and eſpecially among ſer vants and apprentices, and poor artificers; and to the end her ſubjects might apply themſelves to more lawful

and neceſſary trades; by her letters-patent under the great ſeal, dated the 13th of June, in the 30th year of her reign, granted to R. B. eſq; full power, licence, and authority, by himſelf, his ſervants, factors, and deputies, to provide and buy in any parts beyond the ſea, all ſuch playing cards as he thought good, and to import them into the kingdom, and to ſell them within the ſame; and that he, his ſervants, factors, and deputies, ſhould have and enjoy the whole trade, traffic, and merchandiſe of all playing cards, to have and to hold for twelve years. And by the ſame letters-patent, the Queen charged and commanded, that no perſon or perſons beſides the ſaid R. B. &c. ſhould import or bring any cards into the realm during the ſaid time, nor make, buy, or ſell, any ſuch playing cards, &c. upon pain of the Queen's higheſt diſpleaſure, and of ſuch fine and puniſhment as offenders deſerve in caſe of voluntary contempt. On an action of the caſe brought by the patentee againſt one for importing and making cards, contrary to theſe letters-patent, notwithſtanding the glorious preamble and pretence thereof, it was reſolved that this grant was void; for it is a monopoly, and againſt the common law, and likewiſe divers acts of parliament; for all trades, as well mechanical as others, which prevent idleneſs, the bane of the commonwealth, and exerciſe men and youth, for the maintenance of themſelves and their families, and for increaſe of their ſubſtance, to ſerve the Queen when occaſion ſhall require, are profitable to the realm. And the ſole trade of any mechanic art, or any other monopoly, is not only a damage and prejudice to thoſe who exerciſe the ſame trade, but alſo to all other ſubjects; for the end of theſe is for the private gain of the patentees. And there are three inſeparable incidents to every monopoly againſt the commonwealth, that is, the price of the ſame commodity will be raiſed; after the monopoly granted, the commodity is not ſo good and merchantable as it was before; and it tends to the impoveriſhment of divers artificers and others, who before, by the labour of their hands in their art or trade, had ſupported themſelves, but now will be idle and in beggary.

And it is evident by the act of 3d Edward IV. cap. 4. That the importation of foreign cards was prohibited, at the grievous complaint of the poor card makers, who were not able to live at their trades, if ſuch cards ſhould be imported; and the ſaid act provides remedy for maintaining of the trade of making cards, foraſmuch as it maintained many families by their labour and induſtry; and the like proviſion is made in 1ſt Rich. III. cap. 12. And perſons may not be reſtrained from exerciſing any trade, but by parliament. Now, when the wiſdom of the parliament has made a ſtatute to reſtrain, for the good of the public, the importation of foreign manufactures, to the intent that the ſubjects of the realm might be employed in making of the ſaid manufactures, and thereby maintain themſelves and their families; to grant the ſole importation of them to one for private gain, or to divers without limitation, notwithſtanding the ſaid ſtatute, is a monopoly againſt the common law: and therefore the diſpenſation or licence to have the ſole importation and merchandizing of cards, without any limitation, notwithſtanding the act 3d Edw. IV. is utterly againſt the law.

King Edward III by his letters-patent, granted to one John Peche the ſole importation of ſweet wines into London; and at a parliament held 50th Edw. III. this grant was declared void. And Queen Elizabeth having granted unto certain patentees, the ſole coinage and tranſportation of all the tin in Cornwall and Devonſhire, for 21 years, under a large yearly rent to be paid at the exchequer, it was adjudged that this patent was a monopoly, in the 39th year of King James I.

In an action, the plaintiff ſet forth, That in the reign of Henry IV. there was a ſociety of merchant adventurers in England, and Queen Elizabeth incorporated them by that name, with privilege to trade to Holland, Brabant, Flanders, &c. prohibiting all others not free of that company from trading thither; and that the defendant, not being free of that company, did trade there without their leave, and imported goods to their damage, &c. To which the defendant pleaded the ſtatute 15th Edw. III. That the ſeas ſhall be open to all merchants to paſs with their merchandiſe whither they pleaſe. The queſtion was here, whether the King had power to reſtrain his ſubjects from trading to particular places? This caſe was not determined; but the better opinion was, that ſuch a grant was void, it agreeing with Lord Coke's definition of a monopoly. It is againſt the ſtatute of Edward III. which gives liberty to merchants to buy and ſell without diſturbance; and it is expreſsly againſt the ſtatute 21ſt James I. The caſe of the Eaſt India company is not like this, becauſe that patent reſtrained the ſubject from trading with infidels, without leave; if it had been to reſtrain them from trading with Chriſtians, it had been void.

By the ſtatute 21ſt James I. cap. 3. it was enacted and ordained, That all monopolies, commiſſions, grants, letters-patent, and licences, for the ſole buying, ſelling, and making of goods and manufactures within the King's dominions; and all warrants, proclamations, and reſtraints, &c. for the erecting, ſtrengthening, or countenancing thereof, againſt the tenor of any law or ſtatute, ſhall be void; and perſons grieved by the putting them in uſe, ſhall recover in the courts at Weſtminſter treble damages and double coſts, by action on the ſtatute; and if any perſon ſhall cauſe ſuch action to be ſtayed or delayed before judgment, by any order, warrant, &c. except only of the court where it is depending; or ſhall, after judgment had, cauſe or procure the execution to be ſtayed, by colour or means of any ſuch order or warrant, power, or authority, ſave only by a writ of error or attaint, he or they ſo offending ſhall incur a *præmunire*.

But this act doth not extend to any grants allowed or confirmed by act of parliament; nor to any grant or charter to any corporation, company, or fellowſhip of any art, trade, or myſtery; nor to any company or ſociety of merchants for enlargement of trade; nor to grants of new manufactures, made to the inventors thereof by patent for fourteen years, being not contrary to law, or prejudicial to the commonwealth; nor to any grant of privilege for printing, or making or compounding of ſaltpetre for gun-powder, or for caſting or making ordnance, &c.; and certain patents granted to divers perſons, are excepted out of the ſtatute.

And letters-patent, and grants of privilege, formerly made for 21 years or under, to the inventors of any new manufactures, where they are not contrary to law, or miſchievous, by raiſing the prices of commodities at home, or hurt of trade, or generally inconvenient, are ſaved; ſo alſo ſuch patents granted heretofore for more than 21 years from the date thereof, notwithſtanding this act.

All matters relating to monopolies, grants, licences, &c. ſhall be examined, heard, and determined, by and according to the common laws of this realm, and not otherwiſe; and the making uſe of or procuring any unlawful monopoly, is puniſhable by fine and impriſonment at common law.

It is held, that a new invention to do as much work in a day, by an engine, as formerly uſed to employ many hands, is contrary to the ſtatute; by reaſon it is inconvenient, in turning ſo many men to idleneſs. And concerning inventors of new manufactures, &c. it hath been determined on this ſtatute, that the manufacture in ſuch caſe muſt be ſubſtantially new, and not barely an improvement of any old one, by any addition, &c. thereto, to be within the ſtatute. It muſt be ſuch as no other perſons uſed at the time of granting the letters-patent; and no old manufacture in uſe before can be prohibited in any grant for any new invention.

A grant of a monopoly may be to the firſt inventor, by the 21ſt James I.; and if the invention be new in England, a patent may be granted, though the thing was practiſed beyond ſea before; for the ſtatute mentions new inventions within the realm: ſo that if they be new here, it is within the act, which intended to encourage new devices uſeful to the kingdom; and it is the ſame thing, whether acquired by experience or travel abroad, and ſo brought hither, or by ſtudy at home.

A perſon had a grant by letters-patent from K. Cha. II.

for the ſole printing of blank writs and bonds, &c. for the term of 30 years; and one Darrel, a ſtationer, having printed 500 blank bonds, action of the caſe was thereupon brought againſt him; who pleaded, that the company of ſtationers, for the ſpace of 40 years then laſt paſt, before the granting of theſe letters-patent, had conſtantly printed blank bonds, and ſo made a general concluſion. It was here argued, that the King hath a prerogative in printing, and may grant it excluſive to others; and that ſuch grants have been made by the Kings of England ever ſince printing was invented; of which ſeveral inſtances were given. Now the ſtatute againſt monopolies doth not reach to this caſe, becauſe of the proviſo therein to exempt all grants of ſole printing; and there being an inherent prerogative in the King, in theſe caſes, whenever he exerts it, all other perſons are bound up who were at liberty before.

To this it was anſwered, and confeſſed, that the King hath a prerogative to grant the ſole printing to a particular perſon; but then it muſt be in ſuch caſes where no other perſons whatſoever can claim a property in it. On conſidering printing as an art excluſive from the thing printed, this patent is not good; for if a man invents a new art, and another learns it before the inventor can obtain a patent, if afterwards granted, it is void: and then, if this be conſidered in relation to the blank bonds printed, it is not a new invention, which might have made the grant good, becauſe the ſtationers company have printed ſuch ſo long a time; and for that reaſon this patent is void, for where the invention is not new, there trade ſhall not be reſtrained. And ſole printing is a manufacture; it is an art and ſkill which the King cannot reſtrain; but when it is of public concern, then the prerogative may interpoſe. 1

The court of King's Bench made a difference in this caſe between things of a public uſe, and thoſe which are public in their nature; and the court inclined that the patent was not good.

It is agreeable to the common law of England, and the fundamental laws of all nations, to grant projectors or inventors of uſeful things privileges for 21, 14, 11, or 7 years; and as to the time granted, the thing itſelf ought to make the difference, upon good conſideration, and ſo as not to meaſure all things alike. But the general intention of all grants by letters-patent for manufactures, hath or ought to have relation to ſet the people on work, to recompence the inventor of the art or ſcience, and that things may in ſome reſpect be better and cheaper to the ſubjects.

There may be letters patent granted to reward a projector, and the ſame be not any monopoly, although the public liberty may ſeem thereby to be reſtrained; and it may be rather a common diſtribution than reſtraint, whenever it brings a general good to the nation. The ſtatutes of the kingdom, reſtraining from exerciſing divers crafts all ſuch as have not ſerved an apprenticeſhip unto the art which they would exerciſe, do it to no other end, but that thoſe arts might be brought to better perfection, and the things be good and ſerviceable for thoſe that buy and uſe them.

'Theſe remarks concerning monopolies are extracted from a treatiſe on naval trade. However, monopolies in commerce are like rocks in the Danube and the Nicaragua, which obſtruct the courſe of the channels, and form thoſe cataracts which impede the navigation of two of the moſt ſpacious rivers in the univerſe; but a free and open trade may be compared to the Thames and the Elbe, whoſe waters flow in an eaſy, regular, uninterrupted motion, ſpreading their broad and beauteous boſoms as an invitation for all mankind to haſten to their arms, and enjoy thoſe benefits which nature ordained them to afford.

It is uſual in ſome countries, to grant an excluſive privilege to ſome perſons, that no other perſon, for a certain number of years, ſhall manufacture the commodities they are under an obligation to introduce and eſtabliſh: but before diſpenſing with indulgencies of this nature, the affair ought to be conſidered thoroughly; and when, for ſpecial reaſons, it is found abſolutely neceſſary, they are even then limited and guarded with the utmoſt care, leſt they be converted into monopolies, which are of great profit to the proprietor, but of the utmoſt prejudice to the public. Moreover, in diſpenſing of them, though it be with all poſſible precaution, it ought at leaſt to be attended with the following circumſtances, of its being a new fabric, and very difficult to be ſet on foot; that there will enſue an improvement to commerce, and conſiderable advantage to the public, as it happened in France, and lately in Spain, in order to revive and eſtabliſh glaſs-houſes.

Monopolies of any kind are alſo liable to great objections on account of the frauds that by this means may be committed, by importing and ſelling foreign goods free of all duties in cities and towns, to the prejudice of the king's revenue, and of the manufactures of the country, without any poſſibility of detecting thoſe frauds, even with the precaution that the goods ſhould bear the mark as proofs of being their own fabric; for both of them are often counterfeited, and eaſily miſtaken, as marks and ſeals are not known in many cities and towns very remote from the parts where they are manufactured.

In an *Eſſay on the cauſes of the decline of the foreign trade*, p. 41. the following reaſons are urged againſt the monopolies of trading companies.

Theſe companies prevent the increaſing the vent of our manufactures abroad, conſequently they ſtarve our poor, as will appear by the following reaſons.

1. By being all of them confined to London, the price of the woollens they export are enhanced by long land carriages up to town, with the additional charges of commiſſion, warehouſe-rent, porterage, &c. much to the prejudice of their ſale; and what materials of manufacture they import are diſperſed over many parts of the kingdom by the like expenſive conveyance, to the great diſadvantage of the nation in general.

2. The Turky company, whoſe trade is almoſt dwindled away, can prevent diſpatching their ſhips for one year, if they pleaſe, to raiſe the price of ſilk at home for their own advantage, though the nation thereby loſes a whole year's vent and conſumption of its woollen goods in Turky, which it is ſaid hath happened formerly; and if an iniquitous riſe is given to ſilk here, we cannot manufacture it with ſuch advantage as our neighbours. The reader will be pleaſed to conſider the fine ſituation of the poor employed in the woollen and ſilk manufactures muſt be in at ſuch a time.

3. It is not the intereſt of the Eaſt India company to increaſe the quantities of the woollens they export, but rather to contract them, which is ſuppoſed to be the reaſon for obliging them by their charter to-export woollens to a certain value; for at all markets where there are any demands for goods, the ſmallneſs of the quantities naturally enhances the price; and if the company can gain as much on 5000 cloths as on 10,000, is it not their intereſt to prefer the leſſer quantity on account of the leſs diſburſement and riſk? though it is plain the nation would loſe the ſale of one half of the manufactures capable of being vended; whereas private traders puſhing againſt one another, ſtudy to increaſe the vent of their goods by trading at moderate profits, making the quantities anſwer themſelves and their country.

4. The large charges the Eaſt India and South ſea companies are forced to be at for the ſalaries of the directors, governors, ſupercargoes, &c. beſides what may ſlip through their fingers ſometimes, muſt make theſe companies neglect all trades that will not yield extraordinary profits to defray them; which trades private merchants would be glad of, and turn to good account for themſelves and their country, were they not debarred by excluſive charters.

5. The Eaſt India and South ſea companies buying at home by directors, and ſelling abroad by ſervants, who may have an eye to their own or friends intereſt, and the foundation of all being the company's money, they cannot naturally be ſuppoſed to be ſo induſtrious as thoſe that trade only on their own ſtocks; therefore companies

ver extend trade like private dealers, but muſt decay here interlopers are admitted; of which our African mpany is a ſtrong inſtance.

What confirms the whole, is the prohibition of the aſt India company againſt their ſervants carrying out oth; which would be needleſs, did they not know that eir ſervants can underſell them, for the company wants t money to ſupply all the cloth that can be vended with e uſual profit. In the year 1741, a ſeizure was made one of the out-ports of a large quantity of cloth deigned for India, belonging to one of the company's ſerants; when at the ſame time, by the decay of our oollen trade, the poors rates were at 8 s. in the pound ſome of our clothing towns; from whence this bſurdity aroſe, that whilſt our clothiers were ſtarving, e exportation of cloth was a contraband trade.

t is impoſſible to make any inquiry into our companies, ithout taking notice of their paſt villanies, which, as hey have been made ſufficiently public, few can be ignoant of; therefore the bare mention of them is enough; uch as the fatal South ſea ſcheme, that ruined thouſands f families. What need to mention former directors reeiving ſalaries from companies, and, though contrary o law, being notwithſtanding concerned in the Oſtend rade to India, whereby they were cutting the throats of heir benefactors; the ſelling goods by falſe ſamples, and buying them for their private accounts; carrying on priate trade contrary to treaty, and bribing officers to wink t them with the company's money, and charged to acount by the genteel name of preſents, ſubjecting thereby he company's effects to ſeizures, and their country to perpetual jars? The rapaciouſneſs of governors abroad, who by engroſſing goods, nay even the neceſſaries of life, have oppreſſed the people by arbitrary prices, and drove away our trade! Supercargoes, cheating by falſe invoices! Captains, quitting or loſing ſhips, to defraud inſurers and bottomree lenders!

But the greateſt miſchief of all is, that the honeſty of the people hath been corrupted, by having preſented to their eyes roguery lightly puniſhed, if not triumphant.

Theſe companies prevent the increaſe of our navigation.

By their excluſive charters, debarring us from a free trade to 3-4th parts of the known world. The dominions of the Grand Signior in Europe, Aſia, and Africa, are confined to the Turky company. All South, and part of North America, from Vera Cruz to Carthagena, from Buenos Ayres round Cape Horn to California, that vaſt extent of coaſt, is the portion of the South ſea company. All the coaſts of Africa, and Aſia, from the Cape of Good Hope to Japan, are the lot of the Eaſt India company. And what a ſmall number of ports do they all trade to, and what a trifling navigation do they all maintain? There are a greater number of ſhip-tonnage employed in the trade to the free port of Leghorn only, than all theſe three companies employ in their monopolies to 3-4th parts of the world; like the fable of the dog in the manger, not eating themſelves, but preventing thoſe who would.

There is alſo another kind of monopoly, wherein freemen exclude by charter any of the ſame trade from ſettling in their towns; for is not this a monopoly againſt the reſt of the inhabitants? Cannot they impoſe extravagant prices for their goods on their cuſtomers, and do they not do it?

Where no journeymen but freemen can work in towns, have they not a monopoly for wages againſt their maſters? Do not both theſe caſes advance the firſt coſt of goods, to the prejudice of their ſale abroad, and account for foreigners reckoning our country ſo dear?

If a journeyman, not being a freeman, gets into work in a city or town-corporate, what an outcry is there not made of a foreigner's being come among them, to eat the bread out of their mouths? How! can a free-born Briton be reckoned a foreigner in any part of his own country? What an abſurdity is here! yet nevertheleſs true. Can one man eat the bread out of another's mouth, without being more induſtrious than he? Impoſſible! it muſt therefore be idleneſs and luxury they contend for, not bread.

This is one of the reaſons why foreigners flock to our plantations, inſtead of ſettling here, and by our decay of trade many of our own people go over to live there yearly; ſo that many going, and few coming to ſupply their places, a ſcarcity of people will hereafter enſue, to the great damage of the mother country.

Mr. Stanian, in his excellent account of Switzerland, p. 140, obſerves, That the tradeſmen citizens of Berne, are generally eſteemed to be proud and lazy; which qualities proceed chiefly from two privileges they enjoy; one is their right of being choſen into the government by virtue of their burgerſhip, which makes them proud; and the other is, that of hindering any but a citizen from exerciſing any trade within the cities, which makes them lazy. From whence two inconveniencies naturally flow; one, that the inhabitants pay very dear for their goods; and the other, that the workmen are bad; for where there is no great choice of artificers, one muſt be contented, not only with bad work, but to pay ſuch a price for it as they pleaſe to impoſe.

Laws to prevent the importation of cattle, butter, &c. from Ireland, give a monopoly to a few breeding counties to impoſe upon the reſt of the people high prices for cattle, &c. to the ruin of our manufactures, forces the labourer to live dear, and of courſe to raiſe his wages; is greatly prejudicial alſo to our navigation; for whatever enhances the expences of a ſhip, enhances its freight, and gives opportunity to foreigners to victual cheaper in Ireland than we can do at home.

By aboliſhing monopolies, is only meant all excluſive trades; not to prevent any from trading with a large joint ſtock who chuſe it, but that every one ſhould trade in the manner he found moſt beneficial; and by ſuch an abolition the following benefits may ariſe.

It will encreaſe trade,

By reſtoring our people to their natural rights, and allowing them to gain, by their induſtry, an honeſt livelihood, wherever they can find it.

By preventing any ſet of people from combining together to raiſe extravagant wages for labour, or prices for goods.

By furniſhing us with the cheapeſt neceſſaries, and at the cheapeſt freights, the market being open for all.

By taking away from our goods all their preſent fictitious value, whereby their cheapneſs muſt prodigiouſly increaſe their vent; eſpecially the woollens, whereby the price of wool will be raiſed, and its ſmuggling prevented.

By leſſening the French and Dutch woollen trades, in depriving their people of our wool to aſſort their goods.

By extending our commerce to three quarter parts of the globe, where it now languiſhes.

By ruining all foreign Eaſt India companies, who could not ſupport themſelves againſt our free traders.

By increaſing the number of buyers at home for our goods, conſequently raiſe their value; a company being but one buyer.

By increaſing the number of buyers abroad; private dealers trade at a leſs expence than companies, and puſhing againſt one another, muſt ſell for reaſonable profits, whereby a greater vent is given to our goods.

By giving us the herring fiſhery.

By increaſing our navigation vaſtly; for by the fiſhery, and by opening the Eaſt India and Turky trades, 20 ſhips would be employed where one is now.

MONSOON. A regular, or periodical wind, in the Eaſt Indies; blowing conſtantly the ſame way during ſix months of the year, and the contrary way the remaining ſix. See *Wind*.

In the Indian ocean, the winds are partly general, and blow all the year round the ſame way, as in the Ethiopic ocean; and partly periodical, blowing half the year one way, and the other half near on the oppoſite points; which points and times of ſhifting differ in different parts of this ocean, the latter of theſe being properly the monſoons; ſo that theſe are a ſpecies of what is otherwiſe called *trade-winds*. See *Wind*.

They take the denomination *monſoon* from an ancient pilot who firſt croſſed the Indian ſea by means hereof; though

though others derive the name from a Portugueſe word ſignifying motion, or change of wind and ſea.

Lucretius and Apollonius make mention of annual winds which ariſe every year, *eteſia flabra*, which ſeem to be the ſame with what in the Eaſt Indies we now call *monſoons*.

MONTAUBAN. A city of France, ſituated in 1 deg. 5 min. of E. lon. and 44 deg. of N. lat. See *France*.

MONTET, or *Monteſſ*. A large ſcolloped baſon to waſh and cool glaſſes in.

MONTHLY *Book*. See *Book*-keeping.

MONTICHICOURS. A cotton and ſilk ſtuff manufactured in the Eaſt Indies, the piece being 5 ells long, and 2-3ds broad.

MONTPELIER. A city of France. See *France*.

MONTSERAT. One of the ſmalleſt of the Caribbee iſlands, ſituated in 62 deg. of W. lon. and 17 deg. of N. lat. See *Britiſh* America.

MOORING, at ſea, is the laying out of anchors, in a proper place, for the ſecure riding of a ſhip. See *Anchor*.

To *moor acroſs*, is to lay out one of the anchors on one ſide.

To *moor along*, is to have an anchor in a river, and a hawſer on ſhore.

To *moor quarter-ſhot*, is to moor quartering, between the two firſt ways.

Mooring for eaſt, weſt, &c. is when they obſerve which way, and on what point of the compaſs the wind or ſea is moſt likely to endanger the ſhip, and there lay out an anchor.

MOORS. A general name for the inhabitants of Morocco, Barbary, and for the natives of ſeveral other countries profeſſing the Mahometan religion.

MORAVA. A river of European Turky, riſing in the mountain of Rhodope or Argentum; and running north through Servia by Niſſa, falls into the Danube at Semendria, to the eaſtward of Belgrade.

MORAW. A river that riſes in the north of Moravia; and running ſouth through that province by Olmutz, afterwards divides Auſtria from Hungary, and falls into the river Danube to the weſtward of Preſburg.

MORFIL, or *Marfil*, is a term for elephants teeth before they have received a faſhion from art; for when cut, and worked, they are called *ivory*.

MORISQ. A money of accompt uſed at Algiers; being of two ſorts, ſimple, and double; the ſimple computed at about $5\frac{1}{2}$ d. ſterling; and the double at 7 d. ſterling.

MORLAIX. A port town of France in the province of Bretagne, ſituated on a bay of the Engliſh channel, in 4 deg. of W. lon. and 48 deg. 37 min. of N. lat.

MOROCCO. The empire of Morocco lies between 28 and 36 deg. of N. lat. and between 2 and 11 deg. of W. lon. bounded by the ſtraits of Gibraltar and the Mediterranean, on the north; by the river Mulvia, which ſeparates it from Algiers, on the eaſt; by Biledulgerid on the ſouth; and by the Atlantic ocean on the weſt; being upwards of 500 miles in length from the N. E. to the S. E. and about 480 miles in breadth: Some extend this empire as far ſouth as the river Niger, making it upwards of 1200 miles from N. to S.; but all that tract of land, from the province of Suz to Nigritia, being only a barren deſart, inhabited by Arabs, who wander from place to place, and are under no manner of government, is very improperly comprehended in the empire of Morocco.

The chief rivers are the Suz, which runs from E. to W. and falls into the Atlantic at the city of Santa Cruz: the Rabatta, which runs from E. to W. and falls into the ocean at the piratical town of Sallee: the Seba, at the mouth of which lies the piratical town of Mamora: the Lecus, on which ſtands the port-town of Larach; and the Mulvia, which runs from S. to N. divides Morocco from Algiers, and diſcharges itſelf into the Mediterranean. But none of theſe rivers are navigable for ſhips, except the Mulvia, and the mouth of that is almoſt choaked up with ſand; nor will the ports at their mouths admit of large veſſels. Arzilla, to the north of Larach, is another conſiderable port-town; and the Portugueſe are yet in poſſeſſion of Maſignan on the ſame coaſt, to the ſouth. There are alſo the bays of Tangier and Tetuan in the Mediterranean, where ſhips may ride during ſome winds, but ... very unſafe in others; and the Spaniards are yet in po... ſeſſion of Ceuta over againſt Gibraltar, as alſo of Pe... de Veloz, further to the eaſtward; but there is no ... harbour at any of theſe places.

The empire of Morocco is divided into the three gr... provinces or kingdoms of Fez, Morocco, and Suz.

1. The metropolis of Fez bears its name; being ſituated ... 6 deg. of W. lon. and 33 deg. 30 min. of N. lat. ... miles ſouth of Gibraltar; and is rather two cities join... the one called the Old, and the other the New Fe... Mequinez, the preſent reſidence of the Emperor of M... rocco, is ſituated in a delightful plain, 60 miles S. W. ... Fez, and 2 to the E. of Sallee, on the ſame river th... Sallee ſtands, and is ſaid to contain 300,000 ſou... Moors, Negroes, and Jews; which laſt tranſact all mo... ney-affairs, and all foreign trade: beſides, ſeveral Chri... ſtian ſlaves get money here, and are allowed a proper... in it; in which reſpect their condition is preferable ... that of the Moors themſelves.

The town of Tetuan is ſituated on the aſcent of ... rock, about 8 miles from a bay of the Mediterranean ... being between 20 and 30 miles S. of Ceuta, and abou... 60 S. E. of Tangier. It contains about 30,000 in... habitants; of which 5000 at leaſt are Jews, who ar... ſaid to be very poor, though all the trade of the plac... paſſes through their hands; for they are the only broke... between Chriſtians and Moors.

Tangier is ſituated on a bay of the ſea near Cape Spar... tel, juſt at the entrance of the ſtrait of Gibraltar. It w... taken from the Moors by the Portugueſe, and transferr... by them to Charles II. King of England, on his marria... with the Princeſs Catharine. When the Engliſh had ... there was a mole built for the ſecurity of ſhipping, th... heads whereof run out 300 fathom into the ſea, and were ... defended by three batteries of cannon: but theſe, upo... the parliament's refuſing to let the King have money t... maintain the garriſon, were demoliſhed by the Engliſh ... when they abandoned the place in 1683, which is now ... not very ſtrong, and has ſcarce any trade.

Sallee is ſituated in 7 deg. of W. lon. and 34 deg. of N. ... lat. on the Atlantic, 150 miles ſouth of Gibraltar; hav... ing generally a ſmall body of pirates, who make prizes o... ſuch Chriſtian ſhips as come in their way.

2. The chief town of the kingdom of Morocco, is Mo... rocco; a large old city, ſituated in a fine plain about the ... center of the kingdom, in 9 deg. of W. lon. and 32 deg. ... of N. lat.; but ſince the ſeat of the empire has been re... moved from hence, the town is extremely declined: and ... the reſt of the towns in this province are no better than ... villages.

3. The chief towns of the province of Suz, in which is ... comprehended Taffilet, are Taradant, and Taffilet; the ... former the capital of Suz, and the latter of Taffilet: but ... the reſt of the towns in this diſtrict are noted for no con... ſiderable trade; except Santa Cruz, which is a ſea-port. ... The Engliſh, Dutch, and French conſuls reſide at Sal... lee; as alſo Chriſtian merchants and Jews, who come ... from Europe for the commerce of this empire; and they ... have their warehouſes in this town.

The three nations which have conſuls at Sallee, have ... often attempted to keep ſome at Morocco, or in the ... kingdom of Suz, but it was never allowed of; and they ... were obliged to content themſelves with conſuls at ... Sallee, or Tetuan.

The ſoil produces great quantities of corn, wine, and ... oil. No country affords better wheat, barley, or rice; ... both the French and Spaniards fetching theſe from the ... Barbary coaſt, when they have ſcarcity at home. The ... Engliſh garriſons of Gibraltar and Port Mahon are alſo ... frequently ſupplied with proviſions from the African coaſt; ... though the natives of Morocco make ſome ſcruple of ... ſending corn out of their own country, as it is prohi... bited by their law.

The plains of Fez and Morocco are well planted with ... olives, and there are no better grapes for making wine in ... the world; though, as wine is prohibited Mahometans, ... the cultivation of vines is not encouraged. They have ... alſo dates, figs, raiſins, almonds, apples, pears, cherries, plums,

plums, citrons, lemons, oranges, pomegranates, with plenty of roots and herbs, beſides excellent hemp and flax. They have alſo ſome mines of very fine copper; but they have little timber.

They have no ſhipping to carry on a trade by ſea, but the Europeans bring them whatever they want from abroad; particularly linen and woollen cloth, ſtuffs, iron wrought and unwrought, brimſtone, arms, gunpowder, and lead: for which Europeans take in return copper, wax, hides, Morocco leather, fine wool, gums, honey, ſoap, elephants teeth, oſtrich feathers, dates, almonds, and other fruits; as alſo barbs, the fleeteſt horſes in the world.

The duties of importation and exportation are 10 *per cent.* except for ſilver, which pays but 2. The duties of conſulſhip are alſo 2 *per cent.* A barrel of gunpowder is alſo paid for entrance, 12 ounces for loading and anchorage, and 12 to the government; though veſſels trading to and from Gibraltar pay but half this duty for loading and diſcharging.

European merchandiſes are firſt laid up in the warehouſes Chriſtians have at Sallee, or in other maritime towns, being afterwards ſold to the Moors and Jews; the former of which ſend them to their factors up the country.

Their trade by land is either with Arabia or Negroland. They ſend caravans to Mecca twice every year, conſiſting of ſeveral thouſand camels, horſes, and mules, partly for traffic, and partly upon a religious account; carrying with them woollen manufactures, Morocco ſkins, indigo, cochineal, and oſtrich feathers; and bringing back from thence ſilks, muſlins, and drugs. By their caravans to Negroland, they ſend ſalt, ſilk, and woollen manufactures; bringing back gold, ivory, and negroes. Theſe caravans go ſtrong enough to defend themſelves againſt the wild Arabs of the deſarts; though, notwithſtanding all their vigilance, ſome of the ſtragglers and baggage often fall into their hands. They are alſo obliged to load one half of their camels with water, to prevent periſhing with drought and thirſt over theſe extenſive deſarts.

Their navy conſiſts of only 3 or 4 ſhips, from 16 to 20 ſmall guns, with a few row-boats; and it is a great happineſs to Europeans that there is not one tolerable harbour in all the dominions of Morocco. However, with this little force, they iſſue out from Sallee and Mamora, and make prizes of great numbers of Chriſtian merchant ſhips, carrying their miſerable crews into captivity.

The manner of trading between the Arabs and the Negroes of Tombut is too ſingular and curious to be omitted.

When the caffila or caravan arrives in the place of exchange, the commanding alcair, or the King himſelf if there, deputes perſons to receive it with a great deal of ceremony, and joins always with his deputies ſome Arab or other eſtabliſhed among the Negroes, to take down the names of the ſalt merchants, or the other commodities; and to obſerve to them, that the trade is to be conducted without ſpeaking to each other, in order to avoid quarrels and diſorder; which is more religiouſly obſerved than can be expreſſed.

This commerce is always carried on by exchange, and only twice a day, that is, in the morning and evening, upon account of the too great heat of the ſun; and care is taken that the firſt comers of both nations ſhould be alſo thoſe who are firſt to diſpoſe of their merchandiſe.

For this traffic ruſh mats are extended on the ground, where each Arab ſucceſſively lays down his ſalt in different heaps of different meaſures, retiring after he has done ſo. Immediately after a Negro comes; and having conſidered ſuch heaps of ſalt as ſuit him, he places by their ſide as much gold-duſt as he thinks proper to give in exchange.

If the Arab, who returns when the Negro is gone, is ſatisfied with what is offered him, he puts a handful of ſalt near the gold, which is a ſign that he accedes to the bargain; otherwiſe the Negro adds to the gold.

When the exchange is concluded, the alcair's guards come to meaſure the ſalt, and weigh the gold; taking for his duty, or that of the King, the twelfth part of the ſalt, and an ounce for each pound of gold.

What is obſerved in the exchange of ſalt and gold, is in proportion for the other merchandiſes.

The exchanges finiſhed, which continue for ſome time, the caſilla proceeds on its journey; and the Arabs, when returned, ſell their gold, and other commodities, to ſuch Mooriſh or Jewiſh merchants as are eſtabliſhed among them, or rather make a ſecond exchange for ſuch European merchandiſes as ſuit them.

This trade to Tombut brings a great deal of gold into the territories of the King of Morocco, where it is very common; and would be more ſo, if a great quantity of it was not loſt in the ground, where the Arabs hide it, either for defrauding the King in his duties, or for uſing it according to occaſion.

Such Europeans as are willing to trade for gold-duſt ſhould be very intelligent in the matter, as the Jews and Moors often mix with it the filings of braſs. So the grand maxims for Chriſtian traders to Sallee ſhould be, to diſtruſt the Mooriſh and Jewiſh merchants as cheats by profeſſion, and moſt expert in this art. The Moors, it is true, are more to be depended upon than the Jews, though not altogether exempt from the ſuſpicion of infidelity in trade.

The Emperor has 40,000 Negroes in his army, to keep all his ſubjects in the utmoſt awe, who are of a browniſh complexion. He has a tenth of all corn, cattle, fruits, and produce of the ſoil, as well as of the captives and prizes; ſo that his annual revenue is ſuppoſed to amount to 190,000 l. ſterling.

Barbary and Morocco were formerly remarkable for trade; but it was deſtroyed when the Romans conquered Carthage. However, it revived again under the Roman and Grecian emperors; but the Vandals afterwards proved as fatal to it as the Romans under Scipio. The Moors diſpoſſeſſed the Vandals, and ſtill keep poſſeſſion of this part of Africa; where the arbitrary power of the prince, and the indolence of the people, are incompatible with the nature of trade: ſo that this fine country is of little ſervice to mankind.

MOROCCO, or *Marroquin*. The ſkin of a goat, or ſome other animal reſembling it, called menon, common in the Levant, dreſſed in ſumac or galls, and coloured of any colour at pleaſure; much uſed in tapeſtry, bookbinding, and other things.

The name is ordinarily derived from the kingdom of Morocco; whence it is ſuppoſed the manner of preparing them was firſt borrowed.

There are Morocco ſkins brought from the Levant, Barbary, Morocco, Spain, Flanders, and France, of red, black, yellow, blue, and other colours.

MOROEDJE. A ſilver coin current in Perſia, particularly at Iſpahan, 7 of which make the Engliſh crown.

MORSE. See Sea-*Horſe*.

MORTAR, in architecture, a compoſition of lime, ſand, and hair, mixed up with water; ſerving as a cement to bind the ſtones, and other parts of a building.

MORTAR-PIECE. A ſhort piece of ordnance, thick and wide, proper for throwing bombs, carcaſſes, ſhells, and ſtones.

MORTICAL. A ſilver coin ſtruck at Fez, worth 1 s. 9 d. ſterling.

MOSAIC *work*, otherwiſe called *Muſaic*, is an aſſemblage of little pieces of glaſs, marble, ſhells, precious ſtones, wood, or the like, of various colours, cut ſquare, and cemented on a ground of ſtucco, &c. imitating the natural colours and degradations of painting; in which ſenſe moſaic work includes marquetry, or inlaid work, vaneering, &c.

But, in its more proper and reſtrained ſenſe, moſaic only takes in works of ſtone, metals, and glaſs; thoſe of wood being diſtinguiſhed by the name of *marquetry* or *inlaying*.

MOSAIC *Gold*. See Moſaic *Gold*.

MOSAMBIQUE. The capital of the province of Moſambique in Africa, ſituated on an iſland at the mouth of the river Moſambique, which forms a commodious har-

bour; being in 40 deg. of E. lon. and 15 deg. of S. lat. ſubject to Portugal. See *Zanguebar*.

MOSCOSQ. A ſmall coin current in Ruſſia; 2 of which make the copeac, and 100 copeacs the ruble, or 4s. 6d. ſterling.

Moscosq is alſo a money of accompt; books being kept at Archangel in rubles, grievnas, and moſcoſqs.

MOSCOVY *empire*. See *Ruſſia*.

MOSCOW, the capital of Ruſſia before the foundation of Peterſburg, is ſituated in 38 deg. of E. lon. and 55 deg. 45 min. of N. lat. See *Ruſſia*.

MOSCOWA *river*, riſes in the weſt of the province of Moſcow, runs eaſt through that province, paſſes by the city of Moſcow, and falls into the river Ocka at Kolomna.

MOSECK. See *Arabia*.

MOSELLE. A river of Germany, riſing in the mountains of Vauge in Lorrain, runs north through that duchy, paſſing by Toul, Metz, and Thionville, to Triers; and then running north-eaſt through the electorate of Triers, falls into the Rhine at Coblentz.

MOSKITO *country*, is ſituated in North America, between 85 and 88 deg. of W. lon. and between 13 and 15 deg. of N. lat. being inhabited by people who are accounted enemies to the Spaniards, and great friends to the Engliſh. See *Spaniſh* and *Indian* America.

MOSS, *Muſcus*, in natural hiſtory, a little plant of the paraſite kind, growing on the barks of ſeveral trees, as oak, poplar, aſh, cedar, and others, as well as on the ground.

The moſt eſteemed and odoriferous moſs is that of the cedar; being of ſome medicinal uſe as an aſtringent, and proper to ſtop hæmorrhages and dyſenteries.

Moſs makes an article of commerce, ſeveral kinds thereof being uſed in medicine, perfuming, &c. among others the ſea-moſs, called coralline, and the moſs of cedar and fir, which enter the compoſition of cyprus powder.

The moſs of common trees, as oak, aſh, poplar, &c. is uſed for caulking of veſſels; as alſo by birdſellers, to prepare cages for certain kinds of birds to hatch in.

MOTYR. One of the Molucca iſlands, ſituated in 125 deg. of E. lon. and 30 min. of N. lat. See *Molucca* iſlands.

MOVEABLES, or *Moveable goods*, by civilians called *bona mobilia*, are thoſe whch are capable of being removed from one place to another; or which may be concealed or perverted, as not being fixed to the ground.

In England, there are two kinds of effects, moveable and immoveable. The moveable are ready money, merchandiſe, bonds, book-debts, cattle, and houſhold furniture, not faſtened either with iron or nail, nor ſealed in the plaiſter, but which may be tranſported without either fraction or deterioration. See *Chattel*.

MOUNT-BAY, is a harbour on the Engliſh channel, 18 miles weſt of Falmouth in Cornwall.

MOURIS. A cotton cloth brought from the Eaſt Indies, of ſeveral ſorts; as fine, coarſe, broad, narrow, white, and red; the pieces being 12 ells in length, and of different breadths; the broad fine having 1 ell 3 4ths, the narrow fine 1 ell 1 4th, the coarſe white 1 ell 3-4ths, and the red 1 ell 5-8ths.

MOUTA, is a term in the Eaſt Indies for one of the kinds of raw ſilk brought from Bengal.

MOUTASSEN. A ſort of cotton brought from Smyrna, worth 3l. ſterling the quintal.

MOUWER. A corn-meaſure uſed at Utrecht; 6 muids make 5 mouwers, and 25 the laſt, or about $10\frac{1}{4}$ quarters of London meaſure.

MOXA. A ſort of cotton, or downy ſubſtance, brought from China, and by ſome ſaid to grow on the lower part of the mugwort leaf.

It is not known in Europe for any medicinal efficacy, however celebrated in the Indies for curing the gout, by being burnt upon the part, Europeans not having faith enough to try it this way; and ſome think if they had, in all likelihood, any other cauſtic would do as well; though Sir William Temple has wrote in its praiſe.

MUDE. A ſort of Chineſe ſtuff, made of the bark of trees.

MUER. A river of Germany, which riſes in Bavaria; and running eaſt through the duchy of Stiria, by Muer and Gratz, unites with the river Drave at Legrad, near Kaniſha in Hungary.

MUID. A dry meaſure, uſed in France, or rather an eſtimation of ſeveral other meaſures; ſuch as the ſeptier, the mine, the minot, and the buſhel.

The muid of Paris is compoſed of 12 ſeptiers, each ſeptier making 2 mines, the mine 2 minots, the minot 3 buſhels, the buſhel 3-4ths, or 16 citrons, each citron being of 36 cubic inches.

The muid of Rouen contains alſo 12 ſeptiers, but make 14 of Paris, and weighs 3360 lb. avoirdupois weight.

The muid of Orleans weighs 600 lb. and that of Berry of 21 buſhels; of which there are 16 to the ſeptier.

But the muid of oats is double of that of wheat, though like it compoſed of 12 ſeptiers, each ſeptier of oats being 24 buſhels.

MUID is alſo one of the 9 caſks, or regular veſſels uſed in France for wine and other liquors, containing 36 ſeptiers, each ſeptier compoſed of 8 pints; ſo that the muid is 288 pints. One muid and a half make the queue of Orleans, Blois, Nuys, Dijon, or Macon, and one piece of Anjou, which is equal to the queue.

MUID, or *Mudd*, is alſo a Dutch meaſure for grain; ſcheppels being 1 ſack, 4 ſcheppels 1 muid, and 36 ſacks or 27 muids 1 laſt, weighing 4000 lb. avoirdupois, or about $10\frac{1}{4}$ quarters of London meaſure.

MUKEN. A corn-meaſure uſed at Antwerp; 4 of which make the viertel, and $17\frac{1}{2}$ viertels the laſt.

MUKHTESIB. A Perſian officer who has inſpection of the markets, and regulates the price of proviſions and other commodities brought into the bazars. He examines alſo the weights and meaſures, and puniſhes thoſe who uſe falſe ones.

MUL. A ſort of plain and fine muſlin, brought by the Engliſh from the Eaſt Indies; being 16 ells in length and 3-4ths in breadth.

MUL *of Cantire*. The ſouth cape or promontory of the county of Cantire, or Mul, in the frith of Clyde, on the weſt of Scotland.

MUL *of Galloway*. The ſouth cape or promontory of all Scotland, in the county of Galloway, on the Iriſh ſea.

MULATTO. A name given in the Weſt Indies to thoſe who are begotten by a Negro man on an Indian woman, or an Indian man on a Negro woman.

Thoſe begotten of a Spaniſh woman and an Indian man are called *metis*, and thoſe begotten of a Negro by a meſtis are called *jambos*; but all theſe are very different in colour, and in their hair.

MULDAW. A river of Bohemia, riſing on the confines of Auſtria; and running north through Bohemia, visiting Budeweis and Prague, uniting with the Elbe and Moldnick.

MULDER. See *Malder*.

MULMUL. See *Mallemolle*.

MULVIA. A river of Barbary; which riſing in the mountains of Atlas, runs north, dividing the empire of Morocco from the kingdom of Algiers, falling into the Mediterranean weſt of Marſalquiver.

MUM. A wholeſome kind of malt liquor, chiefly prepared in Germany; the proceſs of making which, as recorded in the town houſe of Brunſwick, the place of most note for this liquor, is as follows.

Take 63 gallons of water that has been boiled to the conſumption of a third; brew it with ſeven buſhels of wheaten malt, one buſhel of oat malt, and one buſhel of ground beans; when it is tunned, let not the hogſhead be too full at firſt; and as ſoon as it begins to work, put into it of the inner rind of fir three pounds, tops of fir of birch one pound, carduus benedictus three handfuls, flower of roſa ſolis one handful or two; burnet, betony, marjoram, avens, pennyroyal, wild thyme, of each a handful and a half; of elder flowers two handfuls and more, ſeeds of cardamum bruiſed thirty ounces, and of berries bruiſed one ounce: put the herbs and ſeeds into the veſſel when the liquor has wrought a while; and after they are added, let the liquor work over the veſſel as little as may be, then fill it up: at laſt, when it is ſto

put into the hogſhead ten new laid eggs unbroken or cracked; ſtop it up cloſe, and drink it at two years end.

Engliſh brewers uſe cardamum, ginger, and ſaſſafras, inſtead of the inner rind of fir; and add walnut rinds, madder, red ſanders, and elecampane. See *Beer*.

MUMMY. A carcaſs, or body embalmed or dried in the manner of the antient Egyptians.

Properly ſpeaking, mummy is not the fleſh of the deceaſed, but the compoſition wherewith it is embalmed; though moſt commonly mummy is alſo uſed for the body.

The preparation of mummy is of ſo old a ſtanding, that it was in uſe in Egypt before the time of Moſes. The coffin where the mummy is contained is of ſycamore wood, which is found to keep ſound for the ſpace of 3000 years; but it is very different from European ſycamore.

Mummy is ſaid to have been firſt brought into uſe in medicine by the malice of a Jewiſh phyſician, who wrote, that fleſh thus embalmed was good for the cure of divers diſeaſes, and particularly bruiſes, to prevent the blood's gathering and coagulating; but the Turks prevent the exportation of mummy into Europe as much as poſſible.

There are two kinds of bodies denominated mummies: the firſt are only carcaſſes, dried by the heat of the ſun, and by that means kept from putrefaction, frequently found in the dry ſands of Lybia.—Some ſay they are the bodies of deceaſed people buried there on purpoſe to keep them entire without embalming; others, that they are carcaſſes of travellers, overwhelmed with clouds of ſand raiſed by the hurricanes frequent in thoſe deſarts. Be that as it will, theſe mummies are of no uſe in medicine, and are only preſerved as curioſities.

The ſecond kind of mummies, are bodies taken out of the pits or catacombs near Cairo, wherein the Egyptians depoſited their dead after embalming. Theſe make the mummy ſo much valued, and to which ſuch extraordinary virtues are aſcribed.

It is ſaid that all the mummy ſold in the ſhops, whether brought from Venice or Lyons, or even directly from the Levant, is fictitious, and the work of certain Jews; who, knowing the value Europeans ſet on the Egyptian mummy, counterfeit it by drying carcaſſes in ovens, after having prepared them with powder of myrrh, Caballin aloes, Jewiſh pitch, black pitch, and other coarſe or unwholſome drugs.

The French Charlatans, it ſeems, have likewiſe got the art of preparing mummies; and their method is ſimple enough. Out of the carcaſs of a perſon hanged they take the brain and entrails, dry the reſt in an oven, ſteeping it in pitch and other drugs; and this they ſell for right Egyptian mummy.

Paræus has a very curious treatiſe of mummies, wherein he ſhews the abuſes thereof, and makes it appear that they can never be of any real medicinal uſe.

Matthiolus is of the ſame opinion, after Serapion: but both theſe authors take even the Egyptian mummies to be no more than bodies embalmed with piſſaſphaltum.

Mummy is more particularly uſed for the liquor or juice oozing from human bodies aromatized and embalmed, gathered in the ſepulchres; which is the mummy chiefly ſpoke of among the antient writers.

MUMMY alſo denotes a medicinal drug, or a viſcous compoſition, partaking of bitumen and pitch, found in the mountains and foreſts of Arabia, and other hot countries of the Eaſt, much uſed in embalming of dead bodies.

Dioſcorides ſpeaks of mummy found on the ſea-coaſt near Epidaurus, brought thither by the torrents from the Ceraunian mountains, and there dried by the ſun into great heaps. It ſmells like bitumen mixed with pitch; the people thereabouts calling it mineral wax; in Latin, or rather Greek, *piſſaſphaltum*. See *Piſſaſphaltum*.

MUN-CORN. See *Maſlin*.

MUNDICK. A ſort of marcaſite, or mineral glebe, found in the tin mines, ſometimes white, yellow, or green, but generally of a dark brown colour.

It is frequently called *maxy*, and appears to be nothing elſe but a kind of ſulphur; fire alone being found to ſeparate it from the tin, in which caſe it evaporates into ſmoke. See *Tin*.

The mundick ore is eaſily diſtinguiſhed by its brown ſad-coloured glittering, and by its diſcolouring the fingers. Some ſay it feeds the tin; and yet allow, that where there is much mundick there is little or no tin.

Tinners ſeparate it with great care from the tin, becauſe it makes it thick and curdy; but of late it has been tried, and wrought ſingly, being found to turn to very good advantage by affording copper.

The ſteams of mundick are very troubleſome to miners; yet it is found a good vulnerary; and miners uſe no other remedy for wounds but waſhing them in water that runs from the mundick ore.

MUNICH, is the capital of the electorate and duchy of Bavaria, ſituated in 11 deg. 32 min. of E. lon. and 48 deg. 5 min. of N. lat. See *Germany*.

MUNITION, or *Ammunition*. The proviſions wherewith a veſſel is ſtocked for a voyage, or that follow a camp for its ſubſiſtence. See *Ammunition*.

MURAGE, in the Engliſh cuſtoms, a reaſonable toll to be taken of every cart or horſe coming laden into a city or town, for the building or repairing the walls thereof.

MURAIS, or *Morais*. A meaſure uſed at Goa, and other Portugueſe colonies of the Eaſt Indies, for meaſuring rice and other dry pulſe; the muray containing 25 paras, and the para 22 pounds.

MURON. A fiſh found in the Black ſea, eſpecially about the mouth of the Danube, where a great fiſhery is carried on by the Turks of Kilia, who make a kind of caviac of this fiſh.

MUSCADINE. See *Wine*.

MUSICIAN. A perſon who obtains a livelihood by his ſkill in playing on ſome inſtrument of muſic.

MUSICIANS *company of London* was incorporated by letters-patent of the 2d of James I. dated the 8th of July 1604, by the title of The maſter, wardens, and commonalty of the art or ſcience of the muſicians of London; who are governed by a maſter, 2 wardens, and 20 aſſiſtants, with a livery of 31 members, whoſe fine of admiſſion is 40 s. but having no hall, they occaſionally meet elſewhere to ſettle their affairs.

MUSK. A kind of perfume, of a very ſtrong ſcent, brought from the Eaſt Indies, agreeable only when moderated by the mixture of ſome other perfume; being found in a kind of bag, or tumour, growing about the bigneſs of a hen's egg under the belly, towards the genital parts of a wild animal, called the *muſk-cat*; and appears to be nothing elſe than a kind of bilious blood congealed there, and almoſt corrupted.

This animal is pretty common in the kingdoms of Boutan, Tunquin, Cochinchina, and ſome other places; but the moſt eſteemed are thoſe in the kingdom of Thibet. They inhabit the woods and foreſts, where the natives hunt them down. When the beaſt is killed, they cut out the bladder under the belly, and ſeparate the coagulated blood, and dry it in the ſun; where it is reduced into a light friable ſubſtance, almoſt of the nature of a powder, of a duſky reddiſh colour, and acquires a very ſtrong and diſagreeable ſmell. It is then tied up again in bladders, and exported to other countries, which is the muſk introduced among Europeans.

What the antients have wrote of it is fabulous, as that it comes from the teſticles of a caſtor, which, to ſtop the purſuit of the hunter, caſtrates itſelf. The occaſion of their error may be owing to this, that among the Indians the muſk animal goes by the name of caſtor. See *Caſtoreum*.

Muſk is in conſiderable uſe among perfumers and confectioners, though much leſs now than formerly. It is ſuppoſed to fortify the heart and brain, and is good againſt deafneſs; but is little uſed in medicine, being apt to occaſion vapours.

Muſk ſold at Amſterdam is uſually from Tunquin, Bengal, and ſometimes from Muſcovy. That of Tunquin is of two kinds, in bladders, or out of bladders, both ſold by the ounce; that in bladders for about 9 s. ſterling the ounce, and out of bladders for about 14 s. ſterling.

Muſk of Bengal is ſold for about 8 s. the ounce, and all equally give 1 *per cent.* deduction for prompt payment.

As to Muſcovy muſk, it is leſs eſteemed than the other kinds; its odour, though at firſt very ſtrong, eaſily evaporating; and its price is about 3 s. the ounce.

MUSKET, or *Muſquet*. A fire-arm borne on the ſhoulder, and uſed in war, to be fired by the application of a lighted match.

The length of the muſket is fixed to 3 feet 8 inches from the muzzle to the touch-pan; and its bore is to be ſuch as may receive a ball of 16 in a pound.

Muſkets were antiently borne in the field by the infantry; at preſent they are little uſed, ſave in the defence of places, fuſees or fire-locks having taken their place. See *Arms*.

MUSKETOON. A muſket ſhorter, though thicker, than the ordinary muſket. It is fired by the colliſion of a ſteel and flint in the lock, whereas the muſket is fired by a match. Its bore is a thirty-eighth part of its length, and carries five ounces of iron, or ſeven and a half of lead, with an equal quantity of powder.

MUSKOFSKE. A ſmall ſilver Muſcovite coin, two of which are about a farthing ſterling. They are ſo ſmall, and hard to be handled, that the Ruſſians thruſt whole handfuls of them into their mouths, leſt they ſhould ſlip from their hands; yet without any impediment to their ſpeech.

MUSLIN. A fine ſort of cotton cloth, brought from the Eaſt Indies; which, with callicoes, makes the two general names of this branch of the Indian commerce. But there are ſeveral names for muſlins, as cogmoria, tans, bans, coſſas, muls, moſs, ſeer-coſſas, dom-coſſas, bords coſſas, torps-coſſas, tangs, and others. See *Callicoes*, and *Linen*.

By the ſtatute of the 11th and 12rh of William III. muſlins, landed or put out of any ſhip before entry, or without a warrant, are to be forfeited, or their value.

MUSSELBOROUGH. A port-town of Scotland, in the ſhire of Lothian, ſituated on the frith of Forth, in 2 deg. 45 min. of W. lon. and 56 deg. of N. lat.

MUST. Sweet wine, newly preſſed from the grape, or the new liquor preſſed from the fruit before it has worked or fermented. See *Wine*.

MUSTACHIO. A Venetian liquid meaſure, 76 of which make the amphora, or 16 quarts.

MUSTAGAN. A port-town of Barbary in the kingdom of Algiers, ſituated under the meridian of London.

MUSTARD. A preparation of a ſeed of that name, ground or beaten up with vinegar, or the muſt of wine, whence it is denominated.

MUSTARD *ſeed*. A warm biting ſeed, which gives the denomination to a ſpecies of topical medicines called *ſinapiſms*; and it is alſo uſed in preparing ſhagreen. See *Shagreen*.

MUSTIC. A liquid meaſure, uſed by retailers at Amſterdam; where the mingle is divided into 2 pints, 4 half pints, and 8 muſtics. See *Mingle*.

MUXADAVAT. The capital of the kingdom of Bengal, where the Engliſh have the factory of Caſſimbuzar, ſubordinate to Fort William. See *India*.

MUXARA. A port-town of Spain, in the province of Granada, ſituated on the Mediterranean in 1 deg. 50 min. of W. lon. and 37 deg. 6 min. of N. lat.

MYCONE. One of the iſlands of the Turkiſh Archipelago, ſituated in 25 deg. of E. lon. and 37 deg. of N. lat. See *Turkiſh* iſlands.

MYROBALANS. A kind of medicinal fruit, brought from the Eaſt Indies, much more uſed in the Arabic than the Greek pharmacy, and more among the antients than the moderns; but ſtill more abroad than in England.

There are five kinds of myrobalans, or purging Indian plumb; the firſt called *citrini*, yellowiſh, red, hard, oblong, and the ſize of an olive; the ſecond called *black*, or *Indian myrobalans*, the bigneſs of an acorn, wrinkled without ſtone; the third *chebuli*, the ſize of a date, of a yellowiſh-brown, pointed at the end; the fourth *emblici*, round, rough, the ſize of a gall, of a dark brown; the laſt called *bellerici*, hard, yellow, round, the ſize of an ordinary prune, leſs angular than the reſt. Myrobalans of each kind are ſlightly purgative and aſtringent.

MYRA-BOLTS. A kind of Arabian myrrh, but brought from Surat in the Eaſt Indies by Europeans.

MYRA-IGLET, is another kind of myrrh brought from the ſame place, but much inferior to the former, both in quality and price.

Myrrh is ſold at Amſterdam by the pound, affording 2 *per cent.* deduction for good weight, and 1 *per cent.* for prompt payment, its price being from 5 s. to 15 s. *per* pound.

MYRRH. A kind of gum, or reſin, iſſuing by inciſion, and ſometimes ſpontaneouſly, from the trunk and larger branches of a tree growing in Arabia, Egypt, and eſpecially Abyſſinia.

Authors are not agreed about the tree which produces this gum; for though all of them make it ſmall and thorny, they diſagree about the form of its leaves.

The inciſions are made twice a year, and the myrrh oozing out is received on ruſh mats diſpoſed underneath.

Druggiſts ſell two kinds of myrrh; one in tears, called ſtacte; the other ungulata, or in nails.

Of the firſt kind, the beſt is in bright, yellow, tranſparent drops, friable, light, of a ſtrong diſagreeable ſmell; but this is very rare; and moſt of that in uſe is the nailed myrrh, ſo called from little white ſpots obſerved thereon, much like thoſe on the nails of fingers.

The beſt is in little maſſes, or tears, red and tranſparent; which, when broken, contain a kind of unctuous liquor, the moſt precious part of the myrrh, and the real ſtacte of the antients.

This gum enters a great number of medicinal compoſitions; its bitterneſs rendering it good for the ſtomach, and againſt worms, being chewed to prevent infection from contagious diſeaſes. Dr. Quincy ſays it is excellent to cleanſe and ſtrengthen the womb, and againſt tickling rheums; a good detergent, and as much added externally in unguents for the healing of wounds. It alſo makes the principal ingredient in embalming; and chymiſts draw from it oils, ſpirits, tinctures, &c. to which they attribute extraordinary virtues.

MYRTLE *berries*. The fruit of a ſhrub well known under the name of myrtle, growing common in Spain, eſpecially in the mountains of Siera-Morena, and other places.

There are two kinds of myrtle, male and female; the latter of which produces the beſt berries, and in the greateſt quantity. The fruit is firſt green, but becomes black gradually within. It is a white ſeed, in form of a creſcent, ſolid, hard, and of an aſtringent taſte: while the fruit continues on the trees, it is ſucculent and ſmooth, and only becomes hard and wrinkled becauſe dried in the ſun for the convenience of carriage.

Myrtle berries are rough and aſtringent, being chiefly uſed in the way of ſyrup, as a ſtrengthener againſt fluxes and abortion; but they are alſo an ingredient in ſeveral of the ſtrengthening plaiſters; beſides, perfumers uſe them in their perfumes.

N.

NAP NAT

NAB. A river of Bavaria, in Germany, which riſes in Franconia; runs from N. to S. thro' the Palatinate of Bavaria, and falls into the Danube above Ratiſbon.

NAIL, is a piece of manufactured iron, braſs, or ſilver, to faſten boards together, or to adorn furniture. It alſo ſometimes ſignifies to ſtrike or confirm a bargain, by paying a part of the purchaſe immediately, or upon the nail.

NAIL, is likewiſe a ſort of Engliſh long meaſure, chiefly uſed in the commerce of cloths, containing the 16th part of a yard; being the leaſt ſubdiviſion, or ſmalleſt meaſure that drapers and mercers make uſe of, or ſell by. See *Yard* and *Meaſure*.

NAIRNE. A port-town of Scotland, in the ſhire of Inverneſs, ſituated at the entrance of the Frith of Murray, in 3 deg. 30 min. of W. lon. and 57 deg. 40 min. of N. lat.

NANFIO. One of the Turkiſh Archipelago iſlands, ſituated in 26 deg. of E. lon. and 35 deg. of N. lat. See *Turkiſh Iſlands*.

NANGASAQUI. One of the Japoneſe iſlands, ſituated in 130 deg. of E. lon. and 32 deg. 30 min. of N. lat. See *Japan*.

NANKING. The capital of the province of Nanking in China, ſituated in 118 deg. 30 min. of E. lon. and 32 deg. of N. lat. See *China*.

NANQUE. One of the ſmall five weights uſed by the inhabitants of Madagaſcar, for gold and ſilver, weighing but five grains; the ſompi, the vari, the ſacari, and the nanqui being above it. See *Sompi*.

NANTS. A city of great trade in the province of Bretagne in France, ſituated on the river Loire, in 1 deg. 30 min. of W. lon. and 47 deg. 15 min. of N. lat. See *France*.

NANTUCKET. An iſland of the coaſt of New England in North America, ſituated in 70 deg. of W. lon. and 41 deg. of N. lat. the people whereof apply themſelves chiefly to the whale-fiſhery on the coaſt. See *Britiſh America*.

NAP. That part of the wool or hair of woollen cloth, which riſes above the ſhoot.

NAPHTHA, or *Naptha*. A kind of liquid bitumen, very oily and inflammable, exuding out of the earth, in ſeveral places of Chaldea, particularly on the ſite of the antient Babylon; though it is alſo found in ſome provinces of Italy, and France, particularly Auvergne, and near Raguſa.

Naphtha is found ſwimming on the ſurface of the water of ſome ſprings, and is uſually of a black colour; tho' that found in certain ſprings about Babylon is ſaid to be whitiſh.

That of France is ſoft and black, like liquid pitch, and of a fetid ſmell: but that of Italy is a kind of Petrol, or a clear oil, of various colours, oozing out of a rock, ſituated on a mountain in the duchy of Modena.

Naphtha is eſteemed penetrating, reſolutive, and vulnerary; but its virtues are little known in medicine; its chief uſe being in lamps, &c. on account of its inflammability.

The Turks call the naphtha, carah ſakiz, or black maſtic, to diſtinguiſh it from pitch. Voſſius has an expreſs treatiſe on naphtha antient and modern, where he ſays it is a flour of bitumen, of more virtue than any other bitumen.

NAPLES, or one of the *Sicilies*. A kingdom of Italy. See *Italy*.

NAPLES *city*, is the capital of the kingdom, ſituated on a fine bay of the Mediterranean, in 15 deg. of E. lon. and 40 deg. of N. lat. See *Italy*.

NAPOLI *de Malvaſia*. A port-town of the Morea, ſituated at the entrance of the gulph of Napoli de Romania, in 23 deg. 30 min. of E. lon. and 37 deg. 30 min. of N. lat. See *Turky*.

NAPOLI *de Romania*. A port-town of the Morea, ſituated at the bottom of a bay of the ſame name in the Archipelago, in 23 deg. 20 min. of E. lon. and 37 deg. 30 min. of N. lat. See *Turky*.

NARBOROUGH. An iſland of South America, in the Pacific ocean, ſituated in 85 deg. of W. lon. and 45 deg. of S. lat. on the coaſts of Chili, 100 miles S. of the iſland of Chiloe, where Sir John Narborough refreſhed his men, when he was ſent into the South Sea, in the reign of King Charles II. to ſee if it was feaſible to ſettle colonies on the coaſt of Chili.

NARENZA. A port-town of European Turky, in the province of Dalmatia, ſituated on a bay of the gulph of Venice, in 18 deg. 15 min. of E. lon. and 42 deg. 50 min. of N. lat.

NARHAL. A large fiſh in the north ſeas, particularly upon the coaſts of Greenland, from which oil, and a kind of ivory is extracted. See *Walrus*.

NARVA. A large city and port-town of Livonia, ſituated in 27 deg. 30 min. of E. lon. and 59 deg. of N. lat. See *Ruſſia*.

NASARA. A ſquare ſilver coin, ſtruck at Tunis.

NATA. A port-town of Darien in Spaniſh America, ſituated on the bay of Panama, in 82 deg. of W. lon. and 9 deg. of S. lat.

NATAL *Terra*. A country on the S. E. coaſt of Africa, between 23 and 30 deg. of S. lat. and between 25 and 35 deg. of E. lon. where ſeveral European ſhips have touched, and agree it is a plentiful country; but no nation of Europe has thought fit to ſend any colonies thither.

NATRON, or *Anatron*, in natural hiſtory, a browniſh kind of ſalt, when taken out of a lake of ſtagnant water, in the deſert of Nitria in Egypt; being much of the nature of nitre, whence it is called Egyptian nitre, and is even ſuppoſed to be the proper nitre of the ancients. See *Nitre*.

It is uſed in the whitening of linen; but burns them, if not corrected by a mixture of aſhes.

The natron of Egypt, as deſcribed by Pliny, Matthiolus, and Agricola, is an alkali ſalt perforated in the manner of a ſponge, and of a lixivial taſte.

Its principles Dr. Leigh takes to be chiefly two; a ſea-ſalt and an urinous ſalt: the firſt, he takes it for granted, it receives from the earth; the ſecond, from the air.

Dr. Huntington, who was on the ſpot, ſays the natron is thought to riſe from the bottom of the lake; where, by the heat of the ſun, it is condenſed, and hardened into the form in which it is introduced among Europeans; but his opinion is, that it is rather ſeparated by the ſun from the water.

M. de la Chambre adds, that three or four days before the Nile begins to overflow, there falls a certain dew, of a fermentative virtue, inſomuch as to leaven a paſte expoſed to it; and that at the ſame time the natron riſes.

Hippocrates, Galen, Matthiolus, Dioſcorides, and others, mention it as of uſe in phyſic; and M. de Cloſs is even of opinion, that all the mineral waters of France are impregnated with this kind of nitre; from whence they derive their medicinal virtues.

It is of ſingular efficacy in fertilizing ground, which Dr. Leigh accounts for, by ſuppoſing its volatile particles heated by ſome ſubterraneous fire, or by the warmth of the ſun; and thus readily made to aſcend the minute tubes of plants, and carry with them the juices of the earth.

Pliny derives the invention of glaſs from ſome of this natron accidentally melted down into the ſand, where it ran into ſtreams of glaſs.

This nitre is diſtinguiſhed from the modern nitre or ſaltpetre, by its fermenting with acids, which ſaltpetre will not do; by its volatile ſpirit, its lixivial ſmell, the clammy inſipid ſubſtance it yields, &c. It agrees with ſaltpetre in that, by dropping ſpirit of ſulphur into it, it ſhoots into pyramidal cryſtals: but Dr. Leigh thinks it comes nearer ſal ammoniac than ſaltpetre.

Dr. Liſter conjectures, that moſt of the ſalt-water of the lakes of Egypt, having paſſed thro' the bodies of thoſe vaſt animals wherewith they are ſtocked, as crocodiles, hippopotami, and others, muſt of conſequence be rendered urinous, or ſalino-urinous, which is a part of the compoſition of ſal armoniac.

NATURALIZATION, in law, the act of naturalizing an alien, or putting him into the condition of a natural born ſubject, and intitling him to the rights and privileges thereof; whereby he becomes both a ſubject and a native of a king or country, that by nature he did not belong to. See *Alien*, and *Denizen*.

In France, naturalization is the prerogative of the King; but in England, it is done by act of parliament.

By an act of 13th Geo. II. it was enacted, that from 1ſt June 1740, all perſons born out of the liegeance of his Majeſty, who had, or ſhould reſide for ſeven years or more, in any of his Majeſty's colonies in America, and ſhould not have been abſent out of ſome of them longer than two months, at any one time during, the ſaid ſeven years; and ſhould take and ſubſcribe the oaths; or being quakers, ſhould make, and ſubſcribe the declaration of fidelity; or being people of the congregation called Moravian brethren, and other foreign proteſtants not quakers, who ſcruple the taking of an oath, are ſettled in his Majeſty's colonies in America, and demean themſelves there as a ſober, quiet, and induſtrious people, and many others of the like perſuaſion deſirous to tranſport themſelves thither, ſhall enjoy the privileges of natural born ſubjects, and all the benefits of this act: but with the proviſo of having received the Lord's ſupper, which muſt be certified by the adminiſtrator, and two credible witneſſes.

Another act of parliament was lately paſt, for naturalizing the Jews: but it was ſo diſguſtful to the people, that the legiſlature thought proper to repeal it.

NAVAL. Something belonging to the ſhipping, or ſea-affairs.

NAVAL *Power*. See *Maritime* Power.

NAVAL *Stores*. See *Stores*.

NAVAL *Trade*. See *Trade*.

NAVAL *Timbers*, among ſhip-builders, are ſometimes what they call puttocks, and ſometimes the ribs.

NAVARINO. A port-town of European Turkey, in the province of the Morea, ſituated 12 miles N. of Modon, and 90 S. W. of Corinth.

NAVARRE, was formerly a diſtinct kingdom, ſubject to its own ſovereign; but one part is now become a province to Spain, and the other part a province to France.

NAVIDAD. A port-town of Mexico in North America, in the province of Mechoachan, ſituated on the Pacific ocean, in 110 deg. of W. lon. and 19 deg. of N. lat.

NAVIGATION, is a compound branch of practical mathematics, that applies arithmetic, geometry, and aſtronomy, to the conducting of a ſhip from one port, kingdom, or place, to another; the neareſt, ſafeſt, and beſt way, in the ſhorteſt time: by computing the ſeveral courſes ſteered, and allowing for currents and other hindrances; and frequently obſerving the latitude of the ſeveral places they ſucceſſively are in, to direct their courſe.

It is to this art, ſuppoſed to be handed down to us from the Tyrians, and Carthaginians, that commerce owes its increaſe, or rather its entire perfection; and it muſt be confeſſed that trade flouriſhes in a maritime ſtate, in proportion to the ſolid eſtabliſhment of its navigation; on the contrary, that it languiſhes, and often falls to nothing by reaſon of its neglect. See *Commerce*, *Merchant*, *Sailing*, and *Shipping*.

Common NAVIGATION, uſually called *Coaſting*, is where the ports are on the ſame, or very neighbouring coaſts, and where the veſſel is ſeldom out of ſight of land, or out of reach of ſounding. In this little elſe is required but an acquaintance with the lands, the compaſs, and ſounding line.

Proper NAVIGATION, is where the voyage is long, and out in the main ocean. In this, beſides the requiſites in the former, are likewiſe required the uſe of Mercator's chart, azimuth, and amplitude compaſſes, log-line, and other inſtruments for celeſtial obſervations, as quadrants, ſtaffs, &c.

Navigation turns principally on four things; two whereof being known, the reſt are eaſily found from them by tables, ſcales, and charts. Theſe four things are, the difference of latitude; difference of longitude; the reckoning, or diſtance run; and the courſe, or rhumb ſailed on.

The determining of longitude is what is wanting to the perfection of navigation; mathematicians of many ages have applied themſelves with the utmoſt aſſiduity to ſupply this grand deſideratum, but hitherto in vain, notwithſtanding the magnificent rewards of ſeveral princes, and ſtates, to the diſcoverer. See *Longitude*.

It does not appear which of the European people firſt took themſelves to navigation, and commerce. Some think it began with the French; though the Italians ſeem to have the juſteſt title to it, particularly thoſe of Venice and Genoa.

About the ſame time that navigation was retrieved in the ſouthern parts of Europe, the famous league of the hans towns, commonly ſuppoſed to have begun about the year 1164, was formed in the north. See *Hans*-towns.

It need only be added, that in examining the reaſons why commerce paſſed ſucceſſively from the Venetians, Genoeſe, and hans-towns, to the Portugueſe and Spaniards, and from thoſe again to the Engliſh and Dutch, it muſt be eſtabliſhed as a maxim, that the relation between commerce, and navigation, or rather their union is ſo intimate, that the fall of the one, inevitably draws after it the other, and that they will always either flouriſh or dwindle together.

Hence ſo many laws, ordinances, ſtatutes, &c. for the regulation, and hence particularly that celebrated act of navigation, which an eminent foreign author calls the Palladium, or tutelar deity of the commerce of England, which is too important not to be here mentioned, as it is the ſtanding rule, not only of the Engliſh among themſelves, but alſo of other nations with whom they trade.

Act of Engliſh NAVIGATION, is a ſtatute whereby the parliament of England have ſettled divers matters relating to the navigation and commerce of the kingdom.

Till this act all nations were at liberty to import into England all kinds of merchandiſes, whether of their own growth, or laden elſewhere, and that on their own veſſels.

Cromwell firſt perceiving the prejudice this liberty did the Engliſh commerce, which was now almoſt wholly in the hands of foreigners, chiefly the Dutch, whom he hated, animated the Engliſh, by ſeveral acts of parliament, to reſume their trade into their own hands; particularly paſſed an act prohibiting the Dutch from importing any merchandiſes, except thoſe of their own growth, or manufacture, which were very few.

Upon the reſtoration, the firſt parliament Charles II. called diſtinguiſhing in Cromwell the politician from the tyrannicide, condemned the memory of the one, and followed the plan of the other with regard to navigation and commerce; by paſſing that celebrated bill, or act for the encouraging of ſhipping, and of navigation, which ſubſiſts in its full latitude, and antient vigour. Its date is from the firſt December 1660 12th Car. II. c. 18. and its chief articles are as follow:

1. That no goods, or commodities, ſhall be imported or exported to, or from any of the Engliſh colonies in Aſia, Africa, or America, but on veſſels built within the dominions of England, or really belonging to Engliſh ſubjects, and whoſe maſters, and at leaſt three fourths of the mariners are Engliſh, on pain of forfeiture of the goods and veſſels.

Under the name Engliſh here are comprehended all the King's ſubjects of England, Ireland, and the plantations, as was explained in a ſubſequent act 13 and 14 Car. II. c. 11.

2. That no perſon born out of the ſubjection of England, or not naturalized, ſhall exerciſe any commerce in thoſe colonies for himſelf or others.

3. That no merchandiſes of the growth of Aſia or America ſhall be imported into any of the dominions of England, on any other than Engliſh veſſels.

4. That no goods of foreign growth, or manufacture, that ſhall be brought into England, Wales, Ireland, iſlands of Jerſey or Guernſey, or town of Berwick on Tweed, in Engliſh built ſhipping, or other ſhipping belonging to the foreſaid places, and navigated by Engliſh mariners as aforeſaid, ſhall be ſhipped, or brought from any other place, or country, but only from thoſe of the growth, or manufacture thereof.

5. That all kinds of dry and ſalted ſea-fiſh, train-oils, blubber, and whale-fins, not caught by Engliſh veſſels, imported into England, ſhall pay double duties.

6. That the commerce from port to port in England and Ireland ſhall be carried on wholly by Engliſh veſſels and Engliſh merchants; the crew to be always three-fourths Engliſh.

7. That none but Engliſh veſſels ſhall reap the benefit of the diminutions made, or abatements to be henceforth made in the cuſtoms.

8. All veſſels are prohibited importing into England, and Ireland, any of the commodities of Muſcovy, or even any maſts or other timber, foreign ſalt, pitch, roſin, hemp, prunes, raiſins, oil of olive, any kind of corn, or grain, ſugars, aſhes, ſoap, wine, vinegar, or brandy, except veſſels, whereof Engliſh are owners, or part owners, and where the maſter and three-fourths of the mariners are Engliſh. And that no currants, or other commodities, the growth or manufacture of the Turkiſh empire, ſhall be imported, but in Engliſh built veſſels, and navigated as aforeſaid, except only ſuch veſſels as are of the built of the country, or place whereof ſuch commodities are the growth, or manufacture, or of ſuch part where ſuch goods are uſually ſhipped for tranſportation, and unleſs the maſter, and three-fourths of the crew be natives of the country where they are laden.

9. All timber, maſts, boards, ſalt, pitch, tar, roſin, hemp, flax, raiſins, figs, prunes, olive oils, corn, or grain of any kind, ſugar, potaſhes, brandies, or wines, and all goods of the growth and manufacture of Muſcovy, all currants, and Turkiſh goods imported into England, &c. in other than ſuch ſhipping, and ſo navigated, ſhall be deemed aliens goods, and pay accordingly.

10. That to prevent frauds in buying, and diſguiſing foreign veſſels, the proprietors ſhall take an oath that they really belong to them, and that no alien has any part in them.

11. That Engliſh veſſels, and navigated by Engliſh, may import into the dominions of England any merchandiſes of the Levant, tho' not taken up in the places where they grow, or are manufactured; provided it be in ſome parts of the Mediterranean, beyond the ſtraights of Gibraltar. And the ſame is underſtood of commodities brought from the Eaſt Indies, provided they be taken up in ſome port beyond the Cape of Good Hope; and thoſe from the Canaries, and other colonies of Spain, and the Azores and other colonies of Portugal, which are allowed to be ſhipped, the one in Spaniſh ports, the other in Portugueſe.

12. Theſe penalties, prohibitions, and confiſcations, not to extend to goods taken by way of repriſal from the enemies of England, nor to fiſh caught by the Scots, or their corn, and ſalt, which may be imported into England by the Scotch built ſhips.

Laſtly, that ſugars, tobacco, and other commodities of the growth of the Engliſh colonies, ſhall not be imported into any other part of Europe but the dominions of England. And that veſſels going out of the ports of the ſame crown for the Engliſh colonies, ſhall give 1000 l. ſecurity if under 100 tons, and 2000 l. if above, before they depart, that they will import their cargo into ſome port in the ſaid dominions, and the like before they quit thoſe colonies, that they will land their whole cargo in England. See Great *Britain*.

NAVY, is ſometimes underſtood of the whole maritime force, or power of any nation, or kingdom; and ſometimes it means alſo ſo many ſhips as are in company together for ſome warlike expedition.

The direction of the royal navy of England is in the lord high Admiral, or commiſſioners of the admiralty, and the principal officers under them, who hold their places by patent. See *Admiralty*.

The principal officers of the navy are four; The treaſurer, whoſe buſineſs is to receive monies out of the Exchequer, and to pay all the charges of the navy, by warrant from the principal officers. The comptroller, who attends, and comptrolls all payment of wages, is to know the rates of ſtores, to examine and audite all accompts, &c. The ſurveyor, who is to know the ſtate of all ſtores, and ſee wants ſupplied, to eſtimate repairs, charge boatſwains, &c. with what ſtores they receive, and at the end of each voyage, to ſtate, and audite accompts. The clerk of the acts, whoſe buſineſs is to record all orders, contracts, bills, warrants, &c.

Commiſſioners of the NAVY are five. The firſt executes that part of the comptroller's duty which relates to the victuallers accounts. The ſecond another part of the ſaid comptroller's duty relating to the accompts of the ſtore-keepers of the yard. The third has the direction of the navy at the port of Portſmouth. And the fourth has the ſame at Chatham.

The navy was antiently victualed by contract, but the victualling is now under commiſſioners, who keep their office on Tower-hill.

The ordinary expences of the navy in a year of peace, continuing in harbour, is ſo well regulated that it amounts to ſcarce 130,000 l. a year.

The number of ſhips and veſſels in the navy as it ſtood in 1710, was 7 firſt rates, 13 2d rates, 46 3d rates, 65 4th rates, 68 5th rates, 40 6th rates, 5 fireſhips, 7 bomb-veſſels, 18 yachts, 1 advice boat, 2 brigantines, 7 ſloops, 4 ſtore-ſhips, 13 hulks, 26 hoys, and 2 ſmacks.

But in 1748, there were 6 ſhips of 100 guns, 13 of 90, 16 of 80, 25 of 70, 32 of 60, and 34 of 50; being 126 ſhips of the line including the laſt; beſides 30 of 40 guns, and 45 of 20; 43 ſloops, 16 bombs, and 19 fireſhips; in all 279.

And in 1751, there were 5 firſt rates, 11 ſecond rates, 48 third rates, 58 fourth rates, 42 fifth rates, and 50 ſixth rates; in all 90 ſhips of the line; beſides 125 frigates, 42 ſloops, 12 fireſhips, 8 yachts, and 14 hoſpital ſhips; in all 291.

The building, and maintaining many good ſhips, both for war and traffic, is the chief and main foundation of an extenſive and advantageous commerce: for it is certain, this cannot be attained without the ſupport of a conſiderable fleet; as it is on the other hand impoſſible to keep up a great fleet, without the conſtant ſuccour of a very extenſive and advantageous commerce. So that theſe are two inſeparable companions, and one cannot ſubſiſt without the other.

A prince employing his ſhipping with ſpirit, and courage, is arbiter and lord of the world. Arms upon land threaten, and ſtrike in one part only, but upon the ſea every where. No prudence can keep a coaſt always provided, and upon its guard; no power ſufficiently protect it. It is the ſea that humanizes nations, that would otherwiſe be fierce and untractable, without the communication of ſhipping, by means of which nations underſtand each others language; and antiquity hints it to us by a fable, that makes the helm of the ſhip Argos ſpeak, giving us to underſtand, that by means of ſhips nations aſſiſt, and have communication with each other. For it is the rudder that makes a kingdom ſhare in the bleſſings and riches of all other kingdoms: one country furniſhes mutually another with all it wants; which neceſſity, and convenience, oblige to a friendly commerce, and a benevolence to mankind, from the want they have of each other.

A maritime power is more convenient to ſome than other kingdoms, according to their ſituation and circumſtances. The monarchies of Aſia require rather land forces than a

navy,

navy. Venice and Genoa, that are ſituated, the former in the ſea, the latter cloſe to it, and rather upon a rock in the ſea, than in a bay, and in a territory barren and incapable of cultivation, placed all their ſtrength in the oar and the ſail. Both republics were glorious, and dreaded by all the world, ſo long as theſe were ſet a juſt value upon; eſpecially as commerce provides arms for its own defence, bringing along with it ſkill in navigation, making ports ſo many armouries and magazines, and introducing wealth into a kingdom for the ſupport of each individual. The Republics of Sidon, Ninive, Babylon, Rome, and Carthage, by means of commerce, abounded in wealth, and armies. When trade and navigation began to droop at Venice, and Genoa, all opportunities of exerciſing their valour, and of acquiring trophies of glory were loſt. In a ſmall ſandy diſtrict, incapable of cultivation by the ſpade, or plough, Holland maintains powerful armies, from the abundance and riches of the ocean, and provides for populous cities ſo near to one another, that the moſt fruitful ſoil could not ſupply their wants. France poſſeſſes neither mines of gold nor ſilver; but with traffic, and puerile toys of iron, lead, and tin, makes its induſtry valuable. And the Portugueſe ſenſible of the advantages of commerce, opened in unknown ſeas, and by force of arms, a trade with the Eaſt.

To compleat this article, it will not be improper to give the dimenſions, number of guns, and men of a ſhip, built after the rules practiſed in Spain, and alſo of ſome others built in France, England, Genoa, and Campeche, as repreſented by a Spaniſh author.

The St. Lewis built in Spain in the year 1715, a third rate.

	Spaniſh Cubits.	Inches.
Length of the tread of the keel	60 1/3	
Length on the gun-deck	70 1/2	
Breadth on the beam	18 1/2	
Depth	9 1/4	
Main tack	19	2
Quarter deck	17 1/4	

	Pounders.	Guns.
The loweſt tier	18	26
The ſecond tier	12	26
The third tier	6	8
Total of guns		60

It is to be obſerved, that in manning ſhips of war at Cadiz, they neither obſerve the old cuſtoms of Spain, nor yet that of the French, Engliſh, or Dutch, and therefore each of them ſhall be given diſtinctly.

The number of hands on board the ſhips of the Spaniſh fleet in general, was after the rate of 26 ſailors, and 26 mariners to 100 tons. But in the capitana, and admiral's ſhip, after the rate of 28 of each ſort to 100 tons; and upon account of the ſignals 100 hands more; as 50 ſailors, and 50 mariners, were added to the compliment of each ſhip, agreeable to ſeveral royal ordinances made between the years 1677 and 1682.

To a ſhip of 60 guns were allowed as many gunners, and a fourth more, making in all	75
There was added a fourth of this number 75, and 16 ſea officers which make	18
There were ſailors equal in number to both theſe ſums, and a fifth more, or	111
Boys equal to a third part of the ſailors, or	37
Total	241
To theſe 241 mariners were added, the ſame number of marines	241
Both ſums, in which their officers are included, make	482

The compliment of a French man of war is three men, a gunner, a marine, and a ſailor, to every four pounder.

To a 6 pounder	5 men.
To an 8	7
To a 12	9
To an 18	11
To a 24	13
To a 36	15

So that a ſhip of 60 guns, as the St. Lewis, which mounted 26 eighteen pounders, 26 twelve pounders, and 8 ſix pounders, according to this rate had for her compliment 560 hands.

The Engliſh and Dutch ſay they have a man leſs than the French to every gun, ſo that their compliment of a 60 gun ſhip muſt be after this rate 500 hands.

A Spaniſh ſhip's compliment for 60 guns, 482 hands. French, 560 hands. Engliſh and Dutch, 500 hands.

The ſhip Nueſtra Senora de Begona, built at Genoa, in the year 1703, a fourth rate.

	Cubits.
Length by the tread of the keel	63
Length on the gun-deck	70
Breadth on the beam	20
Depth	9
Main-tack	20

Upper tier	12	2
Forecaſtle	8	1
Total of guns		6

From what has been laid down, is ſeen the dimenſions, onnage, number of guns, and the complement of hands n certain ſhips of war, built within the laſt 25 years in pain and other kingdoms; as alſo how much nations iffer from one another in their rules of naval architecture. The Dutch ſhips of war are not in general of ſo large a uilt, and force, as thoſe of the French and Engliſh; which owers during the reign of Lewis XIV. not only rivaled ach other in the rates and force of their men of war, ut in theſe reſpects exceeded other nations; as we are enſible that the ſhips of war in Sweden, Denmark, Muſcovy, Venice, and the Ottoman empire, are inferior ven to the Dutch, at leaſt according to the plan which heſe powers for ſeveral years paſt have laid down, and urſued.

Tho' the French fleet contains ſeveral ſhips that exceed 80 guns, and it is alſo known that in the vaſt navy of England there are alſo ſeveral ſhips of war from 90 to 100 uns, it is allowed, as it were, by all people of experi- nce in maritime affairs, that theſe are not of ſervice in roportion to their charge, magnitude, and number of ands, from the difficulty there is in managing them, the reat danger they run in going in and out of ports, and pon the coaſts, and from other inconveniencies; ſhips f this vaſt bulk, and number of guns, being uſually uilt in times when money was very plentiful; ſerving ather for oſtentation than uſe in expeditions at ſea.

n the 22d year of King Geo. II. an act was paſſed for mending, explaining, and reducing into an act, the laws elating to the government of his Majeſty's ſhips, veſſels, nd forces, by ſea: whereby all former acts were repealed; nd it was enacted, that the articles and orders therein mentioned, as well in time of peace as in war, ſhould be bſerved and put in execution as therein appointed.

AVY *Debt.* See Navy *Debt.*

AUTICAL, or *Nautic*, ſomething belonging to ſea af- airs.

AUTICAL *Planiſphere*, is a deſcription of the terreſtrial globe upon a plane, for the uſe of mariners.

AUTICAL *Chart.* See Sea *Chart.*

AUTICAL *Compaſs.* See *Compaſs.*

AXIA, or *Nixia.* One of the Turkiſh iſlands in the Archipelago, ſituated in 26 deg. of E. lon. and 36 deg. 30 min. of N. lat.

AZE, or *The Naze*, is the moſt ſoutherly point of land n Norway, dividing the German ocean from the Scag- erick ſea.

EALED *too*, in navigation, is ſpoke of the ſhore, ſtrand, or bank of a ſea, that is very deep without any gradual topping, or regular ſhallowneſs.

EAP, or *Neep Tides*, are thoſe tides which happen when the moon is in the middle of the ſecond and fourth quarters. The neap tides being low tides, in reſpect to their oppoſites the ſpring tides. See *Tide.*

As the higheſt of the ſpring tides is three days after the full or change; ſo the loweſt of the neap is four days before the full or change; on which occaſion the ſeamen ſay, it is *deep neap.*

EAPED, when a ſhip wants water, ſo that ſhe cannot get out of the harbour, off the ground, or out of the dock, the ſeamen ſay, ſhe is *neaped*, or *beneaped.*

NEAR, among ſailors, is the directing the ſteerſman to let the ſhip fall to the leeward.

EAT, or *Net Weight*, the weight of a commodity alone, clear of the caſk, bag, caſe, and even filth. See *Net and Weight.*

EAT. A beaſt, or one of the larger eatable cattle; as oxen, cows, heifers, and ſteers.

EAT-*leather*, is made from the hides of ſuch cattle; and neats foot oil from their feet.

ECANEES. Striped, blue and white linens, manu- factured in the Eaſt Indies; the broad ſort of 12 ells in length, and 3-4ths in breadth; the narrow, 10 ells in length, and 2-3ds breadth.

ECKAR. A river of Germany, which riſes in the ſouth of the circle of Suabia, runs north through that circle; then, paſſing by Tubingen, Stutgard, Hailbron, and Morſbac, turns weſt, and falls into the Rhine at Man- heim. See *Rhine.*

ECK-*lace.* See Neck-*lace.*

NEEDLE. A very familiar little inſtrument, or utenſil, made of ſteel, pointed at one end, and pierced at the other; uſed in ſewing, embroidery, tapeſtry work, and other occaſions.

Needles make a very conſiderable article in commerce; and the conſumption thereof is almoſt incredible. The ſizes are from N° 1. the largeſt, to N°. 25 the ſmalleſt; diſtinguiſhed by the names of ſtitching-needle, ſtocking-needle, packing-needle, and others.

There is ſcarce any commodity cheaper than needles, which will appear ſomething extraordinary, conſidering the great number of operations they undergo before they are brought to perfection.

German and Hungary ſteel is of moſt repute for needles; which is drawn in wire to the fineneſs of the needle deſigned, cut into lengths, then the eye is ſtruck, and the point filed down.

Magnetical NEEDLE, denotes a needle touched with a loadſtone, and ſuſtained on a pivot or centre, on which playing at liberty, it directs itſelf to certain points in or under the horizon. See *Magnet.*

Magnetical needles are of two kinds, *horizontal* and *inclinatory.*

Horizontal NEEDLES, are thoſe equally balanced on each ſide the pivot which ſuſtains them; and which playing horizontally, with their two extremes point out the north and ſouth points of the horizon: but for their application and uſe, ſee *Compaſs.*

Dipping NEEDLE, or *Inclinatory Needle*, a magnetical needle ſo hung, as that inſtead of playing horizontally, and pointing out north and ſouth, one end dips or inclines to the horizon, and the other points to a certain degree of elevation above it. Or a dipping needle may be defined, with Mr. Whiſton, to be a long ſtrait piece of ſteel every way equally poiſed on its center, and afterwards touched with a loadſtone; ſo contrived as not to play on the point of a pin, as does the common horizontal needle; but to ſwing in a vertical plane, about an axis parallel to the horizon, and this in order to diſcover the exact tendency of the power of magnetiſm.

In order to find the longitude or latitude by the dipping needle; if the lines of equal dip below the horizon be drawn on maps, or ſea charts, from good obſervations, it will be eaſy from the longitude known to find the latitude, and from the latitude known to find the longitude, either at ſea or land.

Suppoſe you were travelling, or ſailing along the meridian of London, and found the angle of dip, with a needle of one foot, to be 75 degrees; the chart will ſhew, that this meridian, and the line of dip meet in the lat. 53 deg. 11 min. which therefore is the latitude ſought.

Or ſuppoſe you were travelling, or ſailing along the parallel of London, that is in 51 deg. 32 min. north latitude, and you find the angle of dip to be 74 deg. this parallel, and the line of this dip, will meet in the map in 1 deg. 46 min. of eaſt longitude from London; which is therefore the longitude ſought.

Declination of the NEEDLE, is the variation of the horizontal needle from the meridian; or the angle it makes with the meridian, when freely ſuſpended in a horizontal plane. The needle is not found to point preciſely to the north, except in very few places; but deviates from it more or leſs in different places, and that too at different times; which deviation is called the *declination.*

NEEDLE-*maker.* A perſon who makes needles.

NEEDLE-*makers company of London*, was incorporated by letters-patent of Oliver Cromwell, dated the 10th of November 1656, by the ſtile of The maſter, wardens and ſociety of the art or myſtery of needle-makers of the city of London; who are governed by a maſter, two wardens, 18 aſſiſtants, and 48 liverymen; whoſe fine is 3 l. 6 s. and 8 d. but having no hall, they tranſact their buſineſs in Guildhall.

NEEDLES. Two capes, or points, at the weſt end of the Iſle of Wight, very difficult to paſs on account of the ſands and rocks.

NEESEWORT. See *Hellebore.*

NEGAPATAN. A port-town of the Hither India, ſituated on the Coromandel coaſt, in 79 deg. of E. lon. and 11 deg. 15 min. of N. lat.

NEGOMBO. A port-town of the iſle of Ceylon, ſituated in 78 deg. of E. lon. and 7 deg. 25 min. of N. lat. See *Ceylon*.

NEGRAIS. A port-town of Pegu in the Further India, ſituated on the eaſt ſide of the bay of Bengal, in 92 deg. 30 min. of E. lon. and 17 deg. of N. lat.

NEGRIL-*point*. The moſt weſterly promontory of the iſland of Jamaica, in America.

NEGRILLO. A kind of metallic or mineral ſtone, taken out of ſome mines of ſilver in Chili; which is black, and when mixed with lead is called *plomo-ronco*.

NEGRO *Cape*. A promontory of Angola, on the weſt coaſt of Africa, ſituated in 14 deg. of E. lon. and 17 deg. of S. lat. being the moſt ſoutherly country of Africa, to which the Europeans reſort to purchaſe ſlaves.

NEGROE-*land*, or *Nigritia*. See *Guinea*.

NEGROES, are black ſlaves, which make a conſiderable article in the modern commerce. See *Guinea*, and *Slave*; *Aſſiento*, and *African* Companies.

The negroes, called alſo blacks, and Moors, are a people of Africa, whoſe country extends on each ſide the river Niger, and is called Nigritia; tho' whether the people communicated their name to the river and country, or received it therefrom, is not eaſily determined.

The origin of negroes, and the cauſe of that remarkable difference in their complexion from the reſt of mankind, has much perplexed the naturaliſts; nor has any thing ſatiſfactory been yet offered on that head.

They are brought from Guinea and other coaſts of Africa, and ſent into the colonies of America to cultivate ſugar, tobacco, indigo, and other things; but in Peru and Mexico they are employed to dig in the mines.

This commerce, ſcarce juſtifiable on the footing either religion or humanity, is now carried on by all the nat s that have ſettlements in the Weſt Indies; particularly ıe Engliſh, Dutch, Spaniards, and Portugueſe.

The Spaniards indeed have few negroes at firſt hand, but have always treated with other nations to furniſh them therewith: thus they were formerly furniſhed by the company of the Grilles eſtabliſhed at Genoa, ſince by the Aſſiento in France, and after the peace of Utrecht by the Engliſh South Sea company.

The beſt negroes are brought from Cape Verd, Angola, Senegal, the kingdom of Toloffis, that of Galland, Damel, and the river Gambia.

A negro, between 17 or 18 and 30 years of age, was antiently only valued at about 45 s. in the commodities proper for that country, which are brandies, iron, linen, paper, braſs-pots, baſons, &c. but their value is now much enhanced, and it is ſeldom they meet with a good negro for 5 l. frequently giving 7 or 8.

There are various ways of procuring them: ſome to avoid famine ſell themſelves, their wives and children, to their princes or great men, who have wherewithal to ſubſiſt them: others are made priſoners in war; and great numbers ſeized in excurſions made for that very purpoſe by the petty princes upon one another's territories, in which it is uſual to ſweep off all both old and young, male and female.

The negroes make a frequent practice of ſurpriſing one another while the European veſſels are at anchor; dragging thoſe they have caught to them, and ſelling them; it being no extraordinary thing to ſee the ſon ſell after this manner his father or mother, and the father his own children, for a few bottles of brandy, and a bar of iron.

As ſoon as the ſhip has its complement, it immediately makes off; the poor wretches while yet in ſight of their country, falling into ſuch deep grief and deſpair in the paſſage, that a great part of them languiſh, fall into ſickneſs and die: others of them diſpatch themſelves by refuſing their food; others by ſtopping their breath in a manner peculiar to themſelves, by turning and folding their tongue, which immediately ſtrangles them; others daſh out their brains againſt the ſhip, and others jump over board.

The only ſure means to preſerve them is to have ſome muſical inſtrument play to them, be it ever ſo mean: but this exceſſive love for their country abates as they get farther off.

At their arrival in the colonies, a good negroe is ſold for 38

or 40 l. they make the chief riches of the inhabitants of the plantations; and a man who has 12 negroes is eſteemed to be in good circumſtances.

NEGROES-*Iſland*. One of the Philippine iſlands in the Indian ocean, ſituated in 120 deg. of E. lon. and 10 deg. of N. lat. See *Philippines*.

NEGROPONT. Capital of the iſland of Negropont in the Turkiſh archipelago, ſituated in 24 deg. 30 min. of E. lon. and 38 deg. 30 min. of N. lat.

NEIVA. A river of Muſcovy, ſeparating Carelia from Ingria, on which the capital city of Peterſburg ſtands having its riſe in the lake Ladoga; and, running weſt falls into the gulph of Finland.

NELSON *Fort*. A Britiſh ſettlement on the weſt ſide of Hudſon's bay, ſituated at the mouth of Nelſon's river in 91 deg. of W. lon. and 57 deg. of N. lat.

NEMBROSI. A kind of ſaffron, much eſteemed, and growing in Egypt.

NEPHRITIC *Wood*, *Lignum Nephriticum*, a kind of medicinal wood growing in New Spain, chiefly in the kingdom of Mexico, called by the Indians *Coult*, and *Tlacopatly*, as being reputed ſovereign againſt nephritic pains. It muſt be choſen well cleared of its bark and rind, of a bitter taſte, and a reddiſh yellow colour; but when infuſed in cold water, gives it a ſky blue tincture, if viewed by a falſe light, and a gold colour by a true one: a little of any acid being mixed with the tincture, both colours diſappear; but a little oil of tartar reſtores its ſky blue. Some ſubſtitute ebony, and others red Brazil wood, for lignum nephriticum; but the deceit becomes apparent by infuſing it in water.

NEPHRITIC *Stone*. A ſort of precious ſtone, ſo called from its extraordinary virtues againſt the ſtone and gravel in the kidneys.

It is a ſpecies of jaſper, commonly of an uniform duſky green colour; but ſometimes variegated with white, black, or yellow; ſeeming only to differ from jaſper in its being harder, and always without any red.

It is brought chiefly from New Spain, where it is ſometimes found in pieces large enough to make moderate cups; but there is ſome likewiſe found in Old Spain and Bohemia.

This ſtone is very dear, by reaſon of the wonderful virtues aſcribed to it: a cup made of it being ſold for 160 crowns in the time of the Emperor Rudolphus II.

The beſt for medicinal uſe is of a bluiſh grey, fat and unctuous, as talc of Venice.

The Indians of New Spain, who firſt diſcovered its uſe and taught it the Europeans, wear it hung about their necks, after having cut it into various figures, chiefly beaks of birds: whence ſome Charletans take occaſion to counterfeit it, by cutting jada and other ſtones into the figures; and ſell them at great prices to thoſe who have an opinion of their nephritic faculty.

NERIND. A white cotton cloth, being a ſort of baffeta but narrow, and pretty coarſe, brought from the East Indies.

NERO, or *Fort Naſſau*. A fortreſs at the weſt end of the Banda iſlands of the ſame name; by which the Dutch command the navigation of theſe ſeas, ſituated in 128 deg. of E. lon. and 4 deg. of S. lat. See *Banda* Iſlands.

NESTS *of birds*. A kind of ſpice much eſteemed in China and throughout the Eaſt Indies, found in Tunquin and Cochinchina; but particularly in Chiampa. The birds which make theſe neſts for laying and hatching their eggs are not unlike ſwallows; and when engendering evacuate by the bill a kind of glutinous matter, with which they build their neſts, faſtening them to the rocks, by applying this viſcous ſubſtance in different ranks one over the other till the firſt are dry; theſe neſts being of the form of a middling ſpoon, but with higher raiſed edges.

There is ſuch an abundance of theſe neſts, that every year ſeveral quintals are gathered, and brought to China, where they are ſold for 50 taels the quintal, or more ſterling. They are reputed good for the ſtomach and brain; and they give the meats they ſeaſon a very delicious taſte.

NET, in commerce, ſomething pure and unadulterated with any foreign mixture.

Thus wine is ſaid to be net when not adulterated, and coffee, rice, pepper, &c. are net when the filth and ordures are ſeparated from them.

A diamond is ſaid to be net when it has no ſtains or flaws; and a cryſtal when tranſparent throughout.

NET, is uſed for what remains after the tare has been taken out of the weight of any merchandiſe; that is, when it is weighed clear of all package. See *Tare*.

Thus we ſay, a barrel of cochineal weighs 450 pounds; the tare is 50 pounds, and there remains net 400 pounds.

NET-*produce*. A term to expreſs what any commodity has yielded, all tare and charges deducted: but merchants ſometimes uſe the Italian words *netto proceduto* for net produce.

NETHERLANDS, or the *Low Countries*, ſo called from their low ſituation, near the mouths of ſeveral great rivers, had the ancient name of Belgia. Theſe provinces are 17 in number, and formerly enjoyed great privileges; being governed by ſeveral princes, and in 1430 became united in the houſe of Burgundy: in 1506 they came under the dominion of Spain, by a marrgiage between the heireſs of Burgundy with a prince of Spain; and were conſtituted part of the circle of Burgundy by the emperor Charles V. But Philip II. of Spain ſucceeding his father Charles V. perſecuted and oppreſſed his ſubjects in the low countries, either upon account of their oppoſing his encroachments on their liberties, or embracing the doctrines of the reformation; which occaſioned a civil war in theſe countries. The ſeven provinces of Holland, Zealand, Friezeland, Groningen, Overyſſel, Guelderland, and Utrecht, formed an alliance in 1579, threw off the Spaniſh yoke, made themſelves a free people, and have ever ſince been called the *United Provinces*. But the other ten provinces were reduced to the obedience of Spain, and were ſubject to that crown, till conquered by the allies, and reſigned to the Houſe of Auſtria by the treaty of Utrecht in 1713; under whoſe dominion moſt of the ten ſtill remain, and are called the Auſtrian Netherlands: though the French and Dutch are in poſſeſſion of ſome parts of them, called the French and Dutch Netherlands.

The whole 17 provinces are ſituated between 2 and 7 deg. of W. lon. and 50 and 54 deg. of N. lat. being 300 miles long from N. to S. and 200 broad from E. to W. bounded on the German ſea on the north; by Germany eaſt; by Lorrain and France ſouth; and by the Britiſh ſeas weſt. But for the ſeven united provinces, ſee *United* Provinces.

The ten provinces of the Netherlands, not comprehended in the union of Utrecht, and now ſubject to the Houſe of Auſtria, and France, except ſome ſmall part of Brabant, and Flanders, which the Dutch have made themſelves maſters of, are the duchy of Brabant, the county of Flanders, the county of Artois, the county of Hainault, the county of Cambreſis, the county of Namur, the duchy of Luxemburg, the duchy of Limburg, the marquiſate of the Holy empire, or Antwerp, and the lordſhip of Malines, or Mechlin. Theſe ten provinces are bounded by the ocean, and the united Netherlands towards the north; by Germany on the eaſt; by Lorrain and part of France on the ſouth; and by another part of France, and the Britiſh ocean towards the weſt; being ſituated between 2 and 7 deg. of E. lon. and 49 and 51 deg. of N. lat. about 200 miles in length from E. to W. and about 130 in breadth from N. to S.

The N. W. part of theſe provinces only is waſhed by the ocean, and is a very unſafe coaſt, on account of the numberleſs ſhelves and ſands which lie upon it. The only ports are thoſe of Graveling, Dunkirk, Newport, Oſtend, and Sluys, and theſe will ſcarce admit ſhips of any great burden; the beſt being Oſtend and Sluys.

The chief rivers of theſe ten provinces are the Maeſe, Sambre, Demer, Dyle, Nethe, Geet, Senne, Rupple, Scheld, Lis, Scarpe, Deule, Dender, and Aa. Beſides theſe rivers, there are as fine canals here as in Holland, tho' not ſo many, the chief whereof are thoſe of Bruſſels, Ghent, and Middleburg.

The towns poſſeſſed by the Dutch in the Netherlands are Boiſleduc, Breda, Bergen-op-zoom, Maeſtricht, Grave, Lillo, Steenbergen in Brabant: Sluys, Axel, Hulſt, and Sas van Ghent in Flanders. By the Auſtrians, Bruſſels, Louvain, Vilvorden, Landen in Brabant: Antwerp, Mechlin, in their reſpective lordſhips: Limburg, Dalem, Franquemont, Valkenburg, in Limburg; Luxemburg in the province of the ſame name; Namur, Charleroy in Namur; Mons, Aeth, Enguien, in Hainault; Ghent, Bruges, Oſtend, Neuport, Oudenard, Courtray, Dixmude, Ypres, Tournay, and Menin, in Flanders. By the French, in Luxemburg, Thionville, and Montmedy; in Hainault, Valenciennes, Buchain, Conde, Landrecy; in the Cambreſis, Cambray, Crevecœur; in Artois, Arras, St. Omer, Aire, St. Venant, Bethune, and Terouen; in Flanders, Liſle, Dunkirk, Douay, Mardike, St. Amand, and Graveling.

The ſoil of this country is very different, being in ſome parts a deep rich mould, in others a barren ſand: in the former are large corn fields, paſture grounds, with plenty of foreſt and fruit trees; and that which was formerly eſteemed a barren ſoil is equal, if not preferable to the former at preſent, as it produces the beſt flax and hemp; having alſo received great improvements with ſown graſs, turneps, and other garden ſtuffs.

Their principal manufactures conſiſt of fine lawns, cambrics, lace, and tapeſtry; with which they carry on a very advantageous trade, eſpecially with Great Britain, from whence it is computed they receive a balance of half a million annually in time of peace. They have alſo a good woollen manufacture, particularly camblets and ſtuffs.

The French NETHERLANDS. Liſle, or Ryſſel, in French Flanders, is the capital and centre of its commerce; being ſituated in 3 deg. of E. lon. and 50 deg. 42 min. of N. lat. on the river Deule, 12 miles W. of Tournay. Its different manufactures, and the enterprizes of its traders, employ upwards of a hundred thouſand artificers, either within the city, or in its ſuburbs, or in the flat country, and the neighbouring towns; which are Douay, Mardike, St. Amand, Graveling, and others.

The commodities produced in this part of Flanders, are corn, turneps, hay, wood, fruits, wool, flax, horſes, horned cattle, butter, and oil of Colzat.

The manufactures conſiſt in woollen cloths, ſerges, ratines, and ſeveral other ſtuffs of wool only, or mixed with ſilk and thread. There is alſo a diverſity of linens, leathers variouſly dreſſed, ticking, or tent-cloth, camblets, damaſks, velvets, white and black lace of thread or ſilk, tapeſtries, gilt leather, pipes, matches, paſteboard; ſtockings, breeches, and other hoſiery wares, either knitted or woven; baſkets of fine oſiers; hats; barracans, crapes, blanketting, and a variety of ſuch like merchandiſes. All theſe manufactures are eſtabliſhed in the city of Liſle, and the commerce of them is very great.

The manufactures of the other towns are as follow: at Orchies mock velvets are made; at Douay the ſame things in proportion as at Liſle; at Armentiers, ſtamines, ſome cloths, and a few woollen ſtuffs, it being alſo in this town that all the cloths manufactured in the neighbourhood are ſold. At Lanoy, and its dependencies, ſome woollen ſtuffs are made.

Great parcels of linens are manufactured at Gorche, and bleached admirably well in the ſame place: the fair called Mayolle, held there yearly on the firſt of May, being famous for the great ſale of linens of all qualities.

At Roubais and Turcoing are ſeveral manufactures of woollen ſtuffs, or mixed with ſilk and wool, principally deſigned for Spain, and other foreign countries; ſome alſo are ſent into France, and even to Paris.

Beſides all theſe merchandiſes, woollen yarn ſpung at Turcoing, and in the low country; flax prepared aud unprepared; raw and bleached thread; bituminous earth extracted from ſome marſhy grounds; ſeveral curious flowers for the embelliſhment of gardens, ſold at Paris and elſewhere; are no indifferent objects of commerce for French Flanders.

The city of Liſle maintains a great commerce, not only with the neighbouring ſtates, as France, Holland, the reſt of the low countries, and ſome places of Germany; but

but alſo with Spain, Portugal, England, Ireland, Italy, and the northern countries.

Its neighbouring commerce is carried on by the means of canals and rivers; beſides land-carriages for Paris, and ſome of the ſouthern provinces of France: it was alſo by land-carriages that the Spaniſh commerce was carried on, during the war for the ſucceſſion of this monarchy; and there are yet ſeveral perſons who continue this cuſtom.

The ports of Calais and Dunkirk ſerve for the freighting of the merchandiſes, which the Liſle traders embark for Normandy, Bretagne, Guienne, Provence, and Languedoc; it is alſo in the ſame ports, and in that of Oſtend, that they freight for the north, England, Italy, Holland, Spain and Portugal.

The merchandiſes which the Liſle traders ſend into France, are velvets, linens, flax, worſted yarn; the lace of the country, that of Bruſſels, Mechlin, and Louvain; butter, flowers, oils of Colzat, and ſeveral woollen ſtuffs. Thoſe they ſend to Holland conſiſt in unbleached linens, worſted yarn, oil of Colzat, and fruits. Thoſe to Spain and Portugal are diverſe woollen ſtuffs, white and black thread lace, ſilk lace of the ſame colours, linens, thread, haberdaſhery and hoſiery wares. Thoſe to the northern countries conſiſt in French wines, and brandies, ſalt, coarſe cloths, and ſpice. To Savoy, in linens, and woollen ſtuffs. To the Auſtrian Netherlands, in woollen ſtuffs, French wines, ſilks, and oil of Colzat.

The merchandiſes which the Liſle merchants have in return for thoſe they export, are from France, wine, brandies, confects, dry fruits, oils, ſilk ſtuffs, gauzes, gold and ſilver lace, ſilks, ribbands, cloths, fine woollen ſtuffs different from thoſe of the Flemiſh manufacture, hard and haberdaſhery wares, books, paper, Spaniſh wax, bougies, hats, ſtockings, perukes, arms, ſulphur, ſaltpetre, glaſs and earthen-ware. From Holland, woollen cloths, ſalt fiſh, ſpice, horſes, drugs, indigo, whale-fins, pot-aſhes, wood for dying, wood for joiners, cabinet-makers, and for building; ſaltpetre, ſulphur, alum, cheeſe, ſalt-fleſh, horn, ivory, wax, hemp, callicoes, porcelain, with other Chineſe and Japoneſe curioſities. Spain and Portugal furniſh them with gold and ſilver, wool, oils, ſalt, oranges, lemons, olives, and fruits, either dry or conſerved. England and Ireland ſend them woollen cloths, and ſtuffs; butter, ſalt-fleſh, tallow, leather, lead, tin, coals, cyder, bottles, beaver-hats, furs, cane and ruſh works, ſilk and woollen ſtockings, and Indian curioſities. The returns from the north are corn, hemp, honey, cordage, maſts, potaſhes, pitch, flax-ſeed, ſkins, and whale-fins. Italy and Savoy give them ſilks, oils, citrons, oranges, dry fruits, gauzes, and liquors. Laſtly, from the Auſtrian Netherlands, and ſome parts of Germany, they have wool, ſilk, butter, cheeſe, oil, glaſs, copper, iron, lead, wire, camblets, laces, and white and blue linens.

Dunkirk, is ſituated in 2 deg. 20 min. of E. lon. and 51 deg. of N. lat. being a port-town on the Engliſh channel, at the mouth of the river Coln, 20 miles E. of Calais, 24 S. W. of Oſtend, and 50 E. of Dover. This port would never admit of large men of war; but great miſchief was done from thence by light frigates and privateers; which made Great Britain inſiſt on the harbour and fortifications being demoliſhed by the treaty of Utrecht in 1713.

It was always a place of conſiderable trade; however it muſt be confeſſed, that it was never more flouriſhing than ſince the French became maſters of it; eſpecially ſince the declaration of 1662, whereby it was re-eſtabliſhed in all its ancient franchiſes, exemptions, and immunities; its port declared free for all merchants and traders of what nation ſo ever to go aſhore, purchaſe, and bring out of the town all kinds of merchandiſes free, and acquitted from all duties.

The merchants of Dunkirk have two principal trades; that which they carry on themſelves, with their own ſhips, for exporting their own merchandiſes; and that which they have with ſtrangers, who come to them with the commodities of their own country.

A third trade for Dunkirk is the freighting of ſeveral merchandiſes brought to it from the neighbouring towns and provinces, particularly from Liſle. Laſtly, a fourth is that which it keeps on foot with the interior part of France, and with the towns of the Auſtrian Netherlands, as Bruges, Ghent, Antwerp, Bruſſels, and ſeveral others.

There are at Dunkirk merchants of all kinds, and from almoſt all the nations of Europe; ſome of whom trade on their own account, and others by commiſſion.

The foreigners with whom the merchants of Dunkirk trade moſt, or who ſend moſt ſhips to Dunkirk, are the Spaniards, Portugueſe, Engliſh, Iriſh, Scotch, Dutch, Swedes, Danes, and all the reſt of the north and Baltic ſea.

Spain ſends a diverſity of wines, Campechy wood, currants, and ſeveral Weſt India commodities.

Portugal furniſhes fruits, oils, Brazil tobacco, great cargoes of wines and ſugar.

The merchandiſes imported there from England, are coals, lead, copperas, alum, tin, raw hides and ſkins, leather, and tobacco.

Thoſe from Ireland conſiſt in butter, ſalt beef, tallow, an abundance of raw hides, leather, and pickled ſalmon in caſks. From Scotland ſcarce any thing but coals imported, except pickled ſalmon in caſks.

Theſe three trades are very briſk, and in time of peace more ſhips from theſe three nations are ſeen at Dunkirk than from all other nations together. But it ſhould be remarked, that more ſhips arrive freighted by commiſſion than upon the account of the Dunkirk merchants.

As to the commerce of the Dutch with Dunkirk, it conſiſts in ſo many different kinds of merchandiſe, that it is not poſſible to make an exact enumeration of them; ſo that it is more adviſeable to refer the treating thereof to the article of the Dutch commerce, under the United Provinces.

From Norway to Dunkirk are imported timber, ſpars, planks, and pitch; but not ſo good as that of Sweden.

From Riga, hemp, maſts, iron, ſteel, pitch, wax, corn, cordage, Pruſſia planks, potaſhes, corn, and linſeed.

From Sweden, iron, copper, pitch, and tar.

From Dantzic, corn, potaſhes, ſteel, wool, and leather which comes from Poland and Pruſſia.

Laſtly, from Hamburg, wool, tin, ſtarch, oak planks for ſhips, oats, peaſe, and wheat.

During the wars of Lewis XIV. the Swedes, Danes, and ſome other neutral nations, had all the trade of Dunkirk in their hands; but always with great riſques, upon account of the Oſtend and Zealand privateers who uſually blockaded the entrance, and who, notwithſtanding their neutrality, made prizes of all the ſhips they could ſeize.

Beſides foreign veſſels trading to Dunkirk, ſeveral French ſhips and barks alſo come there, for the moſt part laden with wines, brandies, ſalt, vinegar, prunes, raiſins, honey, and ſyrups: taking in return from thence corn, planks, pitch, little maſts, lead, and hemp.

The ports of France that ſend moſt ſhipping to Dunkirk are Bourdeaux, Nantz, Rochelle, Brouage, Bourneau, St. Martins de Rhe, and ſome other ports of Bretagne and the government of St. Aunis.

Some arrive alſo from Languedoc, and Provence: eſpecially from Marſeilles, which bring to Dunkirk oil, raiſins, anchovies, almonds, aniſe, rice, and all ſorts of Levantine drugs and merchandiſes.

Sometimes the cargo of theſe laſt is compoſed partly of the wines and brandies of Provence and Languedoc; but it is only when the Nantz and Bourdeaux wines and brandies are not good, or in ſufficient quantity.

All the merchandiſes that come from Marſeilles ſell well at Dunkirk; becauſe the merchants there can redistribute them into Ypres, Liſle, Cambray, Valenciennes, Tournay, St. Omers, Artois, and Picardy.

The merchandiſes of Nantz and Bourdeaux ſell well, but not ſo conſiderably; becauſe Calais, Boulogne, and ſome other ports of Picardy, jointly with Dunkirk furniſh the adjacent country with the like commodities.

When corn is ſcarce in Provence, Languedoc, or Spain, the merchants of Dunkirk ſend there great quantities.

They freight alſo for Cadiz ſeveral ſtuffs manufactured chiefly at Liſle: ſome of which are all of wool, others

nixed with ſilk, and others wholly of ſilk, goat, or camels hair. They add to theſe cargoes, linens of various ſorts, eſpecially cambrics.

It is true that the greater part of the ſhips from Dunkirk, for the Spaniſh and Portugal trade, are ſupplied with their cargoes by the merchants of Liſle, and ſome others of the principal towns of French Flanders; the Dunkirk merchants having ſcarce any thing more than the advantage of freight. However, there are ſome who trade upon their own account; but the greater number are freighters, who let their veſſels either by the month, the voyage, or otherwiſe.

The natives of Dunkirk pretend, that the cod-fiſhery formerly flouriſhed there in ſuch a manner as to employ between five and ſix hundred buſſes, with ſeveral thouſands of ſeamen; beſides fifty maſter-coopers, who had each ſeven or eight journeymen to work at caſk-making: but at preſent it is very inconſiderable.

Gravelike, is a port-town, ſituated in 2 deg. 20 min. of E. lon. and 51 deg. of N. lat. 4 miles W. of Dunkirk; which the French were about to fortify after the demolition of Dunkirk; but deſiſted on ſome remonſtrances made on that head by the Britiſh court.

Graveling, is alſo a ſea-port, near the mouth of the river Aa, and the Engliſh channel, 12 miles S. W. of Dunkirk, and 8 miles E. of Calais: but not conſiderable for trade.

The provinces of *Artois* and *Cambreſis* are entirely ſubject to the French. The town of Arras is ſituated in 2 deg. 50 min. of E. lon. and 50 deg. of N. lat. on the river Scarpe, 12 miles S. of Douay, and 20 miles N. W. of Cambray; having both linen and woollen manufactures; but it is chiefly diſtinguiſhed for its tapeſtry, which from this town firſt received the name of Arras.

St. Omers is a town of ſome trade; having a communication with the ſea, by a navigable canal, cut from thence to Graveling: it is ſituated on the river Aa, 20 miles S. of Dunkirk, and 18 S. of Calais. But Aire, St. Venant, Bethune, and Terrouen, are no ways remarkable for trade.

Cambray is ſituated on the river Schelde, near its ſource, in 3 deg. 15 min. of E. lon: and 50 deg. 15 min. of N. lat. 12 miles S. E. of Douay; being conſiderable for its linen manufactory, particularly cambrics, which took their name from hence. But Crevecœur has no trade.

In the province of *Hainault*, the French have the town of Valenciennes, ſituated in 3 deg. 33 min. of E. lon. and 50 deg. 24 min. of N. lat. on the river Schelde, 15 miles S. of Tournay; having conſiderable manufactures of ſilk and fine linen. But Bouchain, Conde, and Landrecy have little trade.

In the province of *Luxemburg*, the French have the towns of Luxemburg, Thionville, and Montmeidy: but without any remarkable trade.

Auſtrian NETHERLANDS. In *Flanders*, the Houſe of Auſtria has ſubject to it, the cities of Ghent and Bruges; with the towns of Oſtend, Neuport, Oudenard, Courtray, Dixmude, Ypres, Tournay, and Menin.

Ghent, or *Gaunt*, is the capital of the earldom of Flanders, being the largeſt city of the Netherlands, and little inferior to the largeſt towns in Europe. Its ſituation is in 3 deg. 36 min. of E. lon. and 51 deg. of N. lat. on four navigable rivers, the Schelde, the Lys, the Lieue, and the Mourwater, 30 miles N. W. of Bruſſels: being very commodious for commerce, upon account of the many canals that from all ſides of Flanders, Brabant, Zealand, and the ſea, empty themſelves into it.

It is 12 miles in circumference, being divided into 26 lands, by the rivers and canals which run throught it; over which are laid 100 bridges.

The principal merchandiſes brought from thence are corn, flax, hemp, and colzat, a kind of red cabbage, affording the rape-ſeed; of which laſt the trade is very conſiderable, and of great profit to this town.

Its threads and lace are almoſt as beautiful as thoſe of Mechlin: it has alſo ſeveral linen manufactures, and ſome of woollen ſtuffs.

The merchandiſes proper for this town are the ſame as for Antwerp; which are enumerated below.

Ghent is one of the three cities of the Auſtrian Netherlands, where the directors of the Oſtend company were to reſide every three years.

Bruges, is ſituated in 3 deg. 5 min. of E. lon. and 51 deg. 16 min. of N. lat. 11 miles E. of Oſtend, and 24 N. W. of Ghent. This town is one of the moſt mercantile places of all the Auſtrian Netherlands; and, with Oſtend and Ghent, was ſet apart for the reſidence of the directors of the Oſtend company.

It has a navigable canal which brings up the ſhipping from Oſtend; and it was once the ſtaple for Engliſh wool.

The commodiouſneſs of the canals that facilitate the communication of Bruges with Oſtend, is the reaſon that its merchants have bent the ſtreſs of their trade towards the ſea; tho' they alſo carry on a very conſiderable one by land.

Its port is at the end of the canal which comes from Oſtend; and the baſon where the canal terminates is ſo great, that it might very well contain upwards of a hundred merchant ſhips.

At Bruges, and in its neighbourhood, great parcels of beautiful linens, that paſs for hollands, are ſold in a market held weekly upon the arches of the town-houſe or guildhall.

It is in the ſquare before this town-houſe that almoſt all the warehouſes are erected for Spaniſh and Engliſh wool, Italian ſilks, cotton, and other materials, which ſerve to ſupport the manufactures of this important city.

The ſtuffs manufactured there are for the moſt part ſerges and camblets, for the uſe of Spain, and the Spaniſh Weſt Indies.

Bruges lace paſſes for that of Mechlin; being ſold on the ſame footing. And corn is a conſiderable article of its trade.

The imported merchandiſes are much of the ſame nature with thoſe proper for the other towns of Brabant and Flanders, which are mentioned below.

Oſtend, is ſituated in 2 deg. 45 min. of E. lon. and 51 deg. 15 min. of N. lat. 12 miles W. of Bruges. The ſituation of this town, which is the only conſiderable port of the Auſtrian Netherlands on the ocean, is very commodious for maintaining a conſiderable commerce. The tide which comes up to the little river Geule, at the mouth of which it is ſituated, brings up the largeſt ſhips to the midſt of its incloſure, where they ride entirely ſafe in the two ports formed there by the waters of the river, and the ſea.

It is by the merchant ſhips equipped in Oſtend that the greater part of the other towns of Flanders, and Brabant, ceded to the Emperor by the treaty of Raſtadt, particularly Antwerp, Bruges, and Ghent, carry on their maritime commerce.

Before this treaty, the merchants of Oſtend contented themſelves with ſending their ſhipping into the different ports of Spain; among others, to St. Sebaſtians and Bilboa; from whence they brought wool, iron, and ſome other commodities of the growth of Spain.

This is eſteemed one of the ſtrongeſt towns in Flanders, and is the beſt harbour on that coaſt, tho' the town is not large. The late Emperor Charles VI. intended to eſtabliſh an Eaſt India company here: but was obliged to relinquiſh his deſign by the Engliſh and Dutch.

Neuport, is a port-town, ſituated 9 miles S. W. of Oſtend, and 16 N. E. of Dunkirk: but it has little trade. Ypres has ſome ſilk and woollen manufactures. Menin has a manufacture of linen, and another of hats; beſides a bleach-yard for thread. Tournay has a manufacture for woollen ſtockings, aud earthen ware. But the other places for trade are very inconſiderable.

In the province of *Hainault*, the towns of Mons, Aeth, and Enguien, are ſubject to the Houſe of Auſtria. Mons is ſituated 26 miles S. W. of Bruſſels, and 22 S. E. of Tournay, upon the confluence of the rivers Haine and Trouille; and Aeth is ſituated on the Dender, 12 miles N. W. of Mons: but neither of them are remarkable for

trade; though the province is productive of many things fit for commerce; particularly iron, coal, glaſs, linens, lace, earthen-ware, flax, hops, corn, bark for tanning, fire-wood, butter, and cheeſe.

The province of *Namur* is entirely ſubject to the Houſe of Auſtria; containing the towns of Namur and Charleroy, which have little trade.

In the provinces of *Luxemburg* and *Limburg*, two towns of the ſame name are ſubject to the Houſe of Auſtria, but are of no conſequence in trade; though the provinces have good arable and paſture land, with plenty of wood, and ſome of the beſt iron mines in the Netherlands.

The provinces of *Antwerp* and *Mechlin* are ſubject to the Houſe of Auſtria, being ſurrounded by Brabant.

Antwerp is the capital of that part of the Netherlands, called the marquiſate of the Holy Empire, ſituated in 4 deg. 15 min. of E. lon. and 51 deg. 15 min. of N. lat. on the eaſtern ſhore of the Schelde, 25 miles N. of Bruſſels, and as many N. E. of Ghent.

This city is built in form of a creſcent upon the river, which is 22 feet deep, and 400 yards wide; ſo that veſſels of great burthen come up to the key; and canals are cut through the town from the river, which bring up the leſſer veſſels to their doors. Two hundred years ago, Antwerp was the greateſt port and place of trade in Europe; but this trade is now removed to Amſterdam, and other towns in Holland; the Dutch having built forts at the mouth of the Schelde, and ruined the trade of this city.

The ſuperb houſe of the Eaſterlings is a remarkable inſtance of the extent of the former commerce of Antwerp: and the remains of the great warehouſe, ſtill to be ſeen there, will be an eternal monument of the grandeur of a trade, which, divided as it now is, was the riſe, and is ſtill the ſupport, of Amſterdam, Rotterdam, and ſome other trading places in the United Provinces. See *United* Provinces.

Several free fairs are held at Antwerp, which bring merchants there from all parts of the world: the principal of which are, that of Whitſuntide, and that between the feaſt of St. Remigius and St. Bavon.

The bleach-yards eſtabliſhed in the neighbourhood of Antwerp are in ſuch great eſteem, that linens are ſent there to be bleached from the remoteſt parts of the Auſtrian Netherlands.

The Antwerp manufactures of tapeſtry are in ſome reputation; ſo is alſo the art of printing, but much degenerated ſince the time of the famous Plantin.

The chief of all the manufactures eſtabliſhed at Antwerp, and which principally ſupports its commerce, is that of thread-lace, made in imitation of Mechlin lace. Great quantities of this lace are yearly bought up by the French and Dutch; as well as threads of all kinds, which are ſpun excellently in that town and neighbourhood.

The merchandiſes ſent by ſtrangers there, eſpecially by the French and Dutch, and which ſell beſt, are all ſorts of gold, ſilver, and ſilk ſtuffs; cloths, and woollen ſtuffs; grocery-wares, potaſhes, wines and brandies; French, Spaniſh, and Portugueſe ſalts; herrings, and ſtock-fiſh; olive, train, and linſeed oils; callicoes, and muſlins; refined ſugar, and molaſſes.

The city of Mechlin, or Malines, is ſituated in 4 deg. 22 min. of E. lon. and 51 deg. 10 min. of N. lat. on the rivers Dyle and Demer, which unite before they reach this city. It ſtands 12 miles N. E. of Bruſſels, 11 N.W. of Louvain, and 13 S. E. of Antwerp; being a large well built city, conſiſting of ſeveral iſlands, made by the branches of the Dyle, or canals, over which are built a great many bridges. It is remarkable for its manufactures of lace and thread; as alſo of gilt-leather: beſides, it is famous for old ſtrong beer, with which they ſerve the other provinces. But its importations are much the ſame with thoſe of Amſterdam.

In the province of *Brabant*, there are ſubject to the Houſe of Auſtria, the city of Bruſſels, with the towns of Louvain, Vilvorden, and Landen. Bruſſels is ſituated in 4 deg. 6 min. of E. lon. and 50 deg. 50 min. of N. lat. on the river Senne, 25 miles S. of Antwerp, and 30 S. E. of Ghent: it is the reſidence of the Auſtrian governor of the Low Countries; and its commerce is much the ſame with that of Antwerp. Louvain is ſituated on the river Dyle, 15 miles N. of Bruſſels, and 12 S. E. Mechlin; having been very conſiderable for its manufactures, and has ſtill a good trade in fine linen: but at preſent it is moſt conſiderable for its univerſity, which contains 43 colleges. But Vilvorden, and Landen, have no trade.

The Dutch NETHERLANDS. In *Flanders* the Dutch have the towns of Sluys, Axel, Hulſt, and Sas Van Ghent. Sluys is ſituated in 3 deg. 15 min. of E. lon. and 51 deg. 18. min. of N. lat. oppoſite to the iſland of Cadſant, 10 miles N. E. of Bruges, and 21 N. W. of Ghent; but neither this, nor any of the other towns are remarkable for trade.

In the province of *Limburg*, the Dutch have the towns of Dalem and Franquemont, or Valkenburg; which are of no conſequence in trade.

In the province of *Brabant*, the Dutch are in the poſſeſſion of the towns of Boiſleduc, Breda, Bergen-op-zoom, Maeſtricht, Grave, Lillo, and Steenbergen; none of any of theſe remarkable for trade; being conſidered only as fortified places, given to the Dutch as a barrier against the French.

Dr. Davenant ſays, that the balance between Great Britain and the Netherlands, is much in favour of the former; but he muſt have been miſtaken; as the Britiſh merchants export broad cloth, druggets, long-ells, flannels, ſtuffs, ſugar, tobacco, tin, and lead, to the Netherlands: from whence they receive fine cambrics, linens, lawns, lace, linen thread, and tapes, to a very great value; which are all articles of luxury, and make the balance very much againſt Britain.

NEVEL. A ſmall Indian coin of baſe alloy, uſed on the Coromandel coaſt, 8 or 9 of which make the fanam, and 15 fanams the pagoda, or 7 s. and 8 d. ſterling.

NEVIS. One of the Caribbee iſlands, ſituated N. W. of Guadalupe, in 62 deg. of W. lon. and 17 deg. 10 min. of N. lat. See *Britiſh* America.

NEUTRAL *Iſlands*. See *Caribbee* Iſlands.

NEW-BRITAIN. See *Britiſh* America.

NEWCASTLE. A town of Northumberland, on the river Tine, famous for its coal pits, ſituated in 1 deg. 10 min. of W. lon. and 55 deg. of N. lat.

NEW-ENGLAND. See *Britiſh* America.

NEWFIDLER *Sea*. A lake on the N. W. of Upper Hungary, 35 miles long.

NEW-FOREST. A part of Hampſhire, ſituated on the Engliſh channel, oppoſite to the Iſle of Wight; appropriated for the growth of oaks to build the royal navy, by act of parliament.

NEWFOUNDLAND. See *Britiſh* America.

NEW-*Guinea*. See *Papous Terra*.

NEW-*Holland*. An unknown country, S. of the Oriental iſlands, to which the Dutch have given this name, but planted no colonies in it.

NEWPORT, or *Neuport*. A port-town of the Auſtrian Netherlands, ſituated in 2 deg. 40 min, of E. lon. and 51 deg. 18 min. of N. lat. See *Netherlands*.

NEWPORT-*town*, is a maritime town of Natolia, in Turky, about 16 leagues diſtant from Smyrna. See *Turky*.

NEW-*River Company*. See *Water*-works.

NEWSOL. A town of Upper Hungary, ſituated 50 miles N. E. of Newhauſel, and 10 miles N. of Chremnitz, conſiderable for its copper mines, which are the richeſt in Hungary; ſilver being frequently extracted from them.

NEWS-*papers*, are periodical printed papers, either publiſhed by authority of ſtates for the intelligence of the people, or printed by private perſons for their own emolument. Theſe papers are now of great ſervice to the trading world, particularly in the Britiſh dominions, where they are the beſt channels of information between buyers and ſellers, who advertiſe what they want to buy or ſell. Theſe papers employ many hands in the printing buſineſs, conſume great quantities of paper, and contribute largely to the public revenue by the ſtamp and advertiſement duties to which they are ſubjected. See *Duty*.

Gazettes are the authoriſed news-papers of moſt countries, particularly of England and Ireland. The London Gazette, and ſeveral other news papers, are publiſhed in Lon-

London; at York, Briſtol, Norwich, Exeter, Reading, and Newcaſtle, two at each place; at Glouceſter, Worceſter, Northampton, Stamford, Nottingham, Cheſter, Derby, Ipſwich, Leeds, Canterbury, Kendal, Colcheſter, Sherborne, Birmingham, and Oxford, one in each place. At Edinburgh two; and at Dublin four, beſides the Dublin gazette.

NEW-*York*. See *Britiſh* America.

NEXIA. A Daniſh town, on the iſland of Bornholm. See *Denmark*.

NICARAGUA *Lake*, and river, runs thro' the middle of the province of Nicaragua in Spaniſh America; the weſt end lying within 5 leagues of the South Sea, and the river which runs from it falls into the North ſea; but there are ſuch terrible cataracts, or waterfalls, in the river, that it is not navigable in many places.

NICARIA. One of the Turkiſh Aſiatic iſlands in the Archipelago, ſituated in 26 deg. of E. lon. and 37 deg. of N. lat.

NICHOLAS, *St.* A port-town of Ruſſia, in the province of Dwina, ſituated on the White ſea, in 41 deg. of E. lon. and 64 deg. of N. lat.

NICHOLAS, *St.* See Cape *Verd* Iſlands.

NICOBAR *Iſlands*, are ſituated in the Indian ocean, between the iſland of Sumatra, and the Andoman iſlands, at the entrance of the bay of Bengal, 300 miles W. of the further peninſula of India, between 92 and 94 deg. of E. lon. and between 7 and 10 deg. of N. lat. The largeſt of theſe iſlands, which gives name to the reſt, and lies fartheſt ſouth, is 40 miles long, and 15 broad. The natives are of a tawny complexion, and live in little huts, having no towns, and go almoſt naked. Their country is covered with wood; producing no corn; but they have a fruit which they boil, and eat inſtead of bread. They have alſo cocoa nuts, plantains, and other tropical fruit, on which they live, with the fiſh they take; but ſeem to ſlight fleſh, though they have hogs and poultry enough, which they ſell to ſuch ſhips as touch here: and yet theſe people, as well as their neighbours of the Andoman iſlands, were reported to be Canibals, when the Europeans firſt viſited them. The natives, in return for the proviſions they furniſh ſhips with, take iron, tobacco, and linen: but they ſeem to have no commerce with the adjacent continent; nor do they appear to be of any of the ſects of religion among the Indians, as they have no images or temples, and ſeem to worſhip the moon.

NICOMEDIA. A city of Aſiatic Turky, ſituated at the bottom of a bay of the ſea of Propontis, in 39 deg. of E. lon. and 41 deg. 20 min. of N. lat.

NICOPOLIS. A port-town of Turky, 300 miles diſtant from Conſtantinople.

NICOPPING. Capital of the iſland of Hulſter in the Baltic, ſituated in 10 deg. of E. lon. and 55 deg. of N. lat. ſubject to Denmark.

NICOSIA. Capital of the iſland of Cyprus, ſituated in 35 deg. of E. lon. and 35 deg. of N. lat.

NICOTERA. A port-town of Italy, in the kingdom of Naples, ſituated on the Tuſcan ſea, in 16 deg. 14 min. of E. lon. and 38 deg. 50 min. of N. lat.

NICOTIANA, or *Herba Nicotiana*, a term given to tobacco, from Nicot the French ambaſſador at the court of Portugal, who firſt ſent it into France in 1560, and gave it his own name, as he ſays in his dictionary. See *Tobacco*.

NICOYA, or *St. Lucar*. A port-town of Mexico in the province of Coſta Rica, ſituated on a bay of the South Sea, in 88 deg. of W. lon. and 10 deg. 15 min. of N. lat.

NIEMEN, or *Berezina*. A river of Poland, which riſes in Lithuania, and runs weſt by Novogorod; then, turning north, paſſes by Grodno and Kowno, where it joins the Wilia; and then running weſt, falls into a bay of the Baltic ſea, near Memel.

NIEPER, or *Boriſthenes*. A river which riſes in the middle of Muſcovy; runs weſt by Smolenſko; then running ſouth through Poland, paſſes by Mogilof, or Mohilow; after which it enters the Ruſſian Ukrain, paſſes by Kiof and Circaſſia, and continues its courſe S. E. and ſeparates little Tartary from Budziac Tartary, falling into the Baltic ſea near Oczakow. The old Coſſacks inhabit the banks and iſlands of this river, who frequently croſs the Black ſea, and plunder the maritime places of the coaſt of Turky.

NIESTER. A river riſing near Lemburg in Poland, and running S. E. divides Podolia in Poland from Moldavia in Turky; it afterwards divides Beſſarabia from Budziac Tartary, and falls into the Black ſea near Belgorod.

NIGELLA *Romana*, or *Papaver Nigrum*, a medicinal ſeed, and plant, whoſe greateſt uſe is for the killing of worms in the human body.

There are two kinds of nigellas; that of the gardens, and the wild one: the one white, or grey; and the other black. The garden nigella ſprouts up to about the height of two feet; its leaves are green, ſmall, interſected, and pretty thin; its flower, like that of groundſel, is in the form of a ſtar inclining to a blue, and the ſeed in its pod is longiſh, grey coloured, of a ſharp taſte, ſtrong ſmell, and ſomewhat aromatic.

Wild nigella has ſmaller leaves, more interſected and diſheveled than that of the gardens; but like it in all other reſpects.

The red flowers growing among corn, and reſembling a roſe, make a third kind of nigella; but they have not the medicinal qualities of the two others.

The beſt of all is the Italian nigella; which muſt be choſen new, plump, of a beautiful yellow colour, and as aromatic as poſſible both in taſte and ſmell.

NIGER. A great river of Africa, whoſe ſource is uncertain: it runs from E. to W. through the middle of Nigritia, diſcharging itſelf into the Atlantic ocean, by three channels; the moſt ſoutherly called Rio Grande, that in the middle the Gambia, and that on the north the river Senega. It is 300 miles between the northern and ſouthern channels, and all the low country between them is annually overflowed, at the latter end of the ſummer, as Egypt is by the river Nile, much about the ſame time; both proceeding from the periodical rains, which fall within the tropics. But that all the three branches proceed from one river, is mere conjecture; for they may be three different rivers. However, near the mouth of them, the Portugueſe, Engliſh, and French, have ſeveral factories and ſettlements, where they traffic with the natives for ſlaves, gold, ivory, gum-ſenega, wax, and other drugs. See *Guinea*.

NIGRITIA. See *Guinea*.

NILE. A great river of Egypt in Africa, which has its ſource in Abyſſinia, or the Upper Ethiopia, in 12 deg. of N. lat. It runs generally from S. to N. thro' Abyſſinia into Egypt, and then continues its courſe N. in one ſtream, till it comes below Cairo to the Delta, where it divides; one branch diſcharging itſelf into the Mediterranean at Damieta, and the other 100 miles to the weſtward of it at Roſetta. In the upper part of the ſtream, we have been told, there are dreadful cataracts, where the water falls in ſheets, from high precipices; but later travellers of credit, of our own nation, aſſure us, there are no ſuch cataracts, only ſome rocks, which indeed hinder navigation; but the water falls not in ſheets from high hills, or precipices, as was currently reported by the antients and moderns till very lately. It runs, as is obſerved, thro' the hilly country of Upper Egypt, with greater rapidity than it does thro' the Delta, or Lower Egypt, where the country is level; which is the caſe of many other rivers. There are great rejoicings every year when the Nile riſes to a certain height; their future harveſt depending on it. The juſt height of the inundation, according to Pliny, is 16 cubits; when it riſes 12 or 13 a famine is expected, and when it exceeds 16 danger is apprehended; the cubit being 17 ½ inches. The moderns are not exactly agreed with the ancients about the height of the inundation; but there is no great difference in their accounts: the river begins to riſe uſually in May or June; and there ſtands a pillar on an iſland oppoſite to old Cairo, divided into picks, a meaſure of about 2 feet, to obſerve how much it riſes; and when it is high enough, the khalis, or great canal, is cut, from whence it is conveyed into other reſervoirs and ciſterns to be diſtributed to their fields and gardens as they want it. As to the Delta, or

Lower

Lower Egypt, it is all overflowed; ſo that there needs no art to carry it into their fields. This part of the country is therefore always ſowed with rice, which grows in water; and their towns, ſtanding on little eminences, during the flood appear like ſo many iſlands. This overflowing of the Nile is occaſioned by the periodical rains, which annually fall within the tropics, where the ſource of the Nile is; and the flood is greatly increaſed by the nature of the country of Abyſſinia where it riſes, which is full of high mountains, from whence the waters ſhoot in torrents, and ſwell the river beyond its uſual bounds.

NILLAS. A ſtuff made of bark, mixed with ſilk, which comes from the Eaſt Indies.

NIMPO. A city and port-town of China, in the province of Chekiam, ſituated in 122 deg. of E. lon. and 30 deg. of N. lat. See *China*.

NIO. A ſmall Turkiſh iſland in the Archipelago, ſituated N. W. of Santorini.

NIOU. One of the Siameſe long meaſures, being about an inch.

NIPHON. The largeſt of the iſlands of Japan. See *Japan*.

NIPPERKIN. A half-pint meaſure, uſed in England for wine and ale.

NIPPERS, in a ſhip, are ſmall ropes, uſed to hold off the cable from the capſtan.

NIPSII. A river of North Jutland, which falls into the German ocean a little below Ripen.

NISAN. A medicinal root much eſteemed in China, and ſold there for 65 l. ſterling the pound; being reputed ſovereign in ſeveral diſorders, particularly in faintings.

NISMES. A city of France, ſituated in 4 deg. 26 min. of E. lon. and 43 deg. 40 min. of N. lat. See *France*.

NITRE, or *Saltpetre*, in natural hiſtory, a ſulphureous, inflammable, bitter ſort of ſalt; thus called by the antients from Nitria, a province in Egypt, where it was found in great abundance.

By the moderns it is uſually called ſaltpetre; who differ as to the point, whether our ſaltpetre is the nitre of the antients, moſt holding the antient nitre to be a mineral or foſſil; whereas our ſaltpetre is in great meaſure artificial. See *Saltpetre*.

Nitre is an acid ſalt, impregnated with abundance of ſpirits out of the air, which render it volatile; being generally taken from among the ſtones and earth of old ruined buildings, cellars, and moiſt places.

The chief virtue the antients aſcribe to their nitre, is that of drying, deterging, and attenuating; and as ſuch it was uſed in ulcers, diſorders of the eyes, the itch, the bites of ſerpents, and other diſorders. They alſo took it inwardly, to reſolve and attenuate viſcid humours; but they were unacquainted with its cooling quality, which is ſo much eſteemed by modern phyſicians. It is alſo found excellent in diſeaſes of the heart, accompanied with a propenſity to vomit.

Spirit of NITRE, is an acid and corroſive liquor, extracted from nitre or ſaltpetre; being of uſe for the diſſolution of metals, and a good remedy againſt the ſtrangury.

Spirit of NITRE *dulcified*, or *ſweet ſpirit of* NITRE, is uſed as a remedy for the wind cholic, hyſterical diſtempers, and obſtructions. It is ſometimes effectual againſt vapours, which it will diſſipate in a moment; the doſe being from 4 to 8 drops in broth, or ſome other convenient liquor.

NIVELLE. A town of the Netherlands, in ſome reputation for its cambric manufacture, ſituated in 4 deg. 16 min. of E. lon. and 50 deg. 40 min. of N. lat.

NOBLE. Formerly an Engliſh money of accompt, being 6 s. 8 d. though it was alſo a real coin, under the denomination of *roſe noble*: however, authors obſerve, that there has not been any piece of gold or ſilver of this name coined ſince 9th Henry V. and they were firſt coined by Edward III. in 1334.

The noble contained 80 d. the ſame with the preſent money of accompt. Its half was called *obolus*, containing 40 d. and its fourth part the *quadrans*, or farthing, in thoſe days 20 d.

NOGAIAN *Tartars*. A nation inhabiting that part of Turky, which lies between the Palus Meotis and the Caſpian ſea. See *Tartary*.

NON *Cape*, or *Cape Non*. A promontory on the weſt coaſt of Africa, over againſt the Canary iſles.

NONA. A port-town of Venetian Dalmatia, ſituated on the gulph of Venice, in 16 deg. 35 min. of E. lon. and 44 deg. 25 min. of N. lat.

NOOK, or *Creek*. See *Port*.

NORDEN. A port-town of Germany, in the circle of Weſtphalia, ſituated in 6 deg. 30 min. of E. lon. and 53 deg. 40 min. of N. lat.

NORTH. One of the four cardinal points of the horizon, being that interſection of the horizon and meridian which is neareſt our pole.

NORTH *Cape*. A promontory on the iſland of Maggere, in the province of Wardhuys, in Norway, ſituated 100 miles N. W. of Wardhuys, and 500 miles N. E. of Drontheim; being the moſt northern point or promontory in Europe.

NORTH *companies*.

The Engliſh Hamburg company, is one of the moſt antient eſtabliſhments of any trading company in England; though it has not always been known by this name, nor confined within ſuch narrow limits as it is at preſent. It was firſt called "The company of merchants trading "to Calais, Holland, Zealand, Brabant, Flanders, and "other adjacent countries:" afterwards it received the general name of "Engliſh merchant-adventurers," as compoſed of all the Engliſh merchants trading in the Germanic ocean, the Low countries, and the Baltic ſea: laſtly, it was called "The company of Engliſh merchant-adven-"turers trading to Hamburg;" which appellation it retained, becauſe Hamburg at preſent is the ſole object of its commerce.

This company is not a ſociety of ſeveral traders, who furniſh each a part of the ſums that compoſe the capital fund of the company; but rather a ſimple aſſociation, or a body of merchants, who have nothing common but the authority and privilege of trading to Hamburg, and ſome other towns of Germany; each perſon otherwiſe carrying on his peculiar trade, and upon his own account; obſerving notwithſtanding certain regulations made by the company.

The firſt charter for the eſtabliſhment of the Hamburg company, was dated the 5th of February 1406, in the reign of Henry IV. which was afterwards confirmed and augmented with ſeveral privileges by the ſucceeding monarchs; among others, by Henry V. in 1413; by Henry VI. in 1422; by Henry VII. in 1493, 1505, 1506; by Henry VIII. in 1509, 1517, and 1531; by Edward VI. in 1547; by Mary in 1553; by Elizabeth in 1564 and 1586; by James I. in 1605, and by Charles II. in 1661.

From among theſe charters there are none properly but thoſe of Henry IV. Henry VII. Elizabeth, James I. and Charles II. that ſhew a face of importance, and grant ſomething new to this company; the others being only ſimple confirmations; wherefore it is from theſe five only that it is proper to extract the regulations and privileges of this company.

Before the charter of Henry IV. all Engliſh merchants trading out of the kingdom, behaved in their commerce with ſtrangers as they thought ſuited beſt their intereſts without any attention, either for the particular good of other traders, or the general advantage of the nation; which very often prejudiced both, and diſcredited the Engliſh trade.

Henry IV. having notice of this diſorder, thought to remedy it, by uniting in one body all the merchants of his ſtates; wherein, without loſing the liberty of trading in particular, and upon their own account, they might be governed by a company always ſubſiſting, and ſubjected to regulations that would preſerve the reputation of the general commerce of the nation, and not prejudice the intereſt of particulars.

For the execution of this project, he allowed the Engliſh merchants, and eſpecially thoſe of Calais, then ſubject to England, to form a political body; to have directors and governors, either in England or foreign countries; to hold aſſemblies, either for the management of trade, or to judge cauſes among merchants; to enact laws and regu-

lations;

lations; to punish by fine, or otherwise, all delinquents; and to impose small taxes upon the merchants and merchandise, to be employed for the common advantage of the association.

These few articles, which the charter of Henry IV. contained, were greatly augmented by that of Henry VII. as follows.

1. It was mentioned, that the associates of this company should be called, "The company of merchant-adventu-"turers trading to Calais, Holland, Zealand, Brabant, "Flanders, and other places beyond sea."

2. That they should be allowed to assemble at Calais, or elsewhere; and to nominate in this assembly, by a majority of voices, one or more governors, and 24 directors, who were to regulate and govern the company, pursuant to the laws and regulations agreed upon by the said governors and directors.

3. That nothing should be regulated and decided in the assemblies, unless they were composed of 13 directors, and the governor, or his deputy.

4. That he who was nominated director, and refused to discharge the office, should pay 20 l. sterling, one moiety to the King, and the other to the company.

5. That the governors and directors might levy small imposts, and impose certain fines; and for their receipts, might have a receiver, who should be accomptable only to the company.

6. That they should be empowered to publish and proclaim the free fairs of Calais; and even to prolong them for fifteen days, if they judged convenient.

7. That to enter into the company, and to be reputed a member thereof, 20 marcs sterling *per* head, according to act of parliament, must be paid.

8. That the members of the company, with its permission, might go into all the states and foreign countries not included in its concession, so that they were allies of England.

9. That the company should be allowed to make choice in Calais of measurers, porters, packers, and folders, for the taking care of the merchandise; and that these measurers, &c. should be entirely dependent on the company.

10. And lastly, That merchant-adventurers, members of this society, should be obliged to be present at the general assemblies held by the governors or directors, either at London, Calais, or elsewhere.

The want of executing this last article, and an opposition to several others, occasioning much trouble and delay in the company's affairs, the governors and directors obtained a new charter, whereby the penalty of imprisonment was ordained, both against those who should not be at the assemblies without just reasons to the contrary, and those who should infringe the laws and regulations therein enacted.

It is not necessary to speak here of the free fairs which Henry VII. established at Calais in 1493, the direction whereof, by the 6th article of the preceding charter, was given to the merchant-adventurers, because they only subsisted during the time this city was possessed by the English.

The governors and directors of the company having, in 1564, presented a request to Queen Elizabeth, for the explanation and interpretation of some articles of the charter of Henry VII. and the confirmation of all the others granted before, this princess, by a charter of the same year, declared,

1. That, to clear up all ambiguities, and prevent all contestations with regard to the said charter, she incorporated the company anew; which should be for the future called and incorporated by the name of "The assisting "governors, and the society of English merchant-ad-"venturers."

2. That the company should be directed by a governor, and 24 assistants; who sh uld be for life, but might be removed for a just and reasonable cause.

3. That all the English who had been members of the said society, should continue to be acknowledged as such.

4. That the sons of merchants, or those who were entitled by apprenticeship, might be also admitted, and made members of the said corporation, if required.

5. That the company should have a common seal.

6. That the governor and assistants assembled in any committee, or at least 13 from among them, might admit into their society all such persons as they should judge necessary, in such form, and on such conditions, distinctions, and diversity of franchise, as they should think expedient to grant them.

7. That all members of the society might be excluded, in case of ill conduct, by the governors and assistants, assembled at least to the number of 20.

8. That the city of Hamburg, the adjacent places, and East Frizeland, should be reputed the company's concession, as well as the cities of Holland, Zealand, Brabant, and Flanders, which always were, though they had not been specified in the preceding charters.

9. That the governors and assistants should hear and determine all disputes and causes between the members of the company, throughout the whole extent of its concession.

10. That the governors or deputies might appoint and call general assemblies, both in England, and in the towns of the states beyond sea where the company was established.

11. That no member of the company should marry out of England, or the states thereon depending; nor acquire any lands, funds, and inheritances, in all the towns and places beyond sea, which were not subject to the English; and that those who should do so, should be deprived of all their privileges, and excluded the society.

12. That the governors and directors assembled, at least to the number of 13, might enact and establish all kinds of new laws, confirm or annul old ones, and make them to be observed throughout the whole extent of their concession, by all merchant-adventurers, members of the company, who should trade in these places with the company's leave; provided they were not contrary to the laws of England, and that they no ways prejudiced either the rights of state, or the royal prerogative.

13. That the judgments made for the execution of the said laws, should be executed without appeal; with a prohibition to all masters, bailiffs, sheriffs, constables, and justices, to take cognisance thereof; who, on the contrary, should lend all aid and assistance for their full accomplishment: they even should be obliged to receive into their prisons the prisoners sent there by the company's governors and assistants.

14. That the company should make choice of one or more receivers of fines, established in the places thought most convenient; which receivers, in default of the payment of the said fines by those condemned thereunto, might prosecute them, in all just and necessary ways, till an entire satisfaction was made.

15. That the company might chuse, for the care and removal of merchandises, such a number of measurers, packers, and porters, as should be thought sufficient.

16. That the company should enjoy, both in England, and the countries beyond sea specified for its commerce, all the rights, privileges, liberties, pre-eminencies, immunities, authorities, jurisdictions, customs, benefices, advantages, and other things comprised, specified, declared, and granted, either by the charters of the Kings of England, or by any prince or foreign potentate, in whose states the said places were situated, wherein the said company was allowed to carry on its trade.

17. That her Majesty however reserved to herself the power to revoke and annul the present charter by other letters-patent, addressed to the governors and assistants of the said company.

Twenty-two years after this first charter, Queen Elizabeth granted the company a second; whereby, after having confirmed and ratified anew all the old ones, she gave it an exclusive privilege in all the places of its concession; forbidding all other English merchants, not members thereof, to exercise any traffic therein.

The company was also, by this charter, allowed to institute, in each town of its concession, a council, composed of a governor, and a competent number of assistants, chosen from among the members of the society, to take cognisance of the causes, and determine disputes in matters of commerce arising among the associates.

Laſtly, there was another privilege granted by this ſecond charter of Elizabeth, to import, excluſive of others, wherever the company has a right to trade, all kinds of cloths, ſerges, and other ſtuffs of wool manufactured in England; with a prohibition, notwithſtanding, of exporting any of the ſaid merchandiſes, whoſe exportation was not allowed by the laws of the kingdom, unleſs the merchant-adventurers of the ſaid company obtained an expreſs permiſſion by writing for that purpoſe.

Since this privilege was granted to the company, cloths and other woollen manufactures became one of the principal objects of its commerce; but not without ſome trouble in the following reign, by the eſtabliſhment of a ſociety called "The company of merchant-adventurers of "the new London trade;" which James I. incorporated in 1606, in favour of ſeveral private perſons, who propoſed to eſtabliſh at London a manufacture for the dying of cloths, and ways for dreſſing them; under which pretext, to give the new company a greater vent for their cloths, he prohibited the Engliſh merchant-adventurers to carry on their commerce.

Happily for the latter, the project proved abortive; the charter was repealed two years after; and, to re-eſtabliſh the adventurers in their antient privileges, James I. granted them another charter, dated the 28th of January 1618, whereby he not only fully reinſtated them in their excluſive right for the ſale of woollen manufactures, ſuch as cloths, ſerges, frizes, ſtockings, &c. in Germany, the Low Countries, Hamburg, and Eaſt and Weſt Frizeland; but alſo allowed them to keep clerks in all the cuſtomhouſes of England, to take care that their trade of woollen manufactures was not prejudiced, under the pretext of the trade of the like merchandiſes allowed to the Engliſh in France, Spain, ſome places of the North, and other foreign countries.

The charter of James I. was the laſt of thoſe which Charles II. repealed, and confirmed in his great charter of the firſt of January 1661.

The revolutions in the Low Countries towards the end of the ſixteenth century, which laid the foundations of the famous Dutch republic, having prevented the Engliſh company from continuing its commerce there with as much liberty as before, the company was obliged to trade only to Hamburg, and the towns on the Germanic ocean. This by degrees accuſtomed people to give it the appellation of the *Hamburg company*, which it ſtill preſerves; though, in all the ſubſequent charters, it was called by the antient name of the Engliſh merchant-adventurers; which was obſerved perhaps to retain ſome uniformity between the charters that granted its privileges, and thoſe that confirmed them.

The Engliſh Ruſſia company. This company was projected towards the end of the reign of Edward VI. and was executed in the 2d year of the reign of Philip and Mary; but was not brought to a full perfection till the year 1566, when the charter was confirmed by an act of parliament.

Some Engliſh adventurers, who ſet out to diſcover new countries, and who pretended to find a paſſage to China by the north, having advanced as far as the White ſea, and arrived at the port of Archangel, where they had a good reception from the Muſcovites, requeſted, when they returned to England, letters-patent for the Ruſſian commerce, for which they had formed an aſſociation.

The charter was promiſed by Edward VI. but the death of this young prince having hindered his ſigning it, his ſiſter Queen Mary, who had juſt married Philip of Spain, completed it the 26th February 1555.

By this charter the company was incorporated by the name of "The merchant-adventurers, for the diſcovery "of lands, territories, iſlands, ſtates, and dominions un-"known, and never frequented before they had ha-"zarded themſelves, or undertaken their diſcovery by "ſea."

Their privileges were, to have a governor, 4 conſuls, and 24 aſſiſtants, for the direction of their commerce; as alſo to enact by-laws; to admit into the ſociety as many perſons as the directors ſhould judge convenient; to puniſh by fines, or otherwiſe, any contravention to the regulations; to have officers for enforcing the payment of the ſaid fines, ſeizures, and confiſcations; to ſend ſhips for diſcovering new countries, and for eſtabliſhing a commerce therein; to take poſſeſſion of the new-diſcovered countries in their Majeſties names; and laſtly, to trade by an excluſive privilege to Archangel, and the other ports of Muſcovy not as yet frequented by the Engliſh. It is unneceſſary to enter into more particulars of the privileges granted the Ruſſia company by the charter of Philip and Mary; becauſe they were augmented and confirmed by an act of parliament made in the 8th year of Queen Elizabeth. It explains firſt the motives whereby three ſhips were equipped towards the end of the reign of Edward VI. the ſucceſs of the adventurers who commanded them, and the expediting of the letters promiſed them, which could not be ſigned before the demiſe of this prince: and having afterwards ſuccinctly related a part of the rights, powers, juriſdictions, privileges, franchiſes, and liberties, granted the new Ruſſia company by the charter of Philip and Mary, it enters upon the reaſons the parliament had to confirm them by an act.

Theſe reaſons are, That the company, ſince its eſtabliſhment, had been at great expences, not only to maintain its commerce in Muſcovy through the White ſea and Archangel; but alſo to penetrate through Ruſſia, the Volga, and the Caſpian ſea, into Armenia, Media, Hircania, Perſia, and the other ſtates of Aſia Major; and that theſe expences were ſtill continued, through the hopes of finding a paſſage for Cathay through the North, which would be of vaſt advantage to the crown of England: that notwithſtanding, contrary to what is enforced by the letters-patent, ſeveral Engliſh, not members of the company, undertook the ſaid trade, which tended to diſcredit this new eſtabliſhment, and ruin all commerce in Ruſſia, which was as yet in its infancy. But to put a ſtop to this diſorder, it was ordained by the ſtatute, That the company ſhould be for the future incorporated, and called by the ſole denomination of "The ſociety of Eng-"liſh merchants for diſcovering new places of trade," becauſe its firſt appellation was too long.

That any part of the continent, iſlands, ports, harbours, fords, gulphs, rivers, of any emperor, king, prince, or ſtate whatſoever, unknown before the firſt enterprize undertaken by the merchants of the ſaid community, or other ſubjects of the kingdom of England, and which they never frequented by ſea, ſituated north, north-weſt and north-eaſt, of the city of London; nor any part of the continent, lands, ports, iſlands, &c. belonging to the Emperor of Ruſſia, together with the countries of Armenia Major or Minor, thoſe of Media, Hircania, Perſia, or the Caſpian ſea, ſhould not be frequented by the other ſubjects of the kingdom of England, not being members of the ſaid company, unleſs by the order, approbation and conſent of the governor, conſuls, and aſſiſtants of the ſaid company, or of the greater part among them, under penalty of the ſeizure and confiſcation of their veſſels and whole cargo; one moiety of which ſhould belong to the crown, and the other to the company.

That, notwithſtanding the ſaid prohibition, it ſhould be allowable for all the ſubjects of her Majeſty to continue to reſort to the town and caſtle of Nardhouſe, and all the ports, towns, and coaſts of Norway, to carry on there the trade of fiſh, and all other accuſtomed Engliſh traffic.

That the company, nor no member thereof, ſhould be allowed to export from England any merchandiſes into the places of their new conceſſion, but upon Engliſh bottoms; nor to import any from the ſaid places into the kingdom, but upon Engliſh bottoms, under the penalty of 200 l. ſterling.

That neither the company, nor any of its members, ſhould for the future export from England into the places of its conceſſion, cloths, ſerges, or other woollen ſtuffs of the Engliſh manufacture, unleſs died and dreſſed, under penalty of 5 l. for each piece of cloth or ſerge ſo exported.

That, in caſe the company ceaſed of itſelf, during the term of three years, in time of peace, to unlade its merchandiſes at the ford of the abbey of St. Nicholas in R

ia, or did not unlade them in any other port of the nor-
hern coaſt of Muſcovy, or in any other place of Ruſſia,
not frequented here before by the Engliſh, all the other
ubjects of her Majeſty ſhould be allowed to trade to Nar-
va during the whole time that the company diſcontinued
ts commerce in Ruſſia; but upon condition to make uſe
nly of Engliſh veſſels.

This company ſubſiſted with reputation near a whole cen-
ury, that is, till the troubles in 1649 coſt Charles I. his
ife. As ſoon as the Czar of Muſcovy received the news
of this horrible parricide, he immediately expelled all the
Engliſh; and the Dutch, taking an advantage of his re-
entment, eſtabliſhed themſelves in their room.

Charles II. having aſcended the Britiſh throne after the
death of the uſurper Cromwel, the company re-eſtabliſhed
themſelves again at Archangel; but neither with the ſame
ſplendor nor ſucceſs as before; the Ruſſians being accuſ-
tomed to Dutch commodities, and unwilling to place the
ſame confidence in a people, whoſe murder of their King
had inſpired them with ſuch horror and deteſtation.

However, this company is ſtill ſubſiſting, almoſt upon the
footing of that of Hamburg.

By an act of the 10th and 11th William III. any Britiſh
ſubject may be free of the Ruſſia company, upon pay-
ment of 5 l. for admiſſion.

By an act of the 14th of Geo. II. any perſon free of this
company may import, in Britiſh built ſhips, from Ruſſia,
any goods of the growth, produce, or manufacture of
Perſia, purchaſed by barter, or with the produce of com-
modities exported from Great Britain to Ruſſia, except
gold and ſilver, in coin or bullion, and from thence
carried into Perſia; to the truth whereof the importer is
to make oath, paying the ſame cuſtoms as ſuch goods are
liable to if imported from the Levant ſeas, by any per-
ſon belonging to the Turky company.

If any doubt ſhall ariſe, whether any of the goods ſo im-
ported be of the growth, &c. of Perſia or not, or were
imported contrary to this act, and for that reaſon ſhall be
ſeized as forfeited, the proof thereof ſhall be incumbent
on the importer or claimer.

Wrought ſilks, and other manufactures of Perſia, men-
tioned in the ſtatute of the 11th and 12th William III.
are not to be worn in Great Britain, but are to be under
the regulations mentioned in the ſaid act: however, no-
thing in this act is to deprive the Eaſt India company from
enjoying their full powers, privileges, &c. See *Ruſſia*,
Perſia, and *Silk*.

The Engliſh Eaſtland company, or *North ſea company*, is eſta-
bliſhed upon the footing of that of Hamburg; of which
it ſeems to be a diviſion; the charter of its eſtabliſhment
being dated the 7th of Auguſt 1579, in the 21ſt year of
the reign of Queen Elizabeth.

By the firſt article of the charter, the company was in-
corporated by the name of "The governor, aſſiſtants,
"and ſociety of merchants of the Eaſt;" who were ſuch
perſons as were real merchants, and before the firſt of Ja-
nuary 1568 had traded to Norway, Sweden, Poland,
Livonia, Pruſſia, Pomerania, and the territories thereon
depending; as alſo Revel, Coninſberg, Elbing, Browſ-
berg, Dantzic, Copenhagen, Elſineur, Finland, Goth-
land, Elwland, and Branthoſin; excepting Narva and
Muſcovy, with their dependences.

Moſt of the following articles gave the new company all
the rights and privileges uſually enjoyed by theſe kinds of
eſtabliſhments; as to have a ſeal; to be directed by a go-
vernor and 24 aſſiſtants; to make by-laws; to impoſe
moderate taxes upon merchants and merchandiſes; to take
cogniſance of the debates between Engliſh merchants,
and to determine them definitely; to hold general courts;
laſtly, all ſuch other privileges, as may be ſeen in the
extract of the charters for the Hamburg company.

The regulations peculiar to the company of the Eaſt are:

That merchants already members of another company,
ſhall have no admittance into this ſociety.

That every member ſhall pay 6 l. 13 s. 4 d. ſterling on
admiſſion.

That the Engliſh merchant-adventurers, and thoſe trad-
ing to Spain and Portugal, who never traded to the places
in the Eaſt ſpecified by the charter, may notwithſtanding
be admitted members on paying 14 l. ſterling.

That the merchants of the Eaſt ſhall export from Eng-
land into the countries of their conceſſion, none but
cloths, dyed and dreſſed purſuant to the laws of the king-
dom, except 200 pieces of white cloths, which they may
export yearly by a ſpecial privilege.

That any merchant belonging to the Eaſt company ſhall
be allowed to carry 10 l. ſterling Engliſh coin out of
the kingdom, when he departs for his trade, without be-
ing ſubject to the penalties enacted by the laws againſt
thoſe who export gold and ſilver coins.

This charter of Queen Elizabeth, and the privileges ſhe
granted the Eaſt company, were afterwards confirmed
by Charles II. who for this purpoſe granted letters-pa-
tent, dated the 20th of February 1661; whereby it was
ordained, That no perſon, of what quality or condition
ſoever, dwelling in the city of London, or 20 miles about
the ſame, ſhould be admitted a member of this com-
pany, unleſs he was free of the city of London.

The French NORTH *company*. The commerce of the Bal-
tic and Archangel was the principal object of this com-
pany; which it alſo extended to all the northern coun-
tries upon the coaſts of Zealand and Holland, thoſe of
the Germanic ocean, Denmark, Sweden, and Norway.
The letters-patent for its eſtabliſhment are dated in June
1669, and regiſtered in parliament the 9th of July fol-
lowing.

The actions or ſhares were to be at 2000 livres each,
and its conceſſion was for 20 years.

Daniſh NORTH *company*. This company was eſtabliſhed at
Copenhagen in 1647, by Frederic III.

Its eſtabliſhments in Norway are not only conſiderable;
but it alſo ſends ſhips into the Varanger, whence it pe-
netrates by land into Daniſh Lapland, in ſledges drawn by
rein-deer.

It ſends alſo merchandiſe to Boranday and Siberia, where
its factors proceed likewiſe upon ſledges as far as Pani-
gorod, the capital of this part of the Ruſſian empire.

The commodities fit for the commerce of Lapland, Bo-
randay, and Siberia, are rix-dollars, tobacco, and linen
cloths; thoſe brought from thence conſiſt only in furs,
eſpecialy ſables, and grey ſquirrels.

Daniſh Iceland company, owes its eſtabliſhment to Frederic
III. who granted it his letters patent the ſame year he
granted thoſe for the North company. None but the
ſhips belonging to this company can trade to this iſland.
Kirkebar, is a ſmall town of Iceland, being the reſidence of
the merchants and clerks belonging to the company.

The Dutch NORTH *company*, has not any excluſive privilege.
The Dutch have alſo companies for the whale-fiſhery;
but other perſons may alſo fiſh in the ſame ſeas, though
they are not to land their fiſh.

NORTH *Eaſt and Weſt paſſage to India and America*. The
firſt northern diſcoveries were made at the charge of a
company of Engliſh merchants incorporated in the reign
of Edward VI. and called *The merchants-adventurers for
diſcovering lands unknown*. Their principal deſign was to
diſcover a paſſage to India and China by the north-eaſt,
and to come in for a ſhare of that rich trade with the
Portugueſe, by a ſhorter way than by the Cape of Good
Hope; or at leaſt to diſcover ſome countries where they
might eſtabliſh a trade of equal advantage to them. An-
other reaſon for their endeavouring to make theſe diſco-
veries ſeems to be, that it was then looked upon as baſe
and unfair to encroach upon or ſupplant any other nation
in trade, to take the advantage of their diſcoveries. And
the world ſeems to be much of the ſame opinion at this
day; or it is not to be conceived what pretence there
was to exclude the Emperor's ſubjects from a ſhare of
the India trade, which ſo many other nations enjoy at this
time.

Nay, we ſeem to think now, that the mere being poſſeſſed
of any branch of trade, however we came into it, en-
titles us to the monopoly of it, and that we may by force
exclude any other people who would endeavour to put
in for a ſhare.

But notwithſtanding Sir Hugh Willoughby, the admiral,
periſhed in this firſt attempt to diſcover the countries of
the North, one of his ſhips, called the Edward Bonaven-
ture, Capt. Chancellor commander, which had been ſe-
parated

parated from him, doubled the North cape, and diſcovered the bay of Archangel; whereby he ſettled a trade directly with Ruſſia, which the Engliſh enjoyed alone for many years, till the Dutch ſupplanted them.

The Engliſh company ſtill perſiſted in their endeavours to diſcover a north-eaſt paſſage; and accordingly, in the year 1556, fitted out a ſhip under the command of Capt. Borough, comptroller of the navy in the reign of Queen Elizabeth, who ſailed beyond the bay of Archangel to the north-eaſt part of Ruſſia and Samoieda, diſcovering the river Pechora, Nova Zembla, and the ſtraights of Waigats, which divide Nova Zembla from the continent of Ruſſia; after which he returned home: and the adventurers, wearied with endeavouring to find a paſſage this way, which might lead them to the Chineſe ſeas, next attempted to find a way to the Indies by the N.W.; in which they employed Sir Martin Forbiſher, in the years 1576,77, and 78, who was a bold and ſkilful navigator. But, after three years fruitleſs labour to make his way into the weſtern or ſouth ſea, he was obliged to deſiſt from that enterpriſe, either by the intervening land, or ice which adhered to the land; as were many other commanders afterwards.

In the 1580, the Engliſh company fitted out two ſhips, under the command of Capt. Arthur Pett, and Capt. Charles Jackman, to endeavour the diſcovery of a north-weſt paſſage again. They paſſed the ſtraights of Waigats, between Nova Zembla and Ruſſia, running as far eaſtward as they could for the ice, and then returned back through the ſaid ſtraights; but Capt. Pett was ſuppoſed to be loſt in his paſſage home, being never heard of more.

The Engliſh alone frequented the northern ſeas hitherto; but now the Dutch began to follow their ſteps, coming to Kola in Lapland, and afterwards into the bay of Archangel.

In the year 1596, the Dutch fitted out four ſhips, under William Barents; who ſailed to Nova Zembla, paſſed the ſtraights of Waigats, and ſailed to the eaſtward, till he was obliged by the ice to return back. The ſame Capt. Barents ſailed to the ſtraights of Waigats the following year, with ſeven ſhips, in order to force a paſſage through to the eaſtern ocean; but was again prevented by the ice.

Upon the return of theſe ſhips, the Dutch, being ſtill confident there muſt be a north-eaſt paſſage, ſent out William Barents with two other ſhips, who now ſtood more to the northward, and came to an iſland in the latitude of 74, by them called the Bear iſland, but by the Engliſh Cherry iſland; from hence they ſailed northward as high as 80, and ſaw the land by them called Spitzbergen, from its craggy promontories, but by the Engliſh Greenland; and here they went on ſhore. Barents afterwards ſailed back to Cherry iſland, and from thence to the the north-eaſt of Nova Zembla, till they came into the latitude of 76, anchoring in Ice haven, as they called it, where they were blocked up with ice in September, ſo that there was no getting out; whereupon they went on ſhore in order to build them a houſe, and winter there; when they found great ſtore of timber-trees, driven on the coaſt, for their purpoſe, though, as they obſerved, there were none growing in the country. By the end of September it froze ſo very hard, that the nails and iron they uſed ſtuck to their fingers and lips, if they touched them. The ſun left them about the 4th of November; but they ſaw the moon continually, day and night; which, with the ſnow, furniſhed them with a tolerable light.

Notwithſtanding the Dutch had found ſuch difficulties in ſearching for a north-eaſt paſſage, the Engliſh merchants determined to attempt it again; and accordingly fitted out a ſmall ſhip, of which Capt. Henry Hudſon had the command, who ſailed from England on the 1ſt of May 1607, and ſteering to the northward, arrived on the 20th of June, the year following, on the coaſt of Greenland, in the latitude of 78, and returned.

Capt. Hudſon ſet out again from the river Thames the 22d of April 1608, having 16 men on board, and on the 29th of May following found himſelf in 73 deg. 15 min. They directed their courſe afterwards to the eaſtward; and being in the lat. of 72 deg. odd min. came in ſight of Swart-cliff in Nova Zembla. This gave them great hopes of finding a paſſage to the Eaſtern ocean; but founding 6 or 7 leagues up the torrent, they found it too ſhallow for any ſhips of burthen, and returned home. Capt. Hudſon aſcribes the great quantities of ice in theſe ſeas near the pole, to the many ſounds, bays, and rivers in Nova Zembla, Greenland, Tartary, Ruſſia, and Lapland, where it is formed; and from hence he concludes, that there can be no navigable paſſage to the north-eaſt ſea.

The next adventurer who attempted the north-eaſt paſſage, was Capt. John Wood, who was fitted out by the Duke of York, afterwards King James II. in the reign of Charles II. and ſet ſail from the river Thames, in the Speedwell, on the 28th of May 1676, having another ſhip in company, called the Proſperous Pink. Capt. Wood following the opinion of Barents, the Dutch pilot, ſteered directly north-eaſt from the north cape of Norway, in order to fall in between Greenland and Nova Zembla; but he could find no ſea or inlet between the countries: on the contrary, he obſerved the ice to adhere immoveably to the coaſt of Nova Zembla, and that the Engliſh and Dutch pilots had been miſtaken in their conjectures of an open hereabouts; for he could paſs further this way than to the 76th deg. of lat. He found the ſea was frozen, without any breach in the ice, as he could obſerve, in coaſting along it, to that degree, that muſt have taken up ſome centuries to thaw. He concludes, therefore, that Greenland and Nova Zembla muſt be the ſame continent: beſides, ſays Mr. Wood, "had there been any paſſage, there wou'd have been "ſome current; whereas we found none, only a ſmall "tide, which riſes about 8 feet, and ebbs back again." As he ſuppoſes Nova Zembla to join to Greenland to the north, ſo he ſeems to be of opinion, that Nova Zembla joins to Tartary or Muſcovy on the ſouth: but if it does not, the ſtraight that divides them is ſo narrow, as to be choaked up with ice, that it is unnavigable.

However, the importance of new diſcoveries to trade and navigation, is too evident to be inſiſted on to an enterpriſing genius. We owe the firſt diſcovery of America, and the inexhauſted treaſures of that new world now flowing into Europe, to this peculiar turn of mind. Though the north-weſt regions of this vaſt continent were later known, yet their valuable produce has opened a very large fund of commerce to the northern nations of Europe; and the Britiſh colonies in thoſe parts, extending from almoſt the gulph of Florida to Hudſon's ſtraights, are now become very conſiderable.

The diſcoveries made by the Dutch in the north-eaſt parts of Aſia, towards China and Japan, together with those near the polar circle about Nova Zembla, firſt inſpired the Eaſt India company with a deſire of finding a north-eaſt paſſage to Aſia by the great Tartarian ocean, which they ſeveral times attempted without ſucceſs. This naturally led the Engliſh navigators, who ſaw the great advantages ariſing from ſuch a diſcovery, to turn their thoughts to the north-weſt parts of America, where there ſeemed a greater likelihood of obtaining a paſſage, as the difficulties were leſs, and the diſtance between Hudſon's bay in Davis's ſtraights, and the north-eaſt coaſt of America above California, no way ſo great as between Nova Zembla and the ſuppoſed ſtraights of Anian near Japan. Indeed, from the diſcoveries already made for the age paſt on the north-weſt coaſts of America, the general opinion of a paſſage is ſo ſtrong, that in the charter granted to the Hudſon's bay company, which inveſted them with very extenſive privileges, ſuch as a power of making peace or war, raiſing troops, and the ſovereignty of the lands they ſhould diſcover, not poſſeſſed by any Chriſtian power, it is recited as a chief motive for the grant, that they ſhould uſe all means for the diſcovery of ſuch a paſſage; to the ſucceſs of which their ſettlement and trade in Hudſon's bay, it was reaſonably ſuppoſed would greatly contribute.

Upon this preſumption, about the year 1730, Arthur Dobbs, Eſq; a gentleman of letters and fortune, a member of the Iriſh parliament at that time, and now governor of North Carolina, having drawn up reaſons for a paſſage to the South ſea by the north-weſt part of Hudſon's bay

and the great advantages ariſing to Britain from ſuch a diſcovery, communicated them to Colonel Bladen, one of the commiſſioners for trade and plantations, with a view of engaging the South Sea company to try the Welcome, which is the moſt N. W. part of Hudſon's bay, and where a paſſage appeared to him moſt likely, from the accounts of former adventurers: but Sir John Eyles being then gone out of the government, and the company having relinquiſhed the whale-fiſhery in Davis's ſtraights, the affair ſlept till the year 1733; when Mr. Dobbs coming to England, ſhewed his manuſcript to Sir Charles Wager, then firſt Lord of the Admiralty, who, on peruſing it, ſeemed ſatisfied of the probability of the diſcovery, and the propriety of the attempting it. As the Hudſon's bay company, from their charter, appeared the moſt proper body to be conſulted, Sir Charles mentioned the affair to Mr. Jones, formerly a deputy governor of that company, and at that time an elder brother of Trinity-houſe, who, as much as poſſible, diſcouraged Sir Charles from the deſign; relating to him the diſaſter, the company had in the loſs of two ſloops fitted out for this purpoſe in 1719, under Mr. Barlow. Mr. Dobbs, not ſatisfied with this, got Sir Charles to introduce him to Mr. Jones, who was ſtill againſt the attempt. But, notwithſtanding theſe diſcouragements, Mr. Dobbs accompliſhed his deſire; ſo that whether there is a N. W. paſſage or not is ſtill a matter of uncertainty.

However, by the ſtatute of the 18th of Geo. II. it was ſet forth in the preamble, that the diſcovery of a N.W. paſſage thro' Hudſon's ſtraights, to the weſtern American ocean, would be of great benefit to the trade of Great Britain; and therefore it was enacted, that if any ſhip or veſſel, ſhips or veſſels, belonging to any of his Majeſty's ſubjects, ſhould find out and ſail thro' any paſſage by ſea, between Hudſon's bay and the weſtern and ſouthern ocean of America, the owner or owners thereof, or their aſſigns, ſhould receive as a reward 20,000 l. and that all perſons being his Majeſty's ſubjects, and reſiding where the adventurers ſhould come, in proſecution of ſuch diſcovery, ſhould give them all aid requiſite, and ſhould no ways obſtruct, or refuſe them reaſonable ſuccour in any diſtreſs.

In 1740, his Majeſty was pleaſed to approve the ſcheme, and two veſſels were ordered to be fitted out, the command of which was given to Capt. Middleton, who ſailed in the ſummer of 1741; but it was the end of July before he could paſs Hudſon's ſtraights, ſo that he found himſelf neceſſitated to winter at the Prince of Wales's fort in Churchhill river, where he was accuſed of employing his men in the company's ſervice, but pleaded ſuch employment was neceſſary to preſerve them in health. Here he was detained by the ice till July 1742, when he ſail'd, and got as far N. as lat. 65 deg. 30 min. where he found a head land, which he called cape Dobbs, and abreaſt of of it a large fair opening, or inlet, which he called Wager river. Here he got his ſhips into a bay called Savage ſound, and ſent his boats about 60 miles up, who found a deep channel, with a ſtrong current againſt them, and high land on both ſides, the water ſalt or brackiſh. However, Auguſt 2d, Capt. Middleton left this river or ſtraight, and proceeded to 66 deg. 44 min. of N. lat. where he ſaw a cape, which he judged to be the moſt northerly point of America, the land falling off to the N. W. but next day finding himſelf embay'd on all ſides, he gave it the name of Repulſe bay. Into this bay he obſerved a tide come from the great ocean, W. of Greenland, by a paſſage he calls the Frozen ſtreights; tho' Mr. Dobbs aſſerts that theſe frozen ſtreights are imaginary, and that cape Frigid is joined to the north continent, to which Capt. Middleton gave the name of Prince William's land, in honour of his royal highneſs the Duke. From hence Capt. Middleton retired to the S. tracing the ſhore till Auguſt 15, when he bore away for England, having made no effectual diſcovery.

NORTHERN *ocean*. See *Ocean*.

NORTH-FORELAND. A cape or promontory in the iſle of Thanet, on the E. coaſt of Kent, ſituated 13 miles N. E. of Canterbury, 4 miles E. of Margate, 11 miles N. of Deal, and 20 miles N. of Dover and the South Foreland. Between the two Forelands are the Downs, thro' which all ſhips paſs that are bound to or from the W. or S. W. and here the fleets of the royal navy frequently rendezvous.

NORTH *River*. A great river which riſes in New Mexico, in North America; and running S. E. divides Mexico from Florida, diſcharging itſelf into the weſt end of the Gulph of Mexico, in 26 deg. of N. lat.

NORTH *Sea*, the gulph of Mexico ſo called by the Spaniards, becauſe they paſſed from thence over the iſthmus of Darien into the South Sea in America; and this name has of late been communicated to all that part of the Atlantic ocean which lies N. of Terra Firma in South America. See *Ocean*.

NORTH *Sea*, or *Eaſtland Company*. See *North* Companies.

NORWAY. See *Denmark*.

NORWICH. A city of Norfolk, ſituated on the river Yare; one of the largeſt and moſt populous places in England, having a very great woollen manufacture, eſpecially in crapes and ſtuffs.

NOSSARIS. A white cotton cloth, of the number of thoſe called baffetas, brought from the Eaſt Indies.

NOTARY, uſually denotes a ſcrivener, or a perſon who takes notes, or makes ſhort draughts of contracts, obligations, or other inſtruments. But, in a more particular ſenſe, the word is uſed for an officer, who draws and keeps notes, and minutes of contracts, obligations, and other inſtruments, executed before him, and delivers out authentic copies, &c. thereof.

NOTARY *Public*, is a perſon who draws and publickly atteſts deeds, or writings, between merchants; and alſo makes proteſts of bills of exchange, to make them authentic in another country: notaries have the drawing, paſſing, keeping, and iſſuing, of contracts, charter-parties, inſurances, and all deeds in the mercantile province; and in their books are regiſtred proteſts, remonſtrances, and other mercantile inſtruments.

The ſignatures of notaries carry along with them the proof of the acts which they ſign; becauſe they are public officers, appointed by the courts of Admiralty, in moſt of the principal trading places in Europe. They ſhould be acquainted with almoſt all the European tongues, eſpecially the trading languages; ſuch as the French, Dutch, Spaniſh, Italian, and Portugueſe; as alſo Latin, becauſe ſeveral foreign inſtruments are drawn up in that language.

NOTE. A minute, or ſhort writing, containing ſome article of buſineſs: in which ſenſe, we ſay *a promiſſory note*, *a note of hand*, *a bank note*, &c.

To NOTE *a bill*, is when a public notary goes as a witneſs, or takes notice that a merchant will not accept or pay it. See *Bill* and *Proteſt*.

Notes promiſſory, purſuant to an act of the 25th of Cha. II. made, and ſigned by any perſon, or by the ſervant or agent of any corporation, banker, goldſmith, merchant, or trader, who is uſually entruſted to ſign ſuch notes, are to be deemed payable according to the conditions thereof; and are aſſignable or endorſable over; an action thereon being to be maintained, in the ſame manner as for inland bills of exchange. See *Exchange*.

NOVA SCOTIA. See *Britiſh* America.

NOVA ZEMBLA, or *Newland*, which the Dutch call the iſland of Weygatz, is ſituated in the North or Frozen ocean, between 50 and 80 deg. of E. lon. and between 70 deg. of N. lat. and the N. pole, ſeparated from the province of Samoieda in Ruſſia, by a narrow ſtreight, called the ſtreights of Weygatz. Whether it is an iſland, or part of ſome great continent, is uncertain; no ſhips having ever paſſed to the northward of it, tho' many attempts have been made to find out a N. E. paſſage to China that way. The Dutch indeed paſſed the ſtreights of Weygatz S. of Nova Zembla, and wintered on the E. ſide of it in 1596, but found it not practicable to ſail further for the fields of ice they met with. There are no conſtant inhabitants here, but the Samoieds and Oſtiacs climb over the mountains of ice in the ſtreights, when they are frozen over, to hunt elks and rein-deer at the proper ſeaſon.

NOYALLE, is a term in France, for a kind of hempen cloth, very ſtrong and cloſe; which is manufactured in Bretagne, and whoſe chief uſe is for the making of ſails for ſhips.

The greateſt conſumption of theſe cloths is in the ports of France; but they are ſent in great quantities to other countries, particularly to England and Spain.

NUBIA. A kingdom of Africa. See *Ethiopia*.

NUMERO. A term prefixed to any number of things, marked or abbreviated thus, N°.

Book of NUMEROS. See *Book*-keeping.

NUMIDIA. A part of Africa. See *Biledulgerid*.

NUNNA. A white Chineſe linen, of three ſorts; the meaſure being the ſame, but the fineneſs different. Their chief deſtination being for Japan, where they are ſold in great quantities.

NURENBURG, or *Noremberg*. A city in the circle of Franconia, ſituated in 11 deg. of E. lon. and 49 deg. 30 min. of N. lat. See *Germany*.

NURSERY, among gardeners, is a place where they cultivate and grow young trees, which are intended to be tranſplanted.

NURSERY-*man*, is a perſon whoſe buſineſs conſiſts in furniſhing gentlemen with young trees, both fruit and foreſt; as alſo with flower-roots, and other branches of gardening.

NUTMEG. A delicate kind of aromatic nut; being the kernel of a fruit of the ſize of a green walnut, found only in the Banda iſlands in the Eaſt Indies; of which there are two kinds, the male and female. See *Banda* iſlands.

The female is that chiefly uſed in England; its form being round, and its ſmell agreeable, with a taſte hot and pungent.

The male is a wild nut of a longiſh form, without either taſte or ſmell; yet ſometimes put off, while in the pod, for the female.

The nutmeg-tree is about the bigneſs of the peach tree, and their leaves are ſomewhat like. The trees which bear the female, or common nutmeg, grow only in cultivated pl ces: but thoſe which bear the male, or long nutmegs, grow in woods and foreſts. The trees are always loaden with flowers and fruits; affording three crops a year, in April, Auguſt, and December.

Nutmegs are incloſed in four different covers; the firſt a thick huſk, ſomething like that of walnuts, under which lies a thin reddiſh coat, of an agreeable ſmell, and aromatic taſte, called *mace*, by others, thro' improperly *flower of nutmeg*. This wraps up the ſhell, and opens in proportion as the pod grows. The ſhell which makes the third cover is hard, thin, and blackiſh; under which is a greeniſh film of no uſe; wherein is found the nutmeg, which is properly the kernel of the fruit; every nutmeg having a little hole in it, which ſome ignorantly take for a defect.

The beſt nutmegs are thoſe gathered In April, which ſhould be choſen heavy, of a whitiſh brown colour, well marbled on the out ſide, reddiſh within, having a fine unctuous moiſture, and an agreeable ſmell.

As to the mace, it muſt be choſen in large blades of a high colour, like the nutmeg in taſte and ſmell. See *Mace*.

The whole commerce of nutmegs is in the hands of the Dutch Eaſt India company. See *Spice*.

The inhabitants of the Banda iſlands make a confection of green nutmegs; which the Dutch bring into Europe ſometimes with ſyrup, and ſometimes without. They are ſtrengtheners of the ſtomach, and are chiefly conſumed in the northern countries, where the people are fond of ſuch warm ſweet-meats.

There is an oil expreſſed from nutmegs, which ought to be of a thick conſiſtence, of a golden yellow colour, a ſweet aromatic ſmell, and a warm poignant taſte: but the Dutch adulterate it with butter.

NUTMEG *Iſlands*. See *Banda* iſlands.

NUX-VOMICA. The fruit, or, as ſome will have it, the ſtone of the fruit of a tree growing in ſeveral parts of Egypt, and in the iſlands of Timor and Ceylon, in the Eaſt Indies; of a ſtrong narcotic quality, ſo as to be ranked in the number of poiſons.

It is round and flat, of a grey mouſe colour without, and various colours within, ſometimes yellow, ſometimes white, and ſometimes brown: the largeſt, whiteſt, newest, and cleaneſt being the beſt.

This drug is ſaid to be an aſſured poiſon for all animals except men: on the contrary, Hermannus Botanic profeſſer at Leyden, who wrote expreſly on it, ſays that the vomic nuts of Timor and Ceylon are excellent ſudorifics, and to be ranked among diuretic medicines.

NYBYE. A town of North Jutland, ſubject to Denmark. See *Denmark*.

NYDER. A river of Norway, which falls into a bay of the northern ocean.

NYKOPPING. A Daniſh town on the iſland of Falſter. See *Denmark*.

O.

OBL — OCE

OAK. A large timber tree, growing in ſeveral countries: but thoſe of the Engliſh growth are moſt durable, and ſtrong, for ſhip building, and other heavy ſervices; the foreign oaks, when ſawn into planks of proper thickneſs, making what is called wainſcotting, principally uſed by the cabinet-makers and joiners.

The acorn is the fruit of the oak-tree, and generally called maſt, for the feeding of ſwine; though acorns are alſo employed in medicine. The miſſeltoe which grows on the oak, is not only reputed an excellent remedy againſt the apoplexy, palſy, and worms; but is likewiſe uſed as an ingredient in ointment, and plaiſters, as a reſolvent.

The bark of this tree is uſeful to tanners; being generally ſtript off in April. The oak delights in moiſt ground, of a good depth: it will flouriſh in the coldeſt clay, and alſo in gravel. See *Timber*.

OAK, is alſo a Turkiſh weight. See *Ocos*.

OAK-*Balls*, *Apples*, or *Cones*. A kind of galls, or excreſcencies, ariſing out of the oak. See *Galls*.

OAKAM, or *Oakum*. A ſea-term for old ropes untwiſted, and pulled out again into looſe hemp, like hurds of flax, to be uſed in the cauking of ſhips: but when tow, flax, or hemp, are employed in this manner, it is called white oakam. See *Cauking*.

OAR. An inſtrument whereby a boat, barge, or galley, is rowed, or advanced along the water.

In a veſſel with oars, the water is to be conſidered as the point of ſupport, or fulcrum; the oar as a lever; the boat as the burden to be moved, and the rower's hand as the moving power.

The burden is to be conſidered as applied to that point of the lever, where the oar reſts on the boat: the greater therefore the diſtance of the hand from that point, and the leſs the diſtance of the water from that point, the greater effect will the oar have.

OATHS, to be taken at the cuſtom-houſe. See *Cuſtoms*.

OATS. A ſmall ſort of corn, or grain, for the feeding of horſes, and ſometimes uſed for the making of bread, being generally ſold at the corn exchange in London from about 11 to 14 s. the quarter. See *Corn*.

OATMEAL, is the flower of oats, threſhed, cleanſed, and ground, for making oaten bread.

OAZY, or *Oozy ground*. A name given by ſeamen to ſoft, ſlimy, or muddy ground. See *Anchorage*.

OBLIGATION. An act whereby a perſon engages, or binds himſelf, or is bound by another, to do ſomething; as to pay a ſum of money, to be ſurety, or the like.

The acceptance of a bill of exchange is a kind of obligation to pay it. See *Exchange*.

The exacting of intereſt on a ſum due by a ſimple obligation is accounted uſury. See *Uſury*.

OBLIGATION, in a more ſtrict ſenſe, denotes a bond containing a penalty, with a condition annexed, for payment of money at a certain time; or for performance of covenant, or the like.

A Bond, or obligation, is ſaid to differ from a bill, in that the latter is commonly without a penalty, and without condition; yet a bill may be obligatory. See *Bill*.

OBLIQUE *ſailing*, is when a ſhip being in ſome intermediate rhumb, between the four cardinal points, makes an oblique angle with the meridian, and continually changes both its latitude and longitude.

Oblique ſailing is of three kinds; plain ſailing, Mercator's ſailing, and great circle ſailing. See *Sailing*.

Seamen call it alſo the application of the method of calculating the parts of oblique plain triangles, in order to find the diſtance of a ſhip from any cape, head-land, or other place.

OBOLUS, was formerly uſed among the Engliſh for half a noble, or florin; when the noble was eſteemed as the penny, and its quarter part a farthing. See *Noble*.

In old hiſtories and accounts of coins, we are to underſtand by the word *denarius* the whole coin, by the *obolus* its half, and by *quadrans* its fourth part. See *Money*.

There were formerly in France *oboli* of gold, ſilver, and copper; all current coins of different value, according to the metal and weight. In the 17th century the copper obolus was current there under the denomination of *maille*, being worth the half of a denier Tournois, or the 24th part of an Engliſh penny; but at preſent the obolus or maille is only a money of accompt.

OBOLUS, in medicine, is uſed for a weight of 10 grains, or half a ſcruple. Du Cange ſays the obolus weighs 3 carats, or 4 grains of wheat: others divide it into ſix arcolæ, and the arcola into ſeven minutes: others into three ſiliquæ, each ſiliqua into 4 grains, and each grain into a lentil and half. See *Grain*.

Among the Sicilians obolus denoted alſo the weight of a pound. See *Pound*.

OBSERVATION, in the ſea language, is the taking the meridian altitude of the ſun, or any ſtar, in order thereby to find the latitude; and the finding of a latitude from the meridian-altitude obſerved, is called *working an obſervation*. See *Latitude*.

OBY. A great river of Ruſſia, which riſes in the lake Kiſan in Kalmuck Tartary, in Aſia; and, running north, joins the river Irtis; after which, continuing its courſe north, it forms the boundary between Europe and Aſia, till it falls into the frozen ocean in 70 deg. of N. lat. having run a courſe of 2000 miles and upwards.

OCCIDENTAL. A term uſed in commerce to diſtinguiſh Weſt India commodities from thoſe of the Eaſt Indies, which are ſaid to be oriental: thus merchants ſay, *occidental bezoard*, and *oriental pearl*.

OCEAN. The grand ſea, or the vaſt collection of ſalt and navigable water, which encompaſſes the whole earth: being that great body of waters wherein the two grand continents known to us, the new and old, are incloſed like iſlands.

By computation it appears, that the ocean takes up conſiderably more of what we know of the terreſtrial globe than the dry land.

Dr. Keil computes the ſurface of the whole ocean to be 85,490,506 ſquare miles; ſo that, ſuppoſing the depth of the ocean at a medium to be 1-4th of a mile, the quantity of water in the whole will be 21,372,626 and 1-half cubic miles.

Yet Dr. Burnet computes that all the waters in the ocean were not ſufficient to drown or overflow the dry land ſo high as the Scriptures ſay it was at the deluge: ſeven or eight oceans, according to him, would ſcarce have ſufficed.

The ocean penetrating the land at ſeveral ſtreights, quits its name of ocean, and aſſumes that of ſea or gulph; to which are added ſome epithet for diſtinction ſake, as Meterranean ſea, Perſian gulph; and in very narrow places it is called ſtraights.

The ocean takes different names according to the divers countries it borders upon; as the Britiſh ocean, German ocean, Indian ocean, Atlantic ocean, and others.

According to Maty, the ocean may be properly divided into Upper and Lower.

Upper OCEAN, which the antients call the exterior, as environing all the known parts of the world, he ſubdivides, according to the four cardinal points, into the northern, ſouthern, eaſtern, and weſtern.

Northern OCEAN, called alſo *frozen*, and *Scythian*, is that part of the Upper ocean next the north pole, bounded

on the ſouth with the Arctic circle, and the northern coaſts of Europe and Aſia; and on the north with the unknown lands about the pole; which is called the icy or Frozen ocean, becauſe thoſe who have attempted a paſſage thro' it to China, &c. have always been ſtopt with the ice; and Scythian, becauſe waſhing the coaſts of Scythia.

Weſtern, or *Atlantic* OCEAN, is that part of the grand ocean which waſhes the weſtern coaſt of Europe and Africa, extending from the Arctic circle to the equinoctial.

Southern, or *European* OCEAN, is that part reaching from the equinoctial to the unknown and antarctic lands.

Eaſtern, or *Indian* OCEAN, has its firſt name from its ſituation to the Eaſt, as its latter from India, the chief country it waſhes; reaching from the coaſt of Anian to the Ladrone iſlands.

Lower, or *American* OCEAN, is that vaſt part of the grand ocean which waſhes the coaſt of America, unknown, in great meaſure, at leaſt, to the ancients: being divided into three parts; the North ſea, which waſhes the eaſtern coaſts of America, from the Arctic circle to the tropic of Capricorn; the Magellanic ſea, extending from the tropic of Capricorn to the Terra auſtralis incognita; the South ſea, or pacific, which waſhes the weſtern coaſt of America to the Eaſt, as far as the Ladrone iſlands, and from S. to N. from the tropic of Capricorn to the land of Jeſſo.

OCHAVO, or *Octavo*: A ſmall copper coin, current in Spain, being worth 2 maravedis of Veillon; and 34 of them make the rial, or 5 $\frac{3}{4}$ d. ſterling. There are alſo octavos of 4 and 5 maravedis; but the former are uſually called quarters, and the latter double quarters. See *Quarter*.

OCKA. A great river in Muſcovy, which riſes in the province of Sfeeſk, and running N. paſſes by Orel and Peremil; then running E. joins the river Moſco at Kolomna; after which it continues to run E. by Reſanſkoi and Niſe Novogorod, falling into the river Volga, a little below Novogorod.

OCKAMY. A ſort of mixed metal, formerly uſed for ſpoons, and other utenſils; but now left off, and inſtead thereof bath-metal, both white and yellow, are introduced.

OCOS, *Oak*, or *Ocqua*. A Turkiſh weight, being 400 drams, and 44 oaks compoſe the Turkiſh quintal, or cantar, making 120 lb. in London.

OCULI-CANCRORUM. See *Crabs* eyes.

OCZAKOW. A port-town of European Turky, capital of the province of Budziac Tartary, ſituated W. of the mouths of the rivers Boriſthenes and Bog, on the Euxine ſea, in 35 deg. of E. lon. and 46 deg. of N. lat.

ODENSEE. Capital of the iſland of Funen, one of the largeſt of the Daniſh iſlands in the Baltic ſea, ſituated in 10 deg. 25 min. of E. lon. and 55 deg. 30 min. of N. lat.

ODER. A river riſing in the Carpathian mountains, on the confines of Hungary; it runs from S. to N. thro' the principality of Sileſia, after which it continues its courſe N. thro' Brandenburg; and then ſeparating the Eaſtern from the Weſtern Pomerania, divides itſelf into ſeveral channels, forming the iſlands of Uſedom, and Wollin, below which it falls into the Baltic ſea; having in its courſe paſſed by the cities of Ratiſbon, Opelen, Breſlaw, Glogaw, Croſſen, Frankfort, and Stetin.

OELAND. A Swediſh iſland, ſituated in the Baltic, in 16 deg. of E. lon. and between 56 and 57 deg. of N. lat.

OESEL. An iſland which lies at the entrance of the bay of Livonia, in the Baltic ſea, ſituated in 22 deg. of E. lon. and 58 deg. of N. lat. ſubject to Ruſſia.

OESYPE, or *Oeſypos*. A kind of fat mucilage, of the conſiſtence of an unguent; being of a greyiſh colour, and a ſickiſh diſagreeable ſmell; drawn from the greaſy wool growing on the throats and between the buttocks of ſheep.

This wool they waſh, boil it in water, let the lotions or decoctions ſtand for ſome time, and from the top ſkim off a fatty ſubſtance, which being ſtrained through a linen cloth, and ſet to cool, makes the oeſype, much uſed externally to reſolve, ſoften, and appeaſe pain.

OFFICE, ſometimes ſignifies the employment, or proper buſineſs a perſon is appointed to perform; and ſometimes the place where buſineſs is tranſacted.

OFFICERS *of the Cuſtoms*, and *Exciſe*, are now very numerous in Great Britain; though the former were anciently of three kinds only, being the cuſtomers, ſearchers, and comptrollers; but at preſent there are alſo collectors, ſurveyors, land-waiters, coaſt-waiters, tide-ſurveyors, tide-waiters or tideſmen, boatmen, or watermen, coal-meters, and riding officers; as alſo maſters of ſmacks. See *Cuſtoms*.

The officers of exciſe are collectors, ſupervifors, exciſemen, and ſupernumeraries. See *Exciſe*.

A deduction of ſixpence in the pound is made quarterly out of the ſalaries of all ſuch eſtabliſhed officers in the out-ports, in the cuſtoms, whoſe ſalaries are not above 60 l. a year, to be applied for the maintenance of ſuperannuated officers; and the ſame proviſion is made for the ſuperannuated officers of exciſe.

Several ſtatutes have been made for the regulation of theſe officers; whereby officers of the cuſtoms are not to obtain their offices for gift, favour or affection, but for deſert, as being of the beſt and moſt lawful men, and ſufficient to their eſtimation and knowledge: nor to have their offices for life or term of years, but during the ſovereign's pleaſure only; and the ſaid offices to remain in his hands, under the government of the treaſury. That they are to reſide by themſelves, or their ſufficient deputies, at the ſeveral head-ports, members, and creeks; on penalty of 100 l. loſs of office, and impriſonment.

That the officers of the cuſtoms, or their deputies or clerks, were not to have any ſhips of their own, nor to freight any ſhips, nor to buy or ſell any merchandiſe, nor to have any wharfs or keys, nor to hold any common hoſteries, or taverns, nor to be factors for any merchant denizen or alien, or hoſt to any merchant alien, on forfeiture of 40 l.

That officers taking a bribe, or conniving at a falſe entry of any goods, to the prejudice of his Majeſty, or ſuffering prohibited goods to paſs, are incapable of any office for the future, and to forfeit 100 l. and the perſon giving the bribe, or offering any bribe, whether it is accepted or not, to forfeit 50 l. But the offenders revealing their offences within two months, to the treaſurer of England, the chancellor, under-treaſurer, or barons of the exchequer, are to be acquitted.

Illegally detaining goods, or neglecting or refuſing to make repayments and allowances; or, after notice given, not giving out and executing their warrant, liable to double coſts and damages.

That officers granting a warrant for, or ſuffering any of the enumerated goods from the plantations, to be carried to any other country, until firſt landed in Great Britain, to forfeit their places, and the value of the goods.

Officers razing, counterfeiting, or falſifying any cocket, tranſire, let-paſs, certificate, or other cuſtom-houſe diſpatch, forfeit 100 l. and ſuch diſpatch to be void.

Granting a falſe coaſt certificate, forfeit their office, and 50 l. to be impriſoned a year without bail, and to ſuffer ſuch corporal puniſhment as the court of exchequer ſhall think fit, and to be incapable of ſerving again in the cuſtoms.

Cuſtomers not mentioning the colour, length, content, weight, and value of foreign goods in coaſt-certificates, are to forfeit their office, and to be fined at the King's pleaſure. Cuſtomers and collectors of the cuſtoms within ten days notice from the King, or ſix of his privy council, are to declare what money due to the King is in their hands, and to pay the ſame when commanded upon forfeiture of office. Cuſtomers, upon yielding their accompts in the exchequer, to be ſworn thereto. Cuſtomers, collectors, and comptrollers, concealing the cuſtoms duly entered and paid, forfeit treble the value of the goods, and are to make fine and ranſom. Collectors detaining public money, are to pay intereſt for the ſame after the rate of 12 l. *per cent. per annum*, with treble damages to the perſons grieved, and to be diſmiſſed.

Officers embezzling any goods, lodged in any warehouſe in their cuſtody, are to forfeit double the value, and

costs; they may not exact unlawful fees; but may take such recompence for extraordinary service in the execution of their office, not required by law, as the commissioners in the port of London, and the collector, customer and comptroller of the out-ports, or any two of them shall determine.

That officers, or their assistants, being resisted or molested in the execution of their duty, by persons passing armed with prohibited or uncustomed goods, may oppose force to foree in defence of themselves, and execution of their duty; and if apprehended for beating, maiming, or killing any person so resisting them, are to be admitted to bail.

OFFING, or *Offin*, in the sea-language, that part of the sea a good distance from shore; where there is deep water, and no need of a pilot to conduct the ship into port. If a ship from shore is seen sailing out to seaward, they say she stands for the offing: and if a ship having the shore near her, has another a good way from her, or towards the sea, they say, that ship is in the *offing*.

OIL, or *Oyl*. A fat, unctuous, inflammable matter, drawn from several natural bodies.

The word oil is sometimes applied to the juices which distill naturally from plants and trees, as balm, and others; but, more strictly, to those juices drawn by expression, &c. from plants, fruits, grains, or seeds, as oil of olives, nut oil, and others.

OIL *of olives*, is the most popular, and most universal of all others; which is chiefly used in medicine, food, sallads, and in manufactures; being drawn from olives by presses or mills made for the purpose. The fruit is gathered when at its utmost maturity, in December and January, as it begins to redden: being put under the mill, as soon as gathered, it yields that oil so very sweet, and of so charming an odour, called virgin oil. Though, as the olives newly gathered yield but little oil, those who rather regard quantity than goodness, leave them on the ground some time before they press them.

Neither the smell nor taste of this second oil is very agreeable; tho' there is a third kind still worse, which is the common oil procured by throwing boiling water on the pressings, and repressing them more strongly.

The consumption of this oil is incredible: the south parts of France, as also Candia, and many parts of Italy, yield vast quantities. Its use is generally known, being reputed one of the most universally useful things in the whole world. See *Olive*.

Gallipoli OIL, is imported from Naples in large quantities for the use of the British woollen manufacturers.

OIL *of sweet almonds*, cold drawn, or without fire, is prepared various ways. Some peel the almonds before they pound them; others pound them without peeling. Some warm them in luke-warm water; others in balneo mariæ; some only bruise them; others beat them into a paste. In effect, there are as many different ways of preparing this oil, as there are persons who make it their business to prepare it. See *Almond*.

In this diversity, Pomet gives a method easier and less expensive than any of the rest.

Take a pound and a half of sweet almonds new and dry; after pounding them in a mortar, pass them thro' a coarse sieve, lay them on a hair cloth, and put them under the press between two plates of copper, steel, or the like; press them gently; and when all the unctuous and fluid part is expressed, you will have a sweet oil without any sediments, which is scarce avoidable in any of the other manners.

Palm OIL, or *Oil of Senegal*. A thick unctuous liquor, of a yellow colour, and a violet smell; so called because drawn by ebullition, or by expression, from the fruit of a kind of palm-tree, growing in several places of Africa, especially in Senegal.

The Africans use this oil as Europeans do butter, and burn it when old. In Europe it is esteemed a sovereign remedy against cold humours; and is even said to give ease in the gout. It is sometimes counterfeited with wax, oil of olives, iris, and turmeric; but the adulteration is found out either by air or fire: the air alters the colour of the genuine, and leaves the counterfeit unchanged; and on the contrary fire changes the counterfeit, not the genuine. See *Palma*-Christi.

OIL *of camomile*, is an oil made with the flowers of this plant steeped in oil of olives, and exposed to the sun in the heat of summer; being of a bluish colour: to which some add fine turpentine. It is most esteemed when old: its use being for the cure of several kinds of wounds, and is reputed a kind of balm.

OIL *of aspic*, or *spike*, is an inflammable oil, drawn from the flowers or leaves of a plant frequent in the southern parts of France, resembling lavender, and called by botanists *lavendula mas*.

It is of a white colour, aromatic smell, and reputed the only oil that will dissolve in sandarach: whence the genuine oil is easily distinguished from the counterfeit, which is oil of turpentine mixed with a little petrol.

It is used by painters and farriers; being also of some use in medicine, where it makes a part in several galenical compositions.

Beech OIL, is an oil drawn from the fruit or mast of the beech-tree.

The beech mast is a kind of triangular seed, in form of a nut, or rather acorn, containing a whitish oleaginous pith, of a very agreeable taste; of which is made an oil much valued for sallads.

It is very common in Picardy, in France, where the mast abounds: they draw ir cold by expression, after the mast has been shelled, and ground or pounded.

An attempt was made some years ago, to introduce the manufacture of beech-oil in England, and a patent granted to the proprietor, but without success; the country people turning their mast to better account in feeding hogs with it, than in selling it to the patentee, and his co-proprietors for oil.

Whale or *Train* OIL, is the blubber or fat of the whale melted: of which a very considerable commerce is carried on, especially in time of peace, upon account of its vast use.

There is some also drawn off the livers of the cod at Newfoundland, by throwing up the livers in heaps when the cod is cured, and draining the oil.

It is employed principally for the refining of sulphur, for the preparing of certain leathers, and for greasing ships; as also that used for caulking and paying a seam. Some clothiers prepare their wool with this oil; tho', in manufactures of fine cloths, good oil of olives is only used. Painters use it likewise for certain colours: fullers for their scourings; even architects and sculptors to make white-lead incrustate, and resist the injuries of the air. In short, it would be too prolix to descend to all the particulars of the uses of train-oil.

Rape OIL, is expressed from the grain of a plant or wild cabbage called *colzat* by the Flemish, and by the English *rape*: its use being for the manufacture of wool, for burning in lamps, and to serve instead of train-oil when there is a scarcity of it.

Its good qualities are, a gold colour, an agreeable smell, and a sweet taste. It is sometimes mixed with linseed-oil, which is discoverable by its bitterness, and a less agreeable smell.

Horse OIL, is the fat of a horse melted and clarified; used by enamellers for their lamps; no other oil but this being proper for those kinds of works that require a very brisk and clear fire; which makes it, in proportion, as dear as the best oil of olives, and sometimes more.

OIL *of petrol*. See *Naphta* and *Petroleum*.
OIL *of amber*. See *Amber*.
OIL or *butter of Antimony*. See *Antimony*.
OIL or *butter of Arsenic*. See *Arsenic*.
OIL *of Balm*. See *Balm*.
OIL *of Ben*. See *Ben*.
OIL *of Bricks*. See *Bricks*.
OIL *of Camphor*. See *Camphor*.
OIL *of Cinnamon*. See *Cinnamon*.
OIL *of Castor*. See *Castoreum*.
OIL *of Wax*. See *Wax*.
OIL *of Cummin*. See *Cummin*.
OIL *of Nutmeg*. See *Nutmeg*.
OIL *of Cloves*, See *Cloves*.
OIL *of Neroli*. See *Orange*.

OIL *of black Pitch.* See *Pitch.*
OIL *of Roſemary.* See *Roſemary.*
OIL *of Sage.* See *Sage.*
OIL *of Tartar.* See *Tartar.*
OIL *of Turpentine.* See *Turpentine.*

Virgin OIL, is underſtood of oils expreſſed from olives, nuts, &c. freſh gathered, without being heated and too much preſſed.

Granulated OIL, is that fixed in little grains, which is the beſt and moſt eſteemed, eſpecially of oil of olives.

Dr. Slare gives a ſcheme or analyſis of oils, which he diſtinguiſhes into vegetable, animal, and mineral.

The vegetable he divides into eſſential, and not eſſential. The eſſential again, are either perfect ſtillations made by the analyſis of the chemiſts fire, where the oleaginous particles are truly ſeparated from all other, as thoſe from the ſeeds of cummin, fennel, and dill; or light and etherial, uſually drawn from the tops of plants, and ſpecifically lighter than water, ſome of them than ſpirit of wine, as thoſe from thyme, wormwood, hyſſop, lavender, roſemary, penny-royal, rue, ſage, ſavin, &c. or ponderous, which commonly ſink in water.

Thoſe not eſſential are imperfect, made by expreſſion; being decompounded of ſeveral parts of the plants; as of almonds, olives, walnuts, lime, rape, &c.

The animal oils are either thoſe of the ſolid parts, as harts-horn, human-ſkull, hoofs, &c. or thoſe of the fluids, as of human blood.

Laſtly, the mineral oils are thoſe of amber, petroleum, Barbadoes tar, to which ſome add bees-wax. Of theſe oils there are twelve, that by a mixture of compound ſpirit of nitre, make an ebullition, exploſion, and flame; eighteen that make an ebullition and exploſion without flame; and four that produce neither.

OIL-*mill.* See *Mill.*

OIL-*ſhop-man*, is a perſon who keeps an oil ſhop, particularly in London, where he ſells oils, pickles, ſoap, ſalt, hams, and ſeveral other family neceſſaries.

OKER. A yellow, dry, foſſil earth, harſh to the touch, found in mines of copper and lead; ſometimes in thoſe of ſilver, and ſometimes in mines of its own.

Others ſeem more rightly to refer oker to the claſs of ſemi-metals, than of earths; conſiſting, according to them, of earth and a metal, particularly iron, combined. Mr. Boyle aſſures us, he he has ſeen a piece of oker richer in metal than moſt iron ores, and which was even rendered magnetical by heating, and then cooling it in a perpendicular poſition.

Oker, in effect, is always impregnated with iron; and is what generally gives to chalybeat ſprings their medicinal virtues; many of which, upon the water's ſtanding, will depoſite the oker at the bottom of the veſſel.

Some authors eſteem oker proper to promote the melting of metals, when too harſh and brittle; but its chief uſe is in painting.

The yellow oker only is natural; the red is prepared from the yellow, by calcining it in the fire, till it has acquired its redneſs.

The beds are uſually from 150 to 200 feet deep, and their thickneſs from 4 to 8 inches, between a white ſand which covers them on the top, and a yellow argillous earth underneath.

The beſt oker is that of Berry in France; but there are ſeveral kinds dug up in England, all bordering on the red; ſome of them uſed in poliſhing looking-glaſſes.

OLDENBURGH. A city of Germany, ſituated in 7 deg. 32 min. of E. lon. and 53 deg. 35 min. of N. lat. See *Denmark.*

OLEB, or *Olep.* A kind of flax gathered in Egypt, as good as that called *forfetee*; but not ſo good as the *ſquinanti.* See *Flax.*

OLERON. An iſland of France, near the coaſt of Poictou, and territory of Aunis, ſituated 14 miles S. W. of Rochelle, being about 15 miles long, and 6 broad, and containing 10,000 people. The ancient inhabitants of this iſland had ſuch a reputation for their ſkill in navigation, that their rules became a model for other maritime powers to make their laws by, in relation to ſea affairs; and theſe were called the laws of Oleron, inſtituted by Rich. I. of England, containing 47 articles.

The ſoil of this iſland produces plenty of corn and wine; they make a great deal of ſalt of the ſea water, and there is a light-houſe on this iſland for the direction of ſhips.

OLEUM *Rodeum*, or *Oil of Roſe*, is a term given by druggiſts to a white and odorous oil extracted from roſe-wood by diſtillation: the beſt of which comes from Holland, where the natives ſucceed better in its extraction than any other nation.

OLIBANUM. A kind of gum, or reſin, uſually called *male frankincenſe.* See *Frankincſe.*

Olibanum is brought to Europe in large white tears, bordering a little on the yellow, very heavy, of a ſharp bitter taſte, and a briſk ſmell.

It is diſtinguiſhed from the female, or common frankincenſe, by the largeneſs of the drops. It is very glutinous, and conſequently ſtrengthening, and partakes enough of the turpentine to render it ſomewhat detergent; it is more uſed in compound ſtrengthening plaiſters, than in inward compoſitions.

OLINDA. A city and port-town of Brazil, and capital of the province of Fernambucco, in South America, ſituated in 35 deg. of W. lon. and 8 deg. of S. lat. See *Portugueſe* America.

OLIVA. A port-town of Poland, in the province of regal Pruſſia, ſituated on a bay of the Baltic, in 18 deg. 30 min. of E. lon. and 54 deg. 20 min. of N. lat.

OLIVE. A ſtone fruit, which yields plenty of oil, the produce of the olive tree. See *Oil.*

There are three kinds of olives frequently ſold, different in ſize and goodneſs: thoſe of Verona, which are the beſt; thoſe of Spain; and thoſe of Provence.

The olives while on the tree are intollerably bitter, without any thing of that delicious taſte which procures them admittance at the richeſt tables; to fit them for which, they muſt be prepared as follows.

In the months of June and July, long before the olives are fit to yield their oil, they are gathered and laid to ſteep ſome days in freſh water; when taken out they are put in a lye made of water prepared with barillia, or kali, with aſhes of olive ſtones calcined, or at leaſt with lime. They are next laid in a liquor of water and ſalt, with which they are put in thoſe little barrels, wherein they are brought to England. To give them the flavour, they throw over them an eſſence uſually compoſed of cloves, cinnamon, coriander, and fennel; which eſſence is a kind of ſecret among thoſe who deal herein; and in effect it is in this that all the difficulty of the preparation lies.

OLONE. A port-town of France, in the province of Orleanois, ſituated in 1 deg. 40 min. of W. lon. and 46 deg. 30 min. of N. lat.

OLYMPIA, now *Longinico.* A port-town of the Morea, ſituated in 21 deg. 35 min. of E. lon. and 37 deg. 40 min. of N. lat.

OMERS, *St.* A city of the French Netherlands, in the province of Artois, ſituated on the river Aa, in 2 deg. 20 min. of E. lon. and 50 deg. 45 min. of N. lat. See *Netherlands.*

ONANDAGOES. One of the tribes of the Iroquois, or five nations; whoſe country is ſituated on the lake Ontario, or Frontenac, in Canada, in North America, being allies of the Engliſh. See *Indian* and *Britiſh* America.

ONEGA *Lake*, is ſituated in 35 deg. of E. lon. and between 61 and 63 deg. of N. lat. in the empire of Ruſſia and provence of Rubeninſka, being upwards of 100 miles in length, and 40 in breadth, having a communication with the lake Ladoga, and conſequently with Peterſburg; they have alſo been cutting a channel between the lake Onega and the White lake, by which it will have a communication with the Wolga, and the Caſpian ſea, when they will be able to continue the navigation from Peterſburg to Perſia.

ONEGLIA. A port-town of Italy, in the territory of Genoa, ſituated on a bay of the Mediterranean, in 8 deg. 30 min. of E. lon. and 44 deg. of N. lat.

ONRUST, or *No reſt.* A ſmall iſland at the mouth of the harbour of Batavia in the Eaſt Indies, where the Dutch are perpetually building and careening their ſhips. See *Sunda* iſlands.

NTARIO, or *Frontenac Lake*, lies in the country of the Iroquois, or five nations, in North America, ſituated in 79 deg. of W. lon. and between 41 and 43 deg. of N. lat. having a communication with the river of St. Laurence on the north, and with the lake Erie on the ſouth; being, by the cataract of Niagara, upwards of 150 miles long, and 50 miles broad. Upon this lake the French had built ſome forts, but the Iroquois Indians, in alliance with the Engliſh, demoliſhed them: and the French have ſince rebuilt them.

NYX. A kind of precious ſtone, accounted a ſpecies of opaque agate. See *Agate*.

It is of a dark horny colour, in which is a plate of a bluiſh white, and ſometimes of red; the ſeveral colours appearing as diſtinct as if laid on by art.

There are ſome brought from Arabia, mixed with a browniſh hue; which, after taking off one lay or zone, ſhews another underderneath, of a different colour: whence they take the name memphitis, or camehuia, that is, another ſtone.

White zones, or girdles, are eſſential to an onyx: but Dioſcorides and Galen rank alabaſter among onyxes; tho' this is very remote from the opinion of the moderns. See *Alabaſter*.

ORT, or *Rix-oort*, is a ſilver coin of Denmark, being s. 1 $\frac{1}{2}$ d. ſterling; 5 $\frac{1}{3}$ oorts making the double dollar, or s. ſterling.

RT, is alſo a ſilver coin of Dantzic, worth 10 $\frac{4}{5}$ d. ſterling; 5 of them making the rix-dollar, or 4 s. 6 d. ſterling.

RT or *Gould*, is likewiſe a ſilver coin of Frankfort, current for 7 d. ſterling; 8 of them making the ſpecie dollar, or 4 s. 8 d. ſterling.

AL. A precious ſtone of various colours, changeable according to the different poſition of the ſtone to the light, which ſhews the red of the ruby, the purple of the amethyſt, the green of the emerald; beſides yellow, blue, and ſometimes black and white: but, when the ſtone is broke, moſt of theſe colours diſappear; which ſhews that they ariſe by reflection from one or two principal ones.

Its form is always either round or oval; its prevailing colour white; and its diverſity of colours makes it almoſt of equal value with a ſapphire, or ruby.

Tavernier ſays, perhaps ſomewhat too poſitively, that there are mines of opal in Turkey. Other authors, ancient and modern ſay, Cyprus, Arabia, Egypt, Bohemia, and Hungary produce it; whence it is diſtinguiſhed into two kinds, oriental and occidental.

Artificial OPAL. In the Philoſ. Tranſact. Mr. Colepreſſe gives an account of the manner of counterfeiting opal as practiſed by the Dutch at Haerlem. He ſays, the counterfeit is very lively, and thinks it only performed by the degrees of heat, which produce the colours. When the compoſition is melted, they take out ſome on the point of an iron rod, which being cooled either in the air or water, is colourleſs or pellucid; but being put into the mouth of the furnace on the ſame rod, and there turned by the hand for a little ſpace, hath its little bodies ſo variouſly poſited in various parts of the ſame piece, that the light falling on them, being variouſly modified thereby, repreſents the ſeveral colours ſeen in the natural opal. He adds the colours may be deſtroyed and reſtored, according to the various motions of its particles by heat.

DALE. A port-town of Norway. See *Denmark*.

HITES. A ſort of variegated marble of a duſky green ground, ſprinkled with ſpots of a lighter green; otherwiſe called ſerpentine. See *Marble* and *Serpentine*.

ATE, is ſometimes applied to any confection or electuary: in which ſenſe it is defined an internal remedy, variouſly compoſed of powders, pulps, liquors, ſugar, or honey, reduced into a ſoft conſiſtence.

The opiate of Solomon is a compoſition of great fame; ſo called from one Solomon. a phyſician, its inventor; and firſt publiſhed by Laurence Joubert.

There are a particular kind of opiates called incarnatives for the teeth and gums, made of alum, ſumach, lignum

aloes, myrrh, maſtic, and other things, reduced into powder.

OPIATE, is alſo uſed for any medicine given with an intention to procure ſleep.

OPIATE, is more particularly uſed for a compoſition wherein opium is an ingredient.

OPIUM. A narcotic juice, commonly drawn from the head of the white poppy, and afterwards inſpiſſated. When the juice flows of itſelf, thro' inciſions made in the poppy-heads, it is properly called opium; when drawn by expreſſion it ought rather to be called *Meconium*. See *Meconium*.

The difference between the qualities and virtues of the two juices is very conſiderable. The former is preferable on all accounts, but exceeding rare; the Turks, among whom it is produced, and who make great uſe of it, never allowing it to be exported: ſo that it is the latter which is generally uſed among Europeans, and ſold for opium.

It is moſtly brought from the Levant and Cairo, generally very impure; the Levantines to ſhorten their labour, and to have the more juice, drawing it equally from the heads and leaves of poppies, by expreſſion, and then reducing it to the thickneſs of an extract by fire: though a late traveller into their countries aſſures us it is drawn by decoction, and afterwards inſpiſſated.

It muſt be choſen dry, the ſmoothеſt and blackeſt poſſible, of a drowſy ſmell, and neither rugged nor ſticky, nor all in a maſs.

It is a popular error, that there is any ſuch thing as white opium; for tho' the juice as it runs from the heads of the poppies is of a milk colour, it always becomes of a very deep brown as it thickens. Wherever it is found yelloweiſh or ſoft, it is a ſign the juice has not had fire enough.

Moſt of the opium ſold at Conſtantinople is brought from Anatolia, from a place called by the Turks *Aphium Carahiſſat*, that is black caule of opium. It is likewiſe produced in the territory of Thebes in Egypt, but held much inferior to the Anatolian opium.

There are alſo great quantities produced in the kingdoms of Bengal and Bahar in India, which are exported by the ſeveral Europeans factors to Pegu and the coaſt of Malacca.

Prepared opium is called *laudanum*, whereof there are two kinds: the one ſimple, extracted by means of rain water, and ſpirit of wine; the other compound, called *laudanum opiatum*; wherein ſeveral other ingredients enter. See *Laudanum*.

The uſes of opium are to ſooth pain, to excite ſleep, to ſtop vomiting and looſeneſſes. Its doſe is from half a grain to two grains: ſome perſons who have much habituated themſelves to it, can take 50 or 60 grains. Charas ſays, he has taken 12 grains himſelf, and adds, he knew one who made no ſcruple of 36. And in the Philoſophical Tranſactions we have an inſtance of one Mr. Lovelock, who in a fever, in three days time, took 102 grains.

Opium raiſes the ſpirits, occaſions agreeable ſenſations, and has much the ſame effect with wine, or ſtrong ſpirits. The Turks ordinarily take to the quantity of a drachm when they go to battle, or undertake any affair that requires vigour and reſolution.

Opium ſtops for a time all overflowing of humours, fluxes, hemorrhages, or the like; probably, from the ſmoothneſs and roundneſs of its parts, which, by a kind of titillation, oblige the inteſtines, and other veſſels, to contract themſelves.

Willis, Silvius, and Muller, look on opium as a coagulating poiſon, which fixes the ſpirits in the nerves. Wepfer and Pitcairn, on the contrary, maintain it to be a hot diſſolving poiſon, which ſubtilizes the blood, exalts and reduces it into vapours, which bloat up the arteries; and the bloated arteries compreſſing the veins and nerves, ſhut up the paſſage of the ſpirits.

By analyſis, opium is found to contain a great deal of volatile ſalt.

OPOBALSAMUM. A whitiſh juice, gum, or reſin, diſtilling from the branches of a tree called the balſam tree. See *Balſam*.

It is whitiſh, pretty thick, tranſparent, of a ſmell approaching turpentine, but much more agreeable; being the ſame

with the celebrated *balſamum verum*, or balm of the Levant; at leaſt the difference is not viſible, nor can authors fix it.

It obtains a place among alexipharmics, and is a good ingredient in the *theriaca Andromachi* and mithridate; very ill ſupplied with the expreſſed oil of mace for a ſuccedaneum, which does not at all come up to the ſubtilty and activity of its parts, and is of a much heavier texture. This, as all other balſams, is ſuppurative, deterſive, and incarnating, applied outwardly to tumours, ulcers, or green wounds.

OPOPONAX. A vegetable juice, or gum, yellow on the outſide, white within, fatty and brittle; of an agreeable taſte, and a very ſtrong ſmell.

The Latins call it *panax Herculeum*, from Hercules who is ſuppoſed to have invented it, or rather who firſt diſcovered its ſpecific virtues. It is one of the three celebrated panacea or univerſal medicines, to which the ancients attributed ſuch wonderful virtues: the two others being the aſclepium, and chironium; the firſt found by Eſculapius, the ſecond by Chiron.

The gum opoponax flows by inciſion from a plant growing abundantly in Achaia, Bæotia, Phocis, and Macedonia, in Greece: while it is liquid it is white; but, as it dries and hardens, it aſſumes a golden yellow.

There are three kinds imported; that in tears, that in the maſs, and that counterfeited and flatted. The firſt is the beſt; and the ſecond is the next, as it has the moſt tears; the third being a rank ſophiſtication, and good for little.

It is little uſed internally, tho' Etmuller ranks it among cathartics: its chief uſe being in the cure of wounds; whence it enters the compoſition of the *unguentum divinum*, with the galbanum, ammoniac, and bdellium.

OPORTO. See *Porto*.

OPTICAL *Inſtrument-maker*, is a perſon employed in making the various ſorts of teleſcopes, microſcopes, ſpectacles, and all other inſtruments invented for the help or preſervation of ſight, and in which glaſſes are uſed. The caſes, or machinery of his inſtruments, are made by different workmen, according to their nature, and he adjuſts the glaſſes to them.

ORAN. A city and port-town of Barbary, in the kingdom of Algiers, ſubject to Spain, and ſituated on the Mediterranean, under the meridian of London, in 36 deg. 30 min. of N. lat.

ORANGE. A delicious fruit of the apple kind, too well known to need a particular deſcription; yet yielding too many kinds of merchandiſe, to be paſſed over.

Oranges are uſually brought from Nice, and Genoa, in Italy; the iſles of Hieres, and Provence, in France; Spain, Portugal, Barbary; the American iſlands; and even China, and the coaſts of India.

There are two kinds of oranges; the ſweet, or China oranges; and the ſour, or Seville.

Thoſe called China oranges were firſt brought into Europe from China by the Portugueſe; and it is ſaid the very tree whence all the European orange-trees of this ſort were produced, is ſtill preſerved at Liſbon, in the houſe of the Count St. Laurent.

Thoſe moſt eſteemed are made preſents of as rarities in the Indies, being no bigger than a billiard ball; when ſweetened with a little ſugar they are eſteemed excellent for diſorders of the breaſt, the juices being cooling and anti-ſcorbutic.

Great quantities of Seville oranges are conſumed in the Britiſh dominions for making punch and ſhrub; which are chiefly brought from Spain and Portugal.

Oranges are uſually confected in halves and quarters, when they are firſt peeled, then ſcoped and dried in a ſtove.

Orangeat is the orange-peel cut in pieces and candied.

Italy furniſhes a great deal of flower of oranges, either dry or liquid.

The water of flower of oranges called *aqua naphæ*, comes moſtly from Provence; which, to be good, muſt be very bitter, and not above a year old.

There are various oils drawn from oranges. The oil of neroli is the produce of the flowers by diſtillation. That drawn from the ſkin by water and an alembic, is alſo ther as good. There is alſo an oil drawn from lim oranges, or orangelettes, by ſteeping them five or days in common water, and diſtilling them with the ſa water in an alembic. Theſe oils are all eſteemed gre for deſtroying worms in children; but are very apt to ſophiſticated with oil of ben, or that of ſweet almon

ORANOCO. A ſtrong ſort of tobacco, and uſed making ſnuff. See *Tobacco*.

ORATAVIA. Capital of the iſland of Teneriffe. *Canary* iſlands.

ORBITELLO. A city and port-town of Italy, in duchy of Tuſcany, ſituated on a bay of the Mediter nean, in 12 deg. of E. lon. and 42 deg. 30 min. of N.

ORCADES, or *Orkney* iſlands, are ſituated between 3 of W. lon. and 1 deg. of E. lon. and between 59 and of N. lat. being about 40 in number. See *Britiſh* iſla

ORCHIES. A town of the French Netherlands. *Netherlands*.

ORCHILLA. One of the Sotovento, or Leeward ille near the coaſt of Terra Firma in America, ſituated 65 deg. of W. lon. and 12 deg. of N. lat.

ORDEFF, or *Oredef*. A word frequently uſed in char of privileges, for a liberty whereby a man claims the found in his own ground.

It properly ſignifies ore lying under ground; as a *of coal* is coal lying in veins under ground.

ORDER, in the commerce of bills of exchange, is an dorſement, or ſuccinct writing, placed on the back the bill, for tranſferring and making it payable to anot See *Endorſement*.

ORDER, among traders, ſignifies the power or commi which a merchant gives his correſpondent to make him ſuch and ſuch bargains, at ſuch and ſuch a price, on ſuch conditions as he preſcribes for him. And it is a term for the direction of any parcel of goods to be in from a merchant or trader, particularly from wholeſale dealers as ſupply country tradeſmen.

ORDER *Book*. See *Book*-keeping.

ORDNANCE. A general term for all ſorts of great or cannon, mortars, &c. uſed in war.

The parts of a piece of ordnance are the outſide, about the piece, which is called *the ſuperficies of her* the ſubſtance, or whole maſs of metal, called her *body* part next us, when ſhe ſtands ready to fire, the *breech coyle*; and the pummel, or round knob at the end o the *caſcabell*, by ſome the *caſcabell dock*. The *trun* are the two knobs, or ears, which hold the piece in carriage. *Maniglions*, or *dolphins*, in the German are two handles placed on the back of the piece near trunnions, and near the center of gravity, to moun diſmount them more eaſily.

The rings about a piece of ordnance are five; the *baſe* that which is next below the touch-hole; the next the touch-hole is called the *reinforced ring*; the ne that forward, the *trunnion ring*; the next the *cornice* that at the mouth, the *muzzle ring*, or the *frize*. the rings near the mouth are ſometimes called *freezes*.

As to the internal parts, the whole cavity or bore piece is called her *chaſe*; that part of the cavity bet the trunnions and the muzzle or mouth, the *vacu linder*; that part from the trunnions to the end of t vity, or ſo much of it as contains, or is loaded wi powder and ſhot, is called the *chamber*. The diame the mouth, the *caliber*; the ſpace between the ſhot the hollow ſuperficies of the piece within, the *vent* ing the difference between the diameter of the ſhot the mouth of the piece.

Ordnance in England is diſtinguiſhed into two *field-pieces*, which are from the ſmalleſt to 12 pou and *cannon of battery*, which are from a culveri whole cannon.

Each of theſe diviſions is again ſubdivided; th into baſe, rabinet, falconets, falcon, minion or minion largeſt, ſaker leaſt, ſaker ordinary, demi cu leaſt, culverin ordinary, culverin largeſt, demi leaſt, demi-cannon ordinary, demi-cannon large royal whole cannon.

The ſtrength and ſerviceableneſs of a piece of ordnance depends much on the thickneſs of the metal, eſpecially about its chamber and breech, which is called its *fortification.*

Of this there are three degrees, both for cannons and culverins. Such as are uſually fortified, are called *legitimate pieces*; thoſe whoſe fortification is leſſened, are called *baſtard pieces*; thoſe doubly fortified, are called *extraordinary pieces.*

The fortification of a gun is reckoned from the thickneſs of the metal at the touch-hole, at the trunnions, and at the muzzle, in proportion to the diameter of the bore. The doubly fortified pieces are a full diameter of the bore in thickneſs at the touch-hole, 11-16ths of it at the trunnions, and 7-16ths at the muzzle: the leſſened cannons have but 3-4ths, or 12-16ths of the diameter of their bore, in the thickneſs at the touch-hole 9-16ths at the trunnions, and 5-16ths at the muzzle.

All the double-fortified culverins, and all the leſſer pieces of that kind, have a diameter and 1 8th at the touch-hole, 15-16ths at the trunnions, and 9-16ths at the muzzle. And the ordinary fortified culverins are every way as the doubly fortified cannon, and the leſſened culverins as the ordinary cannon, in all reſpects. The ordinary fortified cannons have 7-8ths at the touch-hole, and at the trunnions, and 3-8ths at the muzzle.

ORDNANCE *Office*, is the ſtanding grand magazine of arms, habiliments, inſtruments, and utenſils of war, as well by ſea as land, not only for thoſe lodged in the Tower of London, but in all the garriſons, caſtles, forts, &c. in Great Britain; from whence, as occaſion requires, his Majeſty's armies, &c. are ſupplied.

The officers of the ordnance are the *maſter-general*, from whom are derived all orders and diſpatches relating to the ſame, as the ſervice ſhall beſt require.

Under him is a *lieutenant-general of the ordnance*, who receives orders from the maſter-general, and the reſt of the prime officers at the board, ſees them duly executed, orders the firing of the guns on days of rejoicing, and ſees the train of artillery fitted out when ordered to the field.

Next to him is the *ſurveyor-general*, who has the inſpection of the ordnance, ſtores, and proviſions of war, in the cuſtody of the ſtore-keepers; allows all bills of debts, keeps a check on labourers, &c.

Under theſe is a *clerk of the ordnance*, who records all orders, and inſtructions given for the government of the office; with all patents, grants, names of officers, &c. draws all eſtimates for proviſions, and ſupplies all letters, inſtructions, commiſſions, deputations, contracts, &c. ſerves as a check between the two accomptants of the office, the one for money, the other for ſtores.

This office has alſo a *ſtore-keeper*, who takes into his cuſtody all ordnance, ammunition, ſtores, &c. thereto belonging; and indents, and gives in legal ſecurity for the ſafe keeping thereof; rendering an exact account from time to time.

There is alſo a *clerk of the deliveries*, whoſe duty is to draw up all proviſions, either at the Tower, or any other of his Majeſty's magazines, to ſee them duly executed, &c. And laſtly, a *treaſurer*, through whoſe hands paſſes the money of the whole office, as well for payment of ſalaries as debentures.

ORDUNNA. A port-town of Spain, in the province of Biſcay, ſituated in 3 deg. 30 min. of W. lon. and 43 deg. 15 min. of N. lat.

ORE. The mineral glebe, earth, or ſtone, dug out of mines, to be purified, and the metalline parts procured and ſeparated from the ſame.

The ore is frequently called the mineral, and ſometimes marcaſite: though on other occaſions a difference is made; the denomination *ore* being only given where the mineral is rich enough of metal to be wrought; when it is not, it is denominated *marcaſite*. See *Mineral*, and *Marcaſite*.

ORE, is alſo a copper coin of Sweden; being 7-12ths of an Engliſh penny; and 96 of them make the rix-dollar, or 4s. 8d. ſterling.

ORE-GRUND. A port-town of Sweden, in the province of Upland, ſituated on the Bothnic gulph, in 18 deg. 15 min. of E. lon. and 60 deg. 30 min. of N. lat.

ORELLAN. A plant that grows in ſome places of the continent of America, particularly at Brebia, a Dutch colony near the river Surinam in Terra firma, where it is cultivated like indigo; and from it a dye is extracted as good as that from Indigo. See *Indigo*.

ORFORD. A borough and port-town of Suffolk, ſituated on a bay of the German ocean, in 1 deg. 38 min. of E. lon. and 52 deg. 15 min. of N. lat.

ORGAL. The lees of wine dried, and uſed by dyers, to prepare the cloth for more readily taking their ſeveral colours.

ORGAGIS. A white cotton cloth brought from the Eaſt Indies; being a kind of baffetas, called orgagis from the place where it is manufactured. See *Baffetas*.

ORGANSIN, or *Orgenſin*. Silk open, and dreſſed, that is, ſpun and milled; compoſed of four twiſts of ſilk, which have been firſt ſpun, and milled ſeparately, two by two; and being afterwards milled all four together, compoſe but one thread.

Organſins have uſually their names from the countries and towns where they are dreſſed, and brought from: ſuch are thoſe of Milan, Bologna, Bergamo, Reggio, Piedmont, and Breſſe. Thoſe of Meſſina from Sicily are called *organſins of St. Lucia*; which, with thoſe of Bologna, are moſt eſteemed. See *Silk*.

ORIENT, is a term underſtood of all thoſe parts of the world ſituated with regard to us in thoſe places where we ſee the ſun riſe; yet commonly it is ſaid only of thoſe which are moſt diſtant from us, as China, Japan, the Mogul's country, and the reſt of India, Arabia, and Perſia; the other parts which we are nearer to, as the iſlands of the Archipelago, and the coaſt of the Mediterranean, wherein are Conſtantinople, Smyrna, Aleppo, Sidon, and even Cairo, are known only in commerce by the name of the *Levant*.

ORIENTAL. Something ſituated towards the eaſt with regard to us, in oppoſition to occidental; in which ſenſe we ſay *Oriental pearls*, that is, ſuch as are found in the Eaſt Indies. See *Occidental*.

ORIENTAL *Iſlands*, are the Philippines, Celebes, Moluccas, and Banda iſlands, with the reſt which lie ſouth of China.

ORISTAGNI. A city and port-town of the iſland of Sardinia, ſituated on a bay of the Mediterranean, on the weſt-ſide of the iſland, in 8 deg. 30 min. of E. lon. and 39 deg. 30 min of N. lat.

ORLEANS *iſland* and *town*, in North America, are ſituated in the river of St. Laurence, in 73 deg. of W. lon. and 47 deg. of N. lat. See *French* America.

ORLOPE, or *Orlopp*, in the ſea-language, the uppermoſt ſpace or deck in a great ſhip, from the main-maſt to the mizzen; but in three-decked ſhips, the ſecond and loweſt decks are ſometimes alſo called *orlope*.

ORMUS. See *Perſian* iſlands.

Gulph of ORMUS. See *Perſian* Gulph.

ORNIS. A kind of cotton cloth, or muſlin, manufactured at Brampour, a town of India, between Surat and Agra; being half cotton, and half gold and ſilver, from 15 to 20 ells long.

OROBE. A plant, whoſe ſeed and root are of ſome uſe in medicine and dying.

ORONOQUE. A river of South America, riſing ſouth of the equator; and running north through the countries of Guiana and Caribbiana, falls into the Atlantic ocean almoſt oppoſite to the iſland of Trinity. It was in this river that Sir Walter Raleigh went in ſearch of a gold mine, in the reign of King James I. where he took the town of St. Thomas, and diſturbed ſome others of the Spaniſh ſettlements on that ſide; which made the Spaniards never ceaſe to ſolicit the court of England to deſtroy him, till they brought that illuſtrious man to the ſcaffold.

OROPEZA. A city of Peru in South America; ſo called from the quantity of gold found near it.

ORPHAN'*s fund of the city of London*, was eſtabliſhed by act of parliament of the 5th and 6th of William and Mary. The city of London had for many ages acted as

a common parent to all her orphans: but by ſeveral accidents, and public calamities, their money, which had been depoſited in the chamber of the city for its ſecurity, was ſo much exhauſted, that the citizens became indebted to the orphans, and other creditors, in the ſum of 747,500 l. which was a greater ſum than they were immediately capable of diſcharging: therefore, to enable them to pay this debt, they applied for the aſſiſtance of parliament; by whom it was enacted,

That towards ſettling a perpetual fund for paying the yearly intereſt of 4 *per cent.* due by the city to their creditors, all the manors, meſſuages, lands, markets, fairs, and other income whatſoever belonging to the city, excepting the eſtates belonging to the city-hoſpitals, and thoſe appropriated for the repairs of London bridge, ſhould be for ever charged for raiſing the annual ſum of 8000 l. clear of all deductions. That all the profits ariſing from the ſeveral aqueducts belonging to the city be applied towards the payment of the ſaid intereſt. That towards the ſupport of the ſaid fund, the Lord Mayor and common council might annually raiſe 2000 l. by an equal aſſeſſment, upon the perſonal eſtates of the citizens. That the yearly ſum of 600 l. being the rent paid for the privilege of illuminating the ſtreets of the city with convex lamps, ſhould be applied towards the ſupport of this fund; which was afterwards taken off. That every apprentice, at the time of his being bound, ſhould pay 2 s. 6 d. towards this fund. That every perſon, upon his being admitted a freeman of the city, ſhould pay 5 s. towards the ſupport of this fund. That every ton of wine, imported into the port of London, ſhould pay 5 s. towards the ſupport of this fund. That towards the increaſe of this fund, all coals imported into the port of London, ſhould pay 4 d. the chaldron metage, above what was formerly paid; and alſo the meaſurable to pay 6 d. the chaldron; and the weighable 6 d. the ton, for 50 years, which expired in 1742; when all the monies, &c. belonging to the city, ſtood charged with the yearly ſum of 6000 l. over and above the 8000 l. a-year.

For better ſecuring the properties of the city-orphans for the future, they and their truſtees were for ever exempt from paying, or delivering into the chamber of London, any money, or other parts of their perſonal eſtates. And as a further ſecurity to theſe orphans, no money of theirs, which ſhall be veſted in the orphans fund, can be removed from thence, till they to whom it belongs be of age; or, if a daughter, when married.

As ſoon as application is made to the court of Lord Mayor and Aldermen in behalf of any of the city-orphans, to have the benefit of the orphan's fund, the money depoſited on account of ſuch orphan is taken in at par: on which occaſions a non-orphan is paid off to the amount of that money, to make room for others; and no fees are to be taken by any of the city-officers for any buſineſs done by them in relation to this fund. However, from the eſtabliſhment of this beneficial fund in 1694 to 1735, the ſeveral ſums veſted therein, on account of the city-orphans, only amounted to about 100,000 l.

ORPIMENT, *Auripigmentum.* A mineral, or ſemi-metal, uſually found in copper mines, and ſuppoſed to contain particles of gold; which may be extracted by chemiſtry, but were never found to countervail the expence.

Orpiment is found in ſtones, or glebes, of ſeveral ſizes and figures: its colour is always yellow, intermixed with ſhades of other colours, as green, red, orange, and others; but ſometimes it is found almoſt quite red, which is the proper ſandaracha of the antients. See *Sandaracha.*

That uſually called red orpiment, or red arſenic, is only the yellow orpiment heated to a great degree, and put in a crucible, with oil of hempſeed, olives, or nuts.

Painters, farriers, and others, make a great conſumption of this mineral; but as it is found a violent corroſive, and even reputed a poiſon, it ſhould be uſed with great precaution.

Orpiment muſt be choſen of a golden yellow colour, eaſy to ſcale, and the ſcales very thin, ſmall, and ſhining like gold.

Some diſtinguiſh three kinds of orpiment; *white*, which is the ſame with arſenic; *yellow*, which is the proper orpiment; and *red*, which is ſandarach, or realgar. See *Arſenic*, and *Realgar*.

The Indians uſe orpiment, corrected with juice, with good ſucceſs againſt fevers.

ORRICE, or *Orris.* Gold and ſilver lace, wove pretty broad, to ſew on mens and womens garments by way of ornament.

ORT. A term of commerce, uſed in French cuſtom-houſes; where *to weigh ort*, ſignifies to weigh merchandiſe with their package.

The tariff of 1664, and the ordonnance of the five great farms of 1684, import, that all commodities which pay duty by the weight, excepting thoſe of gold and ſilver, and ſpice, ſhall be weighed with their package. See *Tare.*

ORTIES. A ſmall Flemiſh copper coin, worth about a farthing ſterling; 80 of which make the guilder, or 1 s. 7 2/7 d. ſterling.

ORTOLAN. See *Hortolan.*

ORVIETAN. A celebrated antidote, or counter-poiſon, ſo called, becauſe invented and propagated by an operator from Orvieta in Italy; who made experiments thereof on his own perſon, on the public ſtage, by taking ſeveral doſes of poiſons.

In Charas's pharmacopœia is a method of making orvietan; where it appears that Venice treacle is one of the principal ingredients. See *Theriaca.*

ORWELL. A river of Suffolk, riſing in the middle of that county; and running S. E. by Ipſwich, falls into the German ſea at Landguard fort.

OSACA. A great city and port-town of Japan, ſituated on a bay of the ſea, on the eaſt-ſide of the iſland, in 13 deg. of E. lon. and 35 deg. of N. lat. See *Japan.*

OSERA. A Venetian iſland in the gulph of Venice, ſituated in 15 deg. 30 min. of E. lon. and 45 deg. of N. lat.

OSLIC. A ſilver coin of Turky, worth 4 1/2 d. ſterling; 26 of which make the zeriff, or 9 s. 9 d. ſterling.

OSTEND. A city and port-town of the Auſtrian Netherlands, ſituated in 2 deg. 45 min. of E. lon. and 51 deg. 15 min. of N. lat. See *Netherlands.*

OSTENSIO. A tax anciently paid by merchants, &c. for leave to ſhew, or expoſe their goods to ſhow and ſale in markets. See *Scavage.*

OSTEOCOLLA, *Glue-bone.* A white or aſh coloured ſparry ſtone, ſhaped like a bone, and by ſome ſuppoſed to have the quality of uniting broken bones; on which account it is ordered in ſome plaiſters.

OSTIA. A port-town of Italy, in the Pope's territories, ſituated at the mouth of the Tiber, in 13 deg. of E. lon. and 41 deg. 30 min. of N. lat.

OSTRACITIS. A kind of cruſty ſtone, reddiſh, and in form of an oyſter-ſhell; being like that ſeparable into laminæ, found in ſeveral places of Germany, and held in ſervice in the gravel; the doſe being from half a dr. to a whole one, in white wine.

OSTRACITIS, is alſo the name of a kind of cadmia, found at the bottom of the furnaces where copper is purified. See *Cadmia.*

It is very heavy, and in ſtructure reſembles an oyſter-ſhell; whence its name. It is eſteemed aſtringent and deterſive, and is an ingredient in ſeveral unguents.

OSWEGO. A town of the Iroquois in North America, 300 miles weſt of Albany in New York, where the Engliſh trade with the diſtant Indians for their ſkins and furrs.

OTOQUE. An iſland of Terra firma, ſituated on the coaſt of Panama in America, in 82 deg. of W. lon. and 8 deg. of S. lat.

OUATE. A very fine and gloſſy kind of cotton, brought from Egypt.

OUCH. The bed, collar, or ſeat of gold or ſilver, in which jewellers put their precious ſtones, to keep them faſt in rings, buttons, and the like.

OVERFLACKEE. An iſland of the United Provinces, in the province of Holland, ſituated in the mouth of the river Maes. See *United* Provinces.

OVERKEYKERS. A term at Amſterdam for the white ſerges manufactured at Leyden. See *Serge.*

OVER-*maſted*, in the ſea-language, is when the maſts of a ſhip are diſproportioned to her bulk.

OVER-*meaſure*. Something given or allowed more than the exact quantity, for the encouragement of the buyer: thus they who buy 20 chaldrons of coals, have one allowed them for over-meaſure.

OVER-*rake*, in the ſea-language, when a ſhip riding at anchor, ſo overbeats herſelf into a head-ſea, that ſhe is waſhed by the waves breaking in upon her, they ſay the waves over-rake her. See *Rake*.

OUNCE. A little weight, the 16th part of a pound avoirdupois; and the twelfth of a pound troy.

The ounce avoirdupois is divided into 8 drams, and the dram into 3 ſcruples. The ounce troy into 20 pennyweights, and the pennyweight into 24 grains.

The ounce, or once, makes the 8th part of the French mark, and is divided into 3 gros, or drams; the dram into 3 pennyweights, or ſcruples; and the ſcruple into 24 grains, each grain computed to weigh a grain of wheat.

All precious merchandiſes, as gold, ſilver, ſilk, &c. are ſold by the ounce.

OUNCE. A gold coin of Sicily, worth about 7 s. $4\frac{4}{13}$ d. ſterling.

OUNCE *Pearls*, are thoſe too ſmall to be ſold by tale, uſually called ſeeds of pearl. See *Pearl*.

OUNCE cottons, are certain cottons brought from Damaſcus, of a kind and quality ſuperior to the reſt. See *Cotton*.

OUSE. A river which riſes on the confines of Oxfordſhire and Buckinghamſhire, and running N.E. through Bucks, Bedfordſhire, Huntingdonſhire, Cambridgeſhire, and Norfolk, paſſes by Buckingham, Bedford, Huntingdon, and Ely, diſcharging itſelf into a bay of the German ſea at Lynn.

OUSE, is alſo a river which riſes in the north of Yorkſhire, runs S. E. by York; and continuing its courſe S. E. falls into the Trent or Humber.

OUSTIACH, or *Oſtiach*. A country of Aſiatic Ruſſia. See *Ruſſia*.

OWLER. A maſter of a ſhip, or other perſon, who conveys wool, or other prohibited goods, in the night, to the ſea-ſide, in order to ſhip them off contrary to law. See *Smuggler*.

The name is derived hence, that, like owls, they only ſtir abroad in the night-time.

OWNER *of a ſhip*, is the proprietor of the ſame by lawful title, either as the builder of it, or by purchaſe of another intitled thereto. See *Ship*, and *Maſter*.

OWSE, among tanners, is oaken bark beaten, or ground ſmall, to ſerve in the preparation of the leather. See *Bark*.

OX, is a male of the neat kind, that has been gelt, to make him tamer, and more fit for labour, many farmers ploughing the ground with them.

OX-EYE. A ſea-term for a violent ſtorm, that ſometimes happens upon the coaſt of Guinea; which, at its firſt riſing, ſeems to be no bigger than an ox's eye, though ſoon after it ſpreads itſelf over the whole viſible part of the hemiſphere; breaking out into ſuch ſudden guſts of wind or ſtormy air, that it frequently not only ſcatters the ſhips one from another, but alſo ſinks and overturns them.

OXYMEL. A mixture of honey and vinegar, boiled to the conſiſtence of a ſyrup: of which there are two kinds; the one ſimple, the other compound; the ſimple is uſed to deterge any phlegm adhering to the throat or cheſt; the compound, whereto is added the decoction of the five greater opening roots, with the ſeeds of ſmallage, parſley, and fennel, is uſed in obſtructions of the liver and ſpleen.

OXUS. A river which riſes in the mountains on the north of India, runs north-weſt through Uſbec Tartary, afterwards ſeparates Perſia from Uſbec Tartary, falling into the Caſpian ſea in 44 deg. of N. lat.

OYSTER, and *Oyſter fiſhery*. See Oyſter *Fiſhery*.

P.

P, IN medicinal preſcriptions, is uſed for *pugil*, or the eighth part of a handful.

P. Æ. ſignifies *partes æquales*, equal parts of any ingredients, otherwiſe denoted by *ā*, or *ana*.

P. P. ſignifies *pulvis patrum*, Jeſuits powder, or the *cortex peruvianus* in powder; which is ſo called, becauſe firſt brought into Europe by thoſe fathers. See *Cortex*.

P. S. in letters between trading correſpondents, ſignifies *poſtſcript*.

PACE, or *Step*. A meaſure taken from the ſpace between the two feet of a man in walking. See *Meaſure*.

The ordinary pace of a man is two feet and a half, though many reckon it a yard; the geometrical, or German, called alſo the *greater pace*, is five feet. See *Foot*.

The antient Roman and modern Italic mile conſiſts of a thouſand paces, *mille paſſus*; the French league is 3000 paces, and the German 4000.

PACHSU. An iſland of the Mediterranean, near the coaſt of Epirus, ſubject to Venice, and ſituated in 20 deg. 45 min. of E. lon. and 39 deg. 15 min. of N. lat.

PACIFIC *Ocean*, or South ſea, ſeparates Aſia from America, being 10,000 miles wide in the broadeſt part. It was called Pacific from the moderate weather mariners met with on the coaſt of Peru, and generally between the tropics in that ſea; though it appears, it is no leſs ſtormy than other ſeas without the tropics, towards either pole: but Magellan happening to have a very favourable wind, and not meeting with any thing to ruffle him, when he firſt traverſed this ocean in 1520, gave it the name which it has retained ever ſince. Maty however adds, that the wind is ſo regular, that veſſels could frequently go from Acapulco to the Philippine iſlands without ſhifting a ſail. It was called the South ſea, becauſe the Spaniards paſſed the iſthmus to Darien, from north to ſouth, when they firſt diſcovered it; though it is properly the weſtern ocean with regard to America. See *Ocean*.

PACK *of wool*, in commerce, is a horſe's load; containing 17 ſtone and 2 pounds, or 240 pounds weight. See *Wool*.

To PACK, ſignifies to tie, or bundle up, goods in a convenient manner for removing or carrying them from place to place.

PACKAGE. A duty or cuſtom paid by ſome ſort of goods for the packing or package thereof. See *Scavage*.

By the ſtatute of the 13th and 14th of Charles II. the maſters of any ſhips from foreign parts, ſuffering any package to be opened, and the goods embezzled, carried away, or put into any other form or package, after the ſhip comes into the port of diſcharge, are to forfeit 100 l.

PACKBUYS, is a term in Holland for the warehouſes where goods are depoſited, either at their arrival in, or going out of the country, when for ſome reaſons the duties cannot be paid immediately; but there are alſo other cauſes for their being detained there.

PACKER, is a perſon whoſe buſineſs it is to pack up all ſorts of bale goods into proper parcels fit for exportation; being anſwerable to their employers if any damage happens to the goods through their ignorance or neglect. It is a very reputable buſineſs, attended with great profits; and many packers are large adventurers themſelves in the exportation of Britiſh manufactures. See *Preſs*.

PACKERS, are certain perſons appointed, and ſworn to put or pack up herrings, according to the direction of the act of parliament in that caſe made and provided.

PACKET, or *Pacquet*. A name generally applied to a mail or quantity of letters, brought from beyond ſea.

PACKET-*boats*, are veſſels, wherein ſuch mails are carried. See *Letters*.

By the ſtatute of the 13th and 14th of Charles II. packet-boats are not to import or export any goods, unleſs by the allowance of the officers of the cuſtoms; upon forfeiture of ſuch goods, and 100 l. by the maſter, beſides loſs of place.

PACO, is one of thoſe kinds of minerals, or metallic ſtones, found in the ſilver mines of Chili and Peru; being of a yellowiſh red, ſoft, naturally frangible into ſcraps, and produces but little ſilver.

PACOS. An extraordinary kind of ſheep met with in Peru; whoſe wool is very long and fine, and may be uſed for ſeveral beautiful manufactures.

PACOTILLE, or *Paquotille*. A French term of commerce, which ſignifies a certain weight or quantity of merchandiſe allowed to officers, ſailors, &c. to embark upon their own account; which pays no freight, either going or returning. See *Adventure*.

PACTOLUS. A river of Lydia in the Leſſer Aſia, celebrated by the antient poets for its golden ſands.

PADANG. A port-town of the Eaſt Indies, ſubject to the Dutch, ſituated on the weſt coaſt of the iſland of Sumatra, in 99 deg. of E. lon. and 1 deg. 5 min. of S. lat. See *Sunda* iſlands.

PADSTOW. A port-town of Cornwal, ſituated on a bay of the Iriſh channel, in 5 deg. 20 min. of W. lon. and 50 deg. 40 min. of N. lat.

PADUA. A city of Italy, ſituated in 12 deg. 15 min. E. lon. and 45 deg. 30 min. of N. lat. ſubject to the Venetians.

PADUASOY. A particular kind of rich ſilk, originally manufactured at Padua in Italy; though the ſame ſort is brought from China and India.

PAENSZAJIE. A ſilver coin current in Perſia, worth two mamodies and a half, or 1 s. 8 d. ſterling.

PAGIAVELLE. A particular way of ſumming up the pieces of merchandiſe, uſed in ſome places of the East Indies, when ſold by wholeſale; which is in proportion to what Europeans call a groce. Cotton cloths are ſold in Pegu by the Pagiavelle of four pieces.

PAGO. An iſland in the gulph of Venice, ſeparated from the continent of Morlachia by a narrow channel, ſituated in 16 deg. 12 min. of E. lon.

PAGOD, or *Pagoda*. A gold coin current in ſeveral parts of the Eaſt Indies, on the footing of the piece of eight. See *Coin*.

The Engliſh coin pagodas at Fort St. George, and the Dutch at Pel'icate.

There are alſo ſilver pagodas ſtruck at Narſingua, Biſnagar, and other places, which uſually bear the name of ſome monſtrous idol, whence they have their denomination. There are pagodas of various values and inſcriptions, thoſe of Fort St. George being worth 7 s. 8 d. ſterling, and others are worth 9 s. ſterling. The curious alſo give the name *pagod* to the little porcelain images brought from China.

PAINT. Colours mixed up with oil, for the uſe of painters.

PAINTER-*ſtainer*, or *Houſe-painter*. One who paints things with plain colours, as wainſcotting, doors, windows, frames, and other things.

PAINTER, among ſeamen, is alſo the rope that lies in the ſhip's long-boat, or barge, always ready to faſten or haul her on ſhore.

PAINTER, properly ſpeaking, is an artiſt, whoſe buſineſs conſiſts in painting, or the art of deſcribing upon a plane the figure and exact reſemblance of any object, by light and ſhade, or the proper uſe of colours. There are ſeveral branches of this noble art; the hiſtory, landskip, and portrait painter. Every nation has a particular

in painting. The Italians excel in hiſtorical repreſentations, the French in flowers and animals, the Dutch in drolls, and the Engliſh in portrait or face-painting. The gentry of England, of late years, have affected a taſte in Italian and Flemiſh paintings; but, in that reſpect, they are the bubbles of Europe; by private gentlemen laying out great ſums to purchaſe Italian originals, which they buy on the recommendation of ſome trading connoiſſeurs, who generally make them pay for the love of the name of eminent painters; while the Engliſh painters find their own valuable works neglected, and ſmoke-dried pictures, painted by indifferent hands abroad, purchaſed at home for works of the great maſters.

Rome and Venice are the beſt ſchools for painting; where they have academies with eminent profeſſors, who direct the ſtudents in their exerciſe; but theſe ſeminaries are wanting in England, which ſends great ſums of money abroad for pictures and prints.

Painters. There are ſeveral other kinds of painters; as the *drapery-painter*, who is employed in dreſſing the figures, after the portrait-painter has finiſhed the face, given the figure its proper attitude, and drawn the outlines of the dreſs or drapery. The *herald* and *coach-painter*, whoſe buſineſs it is to draw coats of arms, and atchievements, for noblemen and gentlemen. The *ſhip-painter*, who is employed in plain work about ſhips, like the houſe-painter about houſes, though his buſineſs is ſomewhat more curious. The *floor-cloth painter*, who paints floor-cloths in oil-colours. The *ſign-painter*, who paints ſigns on wood or pewter. And the *fan-painter*, who paints the mounts of fans.

AINTER *ſtainers company of London*, was incorporated by letters-patent of the 24th of Q. Eliz. dated the 19th of July 1582, by the appellation of The maſter, wardens, and commonalty of the freemen of the art and myſtery of painters, called painters-ſtainers, within the city of London; which is a corporation governed by a maſter, 2 wardens, and 19 aſſiſtants; who have a livery of 69 members, with a little convenient hall at London-wall, wherein they manage their affairs; their fine being 10 l. on admiſſion.

AITA. A port-town of Peru, in South America, ſituated 500 miles north-weſt of Lima, in 80 deg. of W. lon. and 5 deg. of S. lat. See *Spaniſh* America.

AIX. A port-town, ſituated on the north ſide of the iſland of Hiſpaniola, in 72 deg. 30 min. of W. lon. and 20 deg. of N. lat. See *French* America.

ALAMBOANG, or *Palambang*. The capital of a kingdom at the eaſt end of the iſland of Java, ſituated on the ſtraights of Bally, in 114 deg. of E. lon. and 7 deg. 30 min. of S. lat. See *Sunda* iſlands.

ALAMOS. A port-town of Spain, in the province of Catalonia, ſituated on the Mediterranean, in 2 deg. 40 min. of E. lon. and 41 deg. 50 min. of N. lat.

ALANQUIN. A ſort of chair, or ſedan, much uſed by the Chineſe, and other eaſtern people, to travel in; in England carried by men, in other countries by camels and elephants.

ALATINATE *of Bavaria*, and palatinate of the *Rhine*. See *Germany*.

ALERMO. Capital of the iſland of Sicily, ſituated on a bay of the Mediterranean, near the north coaſt of the iſland, in 13 deg. of E. lon. and 38 deg. 30 min. of N. lat. See *Italian* iſlands.

ALICAT, or *Pelicate*. A port of the Hither India, ſituated on the Coromandel coaſt, in 80 deg. of E. lon. and 14 deg. of N. lat. where the Dutch have a factory.

ALIMBAN. A town on the iſland of Sumatra, ſituated in 103 deg. of E. lon. and 3 deg. of S. lat. See *Sunda* iſlands.

ALL. A ſort of mantle, or looſe garment, ſometimes worn by knights of the garter; ſometimes applied to the decent covering, made of velvet, or other rich ſtuff, which is thrown over coffins, that move in proceſſion on foot to be buried; and alſo laid over the corps coming out of the herſe.

ALLAM. A weight of India, containing 3 ounces, and 3½ drams.

ALM. An antient long meaſure, taken from the extent of the hand.

The modern palm is different in different places where it obtains. At Rome it contains 7 inches $\frac{2}{10}$: at Naples, according to Riccioli, 8 inches: at Genoa, according to M. Petit, 8 inches $\frac{8}{10}$: at Morocco and Fez, 7 inches $\frac{2}{10}$: in Languedoc and ſome other parts of France, the palm is 8 inches $\frac{1}{3}$; and the Engliſh palm is 3 inches.

At Leghorn there are two kinds of palms, the one for woollens, the other for ſilks: the firſt being one third ſhorter than the latter.

PALMA-CHRISTI. A ſhrub growing abundantly in the Antilles iſlands, where the inhabitants call it carapat.

The trunk of the palma-chriſti is never thicker than the ſmall of the leg; its wood is light, knotty, and almoſt hollow, being filled only with a ſmall quantity of a white pith; its bark grey, thin, and ſmooth. Its leaves are interſected as thoſe of the vine, but ſmaller and rougher. It bears twice a year a kind of bean or almond, incloſed within a pod; being ſmooth, ſhining, of a brown colour, and variegated with ſeveral other colours; within there is a white, ſtrong, and oily ſubſtance, whoſe taſte is ſomewhat bitter.

It is from this almond that the oil of palma-chriſti is extracted; which is done two ways; either with, or without fire: the former affording the beſt, and the latter the moſt oil. For this purpoſe the almonds of palma-chriſti are pounded in a wooden mortar; afterwards they are boiled in water, and, as they boil, the oil ſwimming on the ſurface is ſkimmed off with a ſpoon: when they yield no more, the water is poured out by inclination, and the almonds are preſſed, wrapped up in a coarſe cloth, to extract what remains.

The other kind is drawn only by expreſſion, without either hot water or fire. The almonds are firſt pounded, next put into a coarſe cloth, and put under the preſs to ſqueeze out the oil, which never becomes rancid, or imbibes an ill taſte. This is that which is uſed moſt commonly in medicine; tho' for want of it, the other is alſo uſed with ſucceſs.

The diſorders it is good for, are cold humours, wherein it is uſed with brandy; contuſions alſo, and cholicks, are wonderfully allayed by it.

This oil is ſweet, void of either an ill taſte or ſmell; as tranſparent as oil of olives, burning as well as walnut-oil, and without ſmoke, wherein it by far ſurpaſſes train-oil, beſides that it conſumes not ſo readily.

PALM-*oil*, or *Oil of Senegal*. See *Oil*.

PALM-*tree*, is that which produces the date. See *Date*.

PALMA *Iſle*. One of the Canary iſlands, ſituated in 19 deg. of W. lon. and 29 deg. of N. lat. See *Canaries*.

PALMAS *Cape*. A promontory on the ivory coaſt of Guinea, in Africa, ſituated in 8 deg. of W. lon. and 4 deg. 30 min. of N. lat.

PALOS. A port-town of Spain, in the province of Andaluſia, ſituated on the bay of Cadiz, in 7 deg. 15 min. of W. lon. and 37 deg. of N. lat.

PALOS *Cape*, or *Cape Palos*, is a promontory of Spain, in the province of Murcia, ſituated in 40 min. of W. lon. and 37 deg. 40 min. of N. lat.

PALUS MEOTIS. See Palus *Meotis*.

PAMPHLETS. Any ſmall book ſtitched, or unbound.

PANACHE. A meaſure uſed in the iſland of Samos for grains, and dry legumes, weighing 25 lb. 3 panaches making the quillot, which weighs 75 lb. avoirdupois.

PANAMA. The capital city of the province of Darien, or Terra Firma proper, in South America, ſituated in 82 deg. of W. lon. and 9 deg. of N. lat. See *Spaniſh America*.

PANARIA. One of the Lipari iſlands, ſituated in 15 deg. of E. lon. and 39 deg. of N. lat. ſubject to the King of the two Sicilies. See *Italian* Iſlands.

PANARO. A river of Italy, which riſes in the Appenine hills, on the confines of Tuſcany; runs N. into the Modeneſe, and afterwards divides Modena from Romania; then running E. paſſes by Ferrara, thro' the Ferrareſe, falling into the gulph of Venice at Valona; and is called the Po di Valona.

PANAY. One of the Philippine iſlands, ſubject to Spain, ſituated in 119 deg. of E. lon. and 11 deg. of N. lat. See *Philippines*.

PANGFILS. A kind of ſilk ſtuff, manufactured in China, eſpecially in the province of Nanquin; being chiefly deſtined for the Japaneſe trade.

PANOSSAKES. Woollen cloths worn by the negroes of the African coaſts, and diſtributed there in abundance from the kingdom of Cantor, where the beſt are made, by ſuch Europeans as trade on the river of Gambia; being uſually ſtriped with a flame colour.

PANQUE. A plant growing in Chili in America, and uſed for dying a fine black; the leaves of this plant being round, tufted as the acanthus, and its ſtalk of a reddiſh colour, which, eaten raw, is reputed to refreſh, and to have a very aſtringent quality.

PAPER. A thin flexible leaf, either white, brown, or blue, artificially prepared of ſome vegetable, or other ſubſtance, chiefly to write upon with ink.

Paper, with regard to the manner of making it, and the materials employed therein, is reducible to divers kinds; as Egyptian, European, and Chineſe paper.

There is alſo mention of the cotton paper, bark paper, and aſbeſtine or incombuſtible paper.

PAPER, or *Papyrus*, was at firſt a plant, or kind of bulruſh, that grew upon the banks of the Nile; being applied by the Europeans to ſeveral uſes, as well as to that of writing paper, which was denominated from the plant; and the Gauls had paper made of cotton.

PAPER, among Europeans, is chiefly made of linen or hempen rags, beaten to a pulp in water, and moulded into ſquare ſheets, of the thickneſs required: but it may alſo be made of nettles, hay, turnips, parſnips, colewort leaves, earth-flax, or any thing that is fibrous; nay it may be made of white woollen rags, tho' this would not ſerve for writing, becauſe of the hairineſs. The Chineſe paper is ſo fine that many of the Europeans have thought it was made of ſilk, not conſidering, ſays Du Halde, that ſilk cannot be beat into ſuch a paſte, as is neceſſary to make paper: tho' the ſame author ſpeaks afterwards of a paper, or parchment, made of the balls of ſilk worms. Beſides the chief uſe of paper, which is for writing and printing on, there is a great conſumption of it in packing up goods, and on other occaſions.

The manufacture of paper has got footing in moſt countries; tho' France, Holland, and Genoa, are the places where it ſucceeds beſt: in general, it depends much on the quality of the linen worn in the country where it is made: where that is fine, or coarſe, or brown, &c. the rags, and conſequently the paper made thereof, muſt be ſo too. Hence the whiteneſs of the Dutch and Flemiſh papers beyond the Italian and French; and much more the German papers The Engliſh manufacture has not hitherto been in ſuch great reputation; but it is every day improving, inſomuch that the Engliſh now import little of the ordinary ſorts, which were formerly all brought from abroad; yet paper-mills are of ſome ſtanding in England; for one was erected at Dartford as early as the year 1588, by Mr. Spilman a German, and jeweller to Queen Elizabeth.

In reality, the deficiency of the Engliſh paper-manufacture does not ſeem owing ſo much to the quality of the rags, as the want of ſkill and attention in the maſters: but the encouragement given it by the legiſlature, in the high duty laid on foreign paper imported, it is to be hoped, will anſwer the purpoſes for which it was intended; and how conſiderable this is, will appear from the following ſtate.

Genoa royal fine paper, pays *per* ream 7 s. 7 ½ d. Genoa royal ſecond, 6 s. 10 ½ d. Fine Holland royal 7 s. 7 ½ d. Fine Holland ſecond, 5 s. Ordinary royal, 2 s. 6 d. Genoa demy-fine 3 s. 10 ½ d. Genoa demy-ſecond 3 s. 1 ½ d. Dutch printing demy 3 s. 4 ½ d. Genoa crown fine 3 s. 1 ½ d. Genoa crown ſecond 2 s. 4 ½ d. Dutch crown fine 2 s. 4 ½ d. Dutch crown ſecond 2 s. Genoa fools-cap fine 3 s. 1 ½ d. Genoa fools-cap ſecond 2 s. 4 ½ d. Dutch printing fools-cap 2 s. Atlas fine 28 s. 10 d.

Papers are of various kinds: with regard to colours they may be divided into *white*, *brown*, *blue*, &c. with regard to quality into *fine*, *ſecond*, *baſtard*, *ſuperfine*, &c. with regard to uſe into *writing*, *printing*, *preſſing*, *cap*, *cartridge*, *copy*, *chancery*, *poſt*, &c. with regard to dimenſions, into *demy*, *medium*, *crown*, *fools-cap*, *pot*, *royal*, *ſuper-royal*, *imperial*, *elephant*, *atlas*, &c. with regard to country, into *Germany*, *Lombard*, *Rochelle*, *Genoa*, *Holland*, &c.

French papers are divided into *large*, *middle*, and *ſmall*; to the ſmall belong theſe called *petit romain*, *petit raiſin*, or *bâton royal*, *petit nom de Jeſus*, and *petit à la main*, all thus nominated from the marks impreſſed on them in making; alſo the *cartier* for the backs of playing cards; *pot* for the figure ſide; *couronne*, which has commonly the arms of the comptroller general of the finances; *tellier*, with the arms of the late Chancellor *Tellier*, and a double T; and *chamby*, or a *chaſis la ſerpente*, ſo called from its mark, the ſerpent, which being extremely fine and thin, is uſed by fan-makers. To the middling ſort belong the *grand raiſin*, *ſimple*, *carré ſimple*, *cavalier* and *lombart*, the three laſt of which are for printing; *l'ecu*, or *decompte ſimple*, *carré double*, *l'ecu double*, *grand raiſin double*, and *couronne double*, which three laſt are denominated *double* on account of their ſtrength and thickneſs. Add to theſe the *pantalon*, or paper with the Dutch arms, and grand-*cornet*, ſo denominated from the impreſſion on it. To the large belong the *grand Jeſus*, *petite* and *grande fleur de lys*, *chapelet*, *colombier*, *grand aigle*, *dauphin*, *ſoleil*, and *l'etoile*, which are thus called from the figures they bear, being all proper for printing either at the letter-preſs, or rolling preſs, alſo for merchants books and for drawing. The *grand monde* is the largeſt of all. There is alſo *printed paper* for the hanging of rooms; *ſtamped paper*, to write obligations, deeds, and contracts upon; *ruled paper* for books of accompts, &c. To which may be added *cut paper* and *gilt paper* for letters.

Blue paper is a ſort uſed by tradeſmen to wrap up goods as ſugar loaves, pieces of linen, &c.

Blotting paper is paper not ſized, and in which therefore ink readily ſinks or ſpreads. It is uſed in books of accompt, &c. in lieu of ſand, to prevent blotting and diſfiguring the oppoſite pages. The ſame is likewiſe uſed by apothecaries in filtrating juices and other matters, for which the *manica Hippocratis* is not ſo proper.

Teint, or *demi-teint paper*, for deſigning on, is either *brown*, *blue*, or *biſtered*.

Biſtered paper is white paper waſhed over with a ſponge dipped in ſoot-water. Its uſe is to ſave the labour of the crayon in places which are to be ſhadowed the ſame depth with the teint of this paper. For light places, they are made thereon with white chalk.

Marbled paper is a ſort variouſly ſtained, or painted as it were with divers colours, made by applying a ſheet of the ſurface of a liquor wherein colours diluted with oil or oxes gall are ſuſpended.

It is not material to ſay any thing here of other kinds of paper, ſuch as the Egyptian bark, Chineſe paper, &c. being rather matters of curioſity, than commerce among Europeans.

Paper is ſold by the ream every where, except in the paper works of Auvergne, where it is ſold by weight at the rate of 14 ounces to the pound; each ream, according to its kind, being to weigh a certain number of pounds, preſcribed by authority.

The Britiſh merchant, vol. II. p. 266, ſays, That before the Revolution, there was hardly any other paper made in England than brown: but the war enſuing, and duties being laid from time to time on foreign paper, it gave ſuch encouragement to the paper-makers, that moſt of them began to make white paper fit for writing and printing; which means, they brought it to ſuch great perfection both for quantity and goodneſs, that they ſoon made near two-thirds of what was conſumed in Great Britain; and deprived the French nation of 100,000 l. a year, which it received from Britain for 400,000 reams of paper, at 5 s. a ream.

The ſame author alſo obſerves, that, as the neceſſity of having writing and printing paper is well known to every body, it will not be amiſs to make it appear how profitable and beneficial that manufacture is to Great Britain; which he ſets forth as follows.

Rags are the main ingredient paper is made of, which were formerly caſt away, and thrown to the dung-hill, but are now gathered with great care by poor people

who get honeſtly their livelihood by it, and would otherwiſe beg their bread: this employs abundance of hands. When theſe rags are gathered, they are brought to the mill, and this ſtill employs more hands. After they are in the mill they let them lie a while, till they are ſufficiently mellow or rotten, and then put them into the tubs under the hammers, to be broken into a kind of jelly or white ſubſtance, looking like milk; and being thence carried into the fat, the chief workman, upon a pair of moulds for that purpoſe, takes up the ſheets or water-leaves; of which he makes 4 or 5000 a day, more or leſs, according to the ſize and weight of the paper. Theſe water-leaves, after being well preſſed between two felts, and the water well drained out, are carried up into the garrets, or drying-rooms, and there hung upon a multitude of ropes to dry; and from thence being brought down again into the ſizing-room, a liquor is there prepared for ſizing or gumming every ſheet; the paper which is for printing being but moderately ſized; but that which is for writing, nicely, that it may bear ink. This paper, after ſizing, is a ſecond time preſſed, and carried up into the garret, where it is hung upon the ropes to dry once more; and then, with a great deal of care and hard labour, preſſed a third, fourth, and fifth time, to make it ſmooth, and of a good grain; when it is put up into quires and reams; a quire containing 24 or 25 ſheets, and a ream 20 quires.

Now, conſidering how many hands every individual ream of paper goes through before it is brought to perfection, it is plainly perceived that a great number of people are employed in each mill: then thoſe who gather the rags up and down in all the counties of England, and bring them to the mills; thoſe who make the felts, which takes up a good quantity of wool, being very thick, and for every ſheet of paper a piece of felt of the ſame ſize, or a little larger; the rope-makers, mould-makers, carpenters, wheelwrights, timber-merchants, ſmiths, and ſeveral other trades, who depend upon the building and keeping the mills in repair; thoſe who ſell allum, copperas, cuttings, and pairings of gloves, parchment, and leather, all which are uſed at the ſizing or gumming of paper. All thoſe things conſidered, it cannot be denied, but a vaſt many people get their livelihood, or receive a benefit by this uſeful and ingenious manufacture. See *Stationer*.

The French have lately invented a particular way of making ſnuff-boxes of paper, of any colour, which are actually as hard and durable as any made of wood, horn, or tortoiſe ſhell: and this manufacture has alſo been introduced into England, where great quantities are made. There is likewiſe another new manufacture of paper brought into England, which repreſents ſtucco-work, for ornamenting of rooms.

By the ſtatute of the 10th of Queen Anne, which was made perpetual by the third of Geo. I. the drawback on Britiſh made paper was granted as follows.

All other paper, for every 100 l. of the real value to be ſold for at the next market-town, upon the oath of the maker	12	0	0
Mill-boards, paſte-boards, and ſcale-boards, the 112 lb.	0	3	0
Paper, printed, painted, or ſtained in Great Britain for hangings, &c. beſides the aforeſaid duties, for every yard ſquare	0	0	1

PAPER-*cloths*, became a mode a few years ago in France. M. Fluchs has an expreſs diſſertation on the ſubject, wherein he tells us this faſhion ſcarce outlived half a day; and undertakes to ſhew that it is no new thing, but to have been practiſed among the ancients. But then it ſhould be conſidered, that the old Egyptian paper was a very different thing from this; as being likewiſe uſed for ſails, ropes, &c.

PAPER-*mill*. See *Mill*.

PAPER-*tree*, is a tree growing in Japan, where it is cultivated in mountainous parts for the manufacture of paper.

PAPERS, is a term for writings, eſpecially thoſe relating to a man's eſtate, property, dealings, or the like: in which ſenſe papers include books of accompts, invoices, orders; alſo deeds, bonds, charters and the like.

PAPER *Currency*, or *Paper Credit*, among bankers, and other negociants, is alſo uſed for exchequer-bills, bills of exchange, bank and promiſſory notes, bonds, mortgages, and transfers of ſtocks. See *Bill*, and *Exchange*.

In the year 1720, multitudes were ruined by changing their money and lands for paper: but it is the uſe and effect of credit to repreſent money by paper. See *Money*. Subſtituting paper for money, and giving the paper an arbitrary value, was the way of paying debts introduced in France by Mr. Law. A royal bank was eſtabliſhed, to which people were to carry their money, and receive the value of it in bills, which were to paſs current in trade as ſo much money.

It was made confiſcation of goods, and confinement to the gallies, for any man to keep above 40 livres by him of any but paper money: and when the regent was told what a rage was ſpirited up againſt him about the arrets for making paper current, and how openly the people threatned him, he anſwered coolly, the French were like watch-dogs, they would bark but not bite.

In 1725, it was computed that the money-tranſactions of Great Britain for that year amounted to 126,199,328 l. though the national ſpecie was only 15,000,000 l. which ſhews what money circulation can effect, and how ſerviceable it is in carrying on the trade of the world. But this great diſproportion between paper credit, and real ſpecie, may prove very pernicious to a ſtate; as they increaſe the price of labours, and are a check upon induſtry, by baniſhing gold and ſilver out of the common channels of trade. See *Fund*, National *Debt*, *Money*, and *Coin*.

By the ſtatute of the 24th of Geo. II. ſetting forth that the act of the 6th of Anne for aſcertaining the rate of foreign coins in her Majeſty's plantations in America, had been entirely fruſtrated in Rhode iſland, and Providence plantations, Connecticut, the Maſſachuſets bay, and New Hampſhire in America, by their creating and iſſuing great quantities of paper bills of credit, by virtue of acts or votes of aſſembly, and making legal the tender thereof in payments for debts; and which bills have for many years paſt been depreciating in their value, whereby all debts of late years have been paid with a much leſs value than was contracted for, to the great diſcouragement and prejudice to trade and commerce, by occaſioning confuſion in dealings, and leſſening of credit in thoſe parts; therefore, for preventing and remedying of the ſaid inconveniences, it was enacted, That no act or vote of aſſembly ſhould be paſſed within any of the ſaid colonies and plantations, whereby any paper bills, or bills of credit of any kind ſhould be created or iſſued; or whereby the time limited for diſcharging of ſuch as are already ſubſiſting ſhould be protracted or poſtponed; or whereby any of them ſhould be depreciated in value, or ſhould be re-iſſued, or obtain a new and further currency; but all ſuch acts were declared to be null and void.

That nothing therein ſhould extend to reſtrain rhe paſſing any act of aſſembly, in any of the ſaid colonies and plantations, for creating and iſſuing ſuch paper bills, or bills of credit, as ſhould be neceſſary upon ſudden and extraordinary emergencies of government, in caſe of war or invaſion; ſo as in every ſuch act care be taken to aſcertain the real value of all ſuch principal ſums for which the ſame ſhould be iſſued, and the intereſt to be paid thereon; and ſo as a ſufficient fund be provided for diſcharging the ſame, within as ſhort a time as may be, not exceeding five years at the fartheſt, by actual payment of the principal, with the intereſt due thereon.

That

That no paper currency, or bills of credit, which may be created or iſſued, purſuant to the proviſions before made in this act, ſhould be a legal tender in payment of any private bargains, or demands.

That if any governor, or commander in chief, in any of the ſaid colonies or plantations, ſhould give his aſſent to any act, or vote of aſſembly, for the iſſuing of any paper bills of credit, or for prolonging the time limited for calling in and ſinking ſuch as were then ſubſiſting, and paſſing in payment; or for re-iſſuing, or depreciating the ſame, contrary to the true intent and meaning of this act; the ſame ſhould be *ipſo facto* void, and ſuch governor, or his deputy, ſhould be immediately diſmiſſed, and for ever after rendered incapable of any public office or place of truſt.

PAPOUS-*Terra*, or New Guinea, a large continent, a little S. of the equator, in the Pacific ocean, ſituated in 130 deg. of E. lon. E. of the Spice iſlands; but how far it extends further to the eaſtward or ſouthward, is uncertain. It ſeems to be a barren inhoſpitable country, with few inhabitants; at leaſt, the Dutch have repreſented it as ſuch; and no nation has thought fit to make any ſettlements in it, or to ſend any colonies there.

PAR, in commerce, an equality between different moneys; or ſo much as a perſon muſt give of one kind of ſpecie, to render it juſt equivalent to a certain quantity of another. See *Money*.

The par differs from the courſe of exchange in this, that the par of exchange ſhews what other nations ſhould allow in exchange, which is certain and fixed by the intrinſic values of the ſeveral ſpecies to be exchanged: but the courſe ſhews what they will allow in exchange, which is uncertain and contingent, ſometimes more, ſometimes leſs. See *Exchange*.

Some have charged the merchants of England with a great error in ſuffering their neighbours to ſettle the par of exchanges far below what it ought to have been ſettled at; by which means the Engliſh have been imperceptibly robbed of the greateſt part of their ſilver, and no ſmall part of their gold.

For inſtance, it was reckoned for upwards of 40 years, that 37 Dutch ſchillings, and 4 ninths of their groſs Flemiſh, were exactly equal to, or on a par with the Engliſh pound ſterling, or 20 ſhillings; whereas it appears demonſtrably that the Engliſh loſt between 4 and 7 *per cent.* by every ſuch exchange: which is ſufficiently elucidated by Sir Iſaac Newton's eſſays and calculations on foreign coins, under the article of *Exchange*.

The old French coin of 60 ſols, before the late diminution, was equivalent to 4s. 6d. of England; to 100 deniers groſs of Holland; and to 101 of thoſe of Cologne; to 48 Lubec ſols of Germany and Hamburg: to 88 creuxes of Auſburg, and 90 of Frankfort, 83 of Bolſam, and 84 of Switzerland; to 8 julios and a half of Rome, and as many of Ancona; to 3 teſtoons of Florence, 58 ſoldi of Leghorn, 83 of Genoa, 94 of Milan, 60 of Nova; to 5 lires or livres of Genoa, 4 lires and 10 ſoldi of Lucca, 8 lires of Bergama, 3 lires and 15 ſoldi of Savoy; to 9 carlins of Naples, and as many of Sicily; 21 groats and three fifths of Venice, 24 of Naumbourg; to 372 maravedis of Spain, to 600 rees of Portugal; to 4 tarins and 15 grains of Malta; to 120 aſpers of Conſtantinople; to a demi-hongre of gold of Hungary; to two florins of Liege, 3 of Straſbourg, and 20 of Raconis; to 90 groats or groches of Poland, and 24 of Berlin; to 80 marks of copper of Sweden; to 50 grievnas of copper of Muſcovy; and, laſtly, to 4 oorts of Denmark.

PARA. A dry meaſure uſed by the Portugueſe in the Eaſt Indies to meaſure peaſe, beans, rice and other things, weighing about 22 pounds avoirdupoiſe.

PARAC, *Parat*, or *Paraſi*. A ſmall ſilver coin current in Turkey, for 1 $\frac{7}{20}$ d. ſterling; 3 aſpres making the parac: but it is otherwiſe called meidin. See *Meidin*.

PARAGOYA. One of the Philippine iſlands, ſituated a little north of Borneo, and near 300 miles long. See *Philippines*.

PARAGUAY, or *Paragegue*. A celebrated plant of the ſhrub kind, growing in ſome provinces of South America, eſpecially Paraguay, whence its name; though better known in England under the denominaiton of South-ſea tea.

This plant, which riſes not above a foot and a half high, has very ſlender branches, and leaves like thoſe of ſenna; it may be looked on as a kind of occidental tea, being like the oriental, taken infuſed in hot water, to which it communicates a colour and ſmell nearly like thoſe of the beſt tea ſeen in Europe.

There are two kinds of paraguay; the one called ſimply *paraguay*, the other *camini*, by the Spaniards *yerva-camini*; which laſt is moſt eſteemed, and ſold for a third more than the other.

The firſt the Spaniards call *yerva con palos*, that is herb with ſticks, becauſe full of broken branches, and is chiefly uſed by domeſticks and ſlaves: the latter is the drink of the richeſt: but both are of ſo much uſe, and eſteemed of ſuch abſolute neceſſity, that no perſons in that part of America will live without them. The works of the mines of Potoſi would ſtand ſtill, if the maſters did not take care to ſupply the poor ſlaves labouring there with paraguay, which is their conſtant remedy againſt thoſe mineral ſteams wherewith they would otherwiſe be ſuffocated: nor will a ſervant engage himſelf with any maſter without the condition of paraguay for drink.

The paraguay makes one of the moſt conſiderable articles of the South American commerce. At Peru, Chili, and Buenos-Ayres, there are above two millions worth ſold *per annum*, which paſſes almoſt altogether through the hands of the Jeſuits. The uſe of paraguay was once introduced in England, where many ſeemed to like it as well as tea: but foreigners ſay that their approbation flowed more from their intereſt than taſte; in regard they came ſo eaſily by it, on account of their commerce with the Spaniards of South America, and Buenos-Ayres, ſince the treaty of Utrecht in 1713.

The preparation of the plant, and the making it into drink, is much the ſame with that of tea, except that they infuſe both leaves and wood; that they drink it immediately out of the veſſel it is made in, without letting it have time to infuſe, by reaſon of the black tincture it gives; and that to prevent leaves and all from coming they ſuck it thro' a ſilver or glaſs pipe, which goes round the company one after another.

Beſides all the virtues which the eaſtern people aſcribe to their tea, as to be good in diſeaſes of the head, breaſt, ſtomach, againſt phlegm, and to reſtore ſleep; the Americans attribute to theirs, this further, of purifying all kinds of water, how foul and corrupt ſoever, by only infuſing it therein either hot or cold. Thus, having always ſome of it with them, if they meet with none but the worſt waters in the vaſt deſarts to be croſſed in going from Buenos-Ayres to Peru and Chili, they are not afraid to drink it, after ſteeping ſome of the plant a little while therein: it is alſo held ſovereign againſt the ſcurvy and putrid fevers.

PARAH. A dry meaſure uſed in the Eaſt Indies, 5 of which make a peck.

PARALLEL *Sailing*, in navigation, is the ſailing under a parallel of latitude. See *Sailing*.

Of this there are but three caſes; 1ſt, given, the departure, and diſtance; required the latitude. The canon for which is, as the difference of longitude is to the radius, ſo is the diſtance to the co-ſine of the latitude. 2d, Given the difference of longitude between two places under the ſame parallel; required their diſtance. The canon is, as the radius is to the difference of longitude, ſo is the co-ſine of the latitude to the diſtance. 3d, Given the diſtance between two places in the ſame latitude required their difference of longitude. The canon is, as the co-ſine of the latitude to the diſtance, ſo is the radius to the difference of longitude.

PARANGON. The largeſt kind of pearl. See *Pearl*.

PARANGON *of Venice*, is alſo a term at Smyrna for ſome of the moſt beautiful ſtuffs which the Venetian merchants import there: but there are alſo Padua parangons.

PARAPH, or *Paraphe*. A mark, or ſignature of a knot, flouriſh, &c. cuſtomarily made by people who have occaſion to ſign their names often, to prevent their names being counterfeited.

PARA

PARAT, is a Turkiſh coin uſed in Candia, worth about 3 farthings ſterling, being of ſilver, as in all other ſtates of the Grand Signior, but of a very baſe alloy.

PARBAYOLLE. A ſmall coin current at Milan, worth 1½d. ſterling.

PARBUNCLE, in a ſhip, is a rope uſed inſtead of a pair of ſlings, to hoiſt heavy goods in and out of a ſhip's hold.

PARCEL. A part, portion, or bundle of ſome great quantity, or a bundle or quantity conſidered abſolutely.

PARCEL, to divide, diſtribute, or allot goods into parts or parcels, on ſhip board, or elſe where.

Bill of PARCELS, is a bill, or writing, containing the particulars of the goods ſold by a tradeſman to his cuſtomer.

PARCHMENT. Sheep or goats ſkin prepared after a peculiar manner, which renders it proper for ſeveral uſes; particularly for writing on, covering of books, and other purpoſes.

Parchment is begun by the ſkinner, and ended by the parchment-maker. It conſtitutes a very conſiderable article in the French commerce, being made in moſt of their cities; and, beſides the conſumption at home, they ſend vaſt quantities abroad; particularly to England, Flanders, Holland, Spain, and Portugal.

That called virgin parchment, and which ſuperſtitious people believe to be made of a kind of caul wherein ſome children are incloſed in the womb, is nothing but a ſort ſomewhat thinner and finer than the reſt, proper for certain purpoſes, as fans, &c. and made of the ſkin of an abortive lamb, or kid.

What is called vellum is only parchment made of the ſkins of abortive calves, or at leaſt of ſucking calves; it is finer, whiter, and ſmoother, than the common parchment, but prepared in the ſame manner, except that it is not paſſed thro' the lime-pit.

PARDAO, or *Pardo xerafin*. A ſilver coin of baſe alloy, ſtruck by the Portugueſe in the Eaſt Indies, current at Goa, and upon the coaſt of Malabar; having for impreſſion on one ſide a St. Sebaſtian, and on the reverſe a quiver of 4 arrows, being worth 300 rees, or 1 s. 8¼ d. ſterling.

There is ſcarce a coin in the Eaſt Indies more falſified than this; which happens more thro' the diſhoneſty of the Portugueſe, than that of the pagan Indians who counterfeit it, by coining an abundance of them up the country, and afterwards tranſporting them upon the coaſts, and into the towns of the greateſt commerce.

There is hardly a poſſibility of receiving thoſe pardaos without being cheated, unleſs the exchangers called Xaraffes, who are Indian Chriſtians, ſtood not deſignedly in the ſtreets to examine them; which is done by the ſole touch, and without any other precaution, being better than the Europeans can effect by ſcale or touchſtone.

PARDOS. A kind of ſilver coin, current at Moſambique and along the coaſt of Africa, valued at 200 rees, or 1 s. 1½ d.

PAREIRA-BRAVA. The root of a plant growing in the Weſt Indies, chiefly in Mexico and Brazil; eſteemed a ſpecific for the cure of the ſtone and gravel.

The name, which in the original Portugueſe ſignifies wild wine, or baſtard-wine, bears a good deal of analogy to the plant, which has branches loaden with leaves perfectly like thoſe of the vine, and which, like them, creep along walls and trees. The Portugueſe value this root on an equal footing with the ipecacuanha: and ſome druggiſts call it by corruption, *parada brava*.

M. Geoffroy attributes the efficacy of this root, in nephritic caſes, to its diſſolving the viſcid matters whereby the particles of the ſand, &c. were cemented together: and hence he gives it with the ſame intention in jaundices, aſthmas, &c. it being adminiſtred in decoction.

The Portugueſe hold it alſo a remedy for dyſenteries, quinzies, bites of venomous beaſts, and other purpoſes.

PARENZO, or *Pirenzo*. A port-town of Iſtria in the territory of Venice, ſituated on a bay of the gulph of Venice, in 14 deg. 10 min. of E. lon. and 45 deg. 30 min. of N. lat.

PARERE, in commerce, an Italian term which begins to be naturaliſed; in other countries ſignifying the advice, or counſel of a merchant or negotiant; for that ſuch a perſon, being conſulted on any point, introduces his anſwer, in Italian, with *mi pare*, that is, I think, it ſeems to me.

The method of negotiating, eſpecially that of bills of exchange, being borrowed from the Italians, moſt trading cities, particularly Lyons, retain the uſe of *pareres*, which are the advices or opinions of merchants and negotiants, ſerving as acts before notaries, when given by authority of a judge conſervator, or at a particular conſultation, for maintaining the right of the conſultor.

PARIA. A lake in Peru, in South America, in the province of Sos Charcas, ſituated in 67 deg. of W. lon. and 22 deg. of S. lat. 100 miles N. W. of La Plata.

PARIAN *Marble*. See *Marble*.

PARIS. The metropolis of France, ſituated in 2 deg. 25 min. of E. lon. and 48 deg. 50 min. of N. lat. See *France*.

PARISH-*Clerks company of London*, is a city fraternity incorporated by letters-patent of the 17th of Henry III. in 1233, by the name of the fraternity of St. Nicholas, by which they were known, till re-incorporated by charter of the 9th of James I. dated the 19th of January 1611. In the year 1625, this company, by a decree of the court of ſtar chamber, obtained a privilege for keeping a printing-preſs in their hall, for printing the bill of mortality; for which purpoſe a printer is aſſigned them by the Archbiſhop of Canterbury. Yet, notwithſtanding this advantage, it is reputed to be one of the moſt defective of any of its kind; none being mentioned therein but ſuch as are burying goods. This company is by charter ſtrictly enjoined to make report of all the weekly chriſtenings and burials in their reſpective pariſhes, by 6 o' clock on Tueſday in the afternoon; but this is by a by-law changed to 2 o' clock of the ſame day, that the King and the Lord Mayor may have an account thereof a day before its publication.

The above grants to this company were confirmed by letters-patent of the 11th of Charles I. dated the 27th of February 1636, by the title of The maſter, wardens, and fellowſhip of pariſh-clerks of the cities of London, Weſtminſter, borough of Southwark, and 15 out-pariſhes. This community conſiſts of a maſter, two wardens, 17 aſſiſtants, and the whole body of pariſh clerks, who have a convenient hall in Woodſtreet to treat of their affairs.

PARISIS. A French money of accompt, formerly a real coin ſtruck at Paris, at the ſame time time with the tournois ſtruck at Tours.

The pariſis exceeded the tournois by one-fourth; ſo that the livre or pound pariſis was 25 ſols; and the livre tournois 20: the ſols and deniers pariſis, &c. in proportion. See *Livre*.

PARK, commonly means a large field, or tract of ground incloſed, in which beaſts of chace are kept for ſport, either of a prince, nobleman, or gentleman; from whence the fiſhmongers of London are ſupplied with veniſon.

PARLIAMENT *of Great Britain*, is the legiſlative body of the kingdom, conſiſting of King, Lords, and Commons, who enact and repeal all ſuch laws as tend to the proſperity or prejudice of the kingdom. The houſe of commons is the grand inqueſt of the kingdom, being compoſed of 558 members: of which, in England, there are 80 knights for 40 counties, 50 citizens for 25 cities, 334 burgeſſes for 167 boroughs of two repreſentatives each, 5 burgeſſes for 5 boroughs of one repreſentive each, 4 repreſentatives for the 2 univerſities, and 16 barons for the 8 cinque ports: in Wales there are 12 knights for 12 counties, and 12 burgeſſes for the boroughs: and in Scotland there are 30 knights for the ſhires, and 15 burgeſſes for the boroughs.

The Britiſh ſenator is an auguſt character, as the commerce and glory of the nation depend on the reſolutions of parliamen:; therefore, every member ſhould be converſant with the principal branches of trade, the different manufactures, and all the branches of the public revenues: the cuſtoms, duties, exciſe, and all kinds of taxes; the imports and exports into and from his own country; the conſtitution, views, and intereſt of foreign nations, particularly the trading powers; the laws affecting trade, the nature of exchange, and the public funds: all which

are repreſented under their ſeveral articles in this dictionary.

PARMA. A duchy in Italy, ſubject to Don Philip. See *Italy*.

PARMESAN. A cheeſe brought, or reputed to be brought, from Parma in Italy: but moſt of the cheeſes of this name, and thoſe of Milan, are made at Lodi. See *Cheeſe*.

PAROS. One of the ſmalleſt of the Turkiſh Archipelago iſlands, ſituated in 25 deg. 30 min. of E. lon. and 36 deg. 30 min. of N. lat. See *Turkiſh* Iſlands.

PARPIROLLE. A ſmall coin of Savoy, ſtruck at Chamberry, being a kind of ſol, of billon or copper, mixed with ſilver, worth ¾ d. ſterling: but there are other parpirolles called the ſmall croſs, which are ſtruck at Gex, and have a leſs alloy of ſilver.

PARRELS, in a ſhip, are made of trucks, ribs, and ropes, which go about the maſt, faſtened to the yard at both ends, and together with the breaſt-ropes, hold the yard cloſe to the maſt.

PARTERRE. A kind of ſattin or damaſk, ſo called becauſe variegated with natural flowers, which by their diverſity repreſent the enamel of a parterre. They were invented in France, but wretchedly imitated at Amſterdam.

PARTNER, in trade, is a perſon that has a ſhare in a common ſtock, and muſt abide by the ſucceſs of the undertaking, whether profitable or diſadvantageous.

PASSAGE, in commerce, or *Right of paſſage*, is an impoſition which ſome princes exact by their officers and farmers, in certain narrow cloſe places of their territories, either by land or ſea, on all veſſels, vehicles, and carriages of all kinds; and even ſometimes on perſons, and paſſengers coming in or going out of ports, &c.

The paſſage of the Sound, which carries ſhips out of the German into the Baltic ſea, is the moſt celebrated paſſage in Europe: the duties of which belong to the King of Denmark, and are paid at Elſeneur or Cronenburg.

All the nations that trade in this part of the north, have always been ſubject to this duty, except the Swedes who were exempted by the treaty of peace in 1658, becauſe they poſſeſs the oppoſite ſide of the ſtreight.

But the war of the North, ſo fatal to the Swedes, made them loſe their privilege; and by the peace concluded in 1720 between Denmark and Sweden, their condition became ſcarce better than that of other nations.

The French enjoy there alſo ſome exemption; but it regards not the duties, only the viſiting of their veſſels and goods, and the time of payment, for which they are allowed three months. See *Sound*, and *Denmark*.

PASSAGE. A port-town of Spain, in the province of Biſcay, ſituated in 1 deg. 50 min. of W. lon. and 43 deg. 30 min. of N. lat.

PASSAO *Cape*. A promontory of Peru, in South America, juſt under the equator, in 81 deg. of W. lon.

PASSPORT. A licence, or letter, from a prince or governor, granting liberty and ſafe conduct, to travel, enter, and go out of his territories, freely, and without moleſtation: the paſſport being properly given to friends, and the ſafe-conduct to enemies.

Paſquier takes paſſport to have been introduced for *paſſe-par-tout*. Balzac mentions a very honourable paſſport given by an emperor to a philoſopher in theſe terms: "If there be any one on land or ſea, hardy enough to moleſt Potamon, let him conſider whether he be ſtrong enough to wage war with Cæſar."

PASSPORT, is alſo uſed for a licence granted by a prince for the importing, or exporting merchandiſes, or goods, without paying the duties.

Merchants ſometimes procure ſuch paſſports for certain kinds of commodities; and they are always given to ambaſſadors and miniſters, for their baggage, equipage, and attendants.

PASSPORT, is likewiſe a licence obtained for the importing or exporting of merchandiſes deemed contraband, and publickly declared ſuch; as gold, ſilver, precious ſtones, ammunition of war, horſes, corn, wool, &c. upon paying duties.

A ſafe conduct is a ſecurity given by the King, under the great ſeal to a ſtranger, for his ſafe coming into, and paſſing out of the realm, and touching which there are ſeveral ſtatutes.

Protections are of two ſorts, a public protection, when a prince takes upon him the defence of another prince, ſtate, for his honour or profit; or a private protection perſons, or ſhips, which is in effect no more than a paſport for ſuch purpoſe. By the law of protection, he that is protected owes all reſpect and honour to his protector againſt whom he ought not to conſpire, or attempt any thing: and, on the other hand, the protector ought to defend, and ſuccour the protected, and uſe him well; or otherwiſe he may withdraw himſelf from the protection and ſeek another. And the Genoeſe having put themſelves under the protection of the French King, revolted whereupon he changed their conditions into privileges to the end it might be in his will to deprive them of them when he ſhould think fit.

In protections of ſhips and perſons, there is generally great faith kept by the granters; for at this day, if a ſhip has a protection from Barbary, the pirates of that nation if they ſeize any ſhip will reſtore it; and if there be no protection, yet if the ſhip be taken within ſight of the caſtles, the prize is not abſolute; but if reſiſtance is made and there be a caption, ſhe then becomes the captors for ever, as the price of blood.

The ſtatute of Magna Charta, 9th Hen. III. cap. 30. ordains, that all merchant ſtrangers ſhall have ſafe-conduct of coming into, going out of, and remaining in England, to buy and ſell, &c. if they are not openly prohibited; except in time of war, and they are of the enemy's country: and by 27th Edw. III. cap. 2. ſafe-conduct is to be granted to merchant ſtrangers, not alien enemies, to come and dwell in the kingdom, and return at their pleaſure; as alſo to ſell their goods and commodities, without having them taken from them againſt their wills.

By 20th Hen. VI. cap. 1. all letters of ſafe-conduct granted to the King's enemies, or any other perſons, ſhall be enrolled in the chancery of the lord the King, of record, before ſuch letters ſhall be delivered to them to whom the ſame ſhall be granted; or ſhall be void and of no effect: and if at any time hereafter, any goods or merchandiſes are taken by Engliſh ſubjects upon the ſea, or the coaſts of the ſame, loaden in any ſhip or veſſel belonging to enemies, and not having ſufficient letters of ſafe-conduct, enrolled in form aforeſaid; they who ſhall ſo take the ſame goods, ſhall enjoy them without any reſtitution thereof to be made, to whatſoever perſons the ſaid goods or merchandiſes, at the time of taking or before, were belonging.

And the King's ſubjects, taking ſuch ſhips laden with merchandiſe, not having or ſhewing letters of ſafe-conduct, and bringing them by force to a certain port within the realm, ſhall not receive damage in their perſons or goods for ſo doing, if they be ready to make full reſtitution of the ſame ſhips and merchandiſe, within a reaſonable time after they ſhall have knowledge of letters of ſafe-conduct, enrolled in the ſaid chancery of record, before the taking of them.

A late act 4th Geo. II. cap. 18 recites, that treaties are ſubſiſting between the King and the ſeveral ſubjects of Barbary; by which it is ſtipulated, that all ſhips belonging to his Majeſty or his ſubjects, may paſs the ſeas and enter into the harbours of the ſaid governments without any ſeizure or moleſtation, upon producing paſſes of a certain form, under the hand and ſeal of the commiſſioners for executing the office of Lord High Admiral called Mediterranean paſſes. It is therefore enacted and ordained, That if any perſon ſhall, within his majeſty's dominions, or without the ſame, falſly forge or counterfeit any paſs for any ſhip, commonly called a Mediterranean paſs, or ſhall alter or eraſe any paſs made out by the commiſſioners for executing the ſaid office of Lord Admiral, or ſhall publiſh as true, any forged, altered, or erazed paſs, knowing the ſame to be forged, &c. every ſuch perſon being convicted in Great Britain, Ireland, or

majeſty's plantations where ſuch offence ſhall be committed, ſhall be guilty of felony without benefit of clergy. See *Treaty*.

And the ſaid offences, which ſhall be committed in any place out of Great Britain, either within the dominions of his majeſty, or without, may be tried and adjudged in any county of England, by virtue of the King's commiſſion of Oyer and Terminer, and goal-delivery, or before any court of Juſticiary in Scotland.

By the laws of France, no veſſel ſhall go out of any port of that kingdom to put to ſea, without a paſſport from the admiral, recorded at the admiralty office of the place from whence the maſter departs: and within twenty-four hours after the maſter's arrival in any port, he ſhall preſent his paſſport, and declare the place and time of his departure, the burthen and lading of his ſhip, the courſe he has ſteer'd, the hazards he has run, the diſorders happened in his ſhip, and all the conſiderable circumſtances of his voyage, &c.

And by a treaty marine, made by King Charles II. with the King of France, in the year 1677, a form of a paſſport, or ſea brief, is appointed, to be given by the Lord High Admiral of England, or thoſe to whom the exerciſe of admiralty-juriſdiction is ordinarily committed; or by the mayor or other chief magiſtrate, or the commiſſioners, or other principal officers of the cuſtoms, in their reſpective ports and places within the dominions of the King of Great Britain, to ſhips and veſſels; which paſſport is as follows:

An Engliſh Paſſport for ſhipping.

To all to whom theſe preſents ſhall come, greeting. Thomas Earl of P. Lord High Admiral of England, &c. or we A. B. C. D. E. F. &c. Eſqrs. Lords Commiſſioners for executing the office of Lord High Admiral; or we the commiſſioners, or principal officers of the cuſtoms in the city or port of, &c. do teſtify and make known, That G. H. maſter or commander of the ſhip called the Prince Frederick, hath appeared before us, and declared by ſolemn oath, That the ſaid ſhip or veſſel, containing about two hundred tons, of which he is at preſent maſter, as aforeſaid, doth belong to the inhabitants of &c. within the dominions of the King of England: and in regard it would be moſt acceptable to us, that the ſaid maſter or commander be aſſiſted in his juſt and lawful affairs: we do hereby requeſt you, and every of you, whereſoever the ſaid maſter or commander ſhall arrive with his ſhip, and the goods laden on board and carried in her, that you will pleaſe to receive him courteouſly, and uſe him kindly; and admit him, upon paying the lawful and uſual cuſtoms, and other duties, to enter into, remain in, and paſs from your ports, rivers, and dominions, and there to enjoy all kind of right of navigation, traffic, and commerce, in all places where he ſhall think fit, without any interruption; which we ſhall moſt willingly and readily acknowledge, upon all occaſions. In teſtimony and confirmation whereof, we have, with our hand, ſigned theſe preſents, and cauſed them to be ſealed with our ſeal. Dated the day of, &c. in the year, &c.

And the like form of paſſport, *mutatis mutandis*, ſhall be uſed by the moſt chriſtian king of France.

The form of a Dutch paſſport or certificate for ſhips that go from the United Provinces.

To the moſt ſerene, moſt illuſtrious, moſt mighty, moſt honourable and prudent lords, emperors, kings, commonwealths, princes, dukes, counts, barons, lords, burgomaſters, ſheriffs, counſellors, judges, officers, juſtices and regents of all cities and places, as well eccleſiaſtical as ſecular, who ſhall ſee or read theſe preſents. We burgomaſters and governors of the city of, &c. do certify, that A. B. ſhip-maſter appearing before us, hath declared by ſolemn oath, that the ſhip called, &c. containing about, &c. laſts, of which he is the preſent maſter, belongeth to inhabitants of the ſaid United Provinces; ſo help him God: and as we would willingly ſee the ſaid ſhip-maſter aſſiſted in his juſt affairs, we do requeſt you and every of you, where the aboveſaid maſter ſhall arrive with his ſhip and goods, that you will pleaſe to receive him courteouſly, and uſe him kindly; admitting him upon paying uſual dues, tolls, and other cuſtoms, to enter into, remain in, and paſs from your ports, rivers, and territories, and there to trade, deal, and negotiate in any port or place, in ſuch ſort and manner as he ſhall deſire; which we ſhall moſt readily acknowledge in the like occaſion. In witneſs whereof, we have cauſed the ſeal of our city to be hereunto put.

A general maritime paſſport, for a Swediſh or other ſhip to paſs the Sound of Denmark.

We conſuls and ſenators of the town of &c. certify, That the ſhip, &c. commanded by, &c. belongs to our ſaid town, or ſome other town, in Sweden; and is laded only with goods belonging to Swedes, and bound for the ocean, as the maſter and the owners thereof have declared before us in our court, deſiring this certificate as a proof of the ſame; the ſhip and goods being thereby to be exempted from all taxes and vexations in the paſſage of the Sound and the Belt, according to the treaties between the two kingdoms. In teſtimony whereof, we have cauſed the ſeal of the town to be put to theſe preſents, which we have likewiſe cauſed to be ſign'd by the clerk. Given, &c.

PASTEBOARD. A thick kind of paper, formed of ſeveral ſheets paſted together, and uſed chiefly in the binding of books, letter caſes, hat-caſes, gloves, and the like.

PASTEL, or *Paſtil*, ſometimes uſed to ſignify the plant otherwiſe called woad, or glaſs-wort. See *Woad*.

A great trade of all kinds of paſtel is carried on by the Dutch, who have it from Toulouſe, and Caen, in France; Erford, and Juliers, in Germany; the Canary iſlands; Spain, and Portugal: its eſtimation, and duties of importation and exportation, being different purſuant to its quality.

PASTEL *of ſcarlet*, is the powder found in the ſcarlet grain when new. See *Scarlet*.

PASTEL among painters, &c. a ſort of paſte made of ſeveral colours, ground up with gum-water, either together or ſeparately; in order to make crayons to paint with on paper, or parchment.

PASTES. A kind of confects, almoſt dry, made of ſugar, fruits, or flowers. See *Confect*.

PASTRANEA. A name given to the ſalt beef brought from ſeveral parts of the Black ſea.

PASTRY-*Cook*, is a perſon whoſe buſineſs conſiſts in making all kinds of paſtry, jellies, preſerves, and confections, which is a very profitable buſineſs in London.

PATAC. A coin of Avignon in France, ſix of which are a halfpenny ſterling, being current and pretty common in Provence and Dauphiné.

PATACA. A term given by the Portugueſe to the Spaniſh piaſtre, or piece of eight: but there are half and quarter patacas; the pataca being worth 750 rees, or 4 s. 2 ¼ d. ſterling.

Samuel Ricard, who in his general treatiſe of commerce calls them alſo patagons, diſtinguiſhes two kinds of them, which he eſtimates not altogether upon the above footing: the one are ſtamped patacas: but according to this author, the firſt are worth 600 rees, or 3 s. 4 ½ d. ſterling; the ſecond only 500, or 2 s. 9 ¾ d. ſterling.

PATAGON, *Patach*, or *Pattacon*. A Flemiſh ſilver coin, current for 4 s. 4 ½ d. ſterling, which, upon account of its value, and cornuted figure, is confounded with rix-dollars, and rials of eight.

Beſides the Flemiſh patagons, there were ſeveral formerly ſtruck in Franche-Comté, ſome of the weight and inſcription of thoſe of Flanders, and others ſomewhat more; as thoſe which had a croſs with leaves, and a crown on one ſide, and on the arms the reverſe of Burgundy.

Some authors give alſo the name of patagon to the pataque of Portugal.

The patagon of Holland is worth 4 s. 4 ¼ d. ſterling: and the patagon of Liege is worth 4 s. 7 ½ d. ſterling.

PATAN, or *Pettan*. A town of India, ſituated in 89 deg. of E. lon. and 27 deg. 30 min. of N. lat. See *India*.

PATAQUE. A ſilver coin of Portugal, worth 3s. 4½ d. ſterling.

PATARD. A ſmall copper coin, current in Flanders, and the neighbouring provinces, 8 of which make a penny ſterling.

PATARD, is alſo a Dutch money of accompt.

PATCHUCA. A city of Mexico in North America, near which is a ſilver mine, ſituated in 103 deg. of W. lon. and 21 deg. of N. lat.

PATENTS, or *Letters patent*, in law, the King's letters ſealed with the great ſeal, ſerving to convey the title or property of ſome grant, favour, privilege of a new eſtabliſhment, or the like. See *Monopoly* and *Letters*-patent. They have their name becauſe delivered open, *ut pateant omnibus*, by way of contradiſtinction from *letters de cachet* which are ſealed.

PATENTEE, is he to whom the King grants his letters-patent.

PATLAGE, is a name given to the larger ſort of cocoa-nut. See *Cocoa*.

PATMOS. One of the leaſt of the Turkiſh Archipelago iſlands, ſituated in 27 deg. of E. lon. and 37 deg. of N. lat. See *Turkiſh* Iſlands.

PATNA. A city of the Hither India, and capital of the kingdom of Bahar, ſituated in 85 deg. of E. lon. and 26 deg. of N. lat. 400 miles up the Ganges, being one third of the way to Delli; and, although ſo little known among Europeans, I have been told by a gentleman who was chief of the Britiſh factory there, that it is 7 m. long, and half a mile deep from the banks of the river; containing many thouſands of inhabitants; where the French and Dutch have ſtill their factories; but the Engliſh company have lately withdrawn theirs. See *India*.

PATOWMAC. A great river of Virginia, in North America, which riſes in the Apalachian mountains, runs S. E. ſeparating Virginia from Maryland, and falling into the bay of Cheſepeak. This river is navigable 200 miles, generally 7 miles broad, and in ſome places 9 miles: the tide riſes about two feet perpendicular, and ebbs and flows regularly.

PATRAS. A port of European Turky in the Morea, ſituated on the Mediterranean, in 21 deg. 30 min. of E. lon. and 38 deg. 20 min. of N. lat.

PATRON, in navigation, is a name given in the Mediterranean to a perſon who commands the veſſel and ſeamen; ſometimes to the perſon who ſteers it: the former in other places, being called maſter, the latter pilot. See *Maſter* and *Pilot*.

PATTE. A port-town of Sicily in the province of Val-Demona, ſituated on the Mediterranean, in 14 deg. 45 min. of E. lon. and 38 deg. 36 min. of N. lat.

PATTEN *maker*. One who makes pattens and clogs with irons, to raiſe them out of the dirt, or wet, commonly worn by women, under their ſhoes, while they clean their houſes, or when they go out in wet weather.

PATTEN-*makers company of London*, was incorporated by letters-patent of the 22d of Charles II. dated the 22d of Auguſt 1670, by the name of The maſter, wardens, aſſiſtants, and fellowſhip of the company of patten-makers of the city of London.

They conſiſt of a maſter, two wardens, 24 aſſiſtants, and 46 liverymen, who, when admitted, pay a fine of 6 l. but have no hall.

PATTEN-*ring-maker*, is a claſs of ſmiths, who work only for this branch.

PATTERN-*Drawer*, is a perſon employed in drawing patterns for ſilk weavers, callico printers, embroiderers, lace-workers, quilters, and ſeveral little branches belonging to womens apparel. They draw thoſe patterns on paper, which they ſell to callico-printers, &c. who give them good prices for their ingenuity and labour.

PAU. A long meaſure, or kind of ell, uſed at Loango de Boiria, and in ſome other places of the coaſt of Angola in Africa.

There are three kinds of paus at Loango; the King's pau, and that of his favourite or firſt miniſter and captain; the pau of the fidalgues and captains; and the pau of private perſons.

The king's pau is 28 inches long, and eſtimated at three macoutes; the macoute amounting to 10.

The pau of the fidalgues is 24 inches; that of private perſons only 16 and a half; but both containing and deemed 3 macoutes, as the royal ones, the macoute being the ſame.

It is by theſe different paus that the Europeans, who trade for negroes, meaſure the ſtuffs and cloths they give in exchange for ſlaves, and other merchandiſe, as gold duſt, wax, &c. brought from the coaſt of Angola; whence it is eaſily conceived that it is more advantageous to barter gain with private perſons than the fidalgues, and more with the fidalgues than the King; the exceſs of meaſure being granted the king and his captains, for a permiſſion of dealing in the beſt mart; no private perſon daring to carry on the leaſt trade with the Europeans, till the cuſtoms have been paid, and the commerce opened by permiſſion of the king and the grandees. See *Macoute*.

PAVILLION, in a commercial ſenſe, is applied to flags, colours, enſigns, ſtandards, banners, &c. all which, authors uſually confound with one another. See *Flag*.

PAVIOUR. An artificer, whoſe proper buſineſs is to lay the high-way, or common ſtreet, with pebbles; the maſons laying the broad flat ſtones, and the bricklayers the tyles.

PAVIOURS *company of London*, is a fellowſhip by preſcription and not by charter; wherefore it may be juſtly preſumed to have been one of the ancient adulterine guilds, that were erected without a royal licence: the community conſiſting of 3 wardens, and 25 aſſiſtants, who have neither hall nor livery.

PAUL. A ſilver coin of Naples, worth 6 d. ſterling.

PAUL, *St. de Leon*. A port town of France, in the province of Bretagne, ſituated at the entrance of the Britiſh channel, in 4 deg. 7 min. of W. lon. and 49 deg. of N. lat.

PAUL, *St.* A city of Brazil in South America, ſubject to Portugal, and built for the ſecurity of the rich mines of this province, ſituated in 50 deg. of W. lon. and 23 deg. 30 min. of S. lat.

PAUTKAS. Indian cotton cloths; of which there are ſeveral kinds of different lengths and breadths, according to their quality.

White pautkas are 4 ells long and two-thirds broad.

Brown pautkas are of 5 ells and two-thirds.

Blue pautkas are between 5 and 11 ells long, and 1 and two-thirds broad.

PAWN-*Broker*. A perſon whoſe trade is to lend ſums of money upon goods depoſited with him, as a ſecurity for the payment of the principal and intereſt. See *Broker*.

PAY, in the ſea language, or when ſeamen ſay, *pay more cable*, ſignifies to let out more cable. *Pay cheap* is used in turning the anchor out of the boat, to denote, *turn it out faſter*.

PAY. The hire, wages, ſalary, &c. that any perſon has for his work, or labouring.

PAYABLE, is that which ſhould be paid, or acquitted, at a certain time, or to certain perſons; as rent, wages, ſums of money, that is or will be due at a certain time.

A bill of exchange payable upon ſight, is a bill of exchange which ſhould be acquitted as ſoon as preſented.

A bill payable at a prefixed day, is that which ſhould be paid on the day ſpecified in the bill.

A bill payable at ſo many days ſight, is that which ſhould be acquitted in a certain number of days, ſpecified in the bill, reckoning from the date of its acceptation.

A bill payable at one or ſeveral uſances, is that which ſhould be paid in as many times thirty days as there are uſances ſpecified in the body of the bill, reckoning from the day of its date, each uſance being of thirty days.

A bill payable to the bearer, is a bill that ſhould be paid to the firſt that preſents himſelf, without any occaſion of order or tranſport.

A bill payable to ſuch or his order, is that which ſhould be paid to the perſon named in the bill, who has given the value thereof, or to ſuch other in whoſe favour the order is indorſed on the bill.

A bill payable at will has no limited time, and therefore

its payment may be exacted as often, and when a perſon judges proper.

A bill payable in bills of exchange, or other paper, is that which ſhould be acquitted in good bills of exchange, or in ſuch other paper ſpecified in the bill, and in the limited time. See *Bill*, and *Exchange*.

It is ſaid that an obligation, promiſe, aſſignment, order, &c. is payable when the time or term of the payment is expired.

AYAS. White Levantine ſilks, brought particularly from Aleppo.

AYAS, are alſo ſpun cottons brought from the Levant, by the way of Aleppo: the coarſeſt are called *payas thread*, and the fineſt *gondozolette threads*.

AYE. A kind of money of accompt uſed in the kingdom of Siam.

AYE, is a ſilver coin current at Ormus in the Perſian gulph, worth 10 biſti, or 1 s. 4 d. ſterling.

AYE, is likewiſe a weight of 24 grains.

AYED, or *Paid*. A bill of exchange is not reputed paid, while its payment is not endorſed, that is, while its receipt is not on the back.

AYMENT. The diſcharge of a debt either by money really told, or by bills of exchange. See *Debt*.

ompt PAYMENT. A popular term in England and Holland, uſed when a debtor acquits what he owes before the expiration of the term granted by the creditors.

Thus, in caſes of ſales at the India-houſe, &c. a month, or a further time, is allowed the bearer to pay his money, and fetch away his goods: but if the purchaſer comes before that time, and pays his money, then he is is allowed 6½ *per cent.* diſcount for prompt payment. See *Diſcount*, and *Rebate*.

The ordinary diſcount on moſt merchandiſes at Amſterdam is 1 *per cent.* but there are ſome whoſe diſcount is higher, and others whoſe diſcount is lower.

AYMENT ſignifies alſo certain fixed terms on which merchants, negotiants, and bankers are to acquit their debts, or renew their bills.

Such are the payments of the city of Lyons, whereof there are four payments, as well as four free fairs.

The payment of Twelfthtide, commencing the firſt of March, and continuing the whole month.

The payment of Eaſter, commencing the firſt of June, and continuing the whole month.

The payment of Auguſt, commencing the firſt of September, and continuing the whole month.

The payment of All Saints, commencing the firſt of December, and continuing the whole month.

AYMENT is likewiſe a term in Holland for all the ſmall money that interferes in the daily commerce of ſmall merchandiſe.

AY-*Office*, is an office kept in Broad-ſtreet near London-wall, under the direction of a treaſurer, and pay-maſter, who pay for all the ſtores for the uſe of the royal navy, and wages of ſailors that ſerve on board the ſame.

AK. A rocky mountainous country in the weſt of Derbyſhire, in which are mines of lead and iron.

ARL. A hard, white, ſhining body, uſually roundiſh, found in a teſtaceous fiſh, reſembling an oyſter, and ranked in the number of gems or precious ſtones.

The fiſh wherein the pearls are found, is three or four times the ſize of the common oyſters, and is called by naturaliſts *pinna marina*.

Each pinna yields uſually ten or twelve pearls; tho' an author, who treats of their production, pretends to have ſeen a hundred and fifty in the ſame fiſh; but thoſe in different degrees of perfection. The moſt perfect ſtill drop firſt, the reſt remaining at the bottom of the ſhell.

In Europe pearls are ſold by the caract-weight, the caract containing 4 grains. In Aſia the weights uſed for pearls are different in different ſtates. See *Caract*.

The term pearls is only properly applied to what grows dependent of the ſhell: the ſhell itſelf being rather called *mother of pearl*. Thoſe pieces which have grown thereto, and have been ſince ſeparated by the addreſs of the workman, are called *wens of pearls*; which are in effect nothing but roundiſh excreſcencies or pieces of the ſhell, tho' frequently uſed for real ſhell.

Pearls, F. Bouhours obſerves, have this advantage over precious ſtones dug out of the rocks, &c. that the latter owe their luſtre to the induſtry of men; nature as it were only hews them out, and leaves the finiſhing of them to art: but the former are born with that beautiful water which gives them their value. They are found perfectly poliſhed in the abyſſes of the ſea, and nature has put the laſt hand to them before they are ſeparated from their mother.

Pearls of unuſal figures, neither round, nor in the pear form, are called *baroguas*, or Scotch pearls: thoſe of unuſual ſizes are called *parangons*; as that of Cleopatra valued by Pliny at *centies H. S.* or 80,000 l. ſterling; that brought in 1574 to Philip II. of Spain, of the ſize of a pidgeon's egg, valued at 6,480 l. ſterling; that of the Emperor Rodolph, mentioned by Boetius, called *la peregrina*, or the incomparable, of the ſize of a muſcade pear, and weighing 30 caracts; and that mentioned by Tavernier, in the hands of the Emperor of Perſia in 1633, bought of an Arab for 32,000 tomans, which at 3 l. 9 s. the toman, amounts to 110,400 l. ſterling.

Pearls are of ſome uſe in medicine; but it is only the ſmalleſt ſort, called *ſeed of pearls*, that is there uſed. The quality required is, that they be white, clear, tranſparent, and truly oriental. They ſerve to make cordial potions, formerly much valued, but now fallen much from their ancient reputation, and ſcarce owned by any but Charletans.

The ladies alſo uſe certain preparations of pearls, as they are made to believe, for their complexions; ſuch as the white of pearls, flowers, eſſences, ſpirits, tincture, &c. of pearl; but they are all apparently deceits.

PEARL *Aſhes*. See *Aſhes*.

PEARL *Fiſheries*. Pearls are caught in the ſeas of the Eaſt Indies, in thoſe of America, and in ſome parts of Europe.

PEARL *Fiſheries of the Eaſt*, are firſt the iſland of Baharen in the Perſian gulph. This the Portugueſe were maſters of while they held Ormus and Muſcat; but it returned to the Sophi of Perſia, when that prince, with the aſſiſtance of the Engliſh, took from them Ormus, and the Arabs Muſcat.

2d, The fiſhery of Elcatif, or Catifa, on the coaſt of Arabia Felix, over againſt Baharen.

3d, That of Manar, a ſea port in the iſle of Ceylon. The pearls fiſhed here are the fineſt in all the Eaſt for their water and roundneſs; but they ſeldom exceed 4 caracts.

Laſtly, there are pearls fiſhed on the coaſt of Japan; but being coarſe and irregular, they are little valued. The pearls of Baharen and Catifa are thoſe commonly ſold in the Eaſt Indies: they border a little upon the yellow, but the eaſtern people value them not the leſs for it; for they eſteem it a ſign of being ripe, being perſuaded that thoſe which have this yellowiſh tincture, naturally never change their colour; and that on the contrary, their white water holds not above thirty years before the pearl aſſumes a filthy yellow colour, by reaſon of the heat of the climate, and the ſweat of the perſons who wear them.

PEARL *Fiſhery, in Chineſe Tartary*, is near the city Nipchoa, ſituated on a lake of the ſame name: the pearls here are leſs beautiful than thoſe of Baharen, and the fiſhery leſs plentiful. It was this fiſhery that occaſioned the war between the Chineſe and Muſcovites, terminated towards the end of the laſt century by the Jeſuits Pereira and Gerbillion, when the lake, which is of great extent, was divided between the two nations, each of which pretended to the whole.

American PEARL *fiſheries*, are all in the great gulph of Mexico, along the coaſt of the Terra Firma. There are five of them; 1ſt, The fiſhery of Cubagua, an iſland five leagues from New Andaluſia, in 10 deg. 15 min. of N. lat. 2d, That of the iſland Marguerites, or Pearl iſland. 3d, That of Comogote near the Terra Firma. 4th, That of the river de la Hacha, called *la Rencheria*. 5th, That of St. Martha, 60 leagues from the river de la Hacha.

The pearls of theſe 3 laſt fiſheries are uſually of a good weight; but ill formed, and of a livid water. Thoſe of

Cubagua ſeldom exceed 5 caracts; but are found in abundance: however, the greateſt quantity, and the fineſt both with regard to weight and water, are thoſe of the iſland Marguerites.

There are alſo ſome pearl fiſheries in the South Sea, particularly in the bay of Panama: but they are very inconſiderable.

PEARL *Fiſheries of Europe*, are in ſome places on the coaſts of Scotland, and in a river of Bavaria: but the pearls found here are no ways comparable to thoſe of the Eaſt Indies, or of America; tho' they ſerve for necklaces.

Manner of fiſhing for PEARLS *in the Eaſt Indies.* There are two ſeaſons of pearl-fiſhing in the year; the firſt in March and April, the ſecond in Auguſt and September: the more rain falls in the year, the more plentiful are the fiſheries.

In the opening of the ſeaſon, there appears ſometimes 250 barks on the banks. In the larger barks are two divers; in the ſmaller, one. Each bark puts off from ſhore before ſun riſe, by a land breeze, which never fails; and returns again by a ſea breeze, which ſucceeds it about noon.

As ſoon as the barks are arrived, and have caſt anchor, each diver binds a ſtone ſix inches thick, and a foot long under his body; which is to ſerve him as ballaſt, and prevent his being driven away by the motion of the water. Beſide this, they tye another heavy ſtone to one foot, whereby they are ſunk to the bottom of the ſea in a moment. And as the oyſters are uſually ſtrongly faſtened to the rocks, they arm their fingers with leathern mittens, to prevent their being wounded in ſcraping them violently off; and ſome even carry an iron rake for the purpoſe.

Laſtly, each diver carries down with him a large net, in manner of a ſack, tied to his neck by a long cord, the other end of which is faſtened to the ſide of the bark. The ſack is intended for the reception of the oyſters gathered from the rock, and the cord to pull up the diver when his bag is full, or he wants air.

In this equipage he precipitates himſelf, ſometimes above 60 feet under water. As he has no time to loſe there, he is no ſooner arrived at the bottom, than he begins to run from ſide to ſide, ſometimes on a ſand, ſometimes on a clayey earth, and ſometimes among the points of rocks; tearing off the oyſters he meets with, and cramming them into his net.

At whatever depth the divers are, the light is ſo great, that they eaſily ſee whatever paſſes in the ſea, with the ſame clearneſs as on land. And, to their conſternation, they ſometimes ſee monſtrous fiſhes, from which all their addreſs in mudding the water, &c. will not ſave them; but they become their prey: and of all the perils of the fiſhery, this is one of the greateſt and moſt uſual.

The beſt divers keep under water for half an hour, the reſt ſtay not leſs than a quarter; during which time they hold their breath without the uſe of oils, or any other liquors. See *Diving*.

When they find themſelves ſtraitned, they pull the rope to which the bag is faſtened, and hold faſt by it with both hands; when the people in the bark, taking the ſignal, heave them up into air, and unload them of their fiſh, which are ſometimes 500 oyſters, and ſometimes not above 50.

Some of the divers require a moment's reſpite to recover breath; others jump in again inſtantly, continuing this violent exerciſe without intermiſſion for many hours.

On the ſhore they unload their barks, and lay their oyſters in an infinite number of little pits, dug four or five feet ſquare in the ſand; raiſing heaps of ſand over them to the height of a man, which, at a diſtance, look like an army ranged in battle. In this condition they are left till the rain, wind, and ſun, have obliged them to open, which ſoon kills them. Upon this the fleſh rots and dies, and the pearls thus diſengaged, tumble into the pit upon taking the oyſters out.

The fleſh of the fiſh is excellent; and, if what ſome naturaliſts maintain be true, "That the pearls are ſtones, formed there by the ill conſtitution of the body, as ſometimes happens in men, and in the bezoard;" this diſeaſe does not alter the humours: at leaſt the Paravas, who eat them, find no difference between thoſe that have pearls and thoſe that have none.

After clearing the pits of the groſſer filth, they ſift the ſand ſeveral times to ſeparate the pearls: but what care ſoever they take in doing this, they always loſe a great many. After cleaning and drying the pearls, they are paſſed through a kind of ſieve, according to their ſizes. The ſmalleſt are ſold for ſeed of pearls; the reſt are put up by auction and ſold to the higheſt bidder.

Manner of fiſhing for PEARLS *in America.* The ſeaſon for fiſhing is uſually from October to March. In this time there ſet out from Carthagena 10 or 12 barks, under the convoy of a man of war called Larmadilla; each bark having two or three ſlaves for divers.

Among the barks there is one called Capitana, to which all the reſt are obliged to bring at night what they have caught in the day, to prevent frauds. The divers never live long, on account of the great hardſhips they ſuſtain, continuing ſometimes under water above a quarter of an hour. The reſt is the ſame as in the Eaſt India fiſheries.

The Weſt Indians knew the value of their pearls before the diſcovery of America; and when the Spaniards arrived there, they found great quantities ſtored up, which the Americans ſet great value on. But they were almoſt all imperfect, and their water yellow and ſmoky; becauſe they uſed fire in opening the fiſhes. Monſieur Savary has a table of the value of pearls communicated to him by an able hand; and as pearls make a very curious article in commerce, it is proper to inſert the following abridgment of the ſame, reduced to ſterling-money, at the foot of 4 s. 6 d. the French crown.

Value of all kinds of pearls with regard to their different weights.

Seeds of pearls.	l.	s.	d. *per*
Seeds of pearls not perforated, fit for grinding, are worth -	00	09	
Fine ſeed of pearls perforated, for ſmall necklace or embroidery -	01	01	
Ditto, a little larger - -	01	16	
Ragged or irregular Pearls.			
Of 500 to the ounce, are worth	03	00

Of 32 grains, or 8 caracts	225	00	0
Of 36 grains, or nine caracts	262	10	0
Of 40 grains, or ten caracts	300	00	0

As to pearls in form of pears, tho' equally perfect, and of equal weight, with the round ones, their value is much inferior: however, when two are found that match well, their value is leſs but by one third.

Falſe PEARLS, are thoſe reſembling the true ones in water or colour; popularly called beads.

Theſe antiently were only made of glaſs, with a tincture of quickſilver within ſide; afterwards they uſed wax, covered over with a fine brilliant fiſh glue.

The Chineſe make artificial pearls, by feeding the oyſters in freſh water with a particular compoſition.

There has ſince been invented in France, another manner of making them, ſo near the natural ones in luſtre and water, that they deceive a good eye. Theſe are what the ladies now generally wear inſtead of true pearl; ſmall necklaces of which they deſpiſe, and the large ones are generally too dear.

Mother of PEARL, is properly the ſhell of the *auris marina*, a ſea-fiſh of the oyſter kind.

This ſhell within ſide is very ſmooth, and poliſhed, being of the whiteneſs and water of pearl itſelf; having the ſame luſtre without ſide, after the firſt laminæ or leaves, which make the outer coat of this rich ſhell-fiſh, have been cleared off with aqua fortis and the lapidary's drill. It is uſed in inlayed works, and in ſeveral toys, as ſnuff-boxes, &c.

Veins of PEARL, are certain excreſcences, or prominent places in form of half pearls, ſometimes found in the bottoms of the pearl ſhells.

Lapidaries ſaw off theſe protuberances, join them together, and uſe them in ſeveral works of Jewelry, as if they were really pearls. See *Precious* ſtone.

PEARL-*fort*. A fortreſs in Dutch Brabant, ſituated on the river Schelde, by which the Dutch command its navigation.

PEARL *Iſlands*, are ſituated in the bay of Panama, in America, in 81 deg. of W. lon. and between 7 and 9 deg. of N. lat.

PEASE. A ſort of pulſe or legume, of ſeveral ſorts; as white, yellow, green, black, and grey.

Peaſe are proper for the food of men; and alſo for the food of hogs: the former kind ſold for about 23 s. the quarter; and the latter about 21 s. the quarter, at the corn exchange in London. White and yellow peaſe are ſingularly ſerviceable to mariners in their voyages, being one of the beſt articles of ſea proviſions, and of which there are great quantities conſumed.

PEAT. A particular ſort of firing, dug out of mooriſh ground, in ſeveral parts of England.

PEBBLE. A roundiſh ſort of ſtone, of different ſizes, uſed in the paving of high-ways, and in moſaic work.

PECK. A meaſure, or veſſel, uſed in meaſuring grains, pulſe, and the like. See *Meaſure*.

The ſtandard or Wincheſter peck contains two gallons, each gallon weighing about eight pounds troy.

Four pecks make a buſhel, four buſhels a comb or carnock, &c.

Beſides the general or Wincheſter pecks, there are local pecks containing ſome more, ſome leſs; as the Lancaſter peck, containing ſix gallons, &c.

PECHA, or *Peſſa*. A ſmall copper coin, worth about an Engliſh farthing; current in ſeveral places of the Eaſt Indies, particularly at Surat, Baroch, Cambay, and Amadabat.

In thoſe parts of the Eaſt Indies where the coris, or the Maldivee ſhells are current, between 50 and 60 are given for the pecha; and, in thoſe where the Caramania almonds ſerve for ſmall money, the pecha is worth between 40 and 44 almonds. See *Coris* and *Almonds*.

It is pretty difficult to reduce rupees and mamodis into pechas; becauſe, according ro the difference of places, theſe ſilver coins augment or diminiſh in their value.

PEDAGE. Toll, or a local due, exacted on perſons, goods, and carriages, paſſing thro' certain places. See *Toll*.

Pedage is uſually levied for the repairing of roads, bridges, cauſeways, the paving of ſtreets, &c. Antiently thoſe who had the right of pedage, were to keep the roads ſecure, and anſwer for all robberies committed on paſſengers between ſun and ſun; which is ſtill obſerved in ſome parts in Italy; where there are guards called *ſtationary*, eſtabliſhed for the ſecurity of merchants, particularly at Terracina, on the road between Rome and Naples.

PEDLAR. A perſon who carries packs of ſmall goods, or wares, up and down the country, to ſell at peoples houſes. See *Hawker*.

Pedlars, or traveling foot traders, are much deſpiſed in England and France: but in the Spaniſh Weſt Indies they are much reſpected; becauſe they chiefly ſupply the ſouthern parts of that country from Panama to Lima with European commodities.

PEDRERO, or *Paterero*. A ſmall piece of ordnance uſed on board ſhips for the diſcharging of nails, broken iron, or partridge ſhot, on an enemy attempting to board; being generally open at the breech, and their chamber made to take out, to be loaded that way, inſtead of the muzzle.

PEEK, in the ſea language, a term uſed in various ſenſes.

An anchor is ſaid to be *a-peek* when the ſhip being about to weigh, comes over her anchor, ſo as the cable hangs perpendicularly between the hauſe and the anchor; the bringing of a ſhip into which poſition they call *heaving a peek*.

A ſhip is ſaid to *ride a-peek*, when lying with her main and fore yards hoiſed up, one end of her yards is brought down to the ſhrouds, and the other raiſed up an-end; which is chiefly done when ſhe lies at reſt in rivers, leſt other ſhips falling foul on her, ſhould break her yards.

To ride a broad PEEK, denotes much the ſame, excepting that the yards here are only raiſed to half the height.

To PEEK *the miſſen*, is to put the miſſen-yard perpendicular by the maſt.

PEEK, is alſo uſed for the room in the hold, from the bits forward to the ſtem, where men of war keep their powder, and merchant-men their victuals.

PEER, or *Pier*, in building, denotes a maſſive ſtone, &c. oppoſed by way of fortreſs, againſt the force of the ſea, or a great river, for the ſecurity of ſhips that lye at harbour in any haven. See *Port*.

Such is the pier of Dover deſcribed by Camden; as alſo the haven and pier of great Yarmouth, mentioned 22d Car. II.

PEGU. A kingdom and city ſituated on the eaſt ſide of the bay of Bengal. See *India*.

PEKIN. The metropolis of the empire of China, ſituated in 111 deg. of E. lon. and 40 deg. of N. lat. See *China*.

PELICATE. See *Palicat*.

PELING. A kind of ſilk manufactured at China, either white or coloured, ſimple, ſemi-double, or triple.

Among the number of ſilk ſtuffs manufactured in China, the greater part imported by the Dutch into Europe are pelings; becauſe they have a prompt ſale for them, and a vaſt profit: but pelins are alſo for the Japaneſe trade.

PELLAINS. Chineſe ſattins, which paſs thro' the hands of the Indians, from whom the European factors receive and purchaſe them: their length being eight ells, and breadth ſeven-ſixteenths.

PELT. The ſkin of beaſts, eſpecially after the fur is ſtripped or taken off.

PELT-*monger*. A perſon who trades in the ſkins of beaſts.

PEN. A little inſtrument uſually formed of a quill, and ſerving to write with.

Dutch PENS, are thoſe made of quills, which have been paſſed through hot aſhes, to take off the groſſer fat and moiſture thereof. See *Quill*.

PENCE. A money of accompt in England. See *Penny*.

PENCE, is alſo a copper coin of Ruſſia, worth $\frac{9}{20}$ of an Engliſh penny; or 20 Ruſſian pence make 9 d. ſterling.

PENCIL. An inſtrument uſed by painters, for the application of their colours.

There are pencils of various kinds, and made of various matters; the moſt uſual are of badgers and ſquirrels hair, thoſe of ſwans down, and thoſe of bears briſtles; which laſt are bound to a ſtick, bigger or leſs, according to the uſes they are deſtined for; and when large, are called bruſhes. The others are incloſed in the barrel of a quill.

There are alſo pencils made either of red chalk or black lead, cut in thin ſlips, and incloſed in cedar, or other wood, to write memorandums with, or to be uſed in drawing figures, particularly by pattern drawers.

PENDANT *Ear-ring*. An ornament of ſome precious matter wore by ladies, hung by a hole made for that purpoſe through the ear, and frequently enriched with diamonds, pearls, and other precious ſtones.

The pendants of the European ladies are nothing in compariſon with thoſe wore by the Eaſt Indians, both men and women; among whom it is the faſhion to lengthen out the ears, and to enlarge the hole, by putting in pendants of the ſize of ſaucers, ſet with ſtones.

PENDANTS *of a ſhip*, are thoſe long colours, or ſtreamers, cut pointing out towards the end, and there divided into two parts, hung out at the heads of maſts, or at the yard-arm ends; being chiefly uſed for ſhew, though ſometimes for diſtinction of ſquadrons. See *Flag*.

PENDANT, or *Pennant*, is alſo uſed for a ſhort rope, which at one end is faſtened to the head of the maſt or to the yard, or the clew of the ſail; and at the other end hath a block and ſhiver, to reeve ſome running rope into.

The pendant of the tackle is made faſt to the head of the maſt, and the pendants of the back-ſtays are faſtened to, and hang down on the inſide of the ſhrouds. All the yard-arms, except the miſſen, have theſe pendants, into which the braces are reeved.

PENDENNIS. A caſtle in Cornwal, ſituated on Falmouth bay, 50 miles S. W. of Launceſton, in 5 deg. 30 min. of W. lon. and 50 deg. 10 min. of N. lat.

PENE. A river of Germany, in the circle of Upper Saxony; which runs from W. to E. through Weſt Pomerania, dividing the Swediſh territories in Pomerania from thoſe of Brandenburg.

PENGUIN *Iſland* and *Bay*, is ſituated on the coaſt of Patagonia, in South America, in 70 deg. of W. lon. and 47 deg. of S. lat.

PENICHE. A port-town of Portugal, in the province of Eſtramadura, ſituated on the ocean, in 9 deg. 30 min. of W. lon. and 39 deg. 20 min. of N. lat.

PENIDIUM. A preparation of ſugar, made by boiling it up with a decoction of barley; being good againſt colds, to moderate the acrimonies of the breaſt, and promote expectoration.

PENINSULA. A portion or extent of land, joining to the continent by a narrow neck or iſthmus, the reſt encompaſſed with water. See *Iſthmus*.

Such is the Peloponneſus, or the Morea; ſuch alſo are Africa, Jutland, &c. peninſula being the ſame with what is otherwiſe called *cherſoneſus*.

PENISCOLA. A port-town of Spain, in the province of Valencia, ſituated on the Mediterranean, in 40 deg. 29 min. of N. lat. and under the meridian of London.

PENNAL, or *Penal*. A kind of dry meaſure, different according to the places where it is uſed. In Franche-Compté the penal contains about a buſhel. At Gray, 8 penals make 15 buſhels. At Bourbonne, the penal of wheat weighs 72 lb. avoirdupois weight, and of maſlin-corn 70.

PENNING, or *Pening*. The Dutch penny, worth $\frac{21}{320}$ of an Engliſh penny; or 96 pennings make $6\frac{3}{10}$ d. ſterling. The penning is alſo uſed as a money of accompt, in keeping books by pounds, florins, and patards; 12 pennings make the patard, and 20 patards the florin, or 1 s. 9 d. ſterling.

PENNISTON, or *Paniſton*. A woollen ſtuff manufactured in England, being a kind of flannel.

PENNY. An antient Engliſh coin, which had formerly conſiderable courſe, but is now generally dwindled into an imaginary money, or money of accompt.

The antient Engliſh *penny*, *penig*, or *pening*, was the firſt ſilver coin ſtruck in England; and the only one current among our Saxon anceſtors, as is agreed by Camden, Spelman, Dr. Hicks, and others.

The penny was equal in weight to the modern threepence; 5 of them made 1 ſhilling, or ſcilling Saxon; and 30 a mark, or mancuſe, equal to 7 s. See *Mark*.

Till the time of Edward I. the penny was ſtruck with a croſs ſo deeply indented in it, that it might be eaſily broke, and parted, on occaſion, into two parts, thence called *halfpennys*; or into four, thence called *fourthings*, or *farthings*. But that prince coined it without indenture; in lieu of which he firſt ſtruck round halfpence and farthings. He alſo reduced the weight of the penny to a ſtandard, ordering that it ſhould weigh 32 grains of wheat, taken out of the middle of the ear. This penny was called the *penny ſterling*; 20 of theſe pence were to weigh an ounce; whence the penny became a weight, as well as a coin.

The penny ſterling is now diſuſed as a coin, and ſcarce ſubſiſts but as a money of accompt, containing the 12th part of a ſhilling, or the 240th part of a pound.

The courſe of exchange between England and France is ſettled on the foot of ſo many pence ſterling for a French crown of three livres.

The French penny, or denier, is of two kinds; the Paris penny, called *denier Pariſis*; and the penny of Tours, *denier Tournois*. See *Denier*.

PENNY-*poſt*. See *Poſt*.

PENNYWEIGHT. A Troy weight, particularly uſed in England; containing 24 grains, each grain weighing a grain of wheat gathered out of the middle of the ear, well dried. See *Weight*, and *Grain*.

Twenty of theſe pennyweights make an ounce Troy; a pennyweight of gold bullion ſtandard being worth 4 s. and of ſilver bullion 3 d.

PENNYWORTH, ſometimes implies a bargain, or profitable purchaſe, by which the buyer may be a great gainer.

PENON *de Vele*. A port-town of Barbary, ſituated on the Mediterranean, in 5 deg. of W. lon. and 35 deg. 45 min. of N. lat. 80 miles S. E. of the ſtraights of Gibraltar, ſubject to Spain.

PENRISE. A port-town of Wales, in the county of Glamorgan, ſituated on the Britiſh channel, in 4 deg. 15 min. of W. lon. and 51 deg. 36 min. of N. lat. 50 miles S. W. of Launceſton.

PENSILVANIA. A province of Britiſh America. See *Britiſh* America.

PENSIONARY, or *Penſioner*. A perſon who has a penſion, appointment, or yearly ſum, payable during life, by way of acknowledgments, charged on the eſtate of a prince, company, particular perſon, or the like.

PENSIONARY, is alſo the appellation of the firſt miniſter of the ſtates of Holland, who is chairmain in aſſemblies of the ſtates of that province. He propoſes the matters to be conſulted on, collects the votes, forms and pronounces the reſolutions of the ſtates, opens letters, confers with foreign miniſters, *&c.* He is charged with inſpecting the finances, preſerving the rights of the province, maintaining the authority of the ſtates, and ſeeing to the obſervation of the laws, *&c.* for the good of the ſtate. He aſſiſts in the college of deputy-counſellors of the provinces. His commiſſion is only given for five years, after which it is deliberated whether or not it ſhall be renewed. Indeed there is no inſtance of its having been revoked, death only putting a period to the functions of this important miniſter. Formerly he was called the advocate of the province, the title penſionary being only given at the time Barnevelt had the office.

They are called *penſionaries*, becauſe they receive an appointment or penſion.

PEOPLE. The whole collection of inhabitants in a kingdom or ſtate. The people being the firſt matter of power and wealth, by whoſe labour and induſtry a nation muſt be gainers in the balance of trade, their increaſe or decreaſe muſt be carefully obſerved by any government that deſigns to thrive. Dr. Davenant imagines that the people of England were double the number at his time that they were 435 years before. For it is not extent of territory that makes a country powerful, but numbers of men well employed, convenient ports, a good navy, and ſoil producing all ſorts of commodities.

Mr. King thinks that there are 5,500,000 people in England; of which 2,675,520 are the nobility and gentry, with their families and retinues, the perſons in offices, merchants, perſons in the law, the clergy, freeholders, farmers, perſons in ſciences and liberal arts, ſhopkeepers and tradeſmen, handicraftſmen, naval officers, with the families and dependents upon all theſe; and the remaining 2,825,000 are common ſoldiers, labouring people and out-ſervants, cottagers, paupers, and their families, with the vagrants.

But the people of England and Wales may be ſaid

amount to between 8 and 10 millions, thoſe of Scotland 2 millions, thoſe of Ireland 2 millions, and thoſe in the Britiſh colonies 1 million. The Britiſh merchant makes the inhabitants of England 7 millions; and that, great and ſmall, rich and poor, one with another, they are not lodged, fed, and cloathed, for leſs than 7 l. *per* head: ſo that the annual expence, or conſumption of the whole people, is about 50 millions ſterling; of which 4 millions are paid for foreign conſumption, though 7 millions of home manufactures are ſent abroad.

There are in all probability ten times as many poor as rich people in the kingdom, who ought to be employed in ſome manual occupation; for otherwiſe they will weaken, inſtead of ſtrengthening a nation. See Great *Britain*, *Labour*, and *Political* arithmetic.

EPITAS, is a term given by the Spaniards to the piece of pure gold, found in ſome mines of Chili and Peru, particularly in the lavaderos of the latter; where it is uſual to ſee pepitas of 2, 3, 4, and 5 lb. In the reign of Philip V. two were found near Lima, one of 32, and the other of 42½ lb. the latter of which, as a conſiderable piece of ſingularity, was compoſed of a metal of 3 different alloys, as of 11, 18, and 21 carats.

EPPER. An aromatic fruit, or berry, of a hot, dry quality, chiefly uſed in the ſeaſoning of meats; being the product of a ſhrub growing in ſeveral parts of the Eaſt Indies, chiefly Java, Sumatra, Malacca, and the coaſt of Malabar.

The plant is very weak, and of the reptile kind; for which reaſon it is uſually planted at the foot of the larger trees, as the areca, coco, and others. Pepper grows in bunches or cluſters, at firſt green. As the grains ripen, they grow red; and at laſt, after being expoſed a while to the ſun, become black, in the condition they are brought to the Europeans. The fruit is gathered in November; which muſt be choſen large, full, not wrinkled, without duſt, with a good many white grains in it; and care ſhould be taken the largeſt berries have not been picked out to make white pepper.

hite PEPPER, is the fruit of the ſame plant with the black; being prepared from it, by moiſtening it with the ſea-water, then expoſing it to the ſun, and caſting away the outer bark, which, abandoning the grains, leaves it white. White pepper muſt be choſen after the ſame manner as the black; with this further care, that it has not been dyed white. Pepper that is ſold ground, is very apt to be ſophiſticated; the black with burnt cruſts of bread, &c. the white with beaten rice.

g PEPPER, *Piper longum*, is denominated from its form, which in length and thickneſs equals a child's finger. It conſiſts of an aſſemblage of grains or berries, joined cloſe to one another, of a browniſh colour, bordering without on red, and within on black; and grows by a long pedicle to a plant, like that of the black pepper, but lower, and its leaves ſmaller and greener; its taſte reſembling that of the former, but leſs ſharp. There are three ſorts of this pepper; that of the Eaſt Indies; that of America; and that of Ethiopia, called alſo grain of Zelim; though the firſt alone is the proper long pepper, the reſt reſembling it but little. It muſt be choſen new, large, heavy, well filled, hard to break, without duſt or mixture; its chief uſe being in medicine, where it enters ſeveral epidemical compoſitions, particularly Venice treacle.

ica PEPPER, is a reddiſh pepper of a coral colour, much eſteemed by the Americans, from among whom it is brought, and by them called chile, by the Spaniards pimentos, and by the French garden coral. It is now cultivated pretty commonly in France, eſpecially in Languedoc, uſed in making vinegar, and likewiſe comfited with ſugar. It muſt be choſen new, in large pods, dry, entire, and red. There are four kinds; the firſt called by the Americans chilchotes; the ſecond, very ſmall, chilterpin, both of a very pungent taſte; the third tonachiles, moderately hot, and eaten by the natives like other fruit with bread; the fourth chilpelagua, moderately pungent, much uſed by the Spaniards in the preparation of chocolate. There is alſo a fifth kind called agy, growing in Peru.

Jamaica PEPPER, called by the Dutch *amonic*, and by the Spaniards *pimienta de Jamaica*, is the fruit of the tree that yields the Indian wood, growing plentifully in Jamaica, and other American iſlands. It is a real aromatic, and may ſupply the defect both of cloves, nutmeg, and cinnamon; whence it is called alſo by the Engliſh allſpice; but the French call it the round clove, from its taſte reſembling that ſpice.

The Eaſt India company in 1753 imported into England 2,000,000 lb. of pepper; which, at 1 s. *per* pound, the groſs price at the ſales, was 100,000 l. and as the duty is 4 *per cent.* of the value, the revenue received 4000 l. for that commodity.

By the ſtatutes of the 8th and 10th of Queen Anne, pepper may be imported into the port of London only; and upon entry thereof, and payment of half the ſubſidy, muſt be forthwith put into warehouſes, provided at the charge of the importer, and approved of by the commiſſioners of the cuſtoms, upon forfeiture, and 100 l. When in ſuch warehouſes, may be garbled or ſifted from ſtones, dirt, or other traſh, which the commiſſioners of the cuſtoms may cauſe to be deſtroyed. The proprietor of the pepper may affix one lock to each warehouſe, and keep the key; and may, in the preſence of the warehouſe-keeper, who muſt attend at all ſeaſonable times, view, ſort, and deliver the ſame. Upon delivery out of ſuch warehouſes, if for home conſumption, the buyer muſt pay the duties; but if for exportation, ſecurity muſt be firſt given, that it ſhall be really exported, and not relanded in Great Britain.

And by an act of the 8th of George I. ſuch ſecurity may be diſcharged, upon certificate, under the common ſeal of the chief magiſtrate, or under the hands and ſeals of two known Britiſh merchants, teſtifying the landing, or upon proof that it was taken by enemies, or periſhed at ſea.

Pepper warehouſe keepers, by an act of the 8th of Queen Anne, are to enter all pepper brought in and carried out, diſtinguiſhing that for conſumption from that for exportation; and at the end of every ſix months muſt tranſmit an exact account thereof, and of what is remaining in their cuſtody, upon oath, to the commiſſioners of the cuſtoms; who are within one month to cauſe the books and warehouſes to be inſpected, and the accompts examined.

If upon ſuch examination it ſhall appear, that any pepper has been delivered out without payment of duty, or ſecurity for exportation, the warehouſe-keeper is to forfeit the value thereof, and 100 l. and to be rendered incapable of any public employment.

PERCALLES-MAURIS. White Eaſt Indian cotton cloths, of 7¼ ells in length, and 1⅛ ells in breadth.

PERCH, *Pole*, or *Rod*. A long meaſure, much uſed in ſurveying and meaſuring of land. Among the old Romans, and ſtill among geometricians, the pertica, perch is ten feet; and they otherwiſe call it the catena, funis, and decempeda. In England, the ſtatute perch contains ſixteen feet and a half, and for coppice woods, &c. eighteen feet. Forty ſquare perches make a rood, and one hundred and ſixty an acre. The cuſtomary perch is various in different counties. In Staffordſhire it is twenty-four feet; in the foreſt of Sherwood twenty-one, the foot there being eighteen inches, the meaſure of which is marked in the Chancel-wall of Edwynſtow, and in the church of St. Mary in Nottingham. In Herefordſhire a perch of walling is ſixteen feet and a half, and a perch of ditching twenty-one feet. In France the perch is from eighteen to twenty-three, and even twenty-ſeven of their feet.

PERCH, is alſo the name of a fiſh, common in the rivers and ponds of England.

PERFUME. An agreeable artificial odour, ſtriking the ſenſe or organ of ſmelling. The generality of perfumes are made, or compoſed of muſk, ambergreaſe, civet, roſe and cedar woods, orange-flowers, jeſſamine, jonquills, tuberoſes, and other odoriferous flowers, with ſtorax, frankincenſe, benzoin, cloves, mace, and other like drugs, commonly called aromatics. Some perfumes are alſo compoſed with aromatic herbs or leaves, as lavender, marjoram, ſage, thyme, hyſſop, and others. Perfumes were antiently much in uſe, particularly thoſe

wherein muſk, ambergreaſe, and civet enter: but they are now much diſuſed, ſince people have become ſenſible of the harm they do in the head; though in Spain and Italy they are ſtill in faſhion.

PERFUMER, is a perſon who ſells all ſorts of waſhes, pomatums, ſoap, powder, eſſences, and all kinds of perfumes; as alſo ſometimes ſnuff and tobacco.

PERGA. A port-town of European Turky, in the principality of Albania, ſituated in 21 deg. of E. lon. and 39 deg. 20 min. of N. lat. oppoſite to the iſland of Corfu.

PERIOECI, in geography, ſuch inhabitants of the globe as have the ſame latitude, but oppoſite longitudes, or live under the ſame parallel, and the ſame meridian, but in different ſemicircles of that meridian, or oppoſite points of the parallel.

PERIPLUS. A voyage or navigation round a certain ſea, or ſea-coaſt. Arrian has deſcribed all the coaſts of the Black ſea, after having inſpected them in quality of a general of the Emperor Adrian, to whom he dedicates the deſcription, under the title of Periplus on the Euxine ſea.

PERISCII. Thoſe inhabitants of the earth, whoſe ſhadows, in one and the ſame day, ſucceſſively turn to all the points of the horizon. Such are the inhabitants of the frozen zones, or thoſe who live within the compaſs of the arctic and antarctic circles; for as the ſun never goes down with them after he is once up, but always round about, ſo do their ſhadows; inſomuch, that in the ſame day they have their ſhadows on all ſides.

PERMISSION, is a term in Flanders, Brabant, and Zealand, where they call permiſſion money what is uſually called in commerce exchange-money; that is, the eſtimation according to which the remittances, and exchange of theſe provinces, are conducted in other countries.

PERMIT. The name of a note, or certificate, given by the officers of exciſe to the dealers in foreign brandy, and other exciſeable commodities, to ſell or remove them from place to place.

The uſe of certificates and permits, inſtead of preventing, is a great encouragement to the practice of ſmuggling; it being notorious, that in the tea, rum, and brandy trades, certificates or permits are a commodity publickly bought; the increaſe of the revenue on tea and pepper being the effect not of the exciſe-laws, but of the duties on thoſe goods, which has made it worth leſs while to ſmuggle them. And it is demonſtrable, that the ſame policy in reſpect to the tobacco trade would be attended with the ſame happy conſequences, both to the crown and trader. The neceſſity of ſuch certificates or permits ſubject the fair trader to expence, as well as to many great hardſhips and inconveniencies; for it diſcovers the names of his cuſtomers, and the extent and circumſtances of his trade to the officer, who, by communicating the ſame to others, might greatly detriment him in his buſineſs, and perhaps in the very credit by which he ſubſiſts. Beſides, it muſt occaſion great inconveniencies, delays, and diſappointments; orders being commonly brought by carriers, watermen, hoymen, and bargemen, who come to town after, and return before the uſual office-hours; and ſometimes on holidays, when permits or certificates are not to be had, unleſs the officer is paid for his extraordinary attendance; in which caſes it might not be poſſible to comply with the order till the next return, which frequently does not happen in 7, ſometimes in 14 days. It may alſo make the trader liable to unjuſt ſeizures, through the negligence, miſtake, or malice of officers, carriers, ſhipmaſters, wharfingers, book-keepers, and ſervants, even when certificates were properly obtained; and the trouble of obtaining redreſs from the commiſſioners muſt fall upon the town-trader, not without ſome expence, beſides loſs of time and vexation. Therefore, when the certificate clauſe was inſerted in the laſt tobacco-act, it was humbly hoped the fair traders in London, who contribute ſo largely to the revenue, would not be fettered with ſuch unreaſonable and ſevere reſtrictions, and ſo in fact be puniſhed for the faults of others; becauſe the expedient for leſſening the duty was thought the more proper remedy, and fully ſufficient to anſwer every good intention. But the preſent method of certificates can never be productive of any one beneficial thing to the government; whil it is daily teeming with the moſt pernicious evils to ever honeſt man concerned in the trade; for certificates ar difficult to be obtained. A man of any buſineſs may fi ſufficient employment for three or four perſons, only t dance backwards and forwards, to and from the cuſtom houſe, from morning till night, for theſe certificates, an perhaps after all he may be diſappointed, or may get th certificates too late for the carrier, which are then of n manner of ſervice, becauſe the carrier's name muſt b ſpecified in ſuch certificate, which for that reaſon mu be taken out anew for another carrier; ſo that a trade man, when his goods are ready according to his order is frequently obliged to diſappoint his cuſtomer, and pe haps incur his reſentment ſo far as to loſe his buſineſs. Se *Exciſe*.

PERMUTATION. The truck or exchange of o thing for another; the commerce of the antients bei performed wholly by way of permutation; which, in t common law, is a real and actual exchange of two b nefices. See *Exchange*.

PERNAMBUCO. See *Portugueſe* America.

PERNOW, or *Parnau*. A city and port-town of Livoni ſituated on a bay of Livonia in the Baltic, in 24 deg. E. lon. and 58 deg. of N. lat. ſubject to Ruſſia.

PERPETUANA. A ſort of woollen ſtuff uſually man factured in England. See *Sempiternal*.

The beſt perpetuanas, or perpets, are manufactured Crediton and Sandford, in Devonſhire; the former b ing worth 26 s. the piece, containing 15 lb. weight; a the latter 29 s. the piece, containing 16 lb. and a h They are chiefly ſent to Turky and India, where there a great conſumption of them; though the French a great rivals in that trade.

PERRUKE, *Peruke*, or *Periwig*, is now uſed for a ſett falſe or borrowed hair, curled, buckled, and ſewed t gether on a frame or cawl, anciently called capillam tum, or falſe peruke. In effect, the uſe of perukes, leaſt on their preſent footing, is not very old. The ye 1629 is reckoned the epocha of long perukes, at wh time they began to appear in Paris; whence they ſpre by degrees throughout the reſt of Europe. At firſt it w reputed a ſcandal for young people to wear them, by re ſon the loſs of their hair at that age was attributed to a d eaſe, the very name whereof is a reproach: but at leng the mode prevailed over the ſcruple; and now people all ages and conditions wear them; foregoing, with any neceſſity, the conveniencies of their natural hair. was ſome time though before eccleſiaſtics came into t faſhion. The firſt who aſſumed the peruke were ſo of the French clergy, in the year 1660; nor is the pr tice yet well authoriſed. The Cardinal Grimaldi 1684, and the Biſhop of Lavaur in 1688, prohibited uſe of the peruke to all prieſts, without a diſpenſation neceſſity. See *Hair*.

PERRY. A drink made of pears, after the like man as cyder from apples. The beſt fruit for this uſe, ſuch as are leaſt fit for eating, as the borbery-pear, horſe-pear, boreland-pear, and choak-pear; and ſtill redder they are, the better. The method of prepar perry is perfectly the ſame with that of cyder, only fruit muſt be perfectly ripe; though ſome mix crabs w them to mend the liquor. See *Beer*.

PERSIA. The boundaries of the kingdom of Perſia, generally ſaid to be India towards the eaſt; the Ind ocean, and Perſian gulph, towards the ſouth; the Turk empire, towards the weſt; aud Circaſſia, the Caſpian and the river Oxus, towards the north. It muſt alſo remembered, that part of the coaſt of Arabia, on ſouth of the gulph of Boſſora, is under the dominion the King of Perſia.

As to the extent of Perſia, the moſt ſouthern part ly in 25 deg. of N. lat. and the northernmoſt part in 45 it is about 1200 miles long from north to ſouth; the weſt part of it lying in 45 deg. of E. lon. and moſt eaſtern part in 67; the length and breadth is pr near equal: and if it was not for the Caſpian ſea, w divides the N. E. parts of Perſia from the N. W. the f of the country would be almoſt ſquare.

It contains 12 provinces, namely, Choraſſan, Sabluſtan, Sigiſtan, Makeran, Kerman, Farſiſtan, Chuſiſtan, Curdeſtan, Irack-Agem, Ghilan, Aderbeitzan, and Chirvan.

The air of this country is very different, according to the ſituation of the ſeveral diviſions. On the mountains of Caucaſus and Dagiſtan, which are frequently covered with ſnow, it is cold. On the tops of their other mountains it is always cool, but their vallies are exceſſive hot; and the coaſts of the Caſpian and Perſian ſeas are very unhealthful. The middle of Perſia, however, is much admired for the pureneſs and ſerenity of the air; though for two months in the year, about April and May, they are troubled with their ſamiel, or hot wind, which blows for three or four hours in the day with ſuch ſcorching heat, that many perſons have periſhed in them.

Perſia, in general, is a very barren ſoil; but where they can turn the water into their plains and vallies, it is not unfruitful. It produces wine and oil plentifully, with ſenna, rhubarb, and other drugs, abundance of dates, oranges, piſtachio-nuts, and other delicious fruits; as alſo melons, cucumbers, and other garden-ſtuff, in great perfection. There are alſo great quantities of ſilk produced, eſpecially near the coaſt of the Caſpian ſea; and they have a fine pearl-fiſhery in the Perſian gulph. Their moſt uſeful animals are camels; and a ſprightly breed of horſes, equal to the Arabian. They have likewiſe deer, and all manner of game, oxen, and buffaloes; their ſheep are remarkable for having 6 or 7 horns apiece, with tails that weigh 7 or 8 lb. each. They have alſo lions, tygers, and other wild beaſts.

They have good mines of iron, copper, and lead: but the moſt valuable mines are where the turquoiſe ſtones are found; there being one of them at Niſapour, in the province of Choraſſan, and another in a mountain between the province of Irac and Hircania: beſides, ſulphur and ſaltpetre are dug up in the mountain Damaverd.

Their rivers are the Oxus on the north-eaſt, which divides Perſia from Uſbec Tartary; the Kur, antiently Cyrus; and the Arras, antiently Araxes; which riſing in the mountains of Armenia and Caucaſus, join their ſtreams, and run from weſt to eaſt into the Caſpian ſea. The Indus alſo uſed to be reckoned among the Perſian rivers, as it anciently divided Perſia from India; but now Perſia is poſſeſſed of ſome provinces weſt of the Indus.

Their manufactures are chiefly thoſe of ſilk, woollen, mohair, camblets, carpets, and leather: but the Perſians have ſcarce any ſhips of their own to carry on the trade of the Perſian gulph; and the Ruſſians have the ſole navigation of the Caſpian ſea.

The government is an abſolute monarchy; the lives and eſtates of the people being entirely at the diſpoſal of their prince, who is conſidered as the chief merchant, and uſually employs his Armenian ſubjects to traffic for him in every part of the world; and the King's agents muſt have the refuſal of all merchandiſe, before his ſubjects are permitted to trade.

The eſtabliſhed religion is that of Mahomet.

The annual revenues of all the provinces amount to about 22,950,000 mildenaers; and as the mildenaer is equal to an Engliſh crown, the whole is 5,737,500 l. ſterling, ariſing out of the third part of the cattle, corn, fruits, ſilk, and cotton; as alſo by a water-tax, for letting water into fields and gardens; and by a poll-tax of a ducat a-head, for thoſe who are not of the eſtabliſhed religion.

For their coins, money of accompt, weights, and meaſures, ſee *Coin*, *Money*, *Weights*, and *Meaſures*.

The interior commerce of Perſia, and the ſtates depending thereon.

Commerce is a very honourable profeſſion in Perſia; the name of a merchant is even a diſtinguiſhing title, and has ſomething reſpectable in it. Both the King and the greateſt lords diſdain not the exerciſing of trade, having warehouſes and factors, with which they ſend their merchandiſe not only into neighbouring countries, but alſo into the moſt diſtant parts of Aſia and Europe.

It will not however be amiſs to obſerve, that by the word *ſandaguer*, ſignifying merchant, or maker of profits, the Perſians never underſtand thoſe who keep a ſhop, and deal in the retail way; but only ſuch as have an exterior commerce, with clerks and factors in foreign countries.

What makes commerce ſo much eſteemed in Perſia, is on two accounts; the one, becauſe it is the moſt ſtable and lucrative profeſſion of the kingdom; and the other, becauſe dignity being of no permanency in a ſtate where the ſovereign is deſpotic, merchants are there looked upon as ſacred perſons, whom war even reſpects, they and their merchandiſes paſſing without any danger through the armies of friends and enemies.

To this may be added, that the court of Perſia chuſes from among merchants ſuch ambaſſadors as it ſends to foreign courts; as alſo, that the King of Perſia honours with the title of his *hoſts*, thoſe merchants who trade to Iſpahan; which is treating them in ſome reſpects on the footing of ambaſſadors, and envoys from princes.

The Perſians ſeldom or never trade by ſea themſelves; being ſatisfied at ſeeing ſhips from Europe and the Eaſt Indies arrive in their ports; and entruſting ſuch ſhips as they ſend abroad to the care of Chriſtians, particularly the Armenians, who are their factors in almoſt all foreign countries, eſpecially in France, Italy, and Holland.

They alſo employ Jewiſh factors for the Eaſt Indies, as alſo for the interior commerce of the kingdom. The Perſian merchants call their factors and clerks *vikils*, that is, my children; and they keep ſome of theſe factors even in China.

The kingdom of Perſia is of ſo great an extent, and its provinces for the greater part are ſo plentiful and opulent, that it is not aſtoniſhing that its trade is one of the moſt conſiderable of Aſia.

Iſpahan, or Isfahan, was the center of this commerce, and the capital of the kingdom; being ſituated in 50 deg. of E. lon. and 32 deg. 30 min. of N. lat. 200 miles N. of the Perſian gulph, 300 miles S. of the Caſpian ſea, 1400 miles S. E. of Conſtantinople, and 1600 miles N. W. of Delly; being of an oval form, and 12 miles in circumference. It was from thence that the caravans departed, which went to Bander-Abaſſi with the merchandiſe which the factors of foreign nations purchaſed at Iſpahan; and it was there that ſeveral others arrived yearly, either from places within or without the kingdom, as thoſe of Schiras, Lahor, Aleppo, Bagdat, Herat, Boſſora, and all thoſe of the Levant.

Iſpahan was the reſidence of the principal European factors; the Engliſh and Dutch having houſes, or rather palaces, there; which the former held by the favour of Shah Abas the great, for aſſiſting him in taking Ormus; and the latter purchaſed, to ſerve them both for lodgings and warehouſes.

There is ſcarce a town where trade aſſembled more ſtrangers, than this capital of Perſia. The moſt conſiderable were the Armenians of Julpha, a colony which the Shah Abas eſtabliſhed in one of the ſuburbs; and the Indians, who were 2000 in number, and keep their ſhops in the great meidan, or market, near thoſe of the Perſians.

The Armenians are polite, and perſons of good ſenſe and probity, much devoted to trade, which may be ſaid to be their only occupation. They are not only maſters of the Levant trade, but alſo have a great ſhare in that of the greateſt cities of Europe; it being uſual to meet with them at Leghorn, Venice, Marſeilles, in England, Holland, the Mogul's territories, and in all parts of the Eaſt, except China.

As Shah Abas had no other view than the enriching of his ſtates, and as he was convinced that he could not effectuate it by any other means than by commerce, he caſt his eyes on ſilk, as the moſt precious merchandiſe; and on the Armenians, as the moſt proper perſons for ſelling it: ſo that, about the year 1620, from labourers, or ploughmen, he made them merchants, and theſe merchants became the moſt experienced traders throughout the earth.

For commencing this commerce, this ingenious prince entruſted to the moſt intelligent inhabitants of Julpha a certain quantity of bales of ſilk, to be ſent by caravans into foreign countries, and eſpecially into Europe, upon condition

dition of their accompanying them themſelves, and at their return paying for the bales at the price fixed by judicious perſons before their departure; all the profits to be made, over and above the fixed price, being deſtined for the merchants.

The ſucceſs anſwered the expectations both of the prince and merchants. Shah Abas gave in ſome reſpects a new face to the commerce of the earth; and the Armenians, by the richneſs of their return, having brought into the Weſt the beſt merchandiſes of the Eaſt, ſhewed afterwards to the Eaſt all that the Weſt had moſt precious and curious.

The commerce of the Armenians being ſufficiently eſtabliſhed, the Kings of Perſia ceaſed interfering in the trade; and the inhabitants of Julpha were the only perſons who continued to ſupport it, who by their agents diſtributed throughout the reſt of the world all the riches of Aſia.

Nothing is more extraordinary, and at the ſame time more diverting, than the manner whereby purchaſes are made among the Armenians.

They begin by throwing money upon the table; after which they diſpute as much as poſſible about the price; when the purchaſer and vender throw backwards and forwards pieces of money, either for adding to or diminiſhing the price; which is always done with ſuch clamours, and ſuch ill humour, that other people would think they were going to devour each other. All this, however, is but pure grimace and affectation; and when a broker, who is preſent at this farce, thinks things much near their value, he ſqueezes with ſuch violence the hand of the ſeller, as to make him bawl out, not quitting it till he has conſented to the offer of the purchaſer. The whole concludes with merriment, each laughing on his ſide, full of the opinion of having deceived his companion.

There are no exchanges, nor public banks, eſtabliſhed in Perſia, after the manner of Europe; though there are ſome bankers who remit money to all the places where there is an occaſion for it.

The merchants have warehouſes, which are almoſt all in the caravanſeras; and thoſe who ſell by retail have ſhops, but ſeparate from their abode, and the places where they work at their manufactures, or other trades.

Of theſe ſhops are uſually compoſed what go under the denomination of bazars, where the moſt precious merchandiſe are expoſed to ſale, ſuch as goldſmiths work, precious ſtones, rich ſtuffs, drugs, and ſpice; each ſort of trade having a ſeparate quarter.

Though the bazars of Iſpahan are magnificent, that of Tauris, which contains upwards of 15,000 ſhops, paſſes for the moſt ſuperb of Perſia. And, next to the trade of this capital, there is not a town in Perſia where there is a greater trade than at Tauris; its commerce extending not only throughout all Perſia; but alſo to Turky, Muſcovy, Tartary, the Eaſt Indies, and the Black ſea.

There was no ſort of merchandiſe but might be found at Iſpahan; the greateſt trade being that of ſilk, of which there is yearly gathered in Perſia a prodigious quantity. However, the late civil wars have ruined the trade of Iſpahan; the court, and conſequently the trade, being removed to Meſched, in the province of Choraſſan, near the Caſpian ſea.

The provinces that produce moſt ſilk, are Ghilan, Maſanderan, Media, Bactria, Caramania, and Georgia; which in all may annually furniſh to the amount of 22000 bales, each bale weighing 276 lb. whoſe culture continually encreaſes, upon account of the great ſale, and the profits made of it by ſtrangers.

There are four kinds of ſilk among the Perſians. The Chirvan, ſo called from Chirvan in Media near the Caſpian ſea, and called in Europe Ardaſs ſilk.

The Karvary, or Legis ſilk, gathered at Legiam, a ſmall town of Ghilan.

The Ked-coda-penſend, or Kelkodapeſend, or the citizen ſilk.

And the Charbaſs, or Sherbaffe, called brocade ſilk.

It is thought, that of this great quantity of ſilk, ſcarce more than a thouſand bales are employed yearly in the Perſian manufactures; and that the reſt is ſold in Turky, the Indies, Italy, and almoſt in all parts of Europe and Aſia.

The Engliſh and Dutch are thoſe who export moſt from Bander-Abaſſi; and the latter yearly export to the value of 60,000 l. ſterling. The Armenians alſo export great quantities to Smyrna, and no ſmall quantity paſſes alſo into Muſcovy.

The ſtuff-manufactures in Perſia are much upon the footing of thoſe of Europe; but there is no eſtabliſhed manufacture of woollen cloth; the Perſians making only a kind of very fine woollen felts, which they know how to mill perfectly after the manner of European hats.

Theſe felts ſerve for cloaks againſt the rain, or for common carpets placed over a richer ſort; with which the Perſians, as moſt of the eaſtern nations, cover their ſofas.

There is a great trade in Perſia of European woollen cloths, imported by the Engliſh and Dutch to Gombroon; which are ſo much eſteemed there, that an ell of cloth, of indifferent quality, is ſold ſometimes for 20 or 24 crowns.

The French alſo ſell there ſome of their cloths, particularly thoſe called draps de Berry, and draps Duſſeau.

The ſtuffs of the Perſian manufactures are made moſt commonly of wool, cotton, goat, and camels hair, but eſpecially ſilk, with which they uſually mix the three latter materials.

Their manufactures of pure ſilk are taffeties, tabbies, ſatins, grograms, turbans, girdles, and handkerchiefs.

Their brocades are called *zerbaſe*, and are of three ſorts; the ſimple, as in Europe of divers faſhions, deſigns, and kinds; the double, which they call orray, that is, a ſtuff with two faces, becauſe it has no wrong ſide; and the machruely, or gold velvet.

Of this laſt ſort ſome pieces are manufactured, which coſt to the amount of 50 tomans the geuſe, or Perſian ell, being about 50 l. ſterling; and thus this ſtuff may certainly be reputed the deareſt in the world.

Commonly the pieces of ſilk exceed not 5 or 6 ells in length, becauſe no more is required for the making of a veſt after the Perſian mode; and moſt of them are conſumed in the country, except a few ſeen in Europe. Formerly they were pretty plentiful in the Eaſt Indies, particularly in the Mogul's territories: but this prince, to hinder the ſale of them, forbid his ſubjects their uſe; which is obſerved with an exactneſs and ſeverity, that would be very neceſſary in ſome parts of Europe, where certain Aſiatic ſtuffs are not permitted.

Among Perſian ſilks, ſeveral are painted with divers colours; and even emboſſed with gold and ſilver, placed on with moulds of gold and ſilver, and gum-water, which they know how to uſe ſo well, that they may be taken for real brocades. The painters of ſtuffs, who are in moſt repute, are thoſe of Jeſchi and Cachan.

The manufactures of woollen ſtuffs and camels hair are for the moſt part eſtabliſhed at Yeſde, Kirman, and Mongay.

Thoſe of wool are only a kind of coarſe ſerge for the cloathing of the common people; but pretty good ſtamines, druggets, and camblets, are made of camels hair; beſides, there are ſtuffs of goats hair manufactured in Hircania, which reſemble baracans.

The colours the Perſian dyers give to their ſilks, and the other materials which they employ in ſtuffs, are more lively and beautiful than thoſe of European dyers; which is either owing to the ingenuity of the artiſans, or the pureneſs of the air.

The drugs they uſe for dying ſtuffs are red hole and opoponax, both of which are very abundant in Perſia; Sapan wood, indigo, ſome particular herbs, gums, and the fruits of the country; among others, walnuts, pomegranates, citron juice, with ultramarine, or lapis lazuli.

The other merchandiſe which the Perſians ſend to foreigners, beſides their ſilks and ſtuffs, are porcelains, feathers, Morocco leather, ſpun and unſpun cotton, ſhagreen, tobacco, nut-galls, very fine mats, baſkets of ruſh and oſiers, and cabinet-works in box-wood; iron and ſteel of Caſbin and Choraſſan, which are reputed contraband, but

but brought to Bagdat; furs; ſkins of Chirvan ſheep, eſteemed much by the Muſcovites; ultramarine; perfumes, eſpecially ambergreaſe and muſk, the one brought to Perſia from the Eaſt Indies and the Red ſea, and the other from Thibet; pearls of the Perſian gulph, and turquoiſe ſtone.

From Perſia are alſo brought all' ſorts of ſpice, which the Dutch bring to Bander-Abaſſi; ſaffron, the beſt in the wold, particularly that of the coaſts of the Caſpian ſea and Amadan; alum, ſulphur, ſeveral ſorts of diſtilled waters, glaſs, cryſtal, ſkins of divers animals prepared at Schiras; coffee brought to them from Arabia, and ſent to Europe by the way of Aleppo; laſtly, ſeveral drugs and medicinal gums, which grow in Perſia, or are brought thither from other places, among others quinquina and rhubarb, dragons blood, and gum arabic.

Among the Perſian merchandiſe may be alſo included the excellent wines of Schiras and Yeſde; of which a great quantity is conſumed in the country, becauſe the principal inhabitants are extremely addicted to drunkenneſs, notwithſtanding the prohibition of the Alcoran; and there are alſo conſiderable exports for the Mogul's territories, and even for China.

Theſe wines are not preſerved in caſks, as in Europe; but in great earthen veſſels, varniſhed on the inſide, or only rubbed over with the ſuet of a loin of mutton.

Piſtachoes and almonds are alſo fruits of the growth of the country; laſtly, great numbers of camels, horſes, mules, and lambs, are yearly ſent into the Grand Signior's territories, thoſe of the Mogul, and into other parts of Aſia.

All payments are made there in ſilver; for gold has no currency in the commerce of Perſia; ſuch pieces as are ſtruck of this metal, on the acceſſion of each King to the crown, being rather a medal than a coin, and called teler, or the cherafis of the nobles.

The foreign gold ſpecie imported there are received in payments, but at ſo low a price that Europeans trade very little with it; and the King's gain is alſo but ſmall, the greater part of theſe coins paſſing to Baſſora and the Eaſt Indies, by the connivance of the governor of Gombroon, and the other ports of the Perſian gulph; though this trade is very ſeverely prohibited.

The current coins are ſilver or copper, ſtruck at Iſpahan, Erivan, Dadian, Tauris, Ardaville, Hamadan, and Aviſa.

Thoſe of ſilver are of a very good alloy, and at a very high ſtandard; but as ſoon as they are out of the mint, the Indians ſend them out of the kingdom; or falſe coiners, whoſe puniſhment is very ſlight in Perſia, adulterate them; which makes this ſpecie ſcarce, or places very bad ones in their room: ſo that all payments are chiefly made in copper, which hurts the commerce of Perſia, and would ſome time or other totally deſtroy it, if Europeans could do without the ſilks, and the other commodities of the country.

As to the foreign ſilver ſpecie, eſpecially rials and rixdollars, which the caravans by land, and the Europeans by ſea, bring there; they are all converted into money of the country, in which the King gains conſiderably, and would gain much more if they were not fraudulently, as well as the gold ſpecie, ſent away to Baſſora and the Eaſt Indies.

The other principal places are *Baku*, a city of the province of Chirvan on the Caſpian ſea, remarkable for its trade of walnut-oil, which paſſes for the beſt in the world, and of which there are two ſorts, the brown, and the white; the latter is ſent into all the provinces belonging to the King of Perſia; and the former is proper only for Ghilan, and ſome neighbouring provinces.

Bochara, *Boghar*, or *Bocara*. A city of Bactria, ſituated between the Mogul's territories and the kingdom of Perſia, and formerly belonging to the latter, but now has its peculiar prince.

The commerce of Bochara is conſiderable; there being yearly brought there ſeveral merchandiſes from the Eaſt Indies and Ruſſia.

The Indians bring white cotton cloths, of which the Tartars make turbans, and the better part of their wearing apparel; but they bring there neither gold, ſilver, precious ſtones, nor ſpice: and their returns are in wrought ſilk, Ruſſian cow-hides, horſes, and ſlaves.

The Perſians ſend there woollen cloths, linens, and ſilk ſtuffs; as alſo in time of peace, when a trade is open with China, muſk, rhubarb, ſatins, and damaſks.

Cachan, is a town abounding with rich merchants, and ſkilful workmen in all ſorts of manufactures.

The principal bazar, or market place of Cachan, croſſes it from one end to the other, being filled with a great number of ſhops. It is in this bazar that goldſmiths, druggiſts, confectioners, furriers, and braziers, expoſe their merchandiſe to ſale. There are alſo paſtry-cooks, bakers, cooks, and fruiterers, with all the neceſſaries of life; and in the midſt is the royal mint.

Beſides this great bazar, there are ſeveral others deſtined for ſome particular ſorts of merchandiſes; as thoſe of woollen cloths, and ſilk ſtuffs, which are covered and ſhut up in the night time.

It is at Cachan that the moſt beautiful gold and ſilver Perſian ſilk ſtuffs are manufactured; and the commerce of this place is ſo conſiderable, that 7 bales of ſilk, weighing 1512 lb. are daily uſed by the manufacturers.

Aron, is a village in the neighbourhood of Cachan, which is alſo very famous for the beauty of ſilk ſtuffs. It conſiſts of 2000 houſes, and there are at leaſt 1000 occupied by ſilk manufacturers, in ſatins, velvets, taffeties, tabbies, plain brocades, others with ſilk flowers, and others mixed with gold and ſilver.

Samachi, is capital of the province of Chirvan, and three days journey for a horſe from the Caſpian ſea.

The merchandiſes which come from Aſtracan, and deſtined for Samachi, are unloaded upon the coaſts of Niſawacy, where the cuſtom-houſe duties are paid upon the footing of about 1 s. 8 d. ſterling *per* bale, each bale weighing 400 lb. which is a horſe-load. Thoſe who tranſport the merchandiſe, after their arriving at theſe coaſts, are Arabs, who dwell under tents in ſummer, and in winter in villages at ſome diſtance from the ſea. The carriages are made with horſes, or camels; but more uſually with the latter.

On the arrival of theſe merchandiſes at Samachi, they are depoſited in a caravanſera, where the cuſtom-houſe officers carefully inſpect them, at leaſt thoſe ſent to Perſia. The duties are about 2 s. 6 d. ſterling for each camel's load, which is 8 or 900 lb. though formerly only half that duty was paid.

As the tranſport of merchandiſes deſtined for Perſia is uſually on horſes, and as the bales are 400 lb. they muſt be divided into two equal parts.

There are ſeveral bazars, and 20 caravanſeras, at Samachi. Thoſe belonging to the Indians are the largeſt and moſt commodious, being all built of ſtone two ſtories high: the principal merchandiſes are ſold, and the richeſt merchants lodge in the caravanſeras; where it is chiefly that the cloth trade is carried on, which is very conſiderable in this town.

The province of Chirvan produces a great quantity of ſilk, cotton, ſaffron, and excellent red and white wines, which are alſo a conſiderable object of the trade of Samachi.

Samgael, is a town upon the road between Ardevil and Cora; having a pretty good trade in woollen cloth, and cotton; the duties of the cuſtomhouſe are paid upon the footing of 15 d. ſterling the load of 400 lb. for ſilks and cloths: and 8 d. ſterling only for merchandiſe of leſs value.

The commerce of Georgia, and Mingrelia.

Theſe provinces are now ſubject to Perſia; and there is ſcarce a country of all Aſia more abundant in cattle, fowls, fruits, wines, and all neceſſaries of life than Georgia. Its wines, particularly thoſe of Teflis its capital, are ſent into Armenia, Media, and even to Iſpahan, where they are much eſteemed, and ſet apart for the King's table.

Silk is gathered there abundantly; but the Georgians, who know not well how to dreſs it, and who have but few manufactures, bring it to their neighbours, and trade greatly in it to ſeveral parts of Turky, eſpecially to Erzerum, and its neighbourhood.

The great men of the country, and the fathers of families,

milies, being maſters in Georgia of liberty and life theſe of their children, and thoſe of their vaſſals; the ſlave trade is very conſiderable there; and ſeveral thouſands of both ſexes are yearly ſent out of the country, almoſt all under 20 years of age, and divided among the Turks and Perſians, who fill their ſeraglios with them.

It is particularly among the young maids of this country, who are very beautiful, that the kings and great lords of Perſia chuſe their women for their ſeraglios; there being a ſtrict prohibition againſt carrying them any where elſe than to Perſia.

The Armenians have the greater part of the Georgia trade in their hands, where they are held with the ſame contempt as the Jews are in Europe; tho' they are almoſt as numerous as the natives.

Jews, Turks, Perſians, Indians, Tartars, Greeks, Ruſſians, and other Europeans, are alſo ſeen there upon the account of trade.

As to that of the Georgians, it is little elſe than uſury; there being among them merchants who take to the amount of 2 *per cent. per* month intereſt.

Mingrelia carries on a ſlave trade equal with that of Georgia; and one year with another there are ſent out out of the country upwards of 12000 ſlaves; 3000 of which are ſent to Conſtantinople.

The other commodities brought from thence, are ſilk, thread, linen, and linſeed, leather, furs of martins and beaver, box-wood, bees-wax, and honey of two ſorts, the one red, and the other white, but both excellent.

The Turks of Conſtantinople, and the merchants at Caffa, and Trebiſond, carry on this trade; by frequenting the ports on the Black ſea, where they uſually every year ſend 12 ſail of ſhips from Conſtantinople, and upwards of 60 feluccas from other places, which import ſeveral commodities, exchanged for thoſe of the country; little or no gold and ſilver ſpecie being uſed in the Mingrelian traffic.

Almoſt all the trade for the neceſſaries of life is carried on in Georgia, and in Mingrelia, by way of barter, or truck; it being in this manner that all ſorts of proviſions are bought; as bread, wine, fowls, hogs, lambs, and ſheep, eſpecially if the Franks have an occaſion for theſe things.

The merchandiſes proper for this barter, are bracelets, rings, glaſs, or rather enamel collars, ſmall knives, pins, needles, and ſuch other ſmall ware, which often produce the hundredfold of what they coſt; but travellers ſhould take care to not bring too many of them, as none but things daily wanted are exchanged for ſuch goods; all other larger commodities being bought and ſold as in other places.

Merchants may enter, and may go out of the territories of Georgia without a permit, as is practiſed in all the other ſtates of the King of Perſia; though in Turky there is no entering nor going out of the dominions without paying a kind of capitation: as for merchandiſe, the duties of entry are very moderate.

Sulphur and nitre are found pretty near Teflis, which each perſon uſes at diſcretion for the making of gunpowder. Foſſile ſalt is very common there, which is taken out of ſome mines upon the road to Erivan. Oil of olives is very dear; and no ſort of oil is either eat or burnt but linſeed oil, which is the only uſe the Georgians make of flax; throwing away the ſtalk, of which they might make excellent linen; but in all probability they prefer cotton cloth to linen, as they trade greatly in the former.

Their moſt conſiderable trade is in furs ſent into Perſia; as alſo to Erzerum for Conſtantinople. The ſilk of the country, as well as that of Samachi, does not paſs thro' Teflis, upon account of the exceſſive duties paid there; but the Armenians purchaſe it on the ſpot, and ſend it to Smyrna, or the other port-towns of the Mediterranean.

There are annually ſent to Erzerum upwards of 2000 camel loads of madder; from whence it paſſes to Diarbeck, where it is uſed for dying the cloths manufactured there, for the conſumption of Poland: and about the ſame quantity of this root is ſent into the Mogul's territories, where it ſerves for the dying of their moſt beautiful cloths.

Avogaſia is a part of Mingrelia, abounding in flax, hemp, peaſe, wax and honey; but the honey is uſua ly bitter upon account of the box and yew trees, which gro there in abundance, and upon which the bees gather it Vermillion is alſo found there among the rocks; and ſeveral parts of this province the real rhaponticum is foun which ſeveral take for rhubarb, and which druggiſts u ally ſubſtitute in its place.

The commerce of the Perſian gulph.

The Perſian gulph is alſo called the gulph of Ormus, fro an iſland which is not far from its entrance; as likew the gulph of Boſſora, from the name of a town of Ara Deſerta, which is at the other extremity; and the gul of Elcatif, from a kingdom of Arabia Felix, extend along the coaſt oppoſite to that of Perſia. The gulph equally famous for the pearl-fiſhery near the iſland B haren, and for the great commerce of all the Eaſtern a European nations, who ſend their ſhipping either Gombron or Boſſora. Gombron has ſupplanted the tra of Ormus, ſince the Shah Abas took this iſland from t Portugueſe, who made it a ſtaple for all the merch diſes of Iſpahan, and the reſt of Perſia. And Baſſo whoſe poſſeſſion was ſo long diſputed by the Perſia Turks, and Arabs, is now enjoyed by the Turks.

The town of Ormus, and its iſland, tho' entirely fall from their firſt ſplendor, and deſtroyed by the orders Shah Abas, after he had taken them from the Portugue merit ſome mention, upon account of the rank they h a conſiderable time kept among the iſlands, and tow of the greateſt commerce of Aſia.

This iſland is ſituated at the entrance of the gulph, 56 deg. of E. lon. and 27 deg. 30 min. of N. lat. o poſite to Gombron on the continent, 240 miles S. E. Schiras, and 370 S. E. of Iſpahan; it being about miles in circumference; yet it had for a long time t title of a kingdom, governed by its own kings, who we tributary to the kings of Perſia.

The Portugueſe, who thought this poſt neceſſary to the commerce, took it in 1507, and thereby excluded other nations the entrance of Perſia; where none we allowed to trade but by their paſſports, or under their fl The Portugueſe made it the richeſt magazine in t world, by rendering it the centre of trade between E rope and Aſia; where the fine ſpices of the Eaſt we laid up, and afterwards diſtributed to the reſt of t world.

As long as the Portugueſe remained ſole maſters of t trade and navigation of the Indies, the Perſians foun themſelves unable to ſhake off this kind of yoke: but t Dutch having paſſed into the Eaſt towards the end of t 16th century, and the Engliſh in the beginning of t 17th, Shah Abas made uſe of the latter to aſſiſt him expelling the Portugueſe, who were at laſt obliged to ſu render it in 1622, having loſt, by the taking of the iſlan upwards of 50,000 l. ſterling, in merchandiſe, and oth effects.

The Perſian monarch, in return for the aſſiſtance he r ceived from the Engliſh Eaſt India company, grant them great advantages in the Perſian trade; he even ſu fered them to ſhare the revenues of the cuſtoms, on th ſide, with Perſians; and till the late civil war, the compa received between 3 and 4000 l. a year, in lieu of t cuſtoms. Upon the demoliſhing of Ormus, Shah Ab removed the trade to Gombron, on the oppoſite ſhor and gave it the name of Bander-Abaſſi, or the port-tow of Abas.

As to the iſland of Ormus itſelf, it never produced a thing but ſalt, which grows in a ſolid cruſt, 2 inches dee upon the ſurface of the earth; and the hills appear at diſtance as if they were covered with ſnow: nor is the a drop of freſh water on the iſland, but what is preſerv in ciſterns, in the time of the rains.

Gombron, *Gombroon*, or *Bander-Abaſſi*, called alſo *Gamro Gomoron*, or *Gamron*, is the principal port of all Perſia, a perhaps of all Aſia, and which only began to be in repu ſince the Portugueſe had been expelled Ormus. It ſituated in 55 deg. of E. lon. and 27 deg. of N. lat. the province of Farſiſtan.

Before the deſtruction of Ormus, it was only a ſm village of about 50 pitiful cabins, where the Portugue ke

kept 25 or 30 armed barks for ſupporting their commerce, and ſuppreſſing that of other nations.

Shah Abas fortified the port, and built the town; drawing there a great trade by privileges and franchiſes.

This port is open to all ſorts of nations, except the Spaniards and Portugueſe; and in the midſt of the city is a great ſquare called *paſſer*, being the ſame as the *bazar*, roofed all over, with ſhops on both ſides, and an alley in the middle. In this paſſer, the merchants expoſe to ſale their moſt precious merchandiſe, particularly the Banians, who are intelligent people in trade, but generally fraudulent dealers; being eſteemed in the Eaſt in the ſame manner as the Jews are in the Weſt.

The time of trade is from the month of October, when the great heats end; till the month of May, when they begin again. At which time ſhips are ſeen to arrive there, from the Europeans eſtabliſhed in the Eaſt Indies, and ſeveral others belonging to Moors and Indians; as alſo ſeveral caravans by land, among others thoſe of Iſpahan, Schiras, Lahor, Aleppo, Bagdat, Herat and Boſſora.

The Dutch bring there ready money; as alſo European, and Indian merchandiſe, eſpecially ſpice, with which they furniſh all Perſia. The money they employ in their commerce are rials, or Spaniſh piaſtres, and rixdollars; the merchants not taking any other, upon account of the profit they make of them, by converting them into the money of the country.

The Engliſh have leſs money than the Dutch in their cargo; but have great quantities of cloth, tin, ſteel, indigo, ſilk ſtuffs, with the fineſt and moſt beautiful India cottons.

The ſhips belonging to the Indians, Arabians, and Moors, are only laden with the productions and manufactures of their own country.

The merchandiſes brought by the caravans, conſiſt in ſeveral ſtuffs of gold, and ſilver, velvets, taffeties, porcelains, plumes, morocco leather, wool, brocades, rich carpets, Turkiſh camblets, and other more plain ones of Arabia; medicinal drugs, dragons blood, manna, myrrh, frankincenſe, dry raiſins, dates, and horſes; as alſo raw ſilks, the principal object of the Perſian commerce.

At Gombron are alſo found the turquoiſe ſtones, but more of the old than the new rock; and a good number of pearls, which are fiſhed for in the Perſian gulph.

All the nations trading to Gombron have magazines and houſes there; thoſe of the Engliſh, Dutch, and French, being more like palaces than factories, erected along the ſea ſide, which is very commodious to them for loading and unloading the ſhips when they arrive.

The Engliſh began to trade with the Perſians in 1613, and were ſo much the better received, as they aſſiſted the great Shah Abas in expelling the Portugueſe from Ormus.

The Dutch appeared in the ports of the Perſian gulph ten years after the Engliſh; but ſoon had the ſuperiority over them both in immunities and commerce; tho' afterwards, as well as the Engliſh, they thought they had reaſon to complain of ſeveral extortions that troubled their trade, and which they ſtrove to remedy by a treaty concluded in 1652.

But if on one ſide this treaty appeared advantageous to the Dutch, becauſe an immunity from all duties was granted them for a quantity of merchandiſe, to the amount of 50,000 l. ſterling, which they obliged themſelves to bring to Gombron, over and above that which they were ſubject to pay duties for at the cuſtomhouſe as other nations; on the other ſide, it became burdenſome to them, by an engagement to export more ſilks of Perſia than ſuited them, that is, 600 bales a year, each bale weighing 216 lb. and ſome of the ſilk was ſo coarſe, as to be uſed for cordage at Batavia.

The number of Dutch ſhips for Gombron is not certain; tho' it is not extraordinary to ſee there every year 10 of the company's ſhips, whoſe cargo amounts to about 200,000 l. ſterling.

The governor or ſultan of Gombron often receives preſents from the Dutch, for engaging him to favour their commerce; but beſides theſe voluntary preſents, they give him a kind of annual penſion, which conſiſts in 10 lb. of cloves, 30 lb. of nutmegs, 50 lb. of pepper, as much of ſugar candy, 120 pounds of powder ſugar, and 5 pieces of cloth of different colours, of two ells each, each ell making $\frac{5}{4}$ of the Dutch ell.

The French were the laſt of the Europeans who appeared at Gombron; at leaſt under the name, and upon the account of a company; whoſe firſt deputies arrived at Iſpahan in 1664, and made their treaty in 1665; by which the company was granted an exemption from the cuſtomhouſe duties of Gombron during three years, with a proviſo of a preſent, which might equal this exemption.

Other deputies, ſent in 1674, obtained not only the confirmation of theſe privileges, but alſo an exemption from duties without a limited time; which coſt them a preſent of about 5000 l. ſterling, and was an uſeleſs expence, becauſe the company ſent but few ſhips there.

The town is alſo inhabited by Arabs, Jews, Armenians, Indians, Banians, and ſeveral other nations, as well as Perſians and Europeans: but it is unhealthy, which occaſions the inhabitants to remove into the country during the hot ſeaſons; the winter being the time for traffic.

The gains that are made by the Engliſh Eaſt India company, in carrying the merchandiſe of the Armenians, Moors, Banians, &c. from Gombron to Surat, is one great branch of the company's profit: for they ſeldom ſend a ſhip from Gombron to Surat, but ſhe is as deep loaden as ſhe can ſwim with their effects, beſides paſſengers, and a vaſt quantity of treaſure on board, ſometimes of the value of 2 or 300,000 l. ſterling.

Bander-Congo, or *Bander-Eric*, is a port-town on the eaſt-ſide of the Perſian gulph, 100 miles W. of Gombron, having ſome reputation for trade; but chiefly upon account of the pearls of the iſland of Baharen.

The Portugueſe, as long as they were maſters of Ormus, and conſequently of the navigation of the gulph, had the half of the duties of this port: they were afterwards reduced to about 3000 l. a year; and towards the end of the 17th century they entirely loſt this duty.

About 10 miles from Bander-Congo, there is a rugged mountain, called by the natives Chiampa, from whence the Perſian dyers, and painters, have the greater part of their red and green colours.

It is alſo this mountain which furniſhes a kind of medicinal bole, much reſembling what is called *Armenian bole* by druggiſts; but it is properly white and red marble calcined by the ſun.

Baharen, is an iſland in the Perſian gulph, oppoſite to the coaſt of Arabia, and ſubject to the King of Perſia. It is ſomewhat fertile, and produces ſeveral fruits, particularly dates; but the water is of ſuch an ill taſte that ſtrangers cannot well make uſe of it, and are therefore obliged to employ divers, who get very ſweet and agreeable freſh water near the bottom of the ſea.

This iſland is remarkable for its pearl fiſhery; and the manner of the ſale of pearls is very extraordinary. When they are ſorted, and divided each according to their qualities, the merchants aſſemble; and being ſeated round the pearls, placed in the middle, which they have examined at leiſure, the ſeller covers his hand with a handkerchief, and touches that of all the purchaſers one after another, ſpecifying his price by certain ſigns; the others, by different ſigns, intimate what they can give; and when the ſeller ſeems ſatisfied, he delivers to every one their quantity of pearls.

When a broker intervenes, if he concludes the bargain, he takes the hands of the purchaſer and ſeller, and joining them together, gives them a ſtroke with his own.

As to the ſignification of touching, if the whole hand is ſqueezed, it is 1000; if the palm of the hand is touched 500; if a finger 100; and if but a joint 10.

The cuſtom-houſe for the duties of exportation on pearls is ſo well managed at Bander-Congo, that even ſhoes, and the moſt ſecret parts of wearing apparel, are ſearched; yet there is ſcarce a year without the fraudulently conveying of pearls away to the value of 5, 10, or 15000 l. ſterling. See *Pearl* Fiſhery.

There are alſo ſeveral other populous places in Perſia; particularly Meſchid or Thus, Aſtrabad, Herat, Gazna, Candahor, Sigiſtan, Makeran, Lar, Schiras, Schouſter, Caſbin,

Caſbin, Hamadam, Arnova, Courmebad, Ardevil, Naxivan, Gangea, Turki, Ferrabat, Reſhd, and Derbent: but, ſince the death of Nadir Shah in 1747, the whole country has been one ſcene of civil war, which has put a ſtop to the greateſt part of its trade:

The commerce of Perſia over the Caſpian ſea.

The trade to Perſia over the Caſpian ſea, according to Mr. Hanway, was a new path of commerce to Great Britain, propoſed to introduce the uſeful commodity of raw ſilk, the baſis of our moſt conſiderable manufactures, on the cheapeſt terms; and, what is ſtill more, in exchange for Britiſh manufactured wool. It is certain, that in the many years experience of the Turky company, they never eſtabliſhed any factors in the northern provinces of Ruſſia: they thought it more judicious to leave that riſque, as well as the profits ariſing from ſuch eſtabliſhment, to the Armenians, who uſed to bring the Perſian ſilk to them in Smyrna and Aleppo, as the Ruſſians and Armenians now bring great part of it to St. Peterſburgh. But the Turky company never had the ſame temptation as the Ruſſia merchants: they had no treaty with the Turks, to provide for a ſafe paſſage to Perſia; nor any invitations from the mouths of princes to enter upon the trade: beſides, their by-laws reſtrained their factors from ſending goods into Perſia on their own account.

Never any new trade was entered upon with more ſanguine hopes, or proſecuted with more laborious attention, by ſeveral of the moſt eminent merchants of London; to which may be added, ſcarce any commercial ſcheme has had a more powerful protection from great princes. It muſt be confeſſed, that taking all thoſe advantages together, it had once ſo fair an appearance, that it dazzled the eyes of many, and engaged very clear heads, as well as honeſt hearts, in its cauſe. Various were the objections made againſt this commerce, with regard to the intereſt of other mercantile companies: ſome of the members of thoſe companies told its fate in general terms; but, as an inſtance of the fallacy of human wiſdom, the deſign was at length fruſtrated by means, the leaſt, if at all expected; for could it be imagined, that one, who engaged himſelf as a Britiſh factor in Perſia, would engage alſo as a ſhipwright to Nadir Shah? This he tells us was done by captain Elton, whereby the trade was ruined. Though Mr: Hanway ſays, that when he left England in 1743, Mr. Richard Lockwood, a Turky merchant, diſcourſed with him to this effect: "Either you will teach the Ruſſians how to trade, and then become an object of their jealouſy, if you have ſucceſs in this enterprize; or you will be plundered in Perſia; and in either caſe your trade cannot laſt long." Upon which Mr. Hanway ſays, experience has taught us, that his obſervation was juſt, and in ſome meaſure prophetical: the Britiſh factors in Perſia were pillaged, and an end put to the trade in 1747.

The ordinary route for a caravan from Reſhd to Smyrna is to Ardevil 5 days, to Tauris 10 days, to Erzerum 12, from thence to Smyrna 43, in all 70. The route to Aleppo is from Reſhd to Caſbin, Hamadan, Shouſter, Bagdat, and Aleppo; being upon the whole about 10 days leſs than to Smyrna. There is yet a ſhorter road to Aleppo, but it is ill ſupplied with water. Aleppo from Smyrna is reckoned 40 days, and a day's journey being computed at 25 Engliſh miles, the tract of 70 days is 1750 miles. But from Ghilan to Aſtrachan, allowing for quarentine and other contingencies, may be reckoned 30 days, from thence to Zaritzen 10, to Moſcow 35, and to St. Peterſburgh 20; in all 95, which is 25 days more than from Reſhd to Smyrna.

Mr. Hanway alſo obſerves, that Ghilan produces the beſt and greateſt quantities of ſilk; next to this come Chirvan and Erivan; then Mazanderan, and laſtly Aſtrabad; but the latter is vaſtly inferior, ſerving only for a manufacture mixed with cotton, of which they make their ſhirts and drawers. Ghilan ſilk is ſent into Ruſſia and Turky, and part of it is kept for the Perſian manufactures; but that of Mazanderan and Aſtrabad is ſeldom or ever exported. From Chirvan they formerly ſent all their ſilk to Turky and Ruſſia.

The annual produce of Ghilan, in good times, is about 30,000 batmans, the batman of 12 lb. Engliſh avoirdupois, of raw ſilk, of which about 6000 are conſumed in Perſia, 4000 ſent to Babylon, and the remainder over the Caſpian ſea. Chirvan formerly produced a large quantity, but that province is now in a much worſe condition than Ghilan: this commodity is brought to market all the year round, in greater or ſmaller quantities, but chiefly in Auguſt and September.

The chief demand of European goods in Perſia, next to Dutch cloths, is for Britiſh woollens, ſuch as hair-liſt drabs of 12 to 19 l. *per* piece of 37 yards in white, which the Perſians call begreſt; and of theſe they uſually conſume 9 bales in 30. Glouceſter cloths of about 9 l. to 11 l. 10 s. *per* piece, of 42 yards in white; which the Perſians call maghoot, and conſume thereof 10 bales in 30. Ordinary Yorkſhire cloths of about 3 s. 6 d. *per* yard dyed; which the Perſians call londora, and conſume thereof 11 bales in 30. Five bales of ſhalloon of a middling quality, are ordinarily required in 100 bales of cloth. From Holland they reckon one bale of maghoot, one of ſhaloons, and one of long ells, to ten bales of begreſt. Engliſh emboſſed cloth is alſo demanded; likewiſe indigo, cochineal, and in good times, ſome rich ſilk, gold and ſilver lace, velvet, and other rich manufactures.

The Perſians had been long accuſtomed to Dutch cloths, which were thicker, and for the moſt part better ſhorn, and of a ſofter and finer wool, the crimſon and ſcarlets of a finer dye; but they were dearer than Engliſh cloths: however, after two or three years, the Engliſh improved ſome of their drabs, ſo as to be almoſt equal to the Dutch cloths in ſubſtance, and ſuperior in ſoftneſs and beauty.

In Perſia the duty on European goods is 5 *per cent.* on the value.

The whole amount of the Caſpian trade, from its firſt eſtabliſhment by the Engliſh to its end, is as follows:

The whole export of cloth and European goods from Ruſſia, for account of the Britiſh Caſpian traders, coſt as follows:

			Crowns.
In 1742	486 parcels		170,000
1743	414		144,900
1744	299		102,650
1745	value		252,945
1746	value		20,000
		£.	172,398=689,592

The whole import of raw ſilk from Perſia into Ruſſia according to the value in Perſia:

	Crowns.
In 1743	120,000
1744	50,000
1745	62,000
1746	50,500
1747	13,000
1748	12,000
1749	33,000
In money	33,000
£. 93,375=	373,500

Whereby the national balance, excluſive of mercantile profits, and that of the manufacturers and tradeſmen, was 81,023 l. in favour of Great Britain. See *Ruſſia* and *Silk*.

PERSIAN *Gulph*, or gulph of Boſſora, is that which divides Perſia from Arabia; extending from Cape Muſſeldom to Elmalis.

PERSONAL *Goods*, or *Eſtate*, is that conſiſting of money, moveables, &c. which every perſon has in his own diſpoſal; in oppoſition to lands and tenements, which are called *real eſtates*.

PERTHAMBOY. A port-town of New Jerſey, in North America, ſituated in 74 deg. of W. lon. and 40 deg. 4 min. of N. lat. on a bay of the American ocean, at the mouth of the river Raritan, 25 miles S. W. of New York, ſubject to Great Britain.

SCARA. A port-town of Italy, in the kingdom of Naples, and principality of Abruzzo, ſituated in 15 deg. 25 min. of E. lon. and 42 deg. 30 min. of N. lat. on the gulph of Venice, 90 miles N. of Naples.

SO. The Spaniſh dollar, piaſtre, or piece of eight. See *Piaſtre*.

SSA. A ſmall Indian copper coin. See *Pecha*.

SSO. A ſilver coin of Genoa, worth 4 s. 4 d. ſterling.

TARD, in war, a kind of engine of metal, ſomewhat in ſhape of a high crowned hat, ſerving to break down gates, barricades, draw-bridges, or the like works that are intended to be ſurprized. The petard may be conſidered as a piece of ordnance, very ſhort, narrow at the breech, and wide at the muzzle, made of copper mixed with a little braſs, or of lead with tin; uſually about ſeven inches long, and five broad at the mouth; weighing from 40 to 50 pounds. Its charge is from 5 to 6 pounds of powder, which reaches to within three fingers of the mouth: the vacancy is filled with tow, and ſtopped with a wooden tampion, the mouth being ſtrongly bound up with a cloth tied very tight with ropes. It is covered up with a madrier, or wooden plank, that has a cavity cut in it to receive the mouth of the petard, and faſtened down with ropes. Its uſe is in a clandeſtine attack, to break down gates, bridges, barriers, &c. whereto it is hung, which it does by means of the wooden plank. It is alſo uſed in countermines, to break through the enemies galleries, and give vent to their mines. The invention of petards is aſcribed to the French huguenots in the year 1579, whoſe moſt ſignal exploit was the taking the city of Cahors by means thereof.

TERSBURG. The capital city of Ruſſia, ſituated in 31 deg. of E. lon. and 60 deg. of N. lat. on both ſides of the river Nieva, in the provinces of Carelia and Ingria, between the gulph of Finland and the lake Ladoga. See *Ruſſia*.

TIPOLI. A port-town on the coaſt of Coromandel in the Hither India, ſituated in 80 deg. of E. lon. and 16 deg. 45 min. of N. lat. where the Dutch have a factory.

TITGUAVES. A port-town of Hiſpaniola, in the Atlantic, or American ocean, ſituated in 76 deg. of W. lon. and 18 deg. 5 min. of N. lat. on a bay at the weſt-end of the iſland, 200 miles W. of St. Domingo, and upwards of 200 miles E. of Port Royal in Jamaica, ſubject to France. See *French* America.

TRE. See *Salt*-petre.

TROL, *Petræ oleum*, *Oil of petre*, or *Rock oil*, an oleaginous juice, ſuppoſed to iſſue out of the clefts of rocks, and found floating on the waters of certain ſprings. Beſides artificial and vegetable oils, or thoſe drawn from plants, &c. by expreſſion, there are alſo natural and mineral oils iſſuing of themſelves from the entrails of the earth, called by a common name *petrols*, or *petrolea*. Theſe, according to all appearance, muſt be the work of ſubterraneous fires, which raiſe or ſublime the more ſubtile parts of certain bituminous matters that lye in their way. Theſe parts being condenſed into a liquor, by the cold of the vaults of rocks, are there collected, and ooze thence thro' clefts and apertures, which the diſpoſition of the ground furniſhes them with. Petrol then is a black liquid bitumen, only differing by its liquidity from other bitumens, as aſphaltum, jet, &c. The naphtha, which is either a liquid, or at leaſt a very ſoft bitumen, is much the ſame with petrol. Hitherto there has been but little petrol found, except in hot countries. Olearius ſays he ſaw above thirty ſprings of it near Schamachia in Perſia: there are alſo petrols in the ſouthern provinces of France; but the beſt are thoſe in the duchy of Modena, firſt diſcovered by Arioſto a phyſician, in 1640, in a very barren valley, twelve leagues from the city of Modena. There are three canals dug with great expence in the rock, by which three different kinds of petrol are diſcharged into little baſons or reſervoirs: the firſt as white, clear, and fluid as water, of a penetrating ſmell, and not diſagreeable; the ſecond of a bright yellow, leſs fluid, and leſs briſk ſmell than the white; the third a dark red, of a thicker conſiſtence, and ſmell more approaching that of bitumen. Mr. Bouldam obſerves, that he could not raiſe from it any phlegm, or ſaline ſpirit by diſtillation, either in *balneo mariæ*, or in a ſand heat: all that would riſe was oil; and at the bottom of the pellican remained an exceeding ſmall maſs of a thickiſh, browniſh matter. Hence to uſe petroleum in medicine, it muſt be preſcribed juſt as it is; benig a remedy nature has prepared to our hands: it is found very warm and penetrating; and commended in many outward complaints, rheumatick and arthritick pains, and paralytic limbs.

PETROSELINUM *Macedonicum*. A plant whoſe ſeed enters the compoſition of the theriaca; which for this purpoſe muſt be choſen new, clean, plump, longiſh, of a green bordering upon brown, and of an aromatic ſmell.

PETTY *Bag*. An office in chancery, the three clerks of which record the return of all inquiſitions out of every ſhire, make all patents of cuſtomers, gaugers, comptrollers, &c.

PETTY *Chapman*. See *Hawker*.

PETTY *Cuſtom*. See *Cuſtoms*.

PETTY *Tally*, in the ſea language, a competent allowance of victuals, according to the number of the ſhip's company.

PETUM, *Nicotiana*. See *Tobacco*.

PEWTER. A factitious metal, uſed in domeſtic utenſils, whoſe baſis is tin, which is converted into pewter, by the mixture of ſix pounds of braſs, and fifteen pounds of lead, to an hundred weight of tin. Beſides this compoſition, which makes the common pewter, there are others for other occaſions, compounded of tin mixed with regulus of antimony, tin, glaſs, and copper, in ſeveral proportions. See *Tin*, *Braſs*, and *Lead*.

Pewter has occaſionally ſerved for money. In the Philoſophical Tranſactions, Mr. Putland informs us, that King James II. turned all the pewter veſſels, &c. of the proteſtants in Ireland he could ſeize into money; half crowns being ſomewhat bigger than halfpence, and other pieces in proportion. He ordered it to be current in all payments, whence our author obſerves, people abſconded for fear of being paid their debts; and he alſo mentions crown-pieces of this metal.

PEWTERER. A perſon who trades or works in pewter, by making ſuch works, commodities, or veſſels, as are required of this metal.

PEWTERERS *Company of London*, was incorporated by letters-patent of the 13th of Edw. IV. dated the 20th of January 1474, by the title of The maſter, wardens, and commonalty of the art or myſtery of pewterers of the city of London.

In the 25th of Henry VIII. 1534, the wardens of this company, or their deputies, were by act of parliament empowered to have the inſpection or ſearch of pewter in all parts of the kingdom, not only for preventing the ſale of adulterated goods, but likewiſe the importation of foreign pewter wares. And, as a farther encouragement to this company, all Engliſhmen are by the ſaid act ſtrictly enjoined, not to repair into any foreign country, to teach the art or myſtery of pewterers, on pain of diſfranchiſement. And for the more effectual preventing the art from being carried abroad, no pewterer ſhould take as an apprentice the ſon of an alien.

This corporation has a maſter, 2 wardens, 28 aſſiſtants, and 78 liverymen, who, when admitted pay a fine of 20 l. each. They have a convenient hall in Lime-ſtreet, in which the buſineſs of the company is tranſacted.

PEYPUS, or *Pepus Lake*, in Livonia, is ſituated between the gulph of Finland and the lake Worſero, with both which it has a communication by rivers, being 40 miles long, and 20 broad.

PEYSES. A ſmall copper coin current in the Eaſt Indies, particularly at Amadabat, 54 of which make the rupee, or 2 s. 6 d. ſterling.

PHARMACY. The art of preparing or compounding medicines, fit for uſe, vulgarly called the apothecary's art or buſineſs; being divided into galenical and chemical.

PHAROS, *Phare*. A light-houſe; a pile raiſed near a port, where a fire is kept burning in the night, to guide and direct veſſels near at hand. See *Light*-houſe.

PHAROS. A ſmall iſland in the Mediterranean, oppoſite to the city of Alexandria, in Egypt, ſituated in 31 deg. 15 min. of E. lon. and 30 deg. 40 min. of N. lat. which, with the continent, forms a ſpacious harbour; being about a mile and half diſtant from the city, with which it has a communication by a ſtone cauſeway. On this iſland was erected a moſt magnificent tower, eſteemed one of the wonders of the world; on the top were numerous lights for the direction of mariners; which tower, from the iſland it ſtood upon, obtained the name of the Pharos; and a great many other towers erected for the like purpoſe, have obtained the name of Pharos, particularly thoſe of Rhodes, and Meſſina in Sicily.

PHEASANTS *Iſle*. A little iſland in the river Bidaſſoa, which divides France and Spain, ſituated near St. John Pied de Port, in 1 deg. 20 min. of W. lon. and 43 deg. 20 min. of N. lat. ſixteen miles S. of Bayonne. Here the treaty between France and Spain was made in 1659, which from the neighbourhood of the Pyrenean mountains, was called the Pyrenean treaty; and here ſeveral other treaties between thoſe two crowns have been made: this iſland being choſen on theſe occaſions as a neutral place, to which neither king can claim a right.

PHENING. A ſmall copper coin current in Germany. The phening of Hamburgh is worth $\frac{3}{32}$ of a penny ſterling; 12 of them being 1 $\frac{1}{8}$ d. ſterling. The phening of Saxony and Frankfort is worth $\frac{7}{48}$ of an Engliſh penny; 12 of them being 1 $\frac{3}{4}$ d. ſterling. The phening of Vienna is worth the $\frac{7}{60}$ of an Engliſh penny; or 14 of them make 1 $\frac{10}{30}$ d. ſterling. The phening of St. Gall is worth $\frac{9}{80}$ of an Engliſh penny; or 20 of them make 2 $\frac{1}{4}$ d. ſterling. The phening of Zurich is worth $\frac{1}{8}$ of an Engliſh penny; or 4 of them make $\frac{1}{2}$ d. ſterling.

PHILADELPHIA. The capital of the province of Penſilvania, in North America, ſituated in 74 deg. of W. lon. and 40 deg. 50 min. of N. lat. See *Britiſh* America.

PHILIP *Fort*. A fortreſs in Dutch Brabant, ſituated on the eaſt ſide of the Scheld, oppoſite to Pearl fort, five miles north-weſt of Antwerp, whereby the Dutch command the navigation of the river Scheld.

PHILIP. A ſilver coin of Milan, worth about 5 s. 2 d. ſterling.

PHILIPPINE, or *Manila Iſlands*, called alſo the *Luconia Iſlands*, are ſituated in the Chineſian ſea, part of the Pacific ocean, between 114 and 131 deg. of E. lon. and between 5 and 19 deg. of N. lat. 300 miles S. E. of China, and 1200 W. of the Ladrones or Marian iſlands, comprehending 1100 iſlands, according to ſome accounts; or 11,000 according to others; the principal of which are Luconia or Manila; Philippina, or Pandaga or Samar; Maſbate, Mindoro, Luban, Paragoa, Panay, Leyte, Bohol, Sibu, Sogbu, Negros, St. John, Xollo, and Mindanao: the inhabitants conſiſting of Chineſe, Ethiopians, Malays, Spaniards, Portugueſe, Pintados, or painted people, and Meſteos a mixture of all three.

Theſe iſlands were diſcovered by Ferdinand Magellan, a Portugueſe gentleman, who had ſerved his native country both in the wars of Aſia and in the Eaſt Indies; particularly under Albuquerque, the famous Portugueſe general, who reduced Goa and Malacca to the obedience of that crown: but Magellan being neglected by the court of Portugal, offered his ſervice to Charles V. then Emperor of Germany, and King of Spain, to whom he ſhewed there was a probability of diſcovering a way to the ſpice iſlands in the Eaſt Indies, by the Weſt. Upon this he had the command of five ſmall ſhips, with which he ſet ſail from Seville on the 10th of Auguſt 1599, and ſtanding over to the coaſt of South America, continued his voyage to the ſouthward to 52 deg. where he fortunately diſcovered a ſtreight, ſince called the ſtreight of Magellan, which carried him into the Pacific ocean, or South Sea; and then ſteering northward, repaſſed the equator; after which, he ſailed over that vaſt ocean, till he arrived at Guam, one of the Marian iſlands, on the 6th of March 1521, and ſoon after came to the Manila iſlands, which he took poſſeſſion of in the name of the King of Spain; but happened to be killed in a ſkirmiſh in one of theſe iſlands. However, his people afterwards arrived at the Moluccas, or Clove iſlands, where they left a colony, and returned to Spain by the way of the Cape of Good Hope; being the firſt men that ever ſailed round the globe. But there was no further attempt made by the Spaniards to ſubdue or plant the Manila iſlands, until the year 1564, in the reign of Philip II. King of Spain, when Don Lewis de Valaſco, Viceroy of Mexico, ſent Michael Lopez Delagaſpes there, with a fleet from Mexico, and a ſufficient force to make a conqueſt of the iſlands, which he named the Philippines, in honour of Philip II. ſon of Charles V. who was then upon the throne of Spain; and they have ever ſince been ſubject to that crown, except the iſland of Mindanao.

The iſland of Manila, or Luconia, is the chief of the Philippine iſlands, ſituated between 117 and 123 deg. E. lon and between 12 and 19 deg. of N. lat. 300 miles S. E. of China, and 160 S. of Formoſa; being upwards of 400 miles long, but of an unequal breadth, in ſome places 200 miles, and in others not 100 broad. The principal town is alſo called Manila, which lies on a point of land made by a river iſſuing from the lake of Bahi and falling into the ſea a little lower at the town of Cavite, where there is a ſpacious harbour, but of difficult entrance, becauſe of rocks and ſhoals at the mouth of the bay. The Spaniſh viceroy reſides in the town of Manila, and his government is one of the moſt profitable poſts belonging to the Spaniſh monarchy.

Mindanao is the next iſland in magnitude to Manila, being ſituated between 120 and 126 deg. of E. lon. and between 5 and 10 deg. of N. lat. having the reſt of the Philippine iſlands on the north; with the Celebes and Moluccas on the ſouth. This iſland is not ſubject to the Spaniards, as the reſt of the Philippines are; but moſt of the people are Mahometans, and ſubject to a Mahometan prince, called the Sultan of Mindanao. Thoſe who inhabit the middle of the country are pagans, and under another government, being called Hilanons. And there are a third nation on the N. W. part of the iſland, called Sokiques. There are good harbours in the iſland, and ſeveral places of trade; particularly the city of Mindanao, which ſtands on the ſouth-ſide of the iſland, on a ſmall river two miles from the ſea.

The iſland of Philippina is divided from Manila on the N. W. by the ſtreights of that name.

The iſland of Mindora is ſeparated from Manila by a narrow channel. The iſland of Paragoa, or Paragoya, is ſituated a little N. of Borneo, and is ſubject to one of the princes of that iſland; being about 300 miles long.

The iſland of Panay is ſubject to Spain, being ſituated between the iſlands of Paragoa and Negros; about 200 miles in circumference, and ſubject to Spain. The iſland of Leyte is ſeparated from the iſland of Philippina by a narrow channel on the N. E. as it is from the iſlands of Bohol and Sibu by another channel on the S. W.

The iſland of Bohol is ſituated N. of the iſland of Mindanao and S. W. of Leyte. The iſland of Sibu or Cebu is one of the moſt ſoutherly of the Philippines, ſituated between the iſland of Leyte on the W. and Negros on the E. The iſland of Negros is ſituated between the iſlands of Panay and Sibu; having its name on account of its inhabitants, who are blacks, but ſubject to Spain. The iſland of St. John lies E. of Mindanao, from which it is ſeparated by a narrow ſtreight. And the iſland of Xolo lies to the S. W. of them all. But the other iſlands are not remarkable.

Manila lying between the eaſtern and weſtern continents was once eſteemed the beſt ſituation in the world for trade; where ſilver was brought from Mexico and Peru as well as the produce of Europe: diamonds and precious ſtones from Golconda; cinnamon from Ceylon; pepper from Sumatra and Java; cloves and nutmegs from the Moluccas; camphire from Borneo; benjamin and ſilks from Cambaia; ſilks, tea, and China-ware, from China; and formerly there came every year from Japan two or three ſhips freighted with amber, ſilks, cabinets, and other varniſhed ware, in exchange for the produce of the Philippines: beſides, two veſſels ſailed every year from Acapulco, in Mexico, loaded with the riches of the Indies, and returned, as they do now, freighted with ſilver, making 400 *per cent* profit. No ſoil in the world

duces greater plenty of all things neceſſary for life; nor can any country appear more beautiful; there being a perpetual verdure; for buds, bloſſoms, and fruits are found upon the trees all the year round, as well on the mountains as in cultivated places.

The merchandiſes exported from theſe iſlands are gold, which is gathered in the mountains and rivers; bees-wax, rice, ſago, ſtuffs made of the bark of trees, cocoa-nuts, ſeſame and linſeed oil, iron, ſteel, ſaffron, timber, of which the Spaniards build their largeſt galleons, and ſeveral thouſands of animals ſkins, particularly thoſe of ſtags, and buffaloes, which are proper for the Japan trade.

Theſe iſlands alſo produce ſome nutmegs, cloves, betel, cocoa, and pepper: but the iſlanders only cultivate as much as is neceſſary for their uſe of the two former; for fear, if they planted more, the Dutch might pay them a viſit, and ſtrive to make themſelves maſters of this trade, as they have done of the Moluccas, and Banda iſlands.

A great number of jonks, and other Chineſe and Japoneſe ſhips arrive continually at Manila, laden with all the riches of their empires; to exchange them for thoſe of America, for which this town is the ſtaple.

Theſe nations trade there uſually from December to April, when thirty or forty of their largeſt ſhipping are ſeen in the road; and during the reſt of the year there are ſcarce leſs of all burdens than four or five hundred, belonging to the Spaniſh and Chineſe inhabitants of the iſlands, with which they trade in all parts of this Archipelago.

The Portugueſe have alſo a pretty good trade there; it being almoſt the only one they gain conſiderably by, ſince they loſt that of Japan.

Laſtly, of all nations, whether European or Indian, none are excluded the Philippines, but the Engliſh and Dutch; tho' the former have a kind of precarious trade there in the name of and under the Iriſh flag. The Engliſh alſo ſend ſhips from Fort St. George to the Manilles; but manned with Portugueſe pilots and ſailors.

The excluſion of the Dutch ſeems pretty well founded; this nation having ſeveral times attempted the poſſeſſion of theſe iſlands, particularly by the enterprize of 1649, which proved unſucceſsful.

The Chineſe are thoſe who trade moſt to the Philippines, and about 20,000 of them dwell in theſe iſlands, who are chiefly tradeſmen; the Spaniards, thro' their natural pride, diſdaining ſuch occupations.

The merchandiſes imported by the Chineſe, and other nations, are ſilk and cotton ſtuffs of all colours, raw and ſpun ſilk, wool, and ſpun cotton; gun-powder, ſulphur, iron, ſteel, tin, quick-ſilver, copper, wheat, flour, walnuts, cheſnuts, biſcuit, dates, porcelain, cabinet work, writing implements, lacquered ware, rice, all ſorts of drugs, ſaltpetre, cotton cloths, linens white and painted, head-dreſſes, and veils for women; ſeveral houſhold utenſils, ſilk fringes, and thread of all colours; laſtly, moſt kinds of European and Chineſe hard and haberdaſhery ware.

There are excellent loadſtones in theſe iſlands; and trees which produce a variety of gums, particularly one kind called *brea* by the Spaniards, who uſe it inſtead of pitch. They have alſo the ſalignan bird, which builds her neſt on the ſides of rocks, as the ſwallows do againſt a wall, which are the birds-neſts ſo much eſteemed, being a kind of jelly that diſſolves in warm water. Oranges and lemons are very plentiful; and there is alſo a tree called the amet, from whence the natives draw water; and likewiſe a kind of cane, called vexaco by the Spaniards, which if cut yields fair water enough for a draught: beſides, tobacco grows in great quantities in the iſland of Mindanao; as alſo ſugar, palm-wine, and ſaffron in the other iſlands, where proviſions are ſo cheap, that 12 buſhels of rice may be bought for 5 s. ſterling; a fowl for a penny, an ox for a crown, 100 lb. of ſugar for 3 s. 6 d. two large baſkets of ſaffron for 7 d. and a quintal of iron or ſteel for 5 s. 6 d.

PHILIPPUS. A gold Flemiſh coin, of indifferent alloy, and called in Germany *ride*. See *Ride*.

PHILONIUM, in pharmacy, an opiate, or electuary, whereof there are two kinds, the Roman and the Perſian. The Roman, called alſo the great philonium, took its name from the phyſician Philo, who invented it. It conſiſts of the ſeeds of henbane, pepper, opium, and other ingredients. It is uſed to promote ſleep, againſt colds, colics, &c. The Perſian philonium conſiſts of ſeveral ingredients, among which are opium, terra ſigillata, lapis hæmatites, caſtor, and ſaffron; being uſed to ſtop hæmorrhages, dyſenteries, &c.

PHILOSOPHY, is the ſtudy, or knowledge, of natural productions, and alſo of moral obligations; being commonly called moral and natural philoſophy. The natural philoſopher has always been looked upon as a great promoter of trade, by adapting his ſtudies to the diſcovery or improvement of ſuch arts as are eſſential to commerce, and of benefit to mankind.

PIANOSA. An iſland of Italy, in the Tuſcan ſea, ſituated in 11 deg. of E. lon. and 42 deg. 35 min. of N. lat. a little S. W. of the iſle of Elba, ſubject to Tuſcany.

PIASTRE, or *Piaſter*. A ſilver coin firſt ſtruck in Spain, afterwards in ſeveral other European ſtates, and current in moſt parts of the world; which is alſo called piece of eight, becauſe worth 8 rials of ſilver, or 3 s. 7 d. ſterling.

There are two ſorts of piaſters; the one coined at Potoſi, and called Peruvian; the other at Mexico, and called Mexican, which weigh ſomewhat more than the others, but are not of ſo pure a ſilver.

The piaſter has its diminutions, which are the half piaſter, or rial of 4; the quarter piaſter, or rial of 2; the 8th part of the piaſter, or rial; and the 16th, or half rial.

The old piaſtre is valued at 8 rials, and the new one at 10 rials of Plate; for 2 rials of Velon make but 1 rial of Plate; and there muſt be 16 rials of Velon to make but 1 piaſter of 8 rials, and 20 to make 1 piaſter of 10 rials.

Of the Spaniſh piaſters, peſo's, pieces of eight, or dollars, there are ſeveral ſorts; as the Mexico piece of eight, worth 4 s. $9\frac{1}{2}$ d. ſterling; the old Seville piaſter, worth 4 s. 6 d. ſterling; the new Seville piaſter, worth 3 s. 7 d. ſterling; and the Pillar dollar, worth 3 s. $7\frac{3}{4}$ d. ſterling.

There are alſo piaſters of other countries; as the piaſter-ecu, or crown of Milan, worth 4 s. 7 d. ſterling; the piaſter-ecu of Ferdinand II. Duke of Tuſcany, worth 4 s. 6 d. ſterling; the piaſter-ecu of Coſmus III. Duke of Tuſcany, worth 4 s. $3\frac{1}{2}$ d. ſterling; and the piaſter of Bologna, worth 4 s. 3 d. ſterling.

PIAVA. A river of Italy, which riſes in the Tyrol, and runs from north to ſouth through the territory of Venice, falling into the gulph by two mouths, a little to the northward of the city of Venice.

PIC. A large weight uſed in China, particularly at Canton, for the weighing of merchandiſes, and divided into 100 catis, ſome ſay 125; the catis into 16 taels, each tael making one ounce two drams; ſo that the pic makes 25 lb. avoirdupois.

PIC, is alſo a large Siameſe weight, making 125 lb. avoirdupois.

PICE, is a money of accompt in India. At Bengal it is 5-32ds of a penny ſterling, or 192 pices make the rupee of 2 s. 6 d. ſterling: at Bombay, 72 pices make the rupee; at Surat, 16 pices make the ana, and 4 anas the rupee; and at Carwar 288 pices make the Pagoda, or 9 s. ſterling.

PICE, is alſo a weight of India: at Bengal it is 8 drams; at Bombay it is 12 drams; and at Carwar, $6\frac{2}{3}$ drams.

PICHILI, or *Picoli*. A coin, and a money of accompt, uſed in Sicily, particularly at Meſſina and Palermo; 8 pichilis being worth 1 portti, and 720 the florin, or 1 s. $6\frac{1}{2}$ d. ſterling. The pichili of Venice is $\frac{5}{181}$ of an Engliſh penny, or 1488 make the current ducat of 3 s. 4 d. ſterling.

PICKLED *herrings*. See Herring *Fiſhery*.

PICOL. A weight uſed in China, for ſilk, containing 100 catis, or 133 lb. avoirdupos.

PICOL, is alſo a weight uſed in ſeveral parts of the continent, and

and iſlands of the Weſt Indies, where it is equal to 20 lb. avoirdupois.

PICOTIN. A ſort of ſmall meaſure, for oats, uſed in France; containing 4 litrons, or the fourth part of a buſhel.

PICQ, or *Pico*. A long meaſure uſed in Turky, containing 2 feet, 2 inches, and 2 lines; 100 picqs making 43⅓ Engliſh ells.

PICQ-*carpets*, is a term at Smyrna for the ſecond ſort of Turkiſh or Perſian carpets, purchaſed there by the nations that trade to the Levant; being ſo called, becauſe they are not ſold by the piece, but by the ſquare picq.

PICTURE. A piece of painting, or a ſubject repreſented in colours on canvas, wood, or the like, and incloſed in a frame. See *Painting*.

PIECE, in commerce, ſignifies ſometimes a whole, and ſometimes only a part of the whole. In the firſt ſenſe it is ſaid, a piece of cloth, velvet, &c. meaning a certain quantity of yards, regulated by cuſtom, being yet entire, and not cut. In the other ſignification, it is ſaid, a piece of tapeſtry, meaning a diſtinct member wrought apart, which, with ſeveral others, make but one hanging.

PIECE, in matters of money, ſignifies ſometimes the ſame with ſpecies; as when it is ſaid, this piece is too light, &c. ſometimes by adding the value of the pieces, it is uſed to expreſs ſuch as have no other particular name; as a piece of 8 rials, a piece of 25 ſols, &c.

In England, the piece abſolutely is ſometimes uſed for 20 s. ſterling, and ſometimes for a guinea.

By the 6th George II. chap. 25. broad pieces of 25 or 23 s. value, or halves or quarters thereof, are called in, and all perſons are forbid to receive or utter them by tale.

PIECE *of eight*, or *piaſtre*, is a ſilver money, firſt ſtruck in Spain. See *Piaſtre*.

PIECE, is alſo a kind of money of accompt, or rather a manner of accompting, uſed among the negroes on the coaſt of Angola in Africa. The price of ſlaves, and other commodities negotiated here, as alſo the duties paid the petty kings, are eſtimated on both ſides in pieces. Thus thoſe people requiring 10 pieces for a ſlave, the Europeans in like manner value the money on merchandiſe, to be given in exchange, in pieces; as 10 anabaſtes are one piece, a barrel of powder of 10 pounds one piece, a piece of blue ſalempouris four pieces, and 10 braſs baſons one piece.

PIECE-*broker*, is a ſhopkeeper in London, who buys the ſhreds and remnants of all materials that go through the hands of the taylor, and ſells them again to ſuch perſons as want them for mending cloaths; being generally decayed taylors, or ſome cunning men who have crept into the ſecrets of the trade.

PIE POUDER *court*. An antient court mentioned in many Engliſh ſtatutes, to be held in fairs, for the rendering of juſtice to buyers and ſellers, and the redreſs of grievances ariſing therein. It had its name becauſe moſt ordinarily held in ſummer, and that the ſuitors hereat were chiefly country clowns, with duſty feet, called by the French *pieds poudreux*; or from the expedition intended in the hearing of cauſes proper thereto, before the duſt went off the plaintiffs and defendants feet. The Saxons called it ceapunȝ ȝemoт, that is, a court of merchandiſe, or for the deciſion of diſputes relating to buying and ſelling: but it is only held during the continuance of the fairs. See *Fair*.

PIETOT. A ſmall copper coin, ſtruck and current in the iſland of Malta, being worth 32-320ths of a penny ſterling.

It has on one ſide the arms of the grand maſter, with this inſcription, *F* 10 *Paulus Laſcaris Caſtellarum M.M.M.* about a ſpread eagle; and on the reverſe a 3, denoting its value.

PIG *of lead*. The eighth part of a fodder; amounting to 250 lb. weight.

PIGNATELLA. A ſmall liquid meaſure uſed at Apulia, and ſome parts of Calabria in Italy, about a Wincheſter pint.

PIGNATELLI. A ſmall billon coin, ſtruck at Rome, and current for about a halfpenny ſterling.

PIKE, in commerce. To treat at the pike, or pike's end, *a la pique*, denotes a kind of commerce which the Europeans hold with certain unciviliſed nations, wherein they are to keep on their guard, and as it were ſword in hand. Thus it is they treat with the Indians of Canada, &c. and ſome negro nations on the coaſt of Africa. Treating at the pike, is alſo a kind of prohibited traffic, which the Engliſh, French, and Dutch maintain in ſeveral parts of the Spaniſh Weſt Indies, near the colonies which thoſe nations have in the Caribbee iſlands: but perhaps it ſhould be called treating at pike, that is, with the veſſel at anchor; in regard this commerce, which is prohibited on pain of death, is only practiſed in roads where veſſels lie at anchor, waiting for the Spaniſh merchants, who ſometimes by ſtealth, more frequently with the connivance of the governors, &c. come to exchange their gold, pieces of eight, cochineal, &c. for the European merchandiſes. Others will have it treating at the pike, at a pike's length or diſtance, by reaſon of the diſtance ſtrangers are obliged to keep at.

PILAW. A port-town of Poland, in the territory of ducal Pruſſia, ſituated in 20 deg. of E. lon. and 54 deg. 45 min. of N. lat. on the Baltic ſea, 10 miles W. of Koningſburg, ſubject to the King of Pruſſia.

PILCHARD, and *Pilchard fiſhery*. See Pilchard *Fiſhery*.

PILE, is uſed in building for a great ſtake rammed into the earth, for a foundation to build upon in marſhy grounds: thus Amſterdam and other cities are wholly built upon piles.

PILE, is alſo uſed among architects for a maſs or body of building.

PILE, or *Pila*, in coinage, denotes a kind of puncheon, which in the old way of coining with the hammer, contained the arms, croſs, or other figure and inſcription, to be ſtruck for the reverſe of the ſpecies: accordingly, the arms-ſide of a piece of money is ſtill called the pile, and the head the croſs; becauſe in the antient Engliſh monies a croſs uſually took the place of the head.

PILLOW, in a ſhip. That timber whereon the boltſprit lies, bears, or reſts, at the coming out of the hull of the ſhip aloft by the ſtern, is called the pillow of the boltſprit.

PILOT. A perſon retained on board a ſhip, to conduct it into a road or harbour, or over bars, ſands, or through ſerpentine or intricate channels, or the like. Pilots are not conſtant and ſtanding officers on board veſſels, but are moſtly called in occaſionally on coaſts and ſhores unknown to the maſter; and having done their parts in piloting the veſſel, return to ſhore where they reſide. Among the French, pilot is alſo uſed for ſteerſman, or an officer on board a ſhip, who watches her courſe, and rects it.

There are two kinds of pilots; the one a coaſting pilot well acquainted with the coaſts, ports, roads, bars, ſands, &c. and who commands in ſight thereof; the other an officer who makes obſervations, and takes altitudes of at ſea, uſes the quadrant, foreſtaff, watches the compaſs, &c.

The pilot is always the ſecond perſon in the ſhip, whether it be a man of war, or a merchant-man. In the former the captain is the firſt, the pilot after him. The pilot is alſo the ſteerſman, who ſtands at the helm, and manages the rudder.

In the treatiſe of naval trade, under the articles of *pilots* and *lodeſmen*, the following laws are collected.

By the ſea-laws of Wiſbuy, every pilot, mate, or mariner, that does not underſtand his buſineſs, ſhall be obliged to repay to the maſter whatever wages he advanced him, and beſides be bound to pay half as much more as he had promiſed him. The laws of Denmark puniſh an ignorant pilot, by ſentencing him to paſs thrice under the ſhip's keel. And by the laws of Oleron, if a pilot undertakes the conduct of a veſſel, to bring her to a port, and fail of his duty therein, ſo as the ſhip miſcarry by reaſon of his ignorance in what he undertook, and the merchant receives damage thereby, he ſhall be obliged to make ſatisfaction for the ſame, if he have wherewithal; and if he hath not, or where the fault of

pilot is apparently groſs, that the ſhip's crew ſee an apparent wreck, they may lead him to the hatches, and ſtrike off his head.

The laws of France ordain, that no perſon ſhall be received as pilot, nor perform that function, till he has made ſeveral voyages, and paſſed a ſtrict examination as to his knowledge and experience in navigation; and he ſhall be obliged for proving his voyages, to produce the journals thereof. The pilot ſhall provide himſelf with all maps, books, and inſtruments, neceſſary for his art: and in long voyages he ſhall have two journals; in one of which he is to write the changes of the courſes and winds, the days and hours of the changes, the leagues which he believes the ſhip has ſailed in each; alſo the reductions in latitude and longitude, the variations of the compaſs, together with the ſounds and ſhores he has diſcovered; and in the other, he ſhall write out once in 24 hours, courſes, longitude and latitude reduced, and the latitudes obſerved, with all other remarkable things diſcovered during the voyage; and at the return of ſuch long voyages, ſhall lodge a copy of his journal in the admiralty, on pain of 50 livres, or 40 s. 6 d. ſterling.

And by the ſame laws, if a pilot by ignorance or negligence occaſion the loſs of a ſhip, he ſhall pay 100 livres fine, or 4 l. 1 s. ſterling, and be for ever deprived of the exerciſe of pilotage; and if he does it deſignedly, he ſhall be puniſhed with death. But no maſters of ſhips ſhall force pilots to paſs through dangerous places, or to ſteer courſes againſt their will; and in caſe there be difference in opinion, they ſhall be governed by the advice of the moſt expert mariners. When a ſhip comes to a harbour or river, and the maſter does not know the coaſt nor the river, he ought to take a pilot of that country to carry her up the river or harbour; which pilot ſhall be maintained by the maſter, and paid by the merchant. Alſo, if it is thought convenient in any river, or off any dangerous coaſt, to take aboard a pilot of the country; though the merchant oppoſes it, if the maſter, the ſhip's pilot, and the major part of the ſeamen are for it, he may be hired; and ſhall be paid by the ſhip and cargo, as averages are calculated for goods thrown overboard.

The maſter of the ſhip generally in charter-parties covenants to find a pilot, and the merchant agrees to pay him his pilotage. Though if a ſhip ſhould be loſt coming up the river under the charge of the pilot, it has been a queſtion, whether the maſter ſhould anſwer for the inſufficiency of the pilot, or whether the merchant may have his remedy againſt both? But it has been conceived, that the merchant has his election to charge either; and if he charges the maſter, then the maſter muſt have his remedy againſt the pilot. After the ſhip is brought into ſure harbour, the pilot is no further liable; for then the maſter is to ſee to her bed and lying, and has all the charge upon himſelf; ſo that he muſt anſwer all danger and hazard, except that of the act of God: but before ſhe arrives at her place or bed, and while ſhe is under the pilot's care, if ſhe or her goods periſh or be ſpoiled, the pilot ſhall make good the damage.

By ſtatute 3d George I. it was enacted, That if any perſon ſhall take upon him to conduct and pilot any ſhip or veſſel, by or from Dover, Deal, or the iſle of Thanet, to any place on the river Thames or Medway, before he has been examined by the maſter and wardens of the ſociety of Trinity-houſe; and ſhall be approved and admitted into the ſaid ſociety at a court of load-manage by the lord warden of the cinque ports, or his deputy, and the ſaid maſter and wardens; every ſuch perſon for the firſt offence ſhall forfeit 10 l. for the ſecond 20 l. and for every other offence 40 l.

That the maſter, and ſuch two wardens of the ſaid ſociety as ſhall be appointed to examine into the ſkill and ability of any perſon on his being admitted as a pilot, ſhall take the following oath, to be given them by the regiſter of the ſaid court of load manage, or his deputy, *viz.*

"I *A. B.* do ſwear, That I will impartially examine and "inquire into the capacity and ſkill of *T. D.* of, &c. in "the art of pilotage over the Flats, and round the Long-"ſand-head, and the coaſts of Flanders and Holland, and "will make true and ſpeedy return thereof to the lord "warden of the cinque ports for the time being, or his "deputy, without favour, affection, fee, or reward. So "help me God."

That the number of ſuch pilots ſhall not be leſs than 120, whoſe names, ages, and places of abode, ſhall yearly be affixed in ſome public place at the cuſtomhouſes at London and Dover, to which all perſons may have recourſe; and not returning liſts, the maſter and wardens of the ſaid ſociety ſhall forfeit 10 l.

That this act ſhall not prevent the maſter or mate of any ſhip or veſſel, or any part-owner, reſiding at Dover or Deal, or the iſle of Thanet, from piloting his own ſhip from any of the ſaid places up the ſaid rivers; nor ſubject any perſons, though not of that ſociety, to the penalties before mentioned, who ſhall be employed by any maſter to pilot his veſſel from the places aforeſaid, when none of the ſaid ſociety ſhall, within one hour after the arrival of ſuch ſhip or veſſel at any of the ſaid places, be ready to pilot the ſame. And maſters of merchant-ſhips may make choice of ſuch pilot of the ſaid ſociety as they ſhall think fit: alſo no perſon ſhall continue in this ſociety, who ſhall not pilot a ſhip at leaſt twice in one year, unleſs prevented by ſickneſs, to and from the places above mentioned.

That for preventing any exorbitant demands from theſe pilots, for conducting any ſhip or veſſel from Dover, Deal, or the iſle of Thanet, to any places on the river Thames and Medway, the following, and no greater, prices ſhall be taken or demanded, than are here mentioned. For every ſhip or veſſel drawing ſeven feet water 3 l. 10 s. for eight feet water 4 l. nine feet water 4 l. 10 s. ten feet water 5 l. eleven feet water 5 l. 10 s. twelve feet water 6 l. thirteen feet water 6 l. 10 s. fourteen feet water 7 l. fifteen feet water 7 l. 10 s. ſixteen feet water 8 l. ſeventeen feet water 8 l. 10 s. and no allowance to be made for odd inches.

In this act there is likewiſe a clauſe, empowering the lord warden of the cinque ports, to nominate three perſons there to adjuſt differences between the maſter of any ſhip and others, where ſhips by bad weather are forced from their anchors and cables, for ſaving and bringing them aſhore: and this act is not to hinder any perſon from aſſiſting a ſhip in diſtreſs there.

By the 7th George I. c. 21. the lord warden of the cinque ports, with the aſſent of the commiſſioners of load-manage, and of the maſters and wardens of the ſociety of pilots of the Trinity-houſe of the cinque ports, at a court of load-manage held by the ſaid lord warden, or his deputy, may make ſuch rules and ordinances for the better government of the pilots reſiding at Dover, Deal, and the iſle of Thanet, as ſhall be thought convenient; and may order a ſufficient number of the pilots living at Dover, &c. not leſs than eighteen, to ply conſtantly at ſea, to be ready to conduct ſuch ſhips up the rivers of Thames and Medway, as ſhall have occaſion for them: and the ſaid lord warden, &c. at a court of load-manage, may ſuſpend or deprive any of the ſaid pilots, for breaking the rules or orders; and if any pilot ſo ſuſpended or deprived, ſhall undertake to conduct any ſhip by or from Dover, Deal, &c. to any place in or upon the ſaid river of Thames, &c. he ſhall be liable to all ſuch pains and penalties as are ordained by the before mentioned act of 3d Geo. I. againſt ſuch perſons as ſhall conduct ſhips from and to the places aforeſaid, without being firſt examined and approved of by the maſter and wardens of the ſaid ſociety at the ſaid court, and admitted into the ſame.

By the ſtatute 5th George II. it was enacted, That no perſon ſhall undertake the charge of any ſhip or veſſel as pilot thereof down the river Thames, or through the north channel to or by Orfordneſs, or round the Long-ſand-head into the Downs, or down the ſouth channel into the Downs, or from or by Orfordneſs up the north channel, or the river Thames, or river Medway, but ſuch as ſhall be licenſed to act as a pilot by the maſter, wardens, and aſſiſtants of the Trinity-houſe of Deptford-Strond, under the common ſeal of the corporation, on pain of forfeiting 20 l. being convicted before two juſti-

ces of peace for the city of London, or the counties of Middleſex, Eſſex, Kent, or Surrey, within their reſpective juriſdictions: but maſters of ſhips in the coal-trade, or other coaſting trade, are not obliged to employ a pilot.

That the pilots to be ſo admitted and licenſed, ſhall be ſubject to the government of the ſaid corporation, provided their regulations do not relate to the pilots keeping of turns, or to ſettling the rates of pilotage; and ſhall pay the antient dues, ſo as the ſame do not exceed 1 s. in the pound, out of ſuch pilot's hire or wages, for the uſe of the poor of the ſaid corporation, within ten days after the ſervice of any pilots ſhall be ended. And in caſe ſuch pilots ſhall refuſe to take the charge of any of his Majeſty's ſhips, when appointed thereto by the corporation; or ſhall miſbehave themſelves in the conduct of any ſhips, or other part of their duty; or if pilots ſhall refuſe to obey any ſummons of the ſaid corporation, or ſuch orders as they ſhall make, then the general court of the corporation, upon examination thereof, are required to recal the warrants granted to ſuch pilots; and if, after notice of it given to them in perſon, or left at their place of abode, they ſhall act as pilots within the limits aforementioned, they ſhall be ſubject to the penalties inflicted on unlicenſed pilots.

That this ſtatute ſhall not extend to the impeaching of any of the franchiſes, nor to take away the ſole right of piloting merchant-ſhips from or by Dover, Deal, and the iſle of Thanet, up the rivers Thames and Medway, granted and allowed to the ſociety and fellowſhip of the maſter, wardens, and pilots of the Trinity-houſe of Dover, Deal, and the iſle of Thanet, by the ſtatute 3d George I. c. 13.

And that nothing herein ſhall impeach any privileges heretofore granted to, or which by antient uſage have been enjoyed by the pilots of the Trinity-houſe of Kingſton upon Hull, or the Trinity-houſe of Newcaſtle upon Tyne.

Nor to prejudice any juriſdiction of the mayor, or of the mayor, commonalty, and citizens of London upon the river Thames; nor any juriſdiction belonging to the office of lord high admiral.

By the ſtatute of the 23d of George II. the above acts were continued until the 25th of March 1764, and from thence to the end of the next enſuing parliament.

PILOTAGE, is ſometimes applied to the pay or wages given to a pilot; and ſometimes it means the duty, office, or buſineſs, of ſuch a perſon.

PIMENTO, *Piementa*, *All-ſpice*. A kind of aromatic berry. See *Pepper*.

PIN, in commerce. A little neceſſary implement, chiefly uſed by the women in the adjuſting of their dreſs. The form and application of this little moveable require no deſcription; but its conſumption, and the number of hands it employs, are too conſiderable to be paſſed by unnoted. Pins are now altogether made of braſs-wire blanched. Formerly they likewiſe made them of iron wire; which being blanched like the others, paſſed for braſs; but the ill effects of thoſe pins has quite diſcarded their uſe. The French, however, could not be driven off from them without ſeveral arrets of parliament: for by a ſentence of the lieutenant de police, July 1695, the ſeizure of ſome millions of thoſe pins was confirmed, and the pins condemned to be burnt by the common executioner.

The pins moſt eſteemed in commerce are thoſe of England; thoſe of Bourdeaux are next; then thoſe made at Rugle, Naigle, and ſome places in Normandy.

The perfection of pins conſiſts in the ſtiffneſs of the wire, and its blanching, in the heads being well turned, and the points filed. The London pointing and blanching are moſt in repute; becauſe here, after forming the points on the ſtone, the pinmakers ſmooth them again on the poliſher; and in blanching uſe fine tin, well calcined, and ſometimes ſilver leaves prepared by the gold-beaters: whereas in other parts they uſe a mixture of tin, lead, and quickſilver; which not only blanches worſe than the former, but is alſo dangerous, by reaſon of the ill quality of that mineral, which renders a puncture with a pin thus blanched very difficult to cure.

The conſumption of pins, and the number of artificers employed in the manufacture thereof, are incredible. In Paris alone there were antiently above a thouſand people employed in it. At preſent there are none; yet there is every year ſold to the value of about 12,000 l. ſterling of the pin-wire to the pinmakers of the neighbouring places, all brought thither from Stockholm. In the little town of Rugle in Normandy, there are computed at leaſt 500 workmen employed in the pin manufacture, the whole town being peopled therewith. Notwithſtanding there is ſcarce any commodity cheaper than pins, there is none that paſſes through more hands before they come to be ſold; for they reckon 25 workmen ſucceſſively employed in each pin, between the drawing of the braſs-wire, and the ſticking of the pin in the paper.

Pins are diſtinguiſhed by numero's; the ſmaller called from No. 3. 4. 5. thence to the 14th; whence they are only accounted by two and two, as No. 16. 18. and 20. which is the largeſt ſize. Beſides the white pins, there are alſo black ones, made for mourning, from No. 4. to No. 10. which are uſually made of iron-wire. Laſtly, there are pins with double heads, of ſeveral numero's, uſed by the ladies to fix the buckles of their hair for the night, without danger of being diſturbed by their pricking, &c. One of the articles of the antient pinmakers of Paris was, that no maſter ſhould open more than one ſhop for the ſale of his wares, except on new-year's-day, and the eve thereof. This is mentioned in an age of luxury and profuſion, to recollect the agreeable ſimplicity of former times, when people contented themſelves with giving pins for new years-gifts. Hence the cuſtom of ſtill giving the name pins, or pin-money, to certain preſents, which accompany the moſt conſiderable bargains; wherein it is uſual to give ſomething towards the pins of the wife, or children, of the perſon with whom the bargain is ſtruck.

PINMAKER. A perſon who follows the trade of making pins of braſs-wire for womens uſe, firſt introduced into England under the glorious reign of Queen Elizabeth.

PINMAKERS *company of London*, was incorporated by letters-patent in the 11th of Charles I. dated the 20th of Auguſt 1636, by the name of The maſter, wardens, aſſiſtants, and commonalty of the art or myſtery of pinmakers of the city of London; who conſiſt of a maſter, 2 wardens, and 18 aſſiſtants; but without either hall or livery.

PINASSES. An Eaſt India ſtuff, made of the bark of trees.

PINE. A tall ſtraight tree, which bears a fruit divided into many parts like an artichoke; and affords a ſort of reſin or pitch, which oozes from inciſions made in its trunk and largeſt branches. See *Pitch*.

PINE-*apple*. See *Ananas*.

PINES *iſland*. A ſmall iſland on the north-coaſt of Darien or Terra firma, in America, ſituated in 80 deg. of W. lon. and 9 deg. of N. lat.; being 120 miles eaſt of Porto-Bello; which, with two other ſmall iſlands and the main, form a good harbour.

PINK. A veſſel uſed at ſea, maſted and rigged like other ſhips; only that ſhe is built with a round ſtern, the bends and ribs compaſſing ſo as that her ſides bulge out very much. This diſpoſition renders the pinks very difficult to be boarded, and alſo enables them to carry greater burdens than others; whence they are often uſed for ſtore-ſhips and hoſpital ſhips in the fleet.

PINNACE. A ſmall veſſel, with a ſquare ſtern, having ſails and oars, and carrying three maſts; chiefly uſed as a ſcout for intelligence, and for landing of men. One of the boats belonging to a great man of war, ſerving to carry the officers to and from the ſhore, is alſo called the pinnace.

PINT. A veſſel, or meaſure, uſed in eſtimating the quantity of liquids, and even ſometimes of dry things. The Engliſh pint is twofold; the one for wine meaſure, the other for beer and ale meaſure. The wine-pint contains a full pound avoirdupois of common running water; two pints make a quart, two quarts a pottle, and two pottles a gallon.

The Paris pint is eſtimated at 1-6th of the antient congius, and contains two pounds of common water. It

divi

divided into chopins, which ſome call ſeptiers; the ſeptier into two demi-ſeptiers, and the demi-ſeptiers into two poiſſons, each poiſſon containing 6 cubic inches. Two pints make a quart, or quarteau, which ſome call a pot; but the pint of St. Denis is almoſt double to that of Paris.

PINTLES, in a ſhip, are hooks, by which the rudder hangs to the ſtern-poſt.

PIOMBIONO. A city and port-town of Italy, in the duchy of Tuſcany, ſituated in 11 deg. 30 min. of E. lon. and 43 deg. of N. lat. 30 miles ſouth of Leghorn.

PIPE, is a popular machine, uſed in the ſmoaking of tobacco; conſiſting of a long ſlender tube, made of earth or clay. Pipes are made of various faſhions, long, ſhort, plain, worked, white, varniſhed, unvarniſhed, of various colours, &c. The Dutch tobacco pipes are moſt in eſteem; but the Engliſh pipemakers at Cheſter and Broſeley equal the Dutch. The Turks uſe pipes three or four feet long, made of ruſhes, or of wood bored; at the end of which they fix a kind of nut, of baked earth; which ſerves as a bowl, and which they take off after ſmoaking.

PIPE, alſo denotes a veſſel, or meaſure, for wine, and things meaſured by wine-meaſure. See *Meaſure*.

The pipe or butt contains two hogſheads, 2 barrels, or 126 gallons, and is computed to weigh about 900, 2 qrs, and 17 lb. See *Hogſhead*, &c.

The pipe is little uſed in France, except in Anjou and Poictou, where it conſiſts of two boiſſeaux, equal to a muid and a half of Paris; the muid containing three fuillets, or 300 pints.

PIPEMAKER, is a perſon who makes tobacco-pipes, and ſells them by the groce to grocers, chiefly in the country, and in London to the publicans.

PIPELY. A port-town of India, in Aſia, ſituated in 86 deg. of E. lon. and 21 deg. of N. lat. on the weſt-ſide of the bay of Bengal, a little eaſt of the bay of Baliſore, where the French and Dutch have factories.

PIRANO. A port of Iſtria, in the territory of Venice, ſituated in 14 deg. of E. lon. and 45 deg. 40 min. of N. lat. on a bay of the gulph of Venice, 10 miles ſouth of Cabo de Iſtria.

PIRATE, or *Pyrate*, *Pirata*, *Rover*, or *Corſair*. A perſon, or veſſel, that robs on the high ſeas, or makes deſcents on the coaſts, &c. without the permiſſion or authority of any prince or ſtate.

Pirates are enemies to all; for which reaſon neither faith nor oath is to be kept with them. They are denied ſuccour by the laws of nations; and the law of arms is not communicated to ſuch, for they are not capable of enjoying that privilege which lawful enemies are entitled to in the caption of another.

And it is obſerved, that pirates, though ſo called, are not properly termed enemies. A company of pirates or freebooters make not a commonwealth, notwithſtanding they may keep a kind of equality among themſelves, without which no company is able to ſubſiſt; and though it is ſeldom they are free from fault, yet hold ſociety to maintain right; and they do it to others, at leaſt on agreements made between them, or according to cuſtom: but when a company of them forming themſelves into a ſociety, ſubmit to laws, and are acknowledged as a ſtate, they cannot afterwards be treated as pirates, but as enemies.

In the Mediterranean ſea, Algiers, Tripoli, and Tunis, with ſome other towns on the coaſt of Barbary, are only inhabited by pirates that live by no other means. It is true, at the firſt eſtabliſhment of their predeceſſors, who were a ſett of diſcontented mariners, and other debauchees and renegadoes of all nations, it was not thought fit to allow them the privileges granted to other ſtates, or civil ſocieties of men; yet they having afterwards modelled themſelves into a formal method of government, and acknowledged the grand ſignior as their ſovereign, the kings of England, as well as other princes, have concluded ſolemn treaties with them.

Though it is unqueſtionably for the intereſt as well as honour of all princes to ſuppreſs pirates, and not ſuffer them to have any refuge or retreat within the extent of their dominions; and princes and ſtates ought to be reſponſible for their neglect, if they do not provide ſhips of war, and other remedies for reſtraining theſe ſort of robbers; and although it be a queſtion, how far they are bound by the civil or common law of England; the Engliſh monarchs have been at a conſiderable charge for the reduction of theſe wretches, who are the common diſturbers of the peace of the univerſe, and the greateſt plague to trade and commerce.

If piracy be attempted on the ocean, and the pirates are vanquiſhed, the captors may in ſuch caſe immediately inflict a puniſhment, by hanging them up at the main-yard end, and they are not obliged to bring them to any port; but this is underſtood only in places where no legal judgment can be obtained. And therefore if a ſhip ſhall be on a voyage to America, &c. on a diſcovery of unknown parts of the world, and in her way ſhe is attacked by a pirate, but in the attempt the pirate is overcome; by the law-marine the veſſel immediately becomes the captors, and the pirates may be forthwith executed, without any ſolemnity of condemnation. In other caſes, if the captors bring them to the next port, and the judge neglects their trial; or the captors cannot wait for the judgment without certain peril and loſs, juſtice may be done upon them by the captors.

By the law-maritime, if goods are taken by a pirate, and afterwards the pirate making an attack upon another ſhip, is conquered in ſuch attempt, the prize ſhall be abſolutely the captors; and it is accounted in law a juſt caption of whatſoever may be got, or taken from them, be the ſame in their own or their ſucceſſors poſſeſſion: but then an account muſt be rendered to the admiral, who may make reſtitution thereof to the owners, if they are fellow-ſubjects of the captors, or belong to any ſtate in amity with his ſovereign, on paying the coſts and charges, and making the captor ſuch equitable conſideration as ſhall be decreed for his ſervice.

If an Engliſhman commits piracy on the ſubjects of any prince or ſtate in amity with the crown of England, he is within the ſtatute of 28th Henry VIII. and may be convicted of felony: and ſo it is, if the ſubjects of any other nation or kingdom, being in amity with the King of England, ſhall commit piracy on the ſhips or goods of the Engliſh, the ſame is felony, and puniſhable by virtue of that act; as it was adjudged where the captain of a French man of war, and divers others, attacked four merchant-ſhips going from the port of Briſtol to Carmaerthen, and robbed them of about 1000 l. for which he and the reſt were arraigned, and found guilty of the piracy.

Before the 25th Edward III. if the ſubjects of a foreign nation, and ſome Engliſh, had joined together, and committed piracy, it would have been treaſon in the Engliſh, and felony in the foreigners; and there is an inſtance in our books of one that was a Norman being found guilty of felony in ſuch a caſe, and ſome Engliſhmen of treaſon, who were drawn and hanged: but at this day they ſhall both receive judgment as felons, by our laws and ſtatutes. In caſe any ſubjects in enmity with England ſhall be ſailors aboard an Engliſh pirate with others that are Engliſh, and then a robbery is done by them, it is felony without queſtion in the Engliſh; but not in the ſtrangers, for it was no piracy in them, but the depredation of an enemy, for which they ſhall be tried by martial law, and have judgment accordingly.

Piracies committed in the Britiſh ſeas by ſubjects of any nation in amity with England, are properly puniſhable by that crown only. And if a Spaniard robs a Frenchman on the high ſea, both their princes being then in amity, and they alſo with the crown of England, and the ſhip is brought into a port of the King of England, the Frenchman may there proceed criminally againſt the Spaniard to puniſh him, and civilly to have a reſtitution of the veſſel. If a merchant loſe his goods and merchandiſe at ſea by piracy, &c. not being wrecked, and they afterwards come to land, on making proof of the property, they ſhall be reſtored: and where a pirate takes goods upon the ſea, and ſells them, the property is not hereby changed, no more than if a thief on the land had ſtolen and ſold them. Yet by the common law of England, if a man commits

a piracy upon any other prince's ſubjects, and ſhall then bring the goods into the kingdom, and ſell them in a market overt, the ſame ſhall be binding, and all perſons concluded.

It is ſaid, where a ſhip or goods taken by pirates, are carried into a port, and there ſold, that the taking being originally within the admiral's juriſdiction, it continues ſo as incident thereto. It is otherwiſe when a ſhip is taken by enemies, for in that caſe the property is altered. The owners having ſent a ſhip to the Indies to merchandiſe, in the voyage the mariners committed piracy on the ſea; and when the ſhip returned into the Thames, ſhe and all the goods were ſeized and claimed by the admiral as *bona piratorum*, by virtue of the king's grant. But by Coke, though the admiral had ſuch grant of pirates goods, that muſt be intended of their proper goods, and not thoſe which they got by piracy.

A ſhip is riding at anchor, and the mariners part in their ſhip-boat, and the reſt on ſhore, ſo that none are left in the ſhip; if a pirate ſhall attack her, and commit any robbery, the ſame is piracy. But in caſe a pirate enters a port or haven, and aſſaults and robs a merchant-ſhip at anchor there, this is not piracy, becauſe it is not done upon the high ſeas; for it is a downright robbery at the common law, the act being *infra corpus comitatus*. If the crime be committed either *ſuper altum mare*, or in great rivers within the realm, which are looked upon as common highways, there it is piracy. Though a ſhip being at ſea, and in great neceſſity, may attack another ſhip, and take out ſome victuals, cables, ropes, anchors, or ſails, if that other ſhip can poſſibly ſpare them, without being guilty of piracy, on paying ready money for ſuch things, or giving ſecurity for payment of the value.

If a bale of merchandiſe be delivered to a maſter of a ſhip to carry over ſea to ſuch a port, and he goes away with it to another port, and there diſpoſes of the ſame, it is no felony or piracy: but if he opens the bale, and takes any thing out, with a felonious intent, he may be indicted for it in the admiralty, though it amounts not to a piracy.

And if ſuch maſter of a ſhip ſhall carry the lading to the port appointed, and after retake the whole bale of goods back again, this may amount to piracy; for he being in the nature of a common carrier, the delivery had taken its effect, and the privity of it is determined.

In caſe a ſhip ſhall be attacked by a pirate, who only takes away ſome of the men, in order to the ſelling them for ſlaves, this is piracy: and if a pirate attacks a ſhip, and the maſter for redemption gives his oath for a certain ſum of money, though there be no taking, yet is the ſame piracy by the law-marine: but by the common law of England there muſt be an actual taking, if it be but for a penny, as in caſe of robbery on the highway.

A maſter of a ſhip is aſſaulted by pirates: if he does his utmoſt to defend himſelf, but is taken by force; here, if for redeeming the veſſel, he becomes a ſlave to the captors, by the law-maritime the ſhip and cargo are tacitly obliged to contribute to his redemption. But where the maſter of a ſhip, by his own folly and negligence, is ſurpriſed by a pirate, who takes him priſoner; as if the pirate ſhall feign himſelf ſtranded, and to decoy the merchant-man for his relief, ſhall fire his guns, or give other ſignal, and ſuch ſhip accordingly varies its courſe for his aſſiſtance, whereupon the pirate enters him, and to redeem which he is made a ſlave; in this caſe there ſhall not be any contribution. And if the ſhip loſes any of her lading, the maſter ſhall anſwer the ſame.

If any pirate at ſea aſſault a ſhip, and in the engagement kills a perſon in the other ſhip, though he does not enter her; by the common law, all the perſons on board the pirate-ſhips are principals in the murder; but by the law-marine, they who gave the wound only ſhall be principals, and the reſt acceſſaries, if the parties can be known. And when a man is in cuſtody for piracy, and any one aſſiſts him to make his eſcape, although the offences be committed at land, as the court of admiralty has power to puniſh the principal, ſo it may the other offender as an acceſſary to the piracy.

It has been holden, that there cannot be an acceſſary of piracy, by the antient law of England; but if it happens

that there is an acceſſary upon the ſea, ſuch acceſſary may be puniſhed by the civil law, before the lord admiral: and it was made a doubt, whether one who was acceſſary at land to a felony at ſea, was triable by the admiral, within the purview of 28th Henry VIII. Though this is ſettled by 11th and 12th William III. which provides that acceſſaries to piracy, before or after, ſhall be enquired of, tried, and adjudged according to the ſaid ſtatute.

Antiently when any merchants were robbed at ſea, or there ſpoiled of their goods, the king iſſued out commiſſions under the great ſeal of England, to enquire of ſuch depredations and robberies; and to puniſh the parties offending, and alſo award damages to the perſons injured, according to the laws and cuſtoms of England, the law of merchants, and of the marine, *ſecundum legem & conſuetudinem Angliæ*, *ſecundum legem mercatorium*, & *legem maritimam*, all three laws being included in the commiſſions; and it has been uſual to try pirates by ſuch ſpecial commiſſions.

By the ſtatute 28th Henry VIII. c. 15. the preamble of which recites, that matters criminal in pirates were not puniſhable by the common law, but the ſame was determined and adjudged by the admiral, after the courſe of the civil law; it is enacted, That all robberies and felonies committed by pirates at ſea, &c. ſhall be enquired into, tried and determined in any county of England, by the king's commiſſion limiting the ſame, in like manner as if ſuch offences were done at land; and the commiſſion, being under the great ſeal, ſhall be directed to the lord high admiral, &c. and three or four other perſons as ſhall be named by the lord chancellor; which ſaid commiſſioners, or three of them, have power to enquire into, hear and determine ſuch offences by twelve lawful men of the county, ſo limited in their commiſſion, as if the offences had been done at land within the ſame county, and according to the courſe of the common law of the kingdom.

And every indictment ſo found and preferred, ſhall be good in law; and ſuch order, proceſs, judgment, and execution, be had, made and awarded thereupon, againſt offenders for any felony done upon the land and perſons convicted of offences, ſhall ſuffer death without benefit of clergy, and forfeit lands and goods, as if attainted of felony, &c. on land.

This ſtatute does not alter the offence of piracy, but leaves it as it was before, that is, felony only by the civil law; but gives a trial according to the common law, and inflicts pains of death, &c. as if the offenders had been convicted of any felony done upon the land; and no attainder for this offence corrupts the blood, the ſtatute mentioning only that the offender ſhall ſuffer death, loſs of lands, &c. but ſays not that the blood ſhall be corrupted. Likewiſe the offender is to be indicted and tried on the ſtatute, to forfeit his lands, which are not forfeited by the civil law.

An indictment for piracy muſt alledge the fact to be done upon the ſea; and have both the words of *feloniouſly* and *piratically* taken, &c. A pardon of all felonies does not extend to this offence; for the ſame ought to be eſpecially named, it being a ſpecial offence, and no felony in the eye of the law of the land, but by the civil law: and for this reaſon piracy ſhall not be included in a ſtatute ſpeaking generally of felonies, as to benefit of clergy, &c. which ſhall be conſtrued only of thoſe felonies which are ſuch by our law.

The ſtatute of the 11th and 12th of William III. c. 7. ordains, That all piracies, felonies, and robberies, done in or upon the ſea, or in any river, &c. where the admiral hath juriſdiction, may be tried at ſea or upon land in any of his Majeſty's iſlands, plantations, &c. appointed for that purpoſe, by commiſſion under the great ſeal of England, or ſeal of the admiralty, directed to ſuch commiſſioners as his Majeſty ſhall think fit; who may commit the offenders, and call a court of admiralty, conſiſting of ſeven perſons at leaſt: and for want of ſeven, then any three of the ſaid commiſſioners, whereof the preſident of ſome Engliſh factory, or governor or member of the councils in any of the plantations, or commander of one of the King's ſhips, to be one, may call any other perſons

erſons, ſuch as are merchants, factors, planters, ſea-aptains, lieutenants, &c. to make up the number.
And the perſons ſo aſſembled may proceed according to he courſe of the admiralty, in hearing and determining ny caſe of piracy, robbery, and felony, and paſs ſen-ence of death on the offenders, who ſhall ſuffer ſuch loſs f lands, goods, &c. as if they had been convicted and ttainted of any piracies, according to the act 28th Hen-y VIII. and when any ſuch court of admiralty is called n ſhipboard, or on land, the king's commiſſion being irſt read, the preſident, and the reſt of the court, ſhall ake an oath impartially to try the priſoner; who plead-ng not guilty, witneſſes ſhall be produced by the re-giſter, which may be croſs-examined for the priſoner, and other witneſſes brought in his defence; and after a fair hearing, and all perſons withdrawn but the regiſter, the court ſhall conſider of the evidence, and give judgment by plurality of voices; and execution thereupon may be awarded by a warrant to a provoſt-marſhal.

The regiſter is to be a public notary; or for want of ſuch, the preſident ſhall appoint and ſwear a regiſter; who is to prepare all the proceedings in a ſummary way, and tranſmit copies thereof to the admiralry-court in England. And the commiſſioners aforeſaid ſhall have the ſole power of trying the ſaid crimes and offences within the colonies and plantations in America, governed by proprietors, or under grants or charters from the crown, and may iſſue their warrants for apprehending ſuch pi-rates, &c. and their acceſſaries, in order to their being tried there, or ſent into England: and all governors, &c. in the ſaid plantations, under proprietors or charters, ſhall aſſiſt the commiſſioners therein, on penalty of for-feiting their charters. Commiſſions for trial of the ſaid offences, ſent to any place within the juriſdiction of the cinque ports here, ſhall be directed to the lord warden of the ſaid ports, or his lieutenant, and ſuch perſons as the lord chancellor ſhall appoint; and the inquiſition and trial to be by the inhabitants of the ſame ports.

If any natural born ſubjects, or denizens of England, commit piracy, or any act of hoſtility, againſt his Ma-jeſty's ſubjects at ſea, under colour of a commiſſion or authority from any foreign prince or ſtate, or perſon whatſoever, ſuch offenders ſhall be adjudged pirates. And if any commander or maſter of a ſhip, or ſeaman, ſhall turn pirate, or give up his ſhip, &c. to pirates, or com-bine to yield up, or run away with any ſhip; or any ma-riner lay violent hands on his commander, or endeavour to make a revolt in the ſhip, they are declared to be pi-rates, and to ſuffer accordingly: and all perſons who ſhall ſet forth any pirate, or be aiding and aſſiſting to any one committing piracy, or ſhall conceal ſuch pirate, or receive any veſſels or goods piratically taken, they ſhall be adjudged acceſſary to ſuch piracy, and ſuffer as principals.

And by this act, where any Engliſh ſhip ſhall have been defended by fight againſt pirates, and any of the officers or ſeamen are killed or wounded, the judge of the ad-miralty, &c. in London, or the mayor or chief officer in the outports, aſſiſted by four ſubſtantial merchants, may, by proceſs out of the ſaid court, levy upon the owners of ſuch ſhip, &c. a ſum not above 2 *per cent.* of the value of the freight, ſhip, and goods, ſo defended, to be diſtributed among the officers and ſeamen of the ſaid ſhip, or widows and children of the perſons ſlain.

Alſo a reward of 10 l. for every veſſel of 100 tons, or under, and 15 l. for every ſhip of greater burthen, ſhall be paid by the captain, commander, or maſter, of the ſhip, to the firſt diſcoverer of any combination for running away with or deſtroying any ſuch ſhip, at the port where the wages are to be paid.

By the 4th George I. c. 11. all perſons who have com-mitted, or ſhall commit any offences, for which they ought to be adjudged pirates by the act 11th and 12th William III. may be tried for every ſuch offence, in ſuch manner as by the 28th Henry VIII. c. 15. is directed for the trial of pirates, and ſhall be utterly debarred from the benefit of clergy for the ſaid offences. But this ſhall not extend to perſons convicted in Scotland, or to his Majeſty's dominions in America.

The 6th George I. c. 19. makes the ſtatute 11th and 12th William III. c. 7. for more effectual ſuppreſſion of piracy, perpetual. And by 8th George I. c. 24. if any maſter of any ſhip or veſſel, or other perſon, ſhall any ways trade with pirates by truck, barter, exchange, or in any other manner; or ſhall furniſh any pirate, fe-lon, or robber on the ſeas, with any ammunition, pro-viſion, or ſtores; or fit out any ſhip or veſſel knowingly, and with deſign to trade with, or ſupply, or correſpond with any pirate, &c. or if any perſon ſhall conſult, com-bine, or confederate with ſuch pirate, knowing him to be guilty of any piracy, felony, or robbery; ſuch of-fender ſhall in every of the ſaid caſes be adjudged guilty of piracy, felony, and robbery, which ſhall be enquired of, tried and determined, according to the ſtatutes 28th Henry VIII. and 11th and 12th William III. And ſhips fitted out with deſign to trade with pirates, and all the goods and merchandiſe put on board the ſame, ſhall be forfeited; one moiety to the King, the other to the diſ-coverer of ſuch deſign, who may ſue for and recover the ſaid ſhips, &c. in the high court of admiralty.

If any perſon belonging to any ſhip or veſſel, upon meet-ing any merchant-ſhip on the high ſeas, or in any haven or creek, ſhall forcibly board and enter into ſuch ſhip; and though they do not ſeize and carry her off, ſhall throw overboard, or deſtroy any part of the goods or merchandiſes belonging to the ſaid ſhip, the perſons guilty thereof ſhall be puniſhed as pirates. And all per-ſons, who by the act 11th and 12th William III. are de-clared acceſſaries to any piracy therein mentioned, are hereby declared, and ſhall be deemed to be principal pi-rates; and their offences ſhall be enquired of, heard and adjudged in the ſame manner as perſons guilty of piracy, &c. and being thereupon attainted and convicted, ſhall ſuffer ſuch pains of death, loſs of lands, goods, and chattles, as pirates and robbers.

In caſe any maſter, or other officer, or ſeaman of a mer-chant-ſhip, which carries guns and arms, when they are attacked by any pirate, or ſhip on which ſuch pirate is on board, ſhall not fight, and endeavour to defend them-ſelves and their ſhips from being taken; or ſhall utter any words diſcouraging to other mariners, and by reaſon thereof the ſhip fall into the hands of the pirate; every ſuch maſter, &c. ſhall forfeit all the wages due to him to the owners of the ſhip; and as a farther puniſhment, ſuffer ſix months impriſonment. But ſeamen wounded in the defence of ſhips, and fighting againſt pirates, ſhall be admitted into Greenwich hoſpital, and there provided for, &c.

There is a clauſe in this ſtatute, that if any commander or officer of any his Majeſty's ſhips of war, ſhall receive or permit to be received on board ſuch ſhip, any goods or merchandiſes, in order to trade with the ſame, either on his own or any other perſon's account; except gold, ſilver, or jewels, and goods belonging to any merchant-ſhip wrecked, or in danger of being ſo, in order to pre-ſerve them for their proper owners; and except ſuch goods as they ſhall be ordered to receive on board by the admiralty; the captain, &c. ſo offending ſhall, upon his being convicted thereof by a court-martial, forfeit the command and office he ſhall then have in the ſaid ſhip, and be for ever after rendered incapable to ſerve in the ſame, or in any other place or office in the naval ſervice of the crown; and alſo forfeit the wages to him due for his ſervice in the ſhip of war whereto he ſhall belong.

And the ſaid captain, &c. and the proprietors of the goods ſo put on board ſuch ſhip of war, ſhall incur a forfeiture of the value of the ſaid goods; one half to go to the firſt diſcoverer, and the other to the uſe of Greenwich hoſ-pital.

This act ſhall extend to all his Majeſty's dominions in Aſia, Africa, and America, &c. and is made perpetual by 2d George II. c. 28.

The Barbary corſairs are conſidered as pirates by thoſe nations with whom they have no treaties of peace. There are alſo pirates on the coaſt of Morocco; and a great part of the coaſt of Guzurat in India is inhabited by pirates, commonly called Angria's men, who have a numerous

fleet of grabs, or ſmall veſſels, with which they commit great depredations on the Indian merchants.

PIRETHRA. A medicinal root, brought from Tunis in Barbary, uſed for the tooth-ach, and in the compoſition of vinegar.

The pirethra is a root of middling length, of the thickneſs of the little finger, greyiſh without, whitiſh within, garniſhed with ſome fibres, and of a poignant and hot taſte; its good choice conſiſting in its being new, plump, dry, and not eaſily broken.

PISCA. A port-town of Peru, in South America, ſituated in 76 deg. of W. lon. and 14 deg. of N. lat. in the province of Lima, 140 miles ſouth of that city; where is made the greateſt quantity of wine in Peru, which is exported to the reſt of the Spaniſh colonies.

PISCATAWAY. A harbour of New Hampſhire in America, one of the Britiſh colonies, ſituated in 70 deg. of W. lon. and 43 deg. 35 min. of N. lat. 70 miles north of Boſton: and in ſome maps the province of New Hampſhire is called Piſcataway.

PISSASPHALTUM, or *Piſſaſphaltus*, in natural hiſtory, denotes a native, ſolid bitumen, found in ſome of the eaſtern countries, of an intermediate nature between pitch and aſphaltum. See *Bitumen*.

PISSASPHALTUM, is alſo a name given to a factitious ſubſtance, compounded of pitch and aſphaltus or bitumen judaicum; but the coarſeneſs of the black colour, and the fœtidneſs of the ſmell, diſtinguiſhes it from the true aſphaltum. See *Aſphaltum*.

PISSASPHALTUM, is alſo uſed by ſome writers to denote the Jewiſh pitch, or ſimple aſphaltum. See *Aſphaltum*.

PISSELÆUM, or *Oil of pitch*. A medicament compounded of oil and pitch.

PISSELÆUM *indicum*, among modern writers, denotes a bituminous ſubſtance brought from the Weſt Indies, popularly called Barbadoes tar; which has a ſtrong ſmell, not unlike the common tar, and is not very pleaſant to ſight or taſte. It is accounted a good balſamic; and, where the ſtomach can diſpenſe with it, will do great ſervice in many diſorders of the breaſt, which has alſo been experienced of common tar. See *Tar*.

PISTACHIA, or *Piſtach nut*. A fruit brought from ſeveral parts of Aſia, chiefly Aleppo and Perſia. When wrapt in all its coats, it is of the ſize of a green almond; but when ſtript of all to its ſhell, it reſembles a ſmall nut; the kernel being red without, and green within; its taſte very agreeable. The tree that produces it is a kind of turpentine-tree: the nuts are to be choſen new, heavy, and full; as to thoſe that are broken, ſuch as have kept their colours beſt, are to be preferred; for as to the ſize, it is a fancy. Piſtachias are aperitive, proper to give vigour, and are uſed in emulſions, &c. in phtiſical and nephritical caſes. They alſo enter ſeveral ragouts, are confected, made into conſerves, &c.

There is likewiſe a kind of falſe piſtachia brought from the Caribbee iſlands, which ſome confound with the real ones; though very different, both with regard to the plants that produce them, and their quality. The ſpurious piſtachia plant does not riſe a foot high; nor does the fruit grow on the branches, but is found in pods adhering to the root. The pod ſometimes only contains a ſingle nut, which reſembles an olive, but uſually ſeveral; and in that caſe they are irregular. The ſubſtance is white, compact, and heavy. This fruit is rarely eat raw, becauſe of the ill effects it produces. It is uſually roaſted or confected, being uſed in ragouts, and to make ratafias.

PISTARINE. A Spaniſh ſilver coin, worth $10\frac{3}{4}$ d. ſterling.

PISTOL. A ſmall fire-arm, uſed chiefly by the cavalry in an army; as alſo by gentlemen who travel.

PISTOLE. A gold coin of ſeveral ſorts, and ſtruck in ſeveral places, being both double and ſingle.

The old and new Spaniſh double piſtole are worth 1 l. 13 s. 6 d. ſterling; the double piſtoles of Genoa 1621, of Milan, of Pope Urban 1634, and of Placentia, being alſo the ſame value with the Spaniſh double piſtole.

The old Spaniſh ſingle piſtole is worth 16 s. 9 d. ſterling, and the new Seville piſtole is worth about 16 s. 6 d. ſterling; the old Italian piſtole is worth 16 s. 7 d. ſterling; the piſtoles of Beſancon, Florence, Genoa, Milan, Orange, Savoy, and Trevoux, are worth 16 s. 6 d. ſterling.

The double and ſingle louis d'or of France are alſo called double and ſingle piſtoles; the former being worth 1 l. 19 s. and the latter 19 s. 6 d. ſterling.

PITCH. A tenacious kind of juice, or gum, drawn from fatty woods, chiefly pines and firs; uſed in ſhipping, medicine, and various arts. Pitch is properly a juice in the bark of the picea, or pitch-tree; and is conceived to be no other than the oil thereof inſpiſſated, and turned black, further than in balſam. The method of drawing or procuring it, is by cleaving the tree into little billets which they lay in a furnace having two apertures, through one of which the fire is put, and through the other the pitch is gathered; which oozing from the wood, runs along the bottom of the furnace into baſons or receptacles placed for that purpoſe. The ſmoke, which is here very thick, gives it the black colour; though ſome will have our common pitch to be only the laſt running, and that to be the firſt. See *Tar*.

Wheeler gives us another manner of drawing pitch, in the Levant. A pit is dug in the ground two ells diameter a-top, but contracting as it goes deeper; which they fill with branches of pine cloven into ſhivers. The top of the pit is then covered over with fire; which burning down to the bottom, the pitch diſtills, and runs out at a hole made therein.

Pitch acquires different names, according to its different preparations, colours, and qualities. As it diſtills from the wood it is called barras, but afterwards aſſumes a double name; the fineſt and cleareſt being called galipot, and the coarſer marbled barras. Of the galipot is made what they call white pitch, or Burgundy pitch; which is nothing but the galipot melted with oil of turpentine: though ſome will have it a native pitch, diſtilling from a reſinous tree growing in the mountains of Franche Comte. Of the ſame galipot is likewiſe prepared what is called roſin, by boiling the cakes to a certain conſiſtence, and making it up in cakes. See *Roſin*.

The black pitch, which is what is properly called pitch, ſome ſay is the liquid galipot, burnt and reduced into the form and conſiſtence we ſee it in, by mixing tar with it while hot. The beſt is that brought from Sweden and Norway; its goodneſs conſiſting in its being of a gloſſy black colour, dry, and brittle.

Naval pitch, is that drawn from old pines, ranged, and burnt like charcoal. This, with a mixture of tow, is for beaten cables, ſerves for the pitching of veſſels. Naval pitch is alſo a denomination given to that ſcraped from off the ſides of old veſſels, and which is ſuppoſed to have acquired an aſtringent virtue by means of the ſalt water. It ſerves to make plaiſters; though it is certain the apothecaries uſually ſubſtitute the common black pitch in its ſtead.

Greek pitch, or Spaniſh pitch, is that boiled in water till it has loſt its natural ſmell; upon which it becomes ductile and pliable.

The antients called it colophony, from Colophon a city of Greece, whence great quantities were brought.

Oil of PITCH, is an oil procured from pitch, by ſeparating the aqueous matter that ſwims a-top of the melted pitch, which, for the great virtues attributed to it, is alſo called balſam of pitch. See Naval *Stores*.

All ſorts of pitch are ſold at Amſterdam for ſo many livres de gros the laſt of 12 barrels, and afford a deduction of 1 *per cent.* for prompt payment.

Stockholm pitch is the moſt eſteemed there, and is the deareſt; that of Weſterwyck is ſold for 15 or 16 livres de gros the laſt; that of Calmar is of the ſame price; and that of Carolina coſt but 12, or but 12½ livres de gros the laſt.

Yellow reſin-pitch refined is 5 florins the 100 lb. and the brown refined is $4\frac{3}{4}$ florins. Both yield 2 *per cent.* deduction for good weight, and 1 *per cent.* for prompt payment.

Pitch is generally brought from Denmark, Norway, Finland, and Sweden: but as the merchants of thoſe coun-

tries put exorbitant prices on this commodity, it occaſioned the Britiſh government to give particular encouragement to their planters in North America to make pitch; in which they have ſo well ſucceeded, that great quantities are now ſent from New England, Virginia, and Carolina. It is abſolutely eſſential to a trading nation, for pitching their veſſels and cables: therefore the making of it ſhould be carefully attended to in the Britiſh plantations; for if they can be brought to ſupply the mother-country with naval ſtores, it will take the balance of trade out of the hands of the northern nations, and be a great ſaving to Great Britain.

PITCH, a ſea-term; when a ſhip falls with her head too much into the ſea, or beats againſt it, ſo as to endanger her top-maſts, they ſay ſhe will pitch her maſts by the board.

PITCHING *pence*. A duty, commonly one penny, paid for pitching, or ſetting down, every ſack of corn, or pack of merchandiſe, in a fair or market.

PITHA. A port-town of Sweden, capital of the province of Pitha Lapmark, ſituated in 20 deg. of E. lon. and 64 deg. 45 min. of N. lat. on the weſt-ſide of the Bothnic gulph, 80 miles S. W. of Torne.

PITE. An imaginary money in France; being the fourth of a denier, and 12 deniers are about a halfpenny ſterling.

PITE. A kind of hemp, or flax, found in ſeveral parts of South America, particularly along the river Oronoko. This hemp is much longer and whiter than that which grows in Europe, and does not rot ſo eaſily in water. The Indians uſe it for the making of their hamocks, ſails, and cordage for their canoes, beſides ſeveral other uſes.

PITIS. A term among the Javaneſe for a ſmall coin of very baſe alloy, half lead, and half ſcoria of copper, which is brought them from China, where they are called caxas; having a great currency at Bantam, and throughout the reſt of the iſland of Java, as alſo in the neighbouring iſlands; 200 pites being worth about three farthings ſterling. See *Caxas*.

PITTENWEEM. A port-town of Scotland, in the county of Fife, ſituated in 2 deg. 25 min. of W. lon. and 56 deg. of N. lat. at the entrance of the frith of Forth, 23 miles N. E. of Edinburgh.

PLACARD, or *Placart*, is a term in Holland for the proclamations, by which are rendered public the reſolutions and ordonnances of the States-General of the United Provinces, concerning government or commerce.

One of the moſt important placards in this laſt reſpect, is that for the execution of the new tariff of the year 1725; wherein are regulated the duties of importation and exportation throughout the ſtates of the republic, being compoſed of 254 articles, divided into 18 ſections.

PLACENTIA. A port-town of Newfoundland in America, ſituated in 56 deg. of W. lon. and 48 deg. of N. lat. on a bay of the S. E. part of the iſland, 40 miles W. of St. John's, and 200 E. of the iſland of Cape Breton, ſubject to England.

PLAGUE-*water*, *Aqua epidemica*, is one of the compound waters of the ſhops. See *Water*.

PLAID. A kind of chequered ſerge manufactured in Scotland, and uſually 25 ells in length.

PLAIN *Scale*, is a thin ruler, whereon are graduated the lines of chords, ſines, tangents, ſecants, leagues, rhumbs, &c. of ready uſe in moſt parts of the mathematics, chiefly in navigation. See *Line*.

PLAIN *Chart*, in navigation, is a ſea chart, wherein the meridian and parallels are repreſented by parallel ſtraight lines; and where, of conſequence, the degrees of longitude are the ſame in all the parallels of latitude. See *Chart*.

PLAIN *Sailing*, in navigation, is the art of working the ſeveral caſes and varieties in a ſhip's motion, on a plain chart. See *Sailing*.

Plain ſailing is founded on a ſuppoſition of the earth's being a plane or flat; which though notoriouſly falſe, yet places being laid down accordingly, and a long voyage broke into many ſhort ones, the voyage may be tolerably performed by it, near the ſame meridian.

In plain ſailing it is ſuppoſed, that, by the rhumb-line, meridian, and parallel of latitude, there always will be formed a right-angled triangle; and that ſo poſited, as that the perpendicular ſide may repreſent part of the meridian, or north and ſouth line, containing the difference of latitude; the baſe of the triangle repreſents the departure, and the hypothenuſe the diſtance ſailed. The angle at the vertex is the courſe, and the angle at the baſe the compliment of the crown of the courſe; any two of which, with the right-angle being given, the triangle may be protracted, and the other three parts found.

PLAISTER *of Paris*. See *Plaſter*.

PLANK. A long piece of timber, ſawn about two inches thick, more or leſs, for various purpoſes, both in building houſes and ſhips; and alſo for other mechanical purpoſes. The trees which uſually afford planks are the oak, the beech, the fir, the walnut, the pear, and the poplar. The commerce of planks, as alſo of joiners, carpenters, and coopers timber, is a very conſiderable article in the Dutch trade; and all ſorts of planks are ſold at Amſterdam by the hundred, but more or leſs to the hundred.

PLANT. The univerſal name for all vegetable bodies, whether trees, ſhrubs, or herbs.

PLANTAIN, is an excellent vulnerary herb; being alſo uſeful for internal maladies, and other purpoſes.

PLANTATION, in the iſlands and continent of America, a ſpot of ground which ſome planter, or perſon arrived in a new colony, pitches on to cultivate and till for his own uſe. See *Colony*.

A plantation or colony, according to the Treatiſe on Naval Trade, is a place where people are ſent to dwell, or a company of people tranſplanted from one place to another, with an allowance of land for their tillage, and encouraged by immunities, for the good of themſelves, and the ſtate to which they belong.

In caſe a nation or people happen to be expelled out of their own land, they may ſeek void places, and waſtes in ſome other country; where the immediate poſſeſſing ſuch plantations creates a property againſt all perſons, but he that has empire there. Alſo ſome learned civilians are of opinion, that if there be a deſert, or barren ground, the ſame ought to be granted to ſtrangers, upon their requeſt; for they commit no offence who inhabit and manure a part of the land, that lies neglected and unoccupied. And where perſons coming into any territories, and having planted in a plantation there, if before they can reap the fruits of their labour, the neceſſities of life are wanting, by the laws of nature they may force a ſubſiſtence from a neighbour-planter; and the reaſon is this, becauſe ſubſiſtence belongs to every man, unleſs he has merited to loſe the life which he ſeeks to preſerve. The written laws are in ſome meaſure conformable to this; by which, if proviſions begin to fail in a ſhip at ſea, thoſe perſons which laid in particular ſtores for the voyage are obliged to bring the ſame out openly for the benefit of all.

The Britiſh plantations abroad are chiefly upon the continent and iſlands in America; the iſlands of Jamaica and Barbadoes, with ſome others, being much frequented by unfortunate perſons, who have ſo great advantages in trade, that by induſtry and application a preſent misfortune is oftentimes attended with a future happineſs, by accumulating great wealth from the products of theſe foreign colonies. The Britiſh plantations in general contain Jamaica, Barbadoes, part of the Leeward iſlands, Bermudas, the Bahamas, Virginia, Maryland, Penſylvania, New-England, New-York, Carolina, and Georgia.

The plantation-iſlands being originally acquired by conqueſt, or by ſome of the King's ſubjects going in ſearch of ſome prize, and planting themſelves there, the King is not reſtrained to rule them by any particular laws, but may govern them as he will. But it has been held, that the laws and cuſtoms by which the people of any iſland or plantation were governed before the conqueſt thereof, bind them until new laws are given; for there is a neceſſity that the former laws ſhould be in force till new ones are obtained; and even then ſome of their old cuſtoms may remain, as they do in Barbadoes, &c.: though,

in

in caſe of an uninhabited country newly found out by Engliſh ſubjects, all laws in force in England are immediately in force there.

The Iſle of Man and Ireland are part of the poſſeſſions of the crown of England, yet retain their antient laws; and Jamaica was not governed by the law of England after it was conquered, till new laws were made; for they had neither ſheriffs nor counties. They were only an aſſembly of people which are not bound by Engliſh laws or ſtates, unleſs particularly mentioned therein: beſides, they in Jamaica have power to make laws, by which general laws of England may be altered by theirs in particulars. In Barbadoes all freeholds are ſubject to debts, and eſteemed but as chattels, till the creditors are ſatisfied, and then the lands deſcend to the heir. But the law is otherwiſe in England; which ſhews, that though that iſland is parcel of the poſſeſſions of England, yet it is not governed by the laws made here. By the laws of Virginia, negroes are ſaleable as chattels; but the laws of England do not extend to Virginia.

All that ſhall be made governors of the plantations, ſhall, before their entrance into their government, take an oath to do their utmoſt that the acts of parliament paſſed concerning the ſaid colonies and plantations be duly obſerved, ſo far as appertains to the ſaid governors reſpectively; and upon complaint to the King, and proof made before his Majeſty, or ſuch as he ſhall appoint, by the oaths of two or more credible witneſſes, that any of the governors, or commanders in chief, have neglected to take the ſaid oath, or been wittingly negligent in doing his duty accordingly; ſuch governor ſo offending ſhall be removed from his government, and forfeit the ſum of 1000 l.

By the 11th and 12th William III. c. 12. if any governor, lieutenant-governor, deputy-governor, or commander in chief, of any plantation or colony within his Majeſty's dominions beyond the ſeas, ſhall be guilty of oppreſſing any of his Majeſty's ſubjects in their reſpective governments, or of any other crime or offence contrary to the laws of this realm, or in force within their governments, &c. it ſhall be enquired of, heard and determined in the court of King's Bench in England, or before ſuch commiſſioners, and in ſuch county of this realm, as the King ſhall appoint, and by good and lawful men of the ſame county; and the like puniſhments ſhall be inflicted as are uſual for ſuch offences here in England.

And by the act 7th and 8th William III. c. 22. all laws, by-laws, uſages or cuſtoms in practice, in any of the plantations, which are repugnant to any laws already made here, or to this act, or any other law hereafter to be made in this kingdom, relating to the ſaid plantations, are declared null and void. And all places of truſt in the courts of law, or relating to the treaſury, in any iſland; colony, or plantation, belonging to England, ſhall be in the hands of the native-born ſubjects of England, Ireland, or of the ſaid iſlands: alſo perſons that claim any right or property in any iſlands, or tracts of land on the continent of America, by charter or letters-patent, ſhall not at any time alien, ſell, or diſpoſe of the ſame to any other perſons than the natural-born ſubjects of England or Ireland, &c. without the King's licence in council firſt had and obtained; and all governors appointed by any ſuch proprietors, ſhall be allowed and approved of by his Majeſty, and take the oaths enjoined to be taken by the governors or commanders in chief in any other colonies and plantations, under the ſame penalty they are liable to.

The ſtatute of the 12th Charles II. c. 18. enacts, That no alien may be a merchant, or factor, in any of the territories and plantations belonging to England, in Aſia, Africa, or America, on pain to loſe all his goods; one third to the King, another third to the governor of the plantation, and the other third to the perſon ſuing in any of the King's courts there: and if any governor of the plantations ſhall ſuffer any foreign-built veſſel to load or unload goods, before a certificate is produced that the owner or owners are not aliens, and examination made, ſuch governor ſhall be put out of his place.

Goods and merchandiſe ſhall not be imported into, or exported out of any of the plantations which belong to his Majeſty, in any other ſhips but thoſe belonging to the people of England or Ireland, &c. and of which the maſter and three-fourths of the mariners are Engliſh, on forfeiture of all the goods, and the ſhip or veſſel, with its furniture; a third part whereof to the King, another third to the governor where any ſuch default ſhall be, and the other third part to him that will ſeize or ſue for the ſame, &c. And where any abatement or privilege is given in the book of rates to goods imported or exported in ſhipping built in England, Ireland, Wales, &c. or any the King's territories in Aſia, Africa, and America, it is to be underſtood, that the maſter and three-fourths of the mariners be alſo Engliſh; and where that is required, they ſhall be ſuch during the whole voyage, unleſs in caſe of ſickneſs, death, or being taken priſoners, to be proved by the oath of the maſter.

And no ſugars, tobacco, cotton-wool, indico, ginger, fuſtic, or other dying wood, of the growth of any plantations in America, Aſia, or Africa, ſhall be tranſported to any place, other than to ſome Engliſh plantation, or to England, Ireland, Wales, or town of Berwick, on pain to forfeit them, or the value, and the ſhip with her furniture; one moiety to the King, the other to him that ſeizes or ſues for the ſaid forfeiture. And for every veſſel which ſhall ſet out from England, Ireland, &c. for any of the ſaid plantations, bond ſhall be given, with one ſurety, to the chief officers of the cuſtomhouſe of the place from whence ſhe ſails, of 1000 l. if the ſhip be leſs than the burthen of 100 tons, and of 2000 l. penalty if of greater burthen; that if the ſaid veſſel load any of the ſaid commodities at ſuch plantations, it ſhall bring them to ſome port of England or Ireland, &c.

Alſo for all ſhips coming from any other port or place to thoſe plantations, the governors, before the ſhips be permitted to load, ſhall take bond as aforeſaid, that they ſhall carry them to ſome other Engliſh plantations, or to England, Ireland, &c. And every ſhip taking on board any of the ſaid goods before bond given, or certificate produced from ſome cuſtomhouſe in England, &c. of ſuch bonds being there given, ſhall be forfeited; and the ſaid governors ſhall twice in every year return true copies of all ſuch bonds to the officers of the cuſtoms in London.

By the 15th Charles II. c. 7. in regard his Majeſty's plantations beyond the ſeas are inhabited and peopled by ſubjects of the kingdom of England: for the maintaining a greater correſpondence and kindneſs between them, and keeping them in a firmer dependance upon it, and rendering them yet more beneficial and advantageous, in the further employment and increaſe of Engliſh ſhipping and ſeamen, vent of the Engliſh woollen and other manufactures and commodities, &c. and making this kingdom a ſtaple, not only of the commodities of thoſe plantations, but alſo of the merchandiſes of other countries and places, for the ſupplying of them; and it being the uſage of other nations to keep their plantation-trade to themſelves:

It is enacted, That no commodity of the growth or manufacture of Europe ſhall be imported into any of the King's plantations in Aſia, Africa, or America, but what ſhall have been ſhipped in England, Wales, or town of Berwick, and in Engliſh built ſhipping, and whereof the maſter and three-fourths of the mariners are Engliſh, and which ſhall be carried directly thence to the ſaid plantations, on pain to forfeit the ſame, and if imported by water, the veſſel alſo; one third to the King, another to the governor of ſuch plantation, if there ſeized or ſued for, elſe that third to the King likewiſe; the other third to him who will ſeize or ſue for the ſame in any of the King's courts in ſuch plantations, or any court of record in England.

But nevertheleſs it ſhall and may be lawful to ſhip and lade in ſuch ſhips, ſo navigated as aforeſaid, in any ports of Europe, ſalt for the fiſheries of New England and Newfoundland; and in the Maderas and Azores, wines of the growth of the ſaid iſlands; and in Scotland or Ireland to take in ſervants, or horſes, and all victuals of the growth or production of the ſaid places, to tranſport them to the ſaid plantations.

Every perſon or perſons importing or bringing by la

any goods or commodities whatſoever into any of the ſaid plantations, ſhall deliver to the governor of ſuch place, or the officer by him appointed, within twenty-four hours, their names and ſurnames, with a true inventory of the ſaid goods: and no veſſel coming to any ſuch plantation ſhall lade or unlade any goods or commodities, till the maſter have made known the arrival of the veſſel, her name, his own name and ſurname, and ſhall have ſhewn that ſhe is an Engliſh built ſhip, and navigated as before mentioned, or produce ſuch certificate, and have delivered an inventory of her lading, with the places where her goods were taken in, on pain of forfeiting the ſhip and goods, of the growth or manufacture of Europe, not laden in England, Wales, or town of Berwick, to be recovered and divided as aboveſaid.

And if any officers of the cuſtoms in England, &c. ſhall give any warrant for, or ſuffer any ſugar, tobacco, ginger, cotton-wool, indigo, ſpeckle-wood, or Jamaica wood, fuſtic, or other dying wood of the growth of any of the plantations aforeſaid, to be carried into any other country, until they have been firſt unladen and put on ſhore in ſome port or haven in England, or Wales, &c. they ſhall forfeit their places, and the value of ſuch goods; one half to the King, the other to the informer.

By the 22d and 23d of Charles II. c. 26. every ſhip or veſſel that ſhall take on board any ſugar, or other commodities, at any of the Engliſh plantations, till bond be given as directed by the ſtatute 12th Charles II. or a certificate produced from the officers of ſome cuſtomhouſe in England, that ſuch bond hath been given there; or which ſhall carry the ſaid goods to any country or place, contrary to the tenor of ſuch bond; the ſaid ſhip or veſſel, with all her guns, ammunition, furniture, and lading to be forfeited.

But the act 25th Charles II. c. 7. ſeems to have taken off theſe penalties and forfeitures; which ordains, that if any veſſel ſhall come to any of the King's plantations to ſhip ſugar, tobacco, cotton-wool, indico, ginger, fuſtic, or other dying wood of their growth, and bond ſhall not be firſt given, with one ſurety, to bring the ſame to England; there are to be anſwered to the King ſeveral duties on the ſaid goods and commodities, to be paid where and to whom ſhall be appointed in the ſaid plantations, before lading thereof, under ſuch penalties to the officers, and upon the goods, as for non-payment, or defrauding the King of his cuſtoms in England: and in caſe any perſons liable to the payment of theſe duties, ſhall not have monies to anſwer the ſame, the officer ſhall take and accept, inſtead thereof, ſuch a proportion of the commodities to be ſhipped as ſhall amount to the value, according to their current price in the ſame plantations.

The 7th and 8th of William III. c. 22. reciting the acts for encouragement of the navigation of this kingdom, and better ſecuring and regulating the plantation-trade, &c. wherein great abuſes had been committed; for remedy thereof enacted, That no goods or merchandiſes ſhall be imported or exported to, or from any plantation abroad, or from one port or place to another port in the ſame, the kingdom of England, dominion of Wales, or town of Berwick, in any ſhip but what ſhall be built in England, Ireland, or the ſaid plantations, and wholly owned by the people thereof, and navigated with the maſter, and three-fourths of the mariners, of the ſaid places, under pain of forfeiture of ſhip and goods, &c. as by former ſtatutes; except ſhips taken and condemned as prize, to be navigated as aforeſaid, and foreign built ſhips for a certain time employed by the commiſſioners of the navy in bringing naval ſtores, &c. from the plantations for the King's ſervice.

No ſhip ſhall be deemed as a ſhip of the built of England, Ireland, Wales, &c. or any of the King's plantations in America, to be qualified to trade to any of the ſaid plantations, until the proprietor of ſuch ſhip ſhall reſiſter the ſame, and one or more of the owners make oath, *Where the ſhip was built, who are the preſent owners thereof; and that no foreigner, directly or indirectly, hath any ſhare, part, or intereſt therein.* Which oath is to be adminiſtred by the collector and comptroller of the cuſtoms of the port to which the ſhip belongs, if in England, Ireland, Wales, or Berwick; but if in any American plantation, then by the governor, with the principal officer of his Majeſty's revenue there. And which ſaid oath being atteſted by the governor, or cuſtomhouſe officer reſpectively, and having been regiſtered by them, ſhall be delivered to the maſter of the ſhip, for the ſecurity of her navigation, and a duplicate tranſmitted to the commiſſioners of the cuſtoms at London, and there entered in a general regiſter: the veſſel that trades to or from the plantations, without ſuch proof made as here directed, ſhall be liable to ſuch proſecution and forfeiture, as foreign ſhips would be for trading thither. And no ſhip's name regiſtred ſhall be changed without regiſtering the ſhip a-new, under the like penalties; alſo upon ſale of any ſhare, ſuch ſale ſhall be acknowledged by indorſement on the certificate of the regiſter.

All ſhips, whether the King's or merchants ſhips, lading or unlading goods at any of the plantations aforeſaid, and the maſters and commanders thereof, ſhall be ſubject to the ſame rules, viſitations, ſearches, penalties, and forfeitures, as ſhips and their ladings, and the commanders and maſters, are ſubject and liable to in this kingdom, by virtue of 14th Charles II. c. 11. And the officers for collecting his Majeſty's revenue, and inſpecting the plantation-trade, in the ſaid plantations, ſhall have the ſame power and authority for viſiting and ſearching of ſhips, taking their entries, ſeizing goods prohibited, or for which duties ought to be paid, as are provided for the officers of the cuſtoms in England, by the ſaid act 14th Charles II. to enter houſes and warehouſes, to ſearch after and ſeize ſuch goods; and all perſons aſſiſting in the conveyance, or concealment of the goods, or in reſiſting any of the ſaid officers in performance of their duty, and the boats and other veſſels employed therein, ſhall be liable to the like penalties as are provided in relation to prohibited and uncuſtomed goods in this kingdom; and the officers ſubject to the ſame penalties for corruptions, frauds, &c. as here.

In caſes where the governors or officers of the cuſtoms in the plantations ſhall have reaſonable ground to ſuſpect that any certificates produced are falſe and counterfeit, as, that the certificate of having given ſecurity in England is falſe; in that caſe the ſaid governor or officers ſhall require and take ſufficient ſecurity there for the diſcharge of the plantation lading in England, Wales, or town of Berwick; and in caſe there ſhall be cauſe of ſuſpicion, that the certificate of having diſcharged the plantation-lading in this kingdom is falſe, they ſhall not vacate the ſecurity given in the plantations, till they ſhall be informed from the commiſſioners of the cuſtoms in England, that the matter of the certificate is true: and if any perſon ſhall counterfeit, or raiſe any cocket, certificate, return, or permit, for any veſſel or goods, or knowingly make uſe thereof, ſuch perſon ſhall forfeit the ſum of 500 l. and the cocket, &c. ſo falſified ſhall be invalid, and of no effect.

When bonds are taken in the ſaid plantations, purſuant to the afore mentioned act, made 22d and 23d Charles II. the ſureties therein ſhall be perſons of known reſidence and ability in the plantations; and the conditions of the ſaid bonds ſhall be within eighteen months after the date thereof, danger of the ſeas excepted, to produce certificates of having landed the goods therein mentioned in one of his Majeſty's plantations, or in England, Wales, or Berwick; otherwiſe ſuch bonds, or copies thereof, atteſted under the hand and ſeal of the governor or commander in chief, to whom they were given, ſhall be in force, and allowed in all courts.

And it ſhall not be lawful, on any pretence whatſoever, to put on ſhore in the kingdom of Ireland, any merchandiſe of the growth or product of any of his Majeſty's ſaid plantations, unleſs the ſame have been firſt landed in England, Wales, or town of Berwick, and paid the rates and duties wherewith they are chargeable, under the penalty of forfeiture of ſhip and goods, three-fourths to the King, the other fourth to him that ſhall ſue for the ſame. But it is provided, that if any ſhip laden as aforeſaid, ſhall by ſtreſs of weather be ſtranded, or by leakineſs, or other diſability, be driven into any port of Ire-

land, and unable to proceed on her voyage, her goods and merchandiſe may be put on ſhore, but ſhall be delivered into the cuſtody of the chief officer of the cuſtoms there, till the ſaid goods ſhall be put on board ſome other ſhip or veſſel, to be tranſported to ſome port in England, &c.

By the 3d and 4th Anne, c. 8. any native of England or Ireland may ſhip, in any port of Ireland in Engliſh built ſhipping, whereof the maſter, and three fourths of the mariners at leaſt be Engliſh or Iriſh, any white or brown linen cloth which ſhall be of the manufacture of Ireland, and tranſport the ſame into any plantation, territory or place belonging to England, and there traffic with and vend the ſame. But no ſhip coming to any ſuch plantation or place, ſhall break bulk, until notice given to the governor thereof, or perſon appointed by him, of the arrival of ſuch ſhip, her name, and of the maſter; and ſhall have delivered to the ſaid governor, or other perſon, a true invoice of the lading, with a certificate from the chief officer of the port in Ireland where laden, of the particulars thereof, the names and abodes of the exporters, and of two perſons, who have made oath before ſuch chief officer, that the ſaid linen is of the manufacture of Ireland; and till the maſter of the ſhip hath taken oath before the governor, &c. that the goods are the ſame goods took on board by virtue of the certificate, nor until ſuch ſhip hath been ſearched.

And in caſe the maſter ſhall break bulk before ſuch notice given, certificate produced, oath and ſearch made as aforeſaid; or if on ſuch ſearch, any woollen manufacture, neceſſary apparel excepted, or linen not laden in England, nor of the manufacture of Ireland, ſhall be found, the ſhip and furniture, and all goods found therein, ſhall be forfeited; a third to her Majeſty; another third to ſuch governor of the plantation, if they are ſeized, informed againſt, or ſued for; if not, that third alſo to her Majeſty; the other third to him that ſues for the ſame. And ſuch ſhips coming from Ireland to any ſuch plantation, ſhall be ſubject to the like rules, ſearches, and penalties, as coming thither from England are.

If any ſhip laden in England for the plantations, ſhall put into any port in Ireland, and take on board ſuch Iriſh linen, the like certificate and oaths ſhall be made; and then the ſhip, her maſter, and lading, ſhall be liable to ſuch ſearches and penalties, &c. only as they were before the paſſing this act. Suits for offences are to be brought in a twelvemonth after diſcovery of any offence.

The act 6th Anne, c. 30. recites, that her Majeſty, by proclamation, dated June 18, 1704, ſettled the currency of foreign coins, in the colonies and plantations of America, for avoiding the inconveniencies that had ariſen in trade from the different rates the ſame ſpecies of foreign ſilver coin paſt at in the ſaid plantations. See *Money*.

By 8th George I. c. 18. reciting divers acts, by which certain commodities therein enumerated, of the growth, production, or manufacture, of any of the Britiſh plantations in America, Aſia, or Africa, are reſtrained to be imported into this kingdom, or to ſome other of the ſaid plantations, and under the ſecurities and penalties therein particularly mentioned; ſince the making of which ſtatutes, copper ore not being an enumerated commodity, is produced in the plantations, and carried to foreign markets in Europe, without being firſt brought into this kingdom, &c. therefore it is enacted, that all copper ore ſhall be under the like ſecurities and penalties, reſtrained to be imported in this kingdom, as is provided for other goods particularly enumerated by any former laws.

The ſtatute 4th George II. c. 15. ordains, that it ſhall be lawful to import into Ireland, from his Majeſty's plantations in America, all goods and merchandiſes of the growth or manufacture of the ſaid plantations, not being enumerated in any act of parliament. The goods excepted are ſugars, tobacco, cotton-wool, indico, ginger, ſpeckle-wood, or Jamaica wood, fuſtic, or other dying wood, rice, molaſſes, beaver-ſkins, and other furs, copper ore, pitch, tar, turpentine, maſts, yards, and bowſprits, the act 7th and 8th William III. notwithſtanding. But the goods and merchandiſes imported ſhall be in Britiſh ſhipping, whereof the maſter and three-fourths of the mariners at leaſt are Britiſh.

By the 6th George II. c. 13. the planters of the ſugar colonies in America having fallen under great diſcou ragements, ſo as to be unable to improve or carry o the ſugar trade upon an equal footing with the other ſu gar colonies, without ſome advantage and relief given them from Great Britain; it is enacted, that there ſha be paid to his Majeſty, for all ſugars and paneles of th product of any plantations in America, not under the d minions of his Majeſty, which ſhall be imported into a of his Majeſty's plantations, the ſum of 5 s. for eve 100 wt. and for all rum or ſpirits of foreign produc 9 d. for every gallon; and for molaſſes or ſyrups of ſu foreign produce, 6 d. *per* gallon.

By this act, ſugars, paneles, ſyrups, molaſſes, rum, a ſpirits of America, not being of the growth and prod of the Engliſh ſugar colonies, are prohibited to be i ported into Ireland, but ſuch only as are ſhipped in Gr Britain, in ſhips navigated according to law, &c.

The ſtatute 5th George II. c. 22. enacts, That no h or felts ſhall be exported out of any Britiſh plantations, any other Britiſh plantation or place, on penalty of 50 and forfeiture of the goods; and perſons aiding and aſſiſting therein ſhall forfeit 40 l. Any perſon may ſe hats and felts found on ſhipboard, &c. and carry them the King's warehouſe; and commiſſioners of the cuſto &c. in the plantations, permitting entries to be made ſuch hats for exportation, to forfeit 500 l. This ſta alſo regulates the trade of felt-making in the plantati as to apprentices and journeymen, &c. and no perſon habiting in the ſaid plantations ſhall retain in the art of hat or felt-making any negro, upon pain to fo 5 l. for every month. See Naval *Stores*.

Remarks.

Plantations are among ancient, primitive, and here works. When the world was young, it begat m children; but now it is old, it begets fewer; for plantations may juſtly be accounted the children of fo kingdoms. Lord Bacon ſays, he likes a plantation pure ſoil, that is, where people are not diſplanted, to end to plant in others; for elſe, it is rather an extirp than a plantation.

Planting of countries is like planting of woods; be we muſt make account to loſe almoſt 20 years p and expect recompence in the end; for the principal that has been the deſtruction of moſt plantations been the baſe and haſty drawing of profit in the firſt y It is true, ſpeedy profit is not to be neglected, as may ſtand with the good of the plantation, but no ther. It is a ſhameful thing, to take the ſcum o people, ſuch as tranſports, to fill new plantations; they are not induſtrious, they never can be bene The people proper for plantations, are gardeners, bandmen, ſmiths, carpenters, joiners, taylors, ſhe kers, fiſhermen, fowlers, and labourers, with ſom ſurgeons, apothecaries, cooks, and bakers.

In a new plantation, the firſt thing to be regard what kind of proviſions the country yields of it hand, as cheſnuts, walnuts, pine-apples, olives, plumbs, cherries, wild honey, and the like, to ma of them. The next thing to be conſidered is, wha viſions grow ſpeedily, and within the year, as parſnip rots, turnips, onions, radiſh, artichokes, maize, a like. Wheat, barley, and oats, require too much l but the planters may begin with peaſe and beans; b they want leſs labour, and ſerve for meat as well as Rice brings a great increaſe, and is a kind of Above all, there ought to be a ſtore of biſcuit, oat flour, and the like, in the beginning, till bread m had. For beaſts or birds, ſuch ſhould be chiefly ta are leaſt ſubject to diſeaſes, and multiply moſt, as goats, poultry, pigeons, and the like.

Wood commonly abounds too much, and therefo ber may be converted to profit. If there is iron or ſtreams to ſet the mills, iron is a good commodity wood abounds. Making of bay-ſalt, if the cli proper for it, ſhould be put in experience. G ſilk is a likely commodity. Pitch and tar, whe of pines and firs are, will not fail. So drugs an woods, where they are, cannot but yield great Beſides, ſoap-aſhes, and other things, may turn vantage.

A great authority adviſes, that the government of the plantation ſhould not depend upon too many counſellors and undertakers in the country that plants; but upon a temperate number, who ſhould be rather noblemen and gentlemen than merchants, as the laſt always look to the preſent gain. There ſhould be freedom of cuſtoms till the plantation is of ſtrength; and not only freedom from cuſtom, but freedom to carry their commodities where they may make their beſt of them, except there is ſome ſpecial cauſe of caution.

It has been a great endangering to the health of ſome plantations, that they have built along the ſea and rivers, in marſh and unwholſome grounds: therefore, though the planters begin there, to avoid carriage and other inconveniencies, yet they ſhould build rather upwards from the ſtreams, than along them.

In plantations among unciviliſed people, they ſhould not be entertained with trifles, but uſed juſtly and kindly: beſides, they ſhould be frequently ſent over to the planting country, that they may ſee a better condition than their own, and commend it when they return. After all, it is the moſt iniquitous thing in the world, to forſake or deſtitute a plantation, once in forwardneſs; ſuch as Georgia and Nova Scotia, each of them at both the extremities of the Britiſh ſettlements on the continent of America; for, beſides the diſhonour, it is the guiltineſs of blood of many commiſerable perſons. See *Colony*, *Britiſh*, *French*, *Spaniſh*, and *Dutch* America.

PLAPHART, A coin current at Lucern, in Switzerland, for $1\frac{1}{3}$ d. ſterling; and alſo at Cologne in Germany, worth $2\frac{1}{16}$ d. ſterling.

PLAPPER. A ſmall braſs coin ſtruck at Baſil in Switzerland, and not current in the other cantons; being worth 6 raps, or about a halfpenny ſterling.

PLASTER, or *Plaiſter*, *of Paris*, is a fiſſile ſtone, of the nature of a lime-ſtone, ſerving many purpoſes in building; and uſed likewiſe in ſculpture, to mould and make ſtatues, baſſo-relievo's, and other decorations in architecture; being dug out of quarries in ſeveral parts of the neighbourhood of Paris, from whence it is denominated. The fineſt is that of Montmartre. This plaſter is of two kinds, crude, or in the ſtone; and burnt, or beaten. The crude is the native plaſter, as it comes out of the quarry; in which ſtate it is uſed as ſhards in the foundations of buildings. The burnt plaſter is a preparation of the former, by calcining it like lime in a kiln or furnace, and then beating it into powder, and diluting and working it; in which ſtate it is uſed as mortar or cement in buildings.

This, when well ſifted and reduced into an impalpable powder, is uſed to make figures, and other works of ſculpture; beſides, it is of ſome uſe in taking out ſpots of greaſe, &c. in ſtuffs and ſilks.

In the plaſter-quarries is alſo found a kind of falſe talc, with which they counterfeit all kinds of marble.

PLASTERER, or *Plaiſterer*. A perſon who follows a mechanic trade, adapted to thoſe who ſpread mortar upon the walls and cielings of houſes, and alſo white waſh rooms.

PLASTERERS *company of London*, was conſtituted a fraternity by letters-patent of the 16th of Henry VII. dated the 10th of March 1501; which was confirmed by charter of the 19th of Charles II. dated the 11th of June 1667, by the appellation of The maſter and wardens of the guild or fraternity of the bleſſed virgin Mary of plaſterers, London; conſiſting of a maſter, 2 wardens, 32 aſſiſtants, and 77 liverymen; whoſe fine is 8 l. and to tranſact their affairs in, they have a handſome hall in Addle-ſtreet.

PLAT. A popular term, among mariners, &c. for a ſea-chart. See *Chart*.

PLATA, *Plate*, in commerce. A Spaniſh term, ſignifying ſilver; as vellon, which they pronounce vellion, ſignifies copper. Theſe two terms are not only uſed to expreſs the ſpecies of thoſe two metals ſtruck in Spain, but alſo to diſtinguiſh between ſeveral of their monies of accompt. Thus they ſay, a ducat of plata, and a ducat of vellon; a rial of plata, and a rial of vellon; which denominations augment and diminiſh the value by almoſt one half; 34 maravedis of plata being equal to 63 of vellon; and the piece of eight being only 272 maravedis of plata, but 510 vellon. See *Piaſtre*.

PLATA. A ſmall iſland in the Pacific ocean, near the coaſt of Peru, and province of Quitto, in South America, ſituated in 81 deg. of W. lon. and 1 deg. of S. lat. 200 miles weſt of Quitto, ſubject to Spain.

PLATA. A great river of Peru, which riſes in the province of La Plata, and runs S. E. till it joins the river of Paragua; after which the united ſtream bears the name of Plata, till it diſcharges itſelf into the Atlantic ocean below the city of Buenos-Ayres.

PLATE, in commerce, denotes gold or ſilver wrought into veſſels for domeſtic uſe. See *Gold*, *Goldſmith*, *Silver*, and *Embroidery*.

The drawback on Britiſh wrought plate was, by the ſtatute of the 6th George II. granted from 1ſt June 1720 for ever. Silver-plate made in Great Britain, the oz. troy 6 d. Which duty, having been paid by the maker, may be repaid upon exportation to foreign parts by way of merchandiſe, provided ſufficient ſecurity be given to the collector of the port before ſhipping, that it ſhall not be relanded in Great Britain; whereupon the collector of the cuſtoms is to grant a debenture, expreſſing the true kinds and quantities, with the ſhipping, certified by the ſearcher; which being produced to the collector of the duty, he is forthwith to repay the exporter; or, for want of money, to certify the ſame to the commiſſioners.

But by 12th George II. no drawback or allowance ſhall be paid on the exportation of plate or manufactures of ſilver, in caſe the ſame ſhall have been made ſeven years or more before the day of the entering the ſame for exportation.

PLATILLA, is a term among the Spaniards for a kind of very white linen manufactured at Cholet in Anjou, and Beauvais in Picardy, in France; as alſo at Breſlaw in Sileſia. Their uſual length is 5 ells, and breadth 3-4ths and 1-half; their chief deſtination being for Spain, and ſometimes for the coaſts of Africa.

PLATTS, on board a ſhip, are flat ropes, made of rope-yarn, and woven one in another; their uſe being to ſave the cable from galling the hauſe, or to wind about the flukes of the anchors, to ſave the pendant of the fore-ſheet from galling againſt them.

PLIMOUTH, or *Plymouth*. A port-town of Devon, ſituated in 4 deg. 27 min. of W. lon. and 50 deg. of N. lat. 40 miles S. E. of Exeter; a ſtation for building and laying up ſhips of war belonging to the royal navy, and well ſecured from enemies by its fortifications towards the ſea and land.

PLIMOUTH, is alſo a port-town of New England in North America, capital of the county of Plimouth, and ſituated on the ſouth-end of a bay of the ſame name, in 71 deg. of W. lon. and 41 deg. 25 min. of N. lat. being the firſt town the Engliſh built in New England, and once the capital of a diſtinct colony, but now united with the Maſſachuſets.

PLIMPTON. A borough town of Devon, ſituated near the Engliſh channel, 36 miles S. W. of Exeter.

PLOK-PENIN. A term uſed in the public ſales at Amſterdam, for a little ſum given to the laſt bidder; being a kind of earneſt given, whereby it is ſignified, that the commodity is adjudged to him.

The plok-penin differs according to the quality of the commodity, and the price of the lot: ſometimes it is arbitrary, and depends on the pleaſure of the buyer, and ſometimes regulated by the orders of the burgo-maſters. There are alſo merchandiſes where there are no plok-penins, and others where it is double.

PLOMO-RONCO. The richeſt of all the mineral ſilver ore that is taken out of the mines of Chili and Peru. It is black, and mixed with lead; from whence it receives its name; and this mixture helps to melt it without having recourſe to quickſilver; becauſe the lead, agitated by the fire, eaſily evaporates, and leaves the ſilver quite pure.

PLUMBER, or *Plummer*. A perſon who makes pipes for water-works, covers houſes or churches, or does any ſort of work in lead. See *Plumbery*.

PLUMBERS *company of London*, though it is of a conſiderable ſtanding, was only incorporated by letters-patent of the 9th of James I. dated the 12th of April 1611, by the appellation of The maſter, wardens, and commonalty of the myſtery of plumbers of the city of London.

This company, which is governed by a maſter, 2 wardens, and 24 aſſiſtants, has a livery, conſiſting of 57 of its members; who ſeverally, upon their admiſſion, pay a fine of 10 l. and tranſact their buſineſs in a ſmall, but convenient hall, ſituated in Chequer-yard, Dowgate-hill.

PLUMBERY. The art of caſting, preparing, and working lead, and of uſing it in buildings, &c. See *Lead*.

The lead uſed in plumbery is furniſhed from the lead-works in large ingots, or blocks, called pigs of lead, ordinarily weighing about a hundred pounds a piece. As this lead melts very eaſily, it is eaſy to caſt figures thereof, by running it into moulds of braſs, clay, plaſter, &c. But the chief article in plumbery is the ſheets, and pipes of lead, which make the baſis of the plumber-work in building.

PLUMBUM *Uſtum*, or *Burnt lead*. See Burnt *Lead*.

PLUSH. A ſort of ſtuff, partly made of wool, and partly of goats hair, ſometimes of hemp and goat-hair, and ſometimes entirely of ſilk.

PO. A great river of Italy, which riſes in the Alps, dividing France from Italy; and running firſt eaſt, ſoon after turns directly north, and viſits Turin, the capital of Piedmont, where it receives the river Doria, and continues its courſe north to Chivazzo; then turns eaſt again, paſſing through the territories of Piedmont, Milan, Montferat, Parma, Mantua, Ferrara, and Venice, diſcharging itſelf into the gulph of Venice by ſeveral channels; all which carry the name of Po, as well as ſome other ſtreams which run parallel to them. The Po receives in its courſe the two rivers Doria, the Leſſer Tanaro, Oglio, Adda, and Mincio; and paſſes by the towns of Verue, Caſal, Valenza, Placentia, and Cremona.

POET, or *Poed*. A large weight uſed in Muſcovy, particularly at Archangel, weighing about 33 lb. avoirdupois; whereby hemp, potaſhes, and ſuch other coarſe merchandiſe, are weighed.

POINT, in navigation and geography. Points of the horizon, or of the compaſs, are certain points formed by the interſections of the horizon with vertical circles. The number of theſe points, therefore, is really the ſame with that of the points conceived in the horizon, that is, infinite; though in practice only 32 of them are diſtinguiſhed. See *Compaſs*.

Some uſe point for the interſection of a vertical circle with a circle parallel to the horizon; and even ſome, for the ſegment of a vertical intercepted between the meridian and horizon, or a circle parallel thereto. The points are ſhewn by right lines drawn from a point aſſumed in a horizontal plane: but a point of the compaſs is popularly taken for a 32d part of the whole, or for an arch of 11 deg. 15 min. half of which, being 5 deg. 37½ min. is called a half point; and half of that, or 2 deg. 48¾ min. a quarter point.

Theſe points of the compaſs are divided into cardinal and collateral.

Cardinal points are the interſections of the horizon and meridian, called the north and ſouth points; and the interſections of the horizon with the prime vertical, called the eaſt and weſt. Theſe coincide with what the Latins call *cardines mundi*, and are a quadrant, or 90 degrees, diſtant from each other.

Collateral or intermediate points, are thoſe lying between the cardinal points; which are either primary, that is, thoſe equidiſtant from the two cardinals, as north-eaſt, ſouth-weſt, &c. or ſecondary, which are again either of the firſt order, or ſuch as are equidiſtant from a cardinal, and the next primary, as north-north-eaſt; or of the ſecond order, that is, equidiſtant between a cardinal or primary and firſt ſecondary, as north-eaſt by north. The primary collateral points therefore are 45 deg. diſtant from the cardinals; the firſt ſecondaries 22 deg. 30 min. from the cardinal and next primary collateral; and the ſecondaries of the ſecond order 11 deg. 15 min. from a cardinal, or firſt collateral, and a ſecond.

POINT, among ſeamen, is alſo uſed for a cape, or headland, jutting out into the ſea. See *Cape*.

They ſay, two points of land are one in another, when they are ſo in a right line againſt each other, as that the innermoſt is hindered from being ſeen by the outermoſt.

POINT, in perſpective, is a term uſed for various parts or places, with regard to the perſpective plane.

POINT, in the manufactories, is a general term uſed for all kinds of laces wrought with the needle: ſuch are point de Venice, point de France, point d' Eſpagne, point de Genoa, &c. which are diſtinguiſhed by the particular œconomy and arrangement of their points.

POINT, is alſo uſed ſometimes for lace woven with bobbins, as Engliſh point, point de Mechlin, point de Havre, &c.

POINTING, among ſeamen, the marking on the chart in what point or place the veſſel is: but all the difficulty in pointing a chart ariſes from our ignorance of the longitude. The pilot eaſily finds the latitude by taking the height of the pole; though for the longitude, there is no coming at it but by computation, which is very uncertain.

POINTING *the cable*, is a ſea term, denoting the untwiſting it at the end, and leſſening the yarn, and twiſting them again; making all faſt with a piece of marling to keep it from ravelling out.

POLA. A port-town of Iſtria, in the territory of Venice, ſituated in 14 deg. 35 min. of E. lon. and 45 deg. of N. lat. at the ſouth point of the peninſula of Iſtria, 90 miles S. E. of Venice.

POLAND, in its utmoſt extent, including regal and ducal Pruſſia, is bounded by the Baltick, Livonia, and Ruſſia on the north; by Ruſſia and Leſſer Tartary on the eaſt; by Beſſarabia, Moldavia, Tranſilvania, and Hungary on the ſouth; and by Pomerania, Brandenburg, and Moravia towards the weſt; extending 600 miles from north to ſouth, and 700 miles from eaſt to weſt, being ſituated between 16 and 34 deg. of E. lon. and 46 and 57 deg. of N. lat.

The principal rivers are the Weiſel, or Viſtula, the Warta, the Nieper, the Nieſter, the Dwina, the Bog, the Bug, and the Niemen.

Poland is uſually divided into eight parts. Proper Poland, the great dukedom of Lithuania, Pruſſia, Samogitia, and Courland; Warſovia, Polachia, and Poleſia; Red, or Little Ruſſia, Podolia, and the Ukrain.

Proper Poland is divided into the greater and leſſer.

In the Greater Poland are contained ſeven palatinates, or governments; the palatinate of Poſnania, Kaliſh, Siradia, Rava, Lanſchet, Breſty, and Inowlocz.

The chief towns in Poſnania, are Poſnan, ſituated on the river Warta; and Gneſna, ſituated in the marſhes, and anciently the metropolis of the whole kingdom; neither of which have any conſiderable trade.

In the palatinate of Kaliſh, the chief towns are Kaliſh and Kolo. The chief town in Siradia is of the ſame name. In the palatinate of Rava, the chief towns are Rava and Lowitz. In Lanſchet the chief town is Lancicia; but none of theſe towns, nor any of the reſt in the greater Poland, afford any thing remarkable for trade.

The Leſſer Poland is bounded by great Poland and Warſovia on the north; by Red Ruſſia on the eaſt; by Hungary on the ſouth; and by part of Germany towards the weſt. In this province are contained three palatinates; Cracow, Sendomir, and Lublin.

In the palatinate of Cracow, the chief town is Cracow, once the metropolis of the kingdom, ſituated in 50 deg. of N. lat. in a ſpacious plain near the Viſtula. It is the largeſt and beſt built town in Poland, but has no great trade.

In the palatinate of Lublin, the chief city is of the ſame name; which is a ſmall well built town, much frequented by Turkiſh, Muſcovite, Armenian, and German merchants; eſpecially at the four great marts, which are annually held here,

In the palatinate of Wilna, the chief town is Wilna, ſituated at the confluence of the rivers Wilia and Wilna, being a large populous trading city, the capital of Lithuania. The river is large and navigable, on which they tranſport their merchandiſe to Dantzick.

To the weſtward of Wilna lies the palatinate of Troki, in which Grodno, ſituated on the river Niemen, is the only

only place of any conſiderable trade; but it is meanly built of wood.

Pruſſia extends from 53 to 55 deg. of N. lat. being bounded by the Baltick ſea on the north; by Lithuania and Samogitia on the eaſt; by proper Poland and Warſovia towards the ſouth; and by Pomerania towards the weſt. It is in length about 200 miles, and in breadth upwards of 100 in the weſtern part, but not ſo much towards the eaſt. It is divided into Regal and Ducal Pruſſia. Regal Pruſſia takes up the weſtern part, and is ſubject to Poland; and Ducal Pruſſia is the eaſtern part, ſubject to the Elector of Brandenburg, now King of Pruſſia.

Regal Pruſſia is divided into three palatinates; Pomerelia, Culm, and Marienburgh. Pomerelia is ſituated on the weſt ſide the river Weſel, the chief town of which is *Dantzick*, ſituated in 19 deg. of E. lon. and 54 deg. of N. lat. 140 miles N. of Warſaw, and 70 S. W. of Koningſburg, containing 200,000 people. It is the moſt mercantile town of all thoſe ſituated on the Baltic, and the river Weſel or Viſtula, upon whoſe banks it is built, about a league from its mouth, brings it all the commodities of Poland, and ſerves to ſend back to the Poliſh provinces thoſe depoſited in the warehouſes of Dantzick.

Ships which draw more than eight feet of water cannot go up to the canal, which affords a communication between the Viſtula and the town: ſo that they muſt unload in the road, which is excellent; and a part of the cargo muſt be brought in barks called bordins.

The corn-warehouſes eſtabliſhed at Dantzick, in an iſland formed partly by the waters of the canal of the Viſtula, are in great reputation throughout Europe; which they certainly merit, if there is no exaggeration in what is ſaid of eight hundred thouſand tons of corn exported yearly by foreigners.

None but the burghers are privileged to purchaſe the Poliſh corn, when once entered their town; but they are obliged alſo to take all that enters according to the price regulated by the magiſtracy.

Beſides, foreigners have not the liberty of ſending their merchandiſe into the country, or of ſelling them to any other perſons than the Dantzickers; but they enjoy at leaſt that of putting them in warehouſes, till they can conveniently diſpoſe of them.

The Dutch ſeem very zealous for the liberty of this city; and they would not willingly ſee it ſubject to any power, not even to the Poles, who are however its real ſovereigns; but ſuffer the Dantzickers to live according to their own laws; contenting themſelves that the public coins ſhould be ſtruck, and juſtice adminiſtred, in the name of the King of Poland.

The cargoes of Engliſh, Dutch, and French ſhips for Dantzick are woollen cloths, ſilks, ſpice, and drugs for dying, other drugs for medicine, Italian cream of tartar, ſugar, oil, paper, leather variouſly dreſſed; laſtly, French ſalt, wine, and brandy.

The three laſt commodities are for Pruſſia; the Poles having in their country the ſalt of Waliſca, and eſteeming no other ſpirits than thoſe made of corn; nor no other wines, but thoſe of Hungary, particularly thoſe of Tokai; and the reſt they furniſh themſelves with at Dantzick.

Beſides corn, which is the principal commodity of Dantzick, foreigners export alſo maſts for ſhips, oak and fir-timber for carpenters work, hemp, flax, moſt kinds of aſhes, honey, wax, tallow, ſteel, iron, copper, lead, ſalt-petre, tar, yellow amber, hides, furs, wool, and Poliſh ſalt, when the Engliſh and Dutch cannot have French.

The Dantzickers trade to all the countries in Europe; but never to the Eaſt or Weſt Indies.

On the weſtern ſide of the Viſtula lies the palatinate of Culm, which has no place of trade.

In the palatinate of Marienburgh is the city of *Elbing*, ſituated on a river of the ſame name, which diſcharges itſelf into a bay of the Baltick ſea, and is about 30 miles to the eaſtward of Dantzick, with which it has a communication by that bay. The ſituation of Elbing is exceeding pleaſant; it is very populous, has a good trade, and is divided into the old and new town.

The merchandiſes exported from Poland conſiſt of wheat, rye, barley, oats, pulſe, and generally of all kinds of grain; beſides oxen, ſheep, horſes, hogs, hemp, flax, linen, hops, hides, tallow, leather, furs brought out of Muſcovy and dreſſed here, Poliſh furs, honey, wax, amber, pot aſhes, pitch, maſts, planks, ſalt, beer, vitriol, nitre, lead, iron, copper, pit-coal, glaſs, earthen-ware, and wool, of which there is great plenty, and tolerably good. Their imports conſiſt in woollen cloth, ſilks, tapeſtry, rich furs, jewels, gold and ſilver wrought and unwrought, wines, ſpices, ſalt-fiſh, fruit and tin. But notwithſtanding their exports are ſo large and valuable, their imports far exceed them, and the balance of trade is vaſtly againſt them. As to manufactures, they have none, except thoſe of linen, leather, hard-ware, and earthen-ware; and the better ſort of people, except in Pruſſia, look upon every thing that relates to trade or mechanick employments beneath their care, ſpending their revenues in rich habits, furniture, ſpendid equipages, and a profuſe way of living.

Ducal, or *Brandenburg Pruſſia*, from whence the King of Pruſſia takes his title, is bounded by the Baltick ſea on the north; by the province of Lithuania on the eaſt; by Warſovia on the ſouth; and by Regal or Poliſh Pruſſia towards the weſt: the chief town being *Koningſburgh*, the capital of the province, ſituated at the mouth of the river Pregel, about 80 miles to the eaſtward of Dantzick. It is a large, well built, populous city, and a place of good trade; for the bay, or Friſchaff, into which the river Pregel diſcharges itſelf, opens to the Baltic ſea, and forms a commodious port for this city. But it is at Pilaw, a conſiderable port at the entrance of this bay, that ſhips are diſburdened of part of their cargo for going to Koninſburgh, which is about 30 miles diſtant, and which they cannot make to without drawing only 10 feet of water.

This inconveniency is attended with two others, ſtrangers not being allowed to depoſite their merchandiſe in a warehouſe till a favourable time for a ſale comes; nor to land them, by the means of the canals, for ſelling them to any other perſons than the inhabitants of the town.

Beſides the merchandiſes of the growth of the province, the Pregel, which has its ſource in Lithuania, ſerves for tranſporting to Koningſburgh the commodities of Poland, as oak-timber for coopers, fir-planks, wheat, rice, barley, millet, hides, furs, hemp, but of an inferior quality to that of other parts of the north; flax, honey, wax, tallow, and aſhes.

The merchandiſes proper for this trade are woollen cloths, ſalt, iron, lead, tin, ſome wines, a little brandy, and vinegar, butter, cheeſe, ſugar, and rixdollars.

Memel is another port, ſituated 70 miles N. of Koningſburgh; but there are no other places of trade.

The duchy of *Courland* is ſituated between 21 and 26 deg. of E. lon. and between 56 and 57 deg. of N. lat. bounded by the river Dwina, which divides it from Livonia on the north; by Lithuania on the eaſt; by Samogitia on the ſouth; and the Baltic ſea on the weſt; being about 130 miles long, and 30 broad. It is uſually reckoned a province of Poland; but the Courlanders elect their own princes, and are governed by their own laws: however, they are influenced in their choice either by the Poles or the Ruſſians, and the latter ſeem to have the greateſt influence on them at preſent; though the ducal throne has been vacant for ſome years.

The capital city is Mittau, ſituated in 24 deg. of E. lon. and 56 deg. 40 min. of N. lat. Goldingen is 60 miles W. of Mittau. Libaw is a port-town ſituated on a bay of the Baltic, 80 miles W. of Mittau; and there are alſo the ports of Windaw, Angermund, and Pienen: but the linſeed and flax of this country are the beſt of Europe, and conſtitute the principal commerce of this duchy.

Poland is one large plain, from whence it is ſaid to derive its name. The only hills are the Carpathian mountains, which divide it from Hungary and Tranſilvania on the ſouth. There are ſome large foreſts of pines and firs

in Lithuania: but the only ſea that borders on Poland is the Baltic. The government does not only reſemble a republic, but is really ſo, and ſtiled ſuch by the Poles themſelves in their acts of ſtate; for the legiſlative power is lodged in the ſtates, and the executive power in the ſenate, of which the King is only preſident when he is preſent; and they can meet and conſult without him. The crown is elective, and the eſtabliſhed religion is popery, except in the trading towns near the Baltic, where the Lutheran religion is profeſſed: there are alſo a multitude of Mahometan Tartars in Lithuania, great numbers of Jews, and many of the Greek religion. The King has a clear revenue of 140,000 l. a year; but he enjoys only the ſhadow of royalty.

POLAR *Circles*, are two leſſer circles of the ſphere, parallel to the equator, at the diſtance of 23 degrees from each pole, ſerving to mark the beginning of the frigid zones.

POLCHEN. A ſmall copper coin current at Dantzic, 60 of which make the florin, or 1 s. 6 d. ſterling.

POLDING, or *Poluſca*. See *Poluſca*.

POLE, in aſtronomy, one of the extremities of the axis whereon the ſphere revolves: theſe two points, each 90 degrees diſtant from the equator, being called by way of excellence, the poles of the world.

POLE, in geography, is the extremity of the earth's axis, or one of the points on the ſurface of our globe, thro' which the axis paſſes.

The altitude, or elevation of the pole, is an arch of the meridian intercepted between the pole and the horizon. To find the elevation is a very popular problem in aſtronomy, geography, and navigation; this, and the latitude of the place being always the ſame.

To obſerve the altitude of the pole. With a quadrant, obſerve both the greateſt and leaſt meridian altitude of the pole ſtar. See *Meridian*.

Subtract the leaſt from the greateſt, and divide the difference by 2; the quotient is the ſtar's diſtance from the pole, which, added to the leſſer altitude found, gives the elevation of the pole required.

Thus M. Couplet the younger, at Lisbon in 1697, in the end of September, obſerved the greateſt meridian altitude 41 deg. 5 min. 40 ſec. the ſmalleſt 36 deg. 28 min. the difference whereof is 4 deg. 37 min. 40 ſec. one half whereof 2 deg. 18 min. 50 ſec. added to the leſs, gives 38 deg. 46 min. 50 ſec. the altitude of the pole of Lisbon.

The altitude of the pole, together with the meridian line, being the baſis of all aſtronomical obſervations; to determine it with the greater accuracy, the meridian altitudes muſt be corrected from the doctrine of refractions.

By means hereof M. Couplet, ſubtracting 1 min. 25 ſec. in the propoſed example, leaves the corrected altitude 38 deg. 45 min. 25 ſec. Hence, 1. the altitude of the pole being ſubtracted from 90 deg. leaves the altitude of the equator.

2. If the greateſt meridian of this ſtar exceed the altitude of the equator, the latter ſubtracted from the former, leaves the declination of the ſtar northward; if the altitude of the ſtar be leſs than that of the equator, the former ſubtracted from the latter, leaves the ſtar's declination ſouthward. See *Declination*.

Dr. Hook, and ſome others, imagined the height of the pole, and the poſition of the circles in the heavens, in reſpect of thoſe of the earth, to be changed from what they anciently were: though M. Caſſini thinks there is no ground for ſuch ſurmiſe; but that all the difference we now find in the latitudes of places, &c. in reſpect of the ancient accounts, ariſes from the inaccuracies of the ancient obſervations. Indeed, it is no wonder they ſhould err in their obſervations, conſidering what inſtruments they uſed. He adds, it is probable there may be ſome variation in the height of the pole; but thinks this never exceeds two minutes; and that even this will vaniſh, after it is arrived to its higheſt difference.

POLE is alſo a copper coin ſtruck in Boghar, an ancient province of Perſia, at preſent governed by its own prince: 120 poles make the ſilver coin of the ſame town; which is worth about 6 d. ſterling; though the value is not always fixt, riſing and falling at the diſcretion of the prince.

POLERON. One of the Banda, or nutmeg iſlands in the Indian ocean, ſituated in 128 deg. of E. lon. and 4 deg. of S. lat. See *Banda* Iſlands.

POLICANDRO. A ſmall iſland of the Turkiſh Archipelago, ſituated in 25 deg. of E. lon. and 36 deg. 30 min. of N. lat.

POLICY *of Inſurance*, or *Aſſurance of ſhips*, is a contract, or convention, whereby a perſon takes upon himſelf the riſques of a ſea-voyage, obliging himſelf to make good the loſſes and damages that may befal the veſſel, its equipage, tackle, victualing, lading, &c. either from tempeſts, ſhipwrecks, pirates, fire, war, repriſals, &c. in part or in the whole; in conſideration of a certain ſum, of ſeven, eight, or ten *per cent.* more or leſs, according to the riſque run; which ſum is paid down to the aſſuree by the aſſuree, upon his ſigning the policy. See *Inſurance*. The number of inſurers at Amſterdam is not above fifty or ſixty perſons; yet is their wealth and character ſuch, that a man never fails of an aſſurer, be the countries or ports what they will, the cargo ever ſo rich, or the danger every ſo imminent.

POLICY *of Inſurance*, or *Aſſurance of houſes*, is an inſtrument formed on the model of that for ſhips, whereby a perſon, or community of perſons, take on themſelves the riſques and damages that may befal houſes, their furniture, in whole or in part, &c. from fire, in conſideration of a certain ſum, or ſums, to be paid by the aſſurer according to the terms of the agreement. See *Inſurance*.

POLICY *of Inſurances of lives*, is an inſtrument whereby a ſociety of perſons, erected into a corporation, &c. oblige themſelves to pay a certain ſum of money, as a hundred pounds, upon the death of a perſon whoſe life they aſſure, in conſideration of a ſum of money; as one guinea paid quarterly to the inſurers during the life of the perſon aſſured. See *Inſurance*.

POLITICAL *Arithmetic*, is the application of arithmetical calculations to political uſes and ſubjects, as the public revenues, number of people, extent and value of lands, taxes, trade, commerce, manufactures, or whatever relates to the power, ſtrength, riches, &c. of any nation or commonwealth.

The chief authors who have attempted calculations of this kind are Sir William Petty, Major Grant, Dr. Halley, Dr. Davenant, and Mr. King; the principal points ſettled by them being as follows.

According to Sir William Petty's computations, tho' the land of Holland and Zealand be not above 1,000,000 acres, nor that of France leſs than 8,000,000; yet the former are near a third part as rich and ſtrong as the latter. That the rents of lands in Holland are to thoſe in France, as 7 or 8 to 1. That the people of Amſterdam are 2-3ds of thoſe of Paris or London; which, according to him, do not differ above a twentieth part from one another. That the value of the ſhipping of Europe is about 2,000,000 of tuns; whereof the Engliſh have 500,000, the Dutch 900,000, the French 100,000; the Hanburghers, Danes, Swedes, and Dantzickers have 250,000, and Spain, Portugal, Italy, &c. about as much. That the value of goods exported yearly from France into all parts was quadruple of that exported into England alone, and conſequently in all about 5,000,000 l. What was then exported out of Holland into England was worth 300,000, and what was exported thence into all the world 18,000,000 l. That the money yearly raiſed by the French King in time of peace is about 6½ millions ſterling; and that the monies raiſed in Holland and Zealand are about 2,100,000 l. and in all the provinces together 3,000,000 l. That the people of England are about 6,000,000, and their expences at 7 l. *per annum* a head 42,000,000 l. or 800,000 l. a week. That the rent of the lands is about 8,000,000 l. and the intereſts and profits of the perſonal eſtates as much. The rent of houſes in England 4,000,000 l. That the profits of the labour of all the people is 26,000,000 l. yearly. That in Ireland the people amount to about 1,200,000. That the corn ſpent in England at 5 s. the buſhel for wheat

and 2 s. 6 d. for barley, amounts to 10 millions *per annum*. That the navy of England, then, required 36,000 men to mann it, and other trade and ſhipping about 48,000. That in France to manage the whole ſhipping-trade, there were required 15,000 men. That the whole people of France are about 13 millions and a half; and thoſe of England, Scotland, and Ireland, together, about 9 millions and a half. That in the three kingdoms are about 20,000 churchmen, and in all France 270,000. That in the dominions of England are above 40,000 ſeamen, and in France not above 10,000. That in England, Scotland, and Ireland, and all other dominions depending thereon, there were then about 60,000 ton of ſhipping, which is worth about 4 millions and a half in money. That the ſea-line round England, Scotland, and Ireland, and the adjacent iſles, is about 3800 miles. That in the whole world are about 300 millions of people; whereof thoſe with whom the Engliſh and Dutch have any commerce, are not above 80 millions. That the value of commodities, traded for in the whole, is not above 45,000,000 l. That the manufactures exported out of England, amount to about 5,000,000 l. *per annum*. Lead, tin, and coal to 500,000 l. *per annum*. That the value of the French commodities, then, brought into England, did not exceed 1,200,000 l. *per annum*. That the whole caſh of England, in current money, was then about 6 000,000 l. ſterling.

Dr. Davenant gives ſome good reaſons why Sir William Petty's numbers are not to be entirely depended upon; and therefore advances others of his own, founded on the obſervations of Mr. King.

Some of the particulars are; that the land of England is 39 millions of acres; that the number of people, according to his account, is about 5,545,000 ſouls, they increaſing about 90,000 every year; allowances being made for plagues, &c. wars, ſhipping, and the plantations. The people in London he reckons at 530,000: thoſe in the other cities and market-towns in England 870,000; and thoſe in the villages and hamlets at 4,100,000. The yearly rent of the lands he accounts to be 10,000,000l. that of the houſes and buildings 2,000,000 l. *per annum*. The produce of all kinds of grain he reckons to be worth 9,075 000 l. in a year moderately plenty; the rent of the corn-lands annually 2,000,000 l. and their neat produce above 9,000,000 l. The rents of the paſtures, meadows, woods, foreſts, commons, heaths, &c. 7,000,000 l. The annual produce by cattle, in butter, cheeſe, and milk, he thinks is about 2,500,000 l. The value of the wool yearly ſhorn about 2,000,000 l.; of horſes yearly bred, about 250,000 l.; of the fleſh yearly ſpent as food, about 600 000 l.; of the hay yearly conſumed by horſes, about 1,300,000 l.; of the tallow and hides, about 600,000 l.; of the hay conſumed by other cattle 1,000,000 l.; of the timber yearly felled for building 500,000 l.; of the wood yearly ſpent in firing, &c. about 500,000 l. The land of England, to its inhabitants, is now about 7 $\frac{1}{4}$ acres *per* head. The value of the wheat, rye, and barley, neceſſary for the ſuſtenance of England, amounts to at leaſt 6,000,000 l. ſterling *per annum*. The value of the woollen manufacture made in England is about 8,000,000 l. *per annum*; and exports of all kinds of the woollen manufacture amount to above 2,000,000 l. *per annum*. The annual income of England, on which the whole people live and ſubſiſt, and out of which taxes of all kinds are paid, is now about 43,000,000 l. That of France 81,000,000 l.; and that of Holland 18,250,000 l. Major Grant, in his obſervations on the bills of mortality, computes that there are 39,000 ſquare miles of land in England; that in England and Wales there are 4,600,000 ſouls; that the people of London are about 640,000, one-14th part of the people of England; that in England and Wales are about 10,000 pariſhes; that there are 25 millions of acres in England and Wales, which is about 4 acres to every head; that but 64 out of 100 of the children born are alive at 16 years old; that but 40 of 100 are alive at 16 years end; that but 25 of 100 at 26 years end; that but 16 at 36 years end; that but 10 of 100 at 46 years end; that but 6 out of 100 at 56 years end; that but 3 out of 100 at 66 years end; and that but 1 out of 100 at 76 years end; and that London doubles itſelf in about 64 years.

Sir William Petty, in his diſcourſe about duplicate proportion, further tells us, it is found by experience, that there are more perſons living between 16 and 26 than of any other age; and, laying down that as a ſuppoſition, he infers that the ſquare roots of every number of mens ages under 16, whoſe root is 4, ſhew the proportion of the probability of ſuch perſon's reaching the age of 70 years. Thus, it is 4 times more likely that one of 16 years of age lives to be 70, than a child of one year old. It is thrice as probable, that one of 9 years lives to be 70, as ſuch a new-born child, &c. That the odds is 5 to 4, that one of 25 dies before one of 16 years; that it is 6 to 5, ſtill as the ſquare roots of the ages, that one of 36 years dies before one of but 25 years of age; and ſo on according to any declining age to 70, compared with a number between 4 and 5; which is the root of 21, the law age.

But none of theſe calculations ſeem to be rightly founded. Dr. Halley has made a very exact eſtimate of the degrees of the mortality of mankind, from a curious table of the births and burials at the city of Breſlau, the capital of Sileſia; with an attempt to aſcertain the price of annuities upon lives, from which he derives the following uſes. 1. To find in any multitude or body of people, the proportion of men able to bear arms, which he reckons from 18 to 56 years old; and accounts about 1-4th of the whole. 2. To ſhew the different degrees of mortality, or rather vitality, in all ages; by which means he finds the odds there is, that any perſon of any age does not die in a years time, or before he attains ſuch an age. 3. To ſhew of what number of years it is an even lay that ſuch a perſon ſhall die; and finds, for inſtance, that it is an even lay, that a man of 30 years of age, lives between 27 and 28 years. 4. To regulate the price of inſurances upon lives. 5. And the valuation of annuities upon lives. 6. How to value 2 or 3 lives after the ſame manner. See *Annuity*.

From the whole he makes two very good obſervations: 1. How unjuſtly we uſe to complain of the ſhortneſs of our lives; for that it appears, that one half of thoſe that are born do not live above 17 years.

2. That the growth and increaſe of mankind is not ſo much ſtinted by any thing in the nature of the ſpecies, as it is from the curious difficulty moſt people make of venturing on the ſtate of marriage; and therefore that celibacy ought to be every way diſcouraged by all wiſe governments; and thoſe who have numerous families of children to be countenanced and encouraged by good laws; ſuch as the *jus trium liberorum* among the Romans.

POLIUM, *Poley*. A medicinal plant, which makes an ingredient in the treacle of Andromachus: it grows in mountainous places, and is thence denominated montanum. The tops of its flowers are eſteemed cephalic, proper to promote urine, and the menſes; as alſo to prevent putrefaction.

POLL DAVY. A coarſe hempen cloth, chiefly manufactured in Bretagne in France, uſed for the ſails of ſhipping, and bought up in great quantities by the Engliſh in time of peace.

POLOMITTS, or *Polimits*. A kind of ſlight camblet, manufactured in French Flanders, whoſe length is indeterminate, but breadth is uſually 1-4th and a half.

POLTYNA. A ſilver coin of Ruſſia, worth 2 s. 3 d. ſterling, two poltynas making the ruble.

POLUSCA. A ſmall ſilver coin, ſtruck and current in Ruſſia, worth the half of the copeac; 200 poluſcas making the ruble, or 4 s. 6 d. ſterling.

POMATUM, or *Pomado*. A compoſition of apples, with lard and roſe-water, uſed by way of unguent on many occaſions; particularly for diſeaſes of the ſkin, pimples, ſcurfs, &c. to ſoften the hands, render the ſkin ſmooth, and the complexion freſh. See *Unguent*.

Pomatums are occaſionally made with jeſſamine, oranges, jonquils, tuberoſes, &c. that is, they are perfumed with the odour of theſe flowers. The beſt is ſaid to be that prepared with kid's greaſe, pippins, and orange ſliced, with a glaſs of roſe-water, and half a glaſs of white-wine, boiled

boiled and ſtrained, and at laſt ſprinkled with oil of ſweet almonds.

The unguentum pomatum preſcribed in the college diſpenſary, conſiſts of hog's lard, ſheep's ſuet, the apple called pome-water, roſe-water, and orrice root, boiled till the apples are ſoft, ſtrained, and perfumed with oil of rhodium. Dr. Quincy obſerves, that the apple is of no ſignificance at all in the recipe, and that the common pomatum ſold in the ſhops, is only lard beat into cream, with roſe-water, and ſcented with lemons, thyme, or the like.

POMEGRANATE. A medicinal fruit, in form of an apple or quince, full of ſeeds or kernels, incloſed within a reddiſh pulp, ſometimes ſweet, and ſometimes acid.

The pomegranate tree is of two kinds; the one wild, which produces a kind of flower uſed in pharmacy: the other cultivated in gardens, whereof there are two kinds; the one only bearing flowers, the other both flowers and fruit: the flowers of each, called cytini, are incloſed in an oblong purple calyx reſembling a bell. The trees never grow high; their branches are a little prickly; their leaves reſemble thoſe of the greater myrtle; and their fruit, which is compoſed of a great number of red angular grains, ſometimes ſweet, ſometimes ſour, and ſometimes vinous, according to the quality of the tree, are all incloſed in little diſtinct cells, and covered in common with a thick, browniſh rind; over which grows a thick kind of crowning, of the ſame nature with the rind, formed of a production of the calyx.

In general, pomegranates are not only agreeable to the taſte, but good for the ſtomach, and of conſiderable uſe in medicine. Of the kernels are made ſyrups and conſerves; and the peel, or rind, which is called malicorium, held very aſtringent, is an ingredient in ſeveral remedies and ptiſans, for dyſenteries, diarrhœas, hæmorrhages, lienteries, and relaxations of the gums. The antients alſo uſed the rinds as the moderns do ſumac, in the preparation of leather.

The rind ought always to be dried, after the grains are taken out; that dried without ſcouping always taſting muſty, and more likely to increaſe diſtempers than cure them. As to the conſerve, there is but little of the true ſold; being very difficult to make: that which ordinarily paſſes for it, is only ſugar melted down; to which they give the colour and ſharp taſte with cochineel, cream of tartar, and alum.

POMEGUES. One of the French iſlands on the coaſt of Provence. See *French* Iſlands.

POMPHOLYX, in pharmacy, a ſort of metalline flour, being a white, light, and friable ſubſtance, found adherent to the lid or converticle of the crucibles, or furnaces, wherein the copper is melted with calamine ſtone, for the making of braſs. See *Braſs* and *Calamine*.

It is eſteemed deterſive and deſiccative, tho' only applied externally; and much uſed in divers kinds of fevers: but its violence requires its being uſed with great precaution.

The apothecaries ſometimes call it *nil*, or *nihili album*; and ſometimes white tutty, in regard to its reſemblance to tutty in virtue. See *Tutty*.

PONDICHERRY. A town of India, lying in 80 deg. of E. lon. and 12 deg. 27 min. of N. lat. on the coaſt of Coromandel, ſituated 60 miles S. of Fort St. George, where the French have their chief factory, and a ſtrong fort to defend it. See *India*.

PONT, or *Punt*. A long meaſure uſed in China, 10 of which make 1 cobre, the cobre making 13 inches 2 lines. See *Cobre*.

PONT, or *Punt*, is alſo a flat-bottomed boat.

PONTAGE. A contribution towards the maintenance, repairing, and rebuilding of bridges; which was anciently one of the three general national charges, whence no perſon of any degree whatever was exempted.

PONTAGE. is alſo a due anciently belonging to the lord of the fee, for merchandiſes, that paſs over rivers, bridges, &c.

PONTI, is a copper coin of Sicily, 90 of which make the florin, or 1 s. 6½ d. ſterling.

PONTON, or *Pontoon*, in war, a little floating bridge, made of boats and planks; conſiſting of two veſſels, at a little diſtance, joined by beams, with planks laid acroſs, for the paſſage of the cavalry, the cannon, infantry, &c. over a river, an arm of the ſea, &c.

The late invented ponton is of copper, furniſhed with an anchor, &c. to fix it. To make a bridge, ſeveral of theſe are diſpoſed two yards aſunder, with beams acroſs them, and over thoſe, boards or planks. They are linked to one another, and faſtened on each ſide the river, by a rope run through a ring in each of their heads, and fixed to a tree, or ſtake on either ſhore. The whole make one firm uniform bridge, over which a train of artillery may paſs. Cæſar and Aulus Gellius both mention pontons; but theirs were no more than a kind of ſquare flat veſſels, proper for the carrying over of horſes, &c. Ours however take their names from them; thoſe authors call them pontones, of ponto.

PONZA. An iſland in the Mediterranean, ſituated in 13 deg. 50 min. of E. lon. and 41 deg. 15 min. of N. lat. near the W. coaſt of Naples, at the entrance of the bay of Gaieta.

POOLAWAY. One of the Banda, or nutmeg iſlands, in the Indian ocean, lying in 128 deg. of E. lon. and 3 deg. 30 min. of S. lat. See *Banda* Iſlands.

POOP, in a ſhip, is the deck over that which is commonly called the captain's cabbin. See *Poup*.

POOR. Such needy and indigent perſons as want the charitable aſſiſtance of others, to procure the neceſſaries of life.

The poor in England are reputed to be ten times more than the rich, and there are many excellent proviſions for them, though not properly enforced. The poors-rate amounts to about 3 millions and a half ſterling every year; beſides private charities, and hoſpitals; which is ſufficient to maintain the tenth of the inhabitants: but, inſtead of applying themſelves to honeſt induſtry, many of them chuſe to live in idleneſs, preferring beggary to labour.

Sir Joſiah Child, in his diſcourſe on trade, chap. 2. propoſes a ſcheme for regulating the poor; which, with ſome amendments, is as follows.

"That there be a corporation eſtabliſhed in every county for regulating the poor, to conſiſt of 50 perſons, with perpetual ſucceſſion, to be ſtiled fathers of the poor.

That the ſaid number of 50 be conſtantly filled up by the election of the freeholders once a year.

That all the pariſh-officers within each county be ſubordinate and accountable to their reſpective corporations.

That the ſaid corporations have power to aſſeſs and compel the payment from every pariſh in their county of the medium of the poors rates raiſed in the three years preceding.

That one tenth part of the ſaid ſum be abated yearly, until the whole in ten years time be done away, and the poor maintained by the donations of the charitable only.

That each corporation appoint a treaſurer to receive the alms of all charitably diſpoſed perſons.

That the ſaid corporations have power to erect work-houſes, hoſpitals, working-ſchools, houſes of correction, and to exerciſe all other powers relating to the poor, that any number of juſtices of the peace may now do in their quarter-ſeſſions, or otherwiſe.

That they receive none but infants, and perſons well recommended for their diligence and ſobriety, as proper objects.

That each of the ſaid fathers of the poor have power to commit any vagrant, or perſon not having a viſible eſtate or trade, and their own diſorderly poor, to the county goal.

That the ſaid commitments be bailable.

That at the aſſizes for the counties the perſons names committed be called over, and thoſe who cannot give good account of themſelves be tranſported for three years.

That the ſaid corporations have power to admit as members, having equal power with thoſe elected, every perſon paying in 100 l. to the poors uſe.

That ſeven or more fathers of the poor do make court.

That every miniſter and church-warden go together, on a year, to every houſe in their pariſh, to collect the al

of charitably diſpoſed perſons, entering the ſame in a book.

That the whole collection being made, the money be remitted to the corporation the pariſh belongs to, with the ſaid book ſigned by the ſaid miniſter and church-wardens.

That all money given for the poor be accounted ſacred, and that it be felony to miſapply, conceal, lend, or convert it to any other uſe or purpoſe whatſoever.

That every corporation do publiſh its accounts yearly.

That whatever the ſaid corporations want, be publickly bought of the loweſt contractor.

That whatever the ſaid corporations diſpoſe of, be adverti-ſed to be ſold by public auction to the beſt bidder.

That whenever they want money, or whenever a time of general calamity brings on an extraordinary charge, they take care to give public notice thereof, to ſtir up the charity of all good people to relieve their diſtreſſed and ſtarving brethren.

Of the benefits ariſing by well regulating our poor.

1. It will increaſe trade.

For our poor ſeeing that no idle vagrants can live here, but muſt be tranſported, and that none but thoſe well recommended for their diligence and ſobriety can be maintained by the fathers of the poor in ſickneſs or old age, they muſt of neceſſity become frugal, induſtrious, and work at ſuch places as trade will afford; not ſpend half of their wages in drink, as the Britiſh Merchant, vol. 1. p. 7, aſſerts it to be well known that ours do, whereby no nation can out-rival us on account of the plenty of proviſions of all ſorts that our country abounds with, and its natural advantages for trade ſuperior to any nation, the exemption from oppreſſion by taxes, and other good regulations; ſo that our poor, by abating their luxury and idleneſs, will be able to work as cheap as any people; the conſequence of which is a certain increaſe of trade.

By taking off our burdenſome and unjuſt poors rates on the induſtrious, who now maintain the idle, our goods will become cheaper, conſequently more vendible.

2 It will employ our poor.

This is a conſequence of the laſt remark; for as it is certain that they who bring their goods the cheapeſt to market will have the moſt trade, ſo thoſe that work the cheapeſt muſt have the moſt employment; for, 1ſt, it will be more conſtant by being cheaper; 2d, though they receive a leſs number of pence for wages, yet they will be more valuable by the prices of neceſſaries being freed from taxes with their conſequences; 3d, The poor being by this propoſal inured to labour and reſtrained from idleneſs, they will work more and ſpend leſs, therefore be enabled to lay up a better proviſion for their families than they now do.

3. It will increaſe the ſtock of people.

Though this can be proved to be a certain conſequence of the two former remarks; yet as ſome people, out of a falſe tenderneſs, may think that the tranſporting of many vagrants may depopulate the nation, I ſhall endeavour to ſhew the contrary.

1. Idleneſs is the root of all evil, and two of the puniſhments of evil-doers with us are hanging and tranſportation; ſo that idleneſs deprives us of many people; but this propoſal tending in its nature to make our people frugal and induſtrious, will preſerve and ſave many from thoſe two calamities.

2. Idleneſs brings on want, diſeaſes, death, and thins a nation; but frugality and induſtry cauſe plenty, health, long-life, and people a country.

3. Idleneſs diſables men from ſupporting a family; therefore prevents marriage; frugality and induſtry enable men to marry, and ſtock a country with people.

4. If this propoſal drives away the idle ſo much the better, they are a burden inſtead of a benefit to the community; it will ſupply their places by increaſing trade with more deſerving people from our neighbours, agreeable to this maxim, Such as your employment is for people, ſo many will your people be.

5. When our people ſee that idleneſs is deemed a crime, and puniſhed accordingly; but that frugality and induſtry the virtues, rewarded with good wages and a comfortable ſubſiſtence; a thorough reformation muſt enſue among them, the idle be few, and this objection vaniſh.

4. It will increaſe our riches.

This is a conſequence of the other remarks, which tends to make our people induſtrious; *the hand of the diligent maketh rich*, and the greater number of diligent hands we have, the more riches we ſhall get.

5. It will increaſe the value of our lands.

This is a conſequence of all the above remarks; for whatever cauſes trade employs the poor, increaſes the ſtock of people, and increaſes our riches, muſt increaſe the value of our lands.

The well regulating of our poor is proved to be the cauſe of trade, which is the cauſe of all the other remarks; therefore the well regulating our poor is a great increaſer of the value of lands.

But perhaps it will be ſaid, that the poor, being left to ſubſiſt on charity only, will be ſtarved.

To this may be anſwered, that the great number of idle beggars we now voluntarily maintain, proves the contrary; that in all times of general calamities our charity is eminent, as Sir Joſiah Child ſays it was after the fire of London, and was again proved in the hard winter in 1739; beſides, the fathers of the poor hereby propoſed being perſons of character and fortune, will for their own honour, by their delicate ſenſe of public good, and their love for true charity, take care to diſtinguiſh between the real and pretended objects of want, by which the numbers of the former will appear to be but few, and they by good management maintained at a ſmall expence; whereby the encouragement to charity will be vaſtly increas'd, by people's knowing certainly where to give their money to do good, the want of which certain knowledge is a great damp to our charity at preſent.

Therefore as we now maintain voluntarily more idle people than really want, there can be no doubt but they will, when reduced to proper objects only, be ſufficiently provided for.

Mr. Cary, in his diſcourſe of trade, has alſo made ſome excellent proviſions for the proper regulation of the poor; and part of the ſcheme has been carried into execution by the corporation of Briſtol, as appears by his Appendix p. 147: but the legiſlature have not been able to bring this grand point to bear in all places; though, it is evident, that the proper employment of the poor would greatly and moſt materially contribute to the trade and advantage of Great Britain.

Dr. Davenant has alſo publiſhed a ſcheme for ſettling the pariſh work; and has given a liſt of what the poors tax amounted to in one year, at the latter end of the reign of Charles II. as follows.

	£.
Bedfordſhire	6,911
Berkſhire	9800
Buckinghamſhire	14,800
Cambridgeſhire, and Iſle of Ely	9,128

In all		665,362

But ſince that time the poors rates have been greatly augmented.

POPE, his territories. See *Italy*.

POPLAR, or *Aſp-tree*. A tree that principally thrives in a marſhy ground.

POPPY. A medicinal plant, famed for its narcotic quality: of which there are ſeveral kinds, ſome wild, and ſome cultivated; white, purple, ſcarlet, &c. Thoſe moſt uſed being the white, papaver hortenſe ſemine albo; and black, papaver hortenſe ſemine nigro. The heads of theſe plants are of ſingular virtue to promote ſleep, aſſuage pain, &c. they ſtop diarrhœas, hæmorrhages, &c. Of the juice of the white poppy is prepared the opium ſold in the ſhops; and of the juice of the leaves, meconium. See *Opium*, and *Meconium*.

POPULEUM, or *Populenum*, in pharmacy, an unguent, prepared of the buds of black poplar, violet leaves, navelwort, and lard, bruiſed and macerated; to which are added bramble tops, leaves of black poppies, mandragora, henbane, night-ſhade, lettuce, and burdock, boiled in roſe-water, and ſtrained. It is much uſed as a cooler in burns, ſcalds, and all ſorts of inflammations, as alſo to aſſuage arthritic pains.

POQUELLE. A plant of Chili in South America, whoſe flowers form a kind of gold button, fit for a yellow dye; and its ſtalk for a green.

PORCAT. A port-town of the Hither India, in Aſia; ſituated in 75 deg. 30 min. of E. lon. and 9 deg. of N. lat. on the coaſt of Malabar, 200 miles S. of Calicut, in the poſſeſſion of the Dutch.

PORCELAIN, or *Purcelain*. A fine ſort of earthen ware, chiefly manufactured in China, and thence alſo called China, or China-ware, but brought into Europe from other parts of the Eaſt, eſpecially Japan, Siam, Surat, and Perſia. See *Fayance*.

It is not known who was the inventor of porcelain; the Chineſe annals, which uſe to contain every thing in any wiſe memorable, being perfectly ſilent about it: nor do we know much more of the time of its invention; only it is certain, it muſt have been before the beginning of the 5th century; the annals of Feuliang relating, that from the ſecond year of the reign of the Emperor Tam, about the year of Chriſt 442, the workers in porcelain of that province had alone furniſhed the Emperors therewith.

Porcelain is made chiefly, ſome ſay wholly, at Kingteching, a large town in the province of Kiangſi: there is ſome, indeed, made in the provinces of Kanton and Fokyen; but it is of little account, being perfectly white, without either gloſs or painting, and far inferior in beauty and value to the porcelain of Kingteching. Attempts have been made to remove the manufacture from Kingteching to Pekin, and other places, but in vain, the porcelain made in the new manufactories never coming up to that of the old; ſo that Kingteching has the honour of ſupplying the greateſt part of the world with this commodity: and F. du Halde aſſures us, that even the Japoneſe come to China for it.

Manufacture of PORCELAIN. Porcelain makes a very curious article in commerce, and even natural hiſtory. Its manufacture has hitherto paſſed for a myſtery in Europe, notwithſtanding all the endeavours of the Jeſuit miſſionaries to penetrate into the ſecret: the veil, however, is at length drawn, and in a letter of F. d' Entrecolles to F. Orry, from Jauckew, dated September 1ſt, 1712, and late publiſhed in French, the whole proceſs is deſcribed in its circumſtances.

There are porcelains made of all colours; both with r gard to the grounds, and to the repreſentations thereof As to the colour of landſkips, &c. ſome are ſimple, ſu as blues, which are thoſe moſt uſually ſeen in Europ others are mixed up of ſeveral teints, and others ag heightened with gold.

Notwithſtanding the vaſt quantity of porcelains made moſt in all the provinces of the empire of China, th ſtill continue very dear, tho' not near ſo dear as ancientl for the Chineſe annals tell us of times, wherein a fin urn coſt 90 or 100 crowns on the ſpot: but what chie occaſions the extraordinary price of this commodity, ſpecially in Europe, is, beſides the great profits of t merchants in Europe, and their factors in China, that rarely happens an oven ſucceeds throughout; that it frequently quite ſpoilt, ſo that upon opening it, in lieu fine porcelains, is found a hard unformed maſs, into whi both the porcelains and their coffins are converted, eith by exceſs of heat, or ſome ill qualities in the matter.

Another reaſon of the dearneſs of porcelain is, that t ingredients it is made of, and the wood wherewith it burnt, grow more and more ſcarce. A third reaſon m be added for the exceſſive price of porcelains to the E ropeans, which is, that moſt of thoſe ſent to Europe formed on new models, frequently very capricious, a difficult to ſucceed in; which, yet, for the ſmalleſt defec are turned on the manufacturer's hands; and he not bei able to diſpoſe of them to the Chineſe, becauſe not to th taſte, nor to their uſe, is forced to charge the porcelain deliverS, the higher, to pay himſelf for thoſe refuſed.

The French have been ſeveral years attempting to imit porcelain: the firſt eſſays made at Rouen are ſaid to ha ſucceeded tolerably well; and are now ſaid to be carr to ſuch a point in the manufactories at Paſſi and St. Clo that the French porcelains want nothing to make them equal value with the Chineſe, but to be brought five ſix thouſand leagues. In effect, for fineneſs of the gra of the matter, the beauty and turn of the veſſels, the actitude of the deſign, and the luſtre of the colours, leaſt the blues, the French are not much behind Chineſe: but their grand defect is in the white of ground, which is uſually dingy and dull, and eaſily tinguiſhes itſelf from the pure ſprightly white of Chineſe.

But the Saxons ſeem to have exceeded the French: th is a manufacture at Miſſen, the capital of Miſnia, whi the Baron de Polnitz aſſures us, produces porcel painted and enamelled in ſuch perfection, that they more beautiful, as well as dearer, than thoſe of Ch itſelf. The invention is owing to an alchymiſt, w being clapped up in the caſtle of Koningſtein, by the King of Poland, on a ſuſpicion of being maſter of ſecret of the philoſophers ſtone, had leiſure enough, indeed to make gold, but to invent a ware, which, the great vent of it, conſiderably enriches the countr Throughout Perſia a great quantity of porcelain is m ſo beautiful, and perfect, that it is with difficulty di guiſhed from the Chineſe, for which the Dutch, import it abundantly into Europe, uſually ſell it: the terials for compoſing it being glaſs, and ſmall river pebb pounded together, which compoſition becomes ſo that it can very well reſiſt fire.

A manufactory of porcelain has lately been erected in Auſtrian dominions; and there have been alſo two nufactories eſtabliſhed in England, the one at Bow, the other at Chelſea in Middleſex, which promiſe fa rival all the reſt; but that at Bow has acquired the gre reputation, being under the direction of a very elabo painter.

PORCELAIN, alſo denotes a little kind of white ſea- found along with the ſponges; and current in ſe parts of Aſia, Africa, and America, by way of mon

FORCO. A city of Peru, in South America, in the vince of Los Carcos, ſituated in 68 deg. of W. lon 22 deg. of S. lat. a little W. of the mines of Po

where the Spaniards found ſilver mines before thoſe of Potoſi were diſcovered.

PORK. The fleſh of ſwine, being a common food when freſh; but infinitely more ſo when ſalted and pickled, for the uſe of mariners at ſea, who conſume near as much pickled pork as they do beef. See *Beef*.

PORLOK. A port-town of Somerſetſhire, ſituated on the Briſtol channel, in 3 deg. 40 min. of W. lon. and 51 deg. 20 min. of N. lat. 23 miles N. W. of Bridgewater.

PORPHYRY, in natural hiſtory, a precious kind of ſtone, or marble, of a browniſh red colour, frequently interſperſed with white ſtains; anciently brought from Egypt, and exceeding all others in hardneſs. See *Marble*.

PORQUEROLLE. One of the iſlands of Hieres, on the coaſt of Provence in France. See *French* Iſlands.

PORT, or the *Porte*, the city of Conſtantinople, ſo called by way of eminence, on account of its excellent harbour. See *Conſtantinople*, and *Turky*.

PORT, *Haven*, or *Harbour*. A commodious place ſituated on the ſea-coaſt, or the mouth of a river, with depth of water ſufficient for ſhips of burden, and convenient bottom for anchorage; where veſſels lie by, to load or unload, ſcreened from the wind, and ſafe from any enterprize of enemies, either by the diſpoſition of the place, or by means of a mole, dike, or the like, with a chain and light-houſe. See *Harbour*, and *Pharos*.

Ports are either natural or artificial; the former being thoſe which providence ſeems to have formed for the communication of commerce: and the latter are thoſe formed with moles, or projections into the ſea.

But more properly, a port, harbour, or haven, is a place where ſhips arrive with their freight; or of refuge againſt danger, being for the ſafe receiving of ſhips, and ſecurity of navigation: and a road is a little way out from port near the ſea, for any ſhips to ride in. The ports, in England, are only thoſe common places, to which the officers of the cuſtoms are appropriated; and which contain and include all the privileges and guidance of all members and creeks thereunto allotted.

By members, are underſtood thoſe places where anciently a cuſtom houſe hath been kept, and officers or their deputies are attending, they being lawful places of exportation or importation of goods and merchandiſe: and creeks, or nooks to unload wares, are places in which officers commonly are or have been placed, by way of prevention of frauds in the cuſtoms; not out of duty or right of attendance, for they are not legally allowed, without particular licence or ſufferance from the port, or member under which they are placed.

According to the maritime laws of France, all ports and harbours are to be maintained in their depth and cleanneſs; and no perſons are to caſt any thing into them that may obſtruct the ſame. There are always to be ſeamen aboard the ſhips in the harbour, to facilitate the paſſage of veſſels coming in and going out, clear the cable ropes, and do all the neceſſary work; and the mariners are not to make faſt their veſſels, but to the rings and ſtakes ſet up for that uſe, on pain of being fined. In every port and harbour, there are places aſſigned for refitting and caulking of ſhips, and pitching the ropes, &c. And no perſons are to keep any fire during the night, in the ſhips lying in docks and harbours, except in caſes of urgent neceſſity, by theſe laws.

By the laws of Oleron, the anchors of ſhips lying in any port or harbour are to be at a proper diſtance; and if after requeſt of a maſter of a ſhip, to remove his anchor farther diſtant from any ſhip near him, he refuſes to do it, and any damage happening thereby, he is to make ſatisfaction; alſo on probable cauſe, the other maſter may take up the ſame, and let it down further off: and where a ſhip lies at anchor, without placing a buoy to it, if damage is ſuſtained thereby, the party ſhall not only render ſatisfaction to the party damnified, but be alſo ſubject to puniſhment in the admiralty.

And by the laws of France, maſters of ſhips coming into a road, are to drop their anchors ſo far diſtant from each other, as the anchors and cables may not be foul of one another; under pain of being anſwerable for all damage, and an arbitrary fine. When there are ſeveral ſhips in any road, that which is outmoſt towards the ſea is obliged, in the night, to keep out a light, for the direction of other ſhips coming from ſea: and when a veſſel in the road would ſet ſail during the night, the maſter is obliged, the preceding day, to remove to a place convenient for going away, without running aboard of others, or doing any damage to other ſhips, on pain of ſatisfying all damages, coſts and charges.

There are divers ſtatutes for improving and preſerving the ports, havens and harbours of England; as the 23d Henry VIII. cap. 18. and 27th Henry VIII. cap. 23. for preſervation of the havens and ports of Plymouth, Dartmouth, Tinmouth, Falmouth, Fowey, and other ports in Devon and Cornwal: and thoſe who labour in tin-works there ſhall prevent the falling of ſtones and gravel into thoſe havens, upon a certain forfeiture. And the 34th Hen. VIII. cap. 9. ordains, that none ſhall caſt or unlade out of any ſhip or veſſel, in any haven, road, channel, or river flowing or running to any port-town, city, or other town, any rubbiſh, gravel, balaſt, or other wreck or filth, but only upon the land above the full ſea-mark, in pain of 5 l. penalty.

In the 27th year of Queen Eliz. an act was made concerning Orford haven in Suffolk. And by the 23d Eliz. cap. 6. there were certain duties granted of ſo much *per* ton on all ſhips and veſſels, for the repair of Dover harbour; and theſe ſtatutes were continued in the reign of James I. and 13th and 14th Char. II. The like act for repairing the haven of Great Yarmouth, granting duties to perform it, &c. 1 Jac. II. cap. 16. continued and explained by 1 Wil. and Mary, cap. 11. and 10th and 11th Wil. III. cap. 5. for the repairs of the harbour of Minehead in Somerſetſhire, 12th Wil. III. cap. 9. for repairing the port of Whitby, 1ſt Anne, cap. 19. and 7th Geo. I. cap. 16. The port and harbour of Rye, 10th Geo. I. cap. 7. The harbour and pier of Margat, 11th Geo. I. cap. 3. The port and haven of Sunderland in the county of Durham, 13th Geo. I. cap. 6. The harbour of Newhaven in Suſſex, 4th Geo. II. cap. 17. The harbour of Ilfordcombe in the county of Devon, 4th Geo. II. cap. 19. The port town of Scarborough, 5th Geo. II. cap. 11. The harbour of Arundel, 6th Geo. II. cap. 12. The port and harbour of Newcaſtle, 8th Geo. II. cap. 10. By the ſtatute of the 1ſt Eliz. and 13th and 14th Car. II. ports, members and creeks in England, and Wales, for the lawful landing and ſhipping of goods, except in Hull, and to what ancient and head port ſuch members and creeks ſhall belong, and alſo the extents, bounds, and limits of the ſaid ports, &c. may be appointed by his majeſty, by his commiſſion out of the court of exchequer; and the cuſtomer, collector, comptroller, and ſearcher of the head ports, or their ſufficient deputies, or ſervants, are to reſide at ſuch members or creeks.

By an act paſſed in the 6th Anne, members and creeks in Scotland, for the importation and exportation, and keys or wharfs for the landing and ſhipping of goods and merchandiſes, may be aſſigned and appointed, and the extents, bounds, and limits of every port, haven, or creek fixed, and aſcertained by her majeſty, by a commiſſion out of the court of exchequer there; cuſtomers, collectors, &c. as above.

Bar PORTS, are ſuch as can only be entered with the tide, as that of Goa.

Cloſe PORTS, are thoſe within the body of a city; as thoſe of Rhodes, of Venice, Amſterdam, Rochel, Bayonne, and St. John de Luz.

Free PORT, in commerce, is a port open and free for merchants of all nations, to load and unload their veſſels in, without paying any duties or cuſtoms. Such are the ports of Marſeilles, Genoa, Leghorn, Gibraltar, Ancona, and Trieſte.

Free port is alſo uſed for a total exemption and franchiſe, which any ſett of merchants enjoy, for goods imported into a ſtate, or thoſe of the growth of the country exported. Such was the privilege the Engliſh enjoyed for ſeveral years after their diſcovery of Archangel, and which

which was taken from them on account of the regicide in 1648.

Cynque PORTS. See *Cinque* ports.

The ports, members, and creeks, of Great Britain, as ſettled by commiſſions out of his Majeſty's courts of exchequer in England and Scotland.

The ports of South Britain, or England and Wales, with their diviſions into members and creeks.

	——	Leoſtoff.
	Blackney & Cley.	

All these ports are within some county, and therefore the court of admiralty cannot hold jurisdiction of any thing done in them.

As the port of London is of the greatest concern, particularly relating to the customs, the extent thereof is settled by the exchequer; which is accounted from the promontory or point called North-Foreland, in the isle of Thanet, and thence northward, in a supposed line, to the opposite point called the Nase, beyond the Gunfleet, upon the coast of Essex, and so continued westward through the river of Thames, and the several channels, streams, and rivers, falling into it, to London-bridge; saving the privilege to the ports of Sandwich and Ipswich, and the members thereof, respectively belonging.

Ports of North Britain or Scotland, with their divisions into members and creeks.

PORT, is alſo uſed ſometimes for the burden of a ſhip; the capacity of a veſſel being eſtimated in tuns; each whereof may contain about two thouſand pounds weight of ſea-water. When it is ſaid a veſſel is of the port, or burden of a thouſand tuns, it is not meant, as ſome imagine, that it bears ſo many caſks of merchandiſe; but that the ſea-water, which would be contained in the ſpace that the capacity of the veſſel poſſeſſes in the ſea, weighs a thouſand tuns, which, at the rate of two thouſand pounds each, is as much as to ſay, it bears a burden of two millions weight. See *Ton*.

PORT, is likewiſe uſed for a ſtrong wine brought from Oporto, or Port-a-Port in Portugal, whence its name. See *Wine*.

PORT, among ſailors, denotes the larboard, or left ſide of the ſhip. *To port the helm*, is to put the helm on the left ſide of the ſhip, that the ſhip may go to the right, or to the ſtarboard.

PORTENDIC. A French ſettlement on the river Senegal, in Africa.

PORTATIVE *Mill*. See *Mill*.

PORTECROZ. One of the iſlands of Hieres, on the coaſt of Provence, in France. See *French* Iſlands.

PORT *Deſire*. A harbour on the eaſt coaſt of South America, ſituated in 70 deg. of W. lon. and 47 deg. of S. lat. 150 miles N. E. of port St. Julian, where ſhips ſometimes touch in their voyage to the South ſea.

PORTEN *Beſſin*. A port-town of France, in the province of Normandy, ſituated on the Engliſh channel, in 50 min. of W. lon. and 49 deg. 20 min. of N. lat. 18 miles N. W. of Caen.

PORTER, ſometimes means one of thoſe ſett of men who make it their buſineſs to carry goods from one place to another; alſo a perſon to lade and unlade ſhips. See *Cuſtoms*.

PORTERS *company of London*, is a fellowſhip, conſiſting of tackle and ticket porters, which was conſtituted a fraternity by act of common council, in 1646, with a power of annually chuſing from among themſelves 12 rulers, ſix of each denomination, two whereof to be regiſters, for the good government of the community, and for hearing and determining all differences that may ariſe between the members of the united body. However, the court of Lord Mayor and Aldermen have reſerved to themſelves a power of appointing one of their own body, as the chief judge of all controverſies. One laudable cuſtom of the maſter tackle porters deſerves juſtly to be commemorated; which is, that when any of their b thren are diſabled by ſickneſs, or other contingency, or they receive their ſhares of all profits, as if actuall buſineſs; and that too during life: but this fraternity h neither hall or livery.

PORTERAGE. See *Scavage*.

PORTGREVE, or *Portgrave*, was anciently the princi magiſtrate in ports and other maritime towns. Camden obſerves, that the chief magiſtrate of Lon was anciently called portgreve; inſtead of whom, Rich I. ordained two bailiffs; and ſoon afterwards King J granted them a mayor for their yearly magiſtrate.

PORT-HOLES, in a ſhip, are the embraſures, or hol the ſides of the veſſel, through which the muzzles of cannon are put. Large ſhips have three rows of port-ho or batteries, each uſually conſiſting of fifteen port-ho In ſtorms, they uſe to ſhut up the port-holes, to prev the water's driving through them. In Engliſh, Du and French ſhips, their valves or caſements are faſte a-top of the apertures; in Spaniſh veſſels, aſide of th

PORTLAND. A peninſula in the county of Dor ſituated on the Engliſh channel, in 2 deg. 35 min. W. lon. and 50 deg. 30 min. of N. lat. 10 miles S. Dorcheſter. Here the beſt free ſtone is dug, of wh St. Pauls in London, Weſtminſter-bridge, and moſt the grand fabrics in England are built. See *Stone*.

PORT-LAST, in a ſhip, denotes the gun-wale. W a yard is down on the deck, the ſay, the yard is do at port-laſt.

PORT LEWIS. A town belonging to the French, in iſland of Hiſpaniola. See *French* America.

PORT L'ORIENT. A fortreſs, and port-town of Fra ſituated in the province of Bretagne, at the mouth of river Blavet, oppoſite to Fort Louis, in 3 deg. 15 m of W. lon. and 47 deg. 42 min. of N. lat. being the tion of the French Eaſt India ſhips, from whence it la obtained the name of the Eaſtern port, or Port L'Orie 78 miles N. W. of Nants, and 25 miles N. W. of V nes, or Vannes.

PORT LOUIS. A port-town of France, in the provi of Bretagne, ſituated on the bay of Biſcay, in 3 d 6 min. of W. lon. and 47 deg. 42 min. of N. lat. at mouth of the river Blavet, and ſometimes called Blav 70 miles N. W. of Nants: it has a good harbour, be a ſtation for part of the royal navy; and for the ſhips the French Eaſt India company.

PORT MAHON. See *Minorca*.

PORT-NAILS, in a ſhip, ſuch as are uſed to faſten hin to the ports.

PORTO. A city and port-town of Portugal, in the p vince of Entre-Minho-Douro, ſituated near the mo of the river Douro, and the Atlantic ocean, in 9 deg. W. lon. and 41 deg. 14 min. of N. lat. 300 miles S. Braga. See *Portugal*.

PORTO-BELLO. A port-town of America, ſituated 82 deg. of W. lon. and 10 deg. of N. lat. in the p vince of Terra Firma proper, or Darien, on the narrow part of the Iſthmus, which joins North and South Am rica, 70 miles N. of Panama, and 300 miles W. of C thagena. It is a large, ſecure, and commodious harbo with a narrow entrance, defended by forts and batteri and at the bottom of the harbour ſtands the town, o ſemicircular form, as the land is on which it is built; fended alſo by ſeveral forts, which were all taken by A miral Vernon, with ſix ſhips only, in the year 17 But he quitted it again, after he had demoliſhed the wor either on account of the unhealthfulneſs of the place, becauſe he had ſcarce any land forces on board, or, ſome ſuggeſt, becauſe his orders were defective. Here A miral Hoſier was loſt by the unhealthfulneſs of the pla and moſt of the ſhips buried their crews twice over; beſid the ſhips were ſo damaged by the worms, that they we not fit for ſervice afterwards. The greateſt part of t inhabitants are Malattoes, Indians, or Negroes. Spaniard of ſubſtance chuſes to reſide in ſo unhealthfu place; tho', during the time of the fair, it uſed to be much crouded with merchants, that above 100 crow were given for a poor lodging, and 1000 crowns for a ſho during the ſhort time the galeons remained there, a

provisions were proportionably dear. See *Spaniſh* America.

PORTO CAVALLO, or *Porto Cabelo*. A port-town of Terra Firma, in America, on the Caraccos coaſt, ſituated on a bay of the North ſea, in 67 deg. 30 min. of W. lon. and 10 deg. 30 min. of N. lat. 120 miles S. of the Dutch iſland Bonaire, ſubject to Spain.

PORTO FARINO. A port-town of Tunis, in Africa, ſituated in 9 deg. of E. lon. and 36 deg. 30 min. of N. lat. 70 miles N. of Tunis, and a little W. of the ruins of Carthage, ſubject to the Dey of Tunis.

PORTO FERAJO. A port-town on the N. ſide of the Iſle of Elba, in the Tuſcan ſea, ſituated in 11 deg. 30 min. of E. lon. and 42 deg. 35 min. of N. lat. 40 miles N. W. of Orbitello, ſubject to the Duke of Tuſcany.

PORTO GALIETO. A port-town of Spain, in the province of Biſcay, ſituated in 3 deg. 6 min. of W. lon. and 43 deg. 25 min. of N. lat. 8 miles N. of Bilboa.

PORTO HERCOLE. A port-town of Italy, in the province of Tuſcany, ſituated in 12 deg. of E. lon. and 42 deg. 20 min. of N. lat. on the coaſt of the ſtate Del Preſidii, on a bay of the Tuſcan ſea, 60 miles S. E. of Sienne, ſubject to Spain.

PORTO RICO. An iſland in the Atlantic, or American ocean, ſituated between 64 and 68 deg. of W. lon. and in 18 deg. of N. lat. being 120 miles long, and 60 broad. See *Spaniſh* America.

PORTO RICO, or *St. John*'s city, is the capital of Porto Rico, ſituated on a ſmall iſland within the harbour, on the north ſide of the chief iſland, and joined to it by a cauſeway.

PORT ROPES, in a ſhip, are thoſe which ſerve to haul up the ports of the ordnance.

PORT SALE. A public ſale of goods to the higheſt bidder: but in the ſtatute of the 35th Hen. VIII. cap. 7. it denotes the ſale of fiſh preſently upon its arrival in the port or haven.

PORTO SANTO. The leaſt of the Madeira iſlands, in the Atlantic ocean, ſituated 16 deg. of W. lon. and 33 deg. of N. lat. 300 miles W. of Morocco, in Africa, ſubject to Portugal. It is not above 18 miles in circumference, but produces the ſame ſort of wine as the larger iſland does. See *Madeira* Iſlands.

PORT VECCHIO. A port-town in the iſland of Corſica, in the Mediterranean, ſituated on a bay of the ſea, in 9 deg. 30 min. of E. lon. and 40 deg. 25 min. of N. lat. 40 miles N. of Sardinia.

PORTO VENENO. A port-town of Italy, in the territory of Genoa, ſituated near the bay of Spezzia, in 10 deg. 35 min. of E. lon. and 44 deg. 5 min. of N. lat. 45 miles S. E. of Genoa.

PORT ROYAL. A port-town, ſituated in the S. E. part of Jamaica, in America, at the extremity of a long point of land, running W. about 12 miles from the body of the iſland, lying in 77 deg. of W. lon. and 17 deg. 30 min. of N. lat. having the ocean on the ſouth, and a fine bay on the north, which forms one of the moſt commodious harbours imaginable, 3 leagues broad, and deep enough for a ſhip of 700 tons to lie cloſe to the ſhore, well defended by forts and platforms of guns. See *Britiſh* America.

PORT ROYAL, is alſo an iſland on the coaſt of South Carolina, in America, ſituated in 80 deg. of W. lon. and 31 deg. 45 min. of N. lat. which, with the neighbouring continent, forms one of the moſt ſecure and commodious harbours in the Britiſh plantations. The iſland is about 15 miles long, and has a town on the N. E. ſhore called Beaufort town; but neither the town, nor the iſland were ſo ſtrongly fortified lately, as a harbour of that importance deſerves. See *Britiſh* America.

PORT ROYAL, in Acadia. See *Annapolis*.

PORT ST. MARY's. A port-town of Spain, in the province of Andaluſia, ſituated on the bay of Cadiz, in 6 deg. 30 min. of W. lon. and 36 deg. 32 min. of N. lat. 10 miles N. E. of that city. See *Spain*.

PORTSMOUTH. A borough and port town of Hampſhire, ſituated in 1 deg. 6 min. of W. lon. and 50 deg. 48 min. of N. lat. on a fine bay of the Engliſh channel, oppoſite to the Iſle of Wight, 20 miles S. of Wincheſter, and 70 miles S. W. of London, one of the moſt ſecure and capacious harbours in England, ſtrongly fortified and defended by a numerous artillery, both on the ſea and land ſide: here great part of the royal navy of England are built and laid up; and where are ſome of the fineſt docks, yards, and magazines of naval ſtores in Europe: but the general rendezvous for the royal navy is uſually at Spithead, on the eaſt end of the Iſle of Wight, oppoſite to Portſmouth.

PORTUGAL, is a kingdom bounded by the Spaniſh province of Galicia on the north; by the provinces of Leon, Eſtremadura, and Andaluſia, on the eaſt; and by the Atlantic ocean on the ſouth and weſt; and lying between the 7th and 10 deg. of W. lon. being about 300 miles in length from N. to S. and generally about 100 miles in breadth from E. to W.

It is uſually divided into ſix provinces, namely Eſtremadura, Beira, Entre-Minho-Douro, Tralos Montes, Alentejo, and Algarva.

This country does not only conſiſt, great part of it, of mountains, but ſome of the moſt barren on that continent. Towards the bottom of them indeed they are pretty well planted with vines, which afford abundance of good wine. The ſoil produces alſo great plenty of olives, but the oil is not ſo good as in Spain. Of oranges and lemons alſo nature is very bountiful here, and their ſweet oranges, which were brought from China, are ſome of the beſt in Europe; but their ſour oranges are not comparable to thoſe of Seville. Their plantations of mulberries feed abundance of ſilk worms. Of wheat and barley they have not enough in the beſt years for the ſubſiſtence of the natives, and when they are not ſupplied from the neighbouring Spaniſh provinces, the Engliſh and Dutch import great quantities of grain from the north, as alſo from England. As to the peaſants and country people, they live miſerably upon maiſe, or Indian corn, a very coarſe kind of food. Nor have they much good paſture; the beſt is towards the north, and the fleſh of their cattle is generally lean and dry. As to almonds, raiſins, figs, cheſnuts, and ſome other fruits, there are great plenty, but they are not reckoned ſo good as the fruits in the ſouth provinces of Spain. Among the products of their ſoil, ſalt alſo may be reckoned, for this is extracted from the ſea-water let into pans on the coaſt, eſpecially in a bay near Setival, or St. Ubes, as the Engliſh ſailors call it, from whence vaſt quantities are exported to the north, and the American plantations. Of ſea and river fiſh they have alſo good ſtore; and their mountains, it is ſaid, afford mines of gold and ſilver, but none of the former have been opened for many years. The ſilver mine at Guacaldane produces annually a good quantity of that metal. There are alſo mines of lead, iron, and alum; quarries of jaſper, and other fine marble, with cryſtal, rubies, emeralds, and other precious ſtones. Either their wool, or thoſe that manufacture it are in fault, for they make only ſome coarſe cloth, worn by the meaneſt of people; others wear Engliſh cloth, or ſtuffs, but black bays more than any other kind; nor is their manufacture the beſt.

The horſes in Portugal are briſk lively animals, as they are alſo in Spain, but of a ſlight make, and mules being much ſurer footed, are more uſed both for carriage and draught. Some black cattle, and flocks of ſheep are ſeen here. Their hogs and kids are much the beſt food; and there is ſcarce any country where they make more marmalade, both white and red, with abundance of other ſweet meats, and they deal pretty much in perfumed waters.

The rivers in Portugal are the Minho, the Douro, the Tagus, the Guadiana, the Mondego, the Lima, the Sadao, the Vouga, the Leza, the Ave, the Cavado, the Zezere, the Alba, the Coa, the Laura, the Canha, and the Caya.

There is ſcarce a ſtate in Europe, having the title of a kingdom, and a peculiar King, of leſs extent than Portugal; yet ſcarce one at the ſame time of ſo extenſive a commerce, and upheld with greater reputation. Its great conqueſts in both Indies, its eſtabliſhments in ſeveral parts of the coaſts of Africa, and its poſſeſſion of the Azores, Madeira, and Cape Verd iſlands, had for a conſiderable

time ſupported this commerce, and perhaps might yet preſerve its firſt ſplendor, if the union of Portugal and Spain had never happened.

This union, ſo fatal to the Portugueſe trade, happened in 1580, after the death of Cardinal Henry, ſucceſſor of the unfortunate Sebaſtian, killed in Africa, at the battle of Alcacer, the 4th of Auguſt 1578.

The Portugueſe becoming ſubjects of the Spaniſh king, had dreadful enemies in the Dutch, who fought for their liberty, at the ſame time that they were ſubjected to the Spaniards.

Soon after, Brazil, except a few places, was taken from the Portugueſe; they loſt a part of their Eaſt India conqueſts, which their new enemies made themſelves maſters of, as much by ſtratagem as open force; and having alſo loſt ſome of their colonies upon the coaſt of Guinea, they had hardly ſtrength enough to maintain a part of their African commerce, which was before equally glorious and lucrative to them.

It is true, that after ſixty years of a forced union, Portugal entered upon its firſt rights and privileges; and that all its territories in the three other parts of the world, acknowledged with it for King, John Duke of Braganza, who was proclaimed the 1ſt of December 1640.

But the fatal ſtroke to the Portugueſe trade was ſtruck, and tho' they afterwards repoſſeſſed themſelves of Brazil, and were reſtored to their forts and eſtabliſhments on the African coaſts, yet they never could well eſtabliſh themſelves in the Eaſt Indies; ſo that, upon whatever footing the preſent trade of Liſbon is, it may be well ſaid to be nothing in compariſon to their ancient commerce, when all the riches of the Perſian gulph, Arabia, the ſtates of the Mogul, the other coaſts of India, China, Japan, and all the iſlands of that vaſt part of the ocean, were aſſembled at Goa, the capital of their conqueſts in the Eaſt Indies, and arrived at Liſbon in numerous fleets, to be from thence diſtributed among all the nations of Europe by the hands of the Portugueſe alone.

The commerce of Portugal, ſuch as it is at preſent, is carried on either by foreigners, as the Engliſh, Dutch, and French, who load their ſhips for Liſbon, and Oporto, the only conſiderable ports of this kingdom; or by the Portugueſe themſelves, who import their merchandiſe to the neighbouring countries, and export from them ſuch as they have an occaſion for.

But it is in Brazil, and ſome other Portugueſe colonies, that the greateſt conſumption is made of the merchandiſe imported to Liſbon on Dutch, Engliſh and French bottoms.

Liſbon, is the capital of the kingdom, being ſituated in 9 deg. 25 min. of E. lon. and 38 deg. 45 min. of N lat. on the north bank of the river Tagus, about 10 miles from the mouth of it, 80 miles W. of the frontiers of Spain, 300 miles W. of Madrid, and 850 S. W. of London. It is about 6 miles long, winding with the river, from which it riſes with an eaſy aſcent. It is computed there are 30,000 houſes, and 200,000 inhabitants. The harbour of Liſbon will contain ſeveral thouſand ſail of ſhips, which ride in the greateſt ſecurity; and the river is about 3 miles over, where ſhips ride in 18 fathom water: but the entrance into the harbour is ſo difficult, that it cannot be paſſed without a pilot. This entrance is defended by two handſome forts; the one ſeated on the ſhore, and the other ſtanding oppoſite to it, on a ſhelf in the midſt of the water.

Porto, or *Oporto*, is the next conſiderable place of trade, being ſituated in 9 deg. of W. lon. and 41 deg. 10 min. of N. lat. near the mouth of the river Douro, 3 miles from the ſea, and 120 miles N. from Liſbon, having a very commodious harbour.

About 20 ſhips depart every year from Liſbon and Oporto, for Rio Janeiro; 30 for the bay of All Saints; as many for Pernambuca, and 7 or 8 for Paraiba, in America. Thoſe which go to Rio Janeiro, and the bay of All Saints, are from 200 to 500 tons; and thoſe for Pernambuca, and Paraiba 250 and upwards to 300; becauſe large ſhips cannot enter the ports of theſe two provinces of Brazil.

All the ſhips deſtined for the ſame place depart and return together; thoſe of Oporto joining thoſe of Liſbon. The ſhips deſtined for Paraiba and Pernambuca go always together, and return alſo in a body.

The King of Portugal allows yearly five ſhips of war for convoying the merchantmen; namely, two for Rio Janeiro, as many for the bay of All Saints, and one for Pernambuca. About their return, he ſends alſo ſome other ſhips as far as the Azores.

The departure of all theſe ſhips for Brazil, is uſually in the month of March, and their return in September and October.

The merchandiſe ſent to the Brazils, are flour, wine, brandy, oil, common woollen ſtuffs, linens, and thread from Portugal.

Silk and woollen ſtockings, hats, bays, ordinary cloth, and other woollen and ſuch like ſtuffs from England, and fine cloth from Holland and France.

Bleached linens, called *panicos*, and unbleached, called *aniages*; and round copper plates; copper baſons, and pipe ſtaves from Hambourg.

Linens of a ſmall breadth, druggets, ſerges, and brocades from France.

Laſtly ſilk tabbies, taffeties, ſilk for ſewing, and paper from Italy.

The Engliſh, Germans, and Italians, have the principal part of this commerce. The Engliſh commodities are articles of neceſſity to Portugal; the Italian, except in coin, are moſtly articles of luxury.

The returns from Brazil are in ſugar, tobacco, leather, &c. See *Portugueſe* America.

All the Brazil trade is carried on by Portugueze ſhips, no other nation being allowed to trade there. However, ſome interlopers, and pretty often the Engliſh, have a ſhare in the cargoes; but in the name of Portugueſe merchants, as is practiſed in the commerce of Spaniſh America.

Foreigners, as is ſuppoſed, loſe not much by this interdiction of trade to the Brazils; not only upon account of the length of the voyage, which continues uſually a year, but alſo upon account of the ſmall freightage paid for the merchandiſes ſent there, on which even the King of Portugal, to contribute to the expences of the convoy he allows, raiſes a duty, which one with another amounts to the fourth of what returns to the freighter; beſides that the rigging, and manning of Portugueſe ſhips, come to them much cheaper than other nations, upon account of the ſobriety of the people, and the little wages given to ſeamen.

Brazil-wood is not included in this commerce, as belonging ſolely to the King; who, one year with another, has 5000 quintals imported, whoſe profits, all expences deducted, amount to about 14,000 l. ſterling.

The Britiſh commodities which may in a great meaſure be ſaid to work the mines of Brazil, pay 23 *per cent.* duties inwards to Liſbon, and 6 *per cent.* outward duty to Brazil, all on a valuation made on ſome articles much too high. And in Brazil they pay more than 10 *per cent.* on their full eſtimation. All imports from Brazil pay likewiſe great duties in Portugal.

One or two ſhips depart every year from Liſbon to Goa, equipped and manned by the King. Their burden is about 800 tons, but the cargo of the merchandiſe exceeds 1200. Beſides, the paſſengers and ſoldiers, they are laden with ſeveral things of no uſe in trade. Their voyage is about eight months in going, and the ſame in returning; and they always on their return touch at Brazil to come with the fleet.

The cargo of theſe ſhips for Goa conſiſts in wrought and unwrought coral, Italian paper, Dutch ſcarlet, Portugueſe tobacco on the King's account, ſilver ſpecie, and ſome other merchandiſe. The merchandiſe of return are rough diamonds, all ſorts of Chineſe and India ſtuffs, ſaltpetre, indigo, muſk, ambergreaſe, and ſeveral other valuable commodities.

This commerce is very beneficial, and may be computed at 35 *per cent.* profit by exchange, and between 30 and 40 by the ſilver only.

The duty of commiſſion is 13 *per cent.* at Goa, and the duty of entry paid in Portugal for India diamonds is 7 *per cent.*

The Portugueſe have alſo a pretty good trade on the coaſts of Africa; from whence, beſides the Negroes they have either an occaſion for in their American colonies, or to tranſport to thoſe of other nations, as alſo great numbers they even bring into Portugal itſelf, they bring wax, ivory, and gold duſt.

The iſland of St. Thomas, upon the ſame coaſts, furniſhes them with the ſame merchandiſe, and beſides with a quantity of indifferent ſugar.

The Madeira, Azores, and Cape Verd iſlands, are alſo ſubject to Portugal; but its commerce to theſe iſlands is inconſiderable: however, the Portugueſe import there, oil, bays, ſerges, rice, and paper. They export from Tercera, and St. Michael, wheat, and barley, which pay no duty of entry in Portugal, but 4 *per cent.* exportation when under the Portugueſe flag, and 14 *per cent.* when under that of foreigners; from Fayal and Madeira they export wines, which are uſually in time of peace ſent to the Brazils and Barbadoes, but in war time to the north. Madeira ſends alſo ſugars and dry confects.

All the nations which trade to Liſbon have alſo factories and conſuls at Oporto. The Engliſh and Dutch, eſpecially the former, have a pretty conſiderable trade there; that of the French is not ſo good; and the merchandiſe which may be had at Oporto conſiſts in wines, ſugars, oil, tanned leather, Brazil tobacco, cork, ſumac, oranges and citrons, Brazil and Campechy wood, and tallow.

It is computed that the Engliſh export from Oporto, one year with another, to the amount of 18 or 20,000 pipes of wine, valued at about 6 l. the pipe.

Brazil ſugars are worth about 12 s. the arobe or 32 lb. oil is worth about 10 s. the almude, or 4 ½ gallons; Brazil tobacco, 1 l. 4 d. the arobe; cork 6 s. the quintal; fine ſumac, 9 s. the arobe; oranges 9 s. 8 d. and citrons 12 s. 4 d. the thouſand; laſtly Brazil wood from 3 to 4 l. the quintal.

The other conſiderable places are Braga, ſituated on the river Cavado, 170 miles N. of Liſbon, and 32 N. of Oporto. Viana, a port-town, 36 miles N. of Oporto. Braganza, ſituated on the river Sabor, 100 miles N. E. of Oporto. Miranda de Douro, ſituated on the river Douro, 20 miles S. of Braganza. Villa Real, ſituated 50 miles E. of Oporto. Coimbra, ſituated on the river Mondego, 90 miles N. of Liſbon. Guarda, 65 miles E. of Coimbra. St. Ubes, ſituated on a fine bay, 21 miles S. of Liſbon, where great quantities of fine ſalt are made. Evora, or Eibora, 70 miles S. E. of Lisbon. Porto Legre, 80 miles E. of Lisbon. Elvas, ſituated on the river Guadiana, 22 miles E. of Eſtremos. Beja, 60 miles S W. of Elvas. Lago, where the Engliſh fleets bound for the ſtreights, frequently take in freſh water, ſituated 25 miles W. of Faro. Tavira, ſituated at the mouth of the river Gilaon, 25 miles E. of Faro.

The following judicious account of the trade of Portugal was drawn up on a very particular occaſion, by a merchant who reſided many years in that kingdom.

"I ſhall now proceed to give you ſome account of Portugal, its commerce, and the trade of other nations to that kingdom; in which I ſhall advance nothing but known truths; ſuch as are built on facts, and can be vouched for by all experienced perſons. And my principal inducement to this undertaking, is to give the public ſome clear notions of a ſubject, which has of late been written and talked of with the greateſt ignorance and abſurdity.

The Portugueſe themſelves carry on no commerce of conſequence with any other European dominions: the Britiſh, French, Dutch, Germans, of various countries, who all go under the denomination of Hamburghers, Danes, Swedes, Spaniards, and moſt of the ſtates of Italy, have factories and conſuls ſettled in Liſbon: and ſome of them, particularly the Engliſh, have the ſame at Oporto; alſo a few houſes in Viana, Figeira, Faro, and likewiſe on the iſland of Madeira. Of theſe people, the Portugueſe merchants purchaſe the neceſſary commodities for their India, Guinea, and Brazil commerce; as the town and country dealers do thoſe for their home conſumption. And the ſame merchants purchaſe of the natives, or take in barter, the ſeveral products of their dominions, which they export to the countries proper for their ſale.

The native exports of Portugal are wine, lemons, oranges, dried figs, ordinary raiſins, almonds, ſalt, oil, cork, ſumack, tunny-fiſh, and other ſmaller articles. Wool uſed likewiſe to be exported in conſiderable quantities, but the extraction of it from that kingdom is now prohibited. However, I believe the Dutch get a good deal of it off ſtill, under the name of Spaniſh wool, by the help of forged certificates, and falſe-ſwearing; of which bad practice the Portugueſe make as little ſcruple, for gain, as even the worſt of our own countrymen.

The commodities the Portugueſe bring from their foreign dominions, and ſell, chiefly at Liſbon, for other European countries, are diamonds of Brazil and India, ſugars, tobacco, Brazil wood of ſeveral ſorts, cocoa-nuts, coffee, cotton, pepper, ſeveral ſorts of drugs, ſome inferior kinds of ſpices, whalebone, raw and tanned hides, elephants teeth, arrack, orchella, citrons, and, occaſionally, China ware, Indian ſilks, and cotton piece-goods. And here it may be proper to obſerve, that all their India commerce is going to be made more regular and extenſive.

To theſe exports I ſhall venture to add ſilver and gold. The former, as no product of their own, is allowed to be ſhipped off by entry and licence. The latter is not, except for corn, in times of great want, and, by ſtipulation, for ſome articles they receive from Sweden, as I have been informed. But in either of thoſe caſes, the procuring of the licence would be attended with ſo much trouble, that it is rarely, if ever, ſollicited. However, in their exports, gold muſt be and is underſtood as a commodity, which Portugal ought to wink hard at the extraction of, or they could not themſelves even get it from America, or carry on any of their other commerce, as I ſhall hereafter make appear: and have now only to add, on this head, that Britain receives as ſmall, or a ſmaller proportion of gold, than any other nation trading with Portugal, as will be apparent from a general view of their commerce; notwithſtanding the whole weight of that accuſation is levelled at us, through folly and ignorance in ſome, and from a want of ſpirit, reſolution, and abilities in others: for Portugal, of all kingdoms in the world, has the leaſt reaſon to miſuſe or affront Great Britain.

The imports in Portugal, for their home and colony conſumptions, are almoſt all things neceſſary for the ſupport, convenience, ornament, or luxury of life; of moſt of which articles I ſhall give ſome account when I come to treat ſeparately of the trade of each country.

Portugal is fruitful, eſpecially its vallies, and many of its plains, in wine, oil, fruits, and grain: but their crops of the latter are of all the moſt uncertain, and particularly for wheat; of which grain the great city of Liſbon never receives, even in the moſt favourable years, more than a third part of the native growths for its annual conſumptien: and I believe I may ſay near the ſame proportion is wanting of barley, for the feeding of their horſes, mules, and other cattle. The country is very mountainous, and the mountains in general are barren; being moſtly rocks of coarſe marble, ſome of them quite naked and craggy, others covered with a ſhallow ſoil, and in general exceeding ſtony. In their level country they have very extenſive ſands, many of the looſe, red, and heavy ſort; others of the white and lighter kind.

The country is alſo very ill watered, eſpecially in their ſouthern provinces, which prevents their being well peopled or cultivated, as, from a want of that element, the poor inhabitants ſuffer greatly, particularly by the loſs of their cattle in dry years.

However, the ſoil and climate being more kindly in the northern provinces of the kingdom, thoſe are in all reſpects better peopled, as well as cultivated: and from that part of the country, and their iſlands, Brazil has been principally ſupplied with inhabitants; while their ſettlements in India and Guinea have been recruited from the ſouth, moſtly by tranſported felons and vagabonds ſent from Liſbon; in which city, pride, lazineſs, and vice, are predominant qualities; inſomuch that the children of Liſbon are branded for worthleſsneſs even to a proverb.

In fine, the nature of their government, which is entirely abſolute, has too ſtrong a tendency to oppreſſions de-

ſtructive of induſtry, eſpecially in thoſe parts of the country where the climate is an additional encourager of lazineſs, as well as the promoter of vice. To which may be added, the invincible pride of all noble and genteel families, every branch of whom will abſolutely ſtarve rather than uſe any ſort of employment for their ſupport. But above all, the burthens of prieſts, friars, nuns, and the ſuperſtitious influence they have over the people, as well as an univerſal litigious diſpoſition in the whole nation, conſpire to make every order of the people in that country poor. Then, joined to the natural ſterility of the ſoil, the number of ſoldiers neceſſary to garriſon a country which is almoſt all frontier, and whoſe pay is ſo ſmall as to oblige them to a life of celibacy, the great numbers of religious orders of all ſorts, and the neceſſary draughts of people for their immenſe extent of territory in America, keeps the mother country continually weak in people. So that they do, and muſt always, depend chiefly on the ſuccours and ſupplies of other nations, both for their protection and ſubſiſtence.

But the All wiſe diſpenſer of bleſſings, to ſupply their deficiency in ſtrength and the extent of kingdom, as well as of the exterior wealth of the earth, and even induſtry, has given them a treaſure from under it. Their gold and diamond mines have enabled their monarchs of late to make a figure among the great potentates of Europe, and made them generally reſpected from the convenient and neceſſary commerce carried on to their dominions, greatly beneficial to all. The people of Portugal, in general, look on no nation with ſo evil an eye as Spain: France they have no affection nor eſteem for; and always expreſs a juſt ſenſe of the natural connection they have with us in commerce and intereſt, as well as a faith and reliance on our ſupport in times of need.

I ſhall now return to the diſcuſſion of commerce; and, for the reaſons given above, muſt obſerve, the native poverty of Portugal was ſo great on the diſcovery of their gold mines, that they would have found it impoſſible to have worked them, but from the credit given by other countries, and particularly Great Britain, in the neceſſary commodities for that purpoſe. And as their returns of bullion augmented, their credit from us, and by degrees all other countries, grew greater: and, tho' now conſiderably enriched themſelves, they ſtill work their very mines, and carry on almoſt all their colony commerce, and much of their home trade, with foreign capitals. For they are truſted with all articles of traffic till the returns come round: inſomuch that the merchants of other countries not only ſtand the diſburſe of the coſt of their goods, and the charges of tranſporting them to Portugal, but alſo of the King's duties, which are very high on moſt of the articles that are re-exported, till, as I ſaid before, the returns for them arrive. A cuſtom and confidence ſo greatly advantageous to the King as well as the ſubjects of Portugal, that the foreign merchants ſettled amongſt them, eſpecially the Engliſh, ought to live under the faireſt and ſtrongeſt protection, even had they no treaty to exact it, becauſe on the ſupport of the foreign factories that neceſſary credit muſt depend: for without ſuch merchants or factors reſiding in the kingdom, no ſuch credits could with ſafety, nay abſolutely would, be given. And it as ſtrongly behoves every nation that would preſerve its commerce to that kingdom, to ſupport its merchants eſtabliſhed there; otherwiſe the trade of that country will go gradually declining, and at laſt be entirely loſt."

Thus far the author of Mercator's letters has given us a true idea of the Portugueſe commerce in general; after which, he proceeds to give an account of the trade there of other European nations, and afterwards that of Great Britain as follows.

"To begin with their moſt remote trade, I ſhall include in one article the whole Baltick coaſts, or the commerce of all countries within the Sound. The commodities from whence are flax, hemp, Ruſſia leather, Ruſſia linen, ſail-cloths, iron, wrought, caſt, and in bar; copper; timber, planks and boards, not only for the King's ſhipyards, and all other ſhip-work, but alſo for building of their beſt houſes, and other works, where durable wood is required; coarſe linens of ſeveral kinds; wheat, ry and barley, in very conſiderable quantities; bees-wa pipe-ſtaves, ſtock-fiſh, pitch, tar, and other commo ties.

The exports from Portugal to the Baltic, are ſome c goes of ſalt, a few lemons and oranges, a little arra and a meer trifle of wine; ſo that the balance paid ſpecie muſt be exceeding great.

From Hamburg and other neighbouring ports, are i ported immenſe quantities of German linens, of all kin and qualities; and, occaſionally, many of the Balti commodities.

The exports for Hamburgh and its neighbouring por are ſome ſalt, ſugars, and tobaccos, whalebone, a lit wine and arrack, a few lemons, oranges, and dried fi ſome cocoa nuts, coffee, cork, citrons, a few India goo occaſionally, and other trifling articles; the whole which, however, cannot amount to one quarter of t value of their imports; conſequently the balance paid ſpecie muſt be very great. It is, however, to be a knowledged the ſilver imported into Liſbon is chiefly return for German linens, and ordinary Engliſh woll goods; a trade greatly beneficial to Portugal.

From Holland are imported great quantities of fine t woollen cloths, hair-camblets, linens, ſpices, corda anchors, and all ſorts of naval ſtores, moſt of the B tick commodities, all kinds of grain, prodigious quantit of ſmall round cheeſes, coach-horſes, arms, ammunitio and accoutrements of war, indigo, toys, and other a ticles.

The exports for Holland are a few lemons, oranges, a dried figs, a ſmall quantity of wine, ſome candied citro orchella, wool under certificates of its being Spaniſh, ſ veral cargoes of ſalt, diamonds, whalebone, a few ſug and tobaccos, Brazil wood, ſome cocoa-nuts, coff Brazil hides, India goods in conſiderable quantities, wh to be had at public ſale; cork, ſumack, canes for weave and other articles. The balance paid by Portugal Holland in ſpecie, and abſolutely carried over in their o ſhips, &c. is very great.

The French ſend to Portugal fine woollen cloths, vario kinds of ſtuffs, particularly a ſort of black goods call druggets, of which they ſell immenſe quantities for t habits of the clergy, having entirely thereby deſtroy the conſumption of Engliſh crapes, once a very impo tant article of our trade; wrought ſilks, a great quanti of linens and cambricks; dreſſed calve-ſkins, anoth branch taken from us; hats, ſilk ſtockings, both which articles they are alſo getting from us; all ſorts toys, furniture, ribbands, and moſt of the ornament parts of female dreſs; grain of all kinds, when they ha it to ſpare, and ſometimes in immenſe quantities; clare champaigne, and brandies, though prohibited, are ſmuggl in; as are flowered and figured ſilks, gold and ſilver lace India goods, and other contraband commodities: th likewiſe import printed books, ſome ordinary ſorts cutlery ware, and an abundance of ſmaller articles, whi it would be too tedious to enumerate. By the help of wo ſmuggled from us, they have made attempts to rival in our very great article of long-bays, but hitherto wit out ſucceſs. God grant their future endeavours, aid by our inattention, may not bring ſuch a project to be The French take from Portugal ſome raw hides, a ſma quantity of fruit, a few cocoa-nuts, and occaſionally little pepper; alſo ſome Brazil wood and orchella. The formerly likewiſe uſed to receive ſome Brazil diamond but, I think, they now prohibit the importation of the in France. So that Portugal pays them a very great b lance in bullion, and for articles, in general, the leaſt n ceſſary of any they import.

The Portugueſe take from Spain immenſe quantities cattle, both for labour and ſlaughter, a great deal of B cay iron, a vaſt many cheap wrought ſilks and velvet moſt of which are ſmuggled, to defraud the King of h duties; many cargoes of a thin, ſtrong kind of ruſhe for ordinary cordage, and other uſes; printed book ſome dried raiſins, and occaſionally corn and oil, a ſome other commodities.

Th

The Spaniards take from Portugal, cured tunny-fiſh, ſome tobacco, a few ſugars, ſome cocoa-nuts, which are ſmuggled in, as is alſo a vaſt quantity of ſpecie; ſome part of which balance Portugal, however, gets from them again, by the ſame method, in another part of the world. To this article I muſt alſo add the vaſt ſums of money Portugal pays to Spain for the labour of the people of Galicia, who are the principal ordinary working perſons at Liſbon, and in many other cities: they come young into Portugal, where they work hard, and fare hard, for a conſiderable number of years; and then retire, with incredible ſums, for ſuch people, to their own country.

The Italians import into Portugal immenſe quantities of wheat, a great deal of barley, and alſo a deal of Levant rice, vermicelli and oil occaſionally. They likewiſe import prodigious quantities of writing paper, a vaſt abundance of wrought ſilks and velvets, coral, and many expenſive curioſities; great quantities of glaſs beads, for their Guinea and home conſumption; a great many cotton goods, by ſpecial licence from Malta; many toys, and other inferior articles; not to particularize religious traffic, which is very great and public.

The Italians export from Portugal, hides, a conſiderable quantity of ſugars and tobaccos, cocoa-nuts, pepper, ordinary ſpices, elephants teeth, Brazil wood, ſome drugs, and an immenſe quantity of bullion. Inſomuch that, of late, while gold bore ſo high a price in England, it has been a drug all over Italy: a circumſtance well worthy of Britiſh obſervation and attention."

Having thus given an impartial account of the commerce carried on betwixt Portugal and other European territories, the judicious author proceeds to give a ſtate of the trade carried on from the Britiſh dominions with that kingdom. In which he makes it appear, that no nation is more neceſſary to them in commerce than Great Britain, nor is leſs indebted to them for a balance in bullion.

"I ſhall now proceed to give an account of our trade with Portugal, evidently advantageous to both kingdoms in a mere commercial light; to Great Britain, as we furniſh them with commodities that employ many of our people, and procure us alſo a balance in bullion; to Portugal, as we ſend them little but what is cheap, of great uſe, nay, I may ſay of almoſt abſolute neceſſity for their ſubſiſtence, and receive from them in return moſt of their native and many of their colony commodities, which, in general, are articles of luxury with us, and ſome of them ſuch as we could be ſupplied with cheaper from other countries. Whereas they take no one article in preference from us, not even the ſingle one which we have an excluſive right, by the treaty of Queen Anne, of ſupplying, I mean cloths; ſince it is notorious all the fine ones they uſe go from France and Holland, while we religiouſly obſerve our obligation in the treaty, by admitting their wines at one third leſs duty than is paid for thoſe of France: and if our more ordinary cloths have ſtill a conſiderable vent there, as well as in Spain, it is ſolely owing to our being yet able to furniſh them much cheaper than any other country can do; but how long we may continue able to do ſo, I ſhall not preſume to ſay, unleſs ſome of our burthenſome taxes are timely taken off, and the extraction of wool from Ireland as well as England can be more effectually prevented; though by what methods to be accompliſhed I ſhall not pretend to ſay.

The exports from England to Portugal are long-bays of all kinds, Colcheſter bays, Spaniſh, Yorkſhire, and ſome few Glouceſter cloths; long-ells, ſhalloons, ſays, ſerges, Spital-fields, Norwich and Coventry ſtuffs of various kinds; printed linens, watered tabbies, ſilk and worſted ſtockings, hats, great quantities of Birmingham and Sheffield wares, ſome wrought plate, lead ſhot, copper, pewter, tin, coals, corn of all kinds, pulſe, flour, biſcuit, iron hoops, toys, watches, arms, and accoutrements of war, ſome cordage, ſhip-chandlery articles; and, in fine, almoſt every thing produced or made here that is uſeful and cheaper than in other countries.

From Scotland they have barley, and a little cured ling.

From Ireland they receive butter in great quantities, ſalted beef and pork, ſalted ſalmon and hake, ſome ordinary camblets, barley, and potatoes.

From Newfoundland, New England, and Nova Scotia, dried cod-fiſh, and particularly from the former place, in great quantities.

From Carolina, ſeveral cargoes of rice.

From New-York, Philadelphia, Virginia, and Maryland, wheat, flour, Indian corn, biſcuit, pipe-ſtaves, bees-wax, and lumber.

They alſo buy moſt of their commercial ſhipping from us, ſome river built, by order, but moſtly of Old or New-England conſtruction, that have been uſed.

Great Britain exports from Portugal almoſt all the wines that are ſhipt from their whole dominions, including the Weſtern iſlands and Madeira. The ſame of lemons and oranges. Salt for all our fiſheries, and moſt of our colony-uſe in North America; for our fiſheries in England and Scotland; and to Ireland prodigious quantities, for their fiſheries, exported proviſions, and whole national uſe; dried figs, raiſins, almonds, cork, ſumach, orchella, citrons, ſugars of late, in very great quantities for Ireland, near, if not quite ſufficient for that kingdom's conſumption; and from thence I have heard a great many, when refined, have been run into England; the whole to the great reproach of our colony-management, as is alſo our traffic there in French ſugars. Diamonds, both of Brazil and India, Brazil wood, arrack, and occaſionally other Indian commodities, which our ſhips ſmuggle into many parts of the Britiſh dominions; oil, when they have it to ſpare, and at reaſonable rates; and ſometimes cocoa-nuts, elephants teeth, drugs, a few tobaccos, and other articles.

I have not placed their cotton among the exports for any particular country, as hitherto they have received no great quantities from Maranham; and there are generally bidders upon it of all nations, who ſend it to thoſe places, where it is moſt likely to turn to account, the importation, I think, being prohibited no where.

From this ſhort view of the particulars of the Portugal commerce, it is fully apparent that our trade with Portugal, is the leaſt burthenſome and diſadvantageous to them of any; that in no article do we enjoy any preference, or receive any favour; but on the contrary, in the branch of fine cloths, a manifeſt injury.

In an account of ſo general and extenſive a trade, it cannot be expected I ſhould aſcertain quantities, as ſuch a taſk muſt have been the particular labour of years; and even with the utmoſt exertion of toil, art and expence, could never have been made perfect. Every man verſed in the trade, or that takes informations, may readily determine, from a view of the exports and imports, as I have put them one againſt the other, that the balance muſt be very great which Portugal pays to every country in Europe: and that from us ſhe receives hardly one article of luxury, nothing but the very cheapeſt and moſt uſeful of our commodities; and that from the many articles we take in return, all things of leſs abſolute uſe to us, ſhe pays us a ſmaller balance in proportion than to any other nation ſhe trades with.

I ſhall now recommend a few points to the immediate conſideration of whom they may concern.

And firſt, I recommend to ſome ſubſtantial Fabricant, or publick-ſpirited gentleman, to endeavour, in ſome place where labour is cheap, to ſet a manufacture on foot that may rival the black French druggets; an article which, if it could be brought to bear, would employ every inhabitant of a conſiderable village.

Secondly, to ſome of our northern counties, or to Ireland, I recommend the making the ſort of cheeſes ſent by the Dutch to Liſbon; of which many cargoes go in a year: and I cannot think but in our country they are to be made cheaper.

Thirdly, to whom it concerns, to ſupport and extend our hat trade, chiefly by preventing the ſale of beaver to the French, and to encourage the importing of greater quantities of it.

Fourthly, improving our ſilk-ſtocking buſineſs as much as poſſible, in point of cheapneſs and quality, particularly in gauze fabricks.

And fifthly, I humbly recommend to the conſideration of the legiſlature, the taking off, if poſſible, the duties on

ſoap

ſoap and candles, as articles that muſt and do greatly affect all our low-prized manufactures; of which kinds the bulk of our exports are now become. And I think, if an equivalent is neceſſary for the ſupport of government, the tax in lieu ſhould be laid on luxury, which is grown to ſo dangerous and ſhameful a pitch in Britain."

Having thus conſidered the intereſts of Portugal in reſpect to commerce, and made appear that her trade with Great Britain is of all others the moſt neceſſary and leaſt diſadvantageous, the ſame author then undertakes to make evident the ſtrong and natural dependence ſhe has on Great Britain for ſupport; and the good effects, in a political view, a very cloſe connection with Great Britain muſt always have for Portugal, in preference to an alliance with any other power in Europe.

"The natural and dangerous enemy of Portugal is Spain. For as the acquiſition of that kingdom would be of ſuch infinite conſequence, in the points of eaſe, convenience and power, to the Spaniards; the Portugueſe would be blind and ignorant indeed, not to ſuppoſe their ambitious neighbour would miſs no opportunity, on any pretence, for ſeizing on their country. And that ſuch an apprehenſion does always exiſt in Portugal, is evident from the alarms conſtantly taken on any movements or augmentation of troops on the Spaniſh frontier.

The antipathy and hereditary hatred the people of thoſe kingdoms have for each other, putting the Galicians out of the caſe, are extremely obvious and ſtrong. From traditions of former ſufferings, and a dread of future ones, the Portugueſe even abhor Spaniards; they conſider them as having been the unwarrantable ſeizers of their country, and the tyrannical ruiners of it afterwards, to make the acquiſition ſecure: while on the other ſide, it may be ſaid, as violent a prejudice operates, and almoſt to an equal degree. The proud Spaniards conſider the Portugueſe as a province of rebellious and revolted ſlaves, whom they want to ſhake their whips at, and conſtrain to a ſervile obedience, but cannot. They affect to deſpiſe the Portugueſe; but, in the manner of expreſſing their contempt, always manifeſt an anger that ſhews they are moſt ſenſibly hurt. Such is the animoſity that reigns now, and has for ages reigned, betwixt thoſe nations; nor is there the leaſt likelihood of an abatement of it, but, on the contrary, rather an increaſe.

Thus, with Spain for an hereditary enemy, and France a friend that ſhe dares not truſt; where can Portugal, too weak to defend herſelf, look for an able and truſty ally? To Italy? No: they have no ſuccours to ſend; but, on the contrary, live themſelves in perpetual need of them from others. Can Holland do the buſineſs? Moſt certainly no: her ſtrength and weight are no more. And as for the more northern kingdoms, they are at too great a diſtance, and too poor, to enter upon, or comply with ſuch an engagement. Great Britain, then, is the only nation that ever has been, can, or will be, the ſafe, the truſty, the generous, the able ſupporter of Portugal. If we examine hiſtory, from almoſt the firſt foundation of their monarchy, it will be found we were always their true and honourable allies. We generouſly helped them to conquer their country, and have ever protected them in it: for the truth of which I appeal to their own hiſtorians as well as ours. At the reſtoration of their monarchy, our Charles the firſt was one of the firſt princes that acknowledged their John the Fourth, and entered into a treaty with him: the good effects of which were, however, in ſome meaſure prevented by the unhappy troubles that juſt then broke out in Britain.

If a ſquabble happened in Oliver's time, it was from an indiſcretion of the court of Portugal that they paid heartily for; and, on their becoming wiſer, we became their friends again. Charles the Second was no ſooner reſtored to his dominions, than the intereſts of Portugal were by him taken to heart. He married their Infanta in preference to all other princeſſes, notwithſtanding the Spaniſh King offered to portion higher any other catholic or proteſtant princeſs that he would chuſe. He confirmed all former treaties made betwixt the nations, and made a new and perpetual one with Alfonſo the Sixth; by which Great Britain is to ſuccour them in times of need, and particularly with a naval force adequate to the neceſſity of their demand. It was under the ſame King's ſingle and expreſs mediation, the treaty was negotiated, by which Spain firſt acknowledged the independency of Portugal, Charles being guarantee; and by his powers did the Earl of Sandwich abſolutely accompliſh and ſign the treaty.

In conſequence of our above mentioned engagements, did Great Britain, in the year 1735, ſend them a ſuccour of near thirty ſhips of the line, ſo very expeditiouſly fitted out, that they carried, themſelves, the firſt public news of their appointment; which fleet remained, under the command of Sir John Norris, 22 months in the river Tagus, to the coſt of above a million ſterling to Great Britain. And whenever they require another and greater aſſiſtance, I hope we ſhall as readily grant it, on the ſingle condition that Portugal as fully and willingly complies with her obligations to us, in obſerving thoſe regulations in reſpect to commerce, which the ſame national treaty confirms and preſcribes: and which is not demanding from them any favour; nothing diſhonourable to their crown, or diſadvantageous to their country; nothing but what impartial juſtice exacts, and what good policy on their ſide would readily promote."

The patriot-ſpirited Mercator then goes on to ſhew that the Britiſh traders in Portugal labour under ſeveral diſadvantages; ſome of which, with as much freedom as veracity, he proceeds to lay before the public as follows:

"The firſt I ſhall name is, the prejudice which bigotry inſpires them with againſt us, on account of our religion. It muſt be acknowledged, to the great honour of the Portugueſe, that all orders of them are very civil to foreigners, and the better ſort are particularly polite: but ſtill they are rigid roman catholics, with whom it is a neceſſary point of faith, to think too ſeverely of thoſe who differ from them in religious principles. And although there are many of the nation who are very obliging in their carriage, nay, that do many kind and friendly actions for our proteſtant merchants; yet it is not to be doubted but the very beſt of them would like us ſtill better, if we profeſſed the ſame tenets with themſelves: and there are others, no doubt, who eſteem it a merit to hate us, and who think it a much leſs crime to deceive, over-reach and defraud us, than any ſuch as are of their own church. Beſides, the difference in religion does in a great meaſure prevent a free intercourſe with them, and hinders our having that intereſt with the clergy, in particular, which is often of very great ſervice to the roman catholic merchants of other countries.

The next diſadvantage our countrymen labour under, is that of having too often improper or incapable c——

The Britiſh factory of Liſbon had formerly the indulgence of chuſing and recommending a conſul; but fooliſhly reſigned it, to prevent animoſities from growing up among themſelves; and there are perſons yet on the ſpot who ſigned the letter for that purpoſe. Fatal reſignation! for, thereby, the office is now fallen among thouſands of others, to be ſquabbled for by people who regard it for nothing but its profits; and who, without conſidering conſequences, think of little elſe but making the poſt as eaſy as it is profitable to them. Now, rightly conſidered, I believe it will appear, there is no power can legally oblige one Briton to pay money to another without an act of the legiſlature to authoriſe it: and therefore conſulage can be conſidered only as a voluntary gratification for ſatisfactory ſervices: conſequently the merchants have a right to demand reaſonable and proper ſervices, or refuſe paying any conſul his appointments, eſpecially if it is made a reſolution of the majority of the body. But as this is a point of law, any able practitioner would greatly oblige the world by impartially diſcuſſing it, as a matter in which the proſperity of commerce and the rights of the ſubject are greatly intereſted.

To the ill execution of the c—nſ—r o—ce, muſt be added, that our countrymen labour ſometimes under the diſadvantage of having the m—ſt—l functions too badly performed. It is well known that, in Portugueſe ſpirit and dignity in a miniſter are very eſſential qualifications for preſerving a national reſpect, as the certain con-

quen

quences of an abject, mean, or puſillanimous behaviour, are its being ſlighted, deſpiſed, and trampled on. I will ſuppoſe, for example, that if our nation ſhould be ſo unfortunate, at any time, as to have a miniſter at that court, who, in the face of ſo very proud a people, could be ſo mean as to trade, nay, ſo indiſcreet as even to let his name appear at the head of a compoſition in a bankruptcy; what figure can it be thought he could make? and how little muſt he, of neceſſity, be reſpected, either by the natives, or his own countrymen? Nay, I will carry my ſuppoſition farther, and imagine a proteſtant merchant of our factory, perſecuted without a crime, ſhould apply to him, by the direction of the body of merchants, for his protection, and ſhould receive from him this anſwer, "I can't protect you, I come hither for other "purpoſes; if you want protection you muſt go to a "convent for it." I ſay, if ſuch a thing as this could poſſibly happen, what opinion would Portugal have of Great Britain? how would our merchants there look? how would they be treated by the very meaneſt of that people? and how long, after ſuch a diſgrace, could Portugal be tolerable to a Briton?

A noble negotiator that, not an age ago, left Liſbon on terms bad enough with his countrymen, had, notwithſtanding his piques, the wiſdom and honour to deliver his true ſentiments on the very evening of his departure from thence, in or near the following words: "Well, after all, the trade to this place is of great conſequence to Great Britain; and there ought to be a miniſter here of illuſtrious birth, with a high character and large appointments; nor is the beſt nobleman in the kingdom too great for the office, to ſupport properly the dignity of the crown and the rights of the nation. And there ought to be a conſul of ſufficient abilities, who ſhould be a merchant: one that could obtain weight and influence in the tribunals of the kingdom, and do all the under parts of buſineſs without troubling the miniſter; who ought never to appear but in matters of real importance; and, when he does move, he ſhould have ſuch powers as to enable him to act with great weight and dignity: and ſo will I inform the miniſtry when I get to London."

It is to be hoped that ſo wiſe and neceſſary an information was given; and that, to this nation's great benefit as well as honour, a time will come for carrying ſuch prudent counſel into execution.

Were, therefore, the national diſadvantages of having bad c——s and improper m—ſt—s, prevented by wiſe determinations here, moſt others would thereby be greatly weakened, if not entirely removed. Even the firſt I mentioned, their prejudice againſt us on the ſcore of religion, would a good deal be blunted, or at leaſt many of its bad effects removed, by a glare of grandeur on one hand, and a ſteady, wiſe and prudent conduct on the other; eſpecially if attended with affability, liberality, and politeneſs. But from the reverſe of theſe qualities, either in miniſters or conſuls, I am ſure all honeſt and worthy merchants of Great Britain will join me in ſaying, good Lord deliver us.

There is another diſadvantage our merchants labour under in Portugal, which is a prejudice kept up againſt them in particular, from being ſuppoſed the principal ſhippers-off of gold: an allegation in itſelf not entirely true, and in its conſequences abſolutely unjuſt, as I ſhall make plainly appear."

The author then proceeds to diſcuſs the intereſting point that has puzzled ſo many weak heads; that is, the extraction of gold from Portugal, which has been ever fooliſhly repreſented as an immenſe evil to that kingdom, ſuffered, however, out of great kindneſs and particular favour, to Great Britain.

"Nothing is more evident, than that gold is, in itſelf, of no other value than for the neceſſary and convenient uſes it can be put to. For example, I will ſuppoſe every Portugueſe had his houſe full of that metal, and was at the ſame time in want, as he muſt be if he would not part with it, of comfortable food and raiment; might he not, in ſuch a caſe, with propriety be ſaid, amidſt his uſeleſs heaps of ſhining ore, to be miſerable, poor, and wretched? What are particulars, or what is a ſtate the better for

dead and uſeleſs piles of wealth? It certainly might as well be kept under ground, as brought above it to no purpoſe; nay, it had better be kept there, on ſuch principles, than produced to the light; becauſe the care and labour of working the mines would then be avoided.

Should the whole race of Portugueſe fall again into their old, penurious, and inelegant methods of life; feed upon pulſe, or other ſuch ordinary food, and that in a ſparing manner, nay, even without cleanlineſs; when their own corn was exhauſted, if they would content themſelves with eating cheſnuts inſtead of bread, as the poor, in bad years, yet do in the north part of their kingdom; or with the pods of the locuſt-tree, which often ſupply the like wants to this day in Algarve; I ſay, if the people of the metropolis, and other affluent parts, of their kingdom, could condeſcend to foregoe the comforts of grateful food, kick off their ſhoes and ſtockings once more, and make, as in times paſt, an ordinary cloak their clothing by day, and only bed by night, of what value would gold become? or in what ſhape could they propoſe to make it ſerviceable to them? For my part, I ſee no other uſe it could poſſibly be put to, than the buying of themſelves, in times of need, a protection obſtinately to poſſeſs a wretched and comfortleſs independence. Whereas, on the contrary, by parting with their gold in commerce to other kingdoms, they enjoy not only the comforts, but elegancies of life; make a reſpectable figure in Europe; and are ſecure ſingly from us, while they are ſo wiſe as to preſerve our friendſhip, of a fuller and ſafer protection than they could poſſibly buy from the hire of all the mercenary troops upon earth.

Thus have I proved, I hope, from every conſideration, that the extraction of gold from Portugal is no real evil to that kingdom, and more eſpecially any proportion of it that, from our very neceſſary and uſeful commerce, comes to ſo natural, powerful, ready, and ſafe an ally as Great Britain.

But, we are to lament that, from a want of mercantile knowledge and due obſervation, all the odium of the Portugueſe falls on our nation for the extraction of their bullion; than which nothing can be more unreaſonable or unjuſt: but as ignorance is the foundation of this prejudice, I ſhall now endeavour to remove it.

That Portugal muſt and does pay a great balance in bullion to every other nation ſhe trades with, I hope I have made apparently obvious: but if a farther proof thereof is wanting, I appeal to the weekly, nay, I may almoſt ſay daily practice of our buying bills for thoſe balances of the ſeveral countries to whom they are due.

Such debts of Portugal do we purchaſe commonly for ready money, in an exchange buſineſs; which ſeldom gives a profit equal to national intereſt, and a decent premium for ſea riſques: and yet is a negotiation more favourable for us than any other nation, on account of our ſituation, and the number of privileged ſhips we continually have at Liſbon; as alſo from the ſuperior characters of our mercantile navigators to thoſe of Holland and other countries; inſomuch that our ſhips not only bring the money to England, but are alſo the general carriers of it, for all nations, to Italy. Thus, becauſe our ſhipping is principally uſed for the extraction of gold, and our country is made greatly a channel for its conveyance, both the ignorant of Portugal and of Great Britain imagine the balance of our commerce immenſely greater than it really is: for, as I ſaid before, England is only a channel for the greateſt part of the ſpecie our ſhips bring from Portugal; moſt of it going out of the kingdom at her eaſtern ports, as ſurely as it enters at the weſtern ones; ſo that our gain on the traffic for the payments Portugal makes to many other nations by the way of England, including freight, commiſſion, profit, and charges, may reaſonably be eſtimated at from two and a half to three *per cent.* and no more. Such is the profit for which we do the buſineſs, run the riſques, and bear the odium, in Portugal, belonging to other countries.

I cannot quit this head without obſerving, that it is exceeding ill policy in Portugal to make the riſque of extracting gold great; becauſe, according to the difficulties, the exchanges will be proportioned more or leſs againſt

 them.

them. And, I muſt add, if we were not the carriers of any, it would nevertheleſs go, and more to the diſadvantage of Portugal: for national balances, like thoſe of private people, muſt be paid, ought to be ſo, and will be, in bullion, let what laws ſoever be made to hinder it.

The Portugueſe therefore, as our friends and well-wiſhers, ought by all means to preſerve to us the advantage of being the carriers of their bullion. Nay, the late King of Portugal did ſo, on a patriot principle, after his eyes were once well opened, as they were in Wingfield and Roberts's affair; for it is well known he ever after diſcouraged informations and diligences about the extraction of coin, being well ſatisfied of the abſolute neceſſity there was for its going out of his kingdom.

The great Lord Galway made a ſpeech in the year 1709, to his late Portugueſe Majeſty, when that nobleman was general there of the Britiſh forces, and ambaſſador from Queen Anne, on a project then in agitation at the court of Liſbon, to prevent the extraction of bullion: of which Lord Galway having received information, he immediately demanded an audience of the King, to whom he ſtrongly and elegantly delivered his ſenſe on the ſubject, in the following manner:

"Your Majeſty cannot be ſufficiently commended for the ſteady attention you have always ſhewn to the affairs of your government. And the pains you have lately beſtowed on examining into the balance of trade, is a new proof of that merit which would intitle you to the crown, had it not deſcended to you from a long and glorious line of royal anceſtors. But permit me, ſire, to obſerve, that there is a greater King; one by whom all kings reign, and whoſe providence is over all his works. According to his diſtribution of things, riches belong to ſome nations, and induſtry to others; and by theſe means the liberality of heaven is made equal to all. Vain, ſire, are all human counſels, when oppoſed to his wiſdom; and feeble the efforts, even of royal powers, when directed to croſs his will. You have forbid gold to be exported out of your dominions, and you would willingly enforce the prohibition: but the thing is impracticable. You may reſtrain your ſubjects, but you cannot ſet bounds to their neceſſities. But ſay this was poſſible: ſuppoſe you could defeat the induſtry of the northern nations; what would be the conſequence? Their huſbandmen, graziers, weavers, and all that infinite train of manufacturers that now labour quietly at home to clothe and feed your ſubjects, would then turn ſoldiers; and, inſtead of ſeeing their merchantmen in the river of Lisbon, you would hear of their fleets conveying them to Brazil, to fetch much more of that gold than you now fetch for them. Beſides, ſire, if they are gainers by their trade, they thereby become the natural guarantees of your dominions. It is not only their treaty, but intereſts that bind them to your ſervices. You have potent enemies, and you require powerful friends. The ambition of France knows no bounds; and the pride of Spain will teach her to keep up a perpetual claim to your territories and crown. You have no recourſe to fruſtrate the views and defeat the endeavours of thoſe potentates, but to the maritime powers; and, therefore, let me beſeech your majeſty to conſider, that every project to diſtreſs them, is in effect a ſcheme to deſtroy yourſelf."

This ſpeech, it is ſaid, had its deſired effect; as ſuch ſpeeches ever muſt have in Portugal; at leaſt while the preſent ſyſtems of power and politics remain as they are in Europe, or the Portugueſe preſerve their ſenſes; or the governing men their true loyalty to their King, and a generous zeal and patriot love for their country."

Mercator then gives the following account of the nature and reaſonableneſs of the privileges to which the Britiſh merchants are intitled in Portugal; and the neceſſity there is for ſupporting both them and the national dignity of Britain in that kingdom.

"Of theſe privileges many were the ſpecial grants, doubtleſs for wiſe reaſons, of ſeveral of the Kings of Portugal in ancient times, and were mere acts of grace and favour, till the celebration of Cromwell's treaty with John the Fourth, when they became our abſolute right, by being declared ſuch in the third article thereof.

I ſhall now mention the particular articles of privilege a preſent contended for, as well as others that are loſt; an ſhall ſubjoin a ſhort obſervation on moſt of them.

I will begin with a very neceſſary one, which is the righ of having juſtice duly adminiſtred; and that certainl ought not to be reckoned a favour in any nation: but i is at preſent too well known to be the caſe in Portugal and I am afraid has been for many ages paſt the cuſtom there, to regard perſonal influence more than impartial juſtice, in judicial determinations; which, doubtleſs, occaſioned the treaty's being ſo very full, as it is, of regulations on that head.

The office of judge conſervator is our ſtipulated right, b the 7th article of the treaty, whoſe province it is to judg all our cauſes; but with a right, however, for either party to appeal to a body of judges, who are to give the fina ſentence within four months: which rule is ſo far from being obſerved, that law-ſuits may be kept undetermined for forty years. The judge conſervator is likewiſe to protect the ſubjects of Great Britain, not from juſtice but wicked or vexatious inſults. But that authority, like every other, is now taken from him; and our merchants of the moſt reſpectable figure are thereby ſubjected to the inſolences of the very meaneſt fellows in office having many of them been carried by ſuch, unheard, un examined, both with and without orders from their ſu periors, to the Newgates and Gatehouſes of the kingdom and ſuffered outrages in their houſes and properties, with out a poſſibility of obtaining reparation, or any ſort of ſatisfaction whatever; even after proving the illegality of the proceeding, and the innocence of the inſulted perſon Let every merchant of Great Britain, every ſubject of theſe kingdoms, think ſeriouſly of ſuch a ſituation; and never venture more to pronounce a valuable body of their countrymen blameable for ſolliciting, nay demanding, for it is their right, protection from ſuch unjuſtifiable violences; or that their judge conſervator may be re ſtored to his ſtipulated authority for that purpoſe.

As to the navigation articles for America, they are all be come now of no account: our ſhips are not allowed, un leſs in diſtreſs, to go to any of their colonies, except Mazagam and their African iſlands; and there without preference. The right of having houſes of trade in Bra zil, and their other ſettlements, is alſo entirely taken from us.

The right of a legal navigation to Portugal, and com merce there, with an equitable ſecurity of property, par ticularly in periſhable commodities, and ſome of the owing no duties to the king, are ſtipulated to be fr from all vexatious embaraſſments; all of which is agree able to reaſon, juſtice and good policy, for them to fo low of; and yet, in moſt of thoſe articles, our merchant are eternally plagued with vexatious obſtructions, an plunderings.

We have alſo, by ſtipulation, a right to the wearing ſuch arms for our defence as are uſed by the natives: article which I hope is not thought a favour for us to e joy, becauſe thoſe nations who have no treaties wi them do the ſame, and ought to do it in every country The liberty of profeſſing our religion likewiſe, I ho this nation has too much dignity to receive as a favo from any in Europe, eſpecially while the ſame indulgen is granted to the people of all countries in Great Britain That debts owing to our merchants by perſons ſequeſtere by the king or inquiſition, ſhould be made good to creditors, is certainly a very reaſonable and neceſſary pulation: yet in regard to the king it is not obſerve in regard to the inquiſition it is.

That the king, or any other power, by arbitrary pr tections, ſhall not guard the effects of our debtors fr legal executions, is likewiſe an article of mere juſti yet it is frequently and wantonly violated.

The not protecting our run-away ſailors, on a prete of changing their religion, and the obliging them, wh demanded, to return to their ſhips, is an article now at all regarded by the Portugueſe: on the contrary, th are encouraged in unreaſonable and inſolent proſecuti of their captains, ſeduced from their duty, and ſuppor in their reſiſtance; debauched in infamous houſes, wh

they are encouraged to run in debt; for the payment of which they are afterwards ſold like cattle to the Portugueſe and others; ſuch practices being abſolutely become a traffic in Lisbon, to the diſhonour as well as prejudice of Great Britain.

The Britiſh factory have a right, under the authority of their judge conſervator, to appoint, out of their own body, adminiſtrators of the effects of ſuch of their countrymen who die without partners, or inteſtate: which is certainly not only a very reaſonable but very neceſſary article, and can be no evil to Portugal.

Our merchants are exempted from hired or perſonal military ſervice, as well as their domeſtics; and from civil and religious offices, and all church tributes; which in ſome points are merely reaſonable and agreeable to the practice of all nations; in others, moſt neceſſary exemptions. They have, moreover, the right of having all neceſſaries for their houſes and perſons, and thoſe of their families, duty free; but this privilege is now made of little conſequence to them. They have likewiſe, by royal decrees and the laws of the land, the right of being treated as gentlemen, even in the article of criminal proſecutions; but it is ſo far loſt to them, that they are continually, even from wanton inſolence, treated as ſlaves: and they have another privilege, which is that of being priſoners at large for debt. By the ſeparate and ſecret article, the regulation of duties on our woollen goods is made; but, to the manifeſt prejudice both of Great Britain and Portugal, it is, like moſt of the others, never regarded.

Such are the Britiſh privileges in Portugal, and the ſubſtance of the ſtipulations in our favour of the treaty with that crown; which ignorant perſons have thought full of mighty advantages to this nation. Whereas the fact is ſo far otherwiſe, that if they join Charles the ſecond's treaty, and that of Queen Anne to Oliver Cromwell's, and then take a cool view of our ſituation, and that of other nations in Portugal, it will be found we are upon much the worſt footing with them of any, being in nothing favoured in trade, and yet the only nation obliged to ſuccour and protect them, as we frequently have done at an immenſe expence.

The treaty made between Queen Anne and Peter the ſecond of Portugal conſiſting but of two articles, except the preamble and concluſion, and thoſe being ſhort ones, I ſhall here give them entire to the public.

ARTICLE I.

"His ſacred royal Majeſty of Portugal promiſes, both in his own name, and that of his ſucceſſors, to admit for ever hereafter, into Portugal, the woollen cloths, and the reſt of the woollen manufactures of the Britons, as was accuſtomed, till they were prohibited by the laws; nevertheleſs upon this condition, that is to ſay,

ARTICLE II.

That her ſacred royal Majeſty of Great Britain ſhall, in her own name, and that of her ſucceſſors, be obliged, for ever hereafter, to admit the wines of the growth of Portugal into Great Britain; ſo that at no time, whether there ſhall be peace or war between the kingdoms of Britain and France, any thing more ſhall be demanded for theſe wines by the name of cuſtom or duty, or by any other title whatſoever, directly or indirectly, (whether they ſhall be imported into Great Britain in pipes or hogſheads or other caſks) than what ſhall be demanded for the like quantity or meaſure of French wine, deducting or abating a third part of the cuſtom or duty. But if at any time this deduction or abatement of cuſtoms, which is to be made as aforeſaid, ſhall in any manner be attempted and prejudiced, it ſhall be juſt and lawful for his ſaid royal Majeſty of Portugal again to prohibit the woollen cloths, and the reſt of the Britiſh woollen manufactures."

I muſt here obſerve, that the cloth trade is not the only article to which we have an excluſive right; for the treaty manifeſtly gives it for woollen goods in general: and ſuch was the right that we accordingly did enjoy, in its full and genuine ſenſe, till the late Dutch conſul, Mr. Heſterman, found the means of explaining it away in favour of his nation; who thereupon began introducing Dutch cloths, now increaſed to a great trade. And the French have ſince taken the like advantage of our ſupineneſs, to traffic in cloths to Portugal, though in ſecret; and the better to cover it, their cloths go with Engliſh marks, tickets, and package, though they are well enough known: and for many other kinds of their woollen goods, they are imported into Portugal openly, and in very great quantities.

From the ſenſe of the treaty, enforced by many years practice, I think it is clear, that we have the ſole excluſive right of importing woollen goods of all kinds into Portugal; and we are the only nation who give them an equivalent for that right; the conditions whereof, to their advantage, being duly obſerved by us, ſurely demands as honourable an obſervation, on their part, of the ſtipulations made in our favour; and I ſee no reaſon for ſuffering ourſelves quietly to be elbowed out of our rightful poſſeſſions by any intruders whatever.

In regard to our national dignity, weight, and privileges, I have only to add, as a ſerious truth, that the Portugueſe people laugh, nay cry ſhame on us, for giving them ſo tamely and readily up. The French act in all points with a quite different ſpirit: they have no treaty, no privileges, but from favour; and yet, from being better ſupported, their merchants gain ground on ours every day. And as to the flag of France, they make it greatly reſpected in Portugal, and every where elſe: whereas the Britiſh flag has too frequently ſuffered indignities.

It is evident, both from reaſon and obſervation, that in Portugal, the nation that beſt ſupports its dignity will, in the end, be the prevailing one in commerce. It is the nature of the people to require ſpirit in thoſe they have to do with, and they always reſpect it wherever it appears. If any man can point out one advantage we ever got by making conceſſions there, I ſhall be very glad to learn a truth at preſent unknown to me; as it alſo would be to me to have a ſingle inſtance produced, where ſpirited proceedings have failed of obtaining their juſt and honourable ends; for, indeed, the Portugueſe are no fools."

The author then ſhews the cauſes of the late contentions in Portugal, in which the conduct of the Britiſh merchants there has been greatly miſrepreſented. Among other inſtances of the vexations and perſecutions to which the Britiſh merchants are liable in Portugal, he mentions the following.

A Britiſh houſe of great figure, that had large warehouſes at a country-ſeat they hired about a league above Liſbon, on the banks of the river, had a viſitation there by the very meaneſt officers of the cuſtom-houſe, under a pretence of ſearching for ſmuggled goods. The family being in town, and only one ſervant there, who had not the keys of the warehouſes; on their being demanded to be opened, the officers were told by the ſervant, that he would ſend for his maſters and the keys, as he immediately did: but they inſolently, and without a legal authority, broke open the doors; and, finding nothing to ſeize, left the warehouſes expoſed to plunder, as the gentlemen found them when they arrived; for they went thither directly, with their keys, on receiving the notice that was ſent them. This, like all other violences, no ſort of ſatisfaction could be obtained for: and yet, if thoſe fellows had carried but a pound of foreign tobacco, ſnuff, or ſoap, or a ſingle pack of foreign cards, and then ſwore they had found them there, the houſe would have been confiſcated and ruined.

The 17th article of the treaty expreſsly ſays, If it happens that any controverſy does ariſe between the ſaid King's inſpectors, officers or miniſters, and the ſaid merchants, concerning the goodneſs of fiſh, or any other ſorts of proviſions whatſoever, which ſhall be carried to any of the ſaid King's dominions; the ſame ſhall be determined by the arbitration of good men, provided they are Portugueſe, who ſhall be equally choſen by the magiſtrate of the place, and the conſul of the Engliſh nation, and they ſhall determine the buſineſs in ſuch a manner, that no damage may accrue to the owner in the mean time while the matter is in diſpute.

Notwithſtanding the equitable precautions in this article of

of the treaty, the health-officers are guilty of ſuch arbitrary inſolences and plunderings, as are wicked and infamous to the higheſt degree. For example, in the ſummer of the year 1752, a great quantity of foreign grain being then at Lisbon, under falſe and ridiculous pretences, they exerciſed ſuch tyrannies as would diſgrace even a Barbary government. They ſeized whole warehouſes of corn, fined the owners of it, condemned the grain, and threw conſiderable quantities, at the expence of their owners, into the river. From others they took bribes to be quiet; which was the real end they drove at, and not the ſafety of the public; for it is well known the people of that office are capable, for money, of ſuffering the very plague to be imported and ſold. With ſuch proceedings, it muſt be concluded, all the holders of grain were greatly terrified; inſomuch that the prices of wheat, and eſpecially Engliſh, which is not ſo fit for keeping as Streights grain at any time, and was that year, from a wet harveſt, of an inferior quality, fell fifty, ſixty, nay ſeventy *per cent.* in price; ſo that the whole commerce did not loſe leſs that ſummer than 50,000 l. ſterling, beſides the ſums given in bribes to thoſe harpies, the health-officers. On that occaſion the whole Portugueſe nation cried ſhame on ſuch proceedings! however the ſpoilers found protection, the merchants were plundered without redreſs, and the dealers in Engliſh grain ſuffered more in proportion than any others. I muſt here beg leave to inſtance one barbarous act of their wanton tyranny, which was as follows:

Two Engliſh houſes, who had a great deal of our country wheat on hand, finding their corn begin to ſuffer in quality, from the hot weather and weavel, joined together in a petition to the health-office, for leave to ſhip it off, under bond ſecurity for producing certificates of its being landed in other countries; which petition was rejected, under the unwarrantable and improbable pretence, that they might convey it to other parts of Portugal, and obtain forged certificates to cover the fraud: whilſt their real motive for the refuſal was, not to let a commodity get out of their power which they had hopes of ſqueezing gains from. And, as a proof of the iniquity of this proceeding, I can aver, that the corn was afterwards ſold for making bread at Lisbon; alſo, that it made very good bread; and yet it was embaraſſed in its ſales by the health-officers, to the great loſs of thoſe who had ſued for a juſt and reaſonable right, and were refuſed it.

The hard impoſitions that even attend the very unloading of corn, on its arrival at Lisbon, can be vouched for by almoſt every maſter of a ſhip that uſes the trade. It muſt be eaſily conceived, that hardly any cargo of corn can be navigated without receiving ſome little damage, either from heating, or water made by the ſhip on her paſſage. The firſt kind of prejudice is always removed by care in the warehouſe, after it is landed; and for the ſecond, any corn damaged by ſalt water, it has been cuſtomary to ſell for what it might be found worth, to feed hogs or other animals with; for corn can hardly be ſo bad as not to ſerve well for ſome neceſſary uſe. Yet health-officers have been ſo tyrannical of late, as to throw into the river great quantities of grain but little damaged, and ſometimes when it was not at all ſo, merely to procure iniquitous fees for themſelves. It was not long ago that a merchant had a cargo of corn conſigned to him, ſome of which was ſpoilt, by the ſhip's making water on the voyage; when he heard of it, he ordered the damaged wheat to be thrown over-board: no, ſays the health-officer, there muſt be a diligence done, and fees paid: the gentleman replied, there was no neceſſity for any ſuch diligence, ſince all it could do was to cauſe the corn to be thrown away, and he did not want to preſerve it: but his remonſtrances were in vain, for the pick-pocket innovation was inſiſted on.

Such were the tranſactions in the year 1752; and in the following ſummer, another game was play'd equally tyrannical and unjuſt. The harveſt had failed in Spain, and the crop alſo proved very ſhort in Portugal: however, in the latter kingdom there was a very conſiderable ſtock of foreign grain on hand; and, though the price of it was raiſed, yet the merchants went on ſelling it in their uſual manner, without any combination, fraud, or ill practice in their proceedings. They were not moleſted for a conſiderable time, that orders might be given for buying up farther great quantities, as was actually done, for a future ſupply: but in the month of Auguſt, juſt the dangerous time for embaraſſments to the ſtock on hand, miſrepreſentations having been made, out comes a royal ordinay, in effect to take it, in that critical ſeaſon, out of the proprietors hands; or at leaſt, putting it out of their power to uſe the proper means for its preſervation; thereby expoſing many people to ruin: nay more, they were made liable to a treatment due only to the vileſt of felons, and that even without the power of being heard in their own defence; for the order expreſsly directed the preſident of the corn market to take out ſecret informations concerning all tranſgreſſors of it, and tranſmit them to the ſecretary of ſtate, for the King to determine the puniſhment in his cloſet.

Down falls corn, on this proceeding, five and twenty *per cent.* in its prices; which might make the difference of near another fifty thouſand pounds on the year's trade; beſides the danger to the merchants, from falſe informations, of ſequeſtration, corporal puniſhment, and baniſhment from the kingdom; all againſt the force of judicial determinations, as well as reaſon and cuſtom; and alſo againſt the ſanction of a national treaty; in the tenth article of which there is this ſtipulation, "And the people of this republic (England) may freely carry arms, corn, fiſh, and all other ſorts of merchandiſe, into the kingdoms, ports, and territories of the King of Portugal, and ſell the ſame at their pleaſure, either by retail or wholeſale, to any perſon whatſoever, and for whatever prices they can get; and they ſhall not be prohibited, circumſcribed, or incapacitated, by his ſaid royal Majeſty, or his miniſters, governors, farmers of the revenues, or monopolies, or by any chamber, or juriſdiction of any tribunal either public or private."

Such were the ſecurities under which the merchants had ſent for the corn, about which they were treated as I have before deſcribed. I have now only to add on the ſubject, that foreign grain is, by the very laws of the kingdom, a free trade; owing no kind of duty to the King, nor any fee whatever to his officers, except a trifle for an entry at the corn-table; and, therefore, there was no lawful plea for cauſing the prejudices our merchants were made to ſuffer, or the very alarming dangers to which they were ſo arbitrarily expoſed.

The author then continues to point out ſome further grievances, to which the Britiſh merchants are expoſed in Portugal. He ſays, that part of the ſeparate, or ſecret article of the treaty begins thus: "That the people and inhabitants of England, trading (as has been already mentioned) in the kingdoms, dominions, ports or territories of the ſaid King, ſhall not pay more duties and taxes, but only in the manner following, *viz.* that the Engliſh goods, merchandiſe, and manufactures, ſhall never exceed 23 *per cent.* on their valuation, for the payment of the duties; and they ſhall be favourably valued, according to the regimen (or book of rates) of the cuſtom-houſe, and the ancient laws of the kingdom; and ſuppoſe there ſhould be any motive for raiſing the valuation by reaſon of a riſe in the real value of goods and merchandiſe, it ſhall not be done but by the conſent, and in the preſence of two Engliſh merchants, who reſide and dwell in Portugal, and are choſen by the Engliſh conſul; and, granting that the merchandiſe ſhould fall from its preſent or future exact value, the valuation and duties ſhall be determined by diſintereſted perſons, who ſhall be choſen by the Engliſh conſul and the officers of the cuſtom-houſe."

Such are the ſtipulations for regulating the duties on our Britiſh manufactures in Portugal; but theſe are now as little attended to in that kingdom as the reſt, to our manifeſt injury, and indeed to theirs alſo.

The great article of crapes, which we have now loaded a moſt enormous duty: and at preſent, long ells and ſhalloons, and ſome other ſorts of ſtuffs, pay from 28 to 30, and even upwards, *per cent.* duties on their fair valuation.

luation. The conſequences of which are, that theſe branches greatly decline, and moſt of the traffic in them is become clandeſtine, to the great prejudice of the fair traders, and alſo of the royal revenue of Portugal. Beſides, Spain lies ſo very convenient for ſmuggling in her cheap and ſtrong ſilks, that, if not timely check'd, they muſt infallibly undermine a very great part of our ſtuff-trade to Portugal, which can only be preſerved by a better and juſter regulation of the duties thoſe goods are to pay.

It has become a practice of late for the provedors, or chief officers of the cuſtom-houſe, to act in ſo capricious and tyrannical a manner, that our merchants can make no certain calculations on hardly any thing they deal in, notwithſtanding there is a printed book of rates; and there are alſo certain officers in the cuſtom-houſe, whoſe ſole buſineſs is to aſcertain the qualities of merchandiſe; but their determinations are no farther attended to than as the ſuperior pleaſes. I ſhall furniſh two inſtances, out of hundreds that might be produced, of his overbearing and arbitrary management.

The firſt was of ſome Engliſh cloths, of a quality often imported by the gentleman thoſe belonged to. The valuers of the goods put them at their uſual rate; the director of the cuſtom-houſe inſiſted they ſhould pay according to another: the owner remonſtrated on the injuſtice of ſuch a demand: every valuer in the cuſtom-houſe peremptorily aſſerted they could not poſſibly have in higher eſtimation than their old one given, without a manifeſt injury to the merchant; yet the chief officer perſiſted in his demand. The merchant appealed to the higher tribunals, his cloths lying all the while, I believe near a twelvemonth, open in the cuſtom-houſe, but could obtain no redreſs, and was forced to ſubmit to the impoſition.

The ſecond inſtance I ſhall produce was concerning printed linens. One Engliſh houſe diſpatched, in the beginning of a week, ſome caſes of them, at the uſual rate of paying duties for ſuch goods, which had always been regular and certain: about the middle of the ſame week, another Engliſh houſe ſent to diſpatch ſome caſes of the very ſame goods, both for kinds and qualities, and the valuers declared the rates for them to be as uſual. But Mr. Chief Director peremptorily inſiſted they ſhould pay more than *cent. per cent.* higher duties. The owner remonſtrated, but in vain; he was obliged to pay the unreaſonable exaction; nay the duties were afterwards raiſed greatly higher. When that gentleman reproached the cuſtom-houſe valuers for the impoſition, thinking it was their fault, the poor men ſhrugg'd up their ſhoulders, and ſhaking their heads, replied, 'What, ſir, would you have us to do? we are as badly uſed as yourſelf. Since L-— T—— came over here, and did nothing, you muſt look upon yourſelves as given into the hands of this man, as we are, for him to do what he pleaſes with.'

Such capricious and unreaſonable exactions, made without any the leaſt previous notice, deſtroy all calculation, and render uncertain every rule by which merchants can and do regulate their proceedings; and therefore are acts of the moſt barbarous oppreſſion and injuſtice.

Such were the violences and injuries that have from time to time created uneaſineſs in the minds of our merchants at Liſbon; and as they were contrary to ſtipulated regulations, they were certainly ſtronger grounds for complaint; and for any the merchants might make for ſuch wrongs and dangers as I have mentioned, I am very certain every candid reader will excuſe, nay commend them. They were, upon too good grounds, put under an extraordinary apprehenſion ſome time ago. A method was taken to quiet their fears on that head, which effectually did it. They were, however, at the ſame time, promiſed their grievances ſhould alſo be redreſſed, and their juſt priviledges reſtored: but what has been the event thereof? Reader, thou ſhalt be impartially informed: for the following novelties have happened within the two years laſt paſt.

1ſt. The few remaining powers of our judge conſervator, for protecting the Engliſh merchants, have been entirely taken away, by a public printed decree of his moſt faithful Majeſty's.

2dly. Our corn trade has been made ten times more precarious, and the perſons and fortunes of our merchants rendered unſafe from the worſt and moſt arbitrary violences, warranted by a written ordination of the King of Portugal's, which was ſtuck up on the doors of the corn market in Liſbon: its whole tenor expreſsly contrary to the tenth article of the treaty; which they now ſo effectually annul, as to diſpatch no petition about corn in which a right from that treaty is claimed.

3dly. By a decree of the King of Portugal's, in favour of that righteous officer called the provedor of the cuſtom-houſe, all caſes, wrappers, barrels, and package whatſoever, are made his due, of any merchandiſe imported into Portugal, and may be taken by him in ſpecie, if he pleaſes. A moſt unjuſt ordination, as well as enormous tax; for the package is certainly as much the merchant's as the goods it contains; and, in ſome caſes, ſuch as butter, rice and flour, for example, cannot be ſeparated. In ſhort, never was there a law ſo unreaſonable or ſo unjuſt! That officer's chief pay aroſe formerly from a duty only on package, which the Kings of Portugal might have ſome grounds for exacting, as it was a light charge to the merchant; but henceforward it may be made what an arbitrary officer pleaſes: though, in fact, we ought to pay no ſort of duty on package, as by a decree of King Emanuel's, now incorporated with our rights, we are intitled to import, free of duties, canvas, wrappers, bags, and other neceſſaries, for carrying on of our buſineſs, provided they are for our uſe, and not for ſale.

4thly. The inſecurity of the perſons and fortunes of our merchants, from the before-mentioned corn-ordination, the new diamond law; and, above all, the unprecedented baniſhment of a Britiſh merchant, without a crime and without a hearing, on a pretence of what Portugal had nothing to do with.

The enumerating of theſe facts are the beſt and fulleſt vindication of our merchants at Lisbon that can, or need to be given for their proceedings, in appealing to their ſovereign, through the proper channel of his miniſtry, for his royal ſupport and protection. They are well known to have hearts filled with zeal, loyalty, duty, and affection for their King, and a becoming reſpect for all who are in authority under him. But they would no longer deſerve the name of Britons, if they acted in a manner ſo unbecoming of themſelves, as to forget that juſtice is their due, and legal liberty their birthright. There never was a more falſe or injurious opinion propagated, than that our merchants at Lisbon are either factious, turbulent, or unreaſonable; they are not ſo, but the reverſe: and as their cauſe is juſt, they truſt it muſt prevail.'

I promiſed to give the public ſome examples of our flag's having been inſulted, and the perſons alſo of his Majeſty's naval officers: which I ſhall now content myſelf with having only mentioned; as, if any perſon is deſirous of a more particular information, it may be had from almoſt any gentleman who has lived many years in Portugal.

I did intend, in ſome future letter, to have delivered my ſentiments on the ſubject of a propoſal, made ſome time ago, for taking off the bounty on exported corn; the immediate conſequence of which ſcheme's taking place, muſt have been an entire ſtoppage of all exportation of grain, or a reduction of the rents of lands a full fifth part from their preſent value.

It is a miſtaken notion in Great Britain, that other nations cannot ſubſiſt without our corn, which the preſent year gives an undeniable proof of. There has been almoſt a total failure of the crops in Spain, very ſhort ones in Portugal, and hardly enough in France for their national ſupport; and yet there has been no demand for Engliſh grain in thoſe countries; nay, very little has gone, becauſe it was too dear. And their ports have been, notwithſtanding, regularly ſupplied with more than ſufficient quantities; which they had on better terms from the Levant, Naples, Sicily, Sardinia, Philadelphia, Virginia, Dantzick, and Koningsberg. And ſuch being the caſe this year, how much more muſt it be when France and Spain are themſelves conſiderable exporters? as is frequently the caſe. This makes it evident, that our corn can never find a foreign expence, but at prices proportionate for its qua-

lity to that of other nations; and as it has generally been, and now is, above its proportionate price to thoſe of other nations, the bounty cannot be taken off, without obliging the farmers to ſell ſo much lower as to make up the difference; and from the farmers, I am convinced, the abatements muſt be made on the landlords. So that the ſingle alternative is this, unleſs we reduce our tillage, either the government muſt pay the bounty, or the landed gentlemen lower their rents, near, or quite a fifth part, from what they are now at."

PORTUGUESE *America*. The Portugueſe poſſeſs only Brazil, or Braſil, in America: but this part of the new world is ſo extenſive, fertile, and rich, that they have no reaſon to complain of their diviſion.

Brazil is ſituated between 35 and 36 deg. of W. lon. and between the equator and 35 of S. lat. being 2500 miles long, and 700 broad; bounded by the river Amazon, and the Atlantic ocean, on the north; by the ſame ocean on the eaſt; by the river Plata on the ſouth; and by a chain of mountains, which divide it from Spaniſh America, and the country of the Amazons, on the weſt.

It is divided into the fifteen captainſhips of Para, Marignan, Siara, Petagues, Rio-Grande, Payraba, Tamara, Pernambuco, Bahia or the bay of All Saints, Ilheos, Porto-Seguro, Spirito-Sancto, Rio-Janeiro, St. Vincent, and Del-Rey.

There are ſome ſmall iſlands on the coaſt of Brazil, where ſhips touch ſometimes for proviſions in their voyage to the South ſea; particularly Fernando, in 3 deg. of S. lat. St. Barbaras, in 28 deg. of S. lat. and St. Katharine's alſo in 28 deg. of S. lat.

The land is rather low than high near the coaſt; but exceeding pleaſant, being chequered with woods and ſavannahs, or large meadows, and the trees for the moſt part evergreens. However, on the weſt-ſide of it, far within land, are the high mountains which ſeparate it from the Spaniſh province of La Plata; and in theſe are innumerable ſprings and lakes, from whence iſſue abundance of rivers, that fall into the great rivers Amazon and La Plata, or run acroſs the country from weſt to eaſt, and fall into the Atlantic ocean; which laſt are very numerous, and of great uſe to the Portugueſe in turning their ſugar-mills.

Alvarez Cabral, a Portugueſe, driven there in his voyage to the Eaſt Indies by a ſtorm in 1501, took poſſeſſion of this country for the crown of Portugal; but Americus Veſpuſius was the perſon who properly diſcovered it, having traverſed almoſt all the coaſts from the river of the Amazons to that of Plata, which at preſent make almoſt the limits of Brazil from north to ſouth.

The inland part of Brazil is not as yet well known; the Portugueſe not having penetrated above 240 miles, becauſe the vaſt countries which ſeparate it from Peru are inhabited by innumerable Indians who love liberty, and who diſpute foot by foot the poſſeſſion of a country which belongs to them, and of which they look upon all ſtrangers as the uſurpers.

The French were the firſt who attempted to divide Brazil with the Portugueſe; and for this purpoſe, in 1550, eſtabliſhed themſelves there at the mouth of Rio-Janeiro, where they raiſed a fort, and laid the foundations of a pretty numerous colony: but the Portugueſe expelled them in 1558, and built in the place of this fort the city of St. Sebaſtian, which is now famous for its extenſive commerce.

The Dutch, in the following century, were more dangerous enemies to the Portugueſe than the French; and by their Weſt India company, eſtabliſhed at Amſterdam in 1623, ſignaliſed their firſt exploits againſt Spain, of which Portugal then made a part, by the taking of Pernambuco, Tamara, Payraba, and Tignares.

The count of Naſſau, who was ſent there in 1636, in quality of this company's governor general, added to theſe conqueſts the governments of Siara and Marignan; ſo that of the fifteen governments which compoſe Brazil, the Dutch poſſeſſed ſeven.

But this progreſs being ſtopped in 1641 by the truce concluded between the States-General and Portugal, which ſometime before had extricated itſelf from the Spaniſh dominion; the Portugueſe reaped ſuch an advantage from this relaxation, as alſo from the indolence and avarice of the Dutch company's directors, who had paſſed into Brazil in 1654 to take upon them the government of it, that in 1655 they had repaired all their loſſes, and re-entered the poſſeſſion of all that the Dutch had taken from them during the ſpace of 20 years.

The States general ſtrove in vain to remedy this revolution, by the war they declared againſt Portugal in 1656; and, in virtue of a treaty concluded in 1661, by the mediation of the King of England, were obliged to give up all their pretenſions to Brazil, on receiving 8 tuns of gold from the Portugueſe.

It is to this peace of 1661 that the Portugueſe of Brazil owe all the repoſe of their colonies, and the Portugueſe of Europe the great trade they drive on there by the means of ſeveral ſhips, which depart yearly from Liſbon for the bay of All Saints, Pernambuco, and Rio-Janeiro, the three moſt conſiderable governments of thoſe which compoſe Brazil.

It will be ſufficient to ſpeak here of theſe three governments, whereof the capitals, St. Salvador, Olinda, and St. Sebaſtian, are in ſome reſpects the ſtaples of all the European merchandiſe which come to Brazil, and of all thoſe with which Braſil furniſhes Europe.

The bay of All Saints, or *Baiha de Todos Sanctos*, upon the northern coaſt of which the city of St. Salvador, the capital of Brazil, and reſidence of the viceroy, is ſituated, is famous for its tobacco-plantations, which in ſome parts advance to upwards of 50 leagues up the country.

It is true, that ſome governments, eſpecially that of Rio-Janeiro, produce as good tobacco; but the inhabitants are prohibited to plant more than they have either an occaſion for themſelves, or for the trade they carry on with the Spaniards of Buenos-Ayres, to promote the ſale of that of All Saints bay.

The city of *St. Salvador* lies in 14 deg. of S. lat. in a ſituation of little advantage for the conveniency of the inhabitants, but well fortified near the coaſt, and almoſt inacceſſible.

Moſt of the warehouſes are between the city and the port; but the tranſport of merchandiſe is on that ſide very difficult, requiring cranes, and other machines, to raiſe them over the ramparts. However, there is another mountainous, but very long and troubleſome way, where the Negroes are obliged to ſerve like beaſts of burden, carrying their maſters in ſedans, and all the merchandiſe on their backs.

The inhabitants of St. Salvador are rich, and ſeem fond of commerce. The port, which is but 200 fathoms from the city, is excellent, and capable of containing ſeveral veſſels. The Liſbon fleet arrives there yearly in the month of June; and in Auguſt all the ſhips which ſeparated from this fleet, for Pernambuco, Rio-Janeiro, Marignan, Payraba, Tamara, and the other ports of the coaſt of Brazil, rendezvous there for returning.

The number of ſhips this fleet conſiſts of is not certain, but may be ſuppoſed to amount to 40 or 50, carrying from 12 to 36 pieces of cannon.

It is alſo to the bay of All Saints that the Portugueſe East India and African ſhips come; the cargoes of all which in general being tobacco, the principal commodity, common ſugar, ſugar candy, indigo, whale fins and oil, the whales reſorting abundantly to the bay from June to September; cotton, oil, balſam capaiva, ipecacuana, paraayra-brava, ſome cinnamon, long pepper, ginger, elephants teeth brought from the coaſt of Africa, copper from Angola, leather of the country, ſilks, wood for dying and perfumes, ſaffron, rocou, lacca, rock cryſtal, cocoa's fit for inlaid work upon account of their thickneſs, and others ſo ſmall as to form the grains of beads, ambergreaſe, which the ſea ſometimes caſts in the gulph, amethyſts, whereof there is a mine in this government, gold found in the ſand of a river in the diſtrict of St. Vincent, the fifth of which belongs to the King; laſtly all kinds of confects dry and liquid, among others oranges, citrons, lemons, and ananas.

The Liſbon fleet brings to St. Salvador wines, brandy, corn, oil, cheeſe, cloths, ſtuffs, linens, wrought and unwrought

unwrought iron, paper, all ſorts of copper and iron utenſils; laſtly, all neceſſaries of life not met with in Brazil. Some provinces of Brazil may produce a ſufficiency of wine and corn, to ſupply all the reſt, without having recourſe to Europe; but the Portugueſe policy has hindered the culture of vines, and the ſowing of corn, that the inhabitants of Brazil might be always neceſſitated to have recourſe to Portugal. The ſame political views have been followed by the Spaniards, at leaſt in ſome parts of their colonies; the planting of vines being allowed only in Peru, becauſe they cannot ſend a ſufficiency there by the North ſea.

It is by the ſhips which come from Goa, and touch at the bay of All Saints, in their return to Europe, that St. Salvador, and the reſt of Brazil, are furniſhed with the ſpices, drugs, and merchandiſe of the eaſt; it is alſo by the African ſhips from the ports of Angola and Congo, that they receive their negroes, elephants teeth, wax, honey, civet, gold, and all other particulars from theſe quarters; but uſually theſe merchandiſes, the ſlaves excepted, are ſent to Portugal by the Liſbon fleet.

Pernambuco, called by the Dutch *Fernambuc*, is ſituated between the diſtricts of the bay of All Saints and Tamara; its capital, and almoſt only town, being Olinda, 100 leagues from St. Salvador.

This city is one of the largeſt and moſt populous of Brazil, ſituated on the ſea-coaſt, upon an eminence.

The port is ſmall, and of difficult entrance: however, ſeveral ſhips reſort there from Portugal, the Canaries, and ſome other diſtricts of Brazil; without which it could ſcarce ſubſiſt, being deſtitute of almoſt all the neceſſaries of life.

Notwithſtanding theſe inconveniencies, its trade is pretty conſiderable in wood and ſugar; the ſoil proving very good for the latter, and the other being found in abundance throughout the whole government, particularly in the place which the Portugueſe call *O Matta de Brazil*, 10 leagues from Olinda, where it is the beſt, and is cut in greateſt plenty. This wood is called in Europe ſometimes *Brazil wood*, and ſometimes *Pernambuco wood*. See *Brazil* wood.

In the whole province are reckoned to the amount of 100 ſugar-mills, each mill affording, one year with another, about 2000 lb. of ſugar. The reſt of this commerce is much upon the footing of that in All Saints bay.

Rio-Janeiro. St. Sebaſtian is the capital of this government, being ſituated in 23 deg. of S. lat. on the weſt of the river, about 2 leagues from the ſea. The plain which ſurrounds it, and the banks of the river Janeiro, are extremely fertile in ſugar-canes, indigo, tobacco, and cotton. Wheat has alſo been ſown there with ſucceſs; but there is no commerce of it, no more than of tobacco, for the reaſons already alledged in ſpeaking of the trade of the bay of All Saints.

The mountains ſurrounding this plain abound with Brazil wood; which, together with ſugar, indigo, cotton, leather, and train-oil, make the principal trade of Rio-Janeiro, and are ſufficient to enrich the inhabitants, who are the moſt opulent, and the moſt addicted to traffic, of all the Brazilians.

Their ſugar, and other plantations, are cultivated by negroes, as in all other parts; but they have beſides ſeveral Indian families among them, who work at theſe plantations, yet enjoy an entire liberty, whilſt the others are ſunk in an unſupportable ſlavery.

It is particularly with the Portugueſe of Rio-Janeiro, that the Spaniards of Buenos-Ayres carry on a trade, and ſupply them with flour, biſket, with ſalted and dried fiſh before the ſun; taking in exchange ſugar, tobacco, indigo, wines, brandy, and ſeveral European merchandiſe, which the Portugueſe ſhips import to Rio-Janeiro.

The brandies the Portugueſe ſupply the Spaniards with are of two ſorts; the one extracted from wine, which comes from Liſbon; and the other from ſugar, called *guildine*, made in the country, which is of a bad quality, and even unwholſome.

The other principal towns are Para or Belim, St. Lewis, Siara, St. Luc, Tignares, Payraba, Tamara, Receif, Ilheos, Santa Cruz, Spirito Sancto, and St. Vincent.

The diamond mines lie to the weſtward of St. Sebaſtian, and are farmed by his Portugueſe Majeſty to a company at Rio-Janeiro, for the annual rent of 138,000 cruſadoes, or 26,000 l. ſterling, on condition that they ſhall not employ any more than 600 ſlaves in theſe mines. See *Diamond*.

But the Brazils are moſt remarkable for their rich mines of gold, the firſt of which was diſcovered in 1680, near St. Salvador; and after this many others were found in ſeveral parts of the country, which have greatly enriched the European world, as they furniſh 5 millions ſterling of gold every year, of which a fifth belongs to the King. The Brazil wood alſo produces to the value of 30,000 l. annually; and the produce of this country alone ſupports the crown of Portugal, which, on every other ſide, has been ſtript of its once invaluable trade.

POST, denotes the diſpatch a courier or letter-carrier makes, by changing horſes from time to time: but the word is alſo applied to the perſon himſelf, the houſes where he takes up and lays down his charge, and the ſtages and diſtances between houſe and houſe; whence the phraſes, poſt-boy, poſt horſe, poſt-houſe, &c.

Lewis Hornigk has an expreſs treatiſe on poſts; of which he makes four kinds, on horſeback, in chariots, in boats, and on foot; which laſt kind is in uſe in Italy, Turky, and Peru.

Herodotus aſcribes the origin of poſts to Cyrus or Xerxes; but the poſts inſtituted by thoſe princes were no more than couriers.

In effect, poſts on the preſent footing are but a modern invention; though ſome go back as high as Charlemaign. It is certain, it was the policy, or rather the diffidence, of Lewis XI. of France, that they owed their riſe to; that uneaſy prince firſt ſettling them by an ordonnance of the 19th of June 1464, to be the ſooner and more ſurely advertiſed of what paſſed in his kingdom, and in the neighbouring ſtates.

From France the inſtitution propagated itſelf by degrees through the ſeveral other parts of Europe. In Germany poſts were firſt ſettled by the Count de Taxis at his own expence; in acknowledgment of which the Emperor Matthias, in 1616, gave him in fief the charge of poſtmaſter under him and his ſucceſſors.

In England poſts were firſt eſtabliſhed by act of parliament, 12th Charles II. which enabled the King to ſettle a general poſt-office, and appoint a governor. In the 1ſt year of King William III. an act of parliament paſſed in Scotland for erecting a poſt-office in that kingdom; but, after the union, an act of parliament paſſed, the 9th of Queen Anne, for uniting both offices, and ſettling one general poſt-office throughout all the Britiſh dominions. There is alſo a general poſt office in Ireland, independent of that in England. See *Letters*.

The Engliſh poſt-office is now managed by two commiſſioners, or poſtmaſters general; who have under them about forty other officers, of their own appointing, who are all ſworn, and give ſecurity for the faithful diſcharge of their reſpective duties; as the receiver, comptroller, accomptant, 6 clerks of the ſeveral roads, a windowman, and 16 ſorters, for the inland office. For the foreign office are a comptroller, an alphabet-keeper, 6 clerks, and a foreign officer, beſides ſolicitors and clerks, and 67 letter-carriers.

On this grand office depend 182 poſtmaſters in Great Britain; who keep regular offices in their ſtages, and ſub-poſtmaſters in their branches.

Though the number of letters in England was anciently very inconſiderable; yet it is now ſo much increaſed, that this office, before the addition of the penny-poſt, was farmed at 50,000 l. a year. See *Letters*, and *Fund*.

The Great Mogul performs part of his poſtage by pigeons, kept in ſeveral places, for the conveyance of letters on extraordinary occaſions, who will carry them from one end of that vaſt empire to another. The ſame vehicles have been uſed by the Dutch in ſieges: and at this day, Tavernier obſerves, the conſul of Alexandretta ſends

news

news daily to Aleppo, in five hours time, though thoſe two places are three days journey on horſeback apart.

Penny-POST. A poſt eſtabliſhed for the benefit of London, and the parts adjacent; whereby any letter or parcel, not exceeding 16 ounces weight, or 10 l. value, is ſpeedily and ſafely conveyed to and from all parts within the bills of mortality, to moſt towns and villages within 10 miles of London, for one penny each packet, letter, &c. This office is managed by a comptroller; under whom are an accomptant, collector, 6 ſorters, 7 ſub-ſorters, and above 100 meſſengers.

POST, in merchandiſe, is to collect the particulars of each perſon's accompt into one leaf or place, that it may always readily appear whether he is a debtor or creditor.

POSTAGE, is the money paid for the carrying or bringing a letter by the public poſt.

POSTSCRIPT. An addition to a letter, or ſomething wrote at the bottom, after it was ſuppoſed to be finiſhed.

POT. A domeſtic utenſil, made of

POT-*metal*, which is a compoſition of braſs and lead, 20 lb. of the former being uſually put to 100 lb. of the latter. See *Braſs*, and *Lead*.

POTASHES, are properly the lixivious aſhes of certain vegetables uſed in making glaſs and ſoap. See *Aſhes*.

POTOSI. A city of Peru, in South America, ſituated in 67 deg. of W. lon. and 22 deg. of S. lat. 300 miles S. E. of Arica, at the bottom of the mountain of Potoſi, in which is the richeſt ſilver mine that ever was diſcovered, from whence the Spaniards have drawn many hundred ſhip-loads of treaſure. It is ſituated in one of the moſt barren countries of America, deſtitute of corn, graſs, and trees, and all manner of herbage. The hill is now little more than a ſhell, the Spaniards having dug through and through it; for when they could get no more by digging downwards, they began at the bottom of the hill, and dug through it horizontally.

POTTERY. The art of making earthen pots and veſſels, or the manufacture of earthen and ſtone ware.

The wheel and lathe are the chief, almoſt the only inſtruments uſed in pottery; the firſt for large works, the ſecond for the ſmall; though in reality they are the ſame as to the manner of working them.

Earthen ware is commonly called delft, from a city in Holland, where that manufacture has been brought to the greateſt perfection; being made of clay, wrought and cleanſed from all its impurities, glazed or painted in imitation of porcelain, with metallic colours, chiefly made of a proportion of tin and lead, burnt and pounded in mills.

Stone-ware is made near Liverpool, of ſtone pounded, inſtead of clay; the glazing being made of lead, as in the earthen ware, though it is not coloured. See *Porcelain*.

POTTLE. A meaſure, containing 2 quarts of liquor; alſo a baſket holding the ſame quantity of ſtrawberries, raſpberries, or the like.

POUCHOC. A drug growing in Siam, from whence it is ſent to China, being equally good for medicine, and for affording a yellow dye.

POUD, or *Pout*. A Ruſſian weight, being about 34 lb. avoirdupois, uſed principally for weighing ſalt at Aſtracan.

POULTER, or *Poulterer*. A perſon who makes a trade to breed, buy, and ſell, all ſorts of eatable fowls and birds.

POULTERERS *company of London*, was incorporated by letters-patent of the 19th of Henry VII. dated the 23d of January 1504, by the ſtyle of The maſter, wardens, and aſſiſtants of poulters, London; who have a maſter, 2 wardens, 23 aſſiſtants, and a livery of 106 members, whoſe fine is 20 l. but they have no hall to treat of their affairs.

POUND. A weight of a certain proportion, much uſed as a ſtandard for determining the gravities of bodies. See *Weight*.

There are two different pounds in England, the pound troy, and the pound avoirdupois.

The pound troy conſiſts of 12 ounces, each ounce of 20 pennyweights, and each pennyweight of 24 grains; ſo that 480 grains make an ounce, and 5760 grains a pound. This pound is uſed in the weighing of ſilver, gold, precious ſtones, all kind of grains, &c. It is alſo uſed by apothecaries, though differently divided. Among them 24 grains make a ſcruple, 3 ſcruples a drachm, 8 drachms an ounce, and 12 ounces a pound.

The pound avoirdupois conſiſts of 16 ounces; but the avoirdupois ounce is leſs by 42 grains than the troy ounce, which amounts nearly to a 12th part of the whole: ſo that the ounce avoirdupois only contains 438 grains, and the troy ounce 480: the difference of which is nearly as that of 73 to 80; that is, 73 ounces troy make 80 ounces avoirdupois, and 112 avoirdupois pounds make the hundred weight or quintal.

By this weight are weighed all large and coarſe commodities; as fleſh, butter, cheeſe, iron, hemp, lead, fleece, &c.

The Engliſh avoirdupois pound is equal to $14\frac{2}{7}$ ounces of a Paris pound; ſo that 100 of the former pounds make 91 of the latter.

The French pound contains 16 ounces; but one French pound is equal to 1 pound $1\frac{2}{3}$ oz. of an avoirdupois pound; ſo 100 Paris pounds make 109 Engliſh avoirdupois pounds.

The Paris pound is divided in two manners. The firſt diviſion is into 2 marcs, the marc into 8 ounces, the ounce into 8 gros, the gros into 3 deniers, the denier into 24 grains, each weighing a grain of wheat. The ſecond diviſion of the pound is into two half pounds, the half pound into quarters, the quarters into two demi-quarters, the demi-quarter into 2 ounces, the ounce into half ounces, &c.

The firſt diviſion is uſually followed in weighing gold, ſilver, and other precious wares; and the latter in that of leſs value.

At Lyons, the pound is 14 ounces; 100 Paris pounds making 116 pounds of Lyons. At Venice the pound is equal to 8 ounces 3 quarters of the French pound, &c.

For the ſeveral pounds of the ſeveral cities and countries, their proportion, reduction, diviſion, &c. See *Weight*.

POUND, alſo denotes an imaginary money, uſed in accompting; containing more or leſs, according to the ſeveral names added to it, and the ſeveral countries it is uſed in. See *Money*.

Thus in England, it is called a pound ſterling; in France, a pound, or livre tournois, and Pariſis; in Holland and Flanders, a pound, or livre de gros, &c.

The term took its riſe hence, that the ancient pound ſterling, though it only contained 240 pence, as ours does, yet each penny being equal to five of ours, the pound of ſilver weighed a pound troy.

The pound ſterling, or Engliſh pound, contains 20 ſhillings, the ſhilling 12 d. and the penny 4 farthings.

Antiently there were three ways of paying a pound money into the exchequer: 1. The payment of a pound *de numero*, which was juſt 20 s. in tale. 2. *Ad ſcalam*, which was 6 d. over and above the 20 s. 3. *Ad pensam*, which was giving the full weight of 12 ounces.

The French pound, or livre tournois, contains 20 ſols or ſhillings, and the ſol 12 deniers or pence tournois, which was the value of an ancient French coin called franc; a term ſtill ſynonymous with livre.

The pound, or livre tournois, contains in like manner 20 ſols or ſhillings, and the ſol 12 deniers or pence Pariſis. Each ſol Pariſis is equal to 15 deniers tournois; ſo that a pound Pariſis is equal to 25 ſols tournois. See *Livre*.

The pound, or livre de gros, of Holland, is divided into 20 s. gros, and the ſhilling into 12 d. gros. It is equal to 6 florins, the florin valued at 24 ſols tournois, ſuppoſing the exchange upon the footing of 100 pence gros for a French crown of 3 livres tournois; ſo that the pound gros amounts to 10 s. and 11 d. farthing ſterling.

The pound gros of Flanders and Brabant is divided like that of Holland, and like that too is equal to 6 florins, but the florin is equal to 25 ſols tournois; ſo that the Flemiſh pound is equal to 7 livres, 10 ſols tournois, or 11 ſhillings and three pence ſterling.

Merchants, factors, bankers, &c. uſe characters, or initial letters, to expreſs the ſeveral kinds of pounds of

compt, as *L.* or *L. ſt.* pounds ſterling; *L. G.* pounds gros; and *L.* or *L. T.* pounds tournois; the pound weight being marked *lb.*

OUNDAGE. An Engliſh ſubſidy granted to the King upon all manner of merchandiſe imported or exported by all merchants, natives, denizens, or aliens. See *Duty*, and *Cuſtoms*.

It is called poundage, becauſe fixed at the rate of ſo much *per* pound; as 1 s. in every pound or twenty ſhillings; and for Engliſh commodities exported by aliens, 1 s. more. It was firſt granted to Edward VI. for the term of his life, afterwards to King Charles II. and ſince continued to his ſucceſſors. See *Tonnage*.

OUP, or *Poop*, in navigation. The hind part of a veſſel, or that where the helm is fixed, called alſo ſtern.

The French frequently call it queue, tail, becauſe the rudder here applied ſerves the ſame purpoſes in a ſhip, as the tail does to fiſhes.

It is divided into three or four ſtories, which all together form the poup-caſtle, or hind caſtle; the outſide whereof is richly adorned with balconies, galleries, pilaſters, trophies, the arms of the prince, &c.

To have the *wind in poup*, is to have it behind, or favourable.

OUP is more particularly uſed among the Engliſh for the floor, or deck over the round-houſe, or maſter's cabbin, being the higheſt part of a ſhip's hull a-ſtern.

OURVEYOR, or *Purveyor*. An officer of the houſhold, who provides and buys in corn, and other proviſion for the King, mentioned in magna charta, and ſeveral ſtatutes.

Pourveyor became a name ſo odious in times paſt, that, by the ſtatute of the 36th of Edward III. the heinous name of purveyor was changed into that of achator or buyer; and the office was much reſtrained by the ſtatute of the 12th of Charles II.

OWDER, or *Pouder*, in pharmacy. A dry medicine pulveriſed, or prepared by being broken and reduced into almoſt imperceptible atoms, either in a mortar, or by chemical preparations.

OWDER, for hair, made of ſtarch, is to be liable to the ſame duties, and to enjoy the ſame drawbacks as ſtarch. See *Starch*.

OWDER, is flour of wheat or beans, well ſifted and prepared, to give it an agreeable odour. That wherein ſtarch ground is mixed, is the worſt.

un-POWDER. See *Gun*-powder.

ſuits POWDER. See *Cortex* Peruviana.

OWDER *cheſts*, in the ſea-language, are boards joined in form of a triangle, and filled with gun-powder, pebbles, &c. which they ſet fire to when the ſhip is boarded by an enemy, and ſoon make all clear before them.

RAGUE. The capital of Bohemia, ſituated in 14 deg. 20 min. of E. lon. and 50 deg. of N. lat. See *Bohemia*, under *Germany*.

RATIQUE, or *Prattic*, in commerce. A negotiation, or communication of commerce, which a merchant-veſſel obtains in the ports it arrives in, and the countries it diſcovers.

Hence, to obtain pratique, is to obtain a liberty to frequent a port, to go aſhore, buy, and ſell, &c.

RATIQUE, or *Product*, is particularly uſed for a licence to traffic, granted to the maſter of a ſhip in the ports of Italy and Portugal, upon a bill of health; that is, a certificate that the place whence he came is not annoyed with any infectious diſeaſe.

RECARIOUS, or a *precarious commerce*, is that which is carried on by two nations at war with each other, by the interpoſition of a third, which is neuter. Thus it is ſaid, that the Engliſh have a precarious commerce with the Spaniards by the interpoſition of the Portugueſe, when the two former being at war, the latter lends them its veſſels, flags, and name, to continue their trade.

RECIOUS *ſtone*, called alſo *gem* and *jewel*, is a ſtone extraordinarily hard, durable, tranſparent, and of a beautiful colour or water. See *Gem*, *Diamond*, and *Pearl*.

Of theſe we may diſtinguiſh three kinds.

1. Such as are entirely tranſparent; which again may be divided into ſuch as are either colourleſs, as the diamond, or coloured, as the emerald: which diviſion of coloured gems may be ſubdivided into thoſe of one colour, as the ruby; and thoſe of ſeveral, as the amethyſt.

2. Brilliant, or ſhining, as the Bohemian granate.

3. Semi-tranſparent, as opal.

Biſhop Wilkins divides precious ſtones into more and leſs tranſparent.

The leſs tranſparent he diſtinguiſhes by their colours; into red, as the ſardian and cornelian; pale fleſhy colour, like that of a man's nail, as the onyx; bluiſh, as the turquois; pale purple, as the calcedony; and thoſe of various colours, as opal, and cat's eye.

The more tranſparent he diſtinguiſhes into ſuch as are colourleſs, as the diamond, and white ſapphire; and coloured, which are either red, as the ruby, carbuncle, and granate; yellow, as the chryſolite and topaz; green, as the emerald, ſmaragd, and beryl; bluiſh, as the ſapphire; and purple, or violaceous, as the amethyſt and hyacinth.

Dr. Woodward divides precious ſtones ſomething more preciſely, into opake, ſemi-opake, and tranſparent.

The opake are either of one colour, as the turquois; or of various colours, as lazuli, and jaſperſemi-opake: either have their colours permanent, as the agat, calcedony, onyx, ſardonyx, cornelian, and beryl; or their colours vary according to the poſition of the light, as the oculus cati, and opal. Tranſparent ſtones are either with colours, as the topaz and hyacinth; yellow, or partaking thereof, granate, ruby, and amethyſt; red, ſapphire, water-ſapphire, and aquemarine; blue, as emerald, and chryſolite; green, or partaking thereof; or without colours, as the chryſtal, pſeudo-diamond, white-ſapphire, and diamond.

The natural hiſtory, characters, properties, &c. of each ſtone, ſee under its proper name, *Diamond*, *Cornelian*, *Ruby*, *Turquois*, *Onyx*, *Emerald*, *Chryſolite*, &c.

PREME. A coarſe precious ſtone, being the marcaſite of the emerald. See *Emerald*.

PREMIUM, literally, denotes a reward or recompence. See *Bounty*.

Among merchants it is taken for that ſum of money, as 8 or 10 *per cent.* which is given to an inſurer, for inſuring the ſafe return of any ſhip or merchandiſe. See *Inſurance*.

PREMIUM, is alſo uſed in the money and paper trade, for what is given for a thing above par. Thus lottery-tickets, and the like, are ſaid to bear 10 or 20 s. premium, when they are ſold for ſo much more than the prime coſt at which the government iſſued them.

PRESBURG. The capital city of Hungary, ſituated in 17 deg. 30 min. of E. lon. and 48 deg. 20 min. of N. lat. See *Hungary*.

PRESS, in the woollen manufactory, is a large wooden machine, ſerving to preſs cloths, ſerges, rateens, &c. thereby to render them ſmooth and even, and to give them a gloſs. See *Packer*.

This machine conſiſts of ſeveral members, the chief of which are the cheeks, the nut, and the worm or ſcrew, accompanied with its bar, which ſerves to turn it round, and make it deſcend perpendicularly on the middle of a thick wooden plank, under which the ſtuffs to be preſſed are placed.

The calender is alſo a kind of preſs; ſerving to preſs or calender linens, ſilks, &c. See *Calender*.

PREST-ALL, in the ſea-language, is when a ſhip carries all the ſail ſhe can poſſibly croud. This is ſometimes done in giving chace, &c. but it is a dangerous experiment, leſt the ſhip overſet, or bring her maſts by the board; in which latter caſe ſhe becomes an eaſy prey.

PRESTOE. See *Denmark*.

PREVAT. A town of Turky, 200 miles diſtant from Conſtantinople, and remarkable for its trade in buffalo-hides. See *Turky*.

PREVESA. A port-town of Albania, or Epirus, ſituated in 21 deg. 15 min. of E. lon. and 38 deg. 45 min. of N. lat. on the bay of Larta, at the entrance of the gulph of Venice, 25 miles north of the iſland of Cephalonia.

PRIAMAN. A port-town of the iſland of Sumatra, one

of the Sunda iſlands in Aſia, ſituated in 98 deg. of E. lon. and 1 deg. of S. lat. a Dutch factory, 120 miles weſt of Jamby. See *Sunda* iſlands.

PRIMAGE. A duty at the water-ſide, appointed by a ſtatute of Henry VIII. to be paid to the maſter and mariners of the ſhip, by the merchants whoſe goods are loaded and unloaded; which is paid to the maſter for the uſe of his cables and ropes, in moving the goods, and to the mariners for their ſervice and aſſiſtance. This is different in different places; in ſome 12 d. *per* ton, in others a penny *per* pound, and in others 6 d. *per* bale or pack. See *Duty*, and *Cuſtom*.

PRIME. The beſt, chief, or moſt valuable part of any thing.

PRIME *coſt*. The money which any goods coſt at the firſt hand.

PRIMUMS, in the manufactures, are the originals that furniſh matter to work upon: thus wool is the primum of cloth.

PRINCES *Iſland*. A little iſland on the weſt coaſt of Africa, lying in 9 deg. of E. lon. and 2 deg. of N. lat. about 40 leagues N.E. of St. Thomas, and as much to the weſtward of Loango; being the leaſt of the iſlands in the gulph of Guinea, and in poſſeſſion of the Portugueſe. It affords rice, Indian corn, plenty of fruits, roots, and herbs; it has no want of cattle, hogs, or goats; but what it abounds in moſt is ſugar canes. See St. *Thomas*.

PRINCIPAL. The capital of a ſum due, or lent; and ſaid in this ſenſe, in oppoſition to intereſt, which ſignifies the profit accruing from the lending of money. See *Capital*.

PRINTER. A perſon who compoſes and takes impreſſions from moveable characters or types, ranged in order; or from copper plates engraven, by means of ink and a preſs. See *Stationers* company.

The compoſitor is the perſon who compoſes the work, by putting the letters in proper order, and making up the forms; the preſſman puts the work of the compoſitor to the preſs, where he ſpreads the paper, and gives the impreſſion.

This art has been carried to great perfection in Holland, and ſome places of Germany, where great quantities of claſſical books have been printed: but the printers of Great Britain are now as good as any in Europe. See *Books*.

The Copper-plate PRINTER, is a perſon who takes off the impreſſion of copper-plate prints or engravings; which is a buſineſs very different from the letter-printer. And the printſeller ſells theſe prints; being the ſame to the copper-plate printer, as the bookſeller is to the letter-printer.

The Callico PRINTER is employed in printing or ſtaining cotton and linen cloth. The firſt hint of this branch of buſineſs was had from the Eaſt Indies, where thoſe beautiful cloths called chints are made to the greateſt perfection. The Indians paint all their callicoes with the pencil; but their patterns are wild; all their figures, except flowers and plants, being monſtrous; though they excel in their dyes, particularly reds, greens, and blues. The callico-printers of Europe perform their work in a different manner, for it is properly printing; and the Engliſh took the hint from the Hamburghers, who firſt fell into that method. The patterns, when drawn by the pattern-drawer, are cut out upon wooden types by the pattern-cutter. The cloth to be printed is extended upon a table, and the types being covered with the proper colours, are laid on, and the impreſſion is left upon the cloth. They begin to lay on the types at one end of the piece, and ſo continue to the other, leaving no vacancy between. When the whole piece is printed, the cloth is waſhed and bleached; after which it is dried, calendered, and laid up in folds fit for the ſhop. Paper-hangings are printed after the ſame manner, and may be called a branch of this trade. And printing of cards is much allied to the callico-printing, as it is performed with types after the ſame manner.

The Stuff PRINTER, is employed in ſtamping ſtuffs for houſehold-furniture; which is done by heat, and a braſs roller, charged with the deſigned figures.

PRINTING. The art of letter-printing was firſt diſcovered in Germany by a common ſoldier, about 300 years ago; being much about the ſame time that gun-powder was invented by a monk of the ſame country. It is one of the moſt uſeful arts that ever was invented; and the great commerce of books is owing to this diſcovery.

The Chineſe were in poſſeſſion of this valuable art ſome thouſand years before the Europeans: but their printing is ſomething like copper, or wooden-plate printing in Europe, whereas letter-printing is performed by types made of a mixed metal.

PRISAGE, or *Butlerage*, of wines. By ſeveral ſtatutes perſons free thereof, cuſtoming the wines of one not free forfeit to the King double the value of priſage, and their goods and chattels perſonal for ever; for which they may be proſecuted within three years after the offence committed. See *Cuſtoms*.

PRIVATEER. A ſmall convenient ſhip of war, fitted out by any prince, or company of merchants, with his authority, to make prizes of all the ſhips they can take from the enemy.

In the treatiſe of naval trade, it is ſaid, that a privateer is a kind of private man of war, in Holland termed *caper*. Their uſe is not very antient; and ſome account them but one remove from pirates, who, without any reſpect to the cauſe, or having any immediate injury done them, or not being ſo much as hired for the ſervice, ſpoil men and goods, and innocent traders, making a trade and calling of it, amidſt the calamities of a war.

But that privateers in general are lawful, when under right conduct, there is no room to queſtion; for if a war be entered into on a juſt foundation, they cannot be unjuſt. All ways of bringing an enemy to reaſon, which are not againſt the laws of nations, are allowed; and it is no matter whether a perſon ſo commiſſioned is paid by the prince, or content to pay himſelf out of the ſpoil of the enemy; or if he acts for no pay at all, but out of love to his country, and loyalty to his prince.

It has therefore been cuſtomary, ſince the trade of Europe hath been ſo great and important, for princes and ſtates in caſe of a rupture with other princes, to iſſue forth commiſſions to private men to equip ſhips of war; and the perſons concerned in privateers adminiſter at their own coſts a part of a war, by providing ſhips of force and all other military utenſils, to endamage the enemy, having, inſtead of pay, leave granted to keep what they can take from the enemy, allowing the admiral his ſhare, &c. Then, beſides the common private commiſſions, there is mention of ſpecial commiſſions granted to perſons that take pay, who are under diſcipline; and, if they diſobey orders, may be puniſhed with death. And the wars in latter ages have generally given occaſion for the iſſuing commiſſions to annoy the enemies in their commerce, and hinder ſuch ſupplies as might ſtrengthen them, or lengthen out the war; and likewiſe to prevent the ſeparation of ſhips of greater force from their fleet or ſquadrons.

Privateers may not attempt any thing againſt the laws of nations; as to aſſault an enemy in a port or haven, under the protection of any prince or republic, be he friend, ally, or neuter; for the peace of ſuch places muſt be kept inviolably. And when theſe private commiſſions are granted, there is always great care to be had and taken by caution, to preſerve the leagues of allies, neuters, and friends, according to their various and ſeveral treaties; and therefore, by a marine-treaty between King Charles II. and the ſtates of Holland, made at London in the year 1674, before a commiſſion ſhall be granted to any privateer or caper, the commander is to give ſecurity for 1500 l. and if ſuch ſhips have above 150 men, then for 3000 l. &c. that they will make ſatisfaction for all damages which they ſhall commit in their courſes at ſea, contrary to treaties with that ſtate, upon pain of forfeiting their commiſſions, and anſwering ſuch damage, for which the ſhip is made liable.

And by other articles in the ſaid treaty, if torture, cruelty, or any barbarous uſage, after a caption, be done to the perſons taken in the prize, the ſame ſhall diſcharge ſuch prize, although ſhe was lawful; and the captains ſhall loſe their commiſſions; alſo both they and

the offenders be ſubject to puniſhment. This agreement between the Engliſh and Dutch is fit to be a ſtandard to all nations whatſoever; and by the treaty of Utrecht there is an article with France to the ſame purpoſe. See *Treaties*, and *Prize*.

PRIVILEGE, in commerce, is a permiſſion from a prince or magiſtrate, to make and ſell a certain merchandiſe, or to engage in a certain commerce, either excluſively of others, or concurrently with them.

The firſt is called an excluſive privilege, the latter ſimply privilege.

Excluſive privileges are ſeldom to be granted, on account of the hindrance they are of to trade; yet they are ſometimes very juſt and reaſonable, by way of reward for the invention of uſeful machines, manufactures, &c. Excluſive privileges for foreign commerce are uſually granted on the following conditions: That the commodities be brought from remote parts, where there is no going without running great riſks: that the privilege be only for a limited time: that the perſons privileged be not allowed to monopoliſe, or to raiſe and fall their commodities at pleaſure; but that the ſale and price be always proportionable to the expence, intereſts, &c. and that the privileges aſſiſt the ſtate, on occaſion, with part of their gains.

Privilege for the impreſſion of books is properly excluſive; being a permiſſion, which an author, or bookſeller, obtains under a prince's ſeal, to have alone the impreſſion of a book, with a prohibition of all others to print, ſell, or diſtribute the ſame, within a certain term of years, uſually 14, under clauſes and penalties expreſſed therein. Theſe privileges were unknown till the beginning of the 16th century, when they were introduced in France. The oldeſt is ſaid to bear date in the year 1507, and to have been occaſioned by ſome printers counterfeiting the works of others as ſoon as they appeared.

But people were yet at liberty to take them, or let them alone, at pleaſure; till the intereſts of religion, and the ſtate, occaſioned the reſtraining of this liberty.

In 1563, Charles IX. publiſhed a celebrated ordonnance, forbidding any perſon, on pain of confiſcation of body and goods, to print any letter, ſpeech, &c. without permiſſion.

The like has been ſince done in England; though at preſent privileges are not only ſeldom required, but, by the late act for ſecuring the properties of books, ſeem needleſs.

PRIZE, is ſaid of ſuch ſhips, veſſels, and goods, as are taken at ſea from the enemies of the ſtate, or from pirates, by the King's ſhips, or by privateers commiſſioned by the admiralty; which is underſtood likewiſe of the ſhips, veſſels, and goods, which enemies or pirates take from merchants. See *Capture*.

By the ſtatute of the 13th George II. made on the declaration of war againſt Spain, it was enacted, That the flag-officers, commanders, and other officers, ſeamen, mariners, and ſoldiers, on board every Britiſh man of war, ſhould have the ſole property of all ſhips and merchandiſe they ſhould take in any part of the world, being firſt adjudged lawful prize, to be divided in ſuch proprietor as his Majeſty ſhould order by proclamation; which was alſo thereby extended to the owners and the crew of privateers. That there ſhould not be paid above 10 l. to all the judges and officers in any court of admiralty abroad, for condemnation of any capture under 100 tuns burthen; nor above 15 l. if of that or any greater burthen. That ſhares not demanded in three years ſhould be paid to the uſe of Greenwich hoſpital. That the officers and crew on board of ſuch ſhips of war and privateers, in any action, where any ſhips of war or privateers ſhould be taken from the enemy or deſtroyed, ſhould be entitled to a bounty of 5 l. for every man which was living on board any ſhip ſo taken or deſtroyed at the beginning of the engagement between them. That if any ſhips belonging to Britiſh ſubjects ſhould be taken by the enemy, and retaken by Britiſh ſhips, ſuch ſhips retaken ſhould be reſtored to their proper owners; paying, in lieu of ſalvage, an eighth part of the value, after having been in poſſeſſion of the enemy 24 hours; if above 24, and under 48 hours, a fifth part; if above 48, and under 96 hours, a third part; and if above 96 hours, a moiety: but if ſuch ſhip ſhould be taken by any privateers through conſent or connivance, the privateer ſhould be judged good prize; one moiety to his Majeſty, and the other to the informer: or if ſuch ſhip ſhould be taken by a man of war, by conſent or connivance of the captain, ſuch captain ſhould forfeit 1000 l. and forfeit his employment for 7 years; and the ſhip and goods ſhould be deemed good prize to his Majeſty.

By the ſtatute of the 6th and 10th of Queen Anne, and 15th of George II. prize-ſhips and goods are not to be exempted from duties, &c. but the goods may be unladen and brought on ſhore, in the preſence of the officers of the cuſtoms, and ſecured in proper warehouſes, under the ſeparate locks of the collector, comptroller, and agent of the captors, till they are appraiſed and ſold; and, when they are ſold, before delivery to the buyers, they are to pay the cuſtom and exciſe.

Prize-goods of the growth and product of foreign plantations, condemned in and imported from the Britiſh plantations in America, are, upon proper certificates and oaths, to pay the ſame duties as if of the produce of the ſaid Britiſh plantations.

PROCEED, in trade, is the net amount of a cargo, or parcel of goods, after all charges are defrayed.

PROCITA. A ſmall iſland on the weſt-coaſt of Naples, ſituated in 14 deg. of E. lon. and 41 deg. of N. lat. between the iſland of Iſchia and the continent.

PROCTOR, in the civil law, is the ſame in the admiralty and ſpiritual courts, as an attorney at the common law.

PROMONTORY. See *Cape*.

PROMPT *Payment*. See Prompt *Payment*.

PROPONTIS, or *Sea of Marmora*, divides Europe from Aſia; and obtained the name of marmora from a little iſland in it, which conſiſts of a rock of marble. See *Marmora*.

PROPORTION, or *Pro rata*, in commerce. A term ſometimes uſed among merchants, when, in ſpeaking of any undertaking, they ſay, each perſon muſt reap the profit, or ſuſtain the loſs, *pro rata*, or in proportion to his intereſt; by which is meant, each ſhall gain or loſe in proportion to the ſum he put in ſtock.

PROTECTION, of perſons or ſhips, is the ſame as a paſſport. See *Paſſport*.

PROTEST, in commerce, is a ſummons made by a notary-public to a merchant, banker, or the like, to accept or diſcharge a bill of exchange drawn on him, after his having refuſed to accept or pay the ſame. See *Exchange*.

It is called a proteſt, becauſe containing a proteſtation, that the party will return the bill, and even take up money at intereſt, and charge all coſts, damages, carriage, and re-carriage, on the refuſer.

There are two kinds of proteſts; the one for want of acceptance, the other for want of payment. See *Acceptance*.

The firſt to be made by the bearer of the bill, at the time of preſenting it, in caſe the perſon on whom it is drawn refuſes to accept it for the time, or the ſum there expreſſed. The latter is made as the bill falls due, whether it has been accepted or not. See *Exchange*.

The bearers of bills of exchange, that have been accepted, or which become payable at a certain day, are obliged to have them either paid or proteſted within three days after due, on the penalty of anſwering for the omiſſion: and it muſt be obſerved, that if the third day happen to be a holiday, the proteſt is to be made on the eve thereof.

At Paris and Hamburg the proteſt is to be made within ten days. At Venice, where all bills are paid in banco, the proteſt, for want of payment, is to be made within ſix days, otherwiſe in three days; but then the bank is ſuppoſed open, otherwiſe no proteſt to be made. At Rome, proteſts for want of payment are to be made within fifteen days. At Leghorn, Milan, and Bologna, there is no time fixed; but at Amſterdam they are to be made within five days.

The negotiants of ſome places, as thoſe of Rome, never look

look upon themſelves obliged to proteſt in default of payment: but this opinion is contrary to univerſal cuſtom, and natural reaſon; ſince, till after proteſtation, they they have no remedy or reſource againſt the drawer or indorſer, nor any title to be reimburſed.

M. Ricard adds, that bills of exchange drawn from Amſterdam, Antwerp, or Spain, are to be proteſted in default of payment within fourteen days after they fall due; after which time the bearer ſtands the riſk and chance of the non-proteſted bill, not the drawer or indorſer, in caſe the party happens to fail after the ſaid fourteenth day.

PROVEDITOR. An officer in ſeveral parts of Italy, particularly at Venice; where the proveditor general of the ſea, is an officer whoſe authority extends over the whole fleet, when the captain-general is abſent. He has particularly the diſpoſal of the caſh, and pays the ſeamen and ſoldiers.

The captain-general and proveditor are mutually ſpies over one another. Though the proveditor be inferior to the general, yet is the power ſo divided, that one has authority without ſtrength, the other ſtrength without authority.

PROVENDER, properly ſignifies food for cattle; but means alſo frequently the ſame for men.

PROVIDENCE *Plantation*. A colony of New England; which, with Rhode iſland, conſtitutes a charter-government, independent of the Maſſachuſets, or any other colony of New England. See *Britiſh* America.

PROVIDENCE, is alſo one of the leaſt of the Bahama iſlands in the American ocean, ſituated in 78 deg. of W. lon. and 25 deg. of N. lat. See *Britiſh* America.

PROVIDENCE, is likewiſe another ſmall iſland, of difficult acceſs, in the American ſea, ſituated in 82 deg. 30 min. of W. lon. and 12 deg. 45 min. of N. lat. 150 miles E. of Nicaragua, and the Moſkito country, which the Engliſh buccaneers formerly fortified and defended againſt the Spaniſh guarda coſtas, but afterwards abandoned it; though this iſland might be of great ſervice to the Engliſh, if they ſend colonies to the Moſkito country, as has been propoſed.

PROVINCE, among the Romans, was a country conquered by them, without the bounds of Italy, governed by a deputy or lieutenant, and having peculiar laws and privileges. But the word is now chiefly uſed for a canton, or diviſion, of a kingdom or commonwealth, comprehending ſeveral cities, towns, &c. all under the ſame government, and uſually diſtinguiſhed by the extent of either the civil or eccleſiaſtical juriſdiction.

The United Provinces are the ſeven northern provinces of the Low Countries; who, revolting from the Spaniſh dominion, made a firm and perpetual alliance, offenſive and defenſive, at Utrecht, in the year 1579. See *United* Provinces.

PROVISION, ſometimes means all ſorts of food; but particularly ſalted fleſh and fiſh, as well as flour, peaſe, and other neceſſaries, for the diet of mariners.

The price of labour is regulated by the price of proviſions; and any country that can afford proviſions cheaper than another, can afford to work cheaper, and underſel thoſe countries where proviſions are dearer. Thus beef and mutton are ſold in the French provinces for half the price which is given for them in the Engliſh counties; whereby the French manufacturers can work cheaper than the Engliſh, and the merchants of France can underſel thoſe of Great Britain in foreign markets.

PROVISION, in trade, is the ſame with commiſſion, and means the reward or premium paid to the factor for buying and ſelling goods for another.

PROVISO, a ſea term. A ſhip is ſaid to moor a proviſo, when ſhe has an anchor out, and alſo a hawſer aſhore; whereby ſhe is moored with her head to the ſhore, with the two cables at leaſt.

PROVOST, in a fleet, is a ſort of goaler or executioner, having the care of criminal offenders.

PROW, in navigation, denotes the head or fore-part of a ſhip, being that which is oppoſite to the poop or ſtern.

In the front of the prow is the beak that cuts the water, to make way for the veſſel; but the prow is lower than the poop, containing fewer ſtories or decks; and on the beak is uſually ſome figure or hieroglyphic, which often gives name to the veſſel.

PROW, in ſtrictneſs, is only that part of the fore-caſtle which is aloof, and not in the hold, particularly that between the chaſe and the loof. See *Ship*.

PRUNELLÆ *Sal*, in pharmacy, is a preparation of putrified ſalt-petre, called alſo lapis prunellæ, and cryſtal mineral. See *Salt*-petre, and *Cryſtal*.

It is given to cool and provoke urine, in fevers and quincies; though ſome think that ſalt-petre purified three or four times would be a better medicine. See *Nitre*.

PRUNES, are plumbs dried and baked in an oven, or in the ſun; thoſe chiefly uſed in England being brought from the Levant, and Bourdeaux in France, which are black and large; great quantities whereof are uſed by the Engliſh and Dutch.

PRUSSIA. See *Poland*.

PRUTH. A river which riſes in the province of Red Ruſſia in Poland, runs S. E. through Moldavia, and diſcharges itſelf into the river Danube.

PTOLEMAIS. A port-town of Phenicia, now a province of Aſiatic Turky, ſituated in 36 deg. of E. lon. and 32 deg. 30 min. of N. lat. on the coaſt of the Levant, or Mediterranean ſea, 20 miles ſouth of Tyre.

PUBLICAN. A perſon that keeps a houſe of entertainment, either for travellers, or other company; ſuch as inns, alehouſes, and the like. See *Victualler*.

PUCCA *Maund*. A weight uſed in the Eaſt Indies, being 74⅔ lb. avoirdupois.

PUDDINGS, in a ſhip. Thoſe ropes which are faſtened to the yard-arms of the main and fore yards, to keep them from galling; alſo the ſewing of the ring of the anchor with ropes, to ſave the clinch of the cable from galling, are called the puddings of the yard and anchor.

PUEBLA *Nova*. A town of Mexico, in America, in the province of Veragua, ſituated on a bay of the Pacific ocean, in 84 deg. of W. lon. and 8 deg. 45 min. of N. lat. 400 miles weſt of Panama.

PUL, in commerce. A general name which the Perſians give to all the copper-monies current in that empire, particularly the kabeſqui and demi-kabeſqui.

Olearius, who was at Iſpahan in 1637, in the retinue of the ambaſſador of Holſtein, aſſures us, that each city in Perſia has its ſeveral copper-money, marked with its particular badge; which is only current in that diſtrict, and changed every year. At the beginning of each year, which is at the vernal equinox, all the old money is cried down, and the new appears in its place.

Both the emperor and the ſtate find their intereſt in this frequent change: the firſt, in that he only gives at the rate of 17 d. ſterling *per* pound for copper; yet delivers it out coined in kabeſqui and demi-kabeſqui at above 2 *per* pound. The ſecond, in that the copper-money is by this means leſs abundant, being reduced each year nearly the ſame quantity.

The ſame author adds, that, at the time when he was in Perſia, the kabeſqui at Iſpahan were ſtruck with the image of a lion, at Scamachia with a devil, at Kaſchan with a cock, and at Kilan with a fiſh.

PULMO *Marinus*, *Sea-lungs*. A light ſpongeous body of a ſhining colour, like cryſtal, intermixed with blue, and uſually of a figure reſembling the human lungs; whence it has this denomination: though it is alſo called urtica marina, or the ſea-nettle; which ſwims at the top of the water, and is popularly reputed to preſage a ſtorm. It is commonly ſuppoſed to be only a viſcous excrement of the ſea, hardened by the ſun. But Sir Robert Sibbald and Dr. Merret rank it among the zoophytes.

It ſhines in the night-time, and communicates its luminous property to a ſtick rubbed therewith; being applied to the ſkin, it raiſes an itching, and takes off the hair.

PULSE. The common name for rice, barley, wheat, and other vegetable grain. See *Corn*.

PUMICE-*Stone*. A calx, or kind of ſpongeous ſtone, very porous and friable; but naturaliſts are not agreed about the nature and origin of pumice. Some look upon it as pieces of rock half burnt, and calcined, caſt up in eruptions

tions of volcanoes, particularly thoſe of Ætna and Veſuvius, into the ſea; and which, by being in the ſalt-water, lays aſide the black colour that the impreſſion of the ſubterranean fires had given it, and becomes whitiſh, or ſometimes only greyiſh, according as it has floated more or leſs in the ſea.

Dr. Woodward conſiders pumice as only a ſort of flag, or cinder; and affirms it is only found, either where forges of metals have antiently been, or near ſome volcano or burning mountain.

Other authors will have the pumice to ariſe from the bottom of the ſea, whence they ſuppoſe it detached by ſubterranean fires; accounting, this way, both for its lightneſs and poroſity, and its ſaline taſte; alledging, in confirmation thereof, that pumice is frequently found in parts of the ſea far remote from all volcanoes; and adding, that ſeveral parts of the Archipelago are frequently found covered with it, all at once, after a few inward ſhakes and heavings of the bottom of the ſea.

Pumice makes a very conſiderable article in commerce; being much uſed in the arts and manufactures, to poliſh and ſmooth ſeveral works.

Its pieces are of ſeveral ſizes. The parchment-makers and marblers uſe the largeſt and lighteſt, the curriers the heavieſt and flatteſt, and the pewterers the ſmalleſt.

Pliny obſerves, that the antients made conſiderable uſe of pumice in medicine, but it is out of the preſent practice.

PUMP. A machine formed on the model of a ſyringe, for the raiſing of water.

PUMPS, uſed in ſhips, are of ſeveral kinds; as the chain-pump, uſed by the Engliſh in large veſſels, is double; one of which riſes as the other falls. This yields a great quantity of water, works eaſily, and is eaſily mended; but takes up a great deal of room, and makes a diſagreeable noiſe.

Bar pumps, are ſmall ones, made of cane, or a piece of wood, bored through, uſed inſtead of cocks, to pump beer or water out of the caſks.

Bur pumps, called alſo bildge pumps, are chiefly uſed by the Dutch, who have them by their ſhips ſides. In theſe is a long ſtaff, with a bur at the end, like a gunner's ſponge, to pump up the bildge water.

PUMPMAKER, is a perſon employed in making pumps and pipes for the conveyance of water from one place to another. There are ſeveral ſorts of pumps; but moſt of them, except the common pump, which will not riſe above 32 feet, are made by the engineer, or engine-maker.

PUN. A weight uſed in the Eaſt Indies, being 80 cories. See *Coris*.

PUNCH. The name of an inſtrument uſed to ſtrike marks upon iron, copper, or wood.

PUNCHEON, or *Punchion*. A meaſure for liquids, containing a hogſhead and 1-3d, or 84 gallons, or 1-3d of a tun. See *Meaſure*.

PUNTAS *de Moſquito*. A kind of lace proper for the commerce of Spaniſh America; which the Dutch ſend abundantly to Cadiz; half whereof ſhould be of the ſame deſign, from 3 to 8 or 10 fingers in breadth, and the other half of another deſign from 4 to 10 fingers breadth.

PURBECK *Iſle*. The ſouth-eaſt diviſion of the county of Dorſet, ſituated on the Engliſh channel, remarkable for its fine ſtone uſed in the beſt buildings.

PURCHASE. Any thing bought or acquired by means of money.

PURCHASE, in the ſea-language, has the ſame meaning with draw in, at land. Thus ſailors ſay, the capſtan purchaſes apace, that is, draws in the cable apace; and when they cannot draw or hale any thing in with the tackle, they ſay, the tackle will not purchaſe.

PURE, or *fine Gold*. See Fine *Gold*.

PURL. A ſmall narrow edging or lace, ſet or made upon the edge of a broad lace.

PURPLE. A red colour, bordering on violet, dyed chiefly with cochineal, or ſcarlet in grain. See *Scarlet*, and *Cochineal*.

Purple was much eſteemed among the antients, eſpecially the Tyrian purple, which underwent more dyes than the reſt, and was almoſt peculiar to emperors and kings; yet this purple did not exceed that now in uſe. The chief reaſons why the former has been diſuſed are, that the latter is both cheaper and finer.

The antient purple was tinged or given with the blood or juice of a precious turbinated teſtaceous ſea-fiſh, called purpura; whereof there are deſcriptions in ſeveral authors, and ſhells in moſt of the cabinets of the curious. See *Dying*.

In the ſeas of the Spaniſh Weſt Indies about Nicoya, is found a ſhell-fiſh, which perfectly reſembles the antient purpura, and in all probability is the very ſame. This fiſh, Gage tells us, uſually lives ſeven years. It hides itſelf a little before the dog-days, and continues to diſappear for 300 days running.

They are gathered plentifully in the ſpring; and by rubbing one againſt another, yield a kind of ſaliva, or thick glair, reſembling ſoft wax: but the purple dye is in the throat of the fiſh, and the fineſt part in a white little vein, the reſt of the body being of no uſe. Cloth of Segovia, dyed with it, is ſold for 20 crowns the ell; and none but the greateſt Spaniſh lords uſe it.

The fiſh, Mr. Reaumur obſerves, is a kind of buccinum, a name given by the antients to all fiſhes whoſe ſhell bears any reſemblance to a hunting horn. And it appears from Pliny, that part of the antient purple was taken from this kind of ſhell-fiſh: ſo that this may be eſteemed a recovery of what had been ſuppoſed entirely loſt.

The method of obtaining the colour, the author deſcribes thus. The ſhell, which is very hard, being broken, with the mouth of the fiſh downwards, ſo as not to cruſh the body, and the broken pieces being picked off, there appears a white vein lying traverſely in a little furrow or cleft next the head of the fiſh.

In this vein is the purple matter lodged; ſome of which being laid on linen, appears at firſt of a light green colour; and, if expoſed to the ſun, ſoon changes into a deep green, in a few minutes into a ſea-green, and in a few minutes more into a blue; thence it ſoon becomes of a purpliſh red, and in an hour more of a deep purple red. And here the ſun's action terminates; but, by waſhing in ſcalding water and ſoap, and drying it, the colour ripens to a moſt bright beautiful crimſon, which will bear waſhing admirably without any ſtiptic. See *Crimſon*.

The fiſh is good food; but there are ſeveral kinds differing in ſize and ſhell, and alſo in the colour of the tinging liquor; ſome of which are found on the coaſts of Poictou in France.

Mr. Reaumur has diſcovered another very different kind of purple. It is produced in oval grains about a quarter of an inch long, and about one thick, full of a white liquor bordering on yellow, which cover certain ſtones or ſands, about which the buccina of Poictou uſually aſſemble. By the experiments Mr. Reaumur has made, it appears, that theſe grains are neither the eggs of the buccinum, nor the ſeeds of any ſea-plants, but the eggs of ſome other unknown ſea-fiſh. Theſe grains being bruiſed on a white linen, at firſt only tinge it yellow, and that inſenſibly; but in three or four minutes give it a very beautiful purple red, provided the linen is expoſed to open air; for the air of a room, even though the windows are open, will not do: but thiscolour fades a little by repeated waſhings.

Mr. Reaumur concludes, from ſome experiments he made, that the effect of the air on the liquor does not conſiſt in its taking away any particles thereof, nor in giving it any new ones; but only in its agitating it, and changing the arrangement of the parts that compoſe it. He adds, that the liquor of the buccinum, and that of the grains, ſeem nearly of the ſame nature; except that the latter is more watery, and only ſaline; whereas the other is hot and pungent.

The Caribbee iſlands have likewiſe their purple fiſh. It is called burgan, being of the ſize of the end of the finger, and reſembling periwinkles. The ſhell is of a browniſh azure, its fleſh white, its inteſtines of a very bright red, the colour whereof appears through the body; it being this that dyes the froth, which it caſts when taken, and which at firſt is of a violet hue, bordering

ing on blue. To oblige them to yield the greater quantity of froth, they lay them on a plate, ſhake and beat them againſt one another; when the plate is immediately covered with the froth, which is received on a linen cloth, and becomes purple in proportion as it dries.

P. Labat obſerves, that if this be the real Tyrian purple, the ſecret of preparing and fixing it is loſt; this colour being found to dwindle and diſſipate, in proportion as the linen dyed with it is waſhed.

The ſame author gives a deſcription of another purple dye, produced by a plant growing in the Antilles; the juice of which tree, when cut ſtanding, is of a blood red, and communicates the ſame colour to cloths; though, like the former, it loſes much in waſhing.

PURRE. See *Cidrkin.*

PURRYSBURG. A town of Georgia, in North America, ſituated in 81 deg. of W. lon. and 31 deg. 45 min. of N. lat. on the river Savanna, 30 miles weſt of the mouth of it, 20 miles weſt of the town of Savanna, and 130 miles ſouth-weſt of Charles-town.

PURSE. A manner of accompting; or a ſum called a ſpecies of money of accompt, much uſed in the Levant, particularly at Conſtantinople, conſiſting of about 500 dollars, or 120 l. ſterling; and it is ſo called, becauſe all the Grand Signior's treaſure in the ſeraglio is kept in leather bags of this value.

This method of accompting the Turks derive from the Greeks, and they from the Romans; whoſe Emperor brought it to Conſtantinople.

PURSER. An officer aboard a man of war, who receives her victuals from the victualler, and is to take care that they are in good condition, and well laid up and ſtowed. He is alſo to keep a liſt of the men and boys belonging to the ſhip, to ſet down directly the day of each man's admittance into pay, that the paymaſter or treaſurer of the navy may iſſue out his diſburſements, and pay off the men according to the purſer's book.

PURVEYOR. See *Pourveyor.*

PUTTY, ſometimes denotes powder of calcined tin, uſed in poliſhing, and giving the gloſs to works of iron and ſteel. See *Tin*, and *Emery.*

PUTTY, is alſo uſed to denote ſpodium. See *Spodium.*

PUTTY, in its popular ſenſe, denotes a cinericious kind of paſte, compounded of whiting and linſeed oil, beaten together to the conſiſtence of tough dough; uſed by glaziers, for faſtening the ſquares of glaſs in ſaſh-windows, &c. as alſo by houſe painters to ſtop up the crevices, and clefts in timber and wainſcot, to prevent the wet from getting in and ruining the work.

PYRMONT. Capital of the county of Pyrmont in Germany, ſituated in the circle of Weſtphalia, on the confines of the duchy of Brunſwic, in 9 deg. of E. lon. and 52 deg. of N. lat. 40 miles S. W. of Hanover; from whence are had the beſt mineral waters in Germany.

PYRITES, in phyſiology. A ſulphurous inflammable kind of ſtone, compoſed of an acid ſalt, incorporated with an oily or bituminous matter; having its name pyrites, or fire-ſtone, from its giving fire on being ſtruck againſt ſteel.

Pyrites bears a near affinity to marcaſite, with which the generality of authors confound it; though Dr. Woodward makes this diſtinction between the two, that pyrites is reſtrained to the nodules, or thoſe pieces found in ſtrata of another kind, and marcaſite to thoſe found in ſtrata of the ſame kind; to which may be added, that the marcaſite frequently contains arſenic, and the pyrites ſeldom, if ever. See *Marcaſite.*

Pyrites has always a metalline part in it, and ſometimes a cretaceous or okerous part; and in proportion as any of theſe prevail, the body commences a ſulphur, alum, or vitriol. See *Vitriol*, *Copperas*, and *Sulphur.*

The metal in pyrites is chiefly iron; ſometimes there is copper in it, and always a little gold, rarely ſilver, and never lead or tin.

Dr. Liſter attributes thunder, earthquakes, &c. to the ſulphurous and inflammable breath of the pyrites.

Pyrites is applied by ſome authors to the marcaſites of all metals; the names whereof are varied according to the metals they partake of. Thus chryſitis is that of gold, argyritis that of ſilver, ſideritis that of iron, chalcitis that of copper, and moliditis that of lead.

PYROLA. A plant, borrowing its name from the figure of its leaves, becauſe like thoſe of the pear-tree; but ſome call it the *winter-green*, becauſe it preſerves its leaf notwithſtanding the rigour of the ſeaſon. It grows beſt in cold countries, and is pretty common in Germany.

Its ſtalks are about a foot and a half in height, and bear on their ſummit ſeveral white flowers of an agreeable ſmell.

As this plant is ſeldom found in hot countries, real pear-tree leaves are ſubſtituted in its place by ſome herbaliſts, who ſow the pippins, and cut the ſtalks when of the ſize of the real pyrola, and dry them for a nearer reſemblance; the decoction of this plant being very aſtringent, and good for cleaning and curing ulcers.

Q.

Q, IS uſed as an abbreviature in ſeveral arts. Thus *Q. Pl.* in phyſical preparations, ſtands for *quantum placet*, or *quantum vis*, as much as you pleaſe of any thing. *Q. S.* for *quantum ſufficit*, or as much as is neceſſary.

QUACK, or *Empiric*. A perſon who pretends to underſtand the practice of phyſic, or who ſells ſome particular noſtrums, either for one or many diſorders, which is now carried on as a branch of trade. Many of theſe noſtrums, ſome of which are licenſed by authority, are ſent in great quantities to the American colonies, and have alſo a great conſumption at home: but though ſome of them, as Dr. James's fever-powder in particular, are of great ſervice to mankind, others may be as prejudicial.

QUADRANS, in the antient Engliſh cuſtoms, was the fourth part of a penny, or a farthing. See *Penny*, and *Farthing*.

QUADRANT, denotes a mathematical inſtrument, of great uſe in navigation and aſtronomy, for the taking of altitudes, angles, &c. being variouſly contrived, and furniſhed with various apparatus, according to the ſeveral uſes it is intended for; but they all have this in common, that they conſiſt of a quadrant, or quarter of a circle, whoſe limb is divided into 90 degrees; that they have a plummet ſuſpended from the centre, and are furniſhed with pinnulæ, or ſights, to look through.

QUADRIN. A ſmall piece of coin, valued like a farthing, or the fourth part of a ſuperior coin.

QUADRUPLE, is particularly uſed for a gold coin, worth four times as much as that whereof it is the quadruple.

The quadruple of the Spaniſh piſtole is a piece of four piſtoles, worth about 3 l. 12 s. ſterling, called alſo double doubloon.

The quadruple of the louis d'or is only equal to two louis d'ors or French piſtoles, or 11. 13 s. ſterling.

QUALITY, in a commercial ſenſe, is ſaid of the good or ill condition of a mercantile commodity, as of its perfection or imperfection: thus, this corn, this wine, is not of a good quality; or, on the contrary, it is excellent.

QUALITY, is alſo a kind of worſted ſtuff, about two fingers broad, uſed for binding of womens petticoats and gowns, being ſold for 3 farthings, or 1 d. a yard by the haberdaſhers.

QUANTITY, is ſaid of the number of things aſſembled in one and the ſame place: but, in a commercial ſenſe, quantity is underſtood of the number of merchandiſe in a bale, barrel, or packet; or of ſuch as compoſe the cargo of a merchant-veſſel, or any other water or land carriage.

QUARANTAIN, is uſed for a meaſure, or extent of land, containing 40 perches.

QUARANTAIN, or *Quarentine*, is more particularly uſed for the term of forty days, which ſhips coming from places ſuſpected of contagion are obliged to wait in certain places appointed, to air themſelves before they come into port.

Several places in the Baltic being infected with the plague, in the 9th year of the reign of Queen Anne, an act was then made, That, during that infection, and at all times hereafter, when any foreign places ſhall be infected, all veſſels coming into England or Ireland from thoſe places, ſhall make their quarantain, in ſuch place, and for ſuch time, and in ſuch manner, as hath been or ſhall be directed by the Queen, or her ſucceſſors; and that until the ſhips ſhall be diſcharged, no perſon or goods coming or imported therein ſhall come or be brought on ſhore, or put in any other veſſel; nor ſhall any perſon go on board ſuch ſhip, without licence from him who is to ſee quarantain performed; but that all ſhips, perſons, and goods, ſhall be ſubject to ſuch orders touching quarantain, as ſhall be made by the Queen, and her ſucceſſors, and notified by proclamation.

That juſtices of peace of the counties adjoining to the place where quarantain is to be made, are to cauſe watches to be ſet day and night in convenient places in the neighbouring pariſhes, with ſtrict orders not to ſuffer any perſon to come on ſhore, or go on board the ſhips, except ſuch who are to ſee the quarantain performed, or ſhall be licenſed. After quarantain performed, and proof thereof made on oath by the maſter, and two others belonging to any ſuch ſhip, before a cuſtomer of the next port, or his deputy, and one juſtice of the peace near the port, that the ſhip, and all and every perſon therein, have performed the quarantain, and that they are all free from infection; then the cuſtomer, together with the juſtice, ſhall give a certificate thereof, and the ſhip and perſons ſhall be no longer detained.

By the ſtatute of the 7th of George I. it was enacted, That when any country ſhall be infected, and any order concerning quarantain and the prevention of infection ſhall be made by his Majeſty; as often as any ſhip ſhall attempt to enter into any port, the principal officer of the cuſtoms, and ſuch perſon as ſhall be authoriſed to ſee quarantain performed, ſhall go off to ſuch ſhip, or cauſe ſome other perſon by him appointed ſo to do; and ſhall at convenient diſtance, demand of the perſon having charge of the ſhip, a true account of the following particulars; the name of ſuch ſhip; the name of the commander; at what place the cargo was taken on board; what places the ſhip touched at in her voyage; whether ſuch places, or any, and which of them, were infected; how long the ſhip had been in her paſſage; how many perſons were on board when the ſhip ſet ſail; whether any, or what perſons, during the voyage, had been or ſhall be then infected; how many died in the voyage, and of what diſtemper; what ſhips he or any of his company went on board, or had any of their company come on board his ſhip in the voyage; to what place ſuch ſhips belonged; and alſo the true contents of his lading.

And in caſe it ſhall appear on ſuch examination, or otherwiſe, that any perſon on board is infected, then it ſhall be lawful for the officers of any ſhips of war, or of any forts or garriſons, and all other his Majeſty's officers whom it may concern, on notice thereof given to them, and for any other perſons whom they ſhall call to their aſſiſtance, to reſiſt the entrance of ſuch ſhip into any port or place; and to oblige any ſuch ſhip to depart out of the ſame, and uſe all neceſſary means for either of the ſaid purpoſes, by firing of guns upon ſuch ſhip, or any other kind of force and violence whatſoever. And if ſuch ſhip ſhall come from any place viſited with the plague, or have any infected perſon on board, and the maſter, &c. ſhall not diſcover the ſame, he ſhall be adjudged guilty of felony, without benefit of clergy; alſo if ſuch maſter, &c. upon demand made, ſhall not make a true diſcovery, in any other of the particulars before mentioned, he ſhall forfeit 200 l.

That if any maſter, or other perſon, having the charge of a ſhip liable to perform quarantain, ſhall quit ſuch ſhip, or permit any ſeaman or paſſenger to leave the ſame, and go on ſhore, or on board any other veſſel, before quarantain be fully performed, except in ſuch caſes, and by proper licence, as ſhall be directed by the order made concerning quarantain; or ſhall not, within convenient time after due notice given by the proper officer, cauſe his ſhip and the lading to be conveyed into the place appointed

pointed for quarantain; then every ſuch ſhip, with the tackle, &c. ſhall be forfeited: and ſuch maſter, for every ſuch offence, ſhall incur the forfeiture of 200 l. and if any perſon ſhall quit ſuch ſhip, by going on ſhore, or on board any other veſſel, it ſhall be lawful for all perſons, by force and violence, to compel ſuch perſon to return on board; and every perſon ſo quitting, &c. ſhall for every offence ſuffer ſix months impriſonment, and alſo forfeit 200 l.

That, during times of infection, when any part of Great Britain, &c. or France, Spain, Portugal, or the Low Countries, ſhall be infected with the plague, his Majeſty, by proclamation, may prohibit and reſtrain all boats and veſſels, under the burthen of 20 tuns, from ſailing out of any port or place of Great Britain or Ireland, or the iſles of Guernſey, &c. till ſecurity be given by the maſter to the principal officer of the cuſtoms, or chief magiſtrate, by bond to the King in penalty of 500 l. with condition not to go to, or touch at any country or place, mentioned in ſuch proclamation, nor on board any ſhip at ſea, and not to ſuffer any perſon to come on board his veſſel from any other ſhip, or receive any goods whatſoever out of any other ſhip: and if any ſuch veſſel ſhall paſs out of any port or place, before ſuch ſecurity given, ſhe ſhall, together with her tackle, &c. be forfeited; and the maſter, and every mariner of the veſſel, being thereof convicted, ſhall forfeit 50 l. or ſuffer three months impriſonment.

That if it ſhall appear to his Majeſty, that any veſſel ſhall come into any place infected, or being laden with any goods taken on board at any ſuch infected place, or from on board any veſſel infected, or that there be any perſons or goods on board actually infected; in any of the ſaid caſes it ſhall be lawful for his Majeſty, by order in council, to empower any perſons to burn ſuch ſhip, &c. and the infected goods, or ſo much thereof as ſhall be neceſſary for preventing the ſpreading of the infection.

That all goods, after the quarantain is performed, ſhall be opened and aired, in ſuch places, for ſuch time, and in ſuch manner, as ſhall be directed by his Majeſty, by order made and notified as aforeſaid; and after ſuch order ſhall have been duly complied with, and proof ſhall be made thereof by the oaths of two or more witneſſes, before the cuſtomer, &c. of the port lying next to the place where the goods ſhall be carried, or any deputy, and one juſtice, &c. upon certificate by ſuch cuſtomer, &c. to the commiſſioners of the cuſtoms in Great Britain or Ireland, ſuch goods ſhall be forthwith diſcharged, by order of any two of the ſaid commiſſioners, &c.

By the ſtatute of the 8th of George I. it was declared lawful for the King, by one or more proclamations, to be iſſued before ſuch a time, to prohibit all perſons to go to any kingdom or place, which ſhall be infected with the plague; and to export out of Great Britain and Ireland, or any the dominions thereunto belonging, to any place infected, to be ſpecified in ſuch proclamation, any goods or commodities whatſoever; or to import any goods or commodities from any ſuch country or place.

That all goods, wares, and merchandiſe, exported or ſhipped for exportation, contrary to the meaning of ſuch proclamation, and of this act, and the veſſels on which they ſhall be ſo exported or ſhipped, with the tackle, furniture, and apparel thereof, ſhall be forfeited, and may be ſeized wherever found; and every perſon that ſhall have procured ſuch goods to be imported, ſhall forfeit treble value.

That if at any time after the iſſuing ſuch proclamation as aforeſaid, any perſon ſhall go to any country or place infected, contrary to the meaning of the proclamation, and of this act, he ſhall incur a *præmunire*.

By the ſtatute 1ſt George II. for the performing of quarantain, it was enacted, That when any country ſhall be infected, it ſhall be lawful for his Majeſty to order ſhips to be provided, or houſes or lazarets for the receiving and entertaining of perſons obliged to perform quarantain, during ſuch time as they ſhall continue infected, or till they have performed ſuch quarantain; and alſo ſheds, tents, and other places proper for the depoſiting, opening and airing of goods and merchandiſes, to be provided and erected, to continue for ſuch time as his Majeſty ſha
think fit and direct, in convenient places within any par
of Great Britain or Ireland, to be allowed and approve
by two or more juſtices of the peace for the county, &c.
where the ſame lie, living near thereto, under their hand
and ſeals, in any waſte grounds or commons; or, wher
ſuch waſtes are not ſufficient, in the ſeveral grounds of an
perſons, not being a garden, orchard, yard, &c. payin
ſuch rate, rent, or other conſideration as ſhall be agree
on, or aſſeſſed and adjudged by the juſtices of peace a
their general quarter-ſeſſions.

That the proper officers authoriſed to put in execution th
orders made by his Majeſty in council, and notified b
proclamation, ſhall compel all perſons obliged to perfor
quarantain, and all goods and merchandiſes comprife
within ſuch orders, to repair or be conveyed to ſome
the ſhips, houſes, or lazarets, ſheds, tents, or othe
places, provided as before mentioned: and if any perſo
obliged to do quarantain, ſhall wilfully refuſe or neglec
to repair, within convenient time after due notice give
him by the proper officer, to the ſhip, houſe, lazaret
or other place duly appointed for him; or having bee
placed in ſuch ſhip, &c. ſhall eſcape out of the ſame
before quarantain fully performed, or attempt it; in ſuc
caſe the watchmen, and other perſons appointed to ſe
quarantain performed, by any kind of violence that th
caſe ſhall require, may compel every ſuch perſon to re
turn into ſuch ſhip, &c. and on their refuſal ſo to do
or actually eſcaping, &c. ſhall be adjudged guilty of fe
lony, and ſuffer death, without benefit of clergy.

That if any perſon not infected with the plague, no
liable to perform quarantain, ſhall preſume to enter an
ſhip, houſe, lazaret, &c. ſo appointed as aforeſaid, whi
any perſons infected, or under quarantain, ſhall be therei
and ſhall return, or attempt to return from thence, un
leſs in ſuch caſes, and by licence, as ſhall be directed b
any orders ſo made and notified; it ſhall be lawful fo
the watchmen, or other perſons having the guard of ſuc
ſhip, &c. by any kind of violence, to compel ſuch pe
ſon to repair to ſome ſhip, lazaret, &c. there to conti
nue and perform quarantain: and if ſuch perſon ſha
eſcape out of ſuch ſhip, &c. before he ſhall have pe
formed the ſame, he ſhall be guilty of felony, witho
benefit of clergy.

That if any officer, or other perſon appointed to ſ
the quarantain performed, or any watchman placed o
any houſe, lazaret, ſhip, or other place, for performan
of quarantain, ſhall knowingly and willingly ſuffer an
perſon, ſhip, goods, or merchandiſes, to depart or be re
moved from thence, unleſs in ſuch caſes, and by ſuch l
cence as ſhall be directed by ſome order made and not
fied by proclamation, every ſuch offender ſhall be a
judged guilty of felony, and ſuffer death without bene
of clergy. But no attainder of felony, by virtue of th
act, ſhall work any corruption of blood, or forfeiture
goods, chattels, or hereditaments.

But there is a clauſe in this ſtatute, That whereas cotto
ſkins, human hair, and certain other ſpecies of me
chandiſes, are more eſpecially liable to retain infectio
and may be brought from places infected into other cou
tries, and thence imported into his Majeſty's dominio
in ſhips not obliged to perform quarantain: therefo
when any foreign country ſhall be infected with t
plague, all ſuch goods and merchandiſes, as ſhall be par
cularly ſpecified in any order to be made concerning qu
rantain, and notified as aforeſaid, which ſhall be import
in any part of his Majeſty's dominions, from any forei
country, and in any ſhip whatſoever, ſhall be liable
ſuch order ſo made.

By the 6th George II. it was declared lawful for his M
jeſty, by proclamation, to prohibit all perſons to
from Great Britain or Ireland, or the iſles of Guernſe
Jerſey, Alderney, Sark, or Man, unto any place wh
ſhall be infected with the plague, to be mentioned in ſu
proclamation, during the time therein ſpecified, and u
der ſuch regulations as in the proclamation ſhall be p
ſcribed. Alſo it ſhall be lawful for his Majeſty, by p
clamation, to prohibit all perſons to come from any pl
infected with the plague, ſpecified in ſuch proclamatio
in

into Great Britain or Ireland, &c. under the regulations preſcribed in any ſuch proclamation. And all perſons who ſhall export goods contrary to the King's proclamation, ſhall forfeit double the value. That if, after the iſſuing ſuch proclamations aforeſaid, any perſon ſhall go to any place infected, contrary thereto, the perſon offending ſhall forfeit 500 l. one moiety to his Majeſty, and the other to him who ſues for the ſame; and if any perſon coming from any place infected, ſhall enter into, or any goods ſhall be landed out of any ſhip in any place in Great Britain or Ireland, &c. contrary to ſuch proclamation, the perſons offending therein ſhall be guilty of felony, and ſuffer death without benefit of clergy; and ſuch ſhips or goods ſhall be forfeited to his Majeſty: and all perſons, who, after proclamation, ſhall cauſe any ſuch goods to be imported, ſhall forfeit treble value.

That in every proclamation, to be iſſued for prohibiting commerce with any place infected with the plague, a reaſonable time ſhall be allowed, before the prohibition declared by ſuch proclamation ſhall commence; regard being had to the diſtance of the infected places from Great Britain, Ireland, or any of the iſles aforeſaid, and to the time within which notice of ſuch proclamation may arrive at ſuch infected places.

By a late act, it was enacted, That if the plague ſhall appear on board any ſhips being to the northward of Cape Finiſterre, the maſter, &c. ſhall immediately proceed to the harbour of New Grinſby, in the iſland of Scilly; where he is to remain till his Majeſty's pleaſure be known: or if he cannot make the iſland of Scilly, he is to remain in ſome open road, till he receives orders from his Majeſty, or his privy council; and ſhall take care to prevent any of his men from going out of the ſhip, or having intercourſe with other ſhips or perſons; and the maſter, or any of his men, who are diſobedient herein, ſhall ſuffer death without benefit of clergy. That the maſter of every ſhip ordered to perform quarantain, ſhall deliver on demand, to the chief officer appointed to ſee quarantain duly performed, ſuch bill of health, and manifeſt, as he ſhall have received from any Britiſh conſul during his voyage, together with his log-book and journal, under penalty of 500 l. That, after quarantain is duly performed, and upon proof to be made by the oaths of the maſter, &c. and of two of the perſons belonging to ſuch ſhip, or two other credible witneſſes, before the cuſtomer, comptroller, or collectors of the port, or their deputies, or any juſtice of the peace or, within any of the iſles of Guernſey, Jerſey, Alderney, Sark, or Man, before two jurats or magiſtrates, that ſuch ſhips have duly performed quarantain, and are free from infection; and after producing a certificate to that purpoſe, ſigned by the chief officer who ſuperintended the quarantain of the ſaid ſhip, then ſuch officers and magiſtrates are to give a certificate thereof; upon which the ſhip and crew are to be liable to no further reſtraint or detention. That if any perſon ſhall wilfully conceal from the officers of quarantain, or clandeſtinely convey any letters or goods from any ſhip under quarantain, he ſhall ſuffer death, without benefit of clergy.

QUARRY. A place under-ground, out of which are dug marble, free ſtone, ſlate, lime-ſtone, or other matters proper for building. See *Stone*, *Marble*, *Slate*, and *Lime*.

QUARRY, *Quarrel*, in glaziery. A pane, or piece of glaſs, cut in a diamond-form; being of two kinds, ſquare and long; each being of a different ſize, expreſſed by the number of pieces which make a foot of glaſs, as 8ths, 10ths, 12ths, 15ths, 18ths, and 20ths; but all the panes are cut to the ſame angle. See *Glaſs*.

QUART. A diminutive meaſure, containing one-fourth, or quarter, of ſome other meaſure. See *Meaſure*.

The Engliſh quart is a fourth of a gallon, or two pints.

The French, from whom the Engliſh borrow the word, beſides their quart, or pot of two pints, have various other quarts, diſtinguiſhed by the whole, whereof they are quarters; as quart de muid, and quart de boiſſeau. See *Muid*, and *Buſhel*.

They have alſo the quart of a yard.

QUARTAL. A ſort of corn-meaſure uſed in ſome parts of France, particularly in the county of Breſſe.

QUARTARIO. A liquid meaſure at Venice, 16 of which make the amphora. See *Amphora*.

QUARTARIO, is alſo a Venetian corn-meaſure, weighing about 32 lb. avoirdupois.

QUARTAS, or *Quartos*. A copper coin uſed in Spain for ſmall payments, and worth 4 maravedis, from whence it is named. There are alſo double quartas, worth 8 maravedis; 34 quartos make the piſtarine, or 10 ¾ d. ſterling; 136 make the piece of eight, or 3 s. 7 d. ſterling; and 680 make the piſtole, or 17 s. 11 d. ſterling.

QUARTATION, among refiners. A method of purifying gold, by melting three parts of ſilver with one of gold, and then caſting the mixture into aqua fortis; which, diſſolving the ſilver, leaves the gold at bottom in form of a black powder. See *Refining*.

QUARTER, in Engliſh weights, is a fourth part of the quintal or hundred weight, being 28 lb. avoirdupois. See *Hundred*, and *Quintal*.

QUARTER, is alſo a dry meaſure of England, containing of corn 8 buſhels ſtriked, ten quarters making the laſt; and the quarter of coals is the fourth part of a chaldron. See *Meaſure*.

QUARTER, is alſo applied to long meaſure, being the 4th part of an ell or yard: thus the French ell is 6 quarters, or 54 inches; the Flemiſh ell is 3 quarters, or 27 inches; the Engliſh ell is 5 quarters, or 45 inches; and the Engliſh yard is 4 quarters, or 36 inches.

QUARTER, in law, is the fourth part of the year: hence the days whereon thoſe quarters ſtatedly commence, are called quarter-days; being the 25th of March, called Lady-day; the 24th of June, called Midſummer-day; the 29th of September, called Michaelmas-day; and the 25th of December, or Chriſtmas-day: on which rents are uſually paid, as alſo the intereſt due on any principal ſum lent on mortgage or bond.

QUARTER, in navigation, or a quarter of a point, wind, or rhumb, is the fourth part of a cardinal point, wind, or rhumb, or of the diſtance between two cardinal points and winds.

The quarter contains an arch of 11 deg. 15 min. being what Wolfius, with regard to the other diviſions, calls a ſecondary point of the ſecond order. See Cardinal *Point*.

QUARTER *of a ſhip*, is that part of the ſhip's hull, which lies from the ſteerage-room to the tranſom.

QUARTER-*deck of a ſhip*, is that aloft the ſteerage, reaching to the round-houſe.

QUARTERING, in the ſea-language. When a ſhip under ſail goes at large, neither by a wind nor before a wind, but as it were betwixt both, ſhe is ſaid to go quartering.

The term is alſo uſed, when a ſhip ſails with quarter winds.

QUARTERMASTER. An officer on board a ſhip; of which there are more or leſs, according to her burthen; their buſineſs being to rummage in the hold on all occaſions; to overlook the ſteward in his delivery of victuals to the cook, and in his pumping and drawing out the beer; and in general, to take care there is no waſte.

The quartermaſter, or quarteer, is alſo to mind the ſhip's loading, which is the buſineſs he is chiefly employed about.

QUARTERN, or *Quarteron*. A diminutive of quart, ſignifying a quarter of a pint, as a quart does a quarter of a gallon.

QUARTER-*Wind*, at ſea, is a lateral or ſide wind; or a wind which does not blow in ſtern, but a little aſide of it. See *Wind*.

Properly the quarter-wind is that which comes in abaft the main-maſt ſhrouds, even with the quarter of the ſhip; which is the beſt of all winds, as bearing into all the ſails; whereas a wind blowing full in ſtern, is kept off by the ſails of the mizzen. See *Sailing*.

QUATRIN, is a ſmall Italian copper coin; that of Naples being 2-15ths of a penny ſterling, and 40 make the Paul

or 6 d. ſterling; that of Rome is 3-16ths of a penny ſterling, and 32 make the Jule or 6 d. ſterling; the quatrin of Leghorn is 13-90ths of an Engliſh penny, 40 making the Jule or 7-9ths of a penny ſterling; and that of Bologna is 1-10th of a penny ſterling.

QUAY, or *Kay*. A ſpace of ground paved, on the ſhore of a river, or port, deſtined for the loading and unloading of merchandiſe. See *Wharf*.

QUAYAGE. A duty paid by merchants for the liberty of uſing the quay of any ports where their ſhips arrive, for the unloading of their merchandiſe.

QUEBEC. The capital of the French colonies in North America, ſituated in 74 deg. of W. lon. and 47 deg. 35 min. of N. lat. on the weſt-ſide of the river of St. Laurence, 300 miles N. W. of Boſton. See *French* America.

QUEDA. A port-town of Malacca, in the Further India in Aſia, ſituated in 98 deg. 35 min. of E. lon. and 7 deg. 10 min. of N. lat. 300 miles north of Malacca, ſubject to the Dutch.

QUEMKAS, otherwiſe called *bouille-cotonis*, or *bouille-charmay*. A ſort of atlas, or ſatin, brought from the Eaſt Indies. See *Atlas*.

QUESTMEN. Perſons choſe annually, in each ward of the city of London, to go from houſe to houſe, and in the markets, to inquire into abuſes and miſdemeanors, eſpecially ſuch as relate to weights and meaſures.

QUEUE. A wine-meaſure, uſed in ſome provinces of of France: the queues of Orleans, Blois, Nuys, Dijon, and Macon, are alike; making one muid and a half of Paris, or 420 pints.

QUICKSILVER. A very ponderous fluid mineral, by the chemiſts called mercury. See *Mercury*.

QUILLAGE, is a term among the French for a duty paid in France by ſuch merchant-veſſels, as enter for the firſt time ſome port of the kingdom: thus, at Bourdeaux, this duty is 3 livres 4 ſols, or 2 s. 7 d. ſterling.

QUILLOT. A corn-meaſure uſed at Smyrna, Conſtantinople, and in ſome other port-towns of the Levant, being about 75 lb. avoirdupois.

QUILLS, of ſwans, turkies, and geeſe, eſpecially the latter, are no inconſiderable article of trade; being ſold to the ſtationers by the thouſand, and retailed by them by the hundred, of ſix ſcore to the hundred.

Great quantities of quills are brought to London from Germany and Holland; particularly the latter, which are the beſt; and there are alſo great parcels ſent from Scotland and Wales.

QUILO. A ſilver coin of Tuſcany, worth about 5 d. ſterling.

QUILOA, or *Quiola*. A port-town of Zanquebar, on the eaſt-coaſt of Africa, ſituated in 39 deg. of E. lon. and 10 deg. of N. lat. 300 miles north of Moſambique, ſubject to Portugal, or at leaſt tributary to that crown, where the Portugueſe of Braſil ſend every year to purchaſe negroes.

QUILON. See *Coulan*.

QUINQUINA, *Quinaquina*, called alſo *China-china*, and *Kin-kina*. A medicinal bark, brought from the Weſt Indies; called alſo, by way of eminence, *the bark*; or *Cortex Peruvianus*, the Peruvian bark, from the country whence it is brought; and popularly *the jeſuits bark*, becauſe, at its firſt introduction, chiefly ſold and adminiſtered by the jeſuits.

The tree which yields this bark grows in divers provinces of Peru, but chiefly Quenca, Ayavaca, and Loxa; the beſt and fineſt coming from the mountains fourteen leagues round the city of Loxa.

The tree that produces the quinquina is tall, and its trunk thicker than a man's thigh, tapering from the root upwards; but without any branches till near the top, where they grow regular as if lopped by art, and with the leaves form an exact hemiſphere. The bark is blackiſh on the outſide; but ſometimes mixed with white ſpots, where grows a kind of moſs, by the Spaniards called *barbas*, its leaves reſembling the leaves of plumb-trees.

The Spaniards diſtinguiſh four ſorts of this precious bark; the caſcarilla colorada, or reddiſh bark; amarylla, or yellowiſh; creſpilla, or curling; and blanca, or whitiſh.

The colorada and amarylla are reckoned the beſt. The creſpilla is the produce of the ſame ſort of tree, only growing in a cold climate, which impairs the quality of the bark, and renders it whitiſh on the outſide, cinnamon coloured within, and unfit for medicinal uſe.

The blanca is procured from another ſpecies of the tree, of a much bigger trunk, the leaves of a lighter green colour, and the bark a very thick ſpongeous ſubſtance, whiti on the outſide, being ſo tough as to require the force an ax to ſlice it from the tree. When firſt cut dow is as bitter as the beſt ſort, and has then the ſame virtue the cure of intermitting fevers; but when dry, and any length of time, it grows good for nothing. reality, both ſorts are found to have much ſurer a quicker effects when green, than when dry; ſo that Europeans only come in for the ſecond virtues: what worſe, the bad ſort is in great plenty, and the gr very ſcarce, and hard to come at: for which reaſ with a little of the fine bark ſent to Panama for E rope, large quantities of the worſe ſort are mixed.

The ſmall bark, which curls up like ſticks of cinnamo and which in England is much eſteemed, as being ſu poſed to be ſent from the branches of the tree, a therefore more efficacious in the cure of fevers, is o the bark of the younger trees; which being very th curls in this manner: for the bark of the branches never gathered, as it would not compenſate the ch of cutting.

The ſeaſon for cutting the bark is in Auguſt, the dry time of the country; the cutters being Indians, p vided each with a large knife and a bag. When t have ſliced down the bark as high as they can re they faſten ſhort ſticks, with withs, to the tree at pr diſtances, like the ſteps of a ladder, and thus mount, ſlice to the very top: when the bag is full, they car to the low country, to a neighbouring hut, to dry, w is done by ſpreading it in the open air, and freque turning it. If it happen to have been cut wet, they c it directly to the low country to dry, otherwiſe it lo colour, turns black, and rots. After a tree has barked, it requires 18 or 20 years to grow again.

There is an opinion, that the better ſort of bark ſoon be at an end, or at leaſt inacceſſible; partl reaſon of its diſtance from any inhabited place, an impenetrability of the woods where it grows; partly by the want of Indians to cut it, whoſe through the cruelties of the Spaniards, is likely to b tally extinct.

The quinquina was but little known in Europe t year 1640. The jeſuits of Rome firſt brought vogue in Spain and Italy in 1649; and in 165 Cardinal de Lugo, of that order, brought it into F It was at firſt ſold for its weight in gold. Wh duced into powder, it is by foreigners called the nal's powder; but uſually the jeſuits powder, or *patrum*.

It met with great oppoſition at firſt. Chiflet and pius diſtinguiſhed themſelves againſt it: but it almoſt univerſally allowed one of the greateſt a remedies within the whole province of medicine.

Some call the gentian-root the European quinqui ſe good againſt intermitting fevers. See *Gen* Quinquina is ſold at Amſterdam from 1 s. 6 d. to ſterling the pound.

QUINT, or *Fifth*. A term particularly uſed in America, for ſignifying what is due to the King gold and ſilver extracted from the mines, or o gathered.

This duty is ſo conſiderable, that it is proved f regiſters of the quinted gold and ſilver, that, ſ mines of Potoſi alone, the King of Spain has ha then fifty years upwards of 111 millions of p 19,500,000 l. ſterling.

The quint is alſo due to the King for all ſorts of ſtones; under which denomination are compr not only thoſe of any brilliancy, but alſo the bea coral, loadſtone, jet, arcanſon, and vitriol.

The King of Portugal has alſo a fifth of all the diamonds of the Braſils.

QUINTAL, in commerce. The weight of 100 lb. See *Hundred*, and *Weight*.

The quintal admits of ſome differences in different places, according as the pound conſiſts of more or leſs ounces, and as the ounce is lighter or heavier.

Thus, the Paris quintal, or hundred, yields 123 pounds at Montpelier, and the Montpelier hundred only 81 pounds at Paris. The quintal of Conſtantinople is eſteemed the heavieſt of all thoſe uſed in the Levant; containing 45 ocquas, the ocquas weighing 2 $\frac{9}{16}$ Dutch pounds; ſo that the quintal is equal to 112 $\frac{3}{4}$ pounds of Amſterdam, 124 pounds of Venice, and 160 of Leghorn.

The Engliſh quintal uſually conſiſts of 112 pounds avoirdupois, and is divided into four quarters.

QUINTAL, was alſo formerly uſed for a weight of lead, iron, or other common metal, uſually equal to an hundred pounds, at ſix ſcore to the hundred.

St. QUINTIN. A town of France, in the province of Picardy, ſituated in 3 deg. 16 min. of E. lon. and 49 deg. 55 min. of N. lat. See *France*.

QUIRAT. A ſmall weight uſed at Cairo, and throughout Egypt; the drachm being equivalent to 16 quirats, and the quirat to 4 grains.

QUITAL. See *Carat*.

QUITTO *City*. Capital of the province of Quitto in Peru, in South America, ſituated in 78 deg. of W. lon. and 30 deg. of S. lat. 200 miles eaſt of the Pacific ocean, and 140 miles north of Guiaquil. See *Spaniſh America*.

R. THE 17th letter of the alphabet, and uſed in commerce for the following abbreviations: Rs, remittances; Rv'd, received: R°. recto: Rx. rixdollar.

℞, in medicinal preſcriptions, ſtands for *recipe*, or *take*: it is alſo uſed in the Britiſh navy to denote the word run, when a man has deſerted from the ſhip.

RAAGDAER. An officer in Perſia who receives the duties of the high roads: theſe raagdaers being divided into cantons, and each anſwering only for the places he is charged with; but, in conſequence of the duties paid them, they are obliged to keep the high roads in order, and to reſtore to the proprietor the value of the merchandiſe, and other effects he may be robbed of, when they cannot recover them; but, if they recover them, they keep a third for their trouble. They have under them ſeveral bands of ſoldiers for the ſafety of travellers and merchants; but this good regulation is frequently ill executed, and ſometimes theſe very guards are the greateſt robbers.

RABATE, in commerce. See *Rebate*.

RABBETING, in carpentry, the planing or cutting of channels, or grooves, in boards.

In ſhip-carpentry, it ſignifies the letting in of the planks of the ſhip into the keel, which in the rake, and run of a ſhip, is hollowed away, that the planks may join the cloſer.

RABINET. A ſmall piece of ordnance, between a falconet and a baſe. See *Cannon*.

RACK, or *Arack*. See *Arack*.

To RACK *wines*, is to draw them from off their lees, after having ſtood long enough to clear and ſettle. Hence,

RACK-*Vintage*, is frequently uſed for the ſecond voyage made by Engliſh wine-merchants into France for racked wines; whence they uſed to return about the end of December.

RACLIA. One of the leaſt of the iſlands of the Turkiſh Archipelago, near the iſland of Nio: but uninhabited.

RAFFLING. A term uſed when a company of perſons club to the purchaſe of a commodity, and he that throws the higheſt on three dice takes it.

RAG. A piece of linen or woollen cloth, worn, or torn to ſhivers, or in a jagged mangled manner, uſed for the making of paper. See *Paper*.

By the ſtatute of the 11th of Geo. I. old rags, old ropes, or junk, or old fiſhing nets, for making paper, or paſtboard, not regularly entered and landed are forfeited.

RAG-*Bolts*, certain iron pins in a ſhip, which are ragged and hacked on the ſides, to prevent their being drawn out.

RAIN-*Deer*. A ſort of ſtag of a prodigious ſwiftneſs, very common in Lapland, Muſcovy, and other northern countries; whoſe ſkins are uſed in England, for the covering of chairs and ſaddles, which have a ſtrong agreeable ſcent, vulgarly called Ruſſia leather. See *Leather*.

RAINS, in the ſea-language, denotes all that tract of ſea northward of the equator, between 4 and 10 degrees of latitude; and lying between the meridian of Cape Verde, and that of the eaſtermoſt iſlands of the ſame name.

It takes its name from the almoſt continual calms, conſtant rains, and thunder and lightening to a great degree found there. The winds when they blow are only ſmall uncertain guſts, and ſhift about all round the compaſs; ſo that ſhips are ſometimes detained here a long while, and can make but little way.

RAISINS. Grapes which remain on the tree till fully ripe, and then dried in the ſun, or in an oven, to fit them for keeping, and for ſome medicinal purpoſes: the raiſins of the ſun, or jar raiſins, being thoſe dried in the ſun.

Of theſe are various kinds: as, raiſins of Damaſcus, thus called from the capital city of Syria, in the neighbourhood whereof they are cultivated, which are much uſed in the compoſition of ptiſans, together with jujubes and dates: they are brought flat and ſeeded, of the ſize of the thumb, whence it is eaſy judging of the extraordinary bulk of the grape, when freſh. Travellers tell us of bunches weighing 25 pounds. Their taſte is faintiſh and diſagreeable.

The common raiſins are the fruit of ſeveral ſpecies of grape; and the common way of drying them is to tie two or three bunches together, before they are plucked from the vine, and dip them into a hot lixivium of wood-aſhes, with a little oil of olives in it; after which, they ſhrink and wrinkle, being left growing 3 or 4 days: they are then cut, and dried in the ſun at leiſure.

France affords great quantities of raiſins; particularly the picardans and muſcats, which grow chiefly in Provence and Languedoc. The Calabrian raiſins are brought from Italy; and the raiſins of the ſun from Spain.

All kinds of raiſins have much the ſame virtues, being nutritive and balſamic; but ſubject to fermentation with juices of any kind. There is a particular ſort of wine made with raiſins; and alſo a ſpirit extracted from them called raiſin-brandy: but the ſmaller kind of grapes are called currants, or corinths. See *Currants*.

RAKE, of a ſhip, is ſo much over her hull as over-hangs at both ends of the keel: that part of it which is before, being called the rake forward on; and that part which is at the ſetting on of the ſtern poſt, being called her rake aft, or aft-ward on: and when a ſhip has a ſmall rake forward on, but is built with her ſtern too ſtraight up, ſhe is called bluff-headed.

RAKE *of the rudder*, is the hindermoſt part of it. See *Rudder*.

RAMA. A town of Paleſtine, remarkable for its trade of gums and cottons. See *Turky*.

RAMADA. A port-town of Terra Firma, in South America, in the province of New Granada, ſituated on the coaſt of the North ſea, in 72 deg. 30 min. of W. lon. and 11 deg. 30 min. of N. lat. 100 miles E. of St. Martha, near which is a rich copper mine.

RAMBURG. See *Hamburg*.

RAMEKINS. A fortreſs of the United Provinces, in the province of Zealand, ſituated on the South coaſt of the iſle of Walcheren, in 3 deg. 35 min. of E. lon. 5 miles S. of Middleburg; which was one of the fortreſſes put into the poſſeſſion of the Engliſh by the Dutch, as a ſecurity for their fidelity, in the reign of Queen Elizabeth.

RAMSAY. An iſland in the Iriſh channel, on the coaſt of Pembrokeſhire, ſituated in 5 deg. 20 min. of W. lon. and 51 deg. 55 min. of N. lat. 15 miles N. W. of Milford Haven, and 4 miles W. of St. Davids.

RAMSGATE. A port-town of Kent, ſituated near the Downs, in 1 deg. 22 min. of E. lon. and 51 deg. 20 min. of N. lat. between the north and ſouth Foreland; 8 miles N. E. of Canterbury.

RANCHIERA. A port-town of Terra Firma, in South America, in the province of New Granada, ſituated on the coaſt of the North ſea, in 72 deg. of W. lon. and 11 deg. 34 min. of N. lat. between the town of Rio de la Hache and Cape de Vela; near which was a rich pearl fiſhery, when the Spaniards invaded this country; where they deſtroyed multitudes of Indians, in forcing them to dive for pearls beyond their ſtrength, and other hardſhips and oppreſſions.

RANDERS. A town of North Jutland, ſubject to Denmark. See *Denmark*.

RANDS. A ſort of tanned hides. See *Hide*.

RANGES, in a ſhip, are two pieces of timber going a croſs from ſide to ſide; one aloft, on the forecaſtle, a little abaft the fore-maſt; and the other in the beak-head before the mouldings of the bow-ſprit.

RAOLCONDA. A city of the Hither India, in Aſia, ſituated in the province of Golconda, in 79 deg. of E. lon. and 17 deg. 12 min. of N. lat. 120 miles N. W. of Maſſulapatan, and 150 miles N. E. of Golconda; near which is a rich diamond mine, ſubject to the Mogul.

RAP. A term for bad or counterfeit halfpence in Ireland.

RAPE. A name given the wood, or ſtalks of the cluſters of grapes, when dried and freed from the fruit; which is uſed in making vinegar, ſerving to heat and ſour the

wine: but it is firſt put into a place to ſour itſelf, before caſt into the vinegar veſſel; to which end, preſently after the vintage, it is carefully put up in barrels, leſt it take air; otherwiſe it would heat itſelf, and be ſpoiled; there being no other way of keeping rape, hitherto diſcovered, but to fill the veſſel wherein it is contained with wine or vinegar. See *Vinegar* and *Wine*.

RAPE-SEED, is the ſeed of a kind of wild cabbage, or turnip, called by the Flemings colza or colzat, being cultivated abundantly in ſeveral parts of Flanders, Holland, England and Ireland; as alſo in Brie, Champagne, and Normandy, in France: from which ſeed an oil is extracted, commonly uſed by woollen manufacturers, and for burning in lamps. See *Oil*.

RAPEN. A ſmall copper coin current at Lucern, and ſome other parts of Switzerland, being $\frac{1}{5}$ of 1 d. ſterling, and 9 make the batzen, or 1 $\frac{4}{5}$ d. ſterling.

RAPPAHANOCK. A large navigable river, which riſes in the mountains W. of Virginia in America; runs from the N. W. to the S. E. through that province, and diſcharges itſelf into the bay of Cheſepeak.

RAS. A long meaſure uſed in Piedmont for ſtuffs, equivalent to the fathom of Lucca, which contains one foot, 9 inches, and 10 lines, making half an Engliſh ell.

RAS, is alſo a name given by the French to ſeveral ſorts of ſerges.

RASBERRY. A common garden fruit, of which a particular kind of wine is made.

RASEBURG. A port-town of Sweden, in the province of Finland, and territory of Nyland, ſituated on the gulph of Finland, in 23 deg. of E. lon. and 60 deg. 22 min. of N. lat. 50 miles S. W. of Abo.

RASIER. A corn meaſure uſed in French Flanders, being of two ſorts; the one called the ſea meaſure, and the other the land meaſure: the firſt weighs 280 lb. and ſometimes 290 lb. avoirdupoiſe; but the ſecond only 245 lb.

RASSAD, or *Razad*. A kind of glaſs ware, or ſmall beads of glaſs, of diverſe colours, with which the Negroes on the coaſt of Africa, and the Americans, adorn themſelves; being given them in exchange for ſeveral rich merchandiſes.

All ſorts of raſſad are not proper for the African coaſts: on thoſe of Angola, particularly at Loango of Boiria, Malimbo, and Cabindo, none but black, and white and black, are neceſſary; being uſually exchanged by the maſs, weighing three pounds and a half.

In a cargo, to treat for 612 Negroes, about 3000 lb. of raſſad are requiſite; that is, 1200 lb. of white, 800 of black, and 1000 of all other colours.

RATAFIA. A fine ſpirituous liquor, prepared from the kernels of ſeveral ſorts of fruits, particularly cherries and apricots.

Ratafia of cherries, is prepared by bruiſing the cherries, and putting them into a veſſel wherein brandy has been kept; then adding to them the kernels of cherries, or ſtrawberries, ſugar, cinnamon, white pepper, nutmegs, cloves; and to 20 pounds of cherries 10 quarts of brandy. The veſſel is left open 10 or 12 days, then ſtopped cloſe, for two months before it is tapped.

Ratafia of apricots is prepared two ways; either by boiling the apricots in white wine, adding to the liquor an equal quantity of brandy, with ſugar, cinnamon, mace, and the kernels of apricots; infuſing the whole for 8 or 10 days; then ſtraining the liquor, and putting it up for uſe; or by infuſing the apricots, cut in pieces, in brandy, for a day or two, paſſing it through a ſtraining bag, and putting in the uſual ingredients.

RATE. A ſtandard, or proportion, by which either the quantity or value of a thing is adjuſted.

The rates of bread in London are fixed by authority. See *Bread*.

The rate of intereſt, as now eſtabliſhed by law in England, is 5 *per cent*. The rate of intereſt in Italy is 3 *per cent*. In Sweden 6. In France 5. In Spain 10. In Barbadoes 10. In Turky 20. See *Intereſt*.

The rates or fares of hackney-coachmen, chairmen, and watermen, are fixed by act of parliament.

The rates of exchange, factorſhip, &c. are different. See *Exchange*, and *Factorage*.

RATE, of a ſhip of war, is its order, degree, or diſtinction, as to magnitude, burthen, &c. See *Ship* and *Navy*.

The rate is uſually accounted by the length and breadth of the gun-deck, the number of tons, and the number of men and guns the veſſel carries. There are ſix rates: a firſt rate man of war has its gun-deck from 159 to 174 feet in length, and from 44 to 50 feet broad; it contains from 1313 to 1882 tons; has from 706 to 1000 men; and carries from 96 to 10 guns. See *Navy*.

Second rate ſhips have their gun-decks from 153 to 165 feet long; and from 41 to 46 broad; they contain from 1086 to 1482 tons; and carry from 524 to 640 men; and from 84 to 90 guns.

Third rates have their gun-decks from 142 to 158 feet in length; and from 37 to 42 feet broad: they contain from 871 to 1262 tons; and carry from 389 to 476 men; and from 64 to 80 guns.

Fourth rates are in length on the gun-deck, from 118 to to 146 feet; and from 29 to 38 broad: they contain from 448 to 915 tons; carry from 226 to 346 men; and from 48 to 60 guns.

Fifth rates have their gun-decks, from 100 to 120 feet long; and from 24 to 31 broad; they contain from 259 to 542 tons; carry from 145 to 190 men; and from 48 to 60 guns.

Sixth rates have their gun-decks, from 87 to 95 feet long; and from 22 to 25 feet broad; they contain from 152 to 256 tons; carry from 50 to 110 men, and from 16 to 24 guns.

The new built ſhips are much larger, as well as better than the old ones of the ſame rate; whence the double numbers all along; the larger of which expreſs the proportions of the new-built ſhips, as the leſs thoſe of the old ones.

RATEEN, or *Ratten*, in commerce, a thick woollen ſtuff, quilled, wove on a loom with four tredles, like ſerges and other ſtuffs that have the whale or quilling.

There are ſome rateens dreſſed and prepared like cloths; others left ſimply in the hair; and others where the hair or nap is frized.

Rateens are chiefly manufactured in France, Holland, Ireland, and Italy; being moſtly uſed in linings.

The frize is a ſort of coarſe rateen; and the drugget, a rateen half linen, half woollen.

RATEL. A weight uſed in Perſia, of about 16 ounces; being the 6th part of the ſmall batman, called otherwiſe batman of Tauris. See *Batman*.

Book of RATES, is a book eſtabliſhed by the Britiſh parliament, ſhewing at what value goods which pay poundage are to be reckoned at the cuſtom-houſe.

The book of rates annexed to the act of tonnage and poundage, made in the 12th of Charles II. is ſubſcribed with the hand of Sir Harbottle Grimſtone, then ſpeaker of the houſe of commons: but an additional book of rates of goods and merchandiſes uſually imported, and not particularly rated in the former, with rules and orders, is ſigned by Spencer Compton, Eſq; ſpeaker of the houſe of commons in the 11th of Geo. I. See *Cuſtoms*.

But as the book of rates is in the hands of every merchant, and being too long to be inſerted in this work, it has been thought proper to omit it; eſpecially as it may be ſeen at large in Crouch.

There are alſo public books of rates in the cuſtom-houſes of Ireland, France, Holland, Spain, Portugal, and other trading countries.

RATION, or *Ratian*, in the army, a pittance or proportion of ammunition, bread, drink, or forage, diſtributed to each ſoldier for his daily ſubſiſtence.

The ſhips crews have alſo their rations, or allowances of biſket, pulſe, and water, proportioned according to their ſtock: the uſual ration at ſea, particularly among the Portugueſe, &c. being a pound and half of biſket, a pint of wine, and a quart of freſh water *per* day; and each month an arrobe, or 31 pounds of ſalt meat, with ſome dried fiſh and onions.

RATIS. A weight uſed for diamonds and pearls in India, particularly Bengal, being the $\frac{7}{8}$ of a caract, or three grains $\frac{1}{2}$.

RAT-LINES, or as the ſeamen call them ratlings, thoſe

lines which make the ladder ſteps, to go up the ſhrouds and puttocks: hence called the ratlings of the ſhrouds.

RATTLE. A weight in the Eaſt Indies, being 1 lb. and 4½ dr.

RATTARS. A Perſian word, which ſignifies the cuſtom-houſe officers, and ſometimes the guards eſtabliſhed on the high roads for the ſafety of travellers and merchants. The cuſtom-houſe rattars very ſeldom extort any thing from Franks; and for the moſt part never open their bales, or cheſts of merchandiſe; contenting themſelves with their ſimple declaration.

RATONEAU. One of the French iſlands on the coaſt of Provence. See *French* Iſlands.

RATTAN. See *Ruatan*.

RATZ. A ſmall billon coin of Switzerland, worth about a halfpenny.

RAVELLA. A port-town of Italy, in the kingdom of Naples, and Hither Principat, ſituated on the north-ſide of the gulph of Salerno, in 15 deg. of E. lon. and 40 deg. of N. lat. 20 miles S. of Naples.

RAVENGLAS. A port-town of Cumberland, ſituated on the Iriſh channel, in 3 deg. 5 min. of W. lon. and 54 deg. of N. lat. 15 miles S. of Cockermouth, and 38 miles S. W. of Carliſle.

RAW *Hide*. See *Hide*.

RAW *Silk*. See *Crude* ſilk, and *Silk*.

REA. See *Ree*.

REACH, in the ſea-language, the diſtance between any two points of land that lie in a right line one from another.

REAL, *Rial*, or *Ryal*, in commerce. See *Rial*.

REAL, is alſo a ſilver coin at Bencoolen, in the Eaſt Indies, worth 5 s. ſterling.

REALGAR. A red friable mineral ſubſtance, popularly called red arſenic, or orpiment; being prepared from orpiment, by fuſing it over the fire in a cloſe veſſel, and brought from China in different figures, which ſeem to be caſt in moulds. See *Orpiment* and *Arſenic*.

It is of an acrimonious nature, and reputed poiſonous, tho' not in any great degree; and Boerhaave takes it for the ſame with the Sandaracha of the ancients.

In the hiſtory of the French academy, there is an account of a cup brought to Paris, by the embaſſadors of Siam, and preſented there, as a remedy uſed by that people againſt all diſeaſes. Upon an examination, which had like to have coſt Mr. Homberg dear, he found it to be a kind of realgar, or red arſenic, more cauſtic than ours.

Its uſe among the Siameſe, he takes to have been the ſame with that of regulus of antimony; to give an emetic quality to the wine drank out of it.

As the doſe of medicines is much ſtronger in the torrid zone than among us, the quantity of ipecacuanha, ordinarily taken by the Indians, being 20 times as great as that among us, it is very poſſible a cup of realgar, tho' enough to poiſon an European, may prove a gentle medicine to a Siameſe.

REALISE, in commerce, a term little known in trade before the year 1719, when thoſe immenſe fortunes began to be made in France and England, by the buſineſs of actions or ſtock. See *Action*, *Bubble*, and *Company*.

By realiſing is meant the precaution, many of thoſe who had gained moſt, took, to convert their paper into real effects; as lands, houſes, rich moveables, jewels, plate; but above all into current ſpecie. A precaution capable of ruining the ſtate; but which the French regency had the wiſdom to fruſtrate, by taking proper meaſures to have the money, thus hoarded up, returned to the public.

REALEO. A port-town of Mexico in North America, capital of the province of Nicaragua, ſituated on a bay of the Pacific ocean, in 91 deg. 30 min. of W. lon. and 12 deg. of N. lat. being W. of Leon and the lake Nicaragua.

REAM. A parcel of paper conſiſting of 20 quires, each of which ought to contain 25 ſheets.

REAR *Admiral*, is the admiral of the third and laſt ſquadron of the Royal fleet. See *Admiral*, *Navy*, and *Fleet*.

REBATE, or *Rebatement*, in commerce, a term much uſed at Amſterdam, for a diſcount, or abatement, in the price of certain commodities, where the buyer advances the ſum in hand for which he might have taken time. See *Diſcount*.

Rebate, which in England is uſually called prompt payment, is eſtimated by months; and is only allowed for certain kinds of merchandiſes, which, according to the cuſtom of Amſterdam, are, German wools, aſhes, and pot-aſhes, Italian ſilks, ſugars of Brazil, and Spaniſh wools which are ſold at 15, 18, 33, 16, and 21 months rebate. That is, theſe commodities are ſold for ready money, only deducting, or rebating the intereſt of the money which ought not to be paid till the end of 15, 18, &c. months.

This intereſt, called rebate, is uſually regulated on the footing of 8 *per cent. per annum*.

The reaſon of this expedient is, that the merchants having not always money to pay for their goods in hand, by means of the rebatement, ſuch as have will be engaged to diſcharge themſelves as ſoon as poſſible, in hopes of the diſcount.

RECEIPT, or *Receit*, in commerce, an acquittance or diſcharge; or an act whereby it appears a thing has been paid off or acquitted: but where the receipt is on the back of the bill, &c. it is uſually called an endorſement. See *Acquittance* and *Endorſement*.

Among tradeſmen, receipt uſually makes the ſecond of the three articles of an accompt; the receipt containing the monies received; the two others the expence, and the return or balance. See *Accompt*, and *Book*-keeping.

RECEIVER, denotes an officer, whereof there are various kinds, denominated from the particular matters they receive, the places where, or the perſons for whom, &c. as receiver of rents, receiver general of the cuſtoms, and others.

RE-CHANGE, in commerce. See *Re-exchange*.

RE-CHANGE, is uſed at ſea for ſuch tackle as is kept in reſerve aboard the ſhip, to ſerve in caſe of failure of that already in uſe: but the Levantines uſe the word reſpect or reſpit, in the ſame ſenſe.

RECKONING, in navigation, the act of eſtimating the quantity of a ſhip's way; or of the diſtance run from one place to another; which is uſually performed by means of the log-line.

Yet this is liable to great irregularities. Vitruvius adviſes an axis to be paſſed thro' the ſides of the ſhip, with two large heads propending out of the ſhip, wherein are to be included wheels touching the water, by whoſe revolution the ſpace paſſed over in any given time, may be meaſured. The ſame has been lately recommended by Snellius; though there are few authors who have wrote of navigation, but have ſhewn the inſufficiency of the method. See *Sailing*.

RECONNOITRE, is uſed at ſea, where a veſſel or fleet, &c. is ſaid to reconnoitre when they approach near enough to examine the rate and burthen of a veſſel, the force ſhe may have aboard, what nation it is of, &c.

To reconnoitre a land or ſhore, is to obſerve its ſituation in order to find what land it is.

RECTIFIER, in navigation, an inſtrument uſed for the determining the variation of the compaſs, in order to rectify the ſhip's courſe. See *Variation* and *Courſe*.

It conſiſts of two circles, either laid open or let into one another, and ſo faſtened together in their centres, that they repreſent two compaſſes; the one fixed, the other moveable; each divided into thirty-two points of the compaſs, and 360 degrees, numbered both ways, from the north and the ſouth, ending at the eaſt and weſt in 90 degrees.

The fixed compaſs repreſents the horizon, in which the north, and all the other points are liable to variation.

In the centre of the moveable compaſs is faſtened a ſilk thread, long enough to reach the outſide of the fixed compaſs. But if the inſtrument be made of wood, a brass index is uſed inſtead of the thread. See *Compaſs*.

RED, in dying, one of the five ſimple or mother colours of the dyers. See *Dying*.

Some reckon ſeven kinds or caſts of red; as ſcarlet red, crimſon red, madder red, half grain red, lively orange red, and ſcarlet of cochineel; but they may be all reduced

duced to three, according to the three principal drugs which give the colours; being vermilion, cochineel, and madder.

Beſides theſe reds, which are good and allowed colours, there is alſo a brazil red, which is diſcouraged, as fading eaſily.

Of the ſeven good reds, only four have particular caſts or ſhades; the madder red, crimſon red, lively orange red, and ſcarlet of cochineel.

The caſts or ſhades of crimſon, are fleſh colour, peach-colour, carnation-roſe colour, and apple-tree-flower colour. Thoſe of madder are fleſh colour, onion-peel colour, and flame colour. Thoſe of the orange are the ſame with thoſe of crimſon. Scarlet, beſides the ſhades of all the reſt, has ſome peculiar to itſelf, as cherry colour, fire colour, &c.

RED *Arſenic.* See *Arſenic.*

RED-*Herring*, or *Smoked-herring.* See Herring-*Fiſhery.*

RED *Lead.* See *Lead.*

RED *Sea*, is that which ſeparates Aſia from Africa, lying to the weſtward of Arabia, and to the eaſtward of Egypt, extending from the ſtreights of Babelmandel to the town of Suez.

Some authors apprehend that the redneſs of the ſands, or the coral which is found at the bottom of it, or the redneſs of its waters, were the occaſion of its name: and others, that the redneſs of the bordering hills might juſtly give occaſion to it: but as to the ſand of this ſea, travellers aſſure us, they are no redder than thoſe of other ſeas, though ſome of the mountains near it are.

The Arabs call it the ſea of Clyſna, being the name of a town which formerly ſtood at the bottom of the gulph: but it is alſo obſerved, that the Holy Scripture calls it Yam Souf, or the ſea of Ruſhes; becauſe its banks are covered with ruſhes or weeds.

No ſea was more frequented than this before the diſcovery of the way to the Eaſt Indies by the Cape of Good Hope: but of late few ſhips, except the Turkiſh gallies, and the veſſels which tranſport the Mahometan pilgrims to Mecca, go higher than Mocha. See *Arabia* and *Egypt.*

REDDLE, *Ruddle*, or *Red Chalk*, a red foſſile ſtone, which has its particular mine or quarry; and is uſed by painters, &c. to make red pencils, or craions for deſigning: the beſt ſort being the produce of England, which is moderately hard, and eaſy to cut or ſaw into long ſlips. The goldſmiths and gilders alſo uſe it to burn the gold lea they uſe. Some call reddle *lapis hæmatites*, ſuppoſing if to have a particular faculty of ſtopping blood: but others will have the real hæmatites to be another ſtone. It alſo abounds in the Britiſh American colonies, and in Germany; being a ſpecies of marl.

REDUCED *Chart.* See Reduced *Chart.*

REDUCTION, in arithmetic, is the converting of monies, weights, or meaſures, into the ſame value in other denominations, as pounds into ſhillings and pence, or ſhillings and pence into pounds.

REE, *Rea*, *Reis*, *Rais*, or *Res.* A little Portugueſe copper coin, 20 of which make the vintin, or 1 $\frac{7}{20}$ d. ſterling: being both a current and imaginary money; the Portugueſe uſually reckoning by rees, as the Spaniards by maravedis. See *Coin.*

Strangers in treating with them are frequently ſurpriſed with demands of ſeveral thouſand rees, when the matter betwixt them is only a few pieces of eight; the millree or thouſand rees, only making 5 s. $\frac{1}{2}$ d. ſterling; and 4870 make the moidore, or 27 s. ſterling.

The Portugueſe keep their accompts in milrees and rees, 1000 rees making a milree, which they ſeparate thus: 25 — 600, that is, 25 milrees and 600 rees, or 7 l. 4 s. ſterling.

The other gold monies of Portugal are,

		l.	s.	d.
The 24 — 000	piece - -	or 6	15	0
12 — 800	- - -	3	12	0

REE, is alſo a coin at Bombay, 100 of which make the rupee, or 2 s. 6 d. ſterling.

REEF, in navigation, when there is a great gale of wind, ſailors commonly roll up part of the ſail below, that by this means it may become the narrower, and not draw ſo much wind; which contracting and taking up of the ſail, they call a reef, or reefing the ſail.

So alſo when a top-maſt is ſprung, as they call it, that is cracked, or almoſt broken in the cap, they cut off the lower piece, that was near broken off, and ſetting the other part, now much ſhorter, in the ſtep again, call it a reefed top-maſt.

REEL, in the manufactures, a machine ſerving for the office of reeling, or the winding of thread, ſilk, cotton, or the like, in a ſkain, or upon a bottom, to prevent its entangling.

It is alſo uſed for the charging, or diſcharging of bobbins or quills, to uſe them in the manufacture of different ſtuffs, as thread, ſilk, cotton, &c: but reeling is performed different ways, and by different engines.

REEVING, in the ſea language, is the putting a rope through a block: hence, to pull a rope out of a block, is called unreeving.

RE-EXCHANGE, in commerce, a ſecond payment of the price of exchange, or rather the price of a new exchange, due upon a bill of exchange that comes to be proteſted; and to be refunded to the bearer, by the drawer, or indorſer. See *Exchange.*

The occaſion of re-exchange is, when the bearer of a bill of exchange, after proteſting it for want either of acceptance or payment, borrows money on his own promiſe, bond, or the like; or draws a bill of exchange in the place where the payment was to be made, on the perſon who furniſhed the firſt; for which he pays a ſecond exchange, which being added to the firſt already paid, the drawer of the firſt bill is anſwerable for two exchanges, properly called exchange and re exchange. See *Proteſt.*

The bearer of a proteſted bill has a right to recover both the one and the other on the drawer: yet the ſimple proteſtation which the bearer makes in the act of proteſt, that he will take up a like ſum at re-exchange, for want of his bill being accepted or paid, is not ſufficient to intitle him to demand the re-imburſement of his re-exchange; unleſs he makes it appear he has actually taken up money in the place whereon the bill was drawn.

Otherwiſe the re-exchange will only amount to the reſtitution of the firſt exchange, with intereſt, the expences of proteſting, and of the journey, if there have been any.

If a bill of exchange, payable to the bearer or order, come to be proteſted, the re-exchange is only due upon the drawer for the place where the remittance is made; not for thoſe places where it may have been negotiated: at leaſt, the drawer has a right to be refunded his re-exchange for thoſe places, by the indorſer.

Indeed, the re-exchange is due from the drawer upon all places where a power of negotiation is given by the bill, and upon all others, if the power of negotiating be indefinite.

Laſtly,

Laſtly, the intereſt of the re-exchange, of the expences of the proteſt, and the journey, are only due from the day of the demand.

It is ſuppoſed to be the Gibelins, driven out of Italy by the faction of the Guelphs, and ſheltered at Amſterdam, who firſt eſtabliſhed the cuſtom of re-exchange; on pretence of the intereſts, damages, and expences they underwent, when the bills given them for the effects they had been obliged to abandon, were not accepted, but came to be proteſted.

REFE. A long meaſure uſed at Madagaſcar, being much of the nature of the European fathom.

REFINING. The art or act of purifying a thing, or of rendering it finer, clearer, and purer; being chiefly uſed in ſpeaking of metals, ſugar, and ſalt.

The refining of gold is performed three ways; either with antimony, with ſublimate of mercury, or with aqua-fortis; which laſt method, much the moſt uſual and leaſt dangerous of the three, is called departing or parting. See *Gold*, and *Departing*.

REFINING *of gold with antimony.* They here uſe a wind furnace, with an ordinary crucible, of a ſize anſwerable to the quantity of gold to be refined; obſerving, that the gold and antimony together do not above half fill it.

The gold being melted in the crucible, the antimony is thrown in it, in powder. The proportion of the mineral to the metals, is about a pound to eight ounces, if the gold be between 22 and 16 carats fine: if it be beneath 16 carats, they uſe about five quarters of a pound to eight ounces: the coarſer the gold, ſtill the more antimony is required.

As ſoon as the antimony is in the crucible, it is covered up; and after charging the furnace with charcoal, they put on its head or cover; which ſtands till ſuch time as the crucible is left quite bare; then the head being taken off, and the crucible left to cool in the furnace itſelf, till ſuch time as it may be taken out by the hand, they break it, to get out the bottom or culot, which is a maſs of fine gold remaining at the bottom, with the fæces of the antimony, the ſilver and copper alloy, and ſometimes little particles of gold itſelf over it.

Tho' the gold thus prepared is very pure, yet the antimony gives it ſuch a harſh brittle quality, that it ceaſes to be ductile; and muſt be ſoftened by fuſion with ſalt-petre and borax, to bring it to itſelf.

For this operation they prepare what they call a dry coppel; that is, a coppel made of crucible earth, which does not imbibe like the coppels made of aſhes.

The coppel being ſufficiently heated in the refining furnace, they put the gold in it, and cover it up with charcoal.

As ſoon as the gold is diſſolved, which is very ſoon, by reaſon of the remains of the antimony, they blow it with the bellows to drive the mineral entirely away, which now goes off in ſmoak; adding to it as ſoon as the fumes ceaſe, a little ſalt-petre and borax, in powder, which collect the impurities remaining upon the diſſolution, and fix the gold in the coppel, in form of a plate.

The gold being taken out of the coppel, and melted a-freſh in a crucible, with an addition of two ounces of ſalt-petre, and as much borax in powder, to each 8 ounces of gold, as ſoon as it ceaſes to fume, they caſt it into an ingot, which upon trial is found 23 carats twenty-ſix thirty-ſeconds fine.

As to the particles of gold which may have been left behind with the alloy in the fæces of the antimony, they get them out by a dry-coppel, with the ſame meltings and ingredients as are uſed in ſoftening the former. And when they are aſſured, by the eſſay, of the ſhare of gold that matter contains, they refine it to ſeparate the copper; and afterwards make the depart.

As to the gold which may be left ſticking to the dry coppels, they get it out by breaking, and pulveriſing the crucibles, and by repeated lotions of the powder thereof in ſeveral waters.

REFINING *of gold by means of ſublimate of mercury.* The proceſs is begun like that with antimony; being in the ſame furnace, with the ſame coal, the ſame fire, and the ſame crucibles.

The gold being melted in the crucible, they caſt in the ſublimate, not pulveriſed, but only broke in pieces. As to the proportion, to 8 ounces of gold to be refined they put an ounce, or ounce and half, or even two ounces, if the gold be of 22 carats; three ounces, if 20 carats; and 4 or 6 ounces, if it only be from 18 to 20 carats. In which laſt caſe, they part the ſublimate into two, putting half at a time, with the gold, into a new crucible; which, when the operation is over, leaves the gold from 18 to 23 carats, according to its fineneſs before. After this they raiſe it farther by the fire, as follows.

The broken ſublimate being put into the crucible with the melted gold, the crucible is immediately covered up to ſmother the mineral: which done, the furnace is filled with charcoal, and the head put on. A quarter of an hour after, they take off the head, lay the crucible bare, and give the gold air, that is, blow off all the aſhes, and other impurities that may be floating on the liquid gold with a pair of bellows, the nozzle whereof is crooked. This they repeat again and again, till all the impurities of the gold being carried off, by virtue of the ſublimate, it is found of a bright glittering colour: after which it is taken out of the crucible, and the gold caſt into an ingot.

The method of refining by ſublimate is both more complete, and cheaper than that by antimony; but they are both exceedingly dangerous, by reaſon of their ſulphurous and arſenical exhalations: the only difference in their malignity conſiſting in this, that the poiſon of the antimony is flower than that of the ſublimate. See *Mercury*.

Gold may alſo be refined with lead and aſhes; but this is a method ſeldom uſed, excepting in aſſays. See *Aſſay*.

REFINING *of ſilver.* There are two ways of refining ſilver, the one with lead, the other with ſalt-petre. The beſt and cheapeſt is that with lead; tho' that with ſalt-petre ſtill obtains in many places, for want of workmen who underſtand the proceſs of the latter. See *Silver*.

Refining with ſalt-petre is performed in a wind-furnace. The ſilver refined having been reduced into grains, of the ſize of little peas, by pouring it, when melted, into a tub of common water, it is heated over again in a boiler. After this, they put it in a crucible, and along with it, to every eight ounces of metal two of ſalt-petre. The crucible is now covered with an earthen lid in form of a dome, exactly luted; which lid, however, is to have a little aperture in the middle.

The crucible being put in the furnace, and covered with charcoal, which is only to be lighted by degrees, at length they give it the full force of the fire to put the metal in a perfect fuſion. This they repeat three times ſucceſſively at an interval of a quarter of an hour.

After the third fire, they uncover the furnace, to let the crucible cool; and at length break it, to get out the ſilver which is found in a button or culot; the bottom where is very fine ſilver; and the top mixed with the fæces of the ſalt-petre, the alloy of the ſilver, and even ſome particles of the fine ſilver.

The culot being ſeparated from the impurities, is melted in a new crucible; charcoal duſt, being thrown into the diſſolution, and the whole briſkly worked together. Then the crucible being covered up again, and the furnace charged with coal, a ſecond fire is given it.

This done, the aſhes and other impurities are blown from the top of the metal, till it appear as clear as a looking-glaſs; and then an ounce of borax broke in pieces is thrown in.

Laſtly, the crucible being covered up again, they give the laſt fire; after which, it is caſt into ingots, eleven penny-weights, and ſixteen grains fine.

To recover the ſilver that may be left in the fæces, or ſcoria, they pound them, and give them repeated lotions in freſh waters.

REFINING *of copper*, is only performed by giving the mineral matter ſeveral lotions before the melting it; and then giving it ſeveral repeated fuſions. See *Copper*.

REFINING *of tin*, is performed much after the ſame manner as that of copper. See *Tin*.

Tho' two kinds of fineneſs of this metal may be diſtinguiſhed: the one ariſing from its fuſion; that tin taken

out of the furnace wherein it is melted, being always purer than that towards the bottom.

The other kind of fineneſs, is that given the tin by adding ſome other mineral to it, to render it more ſonorous, as well as brighter: ſuch is tin of antimony, pewter, &c.

REFINING *of iron*, begins likewiſe by the melting it. See *Iron*.

The greater degree of fuſion this mineral has, the more the metal is purified; but this firſt fuſion is not ſufficient. To render the iron malleable, and fit to endure the file, it muſt be melted a ſecond time; then forged and beaten a long time with heavy hammers, wrought by water; afterwards heated in the fire, and at laſt reduced on the anvil into bars of ſeveral thickneſſes: but the more the iron is heated in the fire, and the more it is beaten, whether hot or cold, the finer it becomes.

Steel is only iron refined to a great degree by heating it, with ſome other ingredients which cloſe up the pores, and ſoften the grain. See *Steel*.

REFINING *of lead*, is performed like that of moſt other imperfect metals, by frequent meltings, ſtill ſcumming it before it is cold, caſting in tallow, and other kinds of fat. They alſo make aſſays of lead; not to refine it, but to ſee if it is pure, and without mixture of any other metal. See *Lead*.

REFINING *of ſugar*. The operation is begun by ſeveral ſtrong lixiviums or lyes of lime-water, and eggs ſhells all mixed and beaten together.

The firſt refining is performed in the Caribbees, Jamaica, and other places where the ſugar canes are cultivated; and only ſerves for the brown and coarſe ſugar.

When theſe are imported into Europe, the ſugar-bakers take them up, and refine them farther, by a ſecond operation, or rather a repetition of the firſt.

To render the ſugar very fine, fit for confections, they uſually give it a third refining; wherein they only uſe the whites of eggs and their ſhells beaten together, and thrown into the melted ſugar, which is called clarifying the ſugar. See *Sugar*.

REFINING *of ſalt-petre*. The ſalt being put in an earthen or iron veſſel, as much ſpring water is poured on as is ſufficient to diſſolve it. The veſſel is then put over a gentle fire, and as ſoon as the water begins to boil, alum-powder is thrown into it: the proportion is one pound of alum to 128 pounds of ſalt-petre; and a little vinegar is added. As it boils the ſcum is to be taken off; and thus it is refined. See *Salt-petre*.

REFLUX *of the ſea*. The ebbing of the water, or its return from the ſhore; it is thus called, as being the oppoſite motion to the flood or flux. See *Flux* and *Tide*.

REFRACTION, in commerce, is a term ſometimes uſed by merchants, where there has been an overſight in an accompt, to the prejudice of a perſon, who thereupon demands reſtitution of ſo much, added or omitted by miſtake. Thus one tradeſman ſays to another. "You muſt make me a refraction of five pounds forgot in your accompt; or I will reduct or make you a refraction of 30 s. charged inadvertently in my bill."

REGGIO. A port-town of Italy, in the kingdom of Naples, and further Calabria, ſituated in 15 deg. 50 min. of E. lon. and 38 deg. 28 min. of N. lat. on the ſtreight of Meſſina, oppoſite to Meſſina in Sicily. See *Italy*.

REGISTER *Ships*, or *Ships of Regiſter*, in commerce, are veſſels, to which the King of Spain, or the council of the Indies, grant permiſſion to go and traffic in the ports of the Spaniſh Weſt Indies: which are ſo called, becauſe the ſhips are to be regiſtered before they ſet ſail from Cadiz, which is the place where they uſually load for Buenos Ayres.

Theſe veſſels, by the tenor of the cedula, or permit, are not to exceed three hundred ton: but there is that good underſtanding between the merchants and the council of the Indies, that ſhips of five hundred ton frequently paſs un-noted.

The permiſſions coſt thirty thouſand pieces of eight each, or 5375 l. ſterling: but were they to coſt a hundred thouſand, the merchants would be gainers, and the King of Spain a loſer. For tho' the quantity and quality of the merchandiſes on board are always expreſſed; yet, by by force of preſents, the officers here, and in the Indies, allow them to load and unload vaſtly more than the permiſſion expreſſes.

Veſſels, whoſe certificate only mentions twelve thouſand ſkins, and a hundred thouſand pieces of eight, have been known to have on board above four millions in gold and ſilver; twenty ſix thouſand ſkins, &c. ſo that the King of Spain's fifth, and his other dues, were almoſt nothing to what they ſhould be.

Add to this, that in the year 1702, 1703, &c. theſe regiſter veſſels, countenancing and backing each other, ſold their commodities for above three hundred *per cent.* profit: a hat being ſold for 18 pieces of eight, or 3 l. 4 s. 6 d. ſterling; an ell of ordinary cloth for 12 pieces of eight, or 1 l. 7 s. ſterling, &c.

REGRATOR. See *Foreſtalling*.

REGULUS, in chemiſtry, denotes the fineſt and pureſt part of a metal, or mineral, which ſinks or precipitates to the bottom of the crucible or furnace, in melting the mineral or ore.

To procure the regulus, that is, the mercurial parts of metals, flux powders are commonly uſed; as nitre, tartar, &c. which purge the ſulphurous part adhering to the metal, by attracting and abſorbing it to themſelves.

Regulus is principally uſed for that of antimony, which is a ponderous metallic powder, that, by fuſing ſome of the mineral, in its crude ſtate, ſinks to the bottom, leaving the ſcoria or impurities a-top. See *Antimony*.

The alchemiſts will have this matter called regulus, that is little king, as being the firſt born of the royal metallic blood; which is really a ſon; but not a perfect man, or not yet a perfect metal for want of time and proper nouriſhment.

Antimony purified by ſimple fuſion, is called regulus of antimony; or regulus antimonii philoſophorum. But the more common way of reducing it into a regulus, is with the addition of flux powder, as tartar, and nitre.

The ſcoria found at the top of this regulus, is violently emetic, as well as the regulus itſelf, whereof if cups, or drinking veſſels be caſt, the wine put into them will become vomitive.

Of this regulus, caſt in moulds, are made thoſe commonly called the antimonial pills, weighing about 10 grains each; one of which being ſwallowed will operate conſiderably both by vomit and ſtool.

Theſe pills having thus performed their office, and been diſcharged the body, will ſerve the ſame purpoſe again and again; whence they have obtained the name of perpetual pills. The virtue of this regulus is not however inexhauſtible, as has been imagined: for by repeated infuſions in wine, tho' the liquor is made violently emetic at firſt, yet by degrees it loſes its force, and at length ceaſes to be vomitive.

Martial REGULUS *of antimony*, is a mixture of little bits of iron, as the nails of horſes ſhoes, melted with the regulus.

In this operation, the iron diſſolving and abſorbing the ſulphurous parts of the antimony, more ſtrongly than the fluxes in the former caſe, and turning it into a crocus; the antimony is hereby brought to a greater degree of purity, and rendered more efficacious than in the common regulus.

This regulus is ſometimes farther purified by repeated fuſions and detonations, with the addition of freſh antimony, and more nitre alternately: in which caſe it becomes regulus antimonii ſtellatus, or ſtarry regulus of antimony.

REGULUS *of Arſenic*. See *Arſenic*.

REILBON. A kind of madder, brought from Chili in South America: its leaf is much like that of the European madder, except that it is ſomewhat ſmaller; and it is from the root of the plant, boiled in water, that the reddiſh colour is extracted.

REIMBURSEMENT, in commerce, the act of repaying or returning what monies a perſon had received by way of advance; or what another has diſburſed or paid for him. A perſon who gives a bill of exchange in payment, is to reimburſe it, if it comes to be proteſted, for want of being accepted or paid. See *Bill* and *Proteſt*.

REIMURSING, is alſo uſed for paying the price a commodity coſts its owner. Thus, one perſon ſays that another has ſurrendered to him the lot of merchandiſe adjudged to him at the ſale of London, by the directors of the Eaſt India company, on condition of reimburſing the price of the purchaſe, with the expences of carriage, and a profit of 5 *per cent.*

RELAY, in tapeſtry, is an opening left in a piece of tapeſtry, where the colours of figures are to be changed; becauſe on thoſe occaſions the workmen are changed; or elſe the places are left to be filled up till the reſt of the work is done. See *Tapeſtry.*

RELEASE, is a term uſed in law for a deed, or inſtrument, by which actions, demands, titles, eſtates, &c. are ſometimes extinguiſhed, annulled, tranſmitted, abridged, or enlarged; alſo a freeing, or ſetting at liberty from priſon, or all actions, or claims whatever.

REMIT, in commerce, or to remit a ſum of money, bill, or the like, is to ſend a ſum of money, &c. See *Remittance.*

To remit, is alſo uſed among bankers for what is accuſtomed to be given a banker, or as it were diſcounted with him, for his giving a bill of exchange. See *Exchange.*

To remit, is likewiſe to give up a part of a perſon's due to a debtor: thus a perſon ſays he will remit another a fourth part of what he owes, on condition of paying him the reſt in hand.

REMITTANCE, in commerce, is the traffic, or return, of money from one place to another, by bills of exchange, orders, or the like. See *Commerce* and *Exchange.*

A remittance is properly a bill of exchange, or the like, ſent to a correſpondent, and the content thereof to be received by him, of ſome other perſon on whom it is drawn. Thus it is ſaid, ſuch a perſon has remitted, or made a remittance of five thouſand pounds in bank notes, to his correſpondent at London: or a perſon ſays he will remit another, or make him a remittance of five hundred crowns in three bills of exchange, drawn on a particular banker in a particular city, and payable at ſight.

By means of theſe remittances, large ſums of money are returned from one city to another, without danger, and without carriage.

In London it is eaſy getting remittances upon any city in the world: but in the country it is more difficult. Nor are remittances eaſily had upon Copenhagen. See *Exchange.*

REMITTANCE, is alſo uſed in ſpeaking of the payment of a bill of exchange: thus, I have received an hundred piſtoles on your remittance. Mr. N. banker in your city, ſhould have paid two hundred crowns on my remittance.

REMITTANCE, likewiſe denotes the due or fee allowed the banker, both of his wages, and the different value of the ſpecies, in the place where you pay the money, and where he remits it.

Book of REMITTANCE. See *Book*-keeping.

RENT. A ſum of money, or other conſideration, iſſuing yearly out of lands or tenements, alienated on that condition.

The rents of all lands in England and Wales appear, by the computations of Dr. Davenant and Mr. King from the land tax, to be nearly ten millions *per annum*; thoſe of the houſes not let with the lands, two millions more; and thoſe of all other hereditaments two millions more: in all fourteen millions.

RENTERING, and *Finedrawing*, in the manufactories, the ſewing of two pieces of cloth, edge to edge, without doubling them; ſo as that the ſeam ſcarce appears at all: hence alſo called fine-drawing. See *Fine*-drawing.

Serges, &c. are to be ſewed; cloths fine-drawn. It is ſaid of the fine-drawers in the Eaſt Indies, that if a perſon tears a piece of fine muſlin, and gives it one of them to mend, it ſhall be impoſſible for him to diſcover the place where it is rejoined, even though he had made a mark to know it by.

The dexterity of the fine-drawers in England, though inferior to that above mentioned, is nevertheleſs ſuch, as puts them in a condition to defraud the King, by ſewing a head or ſlip of Engliſh cloth on a piece of Dutch,

Spaniſh, or other foreign cloth; or a ſlip of foreign cloth on a piece of Engliſh, ſo as to paſs the whole as of a piece and by that means avoid the duties, penalties, &c.

To renter in tapeſtry, is to work new warp into a piece of tapeſtry damaged, eaten by the rats, &c. and on the warp to reſtore the ancient pattern, or deſign. The warp is to be of woollen, not linen: and among the titles of the French tapeſtry-makers, is included that of renterers.

RENTERING, or rather *Finedrawing*, is particularly uſed for a rent or hole happening in dreſſing or preparing of piece of cloth, artfully ſewed up, or mended with ſilk. All fine drawings are reputed defects or blemiſhes; and ought to be allowed for in the price of the piece. Hence it has been eſtabliſhed as a rule, which is certainly founded on natural equity, that every manufacturer ſhould mark the fine drawings of his cloths with a piece of packthread tied to the liſt; to direct the draper to the ſpot: and that the draper appriſe the taylor, or other perſon, to whom he ſells it, of the ſame; that he may not come to damage in the cutting; there being inſtances of drapers condemned to take back their cloth, when cut to pieces, for omitting to mention the fine drawings, and other flaws.

On this occaſion M. Savary extolls the procedure of an Engliſh merchant, who ſending a piece of cloth damaged in one ſpot, to his correſpondent at Paris, put a piece of gold in the damaged place, to make up the damage. But as this example is perhaps the only one of its kind, that author recommends it to the merchant or draper to unfold all the pieces entirely, as they come to him, to diſcover the fine drawings and other flaws, in order to make the clothier accountable for them.

REODER. A liquid meaſure uſed in Germany, being two feoders and a half. See *Feoder.*

REPACKING. The packings of goods over again.

REPACKED *Herrings.* See *Herring.*

REPAIRERS. Artificers who chaſe figures, and beautify ſword-hilts.

REPAYMENT. See *Drawback.*

REPEATING *watches.* See *Watch.*

REPRISALS, or *Reprizals*, in the civil law, a right which princes have to retake from their enemies, ſuch things as they unjuſtly detain from them; or other things equivalent thereto.

When a place is taken, or held from a prince, he ſeizes another by way of repriſal. Sometimes he takes more of the oppoſite party, by right of repriſals.

REPRISALS, is alſo uſed for a letter, or permiſſion, which a prince ſometimes gives a ſubject, upon a full cognizance of the cauſe; authoriſing him to retake from the firſt perſons he meets with, of the oppoſite party, as many effects as make an equivalent to what have been violently forced from him; and for which the oppoſite prince has refuſed to do him juſtice.

Theſe permiſſions are alſo called letters of mark, or marque, and in the ſtatute 27th Edw. III. law of marque; in regard a perſon, denied juſtice in another man's territory redreſſes himſelf by goods belonging to men in that territory. See *Marque.*

REPRISE, or *Reprize*, in the commerce by ſea. A merchant ſhip which having been taken by a corſair, privateer, or other enemy, is retook or recovered by a veſſel of the contrary party; the word being French, and ſignifies a reſumption, or re taking. See *Prize.*

When a veſſel thus retaken has been 24 hours in the hands of the enemy, it is deemed a lawful prize. If the repriſe have been made within 24 hours, the veſſel is to be reſtored to the proprietor, with every thing therein, upon his allowing one third to the veſſel who made the repriſe.

If the repriſe have been abandoned by the enemy, either in a tempeſt, or from any other cauſe, before it have been led into any port, it is to be reſtored to the proprietor.

Letter of REQUEST. See *Marque.*

RESIDENT. A public miniſter, who manages the public affairs of one country, in the court of a prince, or ſtate of another.

Thus the King of England has reſidents at the courts of the electors, and other princes of Germany, and Italy: at the republic of Genoa and Lucca: and they, reciprocally, have reſidents at the court of Great Britain. Reſidents are a claſs of public miniſters inferior to ambaſſadors and envoys; but like them are under the protection of the law of nations. See *Ambaſſador*.

RESIN. A fat, viſcid, ſulphurous juice, oozing either ſpontaneouſly, or by inciſion, from ſeveral kinds of trees, particularly the pine and fir.

Camphor is a kind of reſin; and maſtic is the reſin of the lentiſk: but the beſt of all the claſs of reſins is turpentine; and the coarſeſt is what is commonly called roſin. See *Roſin*.

Reſin is properly a juice of the bark only: but Boerhaave will have it to be the oil of the bark farther inſpiſſated by the heat of the ſun, ſo as to become friable: he adds, that it may be produced from any vegetable oil, by boiling it much and long.

If turpentine be ſet over a gentle fire, it firſt diſſolves and becomes an oil, then a balſam, then pitch, and then roſin; in which ſtate it is friable in the cold, fuſible by fire, and inflamable and combuſtible, as alſo diſſoluble in ſpirit of wine, but not in water, which are the characters of a reſin.

There are two kinds of reſins; the one liquid, the other dry and hard. The firſt is the natural reſin as it flows from the tree: the ſecond only differs from the firſt in that it is condenſed by the heat of the ſun, or by that of a culinary fire.

Reſins will incorporate with oil, or rectified ſpirits; but not with an aqueous menſtruum.

The difference between reſins and gums conſiſts in this; that reſins are more ſulphurous, and gums more aqueous; ſo that the firſt diſſolve in oil or ſpirit of wine, and the laſt in water. See *Gum*.

M. Tournefort makes a kind of intermediate claſs of vegetable juices, which he calls gum-reſins; that diſſolve partly in ſpirit of wine, partly in water; ſuch as Galbanum, bdellium, opopanax, ſagapenum, &c.

The reſins of ſeveral vegetables which abound with reſinous particles, but not ſo as to yield any by inciſion, as jalap, benzoin, ſcammony, turbith, &c. are thus obtained. The vegetable being groſsly powdered, is put into a matraſs, and rectified ſpirits of wine poured on it, to the height of four fingers above the matter: then the neck of another matraſs being luted into the former, to make a double veſſel, the matter is digeſted three or four days in a ſand heat, till it has given a good tincture to the ſpirit of wine. Then the diſſolution is filtrated, and two thirds of the clear liquor evaporated off, and the remainder poured into a large veſſel of water, where it turns into a kind of milk, whence the reſin, in time, precipitates to the bottom in a white powder. This, when waſhed and dried in the ſun, grows into the ordinary conſiſtence of a reſin.

RESINE. A term in France for the evaporated juice of the grape, coagulated in the cold; in which ſtate it is uſed as a moiſt ſugar.

RESPITE. *Letters of Reſpite*, or *Credit*, are inſtruments anciently granted by ſovereign princes to honeſt, but unfortunate debtors, to ſcreen them from their too rigorous creditors. See *Marque*, and *Letter*.

Theſe ſtill obtain in France; being firſt introduced by Pope Urban II. in favour of the Croiſés, or perſons who went to the holy war.

RESTAUR, *Reſtor*, in ancient cuſtoms, the remedy or recourſe which aſſurers have againſt each other, according to the date of their inſurances; or againſt the maſters, if the average ariſe through their default, as through ill loading, want of caulking, or want of having the veſſel tight. See *Inſurance*.

RESTITUTION. See *Marque*.

RETAIL, in commerce, the buying of goods in the great, or by wholeſale, and ſelling them out again in ſmall parcels. See *Commerce* and *Merchant*.

REVE, in ancient cuſtoms, a duty or impoſition on merchandiſes imported. See *Duty* and *Cuſtom*.

REVEL. A port-town of Livonia, in the diviſion of Eſtonia, or Eaſt-land, ſituated at the ſouth entrance of the gulph of Finland, in 24 deg. of E. lon. and 59 deg. of N. lat. 140 miles N. of Riga, and 110 miles W. of Narva. See *Ruſſia*.

REVENUE. The yearly income that any perſon receives for the ſupport of himſelf and family: but it is more particularly applied to the public taxes. The certain revenues of the King of England were anciently greater than thoſe of any king in Europe; and, till the time of the civil wars, they enjoyed in domains and fee-farm rents, almoſt enough to diſcharge all the ordinary expences of the crown, without any tax or impoſition on the ſubject. See *Tax*, *Cuſtoms*, *Duty*, and *Exciſe*.

Mr. Maddox, in his hiſtory of the exchequer, gives an account of the different branches of the ancient revenue of the crown, from the Norman conqueſt. See *Exchequer*.

Upon the reſtoration, the crown revenues being found much alienated, and the crown charges increaſed; the parliament ſettled a yearly revenue of 1,200.000 l. upon the King; ſo much as the former crown revenue fell ſhort of that ſum, being to be raiſed upon goods exported and imported, upon liquors and fire-hearths.

At the death of King Charles II. the revenue amounted to 1,800,200 l. *per annum*. In King James the ſecond's time it was raiſed to 2,000,000 l. which was computed to be one tenth of the revenues of the whole kingdom.

At the ſame time the revenues of the King of France were computed at ſeven millions ſterling, and thoſe of the ſtates of Holland at three millions.

The ſeveral ſpecies of taxes in Great Britain are as follows:

The land tax, at 2 s. in the pound	*L.*	1,000,000
Malt-tax — —		700,000
Cuſtoms and exciſe —		5,000,000
Stamp-duties, *uncertain*.		
Window-tax, coaches and chairs, hawkers and pedlars —		1,000,000

Free REVENUE, is the revenue which is not mortgaged for the payment of any old debt, being the land-tax and the malt-tax; the former of which, at 2 s. in the pound, is generally computed at a million a year, and the latter at 700,000 l. but as there may be a deficiency in each, both of them may be computed at 1,600,000 l. a year; and though the civil liſt revenue is generally computed at a million a year, it may be reckoned at 900 000 l. which makes in the whole 2,500,000 l. free revenue yearly: but though two millions may be ſufficient to defray all the expences of government, the nation has run prodigiouſly in debt, and taxes have been impoſed which lie heavy on the merchant, the tradeſman, the manufacturer, the farmer, and the labourer. See National *Debt*.

REVERSION, in law, is defined by Coke, a returning of lands, &c. into the poſſeſſion of the donor, or his heirs, after the expiration of the term for which they were given or granted to another. The word has a double acceptation: 1. *Jus revertendi cum ſtatus poſſeſſionis defecerit*. 2. When the poſſeſſion and eſtate, which was parted with for a time, ceaſes, and is determined in the perſon of the alienees, aſſignees, grantees, or their heirs, or effectually returns to the donor, his heirs or aſſigns, whence it was derived.

The difference between a reverſion and a remainder conſiſts in this, that a remainder is general, and may remain or belong to any man, but him that grants or conveys the land: whereas a reverſion is to himſelf from whom the conveyance of the land proceeded, and is commonly perpetual as to his heirs alſo; and yet ſometimes reverſion is confounded with remainder.

For the values of reverſions, or eſtates in reverſion, the little book of tables for renewing and purchaſing college and church leaſes, printed at Cambridge in 1700, and recommended by Sir Iſaac Newton, furniſhes a very uſeful table, which ſhews what one pound due at the end of any number of years to come, not exceeding forty, is worth in ready money at 5, 6, 7, 8, and 10 *per cent. per annum*.

Suppoſe it required, what 1 l. due a year hence is worth in

in ready money? To find this by the common operations, the method is; let 100 l. with the intereſt of a year added to it, be the firſt term in the rule of three, 100 l. the ſecond, and 1 l. the third; for as 1 l. with its intereſt going on to the end of the year, is to a bare 100 then due; ſo muſt 1 l. with its growing intereſt, be to the decreaſe of 1 l. at the year's end: then, at 6 l. and 10 l. *per cent.* the work will ſtand thus:

As, 106 . 100 : : 1 — 0,9433071, or 18 s. $10\frac{1}{4}$ d.
110 . 100 : : 1 — 90909, or 18 s. 2 d.

Whence it appears, that 1 l. due a year hence, at 6 l. *per cent.* is worth 18 s. $10\frac{1}{4}$ d. and at 10 *per cent.* 18 s. 2 d. ſo that 18 s. $10\frac{1}{4}$ d. ready money is worth 20 s. to be paid a year hence at 6 *per cent.* and 18 s. 2 d. ready money is worth 20 s. to be paid a year hence at 10 *per cent.* See *Intereſt.*

But the following table ſhortens the work. To find by it how to renew a leaſe of 21 years, that has but one year lapſed, at the rate of 10 *per cent.* look into the ſame, and under the rate of intereſt mentioned, and right againſt 21 years, in the common angle of meeting you have 2 s. $8\frac{1}{2}$ d. which is the fine to be paid to renew one year lapſed in the ſaid leaſe, ſuppoſing the rent to be 1 l. *per annum*: for it is 21 years before the leaſe is completed, in which time the fine of 2 s. $8\frac{1}{2}$ d. will amount to 20 s. and therefore, by paying that fine, the leaſe may fairly be made up again.

Suppoſe, again, an eſtate in fee-ſimple, whoſe real value is 100 l. but mortgaged, or leaſed out, for 20 years; what is the reverſion of it now worth at 6 d. *per cent.* intereſt? By the table you find, that 1 l. to be paid 20 years hence is worth but 6 s. $2\frac{2}{3}$ d. and multiplying that with 100, you will find 100 times 6 s. is 30 l. 100 times 2 or 200 d. makes 16 s. 8 d. and 100 times 3-4ths, or 300 q. makes 6 s. 3 d. the ſum 31 l. 2 s. 11 d. which is the preſent value of 100 l. to be paid 20 years hence.

A TABLE of reverſions, ſhewing what 1 *l. due any number of years hence, under* 41, *is worth in ready money at* 5, 6, 7, 8, *and* 10 per cent.

Years.	5 per cent.			6 per cent.			7 per cent.			8 per cent.			10 per cent.

EZAL. A corn-measure, used in Alsace, and in some parts of the neighbouring provinces.
At Brisac the rezal of wheat weighs 164 lb. avoirdupois weight, of maslin-corn 162, and of rye 158.
At Colmar the rezal of wheat weighs 160 lb. of maslin-corn 156, of rye 154.
At Sceleſtat, of wheat 168, of maslin-corn 166, of rye 164.
At St. Marina, of wheat 178, of maslin-corn 175, of rye 176.
At Straſburg, of wheat 160, of maslin-corn and rye as much, and of oats 104.
At Haguenau, of wheat 160, of maslin-corn 160, of rye 155, and of oats 112.
At Weiſſenburg, of wheat 164, of maslin-corn 162, of rye 159, and of oats 104.
At Liſtemberg, of wheat 184, of maslin-corn 183, of rye 182, and of oats 104.
At Nancy, of wheat 174, of maslin-corn 173, of rye 172, and of oats 144.
At Longwy the rezal of Nancy is used, but heavier by two pounds.
At Saverna, of wheat 170, of maslin-corn 165, of rye 160.
At Hamingue, of wheat 163, of maslin-corn 160, and of rye 159.

RHAA. A name given by the inhabitants of Madagascar to the tree which produces the gum called *dragons blood*.

RHAPONTICUM. A medicinal root, in form resembling rhubarb, and nearly of the same virtues; whence it is sometimes called Turkish rhubarb.
It is frequently mixed with rhubarb by those who send that drug into Europe: but they are distinguished by this, that the rhubarb is generally in roundish pieces, the internal streaks or lines whereof run transverse; and rhaponticum in longish pieces, having its streaks running lengthways: besides, that rhaponticum chewed in the mouth leaves a viscidity behind it, which rhubarb does not. See *Rhubarb*.
The scarcity of the rhaponticum of the Levant occasions the mountain-rhaponticum, or monks rhubarb, to be frequently substituted for it; which is a wild sort of lapathum, by botanists called *alpinum:* but they are distinguished by this, that the former is yellow without, and reddish within; the latter being blackish without, and yellow within.
Dr. Quincy, however, confounds the two, when he says, the rhaponticum grows plentifully in England; and that it is only used as an alterative, and does not come up to a cathartic. It is certain, what now obtains in the shops under the name of rhaponticum, is no other than the mountain rhapontic, or monks rhubarb, and is much inferior in virtue to the rhaponticum verum.

RHE, or *Ree*. A little island in the bay of Biscay, near the coast of Aunis, in France, situated in 1 deg. 30 min. of W. lon. and 46 deg. 14 min. of N. lat. 7 miles west of Rochelle.

RHINE *Lower Circle*, or the *Lower Circle of the Rhine*, is one of the circles of Germany; consisting of the palatinate of the Rhine, and the three ecclesiastical electorates, namely, those of Mentz, Triers, and Cologn; all of which lie upon the river Rhine. See *Germany*.

RHINE *River*, rises in the country of the Grisons in Switzerland; and running north by Coire, continues its course till it forms a lake, called the *lake of Constance*; from whence it turns west, passing by the cities of Constance and Schaffhausen; and having visited Basil, runs from thence directly north, dividing Suabia from Alsace; it then runs into the Palatinate; and receiving the Neckar, the Maine, and the Moselle; continues its course north by Mentz, Coblentz, and Cologn, entering the Netherlands at Skenkinchans; after which it is divided into several channels, the two largest whereof obtain the name of the Lech and the Waal; which running west through the United Provinces, discharge themselves into the German sea below Rotterdam; the ancient channel of the Rhine, which fell into the sea a little to the west of Leyden, being entirely choaked up and lost.

RHINE *Upper*, or the *Circle of the Upper Rhine*, consisted of the landgravate of Alsace, and the landgravate of Hesse, comprehending the Wetteraw; but now only Hesse can be accounted a part of Germany; France having at present united Alsace to that kingdom. See *France*, and *Germany*.

RHODES. An island of Asiatic Turky, situated in the Mediterranean, in 28 deg. of E. lon. and between 36 and 37 of N. lat. See *Turkish* Islands.
The antient Rhodians were a powerful people at sea, and instituted an excellent system of maritime laws; which were afterwards adopted by the Romans, and by Richard I. of England, when he made the laws of Oleron. The Rhodian laws were divided into two sections; the one containing 21 articles, and the other 51 articles; which, together with those of Oleron, and some other laws, particularly those of Wisbuy, are the foundation of that part of the civil law, whereby all maritime causes are determined. See *Civil* law, and *Treaty*.

RHODES *Island*, is also a part of New England. See *British* America.

RHONE. One of the largest rivers in France, which rises in the mountain La Fourche, one of the Alps, in Switzerland; and running west through the country called the Valais, divides it into two parts; then passing through the lake of Geneva, visits that city; from whence it runs S. W. to Lyons in France; where, joining the river Soane, it continues its course due south; and passing by Orange, Avignon, and Arles, falls into the Mediterranean to the westward of Marseilles. There are several cataracts in the upper part of the river; so that it is not navigable till four or five leagues below Geneva; and it runs forward with such an impetuous force, that it is very difficult getting vessels up the stream.

RHUBARB, or *Tai-haam*. A medicinal root, large, compact, and heavy; yellow without, of a nutmeg colour within; an astringent, bitterish taste, and an agreeable, aromatic smell; of great use in medicine as a purgative.
Considering the great use of this drug, it is surprising we should know so little of the place where the plant grows that produces it. Some say it comes from the kingdom of Boutan, in the extremities of India; others, that it is found in the provinces of Xensi and Suchen in China. Others will have it only grow in Persia; and others on the confines of Muscovy, deriving its name from Rha, the river among us called Wolga, and barbarum; that is, root found by the barbarians on the river Rha.
But it is certain, that the greatest quantities of rhubarb are brought from Thibet in Tartary, and Tsetchanen in China. The stalk of the rhubarb is like the small bamboos or Chinese canes, hollow, and very brittle, three or four feet high, and of a dark violet colour. In March it sends forth long and thick leaves; which are succeeded by flowers of a yellow, and sometimes a violet colour. In September they pull it up, and find the root large and long; that which is heaviest, and most marbled near the heart, being most esteemed. The Chinese, after having cleaned the roots, cut them in pieces about two inches large, and dry them on plates of stone, under which they kindle fires: but, as this operation is not sufficient to exhaust all they humidity, they make a hole in each piece, and suspend them in the greatest heat of the sun, till they are in a condition to be kept without being corrupted.
Rhubarb, in Latin *rhabarbarum officinarum*, was not known to the antients; whose rhaponticum, which indeed resembles it, is not the real rhubarb,
Good rhubarb, steeped in water, gives it a saffron colour; and when broke, looks bright, with somewhat of a vermilion cast. Some druggists have the art of renewing their old roots, by dying them of a yellow hue: but the cheat is easily known by handling them, the powder wherewith they colour them sticking to the fingers.
Rhubarb is esteemed an excellent cathartic, proper in diarrhœas, to fortify the stomach, and to create an appetite.
Mr. Boulduc informs us, in the memoirs of the royal academy, that he drew extracts from rhubarb, both with

water and ſpirit of wine; but the purgative virtue, he ſays, was much more viſible in the former than the latter; which ſhews that it conſiſts more in a ſalt than an oil. He obſerves, however, that rhubarb taken in ſubſtance has a ſtill better effect; and adds, that of all the operations he performed on it, none gave any credit to the common opinion which aſcribes an aſtringent quality to rhubarb.

Two ſorts of rhubarb are ſold at Amſterdam; that of the Levant, and that of Muſcovy: both are purchaſed by the pound; the tare is purſuant to the weight, and they yield 2 *per cent.* deduction for good weight, and as much for prompt payment. The rhubarb of the Levant coſts from 8 to 14 s. ſterling the pound, and that of Muſcovy from 5 s. 3 d. to 8 s. the pound.

There is a tincture of rhubarb in wine, and alſo in ſpirit.

Monks RHUBARB. See *Rhaponticum*.

White RHUBARB. See *Mechoacan*.

RHUMB, *Rumb*, or *Rum*, in navigation. A vertical circle of any given place, or the interſection of a part of ſuch a circle with the horizon.

Rhumbs therefore coincide with points of the world, or of the horizon; and hence the mariners diſtinguiſh the rhumbs by the ſame name as the points and winds; uſually reckoning 32 rhumbs, which are repeſented by the 32 lines in the roſe or card of the compaſs.

Aubin defines a rhumb, a line on the terreſtrial globe, ſea-compaſs, or ſea chart, repreſenting one of the 32 winds which ſerve to conduct a veſſel: ſo that the rhumb a veſſel purſues, is conceived as its rout or courſe.

Rhumbs are divided and ſubdivided like points: thus, the whole rhumb anſwers to the cardinal point; the half rhumb to a collateral point, or makes an angle of 45 degrees with the former. The quarter rhumb makes an angle of 22 deg. 30 min. therewith; and the half quarter rhumb makes an angle of 11 deg. 15 min.

RHUMB *Line*, in navigation, is the line which a ſhip, keeping in the ſame collateral point or rhumb, deſcribes throughout its whole courſe.

The great property of the rhumb-line, or loxodromia, and that from which ſome authors define it, is, that it cuts all the meridians under the ſame angle; which angle is called the angle of the rhumb, or the loxodromic angle; and the angle which the rhumb-line makes with any parallel to the equator, is called the complement of the rhumb.

An idea of the origin and properties of the rhumb-line, the great foundation of navigation, may be conceived thus. A veſſel beginning its courſe, the wind wherewith it is driven makes a certain angle with the meridian of the place; and, as it is ſuppoſed the veſſel runs exactly in the direction of the wind, it makes the ſame angle with the meridian which the wind makes.

Suppoſing then the wind to continue the ſame, as each point or inſtant of the progreſs may be eſteemed the beginning, the veſſel always makes the ſame angle with the meridian of the place where it is each moment, or in each point of its courſe, which the wind makes.

Now, a wind, for inſtance, that is north-eaſt, and which of conſequence makes an angle of 45 deg. with the meridian, is equally north-eaſt wherever it blows, and makes the ſame angle of 45 deg. with all the meridians it meets. A veſſel therefore driven by the ſame wind, always makes the ſame angle with all the meridians it meets with on the ſurface of the earth.

If the veſſel ſails north and ſouth, it makes an angle infinitely acute with the meridian, that is, it is parallel to it, or rather ſails in it: but if it ſails eaſt and weſt, it cuts all the meridians at right angles. In the firſt caſe it deſcribes a great circle; in the ſecond, either a great circle, as the equator, or a parallel to it. If its courſe is between the two, it does not then deſcribe a circle; ſince a circle drawn in ſuch a manner would cut all the meridians at unequal angles, which the veſſel cannot do. It deſcribes therefore another curve; the eſſential property whereof is, that it cuts all the meridians under the ſame angle; which curve is called the loxodromic curve, rhumb-line, or loxodromy; being a kind of ſpiral, which, like the logarithmic ſpiral, makes an infinity of circumvolutions, without ever arriving at a certain point to which it ſtill tends, and towards which it approaches every ſtep.

This aſympotic point of the rhumb line is the pole; to which, were it poſſible for it to arrive, it would find all the meridians conjoined, and be loſt in them.

The courſe of a veſſel, then, except in the two firſt caſes, is always a rhumb-line; which line is the hypothenuſe of a rectangle-triangle, whoſe two other ſides are the ſhip's way, or run in longitude and latitude.

Now the latitude is uſually had by obſervations; and the angle of the rhumb, with one or other of the two ſides, by the compaſs.

All therefore that is required by calculation in ſailing, is the value of the length of the rhumb-line, or the diſtance run: but, as ſuch curve-line would prove very perplexing in calculation, it was neceſſary to have the ſhip's way in a right line; which right line however muſt have the eſſential property of the curve-line, that is, to cut all the meridians at right angles.

If a ſhip ſail on a north or ſouth rhumb, it deſcribes a meridian; if on an eaſt or weſt rhumb, it deſcribes either the equinoctial, or a parallel thereto.

To find the rhumb between two places, by calculation or geometrically, there are two canons or proportions: the firſt, as the radius is to the co-ſine of the middle latitude, ſo is the difference of longitude to the whole departure from the meridian, in the courſe between the two places propoſed: the ſecond, as the radius is to the half ſum of the co-ſines of both latitudes, or as the diameter is to the ſum of the co-ſines of both latitudes, ſo is the difference of longitude to the departure from the meridian.

RIABAULS *Smals*, are cotton cloths, of an indifferent quality, brought from the Eaſt Indies, and uſually white; their length being nine ells, and breadth half an ell.

RIAL, or *Ryal*. A Spaniſh ſilver coin; being the eighth part of the piaſter, or piece of eight, and of equal value to $5\frac{3}{8}$ d. ſterling. See *Coin*.

The ſilver rial is equal to 34 ſilver maravedis, and the copper rial to 44 copper maravedis, which only amount to 18 ſilver maravedis.

There are alſo rials of eight, rials of four, rials of two, and half rials. The rials of eight are the piaſters; those of four, half piaſters, &c. Great quantities of rials, or rials of eight, are carried into the Eaſt Indies, where they are divided into three claſſes, and received on different footings; the old rial, known by the chaplet around it, whereof a hundred are current for 215 rupees, or 26 l. 12 s. 6 d. ſterling; the ſecond, known by the largeneſs of its head, current at $212\frac{1}{4}$ rupees for 100; and the new at $208\frac{1}{4}$ rupees for 100 rials. See *Rupee*.

RIAL, or *Royal*, is alſo the name of a piece of gold, formerly current in England for 10 s.

In 1ſt Henry VI. by indenture of the mint, a pound weight of gold of the old ſtandard was coined into 45 rials, going for 10 s. a piece; or a proportional number of half rials, going at 5 s. a piece; or rial farthings, which went at 2 s. 2 d.

In 1ſt Henry VIII. the gold rial was ordered to go at 11 s. 3 d. In 2d of Elizabeth gold rials were coined at 15 s. a piece, when a pound weight of old ſtandard gold was to be coined into 48 rials. In 3d James I. roſe rials of gold were coined at 30 s. a piece, and ſpur rials at 15 s. See *Money*.

RIBBAND, *Ribbon*, or *Ribbond*. A narrow ſort of ſtuff ſometimes interwoven with gold and ſilver, chiefly uſed for head-ornaments. See *Silk*.

The moſt eſteemed of this manufacture are the English, Italian, and French; of which great quantities are ſent to other countries; but thoſe of England, ſince the treaty of Utrecht, are reputed a contraband merchandiſe in France.

RIBBLE. A river which riſes in the Weſt-riding of Yorkſhire, runs S. W. croſs Lancaſhire, and falls into the Iriſh channel below Preſton.

TBS *of a ſhip*, are the timbers of the futtocks, when the planks are off; ſo called becauſe they are bent like the ribs of a carcaſe or ſkeleton.

ICE. A grain or ſeed of a leguminous plant of the ſame name, frequent in the Eaſt Indies, in Greece, and Italy; the grains of which grow in cluſters; and, being terminated with a ſpica or beard, are incloſed ſeverally in yellow rough capſulæ or caſes; but, when ſtript of their ſkin, they appear oval, of a ſhining white colour, and in a manner tranſparent.

Rice grows in moiſt marſhy places; being throughout the Eaſt, and a great part of the Levant, the principal food, as it ſerves for bread. In the Indies the women threſh and dreſs all their rice, which is a very painful office that the men leave to them, either out of idleneſs or diſreſpect.

Rice is a great food in the Roman catholic countries in time of lent. The ordinary preparation is by firſt ſteeping it in water, then boiling it in milk. Some make it into a ſort of farina, or flour, by pounding it in a mortar, after having firſt put it in hot water, and again waſhed it out in cold.

Rice is of ſome uſe in medicine, being eſteemed proper to ſoften and thicken ſharp humours, and to moderate fluxes of the belly. The northern nations eat their fowls and other meats with rice and ſaffron. The Chineſe make a wine of rice, which is of an amber colour, taſtes like Spaniſh wine, and ſerves them for their common drink. In the Eaſt Indies they make arrac of rice, and in ſome parts of Europe they alſo draw a very ſtrong ſpirit from it. See *Brandy*, and *Arrac*.

Rice is now the ſtaple commodity of South Carolina, which ſends, one year with another, 50,000 barrels into Europe, each weighing about 4000 lb. and worth from 50 to 60 s. a barrel: ſo that, at only 50 s. a barrel, there is the ſum of 125,000 l. ſterling paid to Carolina for rice; the greateſt part of which is re-exported from England to foreigners, and employs a great number of ſhips. The origin of rice-plantations in Carolina was accidental; for a ſhip, on its return from the Eaſt Indies, happened to be wrecked on the coaſt of this colony; when ſome bags of rice were taken out of the ſhip, and a trial was made of ſowing them; which ſucceeded beyond expectation. For the firſt encouragement of this commerce, the Britiſh government laid a heavy duty on foreign rice, exempting that of Carolina: but the cultivation of rice coming to be thoroughly eſtabliſhed, a duty was impoſed upon it, which included only the rice for home-conſumption; the tranſportation of it from the colonies all over the Mediterranean, Spain, and Portugal, being permitted, on condition that the ſhips ſhould return directly to England; whereby the Engliſh traders have been enabled to ſell their rice cheaper than that brought from the Levant.

RICH. A kind of lynx, met with in Poland; whoſe ſkin is very rich, fine, and beautiful. Some of theſe animals are found alſo in Perſia and Sweden; but they all differ in colour. Thoſe of Perſia are white, ſpotted with black; thoſe of Sweden reddiſh; and thoſe of Poland of a beautiful iron grey.

They all reſemble each other in figure and ferocity; having the head of a cat, and the cruelty of a tyger. This is one of the moſt beautiful furs the northern people trade in; being ſold at ſuch a high price, that a quantity ſufficient for robing a gown ſometimes coſts 70 l. ſterling.

RIDE, in the ſea-language, is a term variouſly applied: thus, the ſhip is ſaid to ride, when her anchors hold her faſt, ſo that ſhe does not drive away by the force of the wind or tide.

A ſhip is ſaid to ride well, when ſhe is built ſo as not to overbeat herſelf into an head ſea; as that the waves overrake her, that is, waſh over her, from ſtem to ſtern.

A ſhip rides acroſs, when ſhe rides with her main-yards and fore-yards hoiſted up to the hounds, and both yards and arms topped alike. She is ſaid to ride apeek, when one end of the yard is peeked up, and the other hangs down. This is alſo ſaid of a ſhip, when in weighing ſhe is brought directly over her anchor.

She is ſaid to ride athwart, when her ſide is to the tide; and to ride betwixt wind and tide, when the wind hath equal force over her one way, and the tide another. If the wind has more power over her than the tide, ſhe is ſaid to ride wind road. She is ſaid to ride hawſeful, when in a ſtreſs of weather ſhe falls ſo deep, that the water runs in at her hawſes. She is ſaid to ride portoiſe, when her yards are ſtruck down upon the deck, or when they are down a-port-laſt.

RIDE, called otherwiſe *philippus*. A gold coin of ſome currency in Flanders, ſtruck in the times of the earls of Flanders, weighing 2 pennyweights and 12 grains.

RIDERS, in a ſhip, are great timbers, both in the hold and aloft, which are bolted on to other timbers to ſtrengthen them, when the ſhip is diſcovered to be too ſlightly built.

RIFFY. A ſort of cotton, brought from Alexandria in Egypt, and ſold for about 50 s. the hundred.

RIGA. A city and port-town of Livonia, in the diviſion of Lettenland, ſituated near the mouth of the river Dwina, on a bay of the Baltic ſea, in 24 deg. of E. lon. and 57 deg. of N. lat. being one of the beſt harbours and trading towns in the Baltic. See *Ruſſia*.

RIGGING *of a ſhip*, includes her whole cordage, or all the ropes belonging to her maſts, yards, &c. A ſhip is ſaid to be well rigged, when all her ropes are of their fit ſize, in proportion to her burden. She is over-rigged, when her ropes are too big for her; which wrongs her much in her ſailing, and is apt to make her heel.

RIGHT *Sailing*, is when a voyage is performed on ſome one of the four cardinal points. See *Sailing*.

If a ſhip ſail under the meridian, that is, on the north or ſouth points, ſhe varies not in longitude at all; but only changes the latitude, and that juſt ſo much as the number of degrees ſhe has run. See *Latitude*.

If a ſhip ſail under the equinoctial upon the very eaſt or weſt points, ſhe alters not her latitude at all, but only changes the longitude, and that ſo much as the number of degrees ſhe has run. See *Longitude*.

If ſhe ſail directly eaſt or weſt under any parallel, ſhe there alſo alters not her latitude, but only her longitude; yet not according to the number of degrees of the great circle ſhe has ſailed in, as under the equinoctial, but more according as the parallel is remoter from the equinoctial towards the pole; for the leſs any parallel is, the greater is the difference of longitude. See *Rhumb*.

RIGHT *the helm*, a ſea phraſe, ordering to keep the helm even with the middle of the ſhip.

RIGID *Marble*. See *Marble*.

RIGISCH. A money of accompt uſed at Riga; where the rix-dollar, or 4 s. 6 d. ſterling, is divided into 15 rigiſches.

RIMINI. A port-town of Italy, in the Pope's territory, and province of Romania, ſituated on the gulph of Venice, in 13 deg. 30 min. of E. lon. and 44 deg. 8 min. of N. lat. 28 miles S. E. of Ravenna.

RING. A little moveable, put on the finger, either by way of ceremony, or of ornament.

RING, is alſo the name of an inſtrument, uſed in navigation, for taking the altitudes of the ſun.

It is uſually of braſs, about nine inches diameter, ſuſpended by a little ſwivel, 45 degrees from the point whereof is a perforation, which is the center of a quadrant of 90 degrees, divided in the inner concave ſurface. To uſe it, they hold it up by the ſwivel, and turn it to the ſun, till the ſun-beams falling through the hole, make a ſpot among the degrees, which is the altitude required. This inſtrument is preferred to the aſtrolabe, becauſe the diviſions are here larger than on the aſtrolabe.

RING-*Bolts*, in a ſhip. Thoſe iron pins, which are uſed to bring the timbers to.

RINGKOPPING. A town of North Jutland, ſubject to Denmark. See *Denmark*.

RIO-GRANDE. A river of Terra Firma, in South America, which riſes almoſt under the equator, runs N. through Terra Firma, and falls into the North ſea between Carthagena and St. Martha.

RIO-GRANDE, is alſo a river of Africa, which runs from E. to

E. to W. through Negroland, and falls into the Atlantic ocean in 11 deg. of N. lat. ſuppoſed to be a branch of the river Niger.

RIO-JANEIRO. A river of South America, which riſes in the mountains of Brazil, runs E. croſs that province, and falls into the Atlantic ocean almoſt under the tropic of Capricorn. This river gives name to one of the chief provinces ſubject to the Portugueſe in Brazil, from whence they import a great deal of gold, ſilver, diamonds, and other precious ſtones, annually. See *Portugueſe* America.

RIPEN. A city and port-town of North Jutland, capital of the province of Ripen, ſituated in 9 deg. of E. lon. and 55 deg. 30 min. of N. lat. 60 miles S. of Wiburg, ſubject to Denmark.

RIPPON. A borough-town of Yorkſhire, ſituated 21 miles N. W. of York; conſiderable for its manufactures of hard-ware, eſpecially ſpurs.

RISK, or *Riſque*. The hazard or chance of a loſs or damage; as, there is a great riſk run in letting goods go upon credit to ſome perſons, as to wives not authoriſed by their huſbands, and to young people not yet arrived at the age of majority.

To prevent any riſk in invoices of merchandiſes at ſea, it is uſual to inſure them.

The riſk of merchandiſes commences from the time they are carried on board. In matters of inſurance it is a maxim, that all is never to be riſqued on one bottom, or in the ſame veſſel; to denote, that aſſurers muſt act with diſcretion in the ſigning of policies, and not hazard too much on each veſſel, there being more to be expected from ſeveral than from one.

RIVADEC. A city and port town of Spain, in the province of Galicia, ſituated on a bay of the ſea, in 7 deg. 10 min. of W. lon. and 33 deg. 36 min. of N. lat. 37 miles N. W. of Oviedo.

RIVAGE. A toll antiently paid to the King in ſome rivers, for the paſſage of boats, or veſſels therein.

RIVER, in geography. A ſtream or current of freſh water, flowing in a bed or channel, from a ſource or ſpring into the ſea.

If the ſtream be not large enough to bear boats, or ſmall veſſels loaden, it is properly called in Engliſh by the diminutive rivulet or brook. If it be conſiderable enough to carry larger veſſels, it is called by the general name river: in all which the difference is only as to great and leſs.

Some will have none to be properly rivers, except thoſe which bear the ſame name from their ſource to their mouth; others, none but thoſe which empty themſelves immediately into the ſea, and not into any other river.

Rivulets have their riſe ſometimes from great rains, or great quantities of thawed ſnow, eſpecially in mountainous places; as in the long ridges in Africa, India, and Sumatra: but the generality of rivulets ariſe from ſprings. Rivers themſelves all ariſe, either from the confluence of the ſeveral rivulets, or from lakes; nor is there any great river, ſuch as the Rhine, Elbe, and the like, known to flow from a ſingle ſpring. The Volga conſiſts of above 200 rivulets, all flowing into it, before it reaches the Caſpian; and the Danube receives as many. Pliny, indeed, and Cardan, ſay, that the Nile receives none; but the later travellers into Abyſſinia aſſure us of the contrary. The Rhine, Rhone, Danube, Boryſthenes, and many more, ariſe originally from ſprings in the mountains; the Nile, Volga, and the great river of St. Laurence, from lakes.

Phænomina and variation of RIVERS. Rivers are found ſubject to great alterations, at different ſeaſons of the year and day, by frequent rains and melted ſnow: thus, in Peru and Chili, many of the rivers are almoſt inſenſible in the night-time, and only flow by day, as being then augmented by the diſſolution of the ſnow on the mountains Andes: thus, the Volga abounds in ſo much water in May and June, as to cover the ſand-banks, which all the reſt of the year lie bare, ſo as ſcarce to allow a paſſage to the loaden ſhips: thus alſo, the Nile, Ganges, and Indus, are frequently ſo increaſed as to overflow; and that either in the winter from rain, or in the ſummer from the melting of the ſnow. Some rivers bury themſelves under ground in the middle of their courſe, and break out again in other places like new rivers. Thus the Niger, which ſome coſmographers derive by a ſubterraneous channel from the Nile, becauſe it ſwells at the ſame time with the Nile, without any other apparent cauſe of its ſwelling, the Niger itſelf meeting the mountains of Arabia, is hid under them, and riſes again on the weſtern ſide of the mountains: thus alſo the Tygris is loſt in the mountain Taurus.

The water of moſt rivers flows impregnated with particles of metals, minerals, ſands, and oily and fat bodies: thus, ſome rivers bring ſands intermixed with grains of gold; of which kind is, 1. A river in Japan. 2. Another in the iſland Lequeo, near Japan. 3. A river in Africa called Arroe, breaking out of the roots of the mountains of the Moon, wherein are gold mines. 4. A river in Guinea, where the negroes ſeparate the gold duſt from the ſand, and ſell it to the Europeans, who traffic hither for that very purpoſe. 5. In ſome rivulets near the city of Mexico are grains of gold taken up, eſpecially after rain: which is to be underſtood of all the other rivers; none of which yield any thing conſiderable, except in rainy ſeaſons. 6. In Peru, Sumatra, Cuba, Hiſpaniola, and Guiana. Laſtly, there are ſeveral brooks in the countries about the Alps, eſpecially Tirol; out of whoſe waters gold is drawn, though there are no grains conſpicuous therein. Add to this, that the Rhine in many places affords a golden mud.

As to rivers that bring grains of ſilver, iron, copper, and lead, we find no mention of them in authors; though doubtleſs there are great numbers of each, and many of the medicinal effects of mineral waters are doubtleſs owing thereto. We muſt not here omit a river in Germany, which is ordinarily ſuppoſed to change iron into copper. The truth is, there is no real converſion of the metal; all that is done is, that the cuprine and vitriolic particles in the water corrode the iron, and detaching parts thereof by means of the motion of the water, ſucceed in their room.

From this variety in the mixture of the river-water reſults various qualities, different ſpecific gravities, and different colours. See Mineral *Water*.

Some rivers, at certain ſeaſons of the year, ſwell ſo as to overflow their banks, and drown the neighbouring lands. Of thoſe the moſt eminent is the Nile, which riſes ſo as to cover all Egypt, except the hills. The inundation begins about the 17th day of June, and increaſes for the ſpace of 40 days, decreaſing for as many; during which period the cities of Egypt, which are all built on hills, appear as ſo many iſlands: but it is to theſe inundations that Egypt owes all its fertility; the heavens there affording no rain, or at leaſt none in any reſpect conſiderable: hence, as the inundation is great or ſmall, Egypt for that year is fruitful or barren.

The other rivers having any notable ſtated inundations are the Niger or Gambia, which overflow at the ſame time with the Nile. Leo Africanus ſays it begins on the 15th day of June, increaſes for 40 days, and decreaſes as long. The Zaire, a river of Congo, proceeding from the ſame lake with the Nile, and therefore affected in the ſame manner. The Rio de la Plata in Brazil, which Maffeus obſerves overflows at the ſame time with the Nile. The Ganges and the Indus; both which laſt overflow in June, July, and Auguſt; at which times the natives ſave great quantities of water, in ponds, to ſerve them the reſt of the year. Several rivers flowing out of the lake Chiamay into the bay of Bengal; which overflow in September, October, and November; all which bring a very great fertility with them to the ground. The river Macoa in Camboia. The river Parana, or Paranguaſa, which ſome will have the ſame with the Silver river. Several rivers in Coromandel, a part of India, which overflow in the rainy months, from the great quantity of water iſſuing from the mountain Gatis. The Euphrates, which overflows Meſopotamia certain days in the year. Laſtly, the river Jus in Numidia.

The rivers moſt celebrated for their length, breadth, and ſwiftneſs of current, are the Nile, which runs almoſt in a ſtraight courſe 1520 geographical miles. The Niger,

which

which runs 2400 miles. The Ganges, 1200 miles. The Ob, 1600 miles. The Jeniſca in Aſia, about the ſame length with the Ob. The river Orellana, in America, 60 miles broad at its mouth, and 5000 miles long. The Rio de la Plata, 80 miles broad at the mouth. The Omarannan, another river of Brazil; and the great river of St. Laurence, near 2500 miles long.

Navigable rivers are of great ſervice to trade, as they ſave the greater expence of land-carriage. The Chineſe in Aſia, and the Dutch in Europe, are the moſt remarkable people for river-navigation; and other nations have followed their example. Almoſt all the interior trade of China is carried on by natural rivers, or artificial canals; and the Dutch employ above 50,000 men on their rivers and canals: France is alſo well ſupplied with rivers and canals; particularly the canal of Languedoc, by means of which a communication is made between Bourdeaux and Marſeilles, that is, between the ocean and Mediterranean; as alſo the canals of Orleans and Briare, which open a communication between the countries watered by the Seine and Loire. The Spaniards have been adviſed to make the river Elbe more navigable. The Ruſſians have made a canal, 93 miles long, between the Don and the Volga, to make a communication between the Caſpian and the Euxine ſeas; as alſo another, called the Ladoga canal, deſigned for the uſe of Peterſburg, 460 miles long. The Iriſh have improved their inland navigation by canals; and a ſcheme has been propoſed for cutting a canal to unite the Thames and Severn in England, as alſo another for uniting the Severn and the Trent.

The Britiſh legiſlature has taken particular care of the preſervation of navigable rivers; as alſo in rendering others fit for navigation, eſpecially the Dee, Air, and Calder.

Three RIVERS. A town of Canada, in North America, ſubject to France. See *French* America.

RIXDOLLAR. A ſilver coin, ſtruck in ſeveral ſtates and free cities of Germany; as alſo in Flanders, Poland, Denmark, and Sweden. But there is little difference between the rixdollar and the dollar, another ſilver coin ſtruck in Germany; each being nearly equal to the French crown of three livres, the Spaniſh piece of eight, or 4 s. 6 d. ſterling. See *Exchange*.

The rixdollars of Francfort, Lunenburg, Magdeburg, Hamburg, and Poland, are worth 4 s. 6 d. ſterling; of Brandenburg, Hanover, Mentz, Nuremberg, and Lubec, 4 s. 7 d. ſterling; of Baſil 4 s. 8 d.; of Cologne 4 s. 4 d.; of Dantzic or Thorn 4 s. 5 d.; and of Zuric 4 s. 2 d. ſterling.

The rixdollar is one of the moſt current and univerſal coins in the world; being uſed equally in the commerce of the Levant, the North, Muſcovy, and the Eaſt Indies.

All ſorts of rixdollars are not received in the Eaſt Indies upon the ſame footing, and for the ſame value; upon which account they are weighed there: but if they are not weighed, he who ſells them ſhould make good the weight. Upon this footing 214 rupees are given for 100 Flemiſh rixdollars, and 216¼ for thoſe of Germany, Sweden, and Poland.

RIXDOLLAR, is alſo a money of accompt, uſed in Germany, Poland, and Denmark, of the ſame value as the coin.

RIX-MARK. A Daniſh ſilver coin; being 20 Danſk ſchillings, 10 ſchillings Lubs, or 11¼ d. ſterling.

RIX-OORT. Another ſilver coin of Denmark, worth 24 Danſk ſchillings, or 1 s. 1½ d. ſterling.

RIZE, in the Grand Signior's territories, is a purſe of 15,000 ducats, or 6937 l. ſterling; which may paſs for a money of accompt, like the Dutch ton of gold, and the French million.

ROAD, in navigation, denotes a place of anchorage, at ſome diſtance from ſhore, and ſheltered from the winds, where veſſels uſually moor, to wait for a wind or tide to carry them into harbour, or to ſet ſail.

When the bottom is clear of rocks, the hold firm, and the place well covered from the wind, the road is ſaid to be good: and an open road is one that has but little land on any ſide.

The roads in the Britiſh dominions are free to all merchant-veſſels, either of Britiſh ſubjects or allies. Captains and maſters of ſhips, who are forced by ſtorms to cut their cables, and leave their anchors in the roads, are obliged to fix up marks or buoys, on pain of forfeiting their anchor.

The maſters of ſhips coming to moor in a road, muſt caſt anchor at ſuch diſtance, as that the cables may not mix, on pain of anſwering the damages. When there are ſeveral veſſels in the ſame road, the outermoſt to the ſeaward is obliged to keep a light in his lanthorn in the night time, to appriſe veſſels coming in from ſea. See *Port*.

ROADS, or *Highways*, ſhould be kept in good repair, for the facility of travelling, and conveying goods from one place to another. The Romans were eminent for their great roads, which they paved in a particular manner; and ſince the erection of turnpikes in England, the roads have received ſuch improvement as to abate the price of land-carriage generally 30 *per cent.* for the carriage between Birmingham and London was formerly 7 s. a hundred, and now only from 3 to 4 s. a hundred; the carriage from Portſmouth to London, which was 7 s. a hundred, is now reduced to 4 or 5 ſhilllings; the carriage from Exeter, Briſtol, and Glouceſter, is now only 8 s. a hundred, which was formerly 12 s.; and the carriage from other places has found an equal reduction. Beſides, a team of ſix horſes can now draw 50 or 60 hundred with more eaſe than 30 hundred was drawn before the eſtabliſhing of turnpikes. See *Carriage*.

ROADER, among ſailors. A ſhip that lies at anchor in a road.

ROANOAK. An iſland of North America, near the coaſt of Albemarle county in North Carolina, ſituated in 75 deg. of W. lon. and 35 deg. 40 min. of N. lat. where the Engliſh ſettled one of their firſt colonies in America in 1585; but were obliged to abandon it, as the colony was not ſupplied and reinforced in due time.

ROB, in pharmacy. A preparation antiently much uſed, conſiſting of the juice of fruits, purified, and boiled to a conſumption of two-thirds of their moiſture.

ROBE. A liquid meaſure uſed in Spain, weighing 28 pounds.

ROBE. Any long gown, or garment, that covers the whole body; particularly ſuch as are worn by the Britiſh kings and peers in parliament; as alſo by judges in the courts of judicature, and magiſtrates on public occaſions.

ROBEMAKERS. Are perſons whoſe buſineſs is to make robes.

ROBBINS. Small ropes, reeved or put through the oilet-holes of a ſail, under the head ropes, which ſerve to make faſt the ſails to the yard.

ROCHE, or *Roch alum*. See *Alum*.

ROCHELLE. A city and port-town of France, in the province of Orleanois, and territory of Aunis, ſituated on the bay of Biſcay, oppoſite to the iſle of Ree, in 1 deg. 5 min. of W. lon. and 46 deg. 7 min. of N. lat. 70 miles S. W. of Poictiers. See *France*.

ROCHFORT. A port-town of France, in the province of Guienne, and territory of Saintonge, ſituated near the mouth of the river Charente, in 1 deg. of W. lon. and 46 deg. of N. lat. 23 miles S. of Rochelle; being a fine large town, built by the late King Louis XIV. and made one of the ſtations of the royal navy of France; having a commodious harbour, well ſecured by forts and batteries of guns. See *France*.

ROCK *Alum*. See *Alum*.

ROCKBO. A great river, which riſes in the province of Yuncan in China in Aſia; and running ſouth through the kingdom of Tonquin, falls into the bay of Cochin-China, in 21 deg. of N. lat.

ROCK-*Chryſtal*, or *Chryſtal of the Rock*, is that ſuppoſed to be formed by a congelation of the lapidific juice which trinkles down in rocks and caverns. See *Chryſtal*.

ROCK *Salt*. See *Salt*.

ROCK *of Liſbon*. See *Cintra* Cape.

ROCOU, called by the Braſilians *achiotl*, or *urucu*, and by the Dutch *orlean*, is a drug which ſerves for dying and painting.

The tree which bears the ſeed whereof the rocou is compoſed, grows in the Leeward iſlands, and on the continent of America. It is not much higher than a ſmall orange-tree: its leaves, pointed at one end, are in the form of a heart; and its flowers, mixed with a white and carnation colour, are compoſed of five leaves, in the form of ſtars, growing on the extremities of the branches. Theſe flowers are followed by little *ſiliquæ*, or pods, which encloſe ſeveral grains of the bigneſs of a pea, covered when ripe with as lively a vermilion colour as poſſible.

For extracting this precious colour, theſe grains are ſhook in an earthen veſſel, and waſhed therein with warm water, till they have quitted their vermilion; afterwards, when the water has been left to ſettle, the ſediment is taken, and formed into ſmall round balls, or ſquare cakes, much eſteemed when pure and without mixture, which ſeldom happens. Some alſo make uſe of fire for boiling this drug, and giving it a conſiſtence.

Rocou ſhould be choſen of a violet ſmell, as dry and as high in colour as poſſible, ſoft to the touch, eaſily extended, and, when broken, the inſide of a more lively colour than the outſide.

Sometimes it is ſophiſticated with red earth, brick powder, or other ingredients: but the fraud is diſcovered by diſſolving a little of it in a glaſs of water; for, if pure, it diſſolves entirely; but, if mixed, the earth or brick will fall to the bottom.

Rocou is uſed for giving a colour to chocolate, and yellow wax, and is alſo thought to be of ſome uſe in medicine.

Rocou is ſold at Amſterdam for about 6½ d. the pound.

ROD. A meaſure for land, and bricklayers work, conſiſting of 16 feet and a half in length, and as much in breadth, or 272¼ ſquare feet.

ROE-NEUG. The largeſt of meaſures for diſtances and lengths uſed in the kingdom of Siam, making the Siameſe league; 20 jods make the roe-neug, 4 ſens the jod, 20 vouas the ſen, and 2 kens the voua; the ken being the Siameſe ell of 3 feet wanting half an inch; the voua, or Siameſe fathom, amounting to 5 feet 11 inches. See *Ken*.

ROLL, in the manufactories, ſomething round, and folded up in a cylindrical form.

Few ſtuffs are made up in rolls, except ſatins, gawſes, and crapes, which are apt to break, and take plaits not eaſy to be got out if folded otherwiſe. However, ribbons, laces, galloons, and paduas, of all kinds, are thus rolled.

ROLL *of Tobacco*, is tobacco in the leaf, twiſted on the mill, and wound twiſt over twiſt about a ſtick or roller. The generality of tobacco in America is ſold there in rolls, of various weights; for it is not cut till after its arrival in England, Spain, France, and Holland; this roll-tobacco being what is chiefly uſed both for chewing and raſping. See *Tobacco*.

ROLL *of parchment*, denotes the quantity of 60 ſkins. See *Parchment*.

ROMALS. Painted cotton handkerchiefs, manufactured in the Mogul's territories, and brought from Surat; the piece containing 6 or 7 handkerchiefs.

ROME, the capital of the Pope's territories, and of Italy, is ſituated in 13 deg. of E. lon. and 41 deg. 55 min. of N. lat. 140 miles N. W. of Naples, and 140 S. of Florence, ſtanding on the river Tiber, about 16 miles N. E. of the Tuſcan ſea. See *Italy*.

ROMSDALE. A port-town of Norway. See *Denmark*.

RONAS. A root, which ſpreads in the ground much like liquorice; being of the ſame thickneſs, and growing abundantly at Aſtahat, a city of Armenia, a league from the river Araxes. Its principal uſe is for dying red; it being with the juice of this root that all Indian and Perſian cloths are painted; whereby they imbibe a very deep and lively dye.

It is not ſurpriſing to ſee caravans arrive at Ormus entirely laden with this root, to be ſent from thence to the Indies in the ſhips which return there.

ROOD. A quantity of land, equal to the fourth part of an acre, and containing 40 ſquare perches or poles.

ROOF *trees*, or *Ruff trees*, are the timbers in a ſhip, which go from the half deck to the fore-caſtle.

ROOMER, in the ſea-language. A ſhip is ſaid to be a roomer, when ſhe is larger than ordinary.

ROOT, in botany. That part of a plant which imbibes the juices of the earth, and tranſmits them to other parts for nutrition; conſiſting of woody fibres, covered with bark more or leſs thick, and ariſing from a little point in the ſeed called the radicle. It is no ſmall difficulty to conceive how the root ſhould always point downwards, and turn up the ſtem perpendicularly, conſidering that in the ſowing of plants the radicle muſt frequently happen to be upwards, and the plumulæ downwards.

The root is always found in the ground in terreſtrial plants, except in very few caſes; the ivy and cuſcuta being perhaps the only plants where part of the root lies bare.

The root in plants has been obſerved to do the office of the ſtomach in animals; that is, to make the firſt and principal digeſtion of the alimentary matter. M. Reneaume ſhews, that the root does the office of all the parts in the belly of animals deſtined for nutrition; being the root that receives the nouriſhment, that prepares it, digeſts it, alters it, and turns it into ſap, to be afterwards diſtributed to all the parts.

The ſmell, colour, and even taſte, ſhew what a conſiderable alteration the juices undergo in the root; ſo that the root may be laid down as the principle of vegetation.

Plants growing at the bottom of the ſea have this peculiar to them, that they have no roots; at leaſt the parts performing the office of roots have nothing of the uſual figure of other roots; theſe plants being uſually faſtened to ſome ſolid body; adhering to it by a very ſmooth poliſhed lamina, which does not ſend forth any fibre. Add to this, that the body to which they adhere being frequently a rock or flint, appears very unfit to feed them, in caſe they had roots. Mr. Tournefort therefore conjectures, that they are fed by a juice afforded them by the thick oily mud at the bottom of the ſea, which they receive by the pores of the exterior ſurface of this lamina.

Boerhaave obſerves, that the root may have any ſituation at pleaſure, with reſpect to the body of the plant, nor need there to be loweſt or higheſt: accordingly, in the aloe, coral, moſſes, funguſes, and the like, the root is frequently uppermoſt, and its growth downwards.

Roots are divided by botaniſts into, 1ſt, Fibrous, which ſend out only ſmall ſtrings from the bottom of the plant diſtinct from each other; ſuch are thoſe of moſt ſpecies of graſs: 2dly, More thick and groſs; which either branch out into ſubdiviſions, or elſe ſend out fibres from them horizontally.

Theſe laſt are either carnous; which again are either broad and ſwelling, or long and ſlender, and commonly harder and more woody.

Broad and ſwelling roots are either bulbous, which conſiſt but of one globe or head, and ſend out fibres from the bottom, and are either ſquammoſe and ſcaly, as lilies, martagon, and the like; or coated, and involved in ſkins and coats, as cepa, hyacinthus, allium, and the reſt.

Tuberous are of a carnous ſolid, and continued conſiſtence; either ſimple, but with one globe, as rapa, crocus, and ſuch like; or manifold, as aſphodelus and pœonia, with many others.

Long roots are either ſarmentous, that is, twiggy, branching, which ſhoot or creep out tranſverſe; of these ſome are geniculated, knotty, or jointy, as couch-grass and mint, with the like ſpecies. Others are cauliform, that is, ſtemmy, or ſtalky, which ſhoot down directly, though often ſending out fibres and ſtrings from the great ſtem, which alſo itſelf is ſometimes divided and branching.

ROOTS, in medicine, are principally rhubarb, ipecacanha, jalap, gentian, liquorice, madder, and many others.

ROPE. An aſſemblage of ſeveral twiſts, or ſtrings of hemp,

hemp, twiſted together by means of a wheel; of various uſes, as in binding, ſtaying, drawing, and ſuſpending. See *Hemp*, and *Cordage*.

When the rope is made very thick, it is called a cable; and when very ſmall, a cord. See *Cable*, and *Cord*.

The greateſt conſumption of ropes is in navigation, for the tackling of ſhips; where though ropes include the whole cordage, yet there are ſeveral ropes particularly ſo denominated; as the entering rope, hung at the ladder to help people up; the top rope; a bolt rope, wherein the ſail is ſewed; buoy rope, to which the buoy of the anchor hangs; gueſt rope, to tow the long boat; the keel rope; the bucket rope; rudder rope, to ſave the rudder if it ſhould chance to be beat off; preventer rope, to ſave the yard in caſe any part of the ties ſhould be broke; breaſt rope, to laſh the pannels to the maſts; guy rope, to keep the foremaſts forwards directly over the hatch way; boat rope, by which the boat hangs, or is faſtened a ſtern of the ſhip; and port ropes. See *Stores*.

ROPE *yarn*, is the yarn of any rope untwiſted; commonly conſiſting of cable ends, which are worn out, called junks of the cables, and ſerves for many purpoſes among the ſailors.

ROSADE. A kind of liquor, prepared of pounded almonds and milk, mixed with clarified ſugar.

ROSA *Solis*. See *Ros* Solis.

ROSE. A medicinal flower, which gives the denomination to ſeveral preparations in pharmacy.

ROSE-*water*. A water drawn by diſtillation from red or damaſk roſes; being a good cordial, and formerly highly eſteemed in Enrope; but is ſince fallen from its reputation, and little uſed, except in diſeaſes of the eyes, in perfumes and waſhes. It is, however, in great eſteem throughout the Eaſt; particularly in China and Perſia, where the trade thereof is very conſiderable. The roſe-leaves remaining at the bottom of the ſtill have the natural cathartic quality, and are alſo kept for a perfume.

ROSE-*copper*. See *Copper*.

ROSE-*wood*. See *Aſpalath*.

ROSE-*diamond*. See *Diamond*.

ROSE-*noble*. An antient Engliſh coin, firſt ſtruck in the reign of Edward III. then called the penny of gold, and ſince called roſe-noble, becauſe ſtamped with a roſe, being current at 6 s. 8 d. See *Noble*.

ROSE *noble*, is alſo a gold coin ſtruck in Holland, and current for 11 florins, or 19 s. 3 d. ſterling.

There are alſo roſe-nobles of Denmark, worth 24 Daniſh marks, or 18 s. ſterling.

ROSEE. See *Chabnam*.

ROSEMARY. A medicinal plant, whoſe flower, called anthos, is of conſiderable uſe, being the baſis of the celebrated Hungary water; with a ſmall quantity of which, diluted in common water, the confectioners make conſerve of roſemary flowers, and eſſence of roſemary water. See Hungary *Water*.

ROSES. A city and port town of Spain, in the province of Catalonia, ſituated on a bay of the Mediterranean, in 2 deg. 45 min. of E. lon. and 42 deg. 22 min. of N. lat. 60 miles N. E. of Barcelona. See *Spain*.

ROSETTO. A port-town of Egypt, in Africa, ſituated near the mouth of the weſtern channel of the river Nile, in 31 deg. of E. lon. and 31 deg. of N. lat. being upwards of 100 miles N. W. of Grand Cairo, 100 miles W. of Damietta, and 30 E. of Alexandria. See *Egypt*.

ROSIN, is particularly uſed for a reſinous matter, prepared from the juice of the pine-tree, in ordinary uſe for the making of wax. See *Reſin*.

The manner of preparing this coarſe drug, in the ſouthern parts of France, is ſaid to be thus: the bark being pared off the pine, to make the ſap run down into a hole made at the bottom to receive it; as the juice runs, it leaves a cream, or cruſt, a-top; which being tempered with water, is fraudulently ſold for white bees wax. See *Wax*.

When they have got a quantity of the juice, they ſtrain it through a baſket, and what runs through is the common turpentine. See *Turpentine*.

What ſtays behind, they mix with water; and, diſtilling it in an alembic, the matter that riſes is the oil of turpentine, the calx that remains being the common roſin.

ROS *Solis*, popularly *Roſa ſolis*, or *Sun dew*, is an agreeable ſpirituous liquor, chiefly taken after meals, by way of dram, to aid digeſtion; being compoſed of burnt brandy, ſugar, cinnamon, and milk water, and ſometimes perfumed with a little muſk. It had its name, becauſe antiently prepared wholly of the juice of the plant ros ſolis; but that plant is no longer any ingredient therein. The beſt is that of Turin; but the French have a particular kind not called ros ſolis, but *du roy*, becauſe uſed with good effect by the late King Lewis XIV. being compoſed of Spaniſh wine, wherein are infuſed aniſe, fennel, aneth, and coriander, for three weeks.

ROSSANO. A city and port-town of Italy, in the kingdom of Naples, and province of Calabria, ſituated on the gulph of Taranto, in 17 deg. 5 min. of E. lon. and 39 deg. 35 min. of N. lat. 80 miles S. W. of Taranto.

ROSSE. A port-town of Ireland, in the county of Cork, ſituated on a bay of the ſea, in 8 deg. 50 min. of W. lon. and 51 deg. 20 min. of N. lat. being 22 miles weſt of Kinſale.

ROTHER-*beaſts*. A word uſed in old ſtatutes, and ſtill in the northern parts of England, for horned beaſts, as oxen, cows, ſteers, and heifers; whence rother-ſoil, in Herefordſhire, is taken for the dung or ſoil of ſuch cattle.

ROTHERHITHE *Waterworks*. See *Waterworks*.

ROTHER-NAILS, are ſuch as have a very full head, and are uſed to faſten the rudder irons in ſhips.

ROTOLO, or *Rotoli*. A weight uſed in Sicily, and in ſome other parts of Italy, as alſo in Portugal, at Goa in the Eaſt Indies, and in ſeveral port-towns of the Levant, particularly at Cairo, and in the maritime towns of Egypt: but though the rotolo has the ſame name in all theſe places, it is very different in weight.

At Genoa, and in other parts of Italy where it is uſed, it is of two ſorts; one called the heavy rotolo, weighing 17 ounces 6 drams, and ſomething more, avoirdupois weight; the other, the common rotolo, being 16 ounces avoirdupois.

In Sicily the rotolo weighs ſomewhat more than a pound and half.

In Portugal, and at Goa, the rotolo weighs 13 ounces 1 dram avoirdupois weight.

At Cairo, and in the other maritime towns of Egypt, the rotolo is of 144 drams, which make ſomewhat leſs than a pound avoirdupois.

ROTOLO, or *Rotoli*, is alſo a liquid meaſure, uſed in ſome ſtates and towns of the coaſt of Barbary.

ROTT, or *Rotton*. A weight uſed in the Levant; being more or leſs heavy, according to the places where it is uſed.

100 of Conſtantinople and Smyrna make 14 lb. avoirdupois weight.

At Sidon, the rott is of 600 drams, or 4 lb. 13 oz. The acre is alſo another rott of this town, making about 6 lb. avoirdupois.

At Aleppo there are three ſorts of rotts; the firſt of which make 5 lb. 10 oz. avoirdupois weight; the ſecond of 680 drams, which make 5 lb. 5 oz. and the third of 700 drams, that is, of 5 lb. 7 oz. and a half.

ROTTERDAM. A city of the United Provinces, in the province of Holland, ſituated on the north bank of the river Maes, in 4 deg. 20 min. of E. lon. and 52 deg. of N. lat. 30 miles ſouth of Amſterdam, and 13 miles S. E. of the Hague. See *United* Provinces.

ROTTUM. A Daniſh town on the iſland of Bornholm. See *Denmark*.

ROUEN. A city of France, capital of the province of Normandy, ſituated on the north-ſide of the river Seine, in 1 deg. 6 min. of E. lon. and 49 deg. 30 min. of N. lat. 65 miles N. W. of Paris, and 45 S. E. of Havre-de-Grace, and the Britiſh channel. See *France*.

ROUGH *diamond*. See *Diamond*.

ROUND-*houſe*, in a ſhip, is the uppermoſt room or cabin on the ſtern of a ſhip, where the maſter lies. See *Stern*.

ROUND-*top*, in a ſhip. A floor, or frame of boards laid upon the croſs-trees near the head of the ſhip's maſt, for the men to ſtand upon to furl and looſe the ſails.

ROUNDINGS. A ſort of tanned hides. See *Hide*.

ROUP. A ſilver coin of Poland, worth about 1¼ d. ſterling.

ROUP, is alſo a ſilver coin, ſtruck and current in ſome ſtates of the Grand Signior, particularly at Erzerum in Armenia, being worth about 10 d. ſterling.

ROUPIA, or *Roupee*. See *Rupee*.

To ROUSE *a hawſer* or *cable*, in the ſea-phraſe, is to hale in part of the hawſer or cable which lies ſlack in the water.

ROUT, in navigation. See *Courſe*.

ROW. To carry or convey a perſon in a veſſel, or boat, upon the water with the help of oars.

ROXENT *Cape*, or *Rock of Liſbon*. See *Cintra* Cape.

ROYAL *Exchange*. The burſe or meeting-place of the merchants in London. See Royal *Exchange*.

ROYAL *fiſhes*, are whales and ſturgeons, and ſome add porpoiſes; which the King, by his prerogative, is to have whenever caſt on ſhore, or wrecked, in all places of the realm, unleſs granted to ſubjects by expreſs words. See *Fiſhery*.

ROYAL *Society*. The ſureſt increaſe remaining to be made in manual arts, is to be performed by the conduct of experimental philoſophy. This will appear undeniable, when it ſhall be conſidered that all other cauſes are defective; and that for this very reaſon, becauſe the trials of art have been ſo little united with the plain labour of mens hands. And this was the origin of that moſt uſeful and glorious inſtitution of the Royal ſociety of London, in the reign of King Charles II. from whence all others of the like kind in Europe have taken their riſe, to the wonderful improvement of the mechanic arts and manufactures, and indeed of univerſal commerce.

ROYAL *ſugar*. See *Sugar*.

RUATAN, or *Rattan*. An iſland in the gulph of Honduras, in North America, ſituated in 89 deg. of W. lon. and 16 deg. of N. lat. 75 miles N. W. of Truxillo, in the province of Honduras in Mexico. This iſland was planted and fortified by Admiral Vernon in the year 1742, as a check upon the Spaniards; having a good harbour, where the ſhips that reſort to this gulph or bay for logwood may be protected againſt the Spaniſh guarda coſtas: but though the Britiſh government granted ſeveral ſums of money for its ſupport, they have abandoned it ſince the peace of Aix-la-Chapelle.

RUBIA *Tinctorum*. The root of a plant called madder. See *Madder*.

RUBIA, is alſo a gold coin, current in Algiers and Congo, worth 2 s. 10 d. ſterling; having the name of the dey of Algiers, and ſome Arabian letters for the legend.

RUBLE. A ſilver coin, and money of accompt, in Ruſſia; being 100 copeacs, or 4 s. 6 d. ſterling.

RUBY. A red coloured ſparkling gem, of the firſt rank among precious ſtones: but there are only two places in the Eaſt where the ruby is found, the kingdom of Pegu, and the iſle of Ceylon. The mine in Pegu, where it is found in great plenty, is in the mountain Capelan, 12 days journey from Siren, the reſidence of the king of that country; but the fineſt rubies brought from hence ſeldom exceed three or four carats, the king reſerving all the larger to himſelf. In Ceylon the rubies are found in a river which deſcends from the mountains towards the middle of the iſland; ſome few are alſo found in the ground; theſe rubies being uſually brighter, and more beautiful, than thoſe of Pegu: but they are rare, the King of Ceylon prohibiting his people to gather them, or traffic with them. There are rubies alſo found in Europe, particularly in Bohemia and Hungary; eſpecially the former, wherein is a mine of flints of ſeveral ſizes, which, upon breaking, are ſometimes found to contain rubies, as fine and hard as any of the eaſtern ones. The antients, out of their credulity and ſuperſtition, attributed many virtues to the ruby; as, that it expells poiſon, cures the plague, abates luxury and incontinence, and baniſhes ſorrow.

Lapidaries uſually diſtinguiſh three kinds of rubies, the rocky, barlaſs, and ſpinell; ſome add a fourth kind, called the rubacelle.

It is the different degree of colour which makes their different value and beauty; the barlaſs ruby being a crimſon colour, with a caſt of purple; and the Spinell ruby of a bright roſy red.

It is ſaid the inhabitants of Pegu have the art of heightening the redneſs and brilliancy of rubies, by laying them in the fire, and giving them a proper degree of heat.

The ruby is formed in a ſtony ſubſtance, or marcaſite of a roſe colour, called mother of ruby; it has not all its colour and luſtre at once, but comes to it by degrees. At firſt it grows whitiſh; and, as it approaches to maturity, becomes red. Hence there are white rubies; others half white, half red; and others blue and red, called ſapphire rubies. When a ruby exceeds 20 carats, it may be called a carbuncle, the name of an imaginary ſtone, whereof the antients and moderns have given ſo many deſcriptions. See *Carbuncle*.

They have ſeveral ways of counterfeiting rubies; and have carried the invention to that length, that the moſt able lapidaries are ſometimes overſeen.

Furetiere aſſures us, though the thing ſurpaſſes all belief, that there have been rubies in France of 240 carats. Tavernier tells us, he ſaw one in the Indies of 50 carats, which he had a mind to have bought: he adds, that the King of France has finer and larger rubies than any in the poſſeſſion of the Great Mogul.

The value of rubies, from one carat to four grains:

	l.	s.	d.
A ruby of one carat is worth	1	15	0
two	9	0	0
three	22	10	0
four	33	15	0
five	45	0	0
ſix	67	10	0
ſeven	84	0	0
eight	116	0	0
nine	150	0	0
ten	216	0	0

Sapphire RUBY. See *Sapphire*.

RUBY, in chemiſtry, is a name given to ſeveral preparations of natural bodies, becauſe of their red colour; as ruby of arſenic, and the like.

RUCH. A meaſure uſed in the ſalt marſhes of Normandy, being a kind of buſhel which weighs about 50 lb.

RUDDER, in navigation. A piece of timber turning on hinges in the ſtern of a ſhip; which by oppoſing, ſometimes one ſide of the water, and ſometimes another, turns and directs the veſſel this way or that; the rudder being faſtened on the ſtern-poſts, by four or five iron hooks called pintles; and ſerving, as it were, for the bridle of a ſhip, to turn her about at the pleaſure of the ſteerſman, its power being reducible to that of the lever.

The rudder being perpendicular, and without-ſide the ſhip, another piece of timber is fitted into at right angles which comes into the ſhip; whereby the rudder is managed and directed: but this latter is properly called the helm, or tiller; and ſometimes, though improperly, the rudder itſelf.

As to the angle the rudder ſhould make with the keel, the author of a late book on the working of ſhips ſhews that, in order to ſtay, or bear up the ſooneſt poſſible, the tiller of the rudder ought to make an angle of near 55 deg. with the keel.

A narrow rudder is beſt for a ſhip's ſailing, provided ſhe can feel it, that is, be guided and turned by it; for a broad rudder will hold much water when the helm is put over to any ſide: yet if a ſhip has a fat quarter, ſo that the water cannot come quick and ſtrong to her rudder, ſhe will require a broad rudder; the aftmoſt part of which is called the rake of the rudder.

RUDDLE. A ſort of duſky red chalk, or earth, found in ſeveral parts of England, chiefly in iron mines; of which mineral it has a copious mixture. See *Reddle*.

RUDKOPPING. A Daniſh town, on the iſland of Langland. See *Denmark*.

RUE. A garden herb, very uſeful in phyſic.

UG. A warm woollen coverlid for a bed; alſo a ſhaggy ſort of cloth for great coats, to wear in cold and wet weather.

UGEN. An iſland of the Baltic ſea, on the coaſt of Germany; being part of the duchy of Swediſh Pomerania, ſeparated from the continent by a narrow channel, not three miles over. The iſland is 30 miles long, and near as many broad, being a plentiful country, abounding in corn and cattle: the chief town is Bergen; which has no wall any more than the other towns, and conſiſts of about 400 houſes. See *Sweden*.

UGGI. A corn-meaſure uſed at Leghorn, 11 and 1-3d of which make the laſt.

ULE, in arithmetic, denotes a certain operation with figures, to find ſums or numbers unknown, and to facilitate computations, mercantile, aſtronomical, and the like.

Each rule in arithmetic hath its particular name, according to the uſe for which it is intended. The four firſt, which ſerve for the foundation of the whole art, are called addition, ſubtraction, multiplication, and diviſion. From theſe ariſe ſeveral other rules; as the rule of three, or of proportion, called alſo the golden rule, and diſtinguiſhed into direct and inverſe, ſimple and compound: alſo the rule of five numbers; rule of fellowſhip, ſimple, and with time; rule of alligation, mediate and alternate; rule of exchange; rule of falſe poſition, ſingle and double; to which may be added, approximation, barter, combination, equation, exchange, extraction, involution, progreſſion, rebate, reduction, &c.

UM. A ſpirituous liquor, drawn by diſtillation from ſugar-canes. See *Sugar*, *Diſtillation*, and *Spirituous* Liquors.

Rum, in general, is of a ſtronger body than brandy, that is, it contains a larger quantity of oil, and leſs phlegm and ſalt. That rum is beſt, which is of a browniſh tranſparent colour; of a ſmooth, oily, grateful taſte; of a ſtrong body and conſiſtence; of a good age, and well kept; that of a clear, limpid colour, and a hot pungent taſte, being either too new, or daſhed with ſpirits.

UMB, *Rum*, or *Rhumb*, in navigation. See *Rhumb-line*.

UMMAGE, in the ſea-language, ſignifies to clear a ſhip's hold, or to remove goods or luggage from one place to another, in order to ſtow them more handſomely or conveniently; and ſometimes means only the inſpecting, or narrowly ſearching into or after any thing, as goods in the hold, to ſee if no prohibited goods are on board.

UN *of a ſhip*, is ſo much of her hull as is always under water, growing thinner and lanker by degrees, from the floor-timber to the ſtern-poſts. A ſhip is ſaid to have a good run, when it is long, and the water paſſes freely to her rudder, her tuck not lying too low, which is of great importance to her ſailing. If the water does not come ſtrongly to her rudder, by reaſon of her being built too broad below, ſhe cannot ſteer well; and a ſhip that cannot ſteer well, cannot keep a good wind, nor will have any freſh way through the ſea, but will be falling to leeward; and yet a ſhip with a large and good run, loſes much ſtowage, becauſe made narrow below. See *Ship*, and *Rudder*.

UN *of a ſailor from a ſhip of war*, is when he has deſerted the ſervice, whereby he forfeits all his wages.

UNDLET, *Runlet*, or *Roundlet*. A ſmall veſſel, containing an uncertain quantity of any liquor, from three to twenty gallons.

UNNER, in the ſea-language. A rope belonging to the garnet, and to the two bolt-tackles, which is reeved in a ſingle block, ſeized with a pennant; and has at one end a nooſe to hitch into any thing, and at the other end a double block, into which is reeved the fall of the tackle, or the garnet, whereby it purchaſes more than the tackle or garnet could allow.

o overhale the RUNNER, is to pull down the hooked end, and hitch it into the ſling.

UNNING *of goods*, is a clandeſtine landing of goods, without paying the legal cuſtoms or duties for the ſame. See *Smuggler*.

RUNSTUC. A ſmall copper coin, and money of accompt, in Sweden; being the 7-36ths of a penny; 32 of them make the copper dollar, or $6\frac{2}{3}$ d. ſterling, and 288 make the rix-dollar, or 4 s. 8 d. ſterling.

RUNT. Any thing very ſmall, or low of ſtature; eſpecially ſpoken of cows, oxen, &c. either of the breed of Wales or Scotland.

RUPEE, *Roupia*, or *Roupias*. A coin very current in the territories of the Great Mogul, and ſeveral other parts of the Eaſt Indies.

Rupees are ſtruck both of gold and ſilver; both the one and the other having their diminutions, as half rupees, and quarter rupees. The gold rupee is worth 1 l. 6 s. ſterling: the value of the ſilver rupee is various, according to its quality, and the place where it was coined. A general obſervation is, that the rupees are always current for more at the place where they are ſtruck than elſewhere, and the new rupees for more than the old ones. The reaſon of this laſt difference is, that the Indians being very fond of ſilver, as ſoon as they have got a few rupees together, they hide them under ground; to prevent which inconvenience, tending to drain the ſtate of current monies, the princes and rajas ſtrike new rupees every year, ſtill augmenting the value thereof, without any augmentation of the weight.

Beſides this difference of new and old rupees, the Indians make three other claſſes; the firſt called rupees ſiceas, which at Bengal are worth 2 s. 11 d. ſterling; the ſecond, rupees of Surat, worth 2 s. 6 d. ſterling; the third, rupees of Madras, worth 2 s. 5 d. ſterling; all which is to be underſtood of the new rupees. As to the old ones, thoſe of Madras are only current at 1 s. 11 d. ſterling, thoſe of Surat at 2 s. and the ſiceas at 2 s. 4 d. Yet in other places the order and prices vary; at Surat thoſe ſtruck there have the firſt place, the ſiceas the ſecond, and thoſe of Madras the third. Along the coaſt of Coromandel the Madras have the firſt place, the Siceas the ſecond, and thoſe of Surat the third.

RUPERT *Fort*. A ſettlement belonging to the Engliſh Hudſon's bay company, ſituated at the bottom of Hudſon's bay, in 80 deg. of W. lon. and 51 deg. of N. lat. 600 miles S. E. of Fort Nelſon, and 300 miles N. E. of Quebec.

RUPIEDSIE. A kind of drug, for dying black, found in China, and making a part of the Chineſe commerce to Tonquin, whereby they gain *cent. per cent.*

RUSH. A plant, or tall graſs, uſed for many purpoſes, eſpecially for the weaving of mats for floors, and the ſeats of chairs.

RUSMA. A kind of mineral, not unlike the droſs of iron, both in figure and colour, brought from the Levant, and uſed by the Turks as the beſt depilatory.

RUSSE. A river of Ruſſia, compoſed of the united ſtreams of the Wilia and Berizina, which runs from eaſt to weſt, and falls into a bay of the Baltic ſea, near Memel.

RUSSET. A dark brown colour, uſed for ordinary coarſe cloth, to make cloaths for countrymen.

RUSSIA, or *Muſcovy*. The Empire of Ruſſia, taken in its largeſt extent, and including the late conqueſts on the ſide of Sweden, is bounded by the Frozen ocean towards the north; by Chineſian Tartary on the eaſt; by the Calmucks, the Caſpian ſea, Coban, Tartary, Georgia, the Palus Mæotis, and the Leſſer Tartary towards the ſouth; and by Poland, the Baltic ſea, and Bothnick gulph, towards the weſt. Muſcovy in Europe extends then from the 44th degree of north latitude to the 70th, and perhaps higher, tho' it is nearer the pole; and from the 1ſt degree of N. latitude to the 17th, being 49 degrees of latitude: to which if we add 36 degrees more, which the Aſiatic provinces take up, this empire will be found to take up 85 degrees of longitude, and conſequently is by much the largeſt tract of territory on our continent, ſubject to one monarch.

The province of Moſcow communicates its name to the whole empire, which 100 years ago was included in much narrower bounds: the kingdoms of Caſan, Aſtracan, the Coſſacks, Circaſſians, and the large country which goes under the name of Siberia, being all late acquiſitions, as well as Livonia and Finland.

The Ruſſian territories in Europe are bounded by the Frozen ocean, or Içe-ſea, on the north; by Aſiatic Ruſſia on the eaſt; by little Tartary and Turky on the ſouth; by Poland, the Baltic ſea, and Sweden, on the weſt; being 1500 miles in length, 1100 in breadth, and containing thirty provinces. The northern provinces are Lapland, Samoieda, Bellamoreſkoy, Meſeen, Dwina, Syrianes, Permia, Rubeninſki, and Belaiſeda. The middle provinces are Rezan, or Pereſlaf, Belozero, Wologda, Jereſlaf, Tweer, Moſcow, and Belgerod. The eaſtern provinces are Bulgar, Kaſan, Czeremiſſi, Little Novogorod, the territory of the Don Coſſacs, Great Novogorod, Ruſſian Finland, Kexholm, Carelia, Ingria, Livonia, Smolenſko, Zernigof, and the Ukrain.

The Aſiatic territories belonging to Ruſſia comprehend all the north of Aſiatic Tartary, and Aſtracan; with the countries inhabited by the Calmuc, Oſtiac, and Bratſki Tartars; being of an uncertain extent.

The ſeas of European Ruſſia are the Ice-ſea, or Frozen ocean; the ſea of Weygats, or Nova Zembla; the White ſea, and the Baltic, of which the gulph of Finland is part, upon the north and weſt; with the Palus Mæotis, or ſea of Azoph, on the ſouth. Until the laſt war with Turky, the Ruſſians were alſo maſters of the north coaſt of the Euxine ſea; and ſtill the old Coſſacs of Ruſſia have a communication with the Euxine ſea, by the river Nieper, or Boriſthenes, from whence they frequently iſſue in great numbers, in their wicker-boats, and invade the Turkiſh territories, bringing home thouſands of unhappy wretches, of whom they make ſlaves.

The moſt conſiderable lakes are, the Ladoga, the lake Onega, the White lake, the Ilmen lake, the Worſero, and the lake Pepus.

The rivers are the Tobol, which joins the Irtis, and forms the great river Oby, that divides European Ruſſia from Aſiatic Ruſſia, and falls into the Frozen ocean, oppoſite Nova Zembla; the Manganſea, and the Pezara, or Petzora, which likewiſe fall into the Frozen ocean. The Dwina, which falls into the White ſea, below Archangel. The Wolga, or Rha, which receives the Mologo, Moſco, Kiſma, Ocka, and Kamar; and falls into the Caſpian ſea a little below Aſtracan. The Don, or Tanais, which receives the Woronetz, and Donets; falling into the ſea of Azoph. The Nieper, or Boriſthenes, which falls into the Euxine ſea, at Oczakow. And the Dwina, which falls into the Baltic below Riga.

Ruſſia is generally a level country, except on the north, where are the mountains of Stolp: but it lies in ſo many different climates, that the air muſt of courſe be as different. The north is covered with ſnow nine months in the year; the middle of the country is temperate, and the ſouthern provinces warm. The ſoil is alſo very different: in the north there are foreſts, moraſſes, bogs, and barren ſands; with few inhabitants, and not many animals: the middle of Ruſſia, and the ſouth, are fruitful countries, which ſupply the north with all manner of proviſions by their navigable rivers, lakes, and canals; but the middle is covered with ſnow ſix months of the year. They have continued froſts in winter; but, as ſoon as the ſnow melts, graſs, and all manner of vegetables, ſpring up and thrive amazingly.

In the northern provinces are produced tar in a prodigious quantity, honey, and bees-wax; Ruſſia leather, deer, bear, and elk-ſkins; pot-aſhes, timber, and plank; iron, and ſome copper; hemp, and flax; linen, and linen-yarn; furs, ſuch as ſable, black-fox, ermine, rain-deer, and martins; raw ſilk, by the Wolga, from Perſia; with Perſian, Indian, and China goods, the laſt by land-carriage. From the new conqueſts, and Lower Ruſſia, timber, deals, are alſo brought tar and pitch; maſts, fir- and pot-aſhes; iron and copper; hemp, flax, and excellent linſeed; linen-yarn, linen cloth of ſeveral ſorts, and Ruſſia linen properly ſo called; diaper; ſail-cloth, canvas, and duck; with corn, ſturgeon, and caveari.

Muſcovite Lapland, bounded by the ocean towards the north; by the White ſea towards the eaſt and ſouth; and by Swediſh Lapland on the weſt, is generally divided into three parts. Mourmanskoy Leporie, towards the north-weſt; the chief town whereof is Kola, a port ſituated 350 miles N. W. of Archangel, in 32 deg. 35 min. of E. lon. and 69 deg. of N. lat. upon a river of the ſame name that falls into the northern ocean, and is ſometimes reſorted to by the Engliſh and Dutch ſhips, in their paſſage to and from Archangel. Bellamoreskoy, the moſt ſoutherly part of Lapland, in which is the town of Kandalaſ ſituated on the White ſea; and Freskoy, the moſt eaſterly part of this country, the chief town being Warſeg ſituated towards the ſouth corner of it, near the White ſea. But this country is very ill provided with towns or villages; two or three poor huts being frequently denominated a town by our ſailors. This ſoil does not produce any kind of corn or grain, and but very little fruit. Their animals are deer, elks, foxes, ermins, martens, bears, wolfs, and other beaſts, which they hunt for their ſkins and furs, being the ſtaple commodities of the country.

The province of *Finland*, one of the conqueſts of the late Czar, is bounded by Lapland on the north; by the lakes of Ladoga and Onega, which divide it from other provinces of Muſcovy, on the eaſt; by the gulph of Finland on the ſouth; and by the Bothnick bay towards the weſt. The country is generally divided into 7 parts, namely, Eaſt Bothnia, Savo-Laxia, Kexholm, Carelia, Newland, Finland proper, and Taveſtia. The Finlanders in the North differ very little from the Lappomans; but in the South, being mixed with the Swedes, and trading with other nations of Europe, they are ſomething better poliſhed.

Wyburg, is a city and port-town of Ruſſian Finland, in the territory of Carelia, ſituated on the gulph of Finland, 70 miles N. W. of Peterſburg, in 29 deg. of E. lon. and 61 deg. of N. lat.

We come next to *Ingria*, or *Ingermanland*, divided from Carelia in Finland, only by the river Nieva, or Nye, of which territory Peterſburg is the chief town.

Peterſburg, or *St. Peterſburgh*, is ſituated partly on ſome iſlands in the mouth of the river Nieva, and partly on the ſeveral continents of Ingria and Carelia, in 31 deg. of E. lon. and 60 deg. of N. lat. The late Czar Peter Alexowitz being engaged in a war with Sweden, and having taken the city of Netteburg in the year 1702, as alſo the fortreſs of Nyeſchants, lower down in the river Nieva; and obſerving ſeveral iſlands in the mouth of the river, by the poſſeſſion of which he might open a communication with the Baltic, he ordered a fort to be built on one of them, and commanded a detachment of his troops to make themſelves maſters alſo of the iſland of Retuſari, in the gulph of Finland, near which all ſhipping are obliged to paſs, bound for the river Nieva; and here he built the fortreſs of Cronſlot, finding it capable of being made a commodious harbour for his men of war. The Czar, pleaſed with the neighbouring country of Ingria, which, making allowances for the coldneſs of the climate, is not the moſt diſagreeable; apprehending that if he ſhould fix the ſeat of his empire here, it might be a means to keep the Swedes in awe; and propoſing alſo to eſtabliſh a trade with the reſt of the nations of Europe, with far greater advantage from hence, than he could at Archangel, he ordered labourers and artificers to be ſummoned from all parts of Ruſſia, to erect a royal city, which might deſerve to be the capital of ſo large an empire. The Czar giving proper encouragement to merchants, ſeafaring men, and gentlemen, to ſettle in this new city, the place on a ſudden became extremely populous; and no leſs than 60,000 houſes were erected in a few years. It is now of a very large extent, appearing rather like ſeveral diſtinct towns, than a ſimple city. The river Nieva, which runs thro' it, is very deep all along till it opens into the bay where the ſands render it ſhallow; but about a league further it comes to a good depth again, which is the reaſon that large ſhips are unloaden before they come to the city. The country adjacent to Peterſburg is great part of it a moraſs, covered with buſhes and ſhrubs; the ſoil being ſo moiſt, that it produces but little corn, eſpecially in a wet year, when ſcarce any thing comes to maturity. Turneps, cabbages, and cucumbers are almoſt their only plants. The city and country about it would be ſtarved, were it not for the ſupplies they receive from Novogorod, Pleskow, Moſcow, and even from

from Caſan, which is above 1200 miles diſtant from Peterſburg: but, as all proviſions are plentiful in the heart of Muſcovy, thouſands of ſledges are perpetually trading from thence to Peterſburg, loaden with corn, flour, fruits, and the produce of their reſpective countries; which is in ſummer conveyed to the city by the rivers and lakes; and if at any time the boats happen to meet with any accident in their paſſage, every thing immediately grows exceſſive dear in the city and country about it; for it is obſerved that Peterſburg, inſtead of being ſupplied with proviſions from the neighbouring towns, furniſhes them with all manner of neceſſaries; for, the ground not being cleared of wood, or the moraſſes drained, their land yields but very little grain.

As to the iſland of Cronſlot, it lies about 12 or 15 miles to the weſtward of Peterſburg, at the bottom of the gulph of Finland, and forms a large bay, which reaches as far as the mouth of the river Nieva. To the ſouthward of this iſland is the only paſſage for ſhips up to Peterſburg, the channel being upwards of 2000 paces broad, and very deep.

The late Czar eſtabliſhed at Peterſburg an academy marine, to which he obliged every conſiderable family to ſend one or more of their ſons or kinſmen, above ten, and under eighteen years of age, where they were inſtructed in navigation. Here alſo they learnt the languages, and were taught to ride and fence, with other exerciſes proper for gentlemen, and kept under a very ſtrict diſcipline. Woollen and linen manufactures were alſo ſet up, of which the latter is brought to great perfection, as may be obſerved by the linnen of late imported from thence: and ſeveral regulations are made for improving their plantations of flax and hemp. Paper mills and powder mills have alſo been erected, with laboratories for gunnery and fire-works; and other places for preparing ſalt-petre and brimſtone, of both which they have plenty in Ruſſia.

Rope yards, like thoſe of England and Holland, for the making of cables and tackling for the navy, are alſo ſet up here; and they have a foundery, in which they are perpetually caſting great guns, mortars, and ſmall guns, vaſt quantities of iron ore being found at Alonitz, near the lake of Ladoga, which may be brought to ſuch a temper, it is ſaid, as to be as durable as braſs. The great forge at Peterſburg furniſhes anchors, and ſupplies all iron-work for building ſhips, and houſes; they alſo begin to burn bricks, and uſe them in their buildings inſtead of wood. All foreign architects, mechanicks, and artificers are invited to ſettle here, and allowed ſeveral privileges and immunities beyond other citizens; but hitherto they have not been able to bring either their ſilk or woollen manufactures to any great perfection.

According to Mr. Hanway, the ordinary annual computation of the Ruſſian general export from St. Peterſburg is three millions of rubles, or 675,000 l. ſterling, of which the Britiſh ſubjects in Ruſſia take off 2 millions, or 450,000 l. ſterling, conſiſting chiefly in hemp, flax, iron, hogs briſtles, hare-skins, hempen and flaxen manufactures, Ruſſia leather, and other articles. The ordinary imports of the Ruſſians were two millions of rubles, or 450,000 l. ſterling, conſiſting in indigo, cochineal, lead, pewter, tin, wrought ſilks, gold and ſilver lace, toys, cotton and linen manufactures, woollens and wines. The Ruſſians receive the balance in their favour in ſilver and gold, of which part is a ſum of above 500,000 ſilver rixdollars, of the coin of the United Provinces; theſe do not however paſs current in Ruſſia, but the duties on goods muſt be paid in them at a certain rate, according to weight. The conſumption of the Ruſſians is ſo far increaſed with their acquiſitions by commerce, that they import now more than uſual; but the Engliſh have ſtill above a million of rubles, or 225,000 l. ſterling balance againſt them. The Britiſh factors in St. Peterſburg are generally well eſteemed by the natives of Ruſſia, and acquire fortunes which ſome of them of late years have been wiſe enough to preſerve. They inhabit the beſt houſes on the banks of the Nieva, and are hoſpitable, not to ſay magnificent in their way of life, keeping pace with the luxury of men of ſuperior fortunes at home: but it ſhould be obſerved, that the Britiſh factories in general, make a better figure than thoſe of any other nation in all parts of the world; which may be conſidered as a ſort of compenſation for the voluntary baniſhment which they ſuffer from the beſt of countries in the world: and this generous way of life gives them an influence and aſcendency in the countries where they reſide, at the ſame time that it helps to ſupport the national intereſt and honour.

South-weſt of Ingria lies *Livonia*, another of the late Czar's conqueſts from the crown of Sweden. This country is bounded by the gulph of Finland on the north; by Ingria and great Novogorod towards the eaſt; by the river Dwina, which ſeparates it from Courland, and other provinces of Poland, on the ſouth; and by the Baltic ſea on the weſt; extending about 160 miles in length from north to ſouth, and 120 in breadth from eaſt to weſt. It is uſually divided into two parts; Eſthonia on the north; and Letten on the ſouth: the chief towns being Narva, Revel, Riga, and Parnow.

The poſſeſſion of this vaſt province had for a conſiderable time been diſputed between the Ruſſians, Poles, and Swedes; but at laſt, by the treaty of Oliva, in 1660, it was divided between the two laſt.

The peace concluded between Muſcovy and Sweden, after the death of Charles XII. adjudged finally Livonia to the Czar, and made him in ſome reſpects maſter of all the commerce of the Baltic, by opening to him all the ports of Riga, Revel, Nerva, and Parnow, four famous towns for their great trade, particularly with the Engliſh, Dutch, and French; beſides with the Muſcovites and Poles in ſummer, by the rivers on which three of theſe towns are ſituated; and in winter by ſledges.

Riga. The capital of the province, is ſituated in 24 deg. of E. lon. and 57 deg. of N. lat. near the mouth of the river Dwina, and a bay of the Baltic ſea, being one of the beſt harbours in the Baltic. The ſhips which draw but about twelve feet of water, may proceed as far as Riga, where the river is near two leagues broad; but others are obliged to diſburden a little lower.

The moſt proper time for trading is during the two fairs, which are held there every year, one in the month of May, and the other in the month of September. Purchaſes are carried on there moſtly in rix-dollars, and the reſt in exchange for the merchandiſes brought there; but this traffic is ſomewhat troubleſome to ſtrangers, who cannot unload their ſhips till they have made a ſale to the burghers: however, ſome are found who let their names, and content themſelves with a fee for commiſſion.

The merchandiſes proper for Riga conſiſt in Rheniſh and French wines, but the former ſells beſt; ſpice and ſalt, two of the beſt commodities that can be brought there; ſugar, tobacco, vinegar, paper, ſome fruits, and haberdaſhery ware; but all theſe in ſmall quantities.

The chief commodities of Riga are hemp, flax, maſts, and timber. The quantity of the hemp is generally about 40,000 ſchiponds, or 6400 tons; which is brought down in ſtruzes, or flat-bottom'd boats. The Polanders bring a large proportion of theſe commodities, chiefly from the Poliſh Ukraine. The flax is brought from Druana and Lithuania, a great part of which they call Druana Ragitzer, and Lithuania Ragitzer. The timber is from thoſe parts of Poland which border on Turky; great part of that which is fit for maſts being two ſummers in its paſſage to Riga. This place formerly exported vaſt quantities of corn for Sweden and other countries: but, the ſyſtem of politics in that country having been for ſome time repugnant to that of Ruſſia, the town has ſuffered the inconvenience of a prohibition. Riga has ſometimes loaded 500 ſhips annually, of which above 300 were from the United Provinces: but, as the trade of that country in general has been for ſome years on the decay, the number of Dutch ſhips at this port has decreaſed; nor indeed has the timber, in which great part of the trade conſiſted, been ſo eſſential to thoſe provinces, ſince the Dutch have found that ſtones will make a more laſting fence againſt the inroads of the ſea.

Revel, is ſituated in 24 deg. of E. lon. and 59 deg. of N. lat. at the ſouth entrance of the gulph of Finland, 140 miles N. of Riga, and 110 miles W. of Narva. It had been for ſome time one of the Hanſe-towns, but renounced

nounced their alliance in 1550: tho' it is now a large city, and commodious harbour, where part of the royal navy of Ruſſia is uſually laid up. Its commerce is always very conſiderable; but not in the flouriſhing condition it was in, before the Engliſh diſcovered the port of Archangel; at which time it was the magazine for the greater part of the Ruſſian merchandiſe.

The merchandiſe imported to, and exported from it, are much of the ſame nature with thoſe either brought to or from Riga.

Narva, is ſituated upon a river of the ſame name, in 27 deg. 35 min. of E. lon. and 59 deg. of N. lat. 100 miles S. W. of Peterſburg. It once enjoyed the privileges of the Hanſe towns; but having been almoſt ruined, and its commerce quite decayed for near a century, it only began to recover its reputation towards the middle of the ſeventeenth; for, in 1654, as Olearius obſerves, there arrived at Narva not leſs than 60 Dutch ſhips, which bought to the value of upwards of five hundred thouſand crowns in merchandiſe. Since this time it has diſputed the precedency of commerce with Riga, and ſurpaſſed Revel.

The proximity of the towns of Novogorod, and Pleſkow, the latter of which is not above 120 miles from it, facilitates its trade with all this vaſt empire; being the paſſage for almoſt all the merchandiſes which are ſent to Moſcow.

The trade of Narva conſiſts moſtly of flax and timber: of the firſt about 220,000 poeds, or 3500 tons, are generally brought to market: but, the exportation of the latter is limited by the Ruſſian government to 120,000 bulks of firs, which are of twenty to 40 feet long, and 10 to 15 inches ſquare; the Engliſh generally demand the largeſt, and the Dutch the ſmalleſt kind; every ton of ſhipping in meaſurement will take a load of timber, 50 ſolid feet being reckoned to a load.

Parnow, or *Pernow*, is a ſmall port-town, ſituated upon a river of the ſame name, in 24 deg. of E. lon. and 58 deg. of N. lat. on a bay of the Baltic, 80 miles N. of of Riga. It had formerly only a corn trade, which brought to it ſome foreign ſhips; but ſince the inhabitants diſcovered the method of bringing down the river a great number of maſts, not leſs eſteemed than thoſe of Norway, and a great quantity of fir-timber, its trade is vaſtly increaſed; and ſince the year 1680, the Dutch have ſent there yearly upwards of 60 ſhips, inſtead of only 5 or 6 which they ſent there before.

But few merchandiſe are required for Pernow; and almoſt all its trade is carried on by the means of old rix-dollars.

Dorpat, is a town ſituated in 27 deg. 25 min. of E. lon: and 58 deg. of N. lat. on the river Embec, between the lakes of Worſero and Pepus, 50 miles S. of Narva.

The province of great *Novogorod*, is bounded by the provinces of Ingria and Belozero on the north; by Jeriſlaf towards the eaſt; by the province of Smolenſko on the ſouth; and by Livonia towards the weſt. The chief town is Novogorod, one of the moſt populous trading places in this part of the world, independent of any foreign prince, till the year 1477, when the great Duke of Muſcovy compelled them to receive a governor from him; and afterwards plundered the place, carrying away an immenſe treaſure. This city was formerly comprehended in the league of the Hans towns. It is ſituated in 34 deg. of E. lon. and 58 deg. of N. lat. on the river Wolcoff, near the lake of Ilmen, 130 miles S. of Peterſburgh, having 180 churches and monaſteries. The country about Novogorod abounds in grain, flax, hemp, honey, wax, and the beſt Ruſſia leather is manufactured here.

The province of *Belozero* has the lake of Onega on the north; the province of Wologda on the eaſt; and the province of Novogorod towards the ſouth and weſt: its principal town being of the ſame name, ſituated on the S. E. ſhore of the White lake, 150 miles E. of Peterſburg, and 100 miles N. E. of Novogorod.

The province of *Wologda* has Rubeneſka on the north; Jeriſlaf on the ſouth; and Belozero on the weſt. The chief town is Wologda, being ſituated in 42 deg. 20 min. of E. lon. and 59 deg. of N. lat. on the river Dwina, 235 miles N. of Moſcow. It is a large city, and ſurrounded with a ſtone wall, which is common in Ruſſia; being a place of very good trade; and when the late Czar propoſed the removing the mechanics and handicraft trades from hence to his favorite city of Peterſburg, it was repreſented to him, that there were three German merchants only ſettled at Wologda, who employed upwards of 20,000 perſons in dreſſing of hemp, and flax, which were annually exported to foreign countries, by the way of Archangel; and that if they were obliged to keep the ſame number at Peterſburg, where every thing was five times as dear, trade would be ſo far from turning to account, that they would be loſers by it. That the greater part of the goods exported from Archangel were of the growth of the province of Wologda, from whence they were eaſily carried to that port by water; whereas if they were ordered for Peterſburg, they muſt go a great way over land, and at a far greater expence. That the air about Peterſburg was too moiſt for the keeping hemp; and the navigation of the gulph of Finland ſo hazardous that the inſurance on ſhips was very extravagant; which were all found ſubſtantial reaſons againſt their removing to Peterſburg, and gave ſome ſtop to his project at the time.

Jeriſlaf, or *Jeriſlaw*, is the capital of the province of the ſame name, ſituated in 57 deg. of N. lat. on the river Wolga, in a plentiful country; the principal trade being in linen and leather.

Between great Novogorod and Jeriſlaf, lies the diſtrict of *Tweer*, the chief town whereof is called Tweer, in which the governor reſides. It is ſituated in 30 deg. 37 min. of E. lon. and 57 deg. 25 min. of N. lat. on the Wolga, 90 miles N. of Moſcow. A great many thouſand loads of wheat are brought up hither annually from Kaſan, and ſent from hence to Peterſburg in ſleds.

The province of *Smolensko* has alſo a capital town of the ſame name, ſituated in 33 deg. of E. lon. and 56 deg. of N. lat. on the confines of Poland, 200 miles W. of Moſcow; but of no conſiderable trade.

In the province of *Zernigof*, there are large markets of wooden ware, where hundreds of wooden houſes ready framed are daily expoſed to ſale: and when they meet with a purchaſer, they are ſoon taken to pieces, and ſet up in any part of the town where the buyer deſires. Were it not for this convenience, the inhabitants would often be reduced to very great diſtreſs by the fires which frequently happen and deſtroy many thouſands of their wooden tenements in a few hours; for as the ſtreets are laid with fir-timber, and the partitions of their yards and gardens are of the ſame combuſtible matter, if a fire happens in dry weather, and there is any wind, it is almoſt impoſſible to ſtop it.

The province of *Moſcow* has its capital of the ſame name, ſituated in 38 deg. of E. lon. and 55 deg. 45 min. of N. lat. on the river Moſcowa, 360 miles S. E. of Peterſburg, 800 E. of Stockholm, 1000 N. E. of Conſtantinople, 900 N. E. of Vienna, and 1400 N. of London; being very populous, and the capital of the empire before the building of Peterſburg.

There is nothing material in the province of *Nize*, or *Little Novogorod*, which has its capital of the ſame name, ſituated on the river Ocka, 200 miles E. of Moſcow.

The chief town in the province of *Caſan*, or *Kaſan*, is Caſan, near which, upon the Wolga, the ſhips of war and gallies are built, which are deſigned for the Caſpian ſea.

The province of *Bulgar* has a capital of the ſame name, ſituated on the Wolga, in 51 deg. of E. lon. and 54 deg. of N. lat. 120 miles S. E. of Caſan, and 450 E. of Moſcow.

Reſanskoi, or *Rezan*, is the capital of the province of Rezan, ſituated in 41 deg. of E. lon. and 55 deg. of N. lat. on the river Ocka, 85 miles S. E. of Moſcow.

The province of *Belgerod* has its capital town of the ſame name, ſituated upon the river Donets, in 37 deg. of E. lon. and 51 deg. 20 min. of N. lat. 130 miles S. W. of Woronets, and 220 E. of Kiof. The city of Woronets, or Veroneſe, is ſituated on the river Veroneſe, in 40 deg. of E. lon. and 52 deg. of N. lat. 120 miles S. of Moſcow

and it was at Woronets that the late Czar Peter built large men of war, cutting deep canals between the Voneſe and Wolga, to ſend ſhips down that river to the Caſpian ſea; as he did others by the river Don to the Euxine ſea.

f, or *Kiow*, is the capital of the Ruſſian Ukraine, being ituated on the river Nieper, and on the confines of Poland, in 30 deg. 30 min. of E. lon. and 51 deg. of N. lat.

The province of *Dwina* has the White ſea on the north; and the province of Rubeninſki on the ſouth. Archangel is the capital of this province, which is ſituated in 40 deg. 12 min. of E. lon. and 64 deg. 30 min. of N. lat. on the river Dwina, 4 miles from the White ſea, and 400 N. E. of Peterſburg; being the only port-town of Ruſſia for many years, and firſt reſorted to by the Engliſh in 1553: though the Ruſſians now build ſome of their own men of war here; and it ſtill continues a town of good trade.

The commerce of Archangel comprehends alſo that which may be carried on in ſeveral parts of Muſcovy, and even as far as Moſcow, by the means of the Dwina, on which Archangel is ſituated.

It is not above a century and a half, that the more ſouthern nations of Europe had a knowledge of this famous port of the White ſea, which was firſt reſorted to by the Engliſh, and afterwards by the Dutch, who now trade there more than all other nations.

The time of the fair, commencing the 20th of Auguſt, and continuing ten days, is that of the greateſt trade; tho' pretty good markets may be made 15 days before and after the fair.

This trade is tranſacted three ways; firſt, by the exchange of merchandiſe, which is the moſt uſual; ſecondly, partly by merchandiſe, and partly by ready money, which is the moſt advantageous; and thirdly, entirely by ready money, which foreign merchants pay for ſuch merchandiſe as they purchaſe from the Ruſſians.

The Engliſh and Dutch; as alſo the French, Swedes, Danes, Hamburgers, and Bremeners, who have their ware-houſes, and correſpondents at Archangel, ſend there ſeveral ſorts of merchandiſe, not for ſale on the ſpot, but to be tranſported to Moſcow.

The duties of importation and exportation for theſe ſorts of goods are 10 *per cent.* tho' but 5 *per cent.* for thoſe ſold at Archangel.

The principal building in this city is the palace, which is altogether built of free ſtone, and divided into three parts, whereof the firſt is occupied by foreign merchants, who keep their merchandiſe there, and have alſo lodgings. The merchants who reſort it yearly from Moſcow have likewiſe their apartments and magazines; but continue only till the departure of the ſhips, after which they lodge elſe where, or wait for the winter ſeaſon to return in ſledges.

In the ſecond part of the palace are the Czarina's ware-houſes, which ſtrangers alſo make uſe of ſometimes; and in the third part are the Ruſſian merchants.

Before the palace is a pretty large ſquare, which extends as far as the river; and when ſhips arrive, a large wooden wooden bridge is made for the more convenient loading and unloading of merchandiſe: but when the ſhipping ſail off, this bridge is taken down. The citadel, where the governor dwells, contains a great number of ſhops, where the Ruſſians who reſort to the fair expoſe their merchandiſe to ſale.

The beer which is brewed at Archangel is very good, but none are allowed to ſell it without the imperial licence, which is purchaſed at a dear rate; tho' the inhabitants may brew it for their own uſe, by paying about 2 s. ſterling *per* hogſhead.

French brandy is much eſteemed there; but it is ſo dear, upon account of the great duties of importation it pays, that the inhabitants and ſtrangers even content themſelves with the corn ſpirit made in the country, which is very good, and ſold at a reaſonable price.

The merchants of Archangel, ſince the reign of the Czar Peter Alexiowitz, were accuſtomed to ſend themſelves their merchandiſe to Riga, Narva, Revel, and as far as Koningſberg and Dantzick; but a part of this

commerce being interrupted by the war between the Muſcovites and Swedes, foreigners took an advantage thereof, and doubled the number of the ſhips which they before freighted for Muſcovy; ſo that the Dutch, who ſent uſually but 30 or 35 before the rupture between theſe two nations, ſent afterwards to the amount of 60 every year, which the Engliſh, Hamburgers, Danes, and Bremeners did alſo in proportion. In 1703, there arrived at Archangel 68 Engliſh ſhips, 50 Dutch, 18 from Hamburg, and 3 from Denmark, beſides the convoy of nine men of war.

Things have altered ſince the peace between the Muſcovites and the Swedes; Livonia having been ceded to the Czar, and his ſubjects having now almoſt the whole trade in their hands.

It is computed that the revenues of the Archangel cuſtom-houſe, with regard to foreign merchandiſe, amount one year with another to 58,000 l. ſterling.

There comes yearly to Archangel a grand cuſtom-houſe officer, when foreign ſhips arrive there, who has the inſpection of all the duties due to the government, and who purchaſes the merchandiſe the court has an occaſion for. He has under him four aſſiſtants, and a great number of other clerks, to hinder a contraband trade, or any fraud in the duties.

All the merchandiſes imported to Archangel pay 5 *per cent.* importation, except thoſe to be ſent farther; which, as it has been already intimated, pay 10 *per cent.* Wines and brandy are alſo excepted; whoſe duties are paid purſuant to the eſtimation made by the imperial farmers.

Several bills of exchange are drawn from Archangel upon Amſterdam, during the months of September and October, being the time of the greateſt commerce; and they are uſually payable at one month's ſight, or on the laſt of December. The bills of exchange drawn on Archangel have no privilege, and paſs only for ſimple obligations; having even no days of grace, which occaſions ſtrangers to draw but ſeldom on this town.

The other provinces of European Ruſſia are no ways remarkable for trade.

The ſeas of *Aſiatic Ruſſia* are the Frozen ſea, and the Caſpian ſea. The lakes are thoſe of Baikal, Kiſan, and Kologol.

The rivers are the Wolga, which runs a courſe of 2000 miles, and diſcharges itſelf into the Caſpian ſea, below Aſtracan: the Oby; the Geneſa, or Jeniſca; and the Lena, which fall into the Frozen ocean. The Argun which divides the Ruſſian and Chineſian empires, diſcharging itſelf into the river Yamour.

The air in the north of Tartary is exceſſive cold; the earth being covered with ſnow 9 months in the year. The ſouthern provinces lie in a temperate climate, and would produce moſt kinds of corn and vegetables, if there were hands to cultivate the ſoil: but the people who inhabit it lead a rambling life, driving great herds of cattle before them to ſuch parts of the country where they can meet with the beſt paſture, and ſeldom remain long enough in a place to reap a crop of corn, if they ſhould plough and ſow the lands where they pitch their camps.

The countries of Aſtracan and Siberia are the moſt remarkable. In the former is the city of Aſtracan, the capital of the kingdom, ſituated in 52 deg. of E. lon. and 47 deg. of N. lat. on the eaſtern ſhore of the river Wolga, 80 miles N. of the Caſpian ſea, 800 S. W. of Moſcow, and 450 N. of Aſtrabadt.

Aſtracan is about 2 ½ miles round; but, including the ſuburbs, near 5 miles. It contains about 70,000 inhabitants, among whom are many Armenians and Tartars of various denominations, with a few Perſians and Indians, whoſe manners and cuſtoms exhibit an epitome of Aſia.

The commerce of this city is very conſiderable, though much diminiſhed by the troubles in Perſia, and the frequent revolts and inſolent behaviour of the Tartars. Not long ago they traded to Kheeva and Bockhara; but at preſent their commerce is confined to Ruſſia and Perſia.

The inhabitants have about 38 veſſels, from 60 to 100 laſts, of 2 tons Engliſh, for the Perſian trade; of which ſome belong to the government, and mount a few ſmall pieces of cannon. The trading ſhips carry proviſions to

the frontier towns of Terkie and Kiſlar, ſituated on the Caſpian ſea, and likewiſe merchandiſe to the ſeveral parts of Perſia, at certain ſtated rates. They are alſo occaſionally employed by the Perſians, to carry proviſions from Ghilan to Baku, Derbend, and other places.

Their foreign trade conſiſts in red leather, linens, woollen cloths, and European manufactures, which they export to Perſia, the greateſt part for the account of the Armenians. In return, they import ſeveral manufactures of Perſia, particularly thoſe of Caſan, as ſilk ſaſhes intermixed with gold, for the conſumption of the Polanders; wrought ſilks and ſtuffs mixed with cotton; rice, cotton, raw ſilk, and a ſmall quantity of drugs: they alſo bring rhubarb; but, as the government has engroſſed this article, private perſons are forbid to deal in it on penalty of death. The officers of the admiralty and cuſtom-houſe of Aſtracan have very ſmall ſalaries, which is the caſe in all other places of Ruſſia; ſo that, inſtead of doing their duty to diſpatch buſineſs, they often ſeek pretences to protract it, in order to obtain more conſiderable preſents; upon which occaſions, French brandy, white wine, hats, ſtockings, ribbons, and ſuch like, are acceptable.

About ten miles below Aſtracan is a ſmall iſland, called Boſmakoff, remarkable for its large ſtore-houſes of ſalt, which is made about 12 miles to the eaſtward of it; and being brought thither in boats, is conveyed in large flat-bottomed veſſels up the Wolga, with which all the country is ſupplied as far as Moſcow and Twere. They dig annually ſome millions of pounds, the excluſive property of which is in the crown, and brings in a conſiderable revenue; for the common food of the ſoldiery, and the bulk of the people, is bread and ſalt. In this place alſo are large fiſheries, to which the neighbourhood of the ſalt-works is of great advantage; for from theſe fiſheries all the country is ſupplied as far as St. Peterſburg: the veſſels are loaded with ſalt-fiſh, and ſent away in the ſpring; but as freſh fiſh keeps good ſo long as it is frozen, the winter is no ſooner ſet in, than it is tranſported by land as far as Moſcow and St. Peterſburg; the principal ſorts being ſturgeon, ſtarlett, belluga a large white fiſh, and aſſotra reſembling ſturgeon; as alſo cavear, the roes of ſturgeon and belluga. The firſt eſtabliſher of theſe fiſheries was Tikon Demedoff a carrier, who ſettled here about 50 or 60 years ago: his whole fortune then conſiſted of two horſes; but, through his induſtry and abilities, he became the greateſt merchant in that country.

The country about Aſtracan is conſiderably improved by ſome French refugees, and other mechanics and huſbandmen, which the court of Ruſſia ſent there; who have planted vineyards, and made ſeveral ſorts of wine: beſides, they have begun to plant mulberry trees for raiſing ſilk.

Siberia, formerly denominated Great Tartary, or the ancient Scythia, is ſituated between 60 and 130 deg. of E. lon. and 47 and 72 deg. of N. lat. being bounded by the Frozen ocean on the north; by the Pacific ocean, China, and Chineſian Tartary on the eaſt; by the Mogul's, and Uſbec Tartars on the ſouth; and by the rivers Oby and Irtis, which ſeparate Aſiatic from European Turky, on the weſt; being upwards of 2000 miles long from eaſt to weſt, and 1500 broad from north to ſouth.

There have been ſeveral rich mines of iron, copper, and ſilver, diſcovered in the north; where their iron manufactures are very conſiderable.

The principal places are Tobolſki, Surgut, Tumeen, and Jappantrin.

Tobolſki is ſituated in 63 deg. of E. lon. and 57 deg. of N. lat. at the confluence of the rivers Tobol and Irtis, 800 miles E. of Moſcow, and 1000 E. of Peterſburg. It ſtands upon a hill, being ſurrounded by a wall, and other modern works: but it is not ſo remarkable for trade, as it is for being the uſual place of baniſhment for ſtate priſoners; for here the princes Menzikoff and Dalgorucki, the Duke of Courland, and the great Count Munich were ſent; as alſo the Swediſh priſoners taken at the battle of Pultowa, who have ſet up ſeveral manufactures, and contributed a great deal towards poliſhing the ignorant natives.

It is at Surgut, eſpecially up the country towards Narum, by aſcending the Oby, that the moſt beautiful furs of Siberia are met with; which conſiſt in ſables of a pa brown, others perfectly black, beſides ermins, and bla foxes extremely beautiful.

Theſe black foxes are almoſt all preſerved for the Czarina and are computed to be worth upwards of 60 l. ſterlin a piece. There are abundance of others half black, a mixed with grey; beſides otters, and beavers, of an e traordinary ſize.

The inhabitants of Tumeen, who are chiefly Ruſſian drive on a pretty good trade; particularly with the Ka muck and Bulgarian Tartars.

But few furs are found there, thoſe of bears and r foxes excepted. However, there is a foreſt at ſom leagues from the town, called Hetkoilwolloc, filled wi an abundance of theſe animals, which afford grey fur ſo much eſteemed among the Ruſſian nobility, that the exportation is prohibited under ſevere penalties. The colour does not change in winter; and their leather very ſtrong. The grey furs of Samaroſkoi-jam, anoth town of Siberia, are next in eſteem to thoſe of Tume Jappantrin is a ſmall town ſituated upon the river Tur and conſiderable only for its beautiful furs, which a brought there every year from divers parts; being moſt deſtined for the imperial ware-houſes.

The Oſtiacks are ancient inhabitants of Siberia, and at pr ſent ſubject to the Czarina. The remains of this peop are very poor, and for the moſt part reduced to the e tremeſt miſery: however, they carry on a trade wi ſtrangers, to find ſome ſuccour, and to ſupply their want but as they cannot give ſecurity to thoſe who advan them any merchandiſe; and as their ignorance, as well poverty, puts them out of a condition of giving not to their creditors; they have found out a new and ve ſtrange way of remedying this double inconveniency.

They make for this purpoſe certain marks on their hand as the figures of birds, cyphers, and ſuch other repr ſentations; which they ſhew to thoſe who lend them an thing, that they may thereby be again known. F want of theſe artificial marks, if nature, or ſome acc dent, has made on their face, or elſewhere, any wart moles, ſcars, &c. they ſhew them alſo to the merchan with whom they treat; engaging themſelves by the marks, as by a kind of contract, to pay them in the l mited time, which they never fail to do; and when the have acquitted themſelves, they ſhew again the mark t annul the obligation.

The merchandiſes they give in payment for thoſe the have borrowed, are fiſh, fur, and ſometimes money.

This part of the north furniſhes the ſame furs as La land, except ſables, which are reſerved for the Czarina and which would cauſe the confiſcation of all other me chandiſe, unleſs ſold by the clerks of the imperial war houſes, and bore the imperial ſtamp.

Vitzora, and *Portzora*, are two ſmall towns where there a Ruſſian garriſon; and a more commodious trade, bu dearer, than that carried on by going in ſledges drawn b rain-deer.

Pepinogorod is almoſt wholly peopled by Muſcovites, an the greateſt warehouſe for furs which the Czarina has o that ſide: and the Danes, who hazard themſelves t bring there their merchandiſes thro' Borandai, acquir ſome advantage.

The Burates are people of Ruſſian Tartary, who dwe along the river Angara, and the lake Bekal.

They are very rich in cattle, particularly in oxen an camels; it being uſually by them that the Ruſſian car vans which go to, or return from China, furniſh them ſelves with theſe ſorts of animals, which are paid for i merchandiſe, and not in ready money, which they hav no regard for.

The merchandiſe proper for them are pale ſables, tin c copper baſons, red cloths of Hamburg, otter ſkins, Per ſian ſilks of all colours, and gold and ſilver ingots.

The largeſt ox may be bought for about 20 s. ſterling and the ſtrongeſt camel for about 2 l. ſterling.

Tomskoi, is a town ſituated upon the river Tom, and famou for its commerce to China by the ſubjects of the Chan of Buſuchtu, and by the Bochares, among whom ar

ſome Ruſſian merchants. This journey conſiſts of three months in going, and three months in returning; but with inexpreſſible trouble; becauſe every particular, even wood and water, muſt be tranſported in ſome places on camels; and it would be impoſſible for the Ruſſians alone, or other foreign nations, to perform this journey; becauſe the country abounds with robbers, who pillage all paſſengers unleſs they are well eſcorted.

The principal commerce of Tomſkoi conſiſts in fiſh, corn, lead, iron, and copper, which are found in the neighbouring mountains; but what makes it moſt famous, is the trade of the white furs called Telarskibielki, which are hard to be met with elſewhere.

There is alſo rock cryſtal in its neighbourhood, and upon the banks of the river divers ſtones of different colours; but ſcarce more beautiful than the factitious ſtones made in Europe.

Aſoph, or *Azach*, a city of Coban Tartary, is now ſubject to Ruſſia; being ſituated upon the Don, or Tanais, not far from the place where this great river empties itſelf into the Palus Meotis. This part of Aſia was ſcarce known in Europe before the year 1695; but the famous Czar Peter Alexiowitz having taken this fortreſs from the Turks, with the deſign of eſtabliſhing a fleet there, which ſhould not only acquire for him the whole commerce of the Black ſea, but alſo be capable of making the Grand Signior tremble in his capital, Aſoph attracted very ſoon the attention of all people; but by the treaty of 1739, between Ruſſia and Turky, it was agreed, that the fortifications ſhould be demoliſhed, and the town remain ſubject to Ruſſia; which has prevented the Ruſſians from eſtabliſhing a maritime force at Aſoph.

It is from Aſoph that a part of the cavear ſold at Conſtantinople comes; where, one year with another, there arrive to the amount of 10,000 butts, the butt weighing 7 quintals and a half.

Two or three ſaiks laden with ſturgeons, come alſo yearly from Aſoph to Conſtantinople; but theſe fiſh are not ſo good as thoſe caught at Kily.

To this trade of Aſoph may be added the ſlave trade, which is very conſiderable; being carried on by the Turks and Greeks, who purchaſe them from the Crim-Tartars.

Two hundred years ago, Ruſſia having no communication with any other ſea than the White ſea, and the Frozen ocean at that time unfrequented, had then but a very ſlender ſhare of foreign trade. Their furs, and other merchandiſe, came to us from Livonia, which was under another ſovereign; and were embarked at the ports of Narva, Revel, Pernaw, or Riga; but in the laſt year of the reign of Edward VI. a ſociety of Engliſh merchants being incorporated by the name of "The merchant adventurers for the diſcovery of lands unknown, &c." of whom Sebaſtian Cabot was the firſt governor, they fitted out three ſhips, the admiral called the Bona Eſperance, of 120 ton, commanded by Sir Hugh Willoughby; the ſecond called the Edward Bonadventure, of 160 ton, commanded by Captain Richard Chancellor; and the third called the Bona Confidentia, of 90 ton, commanded by Captain Cornelius Duforth.

In this voyage, Sir Hugh Willoughby and Captain Duforth, ſailing too far northward, were found in a creek near Kegor, on the coaſt of Lapland; Sir Hugh, and all his company, conſiſting of 70 perſons, being frozen to death. Captain Chancellor, being ſeparated from the other two by a ſtorm on the coaſt of Norway, ſteered for Wardhouſe, the moſt northerly part of Norway, as had been agreed upon in caſe of an accident, and afterwards went to Archangel. Here he learnt that this country was called Muſcovy, or Ruſſia, and that John Baſiliowitz was the ſovereign of it: the governor immediately diſpatched an expreſs to Moſcow, with intelligence that the Engliſh had found the way into the bay of Archangel, and deſired to eſtabliſh a trade there; whereupon the ſovereign of Ruſſia ordered, that proper conveniencies ſhould be prepared to attend the captain and his company to Moſcow; when the captain preſented to him a general letter from Edward VI. In anſwer to which his Ruſſian majeſty declared, that he was deſirous the Engliſh ſhould reſort to his country and traffic there.

Soon after, the company's agents, and the Ruſſian commiſſaries, had ſeveral conferences upon the ſubject of trade; and his Ruſſian majeſty granted to Sebaſtian Cabot the governor, Sir George Barnes conſul, and Sir John Greſham and aſſiſtants, and to the commonalty of the aforeſaid fellowſhip, and their ſucceſſors for ever, among others the privileges and immunities following:

1. That the ſaid company, their agents and factors, with their ſhips, goods and merchandiſe, might enter into any of the cities or territories of Ruſſia, by ſea, land, or freſh water, and there remain and traffic with the merchants and people of any nation whatſoever, and with the ſame, or any other goods and merchandiſe, depart into any other country at pleaſure, without any reſtraint, or paying any toll, cuſtom, or impoſition whatſoever, for their ſhips, merchandiſes, or other effects, without ſtanding in need of any other ſafe conduct, or licence general or ſpecial from the government, than this preſent grant.

2. That the Engliſh ſhould be ſubject to, and governed only by ſuch perſons as the company ſhould appoint; and thoſe who fled from juſtice ſhould be delivered up to the Engliſh company by the Ruſſians.

Thus were the Engliſh eſtabliſhed in the Ruſſian trade, and enjoyed the ſole benefit of it for 25 or 30 years, without interruption; when the Dutch began to put in for it. It was not long before that the Spaniards and Portugueſe had forced into America and the Eaſt Indies, whereby they engroſſed moſt of the trade of all the world, and amaſſed a prodigious treaſure: this incited the Engliſh to attempts of the like nature, who hoped a ſhorter paſſage to the Indies, by the N. E. or N. W. and thereby to partake of thoſe beneficial trades, or rather to diſcover ſome countries equally rich to the northward, which neither the Spaniards nor Portugueſe had yet frequented: for all Europe ſeemed to acquieſce at firſt in the propoſition the Pope had made of the new diſcovered countries in the eaſt to the Portugueſe, and thoſe in the weſt to the Spaniards. It was 80 years at leaſt before the Engliſh, or any other nation in Europe, attempted to trade, or ſend colonies to the Eaſt or Weſt Indies after they were diſcovered; the Engliſh ſtill continued to neglect the beaten road thither, and threw away their men and money in attempting an impracticable paſſage thither by the N. E. and N. W. for near 50 years ſucceſſively, in which attempt the Dutch followed their ſteps; however, the Engliſh by this means happened to eſtabliſh a trade to Ruſſia in the manner abovementioned, and fell into the whale-fiſhery on the coaſt of Greenland. But tho' the Engliſh privileges in Ruſſia were ſeveral times confirmed by their emperors, the Dutch at this day have an equal ſhare in that trade; and the Engliſh pay the ſame duties of import and export as other nations.

The Dutch no ſooner found the way to Ruſſia, than, according to their conſtant cuſtom all the world over, they began to magnify the power of their ſtate, to vilify the Engliſh, and endeavour to ſupplant them in their trade; which occaſioned often an abridgment of the privileges of the Engliſh, and hardſhips to their merchants and factors: but they were not entirely deprived of the advantages granted them by the crown of Ruſſia, until the murder of King Charles I. when the Dutch, tho' themſelves enemies to monarchy by principle, repreſented the Engliſh as the moſt abandoned race of men, advocates of anarchy, and deſtroyers of their princes, who deſerved to be extirpated by all foreign nations; which had ſuch an influence upon the Ruſſians, that the Dutch gained their ends. Since that unhappy æra, the Engliſh have been obliged to pay ſuch cuſtoms as the Ruſſians were pleaſed to demand, which they raiſe and fall according to the caprice of their princes, and are ſeldom leſs than 5 *per cent.* on merchandiſe.

As the ſovereign is the moſt conſiderable merchant in Ruſſia, their ſhips at preſent ſerve indifferently for men of war and merchantmen: but the Ruſſians have not made any attempt towards a foreign trade in their own bottoms till within a few years.

By the treaty of commerce concluded between Great Britain and Ruſſia, in December 1734, it was agreed, that the ſubjects of Great Britain might bring into Ruſſia all

ſorts of goods and merchandiſe, and carry them through the dominions of Ruſſia, by the ſhorteſt and moſt convenient way to Perſia, paying 3 *per cent. ad valorem*, in rix-dollars, from the duty and tranſit of the ſaid goods, and no more under any pretence whatſoever; the ſame duty being to be paid for all goods brought from Perſia into Ruſſia.

The opening of a trade over the Caſpian ſea to Perſia, has, ever ſince the diſcovery of Archangel by the Engliſh, been conſidered as capable of producing ſo many advantages to Great Britain, that attempts were made towards obtaining a ſhare in it ſo early as the very eſtabliſhment of the Ruſſian company. King Edward VI. in 1553 ſent out Sir Hugh Willoughby and Capt. Chancellor, who diſcovered Archangel; after which a trade was ſettled in Ruſſia, and extended to Perſia over the Caſpian in 1581, when the war which broke out between the Turks and Perſians hindered the Engliſh from puſhing on their diſcoveries, and defeated their moſt ſanguine expectations.

The French formed a deſign of opening a trade from Archangel over the Caſpian ſea, in the beginning of the laſt century, as well as in this; but it does not appear that they carried either into execution: though it is certain that they chiefly ſupply Turky with woollen goods, and gain upon the Engliſh in that trade every day; beſides they probably do and may through them ſupply a great part of Perſia.

Peter the Great, a few months before his death, requeſted in a particular manner of Mr. Richard Mainwaring, an Engliſh merchant, then on his departure for England, to treat with the merchants in London, about opening a trade through his country to Perſia: but this was neglected, till the year 1738, when Mr. John Elton made a propoſal to ſome of the Britiſh factors to carry on a trade through Ruſſia into Perſia, by way of the Caſpian ſea; which was encouraged by an act of parliament. Britiſh factors were ſent into the north of Perſia; and the trade was carried on with ſome ſucceſs, till the Ruſſian miniſtry put an end to it in 1746, by prohibiting it from being carried on through their country; which was owing to a jealouſy of Capt. Elton, who had been formerly in the Ruſſian ſervice, and was employed as a factor for the Engliſh Ruſſian company for eſtabliſhing this trade in Perſia, where he entered into the ſervice of Nadir Shah, and built ſhips for him in the European manner on the Caſpian, which gave the Ruſſians great offence, as they dreaded that this would give the Perſians the command of that ſea.

The tranſit duty in Ruſſia is 3 *per cent.* on the value of Engliſh goods, with an agio of 150 *per cent.* which, with other petty charges, make it about 8 *per cent.* only in the cuſtom-houſe: and in Perſia the duty on European goods is 5 *per cent.* on the value.

But, however advantageous this trade appeared, and notwithſtanding the encouragement it received from the Britiſh parliament, it has fell to nothing. See *Perſia*, and *Silk*.

The revenues of the Czarina are ſaid to amount only to 3,000,000 l. ſterling a year. Never any nation received ſo entire a change, as this did in the reign of Peter the Great, who died on the 8th of February 1725. Before this great Prince aſcended the throne, the Ruſſians deſpiſed all arts and ſciences; and looked on every other nation with the utmoſt contempt; never imitating any of their improvements, or travelling among them. Their armies were a confuſed multitude, and they had not a ſingle ſhip on their coaſts; when Peter I. after travelling through all the polite nations in Europe, obliged his principal ſubjects to do the ſame, and be inſtructed in every art and ſcience. He new modelled their army, and created them a navy: he refined them into the manners of the beſt civilized people, taught them the utility of trade, and made them the moſt flouriſhing and formidable people in the north.

The Greek church is the eſtabliſhed religion; and it is an arbitrary government.

The goods of the Ruſſian produce which are moſt eſteemed, are the leather and hides of Jeriſlaf; the wax and honey of Pleskow; the tallow of Wologda; the oil of the neighbourhood of the Wolga; the hemp and flax of Novogorod; the pitch of Dwina; and the ſables and other furs of Siberia. The court monopoliſe the fur trade; as alſo that of China, and all ſtrong liquors, whether beer, mead, or ſpirits, which muſt be purchaſed of the agents of the government. A kind of land tax is laid on all eſtates, and other poſſeſſions; nor are the clergy excuſed from taxes.

The Ruſſian navy is now become very formidable; tho' when Peter I. came to the throne, he had not one warlike ſhip in his dominions: but now there are from 60 to 80 ſail of capital men of war to be ſeen before Peterſburgh; beſides leſſer men of war, prahmes, frigates, ſloops, and gallies, amounting to above 300 more; which employ a great body of ſeamen, and give Ruſſia the maritime balance over Sweden and Denmark.

The Ruſſians have nothing to fear on the ſide of China and Perſia: but the Turks and the Crim Tartars may give them ſome diſturbance. Ruſſia has no enemies to dread in Europe, where ſhe can rely on the friendſhip of Great Britain. The Ruſſians know very well that the Engliſh were the firſt who diſcovered Archangel; that they had an excluſive privilege to trade in Ruſſia in the reign of Queen Elizabeth; and that Peter the Great, whoſe maxims of government are juſtly dear to them, always ſhewed a diſtinguiſhed regard to the Britiſh merchants. The Ruſſians are alſo ſenſible of the political, as well as the commercial intereſt of the two nations, and conſider Great Britain as their hereditary friend.

Mr. Hanway, a very judicious merchant, who reſided ſeveral years in the Britiſh factory of St. Peterſburg, obſerves, that the Britiſh houſes in that city have not only a trade to Great Britain and Ireland, but to Holland, Pruſſia, Sweden, Holſtein, and ſeveral parts of Germany; as alſo to Portugal, Spain, and Italy. Beſides ſome particular favours in the cuſtoms, the ſame gentleman remarks, that the Britiſh factors in St. Peterſburgh eſteem it a valuable privilege, that in all caſes where they are defendants, particularly bankruptcy, their affairs are cognizable by the college of trade, and their books ſacred to the inſpection of reputable merchants appointed by that college. In many caſes alſo where they are plaintiffs they apply to the college of trade: but their common ſuits and demands for money of the Ruſſian merchants have been for ſome years transferred to the magiſtracy; which Mr. Hanway ſays, was a moſt ignorant and corrupt tribunal in his time; but if it ſhould continue the ſame it is in the power of the factors to repreſent this grievance.

With regard to quartering of ſoldiers in Ruſſia, the Britiſh ſubjects are indulged in a peculiar manner; and no doubt it ought to be deemed a favour, under a military government, to be exempt from it: but the Ruſſians are ſo cautious of being laviſh of any eſſential part of the treaty with Great Britain, that, in order to aſcertain the legality of property, when a Britiſh ſubject firſt appears in the cuſtom-houſe of St. Peterſburg, the officers demand a certificate of the Britiſh conſul, that the perſon is really what he pretends to be; and, without it, they will not clear his goods.

But Mr. Hanway further obſerves, that this Britiſh factory has been for ſome time blended with foreigners, who in conſequence of their naturalization, have enjoyed a participation of the privileges and immunities of the company. This the Britiſh factors ſaw with impatience, and at length ſent their remonſtrances to their principals in London; in conſequence of which, in 1752, an oppoſition was made to a bill then depending before the parliament in behalf of a foreigner.

It was pretended, in favour of ſuch a naturalization, that the trade carried on by the Ruſſian company was a monopoly againſt foreigners. But it was made evident, that there cannot be a greater trade, where a greater liberty is open to the natives of the country than this in queſtion. The Ruſſian markets are always well ſupplied, each trader purſuing his own inclination to import, and his own opinion concerning the riſe and fall of markets, and the opportunities of ſale. Some Britiſh houſes in Petersburg have for ſeveral years had from 40 to 100 bales of cloth remaining over the annual demand. The credit given

the Ruſſians is never leſs than 12 months, unleſs in ſmall articles, and it is often extended to 15 and 18 months; and the price of goods are as low as poſſible, for the merchant to receive a living profit. There are no monopolies, or excluſive privileges, aſſumed by the Ruſſia company; nor any rule of conduct eſtabliſhed, which has the leaſt appearance of being injurious to Great Britain: for any natural-born proteſtant ſubject may, for 5 l. take his freedom of the company, go into Ruſſia, and eſtabliſh a houſe of buſineſs, under the protection of the Britiſh crown. The Engliſh merchant may alſo conſign goods to any perſon who is a native of Ruſſia, or a ſubject of Great Britain; remembering, that the advantage in favour of the Britiſh ſubjects, in Ruſſia, is about one third part in the cuſtoms of ſoldiers cloths, Yorkſhire, and flannels. Nor is there any reſtraint with regard to the markets of Great Britain; for any Ruſſian, as well as freeman of the company, may ſend Ruſſian goods into England; being only to pay the aliens duty, as eſtabliſhed by law, which amounts to 3 s. 4d. on a ton of hemp, or about 3-4ths *per cent.* on the preſent value of hemp, at 23 l. *per* ton. The law of nations, the right of reciprocal protection, beſides the articles of the treaty, make the Ruſſians free to trade to Great Britain; where ſome Ruſſian merchants have actually come; but, finding they could not diſpoſe of their goods in a ſatisfactory manner, nor live near ſo cheap as at home, they returned to their own country.

The Britiſh trade to Ruſſia has ariſen from the connections of the extenſive commerce of the Britiſh factors, entirely independent of Britiſh naturalized ſubjects in Ruſſia: but this is not the caſe with naturalized ſubjects. There long has been, and it is to be hoped ever will be, an honourable diſtinction abroad between Britons and other foreigners, both as Britons and as merchants; not in the eſteem of the Ruſſians only, but of all other nations. Whether it is worthy of national obſervation or not, can be determined only by the nature of the ſubject: but it is apparent, continues Mr. Hanway, that the naturalization of foreigners to reſide in Ruſſia creates ill blood in the breaſts of the Britiſh natural-born ſubjects who are in that country: it would have created much more, but that there are few of the naturalized factors who have not failed: had they conducted their trade with moderation and prudence, it is probable the Britiſh commerce might have been entirely in their hands, and Great Britain nothing the better for the commiſſion on the ſale of Britiſh commodities, or on the purchaſe of thoſe of Ruſſia. Beſides, is it not highly reaſonable to think, that ſuch naturalized ſubjects would be leſs tender than the Britiſh factors, in regard to the prices Great Britain might pay for naval ſtores?

RUSSIA *Company.* See *North* Companies.

Red RUSSIA, or *Little Ruſſia*, is a province of Poland. See *Poland.*

RUYNAS. A root for dying, called by the Indians ſoliman-doſtyn, and found in ſome provinces of Perſia, particularly in the neighbourhood of Tauris.

There is a conſiderable trade of it in the Indies, where are ſent one year with another 300 bales, each bale containing 150 or 160 lb. and 12 lb. of this root uſually coſt 12 mamoudis, or 8 s. 9 d. ſterling.

RYAL. See *Rial.*

RYE. The name of an inferior ſort of bread corn, too well known to require a deſcription.. It is uſually ſold at the corn exchange in London, from 17 to 18 s. the quarter. See *Corn.*

RYE, or *Ry.* A ſhore, ſtrand, or bank of the ſea.

RYE. A borough and port-town of Suſſex, ſituated on a bay of the Engliſh channel, 60 miles S. E. of London, and 30 miles E. of Lewes.

RYPEN. A city and port-town of Denmark, in the province of Jutland, capital of the territory of Rypen, ſituated on a bay of the German ocean, in 9 deg. of E. lon. and 51 deg. 30 min. of N. lat. 60 miles N. W. of Sleſwic.

S.

SAC

S. IN books of navigation, ſignifies ſouth; *S. E.* ſouth-eaſt; *S. W.* ſouth-weſt; *S. S. E.* ſouth-ſouth-eaſt.

S. ſometimes alſo ſtands for *ſocius*, fellow, member; and ſometimes for *ſocietas*, as *R. S. S. regiæ ſocietatis ſocius*, fellow of the royal ſociety.

S. A. in medicinal preſcriptions, is an abbreviature of *ſecundum artem*, according to the rules of art, chiefly uſed where ſome uncommon care or dexterity is required.

SABA. One of the Caribbee iſlands in the Atlantic or American ocean, ſituated in 63 deg. of W. lon. and 18 deg. of N. lat. a little W. of St. Chriſtopher's, ſubject to the Dutch. See *Dutch* America.

SABLE. A kind of a wild pole-cat, whoſe ſkin is furniſhed with pretty long hair, ſoft, and gloſſy, bordering upon a black colour, and ranked among the moſt precious furs.

The ſables, called by ſome ermins, are found commonly in Lapland and Siberia, two provinces of Muſcovy; and the privilege of hunting them, together with other animals that furniſh ſuch like beautiful furs, makes a conſiderable part of the Ruſſian revenues.

They are either hunted by criminals who are condemned to live there; or by ſoldiers, who reſide there often 7 or 8 years together.

Both are obliged to bring every week into the imperial warehouſes a certain number of ſkins, at which they are taxed; and as they are to take care, under very ſevere penalties, that theſe ſkins are not perforated, or daubed with blood, they diſcharge only one ball at the animal, and take aim at the head, at which they are very expert.

The ſables are uſually brought from Ruſſia by the way of Archangel, and are purchaſed in cheſts ſorted from No. 1. to No. 10. which diminiſh in beauty from the firſt to the laſt.

A cheſt of the deareſt ſort coſts uſually about 440 l. ſterling; which amounts to about 20 s. *per* ſkin, one with another. A cheſt of the inferior ſort is ſold for about 264 l. ſterling; which amounts to about 13 s. a ſkin, one with another.

The greateſt conſumption of theſe ſkins is in Turky, or in Ruſſia: however, great parcels of them are bought up by the Engliſh, Dutch and Hamburghers, and diſtributed in other countries. See *Fur*, and *Ruſſia*.

The ſables ſleep in the winter for a conſiderable time, in very ſecret places; and, if they are diſcovered, they roll themſelves in a round form, like the hedge-hog. They live upon mice, cedar-kernels, red berries, fiſh, and other things. There are ſables as white as ſnow, but ſeldom to be met with. The moſt beautiful ſable-ſkins have generally the worſt tails, and the worſt ſkins the fineſt tails.

SABLE *Cape*, or *Cape Sable*. The moſt ſoutherly point or promontory of Nova Scotia, ſituated in 65 deg. of W. lon. and 43 deg. 45 min. of N. lat. near which is a fine cod-fiſhery.

SACARE. A ſmall weight uſed by the inhabitants of Madagaſcar for gold and ſilver, weighing as much as the European ſcruple. Above the ſacare are the ſompi and vari; under it the nanqui and nanque.

SACCAI. A city and port-town of Japan, ſituated on the bay of Meaco, in 135 deg. of E. lon. and 36 deg. of N. lat. 300 miles S. W. of Jeddo.

SACCHI. A corn-meaſure uſed at Leghorn, 40 of which make 10¼ quarters of London.

SACK *of wool*, is a determinate quantity, containing juſt two weys, or 13 tod, or 26 ſtone, and every ſtone 14 pounds; ſo that the ſack is 364 lb. See *Wool*.

In Scotland a ſack is 24 ſtone, each ſtone containing 16 lb. A ſack of cotton wool is a quantity from one hundred and half to 400 weight.

SACK *of coals*, is the the 12th part of a chaldron, and three buſhels make the ſack. See *Meaſure*.

SAF

SACK, is alſo a certain meaſure uſed in ſeveral parts of Europe for corn, legumes, and other things; or rather a eſtimation to which ſeveral other meaſures are referred thus, at Amſterdam the ſack is uſed for meaſuring corn 4 ſchepels make the ſack, and 36 ſacks the laſt, or about 10¼ quarters of London.

SACQUIERS, is a term at Leghorn for the ſalt meaſurers because they furniſh ſacks for the exportation of ſalt.

SACRIFICE. An iſland in the gulph of Mexico in America, ſituated in 99 deg. of W. lon. and 18 deg. of N. lat. 45 miles eaſt of La Vera Cruz, ſubject to Spain.

SADDLE. A kind of ſtuffed ſeat, laid on the back of a horſe, for the conveniency of the rider.

The origin of the ſaddle is not well known. Goropius Becanus attributes its invention to the Salii, a people among the antient Franks; and hence, ſays he, came the Latin *ſella*, ſaddle. It is certain the antient Romans were unacquainted with the uſe either of the ſaddle or ſtirrups; whence Galen obſerves, in many places, that the Roman cavalry, in his time, were ſubject to ſeveral diſeaſes of the hips and legs, for want of having their feet ſuſtained on horſeback: and, long before him, Hippocrates had noted, that the Scythians, who were much on horſeback, were troubled with defluxions in their legs, becauſe of their hanging down.

The firſt time we hear of ſaddles among the Romans was in the year 340; when Conſtantine, endeavouring to deprive his brother of the empire, made head againſt his army; and entering the ſquadron where he himſelf was, threw him off his ſaddle, as we are informed by the hiſtorian Zonaras. Before, they made uſe of ſquare panels, ſuch as is ſeen in the ſtatue of Antoninus in the capitol. The uſe of ſaddles was firſt eſtabliſhed in England by a law of Henry VIII. whereby the nobility were obliged to ride on ſaddles: though it is but very lately that the Iriſh have taken to it. There are various kinds of ſaddles, as the

Running SADDLE. A very ſmall one, with round ſkirts.

Burford SADDLE, which has the ſeat and ſkirts plain.

Pad SADDLE. Of which there are two kinds; the one made with burs before the ſeat, the other with bolſters under the thighs.

French Pad SADDLE, the burs whereof come all round the ſeat.

Portmantua SADDLE, furniſhed with a cantle behind the ſeat, to keep a carriage off the rider's back.

Side SADDLE, and *Pillions*, are for women.

War SADDLE, furniſhed with a cantle, and a holſter both behind and before.

SADLER. An artificer, who makes ſaddles, and provides all manner of furniture for riding-horſes and horſemen as houſings, holſter-caſes, bridles, capariſons, girths, ſurſingles, bruſhes, ſpunges, and curry-combs.

SADLERS *company of London*, appears to be a fraternity of great antiquity, by a convention agreed upon between them and the dean and chapter of St. Martins le Grand about the reign of Richard I. at which time it is imagined to have been an adulterine guild, as it was only incorporated by letters-patent of Edward I. by the appellation of The wardens and keepers of the commonalty of the myſtery or art of ſadlers, London.

This company is governed by a prime, and 3 other wardens, with 18 aſſiſtants: they have a livery of 7 members, whoſe fine of admiſſion is 10 l. and a beautiful hall in Cheapſide, wherein they diſpatch their affairs.

SADERASAPATAN. A port-town on the coaſt of Coromandel, in the Eaſt Indies, ſituated in 80 deg. of E. lon. and 12 deg. 30 min. of N. lat. 40 miles ſouth of fort St. George; where the Dutch have a factory.

SAFE *Conduct*. A ſecurity given by the prince, under his great ſeal to a ſtranger, for his quiet coming in and paſſing out of the realm; the ſafe conduct being granted to enemies, and the paſſport to friends. See *Paſſport*.

Judg

Judges ſometimes give ſafe-conducts to delinquents or priſoners, to enable them to act in their affairs.

SAFE-*Guard*, at ſea, denotes a rope, which ſaves and ſecures any thing: for inſtance, that whereby perſons walk ſecurely over the bolt-ſprit.

SAFE-*Guard of the helm*, is a rope which goes through the helm, and is faſtened to the ſuttocks of the ſhip.

SAFFRON. A plant which produces a flower of the ſame name; whence alſo a drug called ſaffron, or crocus, is gathered.

The root which produces the ſaffron is a kind of bulb, or onion, covered with ſeveral bulbous cartilages. Its graſſy leaves are long, narrow, thick, and ſoft to the touch: its flower, which appears ſometimes before the leaves, and ſometimes after them, is a pale purple, ſtreaked with whitiſh lines; but towards the bottom of the petala the purple is deeper: from the middle of the flower ariſe three long flame-coloured ſtamina or chives, crowned with their apices. Under theſe is the ovary, or vaſculum ſeminale, by ſome called the piſtil of the plant. It is divided into three capſulæ, wherein the ſeeds are formed. From the upper part of the ovarium ariſes the ſtylus, a long, ſlender tube, incloſed with the fiſtular part of the flower; where it is of a whitiſh colour, but changes into a yellow before its diviſion, which is into three parts, oppoſite to the tops of the ſtamina. It is theſe three parts only that make the true ſaffron of the ſhops, for the ſake of which alone the plant is cultivated. They are of a yellow colour juſt at the beginning from the ſtylus, but afterwards are all of a deep red colour; only their jagged extremities tipped with white inclining to yellow.

As ſoon as the flower is gathered, they ſeparate the ſtylets, and lay them on hurdles, or in large ſieves, or on a little kiln for that purpoſe, with a little coal-fire underneath to dry them. When dry, the ſaffron is in its perfection, and fit for uſe. It is obſerved, that five pounds of freſh ſtyles, which ſome, by miſtake, call the chives, only make one pound of dry ſaffron. The good qualities of ſaffron are, that its ſtyles be long and broad, that they be velveted over with a fine red, of an agreeable ſmell, free of yellow threads, and very dry. The beſt ſaffron in Europe is that of England, chiefly about Walden in Eſſex: that brought from Spain is good for nothing, becauſe of the oil the Spaniards mix with it to make it keep.

The ſaffron of Perſia is in great eſteem, and grows with little culture in ſeveral parts of that country. The beſt is found on the coaſts of the Caſpian ſea, and in the neighbourhood of Amadan, the antient Suza; however, the latter yields in goodneſs to the former.

The ſaffron of Smyrna is of a pretty good quality, and one year with another about 20 quintals are gathered of it. There is alſo a baſtard kind of ſaffron in the Levant, called *ſaffranum*.

Saffron of Malabar and Babylon is the root called commonly terramerita. See *Terramerita*.

The ſaffron-grounds in England lie between Saffron-Walden in Eſſex, and Cambridge, which is an open level country, with few incloſures; and the ſaffron is always planted upon fallow ground, that which has borne barley the year before being moſt preferred. The crop is for two years, and the land lies fallow the third: but the ſaffron grounds are ſeldom above three acres, or leſs than one; the ſoil being a temperate dry mould, ſuch as commonly lies upon chalk, and is of a hazel colour. The time of planting is commonly in July, which is done by ſetting the roots with a narrow ſpade, called a ſpit-ſhovel; the quantity of roots planted in an acre being generally about 16 quarters, or 128 buſhels, amounting to about 400,000 roots. In September the ſaffron-flowers appear, and are gathered early in the morning; but, about the Midſummer after the third crop is gathered, the roots are taken up and tranſplanted.

The cultivation of one acre for ſaffron may coſt about 24 l. for three years: it may produce 26 lb. of neat ſaffron in that time, which is worth about 30 s. a pound; ſo that the neat profits are 15 l. 13 s. though, in plentiful years, ſaffron is ſold for 20 s. a pound, and at other times from 3 to 4 l.

Saffron is uſed both in food and medicine, to chear, fortify, and reſolve. It is the greateſt cordial in medicine, and a ſure promoter of a diaphoreſis: it is alſo uſed by illuminors to make a golden yellow colour.

SAFFRON, is alſo a name given to ſeveral chemical preparations, from the reſemblance of their colour to that of vegetable ſaffron, but more uſually called croci. Such are

SAFFRON *of Venus*;

SAFFRON *of Mars*; and

SAFFRON *of Gold*.

SAFRE, or *Zafre*. A mineral, uſed for giving a blue colour to glaſs and earthen ware; which is brought from Surat in the Eaſt Indies, particularly by the Engliſh and Dutch.

The ſafre ſerves alſo for colouring ſome enamelled works; and the falſe lapis is only tin calcined, coloured with this mineral. The factitious ſapphires have alſo their colour from ſafre.

SAGAPENUM. A medicinal gum, whoſe ſmell comes very near that of the pine, from whence it has its name. It flows by inciſion from the trunk of a ferulaceous plant growing in Perſia. The beſt is in bright tranſparent tears, of a ſtrong, pungent, porraceous ſmell, and the whiter and freer from dirt the better. Sometimes it is found as white, both within and without ſide, as milk; though this is very rare. It is eſteemed aperitive and purgative; proper in the epilepſy, aſthma, and palſy; and is alſo uſed externally, to aſſuage pains, and reſolve tumours.

SAGATHEE, in commerce. A ſlight woollen ſtuff, being a kind of ſerge or ratteen, ſometimes mixed with a little ſilk; manufactured chiefly at Amiens in France, as alſo in ſome parts of England.

SAGE. A medicinal herb, of an agreeable, aromatic taſte, eſteemed an excellent cephalic of the detergent kind, and on that account likewiſe uſed as a vulnerary and diuretic. There are ſeveral kinds of ſage; thoſe uſed and cultivated in England are the tea-ſage, or ſage of virtue, the red ſage, and the common or wormwood ſage: the firſt has the moſt agreeable flower; on which account it is cut when young, and full of ſap, dried, and kept for tea.

The Dutch dry and prepare their ſage like other teas, and carry it to the Eaſt Indies as a very precious thing; where they get a good market for it, the Chineſe preferring it to the beſt of their Indian teas; and for every pound of ſage-tea, giving in exchange two of theirs, which they ſell again very dear in Europe. See *Tea*.

The common, or wormwood ſage, is eſteemed the beſt in medicine; and it is that alone which is uſed in ſhops. It makes an excellent gargariſm, eſpecially if ſharpened with a little acid. Its decoction is very grateful and cooling, with the addition of a little lemon juice. It is both detergent and abſorbent, and as ſuch finds place in diet-drinks, and medicated ales, intended for cleanſers and ſweeteners of the blood.

Sage, when viewed with a microſcope, appears covered all over with little ſpiders, which are ſeen to walk about. It yields, by diſtillation, a very agreeable, aromatic oil, of ſome uſe in the ſhops.

SAGGIO. A ſmall weight uſed at Venice, being the 6th part of an ounce. The pound contains 11 ounces, each ounce 6 ſaggios, and each ſaggio 20 carats.

SAGO, *Sagu*, or *Sagdu*. A medicinal ſimple, brought from the Eaſt Indies; of conſiderable uſe in diet, as a nouriſher, and reſtorative. Sago is a ſort of bread procured from a tree called landan, growing in the Moluccas. When the tree is felled, they cleave it into two in the middle, and dig out the pith, which is even eatable when it comes freſh out of the tree. They pound it very ſmall in a mortar, till ſuch time as it is reduced into a kind of powder, ſomewhat like meal: this done, they put it in a ſearce made of the bark of the ſame tree, and place the ſearce over a ciſtern made of its leaves, pouring water upon it; by which means they ſeparate the pure part of the powder, from the veins of wood wherewith the pith abounds. The flour thus filtrated they call ſago; which they make into paſte, and bake it in earthen furnaces: this they do with ſo much expedition, that in three

three or four hours a man makes as much bread as will feed a hundred perſons a day. From the ſame tree they alſo draw a liquor, as agreeable to drink as European wines. The leaves, when they are young, are covered with a kind of cotton, whereof they make their cloth; and as they grow older, they ſerve them to thatch their houſes. The larger veins of theſe leaves ſerve them for ſtakes in building; and of the ſmaller they make a kind of hemp, wherewith they make very good ropes.

SAH-CHERAY. A Perſian weight of 1170 derhems, each derhem being the 50th part of the pound of 16 oz. avoirdupois. See *Batman*.

SAICK, *Sayque*, or *Saique*. A Turkiſh veſſel, very proper for the carriage of merchandiſes. It has ſquare ſails on the middle maſt, without either mizzen, top-gallant, or ſhrouds; only a main-maſt, with a main-top-maſt, both very high, with a bolt-ſprit, and a little mizzen-maſt. The height of the main-maſt makes the ſaicks viſible at a great diſtance. Their make renders it impoſſible for them to go with a ſide-wind: but when they have the wind behind them, nothing can outgo them; and the generality of them carry no guns.

SAIL, in navigation. An aſſemblage of ſeveral breadths of canvas, or ſtrong hempen cloth, ſewed together by the liſts, and edged around with a cord, faſtened to the yards and ſtays of a veſſel, to make it drive before the wind which bears thereupon.

There are two kinds of ſails; the one ſquare, generally uſed in high-bottomed veſſels: this has various names, according to the various maſts it is faſtened to; as the main-ſail, mizzen-ſail, ſprit-ſail, and the like.

The others are triangular, called ſmack-ſails, and by ſome Latin-ſails, becauſe chiefly uſed in Italy, and in flat-bottomed veſſels; though they are alſo uſed on the mizzen-maſts and ſtays of other veſſels: they need but few ropes, and little wind; but are dangerous, and not to be uſed in foul weather.

There are ordinarily ten ſails in large veſſels; which number is increaſed at bottom, by the addition of bonnets, and at the ſides by caſe-ſails. A veſſel is ſaid to ſet ſail, to go with full ſail, to make all her ſail, that is, to open all her ſail. To be under ſail, is to be ready to ſet ſail.

SAILS, alſo denote the vanes of windmills, or the arms or flights whereby the wind has its effect on windmills, which are either horizontal or perpendicular.

SAIL-*cloth*, is a particular ſort of cloth, or canvas, made of hemp. See *Sail*.

By the ſtatute of the firſt of James I. it was enacted, that no perſon ſhould make any cloth for ſails, called mildernix and powledavies, but ſuch as ſhould be apprentices in the trade of making the ſaid cloth for ſeven years, upon pain of forfeiting 20 s. for every month: and that no perſon ſhould make the ſaid cloths of any other ſtuff than of good hemp, nor of leſs length than 33 yards, nor of leſs breadth than three quarters; nor ſhould ſell, or offer to ſell, the ſaid cloths, before the ſtuff was well beaten, ſcoured, bleached, and the cloth well driven with a brazen or iron ſhuttle, upon pain to forfeit for every piece 5 s.

By the ſtatute of the 7th and 8th of William III. it was enacted, That ſo much Engliſh made ſail-cloth as ſhould be fit for the ſervice of his Majeſty's navy, ſhould have the preference of foreign ſail-cloth. And the commiſſioners of the navy were required, to contract for ſuch Engliſh ſail-cloth, and to allow the makers 2 d. *per* yard above what they paid for of equal goodneſs; and that Engliſh made ſail-cloth, upon proof upon oath of its being made in this kingdom, ſhould be exported free of cuſtom.

By the ſtatute of the 9th of George II. it was enacted, That all ſail-cloth made in Great Britain, ſhould be made in manner hereafter mentioned, namely, every bolt of Britiſh ſail-cloth, 24 inches in breadth, and 38 yards in length, ſhould weigh according to the following numbers and weights:

No. 1.	44	lb. each bolt.	No. 6.	29	lb. each bolt:
2.	41		7.	24	
3.	38		8.	21	
4.	35		9.	18	
5.	32		10.	15	

In caſe any bolt of Britiſh ſail-cloth ſhould be made of a different breadth or length, ſuch bolt ſhould be in weight in proportion, and ſhould be marked with ſuch number as ſhould be agreeable to the weight, and the warp or chain of the firſt ſix numbers ſhould be wholly of double yarn, and ſhould contain in every bolt that ſhould be 24 inches in breadth, 360 double threads; and in every bolt 30 inches in breadth, 700 double threads, and in every other breadth in proportion; and the warp, or ſhoot-yarn, in every bolt of the four firſt numbers, ſhould be of long flax, without any mixture of ſhort or bar-flax, or of long flax, or Italian hemp, or Braack hemp; and all the flax and hemp that ſhould be uſed in making the warp and ſhoot-yarn of ſuch ſail-cloth of the ſaid four numbers, ſhould be of a ſtrong ſtaple, good in its kind, and well dreſſed; and the yarn ſhould be well cleanſed, even ſpun, and well twiſted; and all the ſhoot-yarn of each bolt of the ſaid four numbers ſhould be as ſtrong as the warp-yarn, and cloſe ſtruck, with four ſhoots of double threads at the diſtance of every two feet; and both the warp and ſhoot-yarn ſhould be as ſtrong as the warp and ſhoot-yarn that are uſually wrought in the ſail-cloth of thoſe four numbers that are made for his Majeſty's navy; and that no flax-yarn wrought in Britiſh ſail-cloth ſhould be whitened with lime, on forfeiture of 6 d. *per* yard, or be worked up in new ſails in Great Britain, any ways eſſentially different or inferior to the aforeſaid directions. And that every maker ſhould cauſe this act, or an abſtract thereof, to be put in ſome public part of the loft, or work-room, where his trade is carried, under the penalty of 40 s.

By acts paſſed in the 12th Anne, 5th and 10th Geo. I. 8th, 15th, and 16th George II. ſail-cloth Britiſh made, for which bounty has been given on exportation, afterwards relanded, is forfeited; and every perſon concerned in bringing back, or relanding the ſame, forfeits 2 s. for every ell.

By an act in the 9th George II. ſail-cloth, Britiſh made or canvas foreign, uſually entered as Hollands duck, or Vitery canvas, uſed in making ſails, muſt at importation be ſtamped with a ſtamp, to be provided by the commiſſioners of the cuſtoms, denoting the place from whence the ſame was brought.

For counterfeiting the ſaid ſtamp, or knowingly expoſing to ſale any foreign ſail-cloth, or canvas, with a counterfeit ſtamp thereon, the forfeiture is 50 l.

No perſon to work up any ſuch foreign ſail-cloth, or canvas, without the ſtamp, upon forfeiture thereof, and 20 l.

Every ſhip or veſſel built in Great Britain, or his Majeſty's plantations in America, is on her firſt ſetting out to be furniſhed with a compleat ſett of ſails of Britiſh ſail-cloth, upon penalty of 50 l. to be paid by the maſter thereof.

Every manufacturer muſt affix, or impreſs a ſtamp, containing his name and place of abode on every piece of ſail-cloth made by him.

If any perſon ſhall ſell, or expoſe to ſale, or work up into ſails any piece of Britiſh ſail-cloth, without being ſtamped, and be convicted thereof by the oath of a credible witneſs, before one or more juſtices of the peace of the county, &c. where the offence is committed, he ſhall forfeit to 10 l. for every piece.

Any perſon wilfully cutting off or obliterating ſuch ſtamp, or uſing a ſtamp containing the name and place of abode of any other perſon, is upon conviction to forfeit 5 l. for every offence, to be recovered by diſtreſs, and ſale of the offenders goods, by warrant from two or more juſtices, to be applied to the uſe of the informer.

The bounty on Britiſh made ſail-cloth exported was granted by the ſtatute of the 12th of Queen Anne, and by the 24th of George II. continued to 1757.

Britiſh made ſail-cloth, or canvas, fit for or made into ſails, upon the exporter's oath of its being made in Great Britain, that it is exported without intention of relanding in Great Britain, and that no former allowance for this duty was made for the ſame, is to be allowed for every ell ſo exported 1 s.

And by the 4th George II. was granted, without

mitation, a further allowance for every ell ſo exported 1 d. To be paid out of the new duty on foreign ſail-cloth 2 d. See Naval *Stores*.

SAIL-*cloth-maker*, is a perſon who makes ſail-cloth of dreſſed hemp, ſpun in the ſame manner as rope-yarn, both by men and women, and wove like other linen cloth; but the Dutch ſail-cloth-makers are reputed the beſt.

SAIL-*maker*, is a perſon who ſews and ſhapes all the ſails.

SAILING, in a general ſenſe, is uſed for the art or act of navigating, or of determining all the caſes of a ſhip's motion by means of ſea-charts. See *Navigation*.

Of this there are three kinds, plain, Mercator's, and circulating.

Plain SAILING, is that performed by means of rhumbs drawn on a plain chart.

Mercator's SAILING, is that performed by rhumbs drawn on a Mercator's chart.

Circular SAILING, is that performed by the arch of a great circle, which, of all others, where practicable, is the ſhorteſt.

Doctrine of plain and Mercator's ſailing. I. The longitude and latitude of two places given, to find the departure or miles of longitude.

In plain ſailing, 1. If both places be more eaſterly than the firſt meridian, ſubtract the leſs longitude from the greater, the remainder is the difference of meridians. If one of the places be more eaſterly, and the other more weſterly than the firſt meridian, and the longitude of the more eaſterly to the compliment of the longitude of the more weſterly to a whole circle, the ſum is the difference of meridians. 2. Divide the difference of meridians into ſo many parts as there are degrees in the difference of latitude; or if the difference of latitude be greater than that of the meridians, into ſo many fewer. 3. Reduce the minutes of longitude anſwering to one part, into miles of the ſeveral parallels, in the former caſe; or into miles of the parallel, which is an arithmetically mean proportional between the two, in the latter caſe. 4. The aggregates of theſe parts collected into one ſum, exhibit the departure, or miles of longitude. Suppoſe the longitude of one place 35 deg. and that of the other 47 deg. the difference of meridians is 12. Suppoſe the latitude of the firſt 4 deg. and that of the latter 8 deg. the difference will be 4 deg. conſequently we have ſailed from the 4th to the 8th parallel. Therefore divide 12 by 4, and reduce the quotient 30 into miles in the ſeveral parallels 4, 5, 6, and 7, the ſeveral quotients will be 43 deg. 71 min. 43 deg. 8 min. 43 deg. 65 min. and 43 deg. 59 min. the ſum of which is 174, the departure or miles of longitude required.

In Mercator's ſailing, the reduction is much more commodiouſly performed; wherein the arch intercepted between the two meridians, is applied to an arch of the meridian intercepted between the two parallels; and the diſtance it there meaſures, gives the departure or miles of longitude required. See *Departure*, and *Longitude*.

II. The longitnde and latitude of two places, to and from which a ſhip is to ſail, being given, to find the rhumb to be ſailed on, and the diſtance to be run.

In plain ſailing: 1. Find the departure by the laſt caſe. 2. From the departure, and difference of latitudes, find the loxodromic angle, or rhumb-line; which is done by this proportion: as the difference of latitude is to the departure, ſo is the whole ſine to the tangent of the angle of the rhumb-line. The diſtance then to be run on this rhumb, is to the departure, as the whole ſine to the ſine of the angle of the rhumb.

In Mercator's ſailing, 1. Apply the center of the mariners compaſs on the place ſailed from on the Mercator's chart, and ſo as the north and ſouth line thereof be parallel to ſome of the meridians. 2. Mark the rhumb of the compaſs, wherein the place ſailed to is placed; for this is the rhumb to be ſailed on. 3. The ſame rhumb is likewiſe found by drawing a right line with a protractor, finding the angle the rhumb makes with any meridian it cuts. The ſame may alſo be found by loxodromic tables. Thus, 1. Chuſe a rhumb at pleaſure, and under the ſame, in the tables, find the longitudes correſponding with the given latitudes: the difference whereof, if it coincide with the difference of the given longitudes, the rhumb is well choſen; otherwiſe another muſt be pitched on, either more or leſs oblique, till the tabular difference agree with the given difference. 2. The rhumb thus found, the diſtances anſwering the given latitude, muſt be taken from the tables, and the leſs ſubtracted from the greater, when the remainder is the diſtance ſought.

III. The rhumb and diſtance ſailed being given, to find the longitude and latitude of the place arrived at.

In plain ſailing, 1. From the data, find the difference of latitude of the two places, by the proportion delivered under the article *Rhumb-line*. This difference added to the latitude of the place ſailed from, or ſubtracted from the ſame, the ſum, or the remainder, leaves the latitude of the place ſailed to. 2. From the ſame, find the departure, and thence the latitudes of the place ſailed to, as directed under *Rhumb-line*.

By the loxodromic tables, 1. Under the given rhumb, ſeek the diſtance anſwering to the latitude of the place ſailed from; and either add it to, or ſubtract it from the given diſtance, as the latitude of the place ſailed to is greater, or leſs than that ſailed from. 2. Under the ſame rhumb, aſcend or deſcend further till you meet with the diſtance corrected. 3. The latitude anſwering thereto in the firſt column, is the latitude of the place ſailed to. 4. From the ſecond column of the table take the longitudes correſponding to the latitudes of the places ſailed to and from; their difference is the difference of longitudes of the places ſailed to and from.

IV. The latitude of the places ſailed to and from, together with the rhumb ſailed in, being given; to find the diſtance and difference of latitude.

In plain ſailing: from the difference of latitude, and the rhumb given, find the diſtance, and from the ſame data the departure; this converted into degrees of a great circle, exhibits the difference of longitudes ſought.

By the tables: take both the longitudes and the diſtances anſwering to the latitudes of the given places, out of the tables; then ſubtract both the longitudes and differences from each other; the firſt remainder is the difference of longitude, the latter the diſtance of the places.

V. The latitudes of the places ſailed from and to, with the diſtance given; to find the rhumb, and the difference of longitude.

In plain ſailing: from the difference of latitude, and the diſtance, find the rhumb, and from the ſame data find the departure; which may be alſo determined from the rhumb now found, and the difference of latitude, or from the rhumb and the diſtance run. Laſtly, from the departure find the difference of the longitude.

By the tables: ſubtract the given latitudes from each other; and in the tables ſeek the rhumb, under which the diſtance run anſwers to the given difference of latitude. Subtract the longitude under the rhumb, anſwering to the latitude of the place ſailed to; and that under the ſame rhumb, againſt the latitude of the term ſailed to, from each other, the remainder is the difference of longitude ſought.

VI. The difference of longitudes of the places ſailed to and from, with the latitude of one of the places, and the diſtance run, being given; to find the rhumb, and the latitude of the other.

In plain ſailing: convert the difference of longitude into miles of longitude for the departure; from the given departure, and diſtance run, ſeek the rhumb; and from the ſame, and the rhumb, ſeek the difference of latitude; which, and the latitude of one place being had, the latitude of the other readily follows.

By the tables: take a rhumb at pleaſure, and under the ſame in the tables find the longitude, and the diſtance anſwering the given latitude. Add the given diſtance to the diſtance found in the tables, if the veſſel ſailed from the equator; or ſubtract it therefrom, if it ſailed towards the ſame. With the ſame ſum, or the difference, enter the tables; and the longitude found againſt it ſubtract or add from that juſt found. If the remainder be found the given diſtance of longitudes, the rhumb is well taken; otherwiſe it muſt be changed for a more or

leſs oblique one, till the ſame operation being repeated, the remainder be found the difference of longitudes; then the latitude in the firſt column, correſponding to the diſtance, will be the latitude of the other place.

VII. The difference of longitude, and the latitude of one of the places, being given, together with the rhumb; to find the diſtance, and the latitude of the other place run.

In plain ſailing: reduce the difference of longitude into miles of longitude, or departure, as in the firſt caſe: from the departure and the rhumb find the difference run; and from theſe, or from the rhumb, and the diſtance run, find the diſtance of latitude. This done, as the latitude of one is already had, that of the other is ſo too.

By the tables: under the given rhumb ſeek the diſtance run, and the difference of longitude anſwering to the given latitude. If the veſſel has ſailed towards the pole, the difference of longitude is to be added to the given difference of longitude; if towards the equator, it is to be ſubtracted from the ſame. In the former caſe, deſcend in the table, and in the latter aſcend; till in the firſt the aggregate, in the latter the difference, be ſeen in the column of longitude. The latitude anſwering hereto in the firſt column is that ſought; and from the diſtance anſwering to this latitude in the firſt column, the tabular diſtance is to be ſubtracted; or, in the latter caſe, the diſtance to be ſubtracted from the tabular diſtance. What remains, is the diſtance run.

From the ſolution of theſe caſes in ſailing, it is evident, that ſome are more eaſily performed by the charts than the tables, and that the Mercator's charts are preferable to the plain ones; ſince in the latter the diſtance is not reduced by the map, but by a particular ſcale for that purpoſe.

SAILING, in a more confined ſenſe, is the art of conducting a veſſel from place to place, by the working or handling of her ſails and rudder; though, what is done by the means of this latter, is more properly called ſteering.

To bring ſailing to certain rules, M. Renau computes the force of the water, againſt the ſhip's rudder, ſtern, and ſide, and that of the wind againſt her ſails. In order to this, he, 1. conſiders all fluid bodies, as air, water, &c. as compoſed of little particles, which, when they act upon, or move againſtany ſurface, all move parallel to one another, or ſtrike againſt the ſurface after the ſame manner. 2. That the motion of any body, with regard to a ſurface on which it is to ſtrike, muſt be either perpendicular, parallel, or oblique.

If the different degrees of velocities be conſidered, it will be found, that the forces will then be the ſquares of the velocities of the moving air or water; that is, a wind that blows thrice as ſtrong, or moves thrice as ſwift as another, will have nine times the force upon the ſail. And it being alſo indifferent, whether you conſider the motion of a ſolid in a fluid whoſe particles are at reſt, or of thoſe particles moving all parallel againſt a ſolid that is at reſt, the reciprocal impreſſions being always the ſame; if a ſolid be moved with different velocities in the ſame fluid matter, as ſuppoſe water, the different reſiſtances which it will receive from that water will be in the ſame proportion as the ſquares of the velocities of that body.

SAILORS. The elder ſeamen, who are employed in working and managing the ſails, the tackle, and ſteering. See *Seamen*.

SAIN. A ſilver coin current in Aſiatic Georgia, worth about 2½ d. ſterling.

SAKER. A ſmall ſort of cannon; whereof there are three ſpecies, extraordinary, ordinary, and leaſt ſized.

SAKER *extraordinary*, is about 4 inches diameter at the bore, 1800 lb. weight, 10 feet long, its load 5 lb. ſhot 3 inches and a half diameter, and ſomething more than 7¼ lb. weight, its level is 163 paces.

SAKER *ordinary*, is 3 inches 3 quarters bore, 9 feet long, and 1500 lb. weight: its charge 4 lb. of powder, bullets diameter 3 inches and a half, weight 6 lb. its level range 160 paces.

SAKER *of the leaſt ſize*, is 3 inches and a half diameter at the bore, 1400 pounds weight, 8 feet long, its load near 3 pounds and a half, ſhot 4 pounds 3 quarters weigh and 3 inches and a quarter diameter.

SAL, in chemiſtry, ſalt.

SAL *prunella*. See *Chryſtal* Mineral.

SAL *volatile oleoſum*, is the name of an aromatic volati ſalt, firſt prepared by Sylvius de la Boe, and found a ver good medicine, chiefly as a cephalic, and cordial.

SALAMIS, or *Colouri*. An iſland in the gulph of Engi in European Turky, ſituated in 24 deg. of E. lon. a 37 deg. 32 min. of N. lat. oppoſite to Athens, or S tines, and a little S. W. of it; being 50 miles in circum ference.

SALAMPOURIS. A linen cloth manufactured in ſeve parts of the Coromandel coaſt of India, being eith white or blue; of which the Engliſh of Madras fe great quantities to the Manilles.

SALARY. A ſtipend or wages allowed any perſon, conſideration of his pains, induſtry, or ſervice, in other man's buſineſs.

SALE. A making over of any property, alienation, c vention, or contract; whereby one of the contracti parties engages to deliver a certain thing to another, a put him in poſſeſſion thereof in conſequence of a cert price.

There are two ſorts of ſales; one regarding merchand and other moveable effects; and the other immoveab as houſes, lands, &c.

The ſale of moveable effects is voluntary by deliveranc or forcibly by auction, in a public place authoriſed juſtice.

The ſale of immoveable is alſo forcible, or volunta The forcible are judicially tranſacted by a decree, and voluntary by contracts before notaries. There is anot ſort of voluntary ſale of immoveables made by a dec *ad libitum*, for clearing mortgages, and rendering the quirer certain of his acquiſition.

A merchandiſe, or commodity of good ſale, is that wh is in good condition, and may be eaſily ſold to adv tage.

The ſale of a merchandiſe is ſaid to be high, when product thereof has been conſiderable, and that there much to be gained; and the ſale is ſaid to be over wh all is ſold.

Bill of SALE. See *Bill* of Sale.

SALE *by inch of candle*. See *Candle*.

SALE *by the baſon*, is a term at Amſterdam for all pub ſales, either diſcretionary, or ordered by juſtice; be ſo called, becauſe a copper baſon is uſually ſtruck, wi ſome merchandiſes are adjudged and delivered to laſt bidder.

SALE *out of hand*, is ſaid alſo, in the ſame city, of particu ones from hand to hand, either by the interpoſition brokers, or only by the purchaſer and vender.

SALE, is alſo ſaid of the time of diſpoſing of certain m chandiſes; thus the Eaſt India company is to begin a day the ſale of their ſtuffs, muſlins, &c.

SALEM. A port-town of New England in America, tuated in 70 deg. of W. lon. and 42 deg. 20 min. of lat. a little north of Boſton; ſaid to be the firſt ſettlem the Engliſh had in New England.

SALESMAN. One who keeps a ſhop, and ſells all ſo of cloaths ready made; alſo one who is employed to other mens cattle in Smithfield, or other markets.

SALERNO. A city and port-town of Italy, in the ki dom of Naples, in the Hither Principat, ſituated o bay of the Tuſcan ſea, in 15 deg. 20 min. of E. l and 40 deg. 40 min. of N. lat. 27 miles ſouth Naples.

SALINA, or *Salamis*. A port-town of the iſland of C prus, ſituated in the Levant, on the ſouth-ſide of iſland, 100 miles weſt of Tripoli in Syria.

SALLEE. A port-town of the empire of Morocco, the kingdom of Fez, ſituated on the coaſt of the lantic ocean, in 7 deg. of W. lon. and 34 deg. of lat. 150 miles ſouth of Gibraltar; where there is ge rally a ſmall ſquadron of rovers, or pirates, that m prizes of chriſtian ſhips.

SALMA. A liquid meaſure uſed in Calabria and Apu two provinces of the kingdom of Naples in Italy.

The ſalma is of 10 ſtars, and the ſtar of 32 pignatolis or pots, which make much about a pint.

SALMA, is alſo a weight of 25 lb.

SALMA, is likewiſe a corn-meaſure uſed at Palermo in Sicily, containing 16 tomolis, and the tomoli 4 mondels; $10\frac{2}{7}$ ſalmas make the laſt of Amſterdam, or $10\frac{1}{4}$ quarters of London.

SALMON. A fiſh, which, according to ſome, breeds in the ſea; but the opinion of others ſeems better warranted, that they breed in the clear ſandy parts of rivers, not far from the mouths thereof. They commonly ſpawn in October, and the young becomes a ſamblet the following year, and in a few months a large ſalmon. The milter and ſpawner having performed their office, betake themſelves to the ſea; and if their return be prevented by wears, or the like, they become ſick, lean, and pine away, and die in two years time. If they ſpawn in the mean time, their produce is a diminutive ſalmon, called ſhegger, which will never arrive at the natural bulk; it being the ſea that makes them grow big, and the rivers fat. The female is diſtinguiſhed from the male, in that its noſe is longer and more crooked, its ſcales not ſo bright, and its body ſpeckled over with dark brown ſpots; its belly flatter, and its fleſh not ſo red; more dry, and leſs delicious to the taſte. In ſpawning time, when they repair from the ſea up to the rivers, ſcarce any thing can ſtop their progreſs, for they have been ſeen to leap up cataracts and precipices ſome yards high. See Salmon *Fiſhery*.

SALONA. A port-town of Dalmatia, ſituated on a bay of the gulph of Venice, in 18 deg. of E. lon. and 43 deg. 15 min. of N. lat. a little eaſt of Spalatto, 58 miles N. W. of Raguſa, ſubject to Venice.

SALONICHI, or *Theſſalonica*. A city and port-town of European Turky, capital of the province of Macedon, ſituated on a bay of the Archipelago, or Egean ſea, 260 miles weſt of Conſtantinople, in 24 deg. of E. lon. and 41 deg. of N. lat.

SALSAPARILLA. See *Sarſaparilla*.

SALSETTE, or *Canorin*. An iſland on the weſt-coaſt of the Hither India, in Aſia, ſituated in 72 deg. 15 min. of E. lon. and 19 deg. of N. lat. being ſeparated from the iſland of Bombay by a narrow channel, half a mile over, and fordable at low water; it is 20 miles long, 17 broad, and in the poſſeſſion of the Portugueſe.

SALT, in chemiſtry. A ſimple, acid ſubſtance, which enters the compoſition of all bodies, and is held one of the five principles or elements thereof, only to be extracted by fire.

M. Homberg obſerves, that ſalt is an ingredient in all animal, vegetable, and mineral bodies, excepting perhaps ſome metals and ſtones. In vegetables, and mineral bodies, that have undergone a fermentation, the ſalt riſes firſt in the alembic, then the phlegm.

Salts are diſtinguiſhed, with regard to the manner of extracting them, into volatile, fixed, and eſſential.

Volatile SALTS, are thoſe light, ſubtile ones, which riſe eaſily upon diſtillation, or are even exhaled by the noſe, and rendered ſenſible to the ſmell.

Fixed SALTS, are ſuch as, being more groſs and material, reſiſt and ſuſtain the fire; and are not raiſed by it, but remain after calcination or diſtillation, in the earthy part, at the bottom.

Eſſential SALTS, are thoſe drawn from vegetables, without the uſe of fire; as by chryſtallization, and other eaſy natural means.

Volatile SALTS, become diſtinguiſhable to the noſe, tongue, and brain, by their tenuity and briſkneſs; fixed ſalts, by their bitterneſs and heat in the mouth. To theſe may be added an intermediate kind of ſalt, under the title of

Mixed SALTS, which are thoſe reſulting from a mixture of a volatile with a fixed ſalt.

SALTS, again, are of different kinds, according to the different matters wherewith they are found mixed; ſome are mixed bodies themſelves, and their mixture ſeparable by fire and lixiviation. Such are all eſſential ſalts of plants, and all foſſile ſalts; but theſe are no proper chemical principles.

There are others which we are ſenſible are mixed, and whoſe mixture we pretty well know, though we are not yet able to decompound them. It is theſe make the chemical principle ſalt; for our analogies will not render them more ſimple, which is the character of a principle. And, in this ſenſe, ſalt is defined, a matter diſſoluble by water, and unchangeable by fire; to which ſome add, of a pungent taſte. There are three kinds or claſſes of ſalts, which come under this definition; two whereof are volatile, and the third fixed. The volatile ones, are acid ſalts, and urinous ſalts. The fixed are thoſe drawn by a lixivium after calcination, and called lixivious ſalts. Nature produces none of theſe ſalts ſimple and unmixed; but we eaſily extract them by art, from the mixts wherein ſhe has placed them.

The principal natural ſalts may be reduced to ſaltpetre, ſea-ſalt, and vitriol; each of which has its different kinds; of the various combination whereof, with different oily matters, all the natural ſalts we know of are compounded.

Theſe ſalts are found, by chemical analyſes, to conſiſt of aqueous, earthy, oily, ſulphurous, and acid particles. The acid matter is the pure ſalt, or ſaline principle, and is the baſe of all the reſt. This, M. Homberg obſerves, is pretty uniform, and nearly the ſame in all ſalts, before the particular determination to form this or that ſalt, by the particular admixture of the ſulphur.

SALT-*petre*, *Sea-ſalt*, and the reſt, therefore are not principles; but the acid ſalts diſtilled from them are; and the water wherein theſe ſalts ſwim, and the earth, or fixed ſalt remaining in the retort after diſtillation, are other chemical principles.

M. Homberg ranges all the kinds of acid ſpirits under three different claſſes, according to the different ſulphurous matters which accompany them. The firſt claſs is of thoſe which contain animal or vegetable ſulphur; under which come all acids, diſtilled from plants, fruits, or woods, as alſo ſpirit of nitre.

It is eaſy to conceive, that the acids of plants may have retained a part of the oil of the plant, which is the ſulphur; ſince, in reducing theſe acids into ſalts, we always find a little oil therein; which can be nothing elſe but that of the plant themſelves. And for ſalt-petre, as this is always drawn from earths moiſtened with the excrements of animals, or from old walls, plaſter, and the like, full of the ſulphurous matters of the animals that lived within them, the ſoot, &c. it is thence doubtleſs ſalt-petre borrows its ſulphur.

The ſecond claſs is of thoſe which contain a bituminous ſulphur; under which come the acids of vitriol, common ſulphur, and alum: for theſe are uſually drawn from the ſame mineral ſtone, wherein the bituminous matter, which makes one of the principal parts of common ſulphur, predominates. See *Sulphur*.

The third claſs is of thoſe which contain a more fixed mineral, ſulphurous matter, approaching nearer the properties of a metaline ſulphur; under which claſs come the acids drawn from ſeveral kinds of ſea-ſalts, rock-ſalts, and the like. For the rock-ſalt, or ſal gemmæ, is always found in places near metalic mines; and ſea-ſalt, in all appearance, is nothing but rock-ſalt; the quarries whereof have been penetrated by the ſea-water, which has extracted all the ſaltneſs therefrom.

Acids joined to fixed ſalts, compoſe mixed ſalts: thus, ſpirit of nitre, with ſalt of tartar, make ſalt-petre; ſpirit of ſalt, with ſalt of tartar, make a true common ſalt; and ſpirit of vitriol, with ſalt of tartar, a true vitriol.

However, the two ingredient ſalts ſtill remain, the one fixed, the other volatile; and acids joined with urinous ſalts, compoſe another kind of ſalts, called *ſales ammoniaci*, which are always volatile.

Lixivious and urinous ſalts are called alcalies; the firſt a fixed alcali, the ſecond volatile.

Theſe alcalies are uſually eſteemed antagoniſts to the acid ſalts, becauſe their mixtures always occaſion a ſudden ebullition.

The principal chemical ſalts of uſe in medicine, are ſalt of urine, of lavender, of viper, of human blood, of wormwood, of guaiac, of quinquina, of tobacco, of

rhubarb, of roſemary, of ſage, of vitriol, of amber, and of ſaffron.

SALT, in its popular ſenſe, denotes a kind of ſaline chryſtallization; or a ſharp, pungent, detergent, and aſtringent ſubſtance, uſed to ſeaſon fleſh, fiſh, butter, hides, and other things that are to be kept; as alſo to give a reliſh to meats. This we uſually call common ſalt, in contradiſtinction to the chemical ſalt.

M. Guglielmini, in an expreſs diſſertation *de ſalibus*, lays it down as a fundamental, that the firſt principles of common ſalt, ſalt-petre, and vitriol, had their figures unalterably fixed at their creation, and are indiviſible as to any created force.

Common SALT is of three kinds, as ſea-ſalt, foſſile or rock ſalt, and ſalt drawn from briny ſprings and wells. For ſea-ſalt, the greateſt and beſt part is made in France, but little in England. Foſſile or rock ſalts are chiefly found in Poland, Hungary, and Catalonia. For ſalt ſprings, they are conſiderable in Cheſhire, Worceſterſhire, Hampſhire, and Northumberland, in England; in Franche Compte, and Lorrain, in France; and in Tirol, and ſome other places of Italy.

The great property of ſalt is, that it is incapable of corruption, and that it even preſerves meats ſeaſoned therewith, or ſteeped in ſolutions thereof. It endures the fire, and even comes purer out of it, as being thereby freed of its humidity. In very hot fires it fuſes, and is converted into corroſive waters.

It gives fertility to lands, and promotes the fuſion of all metals; yet we read of princes, who, as a mark of their indignation, ſowed grounds with ſalt to render them barren. Plutarch obſerves, that the Egyptians believed ſalt to be the ſpittle or foam of the giant Typhon, the great enemy of their gods; and hence, adds he, they held it in the greateſt horror.

The uſe of ſalt is ſo univerſal, and the traffic thereof ſo very important, in the places where nature has produced the different ſalts, and ſo neceſſary for thoſe which have not that advantage, that a detail of the preparation, commerce, and of the ſeveral kinds, cannot fail of being acceptable.

Sea-SALT, is made of the ſea-water, thickened by frequent evaporations, and at length chryſtallized. Of ſea-ſalt there are two kinds; that which requires the ſun's rays to give it its conſiſtence, called, from its brown colour, bay ſalt; and that which receives its conſiſtence from the heat of a fire, called white ſalt. They uſe either this or that manner of preparation, according to the diſpoſition of the coaſts where it is made. If the coaſts be down, or hills of ſand, the ſalt is made by fire, in copper or leaden veſſels. If the coaſts be flat and low, eſpecially if the bottom be a little clayiſh, the ſalt is chryſtallized by the action of the ſun. There is nothing very conſiderable of either kind in England; ſome indeed we have of the latter, as at Shields in Northumberland, and of the former in the iſle of May. France is the principal place for theſe ſalts; more being made there than in all Europe, perhaps in all the world beſide; and it is from thence other nations are chiefly furniſhed therewith: therefore it is proper to deliver the method of making it, as it is practiſed there.

The chief coaſts for bay-ſalt are thoſe of Bretagne, Saintonge, and the pays d'Aunis. The principal ſalt-works in the two latter places, are Brouage, Maran, and the iſle of Rhe. Thoſe in Bretagne are in the bay of Borneuf, Guerand, and Croiſil. For white ſalt, it is chiefly made on the coaſts of Normandy. But in the bay of Borneuf alone are computed above 20,000 conſiderable ſalt-works.

Manner of making bay SALT. Low, marſhy grounds, diſpoſed by nature for the reception of the ſea-water when the tide ſwells, and provided with banks and ſluices to retain the ſame, are called a ſalt-marſh. Theſe ſalt-marſhes, the bottoms whereof they ram with a deal of care, are divided into ſeveral pits or baſons, ſome greater, others leſs, ſeparated by little dikes 13 or 14 inches broad; and into theſe baſons, when the ſeaſon is at hand, they let in the ſea-water.

The ſalt-ſeaſon is from the middle of May to the end of Auguſt; in which time the days being long, and the ſun's rays ſtrongeſt, the ſalt is raiſed and chryſtallized better than in any other ſeaſon. Before they let in the water, they take care the baſons be well cleared of what had been left in them during the winter to keep them in order. The water is admitted to the height of about 6 inches, after firſt having let it reſt and warm two or three days in large reſervoirs without the works, that it may come in lukewarm. The water admitted, the ſluices are ſhut, and the reſt of the work left to the wind and the ſun. The ſurface of the water being ſtruck and agitated by the direct rays of the luminary, thickens at firſt imperceptibly, and becomes at length covered over with a ſlight cruſt; which, hardening by the continuance of the heat, is wholly converted into ſalt. The water, in this condition, is ſo hot, that the hand cannot be put into it without ſcalding it. When the ſalt has received its full coction, they break it with a pole, upon which it ſinks to the bottom; whence being dragged out again, they leave it ſome time in little heaps, about the edge of the pit, to complete the drying; and at length in greater heaps, containing ſeveral thouſand muids, which they cover over with ſtraw or ruſhes, to ſecure them from rain.

Eight, ten, or at moſt fifteen days, having thus perfected the chryſtallization of the ſalt, they open the ſluices, when the tide is riſing, for a freſh ſtock of water, and gather the ſalt, till the ſeaſon is over. Rainy weather is very pernicious to the work; for rain-water mixing in any quantity with the ſea-water, renders it uſeleſs; ſo that new water muſt be called in. The ſalt is brown when taken out of the pits, and is uſually thus ſold, without farther preparation: indeed in ſome places they make it into white ſalt by refining, or boiling it in large flat caldrons; which not only takes away its acrimony, but is found to increaſe the quantity.

Bay ſalt is alſo made in Portugal, the Cape de Verd iſlands, and other places; particularly the iſland of Tortuga, near the coaſt of Terra Firma in America, which ſupplies the American colonies.

Method of making white ſalt. The white ſalt of Normandy is made by refining the bay ſalt, but has this colour naturally when taken out of the pits. To make it, they gather a muddy ſand on the flats of the ſhore, which the riſing tide has covered and impregnated with its waters for ſeven days. This ſand being removed into pits for the purpoſe, diſcharges itſelf by degrees of all the water, which filtrates through ſome ſtraw wherewith the bottom of the pit is filled, and trickles into veſſels ſet on purpoſe to receive it; of which water they make the ſalt.

Their furnaces are of earth, and their boilers of lead; each furnace boiling 4 leads. When the water wherewith they have filled the leads begins to boil, they take off the ſkim, which riſes in abundance; and in proportion as it diminiſhes, throw in freſh water, which they continue to ſkim as before. When it thickens, they keep it continually ſtirring, with a crooked ſtick or ladle; and when the grain is formed, take it off the fire to purify it. The purifying is performed by letting it ſtand in large oſier baſkets, where it drains itſelf of certain humidities that remained: when dry, it is laid in heaps, and then carried to the magazines.

The commerce of white ſalt brings an immenſe profit to France, though more to the King than the makers and ſellers; the duty being 1-4th part of the price it is ſold at. The Engliſh and Dutch; as alſo, when they are at war with France, the Swedes and Danes, take moſt of the ſalts of the comte Nantois, paying for it, one year with another, from 18 s. to 28 s. ſterling *per* load. That of Guerande is preferred by the Engliſh and Iriſh to all the reſt, as the beſt and whiteſt. Yet that of Borneuf, though browner and heavier, is moſt uſed in France, as alſo throughout the Baltic; particularly in Poland, where, beſides the ordinary uſes, it ſerves in tilling the ground, being found to warm it, and to prevent little vermin from gnawing the grain.

The Engliſh and Dutch have frequently drove hard, in time of war, to do without the French ſalt, and to that end have endeavoured to take ſalts from the Spaniſh and Portugueſe; but there is a diſagreeable ſharpneſs and ſe-

rosity natural to them, which renders them very unfit for the salting of fish and flesh. To remove this, they boil them with sea-water, and a little French salt, procured by means of neutral nations, which not only softens, but increases their quantity by one third. But it should seem their refining does not succeed to their w sh, by the eagerness wherewith they return to the salts of Bretagne, as soon as any treaty has opened the commerce.

Sile, or *Rock* SALT, is also called *sal gemmæ*, from a certain brightness it has, which gives it some resemblance to gems. Indeed it should have something of the gem in its nature, if there be nothing exaggerated in the account Dr. Edward Brown, who went down into the salt-mines in Hungary, gives us thereof in his travels.

This salt was entirely unknown to the antients. Pliny, however, gives some curious things about salts, in Nat. Hist. lib. 30. c. 7. But we shall here content ourselves with what well warranted relations could be got of the salt-mines of Wiliska in Poland, those in the Upper Hungary, and those in the mountains of Catalonia, which make a considerable article of commerce in those states; salt being transported thence to the several neighbouring nations, who cannot be conveniently supplied with sea-salt.

LT-*mines of Poland*. The Polish mines, in the village of Wiliska, five leagues from Cracow, were first discovered in 1251. Their depth and capacity are surprising. Within them is found a kind of subterraneous republic, which has its polity, laws, and families, and even public roads and carriages; horses being kept here to draw the salt to the mouth of the quarry, where it is taken up by engines. These horses, when once they are down, never see light again; but the men take frequent occasions of breathing the village-air. When a traveller is arrived at the bottom of this strange abyss, where so many people are interred alive, and where so many are even born, and have never stirred out, he is surprised with a long series of lofty vaults, sustained by huge pilasters cut with the chissel, and which, being themselves rock-salt, appear, by the light of flambeaux, which are incessantly burning, as so many chrystals, or precious stones of various colours, casting a lustre which the eye has much ado to bear.

The rocks of salt are hewn in form of great cylinders; the workmen using hammers, pickaxes, and chissels, as in stone-quarries, to separate the several banks of stone. As soon as the massive pieces are got out of the quarry, they break them into fragments fit to be thrown into the mill, where they are ground, and reduced into a coarse farina, or flour, which serves all the uses of sea-salt.

In the mines of Wiliska there are two kinds of sal gemmæ; the one harder and more transparent, and the chrystallization whereof appears more perfect than that of the other. This is the real sal gemmæ of the druggists and dyers. It cuts like chrystal, and is frequently used for toys, chaplets, and little vases. The other is less compact, and only fit for kitchen-uses. One of the chief wonders of the place is, that through these mountains of salt, and along the middle of the mine, there runs a rivulet of fresh water sufficient to supply the inhabitants.

SALT-*mines of Upper Hungary*, are equally extraordinary. They are found in the mountains, two miles from Eperies, a city in the county of Sarax, on the river Tarhz. The depth is 180 fathoms. The mineral runs in large veins, so that pieces are sometimes dug not less than a hundred thousand pounds weight; which however are afterwards reduced into pieces two feet long, and a foot thick, for the convenience of drawing them out of the mine. When out, they are broke further, and put to the mill to be ground. The colour of the stone is a little browniſh; and yet, when ground, becomes as white as if it had been refined. Some of the stones are found as hard and transparent as chrystal; some white, yellow, and blue, fit for various works, whereon they engrave as on precious stones. The mine is cold and moist, whence there arises some difficulty in reducing the salt into powder. Of the water drawn out of it and boiled, is made a blackish salt, which fattens cattle.

The SALT-*mines of Catalonia*, in Spain, are found in the mountains of the duchy of Cardonna, and belong to the grandees of that name. It is the opinion of the country people, that the salt grows again, and is reproduced after several years, in the places whence it had been dug: but the naturalists will scarce allow of such a reproduction. There is no doubt, however, but it vegetates, or grows sometimes; which M. Tournefort proved by the specimens he had of it in his cabinet.

The salt is of four kinds; white, bay, red, and brilliant. The first is almost like common salt, only that it is not granulated. The second, of an iron and slate colour, has most of the qualities of the white. The third, of a conserve-rose colour, only differing from the rest by the mixture of some bole, or earth, which gives it this colour. The fourth is a brilliant salt, yet transparent as chrystal, which is the proper sal gemmæ of the druggists. Of this kind there is some blue, others green, orange, and red; but they all become white by grinding. These four kinds of salt are found over each other in distinct strata or beds; the commerce whereof is very considerable; and the English, when trade is prohibited with France, furnish themselves from hence.

Sal gemmæ is to be chosen in large, bright, transparent pieces, easy to break, and dividing into little square grains. It grows red hot in the fire, like iron, but dissolves easily in the air; yet the druggists wash it, to give it the greater lustre; but they take care to wipe it dry again speedily,

SALT *drawn from springs*. The method in England is thus: near the spring, or place of the brine, is built a saltern, or boiling-house, with a convenience of conveying the brine into it. The saltern is usually several great flat pans, or boilers, each furnished with its grate and furnace. At Shields, and in other places on the eastern coast, where brine springs are wanting, they use sea-water instead thereof; which at spring-tides is let into their ponds, called *sumps*, and from thence pumped into the pans. The brine being in the pan, the fire is kindled; and, after two hours time, the liquor begins to granulate, which is known by a thin skin rising at the top: this they skim off into brine-tubs, that the brine which goes with it may not be lost: and whereas all brines contain or yield sand, which is supposed to petrify in boiling; for that if the liquor have been strained beforehand through brown paper, yet upon boiling it sand will arise; and the parts boiling violently in the middle, the sand is cast towards the corners, where it falls to the bottom of the pan before the salt precipitates; therefore they rake it to the corner of the pan with a broad rake, and then take it with ladles, and put it into wooden vessels, open at one end, placed on stands. The sand being removed, that the salt floating in the liquor may precipitate, they shut up the vent-holes and door, and let the fire go out; and, in twelve hours time, the salt falls to the bottom, and grows hard; a liquor called the *bittern* remaining at top; which being again boiled away, yields more salt. To make the salt precipitate more readily, after the liquor is scummed, they frequently use some beef-suet and wine-lees, of each a like weight, melting and mixing them together, and putting an ounce of this mixture on the end of a slice, turn it round in the liquor till it be spent: then, after two hours at most, open the vent-holes and door, quicken the fire, and lade away the liquor in a good measure, and so the salt is found lying at the bottom fit to be removed. It is now raked upon one side, taken out, and put into cribs, or vessels, like hay-racks, with loose ribs on each side, so close to one another, that an half-crown will scarce go between. Here, after eight hours draining, it is found a hard granulatad salt, and may be taken away, but yet continues dripping three weeks; and afterwards, if not often moved, will become rocky. The liquor in the pan, called *bittern*, is to be all taken out, except a little to keep the pan from burning, drained from the salt, or cast away, or reserved for saltpetre-makers, and the pan immediately filled with fresh brine for another boiling. A pan of brine, of moderate strength, in eight hours time, will be compleatly made into salt, with the expence of

a buſhel and a half of coals, which will make a pan of ſalt, from two buſhels and a half to four buſhels, or more, according as the liquor is in ſtrength. This ſalt they ſometimes mould into the form of ſugar-loaves, in which ſtate it will keep dry without fire, and that for a long time. At Nantwich they bake the loaves twice or thrice in an oven, and keep them in a ſtove, or the chimney-corner.

SALT *from brine raiſed by the ſun.* In ſome parts of England, as at Limington, Port-ſea, and a few other places, they uſe water, raiſed by the ſun, and then boiled; which they find preferable to the natural brines of ſprings, thoſe being always found either too weak or too ſtrong. To this end they have ſeveral ponds or ciſterns, called *ſun-ponds*, built with mud, and well expoſed to the ſun, with little channels to convey the brine from them all to a large ſhallow reſervoir, called the *common ſun pan*, not exceeding 7 or 8 inches in height. Here the liquor is left to mellow, from 12 to 24 hours, or till it will bear a hen's egg new laid; and when it has attained a ſufficient ſtrength, it is from thence derived by channels into the ciſterns, where the rain and ſun breed red worms, that cleanſe and purify the liquor, which ripens by age, and is rendered fitter for boiling, which is performed in the ſame manner as has been already deſcribed.

SALT *upon ſalt*, is bay ſalt diſſolved in ſea-water, or any other ſalt water, and with it boiled into white ſalt; which is the beſt kind of ſalt for curing fiſh, and keeping fleſh. See *Duty*, and *Exciſe*.

Several proviſions have been made by the ſtatutes relative to the commerce and duty of ſalt; whereby ſhips hovering on the coaſts, and not proceeding directly to ſome port, may be compelled to come into port; and in 20 days, either to enter the ſalt, or proceed on their voyage; on forfeiture of the ſalt, and double the value, to be recovered of the maſter.

Veſſels with ſalt from foreign parts, lying in any port, or riding on the ſea-coaſts, may be viſited and ſearched by the officers; and if any ſalt, not duly entered, be found on board any veſſel in which it was not imported, it is forfeited, or the value; and the maſter is ſubject to the ſame penalties and forfeitures, as if it had been landed without entry.

If not entered, or unladen within 20 days after the ſhip's coming into port, or the ſhip not proceeding on her voyage to ſome other port; forfeited, and double the value, to be recovered of the maſter.

If imported in ſhips under 40 tons, or otherwiſe than in bulk, except for the ſhip's proviſions, forfeited, and double the value.

If of the produce or manufacture of Great Britain or Ireland, or other ſalt coming from Ireland or the Iſle of Man, may not be imported, or brought into any port or place of Great Britain, nor taken out of any ſhip or veſſel, nor put on ſhore within any of the ſaid ports or places; upon forfeiture thereof, together with the veſſel, and all her tackle and apparel.

Such ſalt may be ſeized within two months; and, if not claimed within 20 days, and ſecurity given for the value, the ſalt and ſhip are to be ſold to the beſt advantage: except taken in for curing fiſh, or for the ſhip's proviſions, from any foreign parts; the duty whereof muſt be paid within 10 days, upon forfeiture, and double the value: alſo except ſhips forced in by ſtreſs of weather, &c. provided the duty be repaid within 20 days after arrival, and before relanding: likewiſe if carried coaſtwiſe by certificate; or taken in by fiſhermen to cure fiſh at ſea; upon oath before the ſalt-officer, that it was taken on board from ſome port of Great Britain, mentioning the place, and not out of any veſſel at ſea.

Salt imported from Jerſey, Guernſey, Sark, and Alderney, is liable to the ſame duties as any other foreign ſalt.

If taken in only for the ſhip's uſe, or for curing of fiſh, not entered within 10 days after coming into port, and before the landing, &c. is forfeited, with double the value, by the maſter of the ſhip, or the owner of the ſalt.

Foreign ſalt, landed before entry, and the exciſe-duty be ſatisfied, or without a warrant from the collector, or officer appointed for the duty on ſalt, is forfeited, or the value thereof, and 10 s. *per* buſhel; and every perſon concerned is to forfeit 100 l.

The perſons in whoſe cuſtody ſuch ſalt is found, are liable to the ſame penalties as if they had been the importers, unleſs they make it appear from whom they had it.

If embezzled after importation, and before warehouſing, the forfeiture is 20 s. for every buſhel of 84 lb.

If cellared and locked up, may not be removed without a warrant or permit for the conveyance; upon forfeiture thereof, beſides 10 s. *per* buſhel, and 20 l. for every ſuch offence; to be recovered of the importer, and of every perſon concerned in the removal.

Importers to be charged with the full quantity of ſalt cellared; though, upon clearing ſuch cellar or warehouſe, there may appear to be a deficiency.

At the end of every fiſhing-ſeaſon, the officer is to take an account of the ſalt remaining, which muſt be forthwith locked up as before; and the proprietors are to deliver them an account upon oath of the quantity of fiſh exported, confirmed by a certificate of the officers of the port of exportation, or of the red or white herrings entered for home-conſumption, on which the ſaid ſalt had been uſed. But if delivered over by the proprietors to any other perſons for the curing of fiſh, it muſt be ſo expreſſed in their accompts, and made by oath or otherwiſe, that it was ſo uſed, upon forfeiture of 50 l. And the perſons to whom delivered, muſt upon oath likewiſe give an account of the ſalt by them uſed in the curing of fiſh exported, confirmed by the certificate of the officers of the port of exportation.

Such ſalt not ſo accounted for within three months, after the expiration of each year, the forfeiture is 10 s. *per* buſhel.

Such ſalt as cannot be accounted for having been ſold, given away, or uſed for any other purpoſe; the proprietor, or the perſon to whom delivered, and the buyer, are each of them to forfeit 20 s. *per* buſhel; one-third to the uſe of his Majeſty, and the remainder to the informer or ſuer.

In default of payment within 14 days, if ſufficient effects cannot be found, the offenders muſt be ſent to the houſe of correction, for any time not exceeding three months.

Salt-fiſh cured with ſalt, delivered out of warehouſe, not exported while good and merchantable, may be deſtroyed in the preſence of an officer, and his certificate thereof accepted inſtead of that for exportation.

Foreign ſalt from Scotland into England, and all ſalt brought coaſtwiſe, may not be delivered, nor a warrant granted for the landing, till a certificate of the true quantity on board, ſigned by the cuſtom and ſalt-officers of the loading-port, be produced to the ſalt-officer of the delivering-port; and oath be made before the ſalt-officer by the maſter, mate, or boatſwain, that to his knowledge there has not been taken on board any ſalt ſince it came from ſuch port; upon forfeiture of double the value, and 10 s. *per* buſhel.

Part only of ſuch ſalt landed, and the ſhip proceeding with the remainder, the quantity delivered muſt be certified by the officers, on the back of the cocket, tranſire or other warrant; or elſe by a ſeparate certificate under the hand and ſeal of the officers.

Officers at the delivering-port may demand a ſight of the permit and cocket, and are to weigh the ſalt upon unlading; and if found to be more in weight than expreſſed in ſuch permit and cocket, the ſurpluſage is forfeited.

Maſters refuſing to ſhew the permit and cocket, the ſalt may be ſeized and demanded; and, if not produced within four days, the ſalt is forfeited.

Salt for which the duties have been drawn back, fraudulently relanded, without entry and repayment of the duties, the offender is to forfeit double the value thereof and 10 s. *per* buſhel, and to be ſubject to ſuch other penalties and forfeitures as in caſe of foreign ſalt illegally landed.

Salt landed in Ireland, not to have any drawback, unleſs entered outwards for ſome port in Ireland.

Salt ſhipped for Ireland, debentures not to be made out nor drawback allowed, till a certificate, under the ha

of the collector of ſome port in Ireland, of the particular quantity there landed, be produced; the drawback may not be allowed for any more than ſuch quantity: except the allowance for waſte, being 4 buſhels for every 40 buſhels of white ſalt, and 2 buſhels for every 40 buſhels of rock-ſalt.

Salt ſhipped for Ireland, and loſt at ſea by ſinking of the ſhip, or taken by enemies, upon due proof made within ſix months, by the oaths of two credible witneſſes, before the juſtices of the peace at the general quarter-ſeſſions, and their certificate thereof produced, the drawback may be allowed, or the ſecurity vacated.

After put on board any boat, barge, &c. in order to be exported to foreign parts, may not be taken out, unleſs to be put into the ſhip wherein it is to be exported; nor landed in Great Britain, except in the preſence of a ſalt-officer; upon forfeiture of the boat, &c. goods, and 20 l. by every perſon concerned, or 6 months impriſonment.

Ships laden with ſalt to be exported, drove into port by ſtreſs of weather, or other unavoidable neceſſity, ſalt-officers may go and remain on board till the ſalt be re-entered, or the ſhips proceed on their voyages.

Such ſalt may be relanded within 20 days, upon due entry, and repayment of the duty for the whole quantity entered outwards.

Refuſing officers to come on board, penalty 20 l.

If unladen before due entry, or repayment of duty, forfeited; with the whole cargo remaining on board.

Salt ſhipped for exportation, or to be carried coaſtwiſe, the particular quantity muſt be expreſſed in the cocket, which muſt be ſigned by the ſalt-officer, and given without fee or delay; and if the ſhip puts into a port of Great Britain, the officers of the cuſtoms and ſalt-duty may demand a ſight thereof; and upon oath made before the collector or cuſtomer, that they have juſt cauſe to ſuſpect that there is leſs on board than expreſſed in ſuch cocket, the ſalt may be weighed.

If, upon weighing, a deficiency be found, after a reaſonable allowance made for waſte, &c. the remainder is forfeited.

Salt ſhipped for exportation, or to be carried coaſtwiſe, periſhed by the ſinking of the ſhip before gone out of port, and before the exporter is entitled to the drawback; upon proof of ſuch loſs before the juſtices of the peace at the general quarter-ſeſſions, they are to grant the exporter or proprietor a certificate thereof; which being produced to the officers, they are to permit the like quantity therein mentioned to be brought without payment of any duty of exciſe.

Not to be ſhipped in order to be ſent coaſtwiſe by a retailer or ſhopkeeper, till it be made appear by oath or otherwiſe, before the officers, that the duty has been paid, or ſecured to be paid; or that it was bought of ſome other retailer, or ſhop-keeper, that had paid the duty.

Upon reſhipping from any boat, &c. on board any ſhip to be carried coaſtwiſe; the maſter of the boat, &c. muſt, before any diſpatches be granted, make oath before the ſalt-officer, that it is truly reſhipped, and not augmented or diminiſhed; upon forfeiture of double the value, and 10 s. *per* buſhel.

Salt belonging to Britiſh ſubjects, that has paid the duty, periſhed or loſt in any port of Great Britain, or ſhipped coaſtwiſe, and loſt at ſea, by ſtorms, &c. upon proof of ſuch loſs, and that it was not occaſioned by leakage, or negligence, made by the oaths of two or more credible witneſſes, whereof the maſter or mate to be one, before the juſtices of the peace at the general quarter-ſeſſions; they are to grant a certificate of ſuch proof being made; which being produced to any of the officers appointed to collect the duty upon ſalt, he is to permit the like quantity to be bought free of exciſe.

If imported not of the product of Great Britain, to be deemed foreign, and charged accordingly.

If exported to the iſle of Man, Jerſey, or Guernſey, entitled to the drawback.

Any ſalt-maker, importer of ſalt, or any refiner or proprietor of rock-ſalt, refuſing, upon due requeſt or demand made by the ſalt-officer, in the day-time; or in the night in the preſence of a conſtable or other lawful officer of the peace, to permit ſuch officer to enter his works, warehouſes, or other places by him made uſe of for making, laying, refining, or keeping of ſalt, is to forfeit 40 l. for every ſuch offence.

Rock-ſalt, ſalt rock, or refined ſalt, exported to parts beyond the ſeas; the exporter to be paid by the ſalt-officer, for every buſhel of rock-ſalt, or ſalt rock, after the rate of 65 lb. to the buſhel, and refined ſalt after the rate of 56 lb. to the buſhel, all the duties which have been paid for the ſame, within two days after demand, on a debenture, to be prepared by the collector of the cuſtoms, verified by the ſearcher as to the quantity ſhipped; the oath of the exporter being firſt taken that the duties were paid, and that it is to be exported beyond the ſeas, and not relanded in Great Britain; which debenture is to be given without fee or reward.

Rock or white ſalt not to be ſhipped on board any veſſel for exportation, or to be carried coaſtwiſe, without being firſt weighed by the officers appointed by the commiſſioners of exciſe, and a permit or certificate of the quantity obtained, upon penalty of forfeiture of the ſalt, and 10 s. *per* buſhel; unleſs the officer refuſes, or does not attend to weigh it, or refuſes a permit or certificate when weighed.

The officer refuſing ſuch permit, which is to be given *gratis*, is to forfeit 5 l. to the perſon grieved.

If carried coaſtwiſe, an allowance to be made for waſte; 3 buſhels for every 40 buſhels of white ſalt, and 1 buſhel and an half for every 40 buſhels of rock-ſalt.

The allowance to be made but once, though the ſalt ſhould be carried coaſtwiſe from ſeveral ports or members of ports.

Foreign or Engliſh rock or refined ſalt; the exporter to have no greater allowance on prompt payment, and for waſte, and upon exportation of the ſame, than what was paid or ſecured for the duty at firſt.

Engliſh ſalt to have 9 months, and rock-ſalt 12 months, for payment of exciſe.

SALT-*fiſh*. See Cod-*Fiſhery*.

SALTED *hide*. See *Hide*.

SALT *iſland*. One of the Cape Verd iſlands. See Cape *Verd* iſlands.

SALTER. A perſon who deals in ſalt, and furniſhes people with that article in trade, to ſalt meat, fiſh, and the like; without which foreign commerce would be at an end.

Dry SALTER, is a perſon who deals in logwood, cochineel, potaſhes, and ſuch goods; chiefly, like merchants, in the wholeſale way.

SALTERS, or *dry ſalters*, *company of London*, is of conſiderable antiquity, as appears by the grant of a livery by Richard II. in 1394; but they were not incorporated before the 1ſt of Elizabeth, on the 20th of July 1558; when, by letters-patent, they were incorporated by the title of The maſter, wardens, and commonalty, of the art or myſtery of ſalters of London; the fraternity conſiſting of a maſter, 2 wardens, 27 aſſiſtants, and a livery of 190 members; who have a beautiful hall in St. Swithen's lane, and whoſe fine is 20 l. upon admiſſion; the company having a conſiderable eſtate, out of which they pay to charitable uſes about 500 l. a year.

SALTPETRE. A bitter, ſulphurous, or inflammable kind of ſalt, of great uſe in chemical preparation, the compoſition of gun-powder, dying, the glaſs-manufacture, and making aqua fortis. All the ſaltpetre we have, M. Homberg obſerves, is drawn either from earths moiſtened, and manured with the excrements of animals; or from old walls, and the plaiſter of ruined buildings, which have been filled with ſulphurous matters, as well from the animals which inhabited them, as the ſoot penetrating them, and the air incompaſſing them.

However, there is uſually a diviſion made of ſalt-petre into natural and factitious. Of native ſaltpetre there are two kinds; the firſt formed by a natural chryſtalliſation of ſaline ſulphurous juices diſtilling in caverns, or along old walls. This is what they call ſaltpetre of the rocks, and the ſame with the aphronitre of the antients.

The ſecond is furniſhed by the water of a dead lake in the territory of Terrana in Egypt, called the Nitrian waters, exhaled and concocted by the heat of the ſun, much after the manner of our bay ſalt. This is the natrum, or anatrum, of the antients; which our druggiſts call natron, now little uſed but in the bleaching of linen.

Artificial, or *factitious* SALTPETRE, is alſo of two kinds; the firſt, called by ſome mineral ſaltpetre, is procured in ſeveral places in the kingdom of Pegu, Agra, and other parts of India, in villages antiently populous, but now deſart; alſo in ſome places along the banks of the Wolga, that famous river, which, after watering a good part of Muſcovy, empties itſelf into the Caſpian ſea. The ſaltpetre is here drawn from three different kinds of mineral earths, black, yellow, and white. The beſt is that procured from the black, as being freeſt from common ſalt, and needing no purifying after it comes to us, to fit it for making gun-powder, as the reſt do.

The method of working it is thus: two flat pits are dug; one of which they fill up with the mineral earth, turning water upon it for ſome time, and then tread it with their feet into the conſiſtence of pap, letting it ſtand two days for the water to imbibe and extract all the ſalt therein. They then paſs the water into another pit, which ſtanding ſome time, it ſhoots and chryſtallizes into ſaltpetre. This they boil once or twice, as they would have it more or leſs pure, ſcumming it continually, and filling it out into pots, holding 25 or 30 lb. each, and expoſing theſe to the air in clear nights; by which means, if there be any impurity, it ſinks to the bottom; they then break the pots, and dry the ſalt in the ſun.

The ſecond kind of artificial or factitious ſaltpetre is that prepared from nitrous matters collected in old buildings, dove-houſes, and the middle of antient ruins, by means of lixiviums, or lees made of wood-aſhes, and ſometimes of thoſe of herbs. Of this there are great quantities made in France, particularly in the arſenal at Paris, where there is a corporation of ſaltpetre-makers appointed for that purpoſe. The ſaltpetre grained thus, they refine, by boiling it three or four times, and paſſing it ſucceſſively through ſeveral lees.

The Engliſh Eaſt India company import conſiderable quantities of ſaltpetre from Bahar and Bengal, where it is bought for about 10 s. a hundred, and ſold in Europe for 50 s.

Some naturaliſts pretend, that the earths, which have already ſerved for ſaltpetre, may be re-animated, and made fit to ſerve again, by keeping them covered for 12 or 14 years, and watering them with the ſcum of the ſaltpetre, or even with brine. Good common ſaltpetre ſhould be well cleanſed, white, dry, and as free from common ſalt as poſſible. The beſt refined ſaltpetre is that whoſe chryſtals are the longeſt, largeſt, and fineſt.

Philoſophers generally allow the air to be impregnated with a volatile nitre, or ſaltpetre, which is thence communicated to plaiſter and mortar. It is probable it may derive it from ſoot and ſmoak, which are actually found to abound with volatile ſalt, of a nitrous nature. Dew and rain are ſuppoſed to fertilize the ground principally by their bringing down this nitre.

Saltpetre has a property of rarifying, or expanding itſelf to a prodigious degree. It is hence gun-powder derives its force, whereof ſaltpetre is the principal ingredient; for it is computed, that, when inflamed, it takes up above 10,000 times the ſpace it poſſeſſed before. See *Gun-powder*.

There is abundance of chemical preparations made with ſaltpetre, as ſpirit of nitre, aqua regalis, aqua fortis, chryſtal mineral, ſal polychreſt, butter of nitre, and others.

SALTSBURG. Capital of the archbiſhoprick of Saltſburg, in the circle of Bavaria, in Germany, is ſituated on the river Saltza, in 13 deg. of E. lon. and 47 deg. 45 min. of N. lat. 70 miles eaſt of Munich; being eſteemed one of the fineſt cities in Germany, having a very good trade, eſpecially for ſalt, the produce of the ſalt-pits in that neighbourhood.

SALT-WORT. See *Kali*.

SALTZBURG. A town of Norway. See *Denmark*.

St. SALVADOR. The capital of Brazil. See *Portugueſe America*.

SALVAGE *money*, is a recompence allowed, both by the ſtatute and civil law, to ſuch perſons as have aſſiſted in ſaving merchandiſes and ſhips, periſhing in wrecks, or by pirates, or enemies.

By the naval laws of Oleron, if a ſhip departing with her lading to any place abroad, happens in the courſe of her voyage to be rendered unfit to proceed therein, and the ſeamen ſave as much of the lading as poſſibly they can; if the merchants require their goods of the maſter, he may deliver them if he pleaſes, they paying the freight in proportion to the part of the voyage that is performed, and the coſts of the ſalvage: but if the maſter can readily refit his veſſel, he may do it; and though he has promiſed the people who helped him to ſave the ſhip the third or the half part of the goods ſaved, for the danger they ran therein; yet if ſuch a cauſe come before any judicature, it ſhall be conſidered the pains and trouble they have been at, and the reward be accordingly, without any regard to the promiſes made them by the parties concerned, in the time of their diſtreſs.

If a ſhip puts to ſea with merchants goods, and there ſhe is diſabled, or periſhes by the fault of the maſter or his men, the goods that are ſaved ſhall be ſecured in a certain place free from danger. But if it be proved by witneſſes, that the misfortune was occaſioned by tempeſt, what remains of the ſhip and goods ſhall be brought to a contribution; and the maſter ſhall retain half the value of the freight, by the laws of Rhodes. And the ſame laws have ordained, that if a ſhip be ſurpriſed at ſea with whirlwinds, or wrecked at ſea, any perſon ſaving any part of the wreck, ſhall have one-fifth of what he ſaves. And for the charges of ſalvage, very great allowances have been made: as to the divers and ſalvers, the half, third, or the tenth, of the things ſaved, according to the depth of the water out of which they were fiſhed, whether fifteen, eight, or one fathom; alſo a tenth part for ſalvage on the coaſt; and the fifth to him, that, ſaving himſelf, carries ſomething with him. If the ſhip only periſh, and the goods be ſaved, then the goods ſhall pay the tenth or fifth, as the difficulty of the ſaving thereof ſhall require; and gold, ſilver, and the like, being of eaſy tranſportation, ſhall pay leſs than goods of greater weight, and more burthenſome for carriage, which are in greater danger.

Where things are caſt up by ſhipwreck, or left through caſting in ſtorms, the laws of Rhodes allow to the finder a fifth part for the ſaving; and in France they allow one third part for ſalvage. But, by the common cuſtom of countries, every perſon of quality, or lord of a manor, &c. claims all his own, if it comes upon his land; contrary to ſome ſea-laws, which give it to the finder. Though, by the opinion of lawyers, the finders thereof ſhould do therewith as with other goods found upon land, they ought to proclaim the things to be forthcoming to the true owner or loſer; and if no man claim the ſame, then the finder to keep them to himſelf.

By the ſtatute 12th Anne, c. 11. all perſons required by conſtables, &c. who ſhall act in the ſaving and preſerving any ſhip in diſtreſs on our ſea-coaſts, or the cargoes thereof, ſhall within thirty days after be paid a reaſonable reward for the ſame, by the maſter of the ſhip or merchant; in default whereof, the ſhip or goods ſo ſaved ſhall remain in the cuſtody of the officers of the cuſtoms till payment be made: and if any difference ariſe about the ſalvage, three juſtices of peace ſhall adjuſt the quantum to be paid to the perſons acting therein, which ſhall be binding to all parties, and recoverable in an action at law.

And if goods thus ſaved are not claimed in twelve months, they ſhall be ſold; the juſtices taking an account thereof in writing, ſigned by the officer of the cuſtoms, into whoſe hands they are ſafely put; and if they be periſhable goods, are to be forthwith ſold; and after charges deducted, the money ariſing by ſuch ſale ſhall be tranſmitted into the Exchequer, with a fair account of the whole, for the benefit of the owner, who, on proof of

of his property before one of the barons of the Exchequer, ſhall upon his order receive the ſame.

If any perſons ſhall moleſt any one in ſaving the ſhip or goods, or when ſaved ſhall deface the marks of any goods before the ſame be entered in a book for that purpoſe; ſuch perſons ſhall in 20 days make double ſatisfaction to the party grieved, at the diſcretion of the two next juſtices, or in default thereof ſhall be ſent to the houſe of correction for twelve months. See *Wrecks*.

SALIM. A river of Africa, on the coaſt of Cape Verd.

SALVER. A flat diſh, commonly of ſilver, or other precious metal, uſed to ſet glaſſes on to ſerve wines, and other liquors.

SALUTATION. A ceremony of ſaluting, greeting, or paying reſpect or reverence to any one.

At ſea they ſalute by a diſcharge of cannon, which is greater or leſs, with ball, or without, according to the degree of reſpect they would ſhow.

Ships always ſalute with an odd number of guns, gallies with an even number; and a veſſel under the wind of another is always obliged to ſalute firſt.

To ſalute with muskets, is to fire one, two, or three volleys; which is a method of ſalutation that ſometimes precedes that of the cannon, and is chiefly uſed on occaſion of feaſts.

After the cannon, they alſo ſometimes ſalute or hale with the voice, that is, a joint ſhout of all the ſhip's company three times; which ſalutation alſo occaſionally obtains where they carry no guns, or do not care to diſcharge any.

Saluting with the flag, is performed two ways, either by holding it cloſe to the ſtaff, ſo as it cannot flutter; or by ſtriking it ſo that it cannot be ſeen at all, which is the moſt reſpectful ſalutation.

Saluting with ſails, is performed by hovering the top-ſails half way of the maſts: but only thoſe veſſels which carry no guns, ſalute with the ſails.

When there are ſeveral ſhips of war together, the commander alone ſalutes.

SALZ, *Saltz*, or *Sultz*. A ſort of brine, or pickle made of ſalt, diſſolved by the coldneſs or moiſture of a cellar.

SAMACHI. A city of Perſia, conſiderable for its cloth-trade. See *Perſia*.

SAMBALLAS, or *Samblas iſlands*, are ſituated in the American ocean, or North ſea, near the coaſt of Darien, in 81 deg. of E. lon. and 10 deg. of N. lat. 80 miles E. of Porto-Bello, none of them inhabited, but claimed by the Spaniards, as belonging to the neighbouring continent of Darien.

SAMBOUC. An odoriferous wood, brought by ſuch European nations as trade to the Guinea coaſt, by way of a preſent to the negro kings, who eſteem it greatly. The iris of Florence is uſually joined thereto, that the preſent may be better received.

SAMBRE. A river of the Netherlands, which riſes on the confines of Picardy; and running for the moſt part N. E. through Hainault, paſſes by Maubeuge and Charleroy, falling into the Maes by Namur.

SAMGAEL. A town of Perſia, having a good cotton-trade. See *Perſia*.

SAMIAN *earth*. A kind of bole, or aſtringent earth brought from the iſland of Samos, in the Ægean ſea.

The beſt is called by Dioſcorides collyrium, becauſe uſed in medicines of that name: it is white, very light, ſoft, friable, well-taſted, and a little glutinous on the tongue. There is another kind harder, fouler, and more glutinous, called *after ſamias*; becauſe little ſhining ſtraws are frequently found in it, diſpoſed like little ſtars. Each kind is eſteemed very aſtringent, proper to dry, and draw wounds; having much the ſame qualities as the Armenian bole.

There is alſo an Armenian ſtone, taken out of the mines in the ſame iſland; which is white, and ſticks to the tongue when applied to it: it is held aſtringent and cooling; being alſo uſed by the goldſmiths to burniſh their gold, and give it a luſtre.

SAMIS, or *Samalis*. An exceeding rich Venetian ſtuff, worked with leaves of gold, but little known at preſent; though ſome pieces are ſtill ſent to Conſtantinople.

SAMOS. An iſland in the Turkiſh Archipelago, ſituated in 27 deg. 30 min. of E. lon. and 37 deg. 30 min. of N. lat. 30 miles ſouth of Smyrna, in the Leſſer Aſia, ſubject to the Turks; but inhabited by Greek chriſtians, of whom there are about 12,000 on the iſland.

SAMOTHRACIA. A ſmall iſland in the Ægean ſea, near the coaſt of Thrace or Romania.

SAMSOE. One of the Daniſh iſlands. See *Denmark*.

SANAS. White and blue cotton cloths, brought from the Eaſt Indies, particularly from Bengal. The pieces of the white are 9 ells 1-3d in length, and 5-6ths in breadth; the blue being 11 ells 1-4th in length, and 7-8ths in breadth.

SAND. A fine, hard, gravelly ſort of earth, or rather ſtones, divided into ſmall grains; of great uſe in building, and many other arts and manufactures, as glaſs-making, plumbery, foundery, and building.

There are three kinds of ſands, diſtinguiſhed by the places whence they are drawn; as pit-ſand, river-ſand, and ſea-ſand.

The uſe of ſand in building, is as an ingredient in mortar; for which purpoſe pit-ſand is of all others the beſt, and of pit-ſand the whiteſt is always the worſt: of river-ſand, that found in the fall of waters is the beſt, becauſe moſt purged: but ſea-ſand is the worſt.

Pit-ſand, as being fat and tough, is moſt uſed in walls and vaults: river ſand ſerves for rough caſting.

All ſand is good in its kind, if, when ſqueezed and handled, it crackles; and if, being put on a white cloth, it neither ſtains nor makes it foul. That ſand is bad, which, mixed with water, makes it dirty and muddy, or which has been long in the air, for ſuch will retain much earth and rotten humour; therefore ſome maſons waſh their ſand before they uſe it.

Some diſtinguiſh a male ſand, which is of a deeper colour than another ſort in the ſame bank or bed, called female ſand.

The ſand whereof glaſs is made, is white and gritty, full of little ſparkling grains. See *Glaſs*.

The ſand uſed by founders is foſſile; being properly a yellow fat earth, whereof they make their moulds, for the caſting of ſmall work; whence it is they ſay *caſting in ſand*. See *Foundery*.

The plumbers alſo uſe ſand to mould ſeveral of their works, particularly large ſheets. To prepare the ſand for theſe ſheets, they wet it lightly, ſtir and work it with a ſtick, then beat and plain it. See *Plumbery*.

Sands may be divided into ſharp and ſoft. Sharp or rag ſand is that compoſed of tranſparent pebbles naturally found in the mountains; of this again there is ſome fine and white; or grey, reddiſh, or brown; others coarſe, either of a grieſly or brown colour.

Soft or ſmooth ſand, is that mixed with flat particles from lime-ſtone, with micæ of glittering particles, either ſilver-like, as the ſea-ſand about the Scilly iſlands; or gold-like, as in Cleveland.

SAND, in agriculture, denotes one of the three uſual kinds of ſoil, which are ſand, clay and earth, or loam.

M. de la Quintinie attributes all the difference we find in ſoils to the different quality of the ſands mixed in them. Soft ſands, according to him, make a ſoft, gentle earth; unctuous ſand, a fat earth; and coarſe ſands, a rough untractable earth.

SAND, is alſo applied to dry crumbling earths; which, wanting fatneſs to bind them together, the wind eaſily breaks into duſt, and carries them away.

SANDARAC, or *Sandaracha*, in natural hiſtory and chemiſtry. A preparation of orpiment, made by fuſing it by a cloſe fire into a red friable maſs. See *Orpiment*.

SANDARACH, is the ſame with what is called red arſenic and realgar. See *Arſenic*, and *Realgar*.

It is alſo called *ſandaracha Græcorum*, in oppoſition to the gum ſandarach. Some diſtinguiſh two ſorts of Grecian ſandarach; the natural, which is that above deſcribed; and the factitious, which is only ceruſs exalted by the fire, and burnt into a kind of minium: but both of them are poiſon. See *Lead*, *Ceruſs*, and *Sandyx*.

Gum SANDARACH, is a white gum, oozing out of the trunk and thick branches of the great juniper-tree, by inciſions made in the heat of the ſummer. The ſmall or common juniper yields very little ſandarach; but its fruit

yields oils, waters, ſalts, ſpirits, and extracts of ſome repute in medicine.

The gum ſandarach is an ingredient in varniſh; with which, melted in oil of turpentine, is made the fictitious varniſh now uſed by painters and cabinet-makers.

It is alſo reduced into an impalpable powder, and uſed to prevent paper from imbibing ink. The beſt is in fine white tears, free of duſt, with which the Engliſh and Swedes drive a conſiderable trade. Some will have it, that the gum of the juniper is not the right ſandarach, but that of the oxycedrus, or leſſer cedar.

SANDERS. An Indian wood, very much valued; of a red, yellow, and white colour. See *Santalum*.

SANDEVER, or *Sandiver*. The droſs of glaſs, or the ſcum that ariſes from the aſhes of the herb kali, uſed in the making of glaſs. See *Glaſs*.

SANDWICH. A port-town of Kent, ſituated 10 miles eaſt of Canterbury, being one of the cinque ports.

SANDYX. A kind of minium, made of ceruſs, or rather lead, calcined and rubified, called alſo factitious ſandarach. See *Lead*, and *Sandarach*.

It is of little uſe in painting; the real minium, or vermilion, to which it is ſubſtituted, making a much better, brighter, and more durable colour.

SANEQUIN. A ſort of cotton, brought from Smyrna.

SANGLARGAN. A medicinal drug for ſtopping blood, brought from China: but, in all probability, this drug is only the dragon's blood. See *Dragon*'s blood.

SANGUINE *ſtone*. A kind of jaſper, brought from New Spain, of a dark brown colour, marked with ſpots of blood red. See *Jaſper*.

The Indians cut it in form of a heart, and uſe it in hæmorrhages, immoderate menſes, and other fluxes of blood. The patient applies it, by graſping it in his right hand, having firſt dipt it in water; but they ſometimes alſo hang it on the part whence the blood flows.

SANGUIS *draconis*, in pharmacy. See *Dragon*'s blood.

SANTA. A money of accompt; being a term at Bantam, and in all parts of the iſland of Java, as alſo in ſome neighbouring iſlands, for a certain number of caxas, ſtrung together upon a ſtraw.

The ſanta is of 200 caxas; and 5 ſantas make the ſapocou, worth about $3\frac{1}{2}$ d. ſterling.

SANTA *Clara*. An iſland in the Pacific ocean, ſituated in the bay of Guyaquil, near the coaſt of Peru, in 80 deg. of W. lon. and 5 deg. 15 min. of N. lat. 80 miles S. W. of the city of Guyaquil.

SANTA *Cruz*. A port-town of the iſland of Cuba, in North America, ſituated on the north-ſide of the iſland, in 85 deg. 30 min. of W. lon. and 22 deg. 30 min. of N. lat. 60 miles eaſt of Havannah.

SANTA *Fe*. The capital of New Mexico, in North America, ſituated in 109 deg. of W. lon. and 36 deg. of N. lat. 100 miles N. of the city of Old Mexico, and 700 miles weſt of the river Miſſiſſippi.

SANTA *Fe de Bagotta*. The capital of Terra Firma, in South America, ſituated on the eaſt ſide of the river Magdalena, in 74 deg. of W. lon. and 4 deg. 30 min. of N. lat. 360 miles ſouth of Carthagena.

SANTA *Maria*. A town of America, in the province of Darien, or Terra Firma Proper, ſituated on the river Santa Maria, a little eaſt of the bay of Panama, 100 miles S. E. of the city of Panama.

SANTALUM, *Santal*, or *Sanders*. A hard, heavy, odoriferous, medicinal wood, brought from the Eaſt Indies; of ſome repute as a drier, abſorbent, and ſweetener. There are ſantals of three different colours, citrine, white, and red. The trees whence they are taken are all of the ſame kind; and it is ſuppoſed their different colours only ariſe from the difference of climates where they grow; ſome ſay, from the different parts of the tree they are taken from. They are all held to be a little aſtringent, to ſtrengthen the heart and brain, and to ſtop vomiting; being frequently uſed in diet-drinks, and medicated ales, againſt ſcorbutic complaints. The tree is about the height of the European walnut-tree; its leaves reſemble thoſe of the lentiſcus; its flowers are blue, bordering on black; its fruit of the ſize of the cherry, green at firſt, but blackening as it ripens, and of a faint taſte. The citrine ſantal is eſteemed the beſt: it is brought from China and Siam; being yellow, heavy, and of a good ſmell; uſed in medicine, and alſo by the perfumers. The white ſantal is leſs odoriferous, and is brought from the iſle of Timor. The red has the leaſt ſmell of the three, but is the moſt aſtringent; being brought from Tanaſſarim, and the coaſt of Coromandel.

SANTILLANA. A city and port-town of Spain, in the province of Aſturias, ſituated on the bay of Biſcay, in 5 deg. of W. lon. and 43 deg. 35 min. of N. lat. 90 miles weſt of Bilboa.

SANTORINI. An iſland of the Turkiſh Archipelago, ſituated 40 miles S. E. of Melos, and 20 miles S. W. of Morgo, being 35 miles in circumference. The whole iſland ſeems to be a pumice-ſtone rock, covered over with a foot of vegetable earth, and was raiſed out of the ſea by a volcano, as were two or three other ſmall iſlands near it.

SAONE. A river of France, which riſes in Lorrain, and runs ſouth through Burgundy; then paſſing by Gray, Chalons, and Maſcon, falls into the Rhine at Lyons.

SAPAN. A name given by the Dutch to the Brazil wood brought from Japan; of which there are two ſorts, the large and the ſmall; which latter is alſo called ſapanbimaes. See *Brazil* wood.

SAPIENZA. An iſland and cape in the Mediterranean ſea, on the S. W. point of the Morea, in European Turky, ſituated 60 miles ſouth of the iſland of Zante, in 21 deg. 15 min. of E. lon. and 36 deg. 45 min. of N. lat.

SAPOCOU. A money of accompt in the iſland of Java, and ſome neighbouring iſlands, compoſed of 5 ſantas, and each ſanta of 200 caxas. See *Santa*, and *Caxa*.

SAPPHIRE. A precious ſtone, of a beautiful azure or ſky-blue colour; tranſparent, yet exceedingly hard, ſo as ſcarce to bear being engraven.

Different colours conſtitute different kinds thereof; the deepeſt blues being eſteemed males, and the whiteſt females. The ſapphires of Pegu are moſt eſteemed, which are found in the ſame mines as the rubies. There are ſome alſo brought from Calicut, Cananor, and Ceylon; from which laſt place Europeans might be furniſhed with abundance, if the king of the iſland did not prohibit all commerce thereof with foreigners. The ſoft water ſapphires of Bohemia and Sileſia are of ſome account, though far inferior to the oriental ones, both in the brightneſs of their blue, and the firmneſs of their texture. Many people value the ſapphire beyond the ruby, and give it the ſecond place among precious ſtones, as that next the diamond; though others give that place to the ruby. Some authors affirm, that a ſapphire, being heated to a certain degree, between two crucibles luted together, loſes all its colour, and becomes perfectly white; ſo as to deceive even the jewellers themſelves, and make it paſs for a diamond.

Druggiſts ſell two kinds of ſapphires, uſed in the confection of hyacinth, the one red, the other blackiſh: the laſt, by reaſon of the deep tincture they give that medicine, are very improperly uſed there: the former are little reddiſh ſtones, of the ſize of pin-heads, very hard, and difficult to pulveriſe.

Some rank the cat's-eye in the number of ſapphires, which is a gem remarkable for a fine diverſity of colours, as well as for its hardneſs, and bears a poliſh equal with that of the true ſapphire.

The chemiſts make ſeveral preparations of ſapphire, as a ſalt, a tincture, an eſſence, a water, and an oil; there being few diſeaſes but they pretend themſelves able to cure by remedies compoſed thereof. The ſuperſtitious attribute ſtill more ſtrange virtues to this ſtone; as that it grows foul, and loſes its beauty, when wore by a perſon that is of a lecherous nature.

SAPPHIRE *rubies*, are certain precious ſtones, between blue and red; which, in effect, are nothing but rubies whoſe colour is not perfectly formed. See *Ruby*.

SAQUEM. A port-town, lying on the Red ſea, in the province of Abex in Africa, ſituated in 38 deg. 30 min. of E. lon. and 19 deg. of N. lat. 250 miles weſt of Mecca, and ſubject to Turky.

SAR. A river of Germany, which riſes in Alſace, and running north enters Lorrain; it then paſſes by Sarabert

Sarbruck, and Sarburg, falling into the Moſelle a little above Triers.

ARAIS, is a term in the Mogul's territories for large buildings in the greater part of the towns, much of the nature of European inns, but leſs than the caravanſeras; merchants being received there with their merchandiſe, on paying a certain duty.

ARCOCOLLA. A gum oozing out of a thorny tree, either with or without inciſions. Neither authors nor merchants are agreed as to the place where it grows; ſome ſaying it is in Perſia, others in Arabia Deſerta. It comes to Europe in grains, or in tears of different colours; ſometimes white, ſometimes yellow, and ſometimes red; but all equally good, provided they are very dry: their taſte is bitter, accompanied with ſomewhat of a diſagreeable ſweetneſs. It is eſteemed warm and drying, very good to conſolidate and heal wounds, from whence it has its name. It is ſometimes alſo uſed in collyria to ſtop defluxions, and take off ſpecks in the eye.

ARDAM. A port-town of Holland, ſituated on the north-ſide of the Wye, in 4 deg. 30 min. of E. lon. and 52 deg. 38 min. of N. lat. 7 miles N. W. of Amſterdam, where are the greateſt magazines of ſhip-timber and naval ſtores in the world; and ſuch number of ſhipwrights, that it is ſaid they could formerly build a man of war every day of the year, if there was a neceſſity for it.

ARDIAN. A precious ſtone, of a blood colour, half tranſparent; being the ſame with what is otherwiſe called a cornelian. See *Cornelian*.

The moſt beautiful ſardians, are thoſe brought from about Babylon; thoſe of Sardinia, from whence they take their name, are in the ſecond claſs. There are others, and thoſe no contemptible ones, found near St. Mauro in Albania in Turky; and other very ſmall ones about the Rhine, as alſo in Bohemia and Sileſia. To give them the greater luſtre, it is uſual, in ſetting them, to lay ſilver-leaf underneath. The ſardian is moſt uſed for ſeals, as graving eaſily, yet taking a fine poliſh.

ARDINIA. An iſland of the Mediterranean, ſituated between 8 and 10 deg. of E. lon. and between 39 and 41 deg. of N. lat. bounded by the ſtrait which divides it from Corſica, on the north; by the Tuſcan ſea, which blows betwixt this iſland and Italy, on the eaſt; and by other parts of the Mediterranean ſea on the ſouth and weſt; being about 140 miles long, and 60 broad; a warm country, but not eſteemed very healthful, ſubject to the King of Sardinia, Duke of Savoy. See *Italy*.

ARDONYX. A kind of precious ſtone, partaking partly of the Sardian, and partly of the onyx; being ſemitranſparent, and reddiſh, bordering on white, ſomewhat like the nail of the hand: but in ſome the red inclines to yellow. It is brought from the Eaſt Indies, Arabia, and Bohemia; and was anciently much uſed for fine veſſels. See *Agate* and *Sardian*.

ARK. A little iſland between Guernſey and Jerſey, and the coaſt of Normandy in France, ſubject to Great Britain. See *Britiſh* Iſlands.

ARPLAR *of wool*, otherwiſe called *Pocket*, is half a ſack. See *Sack*.

ARRASIN. Black, or French corn. See *Corn*.

ARSAPARILLA. A medicinal plant, growing in New Spain, chiefly uſed in decoctions, and potions for the venereal diſeaſe; being eſteemed a great abſorbent and ſweetener, and on that account ſometimes taken as tea. Its root, which is the part in uſe, divides itſelf into a great number of filaments, 6 or 7 feet long, of the thickneſs of a quill: it is browniſh without ſide, and white within, only marked with two red ſtreaks. The branches creep on the earth, or along the trunks of other trees, in the ſame manner as ivy does.

To be good, it muſt be very dry, its filaments long, eaſy to cleave, and in cleaving muſt not yield any duſt: when boiled in water it muſt give it a red tincture. Some phyſicians much doubt the medicinal virtues of this root, as it does not diſcover much, either in taſte, ſmell, or tincture. There is another kind of ſarſaparilla, the filaments of whoſe root are thicker, growing in the iſland of Marignan, on the coaſt of Brazil; but not eſteemed ſo good as the former. A third kind is brought from Ruſſia, whoſe roots are ſtill bigger, and good for nothing but to burn.

SASSAFRAS. A yellow odoriferous wood, of a briſk aromatic ſcent, ſomewhat reſembling fennel; being the produce of a tree of which there are whole foreſts growing in Florida, and Virginia. The natives call it pavama; the Spaniards and French cinnamon-wood; becauſe, at the conqueſt of that country, under Ferdinand Soto in 1558, they imagined this to have been the true cinnamon tree. The principal virtue of the lignum ſaſſafras lies in its bark, which was formerly ſold at an incredible price, to be uſed with ſarſaparilla and eſquilina, in the cure of the venereal diſeaſe. It is very dry and hot, tho' not quite ſo much as the guaiacum.

It is uſed in ſome families as a common tea, which the ſhavings of it make agreeably enough; but the ſcandal of being a medicine in venereal caſes, prevents a deal of good being done by it. It is eſteemed in the gout, ſciatica, and green-ſickneſs. The beſt is that covered with a thick bark, reddiſh and rough; of a ſharp taſte, and a ſtrong aromatic ſmell.

SASSE, in ſome of the Engliſh ſtatutes, denotes a kind of wear with flood-gates, commonly uſed in navigable rivers for the damming and looſing the ſtream of water as occaſion requires, for the better paſſing of boats and barges.

SAT. A meaſure uſed at Siam for grain, and dry fruits: 40 of which make the ſeſt, and 40 ſeſts the cohi. Some think the ſeſt contains 100 catis, and by eſtimating 100 catis at 126 lb. avoirdupoiſe, the ſat would be about 3 lb. and the cohi 5000 lb.

SATALIA. A port-town of Pamphylia, in Leſſer Aſia. See *Turkey*.

SATTIN. A kind of ſilken ſtuff, very ſmooth and ſhining; the warp of which is very fine, and ſtands out; the woof coarſer, and hid underneath; whereon depends that gloſs and beauty which gives its price. There are ſome ſattins quite plain; others flowered with gold or ſilk; ſome wrought, and others ſtriped: all the varieties in the fabric of ſattins being made by uſing new warps or woofs. The fineſt ſattins are thoſe of Florence and Genoa; yet the French will not allow thoſe of Lyons to be any thing inferior thereto. The ſattins of Bruges have their warp of ſilk, and their woof of thread.

India ſattins, or ſattins of China, are ſilken ſtuffs, much like thoſe manufactured in Europe. Of theſe ſome are plain, either white, or of other colours; others worked, either with gold or ſilk, flowered, damaſked, or ſtriped. They are moſtly valued becauſe of their cleaning and bleaching eaſily, without loſing any thing of their luſtre: but in all other reſpects they are inferior to thoſe of Europe. F. le Comte obſerves, that the Chineſe prepare their ſattins in oil, to give them the greater luſtre; but this makes the duſt liable to hang to them. See *Silk*.

SATTINET, or *Sattinade*, a very ſlight thin ſort of ſattin, chiefly uſed by the ladies for ſummer night-gowns, and commonly ſtriped.

SATURDAY-*Stop*. A ſpace of time, in which formerly it was not lawful to take ſalmons, in the north, from Saturday evening till ſun riſing on Monday.

SATURN. See *Lead*.

SAVANNA. A town of Georgia in North America, ſituated in 81 deg. 20 min. of W. lon. and 32 deg. of N. lat. on the river Savanna, 10 miles W. of the mouth of it, lately built by the truſtees of Georgia, and ſubject to Great Britain.

SAVE. A river of Germany, which riſes in Carinthia, and runs E. through Carniola and Croatia; then continuing its courſe S. E. forms the boundary between Sclavonia and Turky, diſcharging itſelf into the Danube at Belgrade.

SAVONA. A port-town of the territory of Genoa, ſituated in 9 deg. of E. lon. and 44 deg. 25 min. of N. lat. on the bay of Genoa, 26 miles S. W. of that city.

SAVOY. A Dutchy ſubject to the King of Sardinia, ſituated between France and Italy, on the weſt ſide of the Alps. See *Italy*.

SAUSAGE, or *Saucidge*. A term of ſome ſignificancy in commerce, denoting a popular food prepared of crude meat,

meat, uſually either pork, beef, or veal, ſhred ſmall, ſeaſoned, and put up in a ſkin, in manner of a pudding. The moſt eſteemed is the Bologna ſauſage, which is much thicker than the common one; and is made with moſt ſucceſs in ſome cities in Italy, particularly in Bologna and Venice, from whence great quantities are exported to other places. They are made of raw pork well beaten in a mortar, with a quantity of garlic, pepper in the grain, and other ſpices: the Italians are furniſhed with a great part of the ſkins or guts for their ſauſages from England; and the quantities of that commodity yearly exported are greater than may be commonly imagined.

SAUK-BUND. The fifth ſort of ſilk gathered in the Mogul's territories.

SAUVAGAGI. A white cotton cloth brought from the Eaſt Indies, particularly from Surat; the pieces of which are 13 ells 1 half in length, and 5-8ths in breadth.

SAUVAGUZEES. White cotton cloths brought from the Eaſt Indies: ſome are called balazees, manufactured at Surat; and others called ſauvaguzees-dontis. Their length being 13 ells and a half, and 2-3ds breadth.

SAW. An inſtrument ſerving to divide into pieces divers ſolid matters; as wood, ſtone, ivory, and marble. See *Sawing*.

The ſaw is one of the moſt uſeful machines, in the mechanic arts, ever invented. The fable, which is perhaps founded upon ſome ſurer tradition, attributes the invention thereof to Icarus, who, vying with his father Dædalus, enriched the riſing arts with ſeveral diſcoveries. It is added, that he took the firſt hint from the ſpine or back-bone of a flat fiſh, ſuch as the ſoal. The ſaw is made of ſteel, with teeth; but thoſe differently filed, and turned, according to the uſe it is deſigned for. There are alſo a kind of ſaws without teeth, uſed in the ſawing of marbles and other ſtones.

The beſt ſaws are of tempered ſteel, ground bright and ſmooth; thoſe of iron are only hammer-hardened: hence, the firſt, beſides their being ſtiffer, are likewiſe found ſmoother than the laſt. They are known to be well hammered by the ſtiff bending of the blade; and well or evenly ground, by bending equally into a bow. The edge wherein the teeth are ſet, is always thicker than the back; in regard the back is to follow the edge; and the teeth are cut and ſharpened by a triangular file; firſt fitting the blade of the ſaw in a whetting-block. When filed, the teeth are to be ſet, that is, to be turned a-ſkew, or out of the right line to make the wider kerf or fiſſure, that the back may follow the better. This is done by putting an inſtrument, called a ſaw-wriſt, between every other two teeth, and giving it a little wrench, which turns one of the teeth a little towards you, and the other a little from you. The teeth are always ſet ranker for coarſe cheap ſtuff, than for hard and fine; in regard the ranker the tooth is ſet, the more ſtuff is loſt in the kerf; and if the ſtuff be hard, the greater is the labour of ſawing it.

The workmen who make the greateſt uſe of the ſaw, are the ſawyers, carpenters, joiners, eboniſts, ſtone-cutters, carvers, and ſculptors. The lapidaries too have their ſaw, as well as the workers in moſaic; but theſe bear little reſemblance to the common ſaws.

Of all mechanicks, there are none have ſo many ſaws as the joiners, nor of ſo many different kinds. The chief are as follow: 1. the pit-ſaw, a large two-handed ſaw, uſed to ſaw timber in pits; which is ſet rank for coarſe ſtuff, ſo as to make a kerf or fiſſure of almoſt a quarter of an inch; but for finer ſtuff finer. 2. The whip-ſaw, which is likewiſe two-handed, and uſed to ſaw ſuch large pieces of ſtuff as the hand-ſaw will not eaſily reach. 3. The hand-ſaw, which is made for a ſingle man's uſe, and is of various kinds; as the bow or frame ſaw, furniſhed with cheeks, by the twiſted cord and tongue in the middle thereof; the upper ends are occaſionally drawn cloſe together, and the lower ſet the further apart. Tennon ſaw, which being very thin, has a back to keep it from bending. Compaſs-ſaw, which is very ſmall, and its teeth uſually not ſet; its uſe is to cut a round, or any other compaſs-kerf: hence the edge is made broad, and the back thin, that it may have a compaſs to turn in. The chirurgeons likewiſe uſe a ſaw to cut off bones, which is very ſmall and light, that it may be managed with the more eaſe and freedom; the blade exceeding fine, and the teeth exquiſitely ſharpened, to make its way more gently, and yet with more expedition, in amputations of legs and arms.

SAWING, is the application of the ſaw, in the diviſion of timber and ſtone into pieces, and ſlabs. There are wind-mills and water-mills, which do the office of ſawing wood, with infinitely more expedition and eaſe than is performed by the hand.

They conſiſt of ſeveral parallel ſaws, which are made to riſe and fall perpendicularly, by means of one of the grand principles of motion. A very few hands are required only to puſh forwards the pieces of timber, which are laid on rollers, or ſuſpended by ropes, in proportion as the ſawing advances. Theſe mills are frequently found abroad, and were lately begun to be introduced in England; but the parliament, in conſideration that they would ſpoil the ſawyers trade, and ruin great numbers of families, thought fit to ſuppreſs them.

SAWING-*Mill*. See *Mill*.

SAXIFRAGE. A plant, ſuppoſed to be ſovereign for diſſolving the ſtone in the bladder.

The ſaxifrage ſhoots forth leaves almoſt round, indented, thickiſh, and gloſſy, not unlike thoſe of ground-ivy. In the midſt of the leaves ariſe ſtalks of about a foot high, which bear on their ſummits ſmall white-leaved flowers diſpoſed in form of a roſe. Its ſeed, which is very ſmall, is encloſed within almoſt round capſulas. Its root is divided into ſeveral fibres, towards the lower part of which are formed ſmall grains reſembling coriander; and it is theſe grains, properly called ſeed of ſaxifrage, which are uſed in medicine. The beſt manner of uſing them is to take them infuſed in white wine, or in a decoction of common water.

SAXONY, comprehends the northern diviſion of Germany; containing the upper and lower circles of Saxony. See *Germany*.

SAY, or *Saye*, in commerce, a kind of ſerge, or a very light croſſed ſtuff, all wool; much uſed abroad for linings, and by the religious for ſhirts; as alſo in England by the quakers for aprons, for which purpoſe it is uſually green. There are very conſiderable manufactures thereof at Sudbury, near Colcheſter; alſo at Ypres and Houdſcot, in Flanders. Thoſe made in England are chiefly exported to Portugal and Leghorn.

SAY, or *Aſſay*. See *Aſſay*.

SAYBROOK. A port-town of New England, in North America, in the province of Connecticut, ſituated at the mouth of the river Connecticut, in 72 deg. of W. lon. and 41 deg. of N. lat. 85 miles S. W. of Boſton.

SAYCOCK, or *Bongo*. One of the iſlands of Japan, ſituated in 130 deg. of E. lon. and 32 deg. of N. lat. being divided from the great iſland of Japan by a narrow channel on the north; and from the iſland of Tonſa by another channel on the N. E. See *Japan*.

SCABBARD. An inſtrument or ſheath to contain a ſword in.

SCABIOUS. A medicinal plant, very common in the fields, which has a great character among diſpenſatory writers, though it ſeems to grow much out of uſe. However, it paſſes for a great pectoral, and does great things in aſthmas and pleuriſies; Etmuller giving it the pre-eminence in inward abſceſſes. It has a place alſo among alexipharmicks, and there is ſcarce any thing in better eſteem for the itch, or other cutaneous foulneſſes, when it has its name, and upon which account it is often mixed with in decoctions, and ſometimes in a ſyrup, among ſuch as are called ſweeteners.

SCAGEN. A port-town of N. Jutland, ſubject to Denmark, which gives name to a promontory, or cape, at the entrance of the Scaggerac ſea, or paſſage out of the ocean into the Baltic; ſituated in 10 deg. of E. lon. and 58 of N. lat. Here was a ſand hill, upon which a fire was kept conſtantly burning in the night-time, for the direction

direction of ſhips ſailing through the Categate; but, this being almoſt waſted away by the ſea, there is now erected, inſtead of the ſaid waſting ſand hill, a tower of 64 feet high, ſtanding farther within the land, at the diſtance of 800 feet from the ſand hill, and 400 more towards the north; upon which tower, the fire has been kept, ſince the firſt of February 1752, of which the King of Denmark gave public notice; to the end that mariners, being duly apprized of the alteration beforehand, might regulate their courſe to the Categate accordingly. See *Denmark*.

SCAGGERAC *Sea*. See *Categate*.

SCALE. A mathematical inſtrument, conſiſting of one or more lines drawn on wood, metal, or other matter, divided into equal or unequal parts; of great uſe in laying down diſtances in proportion, or in meaſuring diſtances already laid down. There are ſcales of ſeveral kinds, accommodated to the ſeveral uſes; the principal are, the plain-ſcale, the diagonal ſcale, Gunter's ſcale, and the plotting-ſcale.

SCALE, in geography and architecture, is a line divided into equal parts, placed at the bottom of a map or draught, to ſerve as a common meaſure, to all the parts of the building, or all the diſtances and places of the map.

In maps of large tracts, as kingdoms and provinces, the ſcale uſually conſiſts of miles, whence it becomes denominated a ſcale of miles. In more particular maps, as thoſe of fields and manors, the ſcale is uſually of chains, ſubdivided into poles or links. The ſcales uſed in draughts of buildings, uſually conſiſt of modules, feet, inches, palms, fathoms, or the like. To find the diſtance between two towns in a map, the interval is taken in the compaſſes, and ſet off in the ſcale, and the number of diviſions it includes gives the diſtance. The ſame method ſerves to find the height of a ſtory in a deſign.

SCALIN, or *Eſcalin*. A ſmall ſilver coin current in Flanders and Holland, worth about 3½ d. ſterling. There are are alſo half, double, and triple ſcalins, all uſed in the Dutch commerce on the coaſts of Africa.

SCALLOWAY. A town on the weſt ſide of Mainland, one of the iſlands of Shetland, in the county of Orkney in Scotland, ſituated in 1 deg. 5 min. of W. lon. and 61 deg. of N. lat. 130 miles N. E. of Cathneſs, ſubject to Great Britain.

SCAMITE. A cotton cloth manufactured in ſome of the iſlands of the Turkiſh Archipelago, particularly at Siphanto; it is plain, and not ſo ſtrong as the dimitty, which is another ſort manufactured in the ſame place.

SCAMMONY, in pharmacy, an inſpiſſated juice, of the root of a plant of the ſame name, growing in the Levant, particularly about Aleppo, and St. John de Acre. The juice flows from an inciſion made in the root, and is afterwards thickened by the ſun, as it is pretended; but in reality by the fire. The tree is much like an ivy, its leaves in form of hearts, its flowers white, and it creeps on the ground, or climbs on other trees and walls. The good and genuine ſcammony of Aleppo, is to be grey, tender, friable, and reſinous; the taſte bitter, and the ſmell faintiſh and diſagreeable. The ſcammony of Smyrna, and that of the Eaſt Indies, are leſs valued; the firſt as being more heavy, hard, and black; the latter, though light and friable, is in reality nothing but a compoſition of common roſin, with ſome other violent purgatives. Pomet aſſerts, that both theſe kinds are rather poiſons than remedies.

The true ſcammony is one of the ſureſt purgatives; but one of the moſt violent we have: hence it is ſeldom uſed without correcting it by ſome preparation with ſulphur, quince, or the like. From the juice is drawn a reſin, of more virtue than the ſcammony itſelf. They alſo make a ſyrup of it, which is found a gentle purgative. The ſcammony now in uſe muſt be very different from that of the ancients, at leaſt in the preparation, by reaſon the ancients gave it in much larger doſes: hence Fallopius conjectures the modern ſcammony to be adulterated with ſpurge. Some give the name of American ſcammony to mechoacan. See *Mechoacan*.

SCANDEROON. A port-town of Aſiatic Turky, ſituated on the coaſt of the Leſſer Aſia, in 37 deg. of E. lon. and 36 deg. 15 min. of N. lat. 50 miles N. E. of the iſland of Cyprus; being the port-town to Aleppo, with which the Engliſh and other European merchants have a conſiderable trade. See *Turky*.

SCANTLING. A meaſure, ſize, or ſtandard, whereby the dimenſions of things are to be determined.

SCARBOROUGH, under the meridian of London, a borough and port-town of Yorkſhire, ſituated on the German ocean, 37 miles N. E. of York; reſorted to in the ſummer by great numbers of nobility and gentry, on account of its excellent mineral waters.

SCARDONNA. A port-town of Dalmatia, ſituated on a bay of the gulph of Venice, in 17 deg. 25 min. of E. lon. and 43 deg. 55 min. of N. lat. 45 miles N. of Spalatto, ſubject to Venice.

SCARLET, in dying, one of the ſeven kinds of good reds. See *Red*.

There are two kinds of ſcarlets; the one given with kermes, or ſcarlet grain; the other with cochineel. See *Cochineel*.

SCARLET-*Grain*, is a dyer's drug, uſed for giving a ſcarlet colour, and commonly taken for the grain of a plant. This imaginary grain, called by the Arabs kermes, is found on a kind of ilex, growing in great plenty in the uncultivated parts of Provence, and Languedoc in France; as alſo in Spain and Portugal. That of Languedoc paſſes for the beſt, being large, and of a very bright red: that of Spain is the worſt, being very ſmall, and of a blackiſh red. It is to be gathered when ripe, and is only good while new; that is, within the compaſs of the year; after which time a kind of inſect is found in it that eats out the heart thereof.

F. Plumier has made ſeveral diſcoveries on the ſubject of ſcarlet-grain. The Arabic term kermes, which ſignifies little worms, he obſerves, agrees perfectly with the nature of this drug; which is the work of a worm, and not the grain or ſeed of a tree, as is generally ſuppoſed. The ſhrub it is found on, is the ilex aculeata cocci-glandifera; on the leaves and little ſhoots whereof appear in the ſpring time, a kind of little veſiculæ, at firſt no bigger than grains of millet, occaſioned by the puncture of an inſect, which depoſite its eggs therein. In proportion as theſe grow, they become covered with a kind of aſh-coloured down, which hides the red colour underneath; and when arrived at maturity, which thoſe who gather them know very well, they are taken from the tree in form of little galls. The huſk or ſkin of theſe galls, is very light and brittle, covered with a fine membranous pellicle all round, except at the place where it grows to the leaf: a ſecond ſkin under the firſt, is full of a duſt, partly red, and partly white. As ſoon as the galls are gathered, the juice or pulp is preſſed from them, and they are waſhed in vinegar, to deſtroy the little inſects within ſide, which, without ſuch precaution, would grow, feed on the duſt, and at laſt be hatched, leaving only empty ſhells.

The ſcarlet-grain is alſo of conſiderable uſe in medicine, where it is better known under its Arabic name of kermes. See *Kermes*.

SCARPANTO. An iſland in the Mediterranean, ſituated in 27 deg. of E. lon. and 36 deg. of N. lat. 20 miles S. W. of Rhodes, and 40 miles N. E. of Candia.

SCARPE. A river of the Netherlands, which riſes in the province of Artois, and running N. E. paſſes by Arras, Douay, and St. Amand, falling into the river Scheld a little below Mortaigne.

SCAVAGE, *Schevage*, *Schewage*, or *Shewage*, in the antient Engliſh cuſtoms, a kind of toll exacted by mayors and ſheriffs, of merchant-ſtrangers, for wares ſhewed, or offered to ſale within their liberties: but this cuſtom was prohibited by the ſtatute of the 19th of Henry VII. except to the city of London, which ſtill retains the benefit of it.

The duties of ſcavage, package, balliage, and portage, payable to the city of London for all the goods and merchandiſes of aliens, or denizens born within the allegiance of the Britiſh crown, being the ſons of aliens, born under foreign allegiance, imported into, or exported out of the ſaid city: granted to the mayor and commonalty, and citizens, by their charter dated the 5th day of Sep-

tember, in the 16th year of the reign of King Charles the ſecond, confirmed by the 20th rule of the book of rates, and by 2 Will. and Mary, cap. 8.

Which ſaid duty of ſcavage is by the act of navigation paſſed *anno* 12th Car. II. cap. 18 § 9. and the act of frauds paſſed *anno* 13th and 14th Car. II. cap. 11 § 6. alſo payable for ſeveral commodities, though of Britiſh property, when imported in any other than ſhips belonging to the people of Great Britain or Ireland, and whereof the maſter, and at leaſt three fourths of the mariners are Britiſh, or in foreign-built ſhips, altho' owned or manned by Britiſh, unleſs ſuch as are taken as prize, and for currants and Turkey commodities imported in any other than Britiſh-built ſhipping, and navigated as aforeſaid; the particular ſpecies whereof are thus marked * in the following table; being the ſame that are chargeable with petty cuſtom in the like caſe.

1. *The ſcavage table of rates inwards*, for the ſurveying of all goods and merchandiſes imported from parts beyond the ſeas; although the mayor and commonalty, or their officers, do not ſurvey or deliver the ſaid goods when they are ready, and upon reaſonable requeſt and notice given. By the 22 Hen. VIII cap. 8. § 2, 4. it is directed, that tables thereof be ſet up in the city of London, approved and ſubſcribed by the chancellor and treaſurer of England, the preſident of the King's council, lord privy-ſeal, lord ſteward of the houſhold, and the two chief juſtices of the King's-Bench and Common Pleas, or four of them at the leaſt.

SCAVAGE.

	s.	d.
A		
Alum, the hundred weight, containing 112 lb.	0	2
Andirons. See *Braſs*.		
Annotto, the hundred weight containing 5 ſcore	0	4
Apples and pears, the little barrel -	0	1¼
* Aqua vitæ, the hogſhead - -	0	6
Argol, white or red, the hundred weight containing 112 lb. - - -	0	1½
* Aſhes, vocat. potaſhes, for every 20 s. of the rate - - -	0	1
B.		
Babies heads, the dozen - - -	0	0½
Bacon, the hundred weight containing 112 lb.	0	3
Bandſtrings, the dozen knots - -	0	0¼
* Balks great, the hundred containing 6 ſcore	1	6
middle, the hundred containing 6 ſcore	0	9
ſmall, the hundred containing 6 ſcore	0	4
* Barlings, the hundred containing 6 ſcore	0	4
* Barley, the quarter containing 8 buſhels	0	0½
Barillia, or ſaphora, the barrel cont. 200 wt.	0	4
Baſket-rods, the dozen bundles - -	0	4
Baſt-ropes, the hundred weight cont. 112 lb	0	0½
Battery, baſhrones, or kettles, the hundred wt. containing 112 lb. - -	0	6
* Beans, the quarter - - - -	0	0½
Beef, the barrel - - - -	0	1
Bell metal, the hundred weight cont. 112 lb.	0	2
Bermilians. See *Fuſtians*.		
Blacking, or lamp-black, the hundred weight containing 112 lb. - - -	0	3
Bottles of all ſorts, the dozen - - -	0	0½
* Boards, barrel boards, the thouſand -	0	4
Clap-boards, the hundred cont. 6 ſcore -	0	1
Pipe-boards, the hundred cont. 6 ſcore -	0	1
Boratoes, or bombaſines,—narrow, the ſingle piece not above 15 yards, - -	0	2
Broad, the ſingle piece not above 15 yards	0	3
Books unbound, the baſket or maund -	0	8
* Bow ſtaves, the hundred cont. ſix ſcore -	0	2
Braſs andirons, laver-cocks, chaffing-diſhes, and all other braſs or latten wrought, the hundred pound containing five ſcore - -	0	3
Brimſtone, the hundred weight cont. 112 lb.	0	0½
Briſtles, the dozen pounds - -	0	0½
Buckrams of Germany, the dozen pieces	0	3
Of France, the dozen pieces - -	0	2
Buffins, liles, or mocadoes narrow, the ſingle piece not above 15 yards - -	0	1
Broad, the ſingle piece not above 15 yards	0	2
Bulruſhes, the load - - -	0	1
Burs for milſtones, the hundred cont. five ſcore	0	3
Butter, the hundred weight containing 112 lb.	0	1
C		
Cable ropes for cordage, the hundred weight containing 112 lb. - -	0	1
Cabinets great, the piece - -	0	2
ſmall, the piece - -	0	1
Caddas, or cruel ribbon, the dozen pieces, each piece containing 36 yards - -	0	1
Candlewick, the hundred weight cont. 112 lb.	0	1
Candles of tallow, the dozen pound -	0	0½
Capers, the hundred lb. cont. five ſcore -	0	2
* Capravens, the hundred containing ſix ſcore	0	3
Cards—Playing-cards, the ſmall groſs containing 12 dozen pair - - -	0	2
Wooll cards, the dozen pair -	0	0½
Carpets—Turky, Perſia, Eaſt India and Venice, long, the piece - -	0	6
Of the ſame, or like ſort, ſhort, the piece -	0	4
Carpets of all other ſorts, the piece -	0	0½
Caſes—For looking-glaſſes, gilt, from No. 3. to No. 10. the dozen - -	0	1½
For looking glaſſes ungilt, the dozen -	0	0½
Catlings. See *Luteſtrings*.		
Chamlets, mohairs, and Turkey grograms, each 15 yards - - - -	0	1½
Cheeſe, the hundred weight containing 112. lb.	0	1
Cherries, the hundred weight containing 112 lb.	0	1½
Cloth—French woollen, each 20 yards -	0	8½
Scarlet, the yard - -	0	1
Cochineal—Silveſter, or Campechea, the pound	0	0½
Of all other ſorts, the pound	0	1
Combs of box or light-wood, the groſs containing 12 dozen - - -	0	0½
Copper bricks, or plates, round or ſquare, the hundred weight containing 112 lb - -	0	4
Copperas, the hundred weight containing 112 lb.	0	1
Coral, rough or poliſhed, the maſt containing two pounds and a half - -	0	2
Cordage. See *Cable Ropes*.		
Cork—The hundred weight containing 112 lb.	0	1
The dozen pieces, for ſhoemakers -	0	0½
Corn—Barley, ſee in *B*.		
Beans, ſee in *B*.		
Malt, ſee in *M*.		
Oats, ſee in *O*.		
Peaſe, ſee in *P*.		
Rye, ſee in *R*.		
Wheat, ſee in *W*.		
D.		
* Deal boards of all ſorts, the hund. cont. 6 ſcore	1	0
Dogs of earth, the ſmall groce cont. 12 dozen	0	1½
Durance, or duretties, with thread, each 15 yards	0	1½
With ſilk, each 15 yards - -	0	2
Drugs.—Amber-greaſe, the ounce -	0	1½
Aloes cicotrina, the pound - -	0	0½
Barley hulled, the hundred wt. cont. 112. lb.	0	1
Carraway and cummin-ſeeds, the hundred wt.	0	1½
China roots, the hundred pounds cont. 5 ſcore	1	6
Civet the ounce - - - -	0	1
Coral, ſee in *C*.		
Frankincenſe, ſee in *F*.		
Gum arabick, ſee in *G*.		
Gum armoniack, the hundred cont. 5 ſcore	0	6
Muſk, the ounce - -	0	1
Cods, the dozen - - -	0	1
Quickſilver, ſee in *Q*.		
Saunders, white or red, the hundr. cont. 5 ſcore	0	6
Treacle, common, the hundred cont. 5 ſcore.	0	2
Turpentine, common, the hundred wt. containing 112. lb. - -	0	1
E.		
Earthen wares, vocat. tiles, ſee in *T*.		

F.

Feathers for beds, the hundred wt. cont. 112 lb.	0	2
Fiſh—Cod-fiſh, the hundred containing ſix ſcore	0	4
Cole-fiſh, the hundred containing ſix ſcore -	0	1
Eels the barrel - - -	0	1
Quick, the ſhip's lading - -	10	0
Herrings, white or red, the laſt -	0	6
Lings, the hundred containing ſix ſcore	0	6
Lub fiſh, the hundred containing ſix ſcore	0	2
Croplings, the hundred containing ſix ſcore	0	1
Titling, the hundred containing ſix ſcore	0	0½
Sturgeon, the firkin - -	0	1
The keg - -	0	0½
Salmon, the Barrel - -	0	1½
*Flax undreſs'd, the hundred weight cont. 112 lb.	0	1½
Dreſſed or wrought, the hundred weight containing 112 lb. - -	0	4
Flox, the hundred weight containing 112 lb.	0	2
Frankincenſe, the hundred weight cont. 112 lb.	0	1½
Fuſtian bermillians, the piece, or two half pieces containing 15 yards each half piece	0	2
Naples fuſtian, tripe, or velure, the piece containing 15 yards - -	0	2
Furs—Beaver-ſkins, the piece - -	0	0½
Beaver-bellies or wombs, the dozen	0	4
Budge, tawed or untawed, the hundred containing five ſcore - -	0	2
Fox-ſkins, the hundred cont. five ſcore	0	4
Foyns, without tails, the dozen -	0	1½

G.

Galley diſhes, each 12 dozen - -	0	1
Galls, the hundred containing 112 lb.	0	2
Glaſs, for windows, the cheſt or caſe	0	3
Called Venice drinking-glaſſes, the dozen	0	0½
Looking-glaſſes, halfpenny ware, the groce cont. 12 dozen - - -	0	0¼
Penny ware, the groce cont. 12 dozen -	0	0½
Looking-glaſſes of ſteel, ſmall, the dozen	0	0½
large, the dozen	0	1
Ditto, of cryſtal, ſmall, the dozen under No. 6.	0	1
the doz. No. 7, 8, 9, 10 -	0	4
middle ſort, the dozen, No. 6.	0	2
the dozen, No. 11 and 12 -	1	6
Glaſs ſtone plates for ſpectacles, rough, the dozen	0	0½
Glaſs-plates, or ſights for looking-glaſſes unfoyled of cryſtal, ſmall, under No. 6. the dozen	0	0½
Ditto, No. 6. the dozen - -	0	1
No. 7, 8, 9, 10. -	0	2
No. 11, 12, the dozen -	1	0
Gloves of Spaniſh leather, the dozen pair	0	0½
Goats hair, the hundred pound cont. five ſcore	0	6
Grain for dyers of ſcarlet powder, the pound	0	0½
Of Sevil in berries, and grains of Portugal, or Rotta, the pound - -	0	0¼

Grocery.

Almonds, the hundred weight cont. 112 lb	0	3
Aniſeeds, the hundred weight cont. 112 lb.	0	2
Cinnamon, the hundred cont. five ſcore	1	0
Cloves, the hundred containing five ſcore	1	6
* Currants, the hundred weight cont. 112 lb.	0	2
Dates, the hundred wt. containing 112 lb.	0	4
* Figs, the hundred wt. cont. 112 lb. -	0	1
Fuſſes of cloves, the hundred lb cont. five ſcore	0	8
Ginger, the hundred lb. containing five ſcore	1	0
Liquorice, the hundred containing 112 lb.	0	1½
Mace, the hundred containing five ſcore	2	0
Nutmegs, the hundred containing five ſcore	1	6
Pepper, the hundred containing five ſcore	0	6
*Prunes, the hundred containing 112 lb.	0	1
*Raiſins great, or Malaga, the hund. cont. 112 lb.	0	1
Of the ſun, the hundred wt. cont. 112 lb.	0	2
* Sugar refined, the hundred containing 112 lb.	0	10
Candy-brown, or white, the hundred wt.	0	8
Muſcovadoes, and white, the hund. wt.	0	4
St. Thome and Panellis, the hundred wt.	0	2
Grograms, ſee *Chamlets*.		
Gunpowder, the barrel containing 112 lb.	0	3
Gum arabick, the hundred weight cont. 112 lb.	0	2

H.

Hawks of all ſorts, the hawk -	0	2
*Hats—Baſt or ſtraw hats knotted, the dozen	0	0¼
Baſt or ſtraw hats plain, the groce containing 12 dozen - -	0	1½
Wooll-felts, the dozen - -	0	1
Demi-caſtors, the piece - -	0	0½
Beaver-hats, the piece - -	0	2
* Headings for pipes, hogſheads, or barrels, the thouſand - - - -	0	2
Heath for bruſhes, the hundred weight cont. 112 lb.	0	1
* Hemp undreſs'd the hundred weight cont. 112 lb.	0	1
Dreſs'd, the hundred wt. containing 112 lb.	0	2
Hides—Buff hides, the piece - -	0	0½
Cow hides, or horſe hides, the dozen hides	0	3
Honey, the barrel - - -	0	1½
Horſes and mares, each horſe or mare -	0	6
Hops, the hundred weight - -	0	2

I

Indico, the hundred pound cont. five ſcore	2	0
Indico duſt, the hundred pound cont. five ſcore	0	8
Incle wrought, the dozen pound - -	0	1½
Rolls, the dozen pieces, containing 36 yards each piece - -	0	1
Unwrought, the hundred lb. cont. five ſcore	0	4
Iron wrought, the hundred containing 112 lb.	0	1
Iron unwrought, the ton - -	0	6
Iron pots, the dozen - -	0	1½
Juice of lemons, ſee *Lemons*.		

L.

Lamp black, ſee *Blacking*.		
Latten, ſhaven latten, the hundr. wt. cont. 112 lb.	0	6
Black latten, the hundred weight containing 112 lb. - - -	0	3
Lace,—Bone-lace of thread, the dozen yards	0	0½
Silk bone-lace, the pound cont. 16 ounces -	0	2
Silk lace of all other ſorts, the pound containing 16 ounces - - -	0	1
Lemons, the thouſand - -	0	1
Juice of lemons, the pipe - -	0	6
Pickled lemons, the pipe - -	0	3
Linſeed, the quarter - - -	0	1
Leaves of gold, the hundred leaves cont. five ſcore	0	0½
Lewers for hawks, the dozen - -	0	0½
Leather.—Bazel leather, the dozen skins -	0	0¼
Hangings, gilt, the piece - -	0	3
Leather for masks, the dozen pound -	0	2
Lutes, the dozen - - -	0	4
Lute-ſtrings, called catlings, the great groce containing 12 ſmall groce of knots -	0	1
Minikins, the great groce containing 12 dozen knots - - -	0	0½

Linen, Brabant, Flemiſh, Embden.

Britiſh cloth, the hundred ells cont. five ſcore	0	2
Frieze cloth, Ghentiſh Holland, Iſinghams, Overiſſels cloth, Rowes, Cowſfeld, or Plats cloth, each 30 ells - - -	0	2
Callicoes, or dutties, the piece - -	0	0½
Cambricks, the whole piece containing 13 ells	0	2

For a winch of cable-yarn	0	4
For a firkin of ſhot	0	2

All other goods not mentioned in this table, ſhall pay portage duties, as other goods do of like bulk, or condition, herein expreſſed.

For the more certain and better levying and collecting the aforeſaid duties of package, ſcavage, &c. the mayor and commonalty, or their proper officers, or deputies, may by all lawful ways and means, compel perſons ſuſpected of any concealments, colourings or frauds, to take their oaths upon the Holy Evangeliſts.

Note, The city of London is likewiſe intitled to the ſurvey of the meaſures, numbers, and weights, of all merchandiſes of aliens or denizens, coming into, or going out of the ſaid city, as well by land as by water: and alſo the portage and carriage of all goods of denizens, whoſe fathers are aliens, born under foreign allegiance, or of aliens born under foreign allegiance in parts beyond the ſeas, carried into London from the river of Thames, to the houſes or warehouſes of ſuch merchants, and from thence to the ſaid river.

SCAVINGERS. Two officers choſe yearly in each pariſh in London, and the adjacent ſuburbs, whoſe buſineſs it is to hire perſons, called rakers, and carts to clean the ſtreets, and carry away the dirt and filth thereof; being much the ſame with what were anciently called ſtreet-wards.

SCHEDULE. A ſcroll of paper, or parchment, annexed to a will, leaſe, or other deed; containing an inventory of goods, or ſome other matter, omitted in the body of the deed.

SCHELD. A river of the Netherlands, which riſes in the confines of Picardy, and runs N.E. by Cambray, Bouchain, Valenciennes, Conde, Tournay, and Oudenarde; and receiving the Lis at Ghent, runs E. by Dendermonde; then N. to Antwerp, below which city it divides into two branches; one called the Weſter-ſcheld, which ſeparates Flanders from Zealand, and diſcharges itſelf into the ſea near Fluſhing; the other branch is called the Eaſter-ſcheld, dividing from the Weſter-ſcheld at Sandvliet, runs N. by Bergen-op-zoom, and afterwards E. between the iſlands of Beverland and Schowen, and falls into the ſea a little below.

SCHELDAL A ſilver coin ſtruck and current in Denmark, and in ſome parts of Germany, worth 32 lubs, or 3 s. ſterling.

SCHELLING. An iſland of Holland, ſituated at the entrance of the Zuyder ſea, between Flie iſland and Ameland, in 5 deg. 20 min. of E. lon. and 53 deg. 34 min. of N. lat.

SCHELONGS. A copper coin, current in Poland, worth an Engliſh farthing.

SCHEMNITZ. The capital of the mine towns in Upper Hungary, ſituated in 19 deg. of E. lon. and 48 deg. 0 min. of N. lat. 60 miles N. E. of Preſburg, near which place is a rich ſilver mine.

SCHENECTIDA. A fortreſs of New York in America, ſituated in 72 deg. 30 min. of W. lon. and 43 deg. 30 min. of N. lat. on Hudſon's river, in the province of Albany, adjoining to the country of the Iroquois, 100 miles north of New York city, ſubject to Great Britain.

SCHEPEL, or *Sheppel*. A corn meaſure uſed at Hamburg; 83 of which make 10 quarters in London.

The ſchepel is alſo uſed at Amſterdam, where 4 make the muid, and 27 muids the laſt, or 10¼ quarters of London.

SCHEREFI. A gold coin current in Perſia, worth 8 larins, or about 2 l. 17 s 4 d. ſterling.

SCHERIF, called otherwiſe *Sultahin*, and commonly *Sequin*. A gold coin ſtruck at Cairo, and current in all the Grand Signior's territories. It is the only gold coin ſtruck in Turky; and its value is ſuppoſed to be the ſame with that of the Britiſh crown.

The other gold coins met with in the Grand Signior's territories are German, Hungarian, and Venetian Ducats; which laſt are called ſequins. See *Sequins*.

SCHETLAND, or *Shetland Iſlands*, ſituated between 1 deg. E. and 2 deg. of W. lon. and between 61 and 62 deg. of N. lat. conſtitute part of the county of Orkney, or Orcades, in Scotland, 100 miles N. E. of Cathneſs, moſt valuable for the herring-fiſhery on their ſhores. See *Britiſh* Iſlands.

SCHIPPONDT. A weight, uſed in ſeveral cities of Europe.

At Antwerp the ſchippondt is of 300 lb. which make 264 lb. 5 oz. of Amſterdam; the 100 lb. weight of Amſterdam being equal to 109 lb. of London.

At Hamburgh, of 300 lb. and make 294 of Amſterdam.

At Lubeck, of 320 lb. which make 305 of Amſterdam.

At Stockholm two ſorts of ſchippondts are uſed, one for copper, and the other for merchandiſe of proviſion. The firſt is of 320 lb. which make 273 and 1-half of Amſterdam. The ſecond is of 400 lb. which makes at Amſterdam 342.

At Coningsberg the ſchippondt is of 400 lb. making at Amſterdam 307; which is to be underſtood when the purchaſe or ſale of merchandiſe is between citizen and citizen; for when a citizen purchaſes from a Pole, the latter allows to the former 4 or 5 lb. *per cent.* benefit, or good weight, ſo that a ſchippondt of merchandiſe purchaſed at the firſt hand, that is, from a Pole, ſhould yield of Amſterdam weight about 320 lb.

At Riga the ſchippondt is of 400 lb. and makes 330 of Amſterdam.

At Copenhagen of 320 lb. which make 316 of Amſterdam.

At Revel of 400, which makes 356 of Amſterdam.

At Dantzick of 340, which makes 302 lb. 9 oz. 4 drams of Amſterdam

At Bergen in Norway of 300, which make of Amſterdam 315.

At Amſterdam the ſchippondt is of 30 lb. and contains 20 lvſpondts, which weigh 15 lb. each.

SCHOE. A ſort of meaſure of accompt, uſed at Breſlaw, in the commerce of the beſt Sileſia lawns.

The ſchoe makes 60 ells of Breſlaw, which amount to 27 ells 1-half of England.

Each ſchoe is compoſed of 4 or five pieces of lawn: thoſe of 5 pieces to the ſchoe being the beſt.

SCHOWEN. One of the iſlands of Zealand, in the United Provinces, ſituated between the iſlands of Goree and Beveland, being 15 miles long and 6 broad; the chief town Zirickzee.

SCHUT. An iſland of Hungary, formed by the Danube, on the confines of Auſtria, being 30 miles long and 15 broad; which was grantd to that celebrated general Prince Eugene of Savoy, for his ſervices againſt France and Turky, by the late Emperor.

SCHWINBURG. A town on the iſland of Funen. See *Denmark*.

SCILLA, *Squilla*, or *Squill*, the ſea-onion, a medicinal plant of the onion kind, but very large; chiefly brought from Spain: uſed only in infuſion, and that generally in vinegar, which it renders emetic. There are two ſorts of ſquills, male and female; the male are whitiſh, and the female reddiſh; whence they are alſo diſtinguiſhed by the appellation of white ſquills and red ſquills. Their infuſion when boiled to the conſiſtence of a ſyrup, with honey, is called oxymel ſcilliticum in the ſhops, and retains the ſame properties.

Squills powerfully deterge and ſcour off the viſcid adheſions in the bowels, and gently irritate the ſtomach to ejection. They are alſo, as all the onion kind are, very diuretic, and therefore in great eſteem with ſome in dropſies: if their infuſion be mixed with cinnamon water, they will ſeldom vomit, but work downwards, and very forcibly by urine: in aſthmas, and all obſtructions, or infarctions of the lungs, which are to be removed by deterſives and expectoration, there is ſcarce any thing more effectual. They are alſo eſteemed alexipharmick, and upon that account have a place in the theriaca Andromachi.

SCILLY. A cluſter of iſlands and rocks, ſituated in the Atlantic ocean, 30 miles W. of Cornwal, in 7 min. of W. lon. and 50 deg. of N. lat. See *Britiſh* Iſlands.

SCIO. An iſland in the Turkiſh Archipelago. See *Chios*.

SCIRO. An iſland of Turky, in the Archipelago, ſituated W. of Negropont, from which it is ſeparated by a channel 20 miles broad. This iſland was called Skyros from the ruggedneſs of its ſurface, being full of rocks.

SCOPPER-HOLES, or *Scupper-holes*, in a ſhip, are holes made thro' the ſides cloſe to the deck, to carry off the water that comes from the pump, or any other way. Theſe holes in the lower or covered deck, have round leathers nailed over them, to keep the ſea-water from coming up into the ſhip which are called ſcopper-leathers; and the ſhort-nails, with broad heads which faſten theſe leathers down, are called ſcopper, or ſcupper nails.

SCORIA. The recrement or droſs of any metal, remaining after melting or refining the ſame. The ſcoria of iron is the ſcum taken from that metal in forges where it is melted, and conſiſts of the ſulphurous part of the iron; which, uniting with the ſulphurous part of the charcoal, makes together thoſe porous maſſes reſembling ſpunges, frequently ſeen in the ſmiths forges.

SCOTLAND, excluſive of the iſlands, is ſituated between 1 and 6 deg. of W. lon. and between 54 deg. 30 min. and 59 deg. 30 min. of N. lat. bounded by the northern or Caledonian ocean, on the north; by the German ocean on the eaſt; by England and Solway frith on the ſouth; and by the Iriſh ſea and the Atlantic ocean on the weſt; being 300 miles in length from N. to S. and from 50 to 150 in breadth from E. to W. but indented, and almoſt cut through in many places by bays of the ſea, and conſequently abounding in excellent harbours. See Great *Britain*.

SCOTLAND *New*, or *Nova Scotia*. See *Acadia*, and *Britiſh* America.

SCOURER, in London, is a ſpecies of the fuller, whoſe buſineſs is to clean mens cloaths, &c.

SCRIVAH. A port-town of the province of Darien, in South America, ſituated in 81 deg. of W. lon. and 10 deg. of N. lat. 50 miles E. of Porto Bello.

SCRIVENER. One who makes a trade of drawing up and engroſſing writings, deeds of conveyance, marriage contracts, leaſes, and the like.

SCRIVENERS *company of London*, anciently denominated The writers of the court letter of the city of London, was incorporated by letters-patent of the 14th of James I. in 1616, by the name of The maſter, wardens, and aſſiſtants of the ſociety of writers of the city of London; who are governed by a maſter, two wardens, and 24 aſſiſtants, with a livery of 53 of their members, whoſe fine upon their admiſſion is 5 l. but this company, being reduced to low circumſtances, thought proper to ſell their hall in Noble-ſtreet to the incorporation of coach-makers.

SCRUPLE. The leaſt of the weights uſed by the ancients, which among the Romans was the 24th part of an ounce. It is ſtill a weight in England, containing the third part of a dram, or 20 grains: but among goldſmiths the ſcruple is 24 grains. See *Weight*.

SCULPTURE. The art of cutting or carving wood, ſtone, or other matter, and forming various figures or repreſentations therein; as alſo of faſhioning wax, earth, and plaiſter, to ſerve as models, or moulds, for the caſting of metalline figures.

SCULPTURE, in its general ſenſe, includes both the art of working in creux, properly called engraving; and of working in relievo, which is what is ſtrictly called ſculpture. See *Engraving*.

SCUM. A light excrement, ariſing from liquors when briſkly ſtirred; called alſo ſpume, foam, or froth.

SCUM *of Lead*, is a kind of ſmalt of various colours, produced from the fumes of lead. See *Lead*.

SCUM *of Silver*, is that which is commonly called litharge of ſilver.

SCUTTLE. A fiſh caught in the Danube.

SCUTTLE-*Bone*. The bone of a ſcuttle fiſh, ſold by ſtationers, and uſed for cleaning parchment.

SCUTTLES, in a ſhip, are ſquare holes cut in the deck, big enough to let in the body of a man, ſerving to let people down into any room below, upon occaſion, or from deck to deck. They are generally before the main-maſt; before the knight in the fore-caſtle; in the gun-room, to go down to the ſtern-ſheets; or in the round-houſe, to go down into the captain's cabbin, when forced by the enemy in a fight aloft. There are alſo ſome ſmall ſcuttles which have gratings over them; all which have covers that men may not tumble through in the night.

SCUTTLE, is alſo a denomination given to thoſe little windows, and long holes, which are cut out in cabbins to let in the light.

SCYLLA. A rock in the ſtreights of Meſſina, between Naples and Sicily; which mariners were formerly in danger of being driven upon, by avoiding that of Charibdis.

SCYTHIA. The northern parts of Europe and Aſia were anciently ſo called, which afterwards obtained the name of Tartary.

SEA, in geography, is frequently uſed for that vaſt tract of water encompaſſing the whole earth, more properly called ocean. See *Ocean*.

SEA, is more properly uſed for a particular part, or diviſion of the ocean, confined by the land, and denominated from the countries it waſhes, or from other circumſtances: as the Iriſh ſea, the Mediterranean ſea, the Baltic ſea, and the Red ſea.

Till the time of the Emperor Juſtinian, the ſea was common and open to all men; whence it is that the Roman laws grant an action againſt a perſon who ſhall prevent or moleſt another in the free navigation or fiſhing therein. The Emperor Leo, in his 56th novel, firſt allowed ſuch as were in poſſeſſion of the lands the ſole fiſhing before their reſpective territories, excluſive of all others; and he even gave a particular commiſſion to certain perſons to divide the Thracian Boſphorus among them. From that time the ſovereign princes have been endeavouring to appropriate the ſea, and to withdraw it from the public uſe. The republic of Venice pretends to be ſo far miſtreſs in her gulph, that there is a formal marriage every year, between that Seignory and the Adriatic. In theſe laſt ages, the Engliſh have particularly claimed the empire of the ſea in the channel, and even that of all the ſeas encompaſſing the kingdoms of England, Scotland, and Ireland; and that as far as the ſhores of the neighbouring ſtates. In conſequence of which pretenſion it is, that children born on theſe ſeas, are declared natural Engliſhmen, as much as if they were born on Engliſh ground; the

the juſtice of which pretenſion is ſtrenuouſly argued between Grotius and Selden, in the Mare Liberum and Mare Clauſum.

SEA-*drags*, among mariners, are ſuch things as hang over the ſhip, in the ſea; as ſhirts, coats, and even the boat, when towed.

SEA-*horſe*, or *Morſe*. See Sea-*Horſe*.

SEA-*moſs*. See *Coralline*.

SEA-*Salt*. See Sea-*Salt*.

SEA-*ſticks*. A particular kind of herrings. See *Herring*.

SEA-*water*, that briny bitteriſh fluid, which conſtitutes the ſea.

To make ſea-water ſweet or freſh, is a thing long and much wanted, for the advantage of navigation and commerce: a method of doing which has been invented by Mr. Hauton, and the ſecret publiſhed in the Philoſophical Tranſactions; which is performed by precipitating the water with oil of tartar, and then diſtilling of it. The oil of tartar he can draw very cheap, and the diſtillation he performs very compendiouſly, ſo as to gain 24 quarts of freſh water in a day; for the cooling of which, inſtead of making the worm paſs through a veſſel of water, as uſual, he makes it paſs through a hole in the ſhip into the ſea, and enter in again through another. To the precipitation and diſtillation, he adds filtration to correct entirely the malignity of the water. The filtration is performed by a peculiar earth, mixed and ſtirred with the diſtilled water, and at length ſuffered to ſettle at the bottom. The water thus managed is found perfectly wholeſome, both for man and beaſt.

Dr. Liſter obſerves, that the ſea-water is made freſh by the breath of plants growing in it. This he found by putting a quantity of ſea-weed in a veſſel; and filling the hole with a head, beak, and receiver, he diſtilled daily from the plants a ſmall quantity of freſh, ſweet, potable water: this he takes to be the moſt natural, ſafe, and ſpeedy way of having freſh water from the ſea.

Mr. Boyle relates, from ſome experiments he procured to be made of the gravity of ſea-water, in different climates, that ſtill, as you approach nearer the equator, the ſea-water is heavier and heavier, as far as within 30 degrees thereof; after which it continues much at one.

SEA-*wreck*. See *Wreck*.

SEA-*yoke*. When the ſea is ſo rough, that the helm cannot be governed by the hands, the ſeamen make a yoke to ſteer by; that is, they fix two blocks to the end of the helm; and reeving two ſmall ropes through them, which they call falls, having ſome men at each tackle, they govern the helm by direction. They have another way of making a ſea-yoke, by taking a double turn about the end of the helm with a ſingle rope; the ends being laid to the ſhip-ſides, by means whereof they guide the helm.

SEAFORD. A port-town of Suſſex, ſituated on the Engliſh channel, 7 miles ſouth of Lewes.

SEAL, or *Sea-calf*. An amphibious animal met with abundantly in ſeveral parts of the frozen ſea.

The head of this animal is much like that of a dog, with very ſhort ears. Under the muzzle it has a beard, ſome hairs in the noſtrils, and three or four over the eyes, which ſerve it for the eye-brows. Their eyes are large, hollow, and very clear; their teeth ſtrong and ſharp. The hair which covers their ſkin is very ſhort, and diverſified with ſeveral colours; their tail is ſhort, as alſo their legs and feet; whereof the talons, being five in number, are joined together by a black membrane, not unlike thoſe of aquatic birds. The largeſt are about 8 feet in length; but the uſual ſize is five or ſix. They are hunted for their ſkin and fat; each ſeal affording about a barrel of oil when fat, and about half a barrel when lean.

Their fat is about three or four inches thick between the ſkin and the fleſh; and it is ſaid to yield the beſt ſort of all the oils that go under the denomination of train-oil.

SEAL, is alſo uſed for the wax or lead, and impreſſion thereon, affixed to any thing ſealed. The manufacturer's ſeal frequently applied to their ſtuffs, is to be of lead: that of knights, by the French law, is to be of hard wax; and that of agents, of ſoft wax. Some ſeals are ſtamped on the paper or parchment itſelf, others hung by ſilken ſtrings.

SEALING *Wax*. See *Wax*.

SEAM, or *ſeme of corn*, is a meaſure of eight buſhels. Seam of glaſs, is the quantity of 120 lb. or 24 ſtone, each 5 lb. weight. Seam of wood, is a horſe load.

SEAM, in a ſhip, is the edge where the planks meet, which are drove full of oakum.

SEAMEN. A mariner, or ſeaman, is one under the command of the maſter of a ſhip, that is hired to work therein, and do all common buſineſs for the ſailing, guiding, and preſervation of the ſhip. The ſhip's crew are called mariners, and owe all obedience to the maſter; who hath the ſupreme rule on ſhipboard, and therefore his authority is much countenanced by law. See *Ship*.

By the laws of Oleron, if a mariner rebels or commits a fault, and the maſter lifts up the towel three times before him, and he does not ſubmit, the maſter at the next place of land may diſcharge him: and if he refuſes to go aſhore, he ſhall loſe half his wages, and all his goods in the ſhip; but if the mariner ſubmits, he is to receive his whole wages. And a maſter of a ſhip may juſtify his giving moderate and due correction to his men: but if a mariner aſſaults the maſter on ſhipboard, he ſhall pay five ſols, or loſe his hand; yet it is ſaid, after one ſtroke, he may defend himſelf. By the antient Rhodian laws, the maſters, mariners, &c. that ſail together were to take an oath of fidelity, or mutual engagement.

Mariners are not to depart from on ſhipboard when they are in full pay, which is always when they break ground, without the maſter's licence for ſo doing; and they may in no caſe quit the ſhip, without leaving a ſufficient number to guard her: and they muſt aſſiſt one another, both at ſea and in port; or, upon the oath of their fellows of any refuſal, ſhall loſe their wages. If mariners in a ſtrange port leave the ſhip, not having the licence of the maſter, or without faſtening her with four ropes, the loſs, if any happen, falls upon them. They are alſo to attend the ſhip until ſhe be diſcharged, and ballaſted anew; and if any mariner, during the time of her diſcharge or lading, labours not with the reſt of the company, but abſents himſelf, he ſhall pay a fine to the others *pro rata*: and the mariners are not only to diſcharge and deliver goods out of the ſhip, but likewiſe, if no porters or carriers be in thoſe parts, they muſt carry the ſame themſelves for ſuch hire as other workmen ſhould have had for it.

In a ſtrange country, the one half of the ſeamen at leaſt ought to remain on ſhipboard; and thoſe who go on land, are to keep ſobriety, and abſtain from ſuſpected places, and not abſent on pain of being puniſhed, like unto him who abſents when the ſhip is ready to ſail. If it happens otherwiſe than well with the maſter, the mariners are obliged to bring the ſhip to the port, from whence ſhe was freighted, without any delay, except it be otherwiſe provided: and a mariner ſhall forfeit his wages, if the ſhip break in any part, and he doth not help with all his diligence to ſave the goods on board.

Where a mariner is hired, and he deſerts the ſervice before the voyage is ended, by the law marine, and the common law, he ſhall loſe his wages. And it has been adjudged, that if the ſhip do not return, but periſhes at ſea, either by tempeſt, enemies, fire, &c. the mariners ſhall not have their wages; for if they were allowed to have wages in theſe caſes, it is preſumed their beſt endeavours would be wanting to preſerve the ſhip; and the mariners ſhall loſe their wages, as well as the owners their freight. If the ſhip unlade any part of the cargo, the mariners ſhall have their wages; but if, after they have unladen the veſſel at any port abroad, they demand the ſame, with an intention of leaving the ſhip, the maſter may detain a reaſonable proportion thereof as his ſecurity, till they have brought back the ſhip. It was held by Holt chief juſtice, that if a ſhip is loſt before ſhe arrives at any port of delivery, the ſeamen loſe all their wages; if ſhe be loſt after ſhe comes to a port of delivery, then they only loſe their wages from the laſt port

of

of delivery; but in caſe they run away, though after they come to any port of delivery, they loſe all their wages.

A mariner being hired for a ſimple mariner, if afterwards in the voyage he finds hiring to be a pilot, or other officer of a ſhip, by the law marine he may paſs over, reſtoring his former hire; and ſo it is if he marry abroad: but if a mariner ſhall depart the ſhip, at the maſter's command, and the maſter do not take another, if any damage happens to the ſhip or goods, the maſter muſt anſwer. Mariners may not carry out of the ſhip any drink, nor above one meal of meat; and if they embezzle the goods on board, &c. they are accountable to the maſter, the maſter to the owners, and the owners to the merchant or freighter; though, in caſe of a ſtorm, if goods are caſt overboard for lightening the ſhip, the mariners making oath that it was done for preſerving the veſſel, ſhall diſcharge the maſter: ſo if goods or merchandiſe in ſuch caſe receive damage at ſea, by the oath of the maſter and mariners they may be cleared.

If a mariner ſhall commit any fault, by reaſon of which the maſter, owners, or the ſhip, anſwers damage to the merchant, an action well lies againſt him. But when a mariner is on ſhipboard, he ought not to be arreſted by any one for debt, nor be taken away from thence; for the ſhip is compared to a man's dwelling houſe, which is as his caſtle, and a ſure refuge by law, unleſs it be for a ſworn debt, or penalty to the King, &c. The wages and goods of ſuch mariner ſhall in theſe caſes be liable; and if a mariner takes up money, or buys cloaths on credit, and the ſame is entered in the purſer's books, this will intitle a diſcount of ſo much of his wages as the ſame amounts unto.

In caſe a ſhip happens to be ſeiſed for debt, or otherwiſe become forfeited, the mariners ſhall receive their wages, except, through any act of theirs, there be a forfeiture of all. If the ſhip be laden with prohibited goods, as wool, and the like, though it ſubjects the veſſel to forfeiture; yet it deprives not the mariners of their hire, who have faithfully performed their parts, and for which the ſhip is obliged. A mariner may either keep his portage or allowance of goods in his hands, or let the ſame out to freight, by the laws of Oleron.

The act 2d George II. c. 36. for better regulation of ſeamen in the merchants ſervice, has ordained, that no maſter or commander of any ſhip or veſſel ſhall carry any ſeaman or mariner, except his apprentices, to ſea, without firſt coming to an agreement or contract for their wages; which agreement ſhall be in writing, ſigned by the maſter and mariners, on pain of forfeiting 5 l. to the uſe of Greenwich hoſpital, to be recovered by information upon the oath of one or more witneſſes, before a juſtice of peace, &c. And if any ſeaman or mariner ſhall deſert, or refuſe to proceed in the voyage on board any veſſel, after he has ſigned ſuch contract, he ſhall forfeit to the owners of the ſhip the wages due to him at the time of his deſerting or refuſing as aforeſaid: and in caſe he deſerts, or abſents from any ſuch ſhip, wherein he hath ſo contracted to ſerve, upon application to any juſtice of the peace, he may iſſue his warrant to apprehend ſuch ſeaman; and on his refuſal to proceed on the voyage, the juſtice may commit him to the houſe of correction, to be kept to hard labour not exceeding thirty days, nor leſs than fourteen.

And by the ſame ſtatute, if any ſeaman ſhall abſent himſelf from the veſſel to which he belongs, without leave of the maſter, or other chief officer having the charge of ſuch ſhip, he ſhall for every day's abſence forfeit two days pay, for the uſe of Greenwich hoſpital; and if he ſhall leave the veſſel to which he belongs, before he hath a diſcharge in writing from the maſter, he ſhall forfeit one month's pay, to the uſes aforeſaid; and the maſters or owners of ſhips are empowered to deduct out of the wages of any ſeaman the penalties and forfeitures incurred by this act; and thoſe penalties which are to be applied to the uſe of Greenwich hoſpital, ſhall be paid by the maſters of ſhips to the officer at any port, who collects the 6 d. a month, deducted out of ſeamens wages, for the uſe of the ſaid hoſpital; and neglecting to do it within three months, they ſhall forfeit treble value.

Alſo by the ſaid act, on the arriving of any ſhip in Great Britain, from parts beyond the ſeas, the maſter ſhall be obliged to pay the ſeamen their wages, within 30 days, if demanded, except the contract for ſerving be to the contrary, or at the time the ſeamen ſhall be diſcharged, which ſhall firſt happen; deducting thereout the penalties and forfeitures; and not paying the ſame, ſhall be liable to a penalty of 20 s. over and above the wages due to each ſeaman, to be recovered by the ſame ways as the ſaid wages are recoverable; and no ſeaman or mariner ſhall fail in any ſuit for recovery of his wages, for want of producing the contract with the maſter, on whom it lies, to produce the ſame if neceſſary.

This act ſhall not extend to debar any mariner or ſeaman, belonging to any merchant ſhip or veſſel, from entering into his Majeſty's ſervice, on board any of his ſhips; nor ſhall ſuch ſeaman or mariner, for his entry therein, forfeit the wages due to him during the time of his ſervice in ſuch merchant ſhip or veſſel; nor ſhall ſuch entry be judged a deſertion from the ſhip.

By the ſtatute of 1ſt George II. ſeſſ. 2. c. 14. for encouraging ſeamen voluntarily to enter into the King's ſervice, &c. the governors, miniſters and conſuls in foreign parts, or where none ſuch are reſident, any two or more Britiſh merchants there reſiding, are authoriſed and required to provide for all ſeamen, ſubjects of Great Britain, that ſhall by ſhipwreck, or other unavoidable accident, be driven or caſt away in ſuch foreign parts or places; and ſhall ſubſiſt them by an allowance after the rate of 6 d. *per diem* each, &c. and put them on board the firſt ſhip of war arriving there in convenient time; or they may be ſent by any merchant-ſhips wanting men, or others bound for any port in Great Britain.

And maſters of ſhips abroad, ſhall take on board four men for each 100 tuns of which their veſſel conſiſt, and receive from the commiſſioners of the navy 6 d. a day for the paſſage and proviſion of every ſeamen, from the day of their embarkation homewards; on producing a certificate of the mens being taken on board, and the time when, &c.

By the acts 9th Geo. II. c. 25. and 10th Geo. II. c. 14. a ſmall ſum, of ſo much *per* tun, is to be paid by all maſters of veſſels, &c. trading from any part of his Majeſty's dominions to Cadiz, and Port St. Mary's in Spain, or to the port of Leghorn, to perſons appointed by the conſuls and a majority of Britiſh merchants there; and ſuch maſters paying it ſhall be reimburſed by their freighters, or the perſons to whom the goods are conſigned, &c. and the money to be applied for relieving ſeamen ſhipwrecked, or taken in war, and other perſons being Engliſh ſubjects in diſtreſs in the ſaid ports.

Notwithſtanding the public charities in Great Britain may be more conſiderable, in proportion, than thoſe of any other country in the known world, they are even at this day too greatly defective with regard to one particular object thereof, and perhaps the moſt meritorious of any already provided for, on particular emergencies. An object of charity! which demands the inſpection, and moſt ſanguine attention, of all thoſe inhabitants within the three kingdoms, who have the welfare of commerce at heart, and wiſh well to the encouragement of the Britiſh manufactories, more peculiarly of the mercantile part of the city of London, upon which the grandeur of our moſt gracious Sovereign, the ſource of our invaluable liberties, the ſupport of our glorious fleets, and the wealth of the nation, entirely depend.

When it is conſidered, that London is firſt affected by the obſtruction of commerce; that ſhe is the fountain of life to the trade of this nation; and that, if ſhe neglects any valuable branch thereof, the conſequences, however fatal, muſt become univerſal; and if, which Heaven forbid! the glory of our trade ſhould happen to be eclipſed by ſuch miſtakes as are in our power to recal, or were in our power to prevent, our utmoſt concern for the improvement of that very part ſhould be the greater, and as carefully huſbanded as we would proviſions in caſe of a famine. But commerce is not without enthuſiaſts, who have their deity, as well as thoſe in religion, and in whoſe ſervice they think of death, as the Romans did in their

their views to monumental honour. This ſort of bigotry has been well underſtood by our neighbours the Dutch; who have ſuch a tenderneſs to their trade, as rarely, if ever, to engage in any war that would interrupt it; for, as with France in the late wars, ſo with Spain formerly, they traded and fought at the ſame time; the foundations of their trade to Africa and the Eaſt Indies being laid in the heat of their revolt from the Spaniſh tyranny.

The productions of their country being in no proportion to the number of their people, by their policy and diligence in commerce they make other nations maintain them: ſo that they, who naturally have not ſufficient for their own nececeſſities, are poſſeſſed of magazines, which furniſh to the neceſſities of others; being the natural effects, and reaſonable rewards, of ſuch a conduct. Pity it is, that the ſame beneficent ſcheme has not been put in practice, and better attended to, in Great Britain: for commerce, being a kind of univerſal charity, which extends its influence to all parties concerned in any of its branches, creates profitable employments, and adminiſters to the preſſing neceſſities our nature is every day demanding.

If the word *charity* may be defined to ſignify that compaſſion which ariſes from a juſt contemplation of the condition of human nature, in reſpect to the public utility; and the generous diſpoſition of mind, that deſpiſes luxury, inſpired with an irreſiſtible inclination to apply the ſuperfluity of fortune towards the relief of the virtuous, as well as uſeful perſons in diſtreſs; which is certainly the higheſt degree of perfection attainable in this life: it is very evident, that the moſt uſeful claſs of people in this kingdom, with regard to trade and navigation, and from whoſe ſervices we receive the greateſt benefits, have been hitherto too much diſregarded, and omitted among the liſt of thoſe who ſeemed beſt entitled to a comfortable and temporary ſubſiſtence.

The lunatic, the foundling, and the blind, are doubtleſs real objects of charity; as the firſt, by the loſs of his reaſon, is rendered uſeleſs; the ſecond, without due care, and a neceſſary education, cannot properly be ſaid to contribute for the good of the community; and the latter is but ſeldom employed. But, be this as it will, we may venture to affirm, there is no kind of affliction which requires greater attention, or ought more ſtrongly to move our compaſſion, than that of the maimed or decayed common ſailor; who has hazarded his life, loſt his limbs, and ſpent the beſt part of his days in the ſervice of the merchant.

But ſurely our gentlemen, as well as our merchants, will think of making a proviſion for the relief of thoſe poor ſeamen, who have been the ſupport of their country, and are as well entitled to charity as any part of the community.

In making proviſion for theſe unhappy ſufferers, what wealthy citizen can be too bountiful? what gentleman too liberal? Let them but conſider, that they beſtow only to reſume again at pleaſure; that they are hereby ſowing the ſeeds of induſtry, which muſt neceſſarily produce a continual race of hardy and able ſailors, uſeful to their country, their king, and themſelves, from generation to generation: for as nothing contributes more to the raiſing a new progeny, to ſupply the place of their predeceſſors in any branch of buſineſs, more eſpecially in the laborious employments of life, than proper encouragement, exemplified by making ſuitable proviſion for their decayed parents, who were employed in the ſame branch of buſineſs; ſo nothing ſo much weakens the party, and derogates therefrom, as to be ſlighted and abandoned by thoſe very perſons to whom they have devoted themſelves; whoſe fortunes they have raiſed; in whoſe ſervices they are worn out, and thereby become burthenſome to their families and pariſhes.

The ſeveral infirmaries in and about London, particularly St. Luke's hoſpital in Moorfields, and that near Hyde-park, which are at preſent ſupported by the annual ſubſcription of the merchants and gentlemen, appear to be far more productive of worldly happineſs, alſo far more meritorious, than any of the ſumptuous donations, of thoſe overgrown rich men, who at their deaths, bequeath ſplendid palaces, and lordly governors, for pretended charitable uſes; provided theſe donors acted the part of penurious haughty miſers in their lifetimes, and were moved to ſuch endowments from a principal of pride, to live in effigy; or to have their names written in golden letters, in order to render themſelves immortal.

Charity is a virtue altogether incompatible with oſtentation, or with thoſe low, and vicious appetites, which are to be found in the miſer's heart, and generally direct his conduct.

There is not any object ſo pleaſing to the eye, as the ſight of a man whom we have obliged; or any muſic ſo agreeable to the ear, as the voice of one that owns you for his high benefactor; and if the trading part of the nation thought in the ſame way, they would have continually before them a foretaſte of future bliſs, by providing for their natural ſervants, our honeſt tars, when reduced to beggary after a life of labour, and in hearing them chant forth the praiſes of their benefactors, in ſongs of gratitude and thankſgiving; which, it is hoped, ſome public-ſpirited merchants, will cauſe ſpeedily to be put in proper execution, without waiting for the aſſiſtance of the landed intereſt.

Some propoſals were publiſhed in 1744, by Mr. Griffin, for the relief and ſupport of maimed, aged, and diſabled ſeamen, in the merchants ſervice of Great Britain.

The legiſlature, ſenſible of this proviſion for ſeamen, paſſed an act of parliament in 1747, for relief and ſupport of maimed and diſabled ſeamen, and the widows and children of ſuch as ſhould be killed, ſlain, or drowned in the merchants ſervice. The preamble obſerves, that, by an act of the 7th and 8th of William III. certain encouragements were given for ſeamen to regiſter themſelves for his Majeſty's ſervice; and if any ſuch ſhould, by age, or other accidents, be diſabled for future ſervice, and ſhould not be able to maintain themſelves comfortably; and the children of ſuch diſabled ſeamen, and the widows and children of ſuch of them as ſhould be killed or drowned in ſea-ſervice, were to be provided for in the royal hoſpital of Greenwich, ſo far as the ſaid hoſpital ſhould be capable to receive them, and the revenue thereof would extend; and for the better ſupport of the ſaid hoſpital, 6 d. *per* month is by the ſaid act to be allowed out of the wages of every ſeaman in the merchants ſervice, as well as in the navy. But ſo much of the ſaid act as relates to the regiſtring of ſeamen, was repealed by an act of the 9th of Queen Anne, whereby every ſeaman in the navy, though not regiſtred, is entitled to the benefits of the ſaid hoſpital. By an act of the 10th of Anne, any ſeaman is to be conſidered as fully qualified for an admiſſion into the ſaid hoſpital, who ſhall produce a certificate of his having been hurt and diſabled for ſea-ſervice, in defending any Britiſh ſhip againſt an enemy, or in taking any ſhip from an enemy. By an act of the 8th of George I. every ſeaman on board a merchant-ſhip, who ſhall be maimed in fight againſt any pirate, is to be admitted into the ſaid hoſpital, preferable to any other ſeaman diſabled merely by age. By an act of the 8th of George II. ſeamen on board any merchant-ſhip, who ſhall be maimed in fight againſt an enemy, ſhall be admitted into the ſaid hoſpital, in like manner as any other ſeaman wounded or diſabled in the royal ſervice. But the act of 1747 recited, that whereas the ſaid hoſpital was not capable to receive, nor the income thereof ſufficient to provide for the ſeamen in the ſervice of the navy, entitled to the benefits thereof, ſo that the ſeamen in the merchants ſervice, maimed and diſabled in fight, and proper objects of charity, have ſeldom or never been admitted into the ſaid hoſpital; and as there was no proviſion made for ſuch ſeamen in the merchants ſervice, as were diſabled by accidental misfortunes, or for thoſe worn out by age, or for the widows or children of ſuch as ſhould be killed or drowned in the ſaid ſervice; and as the ſeamen in the ſaid ſervice were willing to allow 6 d. *per* month out of their wages, to be applied for the relief of ſuch as ſhould be diſabled or worn out by age, and of the widows and children of thoſe killed in the ſaid ſervice; and as they had, during the courſe of the war,

manifeſted their courage, and deſerved all due encouragement, and the eſtabliſhing the ſaid charity would tend to the honour and good of the public; it was enacted, that Alexander Hume, John Briſtow, John Bance, Harry Gough, Albert Niſbett, Nathaniel Newman junior, Joſeph Gulſton, Charles Pole, eſqs. Sir Peter Thompſon, knight; Robert Nettleton, and 108 other merchants and gentlemen, and their ſucceſſors, ſhould be one body corporate and politic, by the name of "The preſident and "governors for the relief and ſupport of ſick, maimed, "and diſabled ſeamen, and of the widows and children "of ſuch as ſhall be killed, ſlain, or drowned in the "merchants ſervice." The preſident and governors are to provide in the ſaid hoſpital for the reception of ſeamen rendered incapable of ſervice; or allow them certain penſions, or otherwiſe, as they ſhall think moſt for the advantage of the charity; and ſhall alſo relieve the widows and children of ſuch ſeamen as ſhall be killed or drowned in the ſaid ſervice, provided ſuch children are not of the age of fourteen; or if, of that age or upwards, they are incapable of getting a livelihood, by reaſon of lameneſs, blindneſs, or other infirmities, and are proper objects of charity: and ſhall make reaſonable allowances to thoſe who ſhall loſe an eye or limb, or be otherwiſe hurt in fighting, defending, or working the ſhips in which they ſerve, or in loading or unloading the cargoes, or otherwiſe howſoever in doing duty, in proportion to the damage they ſhall receive, ſo far as the revenues will extend. No ſeaman is to be entitled to any of the benefits of this act, without producing a certificate of the hurt, &c. received, to the preſident, aſſiſtants, and committees, from the maſter, mate, boatſwain, and ſurgeon, or of the maſter and two of the ſeamen, if there is no other officer; and no widow or children of any ſeaman killed or drowned in the ſaid ſervice, are to be entitled to any allowance, without a proper certificate. But no ſeaman is to be provided for by a penſion, or otherwiſe, as decrepit or worn out, unleſs he has ſerved five years in the merchants ſervice, and paid 6 d. *per* month out of his wages for that time, for the purpoſes of this act. There is to be a preſident and 21 aſſiſtants, or committees of the ſaid corporation, for the more conſtant and ordinary management of the monies to be raiſed for the purpoſes aforeſaid; and Henry Norris ſenior, eſq; was appointed the firſt preſident: but the preſident and aſſiſtants are to be elected every year, on the 24th of June, or within five days before or after. Four general courts are to be held every year, on the 24th of June, 29th September, 25th December, and 25th March, or within five days before or after any of the ſaid days; of which ten days notice is to be given in the Gazette: but the preſident and aſſiſtants may call a general court at any other time, as the affairs of the company ſhall require, or at the requeſt of 13 members. The preſident, with five or more of the aſſiſtants, are to make a full court of aſſiſtants or committees, and to meet upon Wedneſdays weekly; when they have power to apply the monies ariſing by this act for the intended relief, and to tranſact all other neceſſary matters. A receiver is to be choſen by a majority in a general court. The preſident, and 13 governors, may make bye laws; and any perſon who contributes 50 l. for the purpoſes of this act, ſhall be declared a governor of the corporation. Every ſeaman, or perſon employed in any veſſel belonging to a ſubject of England, and every maſter or owner navigating the ſame, except ſuch as are exempted from the payment of 6 d. *per* month to Greenwich hoſpital, as alſo pilots employed on board veſſels, ſhall pay 6 d. *per* month, and proportionably for a leſſer time, during their employment, for the purpoſes aforeſaid. The maſter, owner, or commander of every veſſel is to deduct out of the wages of every ſuch ſeaman the ſaid duty of 6 d. *per* month, and pay the ſame to ſuch receivers as the preſident or governors, or the truſtees of the out-ports, ſhall appoint. The preſident and governors, at a full court of aſſiſtants, are to appoint the receivers. Every maſter, or other perſon having the care of any merchant-veſſel, is to keep a book, by way of muſter-roll, of the perſons employed on board, with the uſual place of their abode when o ſhore; the time and place of each ſeaman entering in ſuch ſervice, and in what ſhip he performed his la voyage; a duplicate of which ſhall be ſigned and del vered by the maſter to the receiver or collector of the ſa duties, at the port to which the veſſel belongs. Th maſter is alſo to keep ſuch a muſter-roll during the vo age, and to enter when and where any perſon ſhall b diſcharged from, or ſhall leave or deſert ſuch veſſe and others ſhipped on board, and when and where an of them received any hurt or damage, or were kille or drowned; a duplicate whereof is alſo to be ſigned an delivered as aforeſaid at the ſhip's return to the port t which ſhe belongs, under penalty of 20 l. Every ma ſter, &c. ſhall pay all ſuch monies to the collectors ap pointed, at the port only to which ſuch veſſel belong and before ſhe is cleared inwards; and no officer of th cuſtoms ſhall clear inwards any veſſel liable to this dut or grant any warrant, cocket, tranſire, return, or di charge, or ſuffer ſuch veſſel to go out of port, until th maſter, &c. ſhall produce a certificate from the receiv of the ſaid duty being fully paid, and that he is not mor than three months in arrear, under penalty of 20 l. Th owners and maſters of veſſels in the out-ports may appoin fifteen perſons to be truſtees for ſuch out-ports, for re ceiving and applying the ſaid duty; which truſtees ar to be elected every year, on the 26th of December, o within ten days after, who are to be confirmed by th preſident and aſſiſtants; and theſe truſtees, when ſo con firmed, five of whom are to be a quorum, may make bye laws, receive and apply benefactions, and appoint officers But as, by letters-patent of the 6th of Edward VI. certai merchants of Briſtol were incorporated by the name o The maſter, wardens, and commonalty of merchant venturers of the city of Briſtol; and as this ſociety w willing to undertake the collection and application of th ſaid 6 d. *per* month payable in the port of Briſtol, and o any donations of well-diſpoſed people, they are appointe truſtees for that port. The ſame liberty is granted to th guild of maſters and pilots ſeamen of the Trinity-hou of Kingſton upon Hull, as alſo to the Eaſt India com pany. That ſeamen who have been longeſt in the ſer vice, ſhall be firſt provided for as worn out or decrepit If any ſeaman, or other perſon employed on board an veſſel, ſhall, in the diſcharge of his duty, break an limb, or be otherwiſe hurt, the preſident and governor of the port of London, and the reſpective truſtees for th out-ports, ſhall provide proper relief for ſuch perſon, unt he ſhall be ſo well recovered of ſuch hurt as to be re moved, and ſent with ſafety to the port to which ſuc veſſel belongs; and the expence thereof, not exceedin 2 d. *per* mile, is to be paid by the company. Any ſea man, or other perſon, ſerving five years or more in th merchant-ſervice, who ſhall have paid the 6 d. *per* mont for that time, and ſhall be adjudged by the preſident &c. a proper object of relief, ſhall be provided for a the port where he ſhall have paid the greateſt part of th ſaid duty, for the laſt five years of his ſervice. An any ſeamen employed in the merchant-ſervice, who ſha be ſhipwrecked, or taken by the enemy, and on their re turn may be travelling with paſſes to the place of thei abode, the preſident and governors, and the reſpective truſtees, may relieve them in ſuch manner as they ſha think proper.

This act was calculated with very noble and patriotic views, and has been put into execution; but it may re quire much time and aſſiſtance to anſwer the ſalutary purpoſes thereby intended; which ought to be promoted by every man who wiſhes well to the proſperity of Great Britain.

It is a melancholy thing to conſider how many Britiſh ſailors, perhaps the beſt in the world, have been ſold to other nations, as things at auction, to the beſt bidder when they might all be preſerved for the ſervice of their own nation, by an annual expence, and proper funds erected for that uſeful purpoſe, not exceeding the charge of what is allowed for the keeping up a ſingle regiment of ſoldiers; whereby thoſe who are obliged to go abroad, as well as the maimed and ſuperannuated, might be ſup-

ported

ported. The ſailor, inured to hardſhip, requires but little for his ſubſiſtence, and much leſs for his lodging and apparel. A decent habitation, little furniture, and a ſparing diet, would anſwer the expectations of the lame and decayed; while a moderate proviſion might be readily found out to keep the ſtrong and active in their own country in caſe of any emergency of ſtate, or unexpected invaſion; a conſtant ſupply of theſe people being naturally and politically our firſt and greateſt concern. For the caſe, as it ſtands with our real intereſt, is ſhort and eaſy to be underſtood. Nature calls us to commerce, and has furniſhed all the things by which it may be promoted. That which we retain of trade ſhould therefore be protected and extended by all the juſt means we are poſſeſſed of; and thoſe are only to be found in the number of ſhips; which, however well ſupported by ſtrength and art in the building, without being properly manned, will prove little more than incumbrances. Common prudence prompts us to keep up a ſuperiority at ſea, and to give all neceſſary encouragement to the ſailors, by whom our trade, as well as freedom, is ſupported; for, in this, nature, has fixed the policy of our country, and in our obedience to her dictates, by following ſuch meaſures, we ſhall have a full reward.

As the great branch of duty in our fighting ſhips is to protect trade, ſo that of our trading ſhips is to add to our ſtrength and treaſure, which protect and conſolidate the whole: but if we ſuffer our trade to be deſtroyed, or thoſe perſons to be neglected and maltreated, who are the main ſupport of it, we cannot poſſibly expect the life of one, after the death of the other; for, after the loſs of that which is to be protected, the protectors may return to perpetual reſt, and will ſoon be buried in oblivion.

The hoſpital of Greenwich, by the general concurrence of the nation, was founded and endowed, for the reception of ſuch ſailors as were either diſabled or ſuperannuated in the royal ſervice; to which laudable foundation every ſailor in the kingdom, though he never belonged to the royal navy, is obliged to contribute, by having 6d. a month deducted out of his wages for that purpoſe, although he is not entitled to be admitted as a penſioner; which contribution is extended to all ſeamen, except apprentices under 18 years of age, fiſhermen, and perſons employed in open boats.

Hence we may obſerve, that the legiſlature have always looked upon their old and maimed ſailors as real objects of charity, and well worthy of their regard; in conſequence of which, they have not only provided for them a comfortable ſubſiſtence during life, but alſo a proviſion for their wives and children; that they, who had been ſerviceable to their country, might not have the mortification and diſgrace of becoming chargeable to their reſpective pariſhes. May we not therefore reaſonably hope, that the trading part of the kingdom will take it under their immediate conſideration, to contrive and eſtabliſh a fund, to erect or purchaſe manſions, for the reception of ſuch of their faithful ſervants as they, in their wiſdom, ſhall judge to have behaved well, or to have caſually ſuffered in their employments? For the intereſt of the crown and people being naturally mutual, or rather but one, a ſeparation of their intereſts muſt be as pernicious as a ſeparation in the intereſts of a man and his wife, which ends in the ruin of the family. Therefore ſomething of this kind may be concerted, which has been ſo long wanted, neglected, or poſtponed; and perhaps purely on account of the preſs in time of war, by which our merchant-ſhips are frequently unmanned, and trade ſtagnated, for the want of hands to conduct it; which is to the body politic like a ſtagnation of blood in the body natural, often producing an apoplexy, fatal, for the moſt part, to thoſe corpulent bodies whoſe misfortune it is to be thereby affected.

If they who contribute moſt for the ſervice of the community are moſt worthy of its favour and eſteem, there cannot poſſibly be any difficulty in finding the degree of honour the merchant ought to be placed in, nor the degree of care which ſhould be taken for the preſervation of his ſubſervients; without whoſe aſſiſtance ſtocks would fall, the price of lands and houſes be reduced, our national funds grow contemptible, our public credit deſpiſed, and commerce itſelf would ſicken and die. Let no man, therefore, depend too much upon himſelf; but conſider the benefit of others, and how neceſſary it is for the ſake of his own intereſt to preſerve our ſeamen; for as preſumption is the higheſt ſin, ſo prevention is the higheſt wiſdom: and the firſt worthy man who forms the eſtabliſhment of a public hoſpital fit for the reception of our numerous poor diſabled ſeamen, ought to have his ſtatue ſet up in gold, in the middle of our Royal Exchange, to immortalize his memory.

As to the impreſſing of ſeamen, it is certainly a prerogative of the crown: but as they are the moſt valuable ſubjects, many ſchemes have been projected for giving them as much liberty as the reſt of their countrymen. Mr. Cary, p. 40. ſays, that our navigation is carried on by ſhips and ſailors; the former are the ſea-waggons, whereby we tranſport and carry commodities from one market to another; and the latter are the waggoners, who drive and manage them. Theſe are a ſort of jolly fellows, who are generally bold in their undertakings, and go through any kind of labour in their own way with a great deal of chearfulneſs; are undaunted by ſtorms and tempeſts, the ſea being as it were their element, and are allowed by all to be the beſt navigators in the world. They are our wealth in peace, our defence in war, and ought to be more encouraged than they are in both; eſpecially in the latter, which might be done, if better methods were uſed to engage them in the ſervice, and better treatment when they are there. Now, I ſhould think, if no man was forced into the king's ſhips till he had been three years at ſea; nor to ſtay there above that time, without his free conſent, and then to be permitted to take a merchants employment ſo much longer, and ſo *toties quoties*, it would encourage them to come willingly into the ſervice, which they look upon now to be a ſlavery, whereto they are bound for their lives. This, and the manner of preſſing them, hinders very much the making of ſailors; landmen not caring to put their hand to the oar, leſt the next day they ſhould be hauled away to the fleet, though they underſtand nothing of the ſea. By this means our men of war would be manned with able ſeamen, and not with ſuch who only ſtand in the way, and are uſeleſs, when moſt wanted. Nor, continues Mr. Cary, do I take embargoes to be any helps towards it; for many ſailors then lie hid, who would appear to ſerve in merchants ſhips, and might be eaſily met with at the return of their voyages. By theſe means, in a ſhort time, there would be a double ſett of mariners, enough both for the ſervice of the fleet, and of trade; the laſt of which would every year breed more. This would alſo prevent great miſchiefs, which ariſe from preſſing ſailors out of merchants ſhips, whilſt on their voyages, many of them being thereby loſt at ſea, and others have been detained in the Weſt Indies, to the diſcouragement of trade: and it would alſo prevent another miſchief, too much practiſed abroad, where captains of men of war preſs ſailors from one merchant-ſhip, only to make advantage by ſelling them to another.

In the year 1751, there was preſented to the Right Honourable George Lord Anſon, firſt lord commiſſioner of the navy, "A ſcheme how to mann the royal navy of "Great Btitain in time of war, without the impreſſing "of ſeamen, &c." for which his lordſhip returned the author the thanks of the board; and it was afterwards publiſhed, and addreſſed to his lordſhip. Several other ſchemes have alſo been projected for this purpoſe; ſome of which may be ſeen in the London magazine for the year 1741, p. 144, and 348; the ſame magazine for the year 1742, p. 210, and 214; as likewiſe in the Gentleman's magazine for the year 1744, p. 413; and in the ſame magazine for the year 1746, p. 309; to which the reader may refer, as they are too copious to be inſerted here.

SEARCHERS. Officers belonging to the cuſtoms, whoſe buſineſs it is to ſearch for prohibited goods, &c.

SEASONINGS, in the Weſt Indies. A kind of aguiſh diſtemper, which foreigners are much ſubject to at their firſt coming.

SEATON. A port-town in Scotland, in the county of Lothian, ſituated on the frith of Forth, 9 miles eaſt of Edinburgh.

SEBASTIAN, *St.* A port-town of Spain, in the province of Biſcay, and territory of Guipuſcoa, ſituated 55 miles eaſt of Bilboa, and 25 miles S. W. of Bayonne, in 1 deg. 50 min. of W. lon. and 43 deg. 35 min. of N. lat. *St.* SEBASTIAN, is alſo a town of Brazil.

SEBENICO. A port-town of Dalmatia, ſituated on a bay of the gulph of Venice, in 17 deg. 20 min. of E. lon. and 43 deg. 40 min. of N. lat. 40 miles north of Spalatto, ſubject to Venice.

SEBESTEN, in pharmacy. A fruit reſembling a little plumb or prune; which, when ripe, is of a deep red colour, bordering on black; very ſweet, and the fleſh or pulp very glutinous or ſticky. The Syrians make a kind of glue or birdlime of the ſebeſtens, called birdlime of Alexandria. The fruit is eſteemed pectoral, cooling, and emollient; though not much uſed in medicine. The ſtone within it is triangular. It brought its name from Arabia, whence Pliny obſerves it came in his time into Italy.

SECOND, in geometry and aſtronomy. The 60th part of a prime, or minute, either in the diviſion of circles, or in the meaſure of time. A degree, or an hour, are each divided into 60 minutes, marked thus ′; a minute is ſubdivided into 60 ſeconds, marked thus ″; a ſecond into 60 thirds, marked thus ‴. See *Degree*.

SECONDARY *circles*, in the ecliptic, are circles of longitude of the ſtars; or circles, which, paſſing through the poles of the ecliptic, are at right angles to the ecliptic. By the help of theſe all points in the heavens are referred to the ecliptic; that is, any ſtar, planet, or other phænomenon, is underſtood to be in that point of the ecliptic which is cut by the ſecondary ſemicircle, which paſſes through each ſtar or phenomena.

If two ſtars be thus referred to the ſame point of the ecliptic, they are ſaid to be in conjunction; if in oppoſite points, they are ſaid to be in oppoſition: if they be referred to two points at a quadrant's diſtance, they are ſaid to be in quartile aſpect; if the points differ a 6th part of the ecliptic, they are ſaid to be in ſextile aſpect. In the general, all circles which interſect one of the ſix greater circles of the ſphere at right angles, may be called ſecondary circles. As the azimuth or vertical circles, in reſpect of the horizon; ſo is the meridian, in reſpect of the equator.

SECRETARY. An officer, who, by order of his maſter, writes letters, diſpatches, and other inſtruments, which he renders authentic by his ſignature. Of theſe there are ſeveral kinds, as ſecretary of ſtate, ſecretary at war, ſecretary of the treaſury, ſecretary of the admiralty, and others.

SECRETARIES *of ſtate*, are officers attending the king, for the receipt and diſpatch of letters, grants, petitions, and many of the moſt important affairs of the kingdom, both foreign and domeſtick.

The king's ſecretaries were antiently called the king's clerks, and notaries, *regi a commentariis*; for the name ſecretary was at firſt applied to ſuch, as being always near the king's perſon, received his commands, and were called clerks of the ſecret; whence was afterwards formed the word ſecretary, *regi a ſecretis*: and as the great lords began to give their clerks the quality of ſecretaries, thoſe who attended the king were called, by way of diſtinction, ſecretaries of the commands, *regi a mandatis*. This continued till the reign of Henry VIII. 1559; when, at a treaty of peace between the French and Spaniards, the former obſerved, that the Spaniſh miniſters who treated for Philip II. called themſelves ſecretaries of ſtate. Upon which the French ſecretaries des commandements, out of emulation, aſſumed the ſame title, which thence paſſed into England.

Till the reign of Henry VIII. there was only one ſecretary of ſtate; but then, buſineſs increaſing, that prince appointed a ſecond ſecretary, both of equal power and authority, and both ſtyled principal ſecretaries of ſtate. Before Queen Elizabeth's time the ſecretaries did not ſit at the council-board; but that princeſs admitted them to the place of privy counſellors; which honour they have held ever ſince; and a council is never, or at leaſt ſeldom, held without one of them.

They have under their management and direction the moſt conſiderable affairs of the nation, and are obliged to a conſtant attendance on the king. They receive and diſpatch whatever comes to their hands, be it for the crown, the church, the militia, private grants, pardons, diſpenſations, and likewiſe petitions to the ſovereign, which, when read, are returned to the ſecretaries for anſwer; all which they diſpatch according to the king's commands and direction. As to foreign affairs, they are divided into two provinces, or departments, comprehending all the kingdoms and nations which have any intercourſe or buſineſs with Great Britain; each ſecretary receiving all letters and addreſſes from, and making all diſpatches to the ſeveral princes and ſtates comprehended in his province.

The ſecretaries of ſtate have the cuſtody of that ſeal properly called the ſignet, and the direction of the ſignet-office; wherein are four clerks employed, who prepare ſuch things as are to paſs the ſignet, in order to the privy or great ſeal. All grants ſigned by the king are returned hither, which, when tranſcribed, are carried to one of the principal ſecretaries of ſtate, and ſealed, and then called ſignets; which being directed to the lord privy ſeal, are his warrant.

On the ſecretaries of ſtate is likewiſe dependent another office, called the paper-office, wherein all public writings, papers, and matters of ſtate, are preſerved.

All the under ſecretaries and clerks are in the choice of the ſecretary of ſtate, without reſerve to any perſon: the under ſecretaries receive orders and directions from them, for writing diſpatches, foreign and domeſtic, which they give to the chief clerk, who diſtributes them to the under clerks.

SECRETARY *of an embaſſy*, is a perſon attending an ambaſſador, for the writing of diſpatches relating to the negotiation. There is a deal of difference between the ſecretary of the embaſſy, and the ambaſſador's ſecretary; the laſt is a domeſtic or menial of the ambaſſador, the firſt a ſervant or miniſter of the prince. See *Ambaſſador*.

SECRETON. A white cotton cloth, of a middling fineneſs, brought from the Eaſt Indies; the pieces containing 16 ells in length, and 5-6ths in breadth.

SECUNDA *aqua*, among chemiſts, denotes aqua fortis, which has been already uſed to diſſolve ſome metal. See *Aqua* fortis, and *Depart*.

SECURITY. A bail, or inſtrument drawn and ſigned, to anſwer an accuſation for the payment of a ſum of money, whether public or private; but the word is now more particularly adapted to the funds appropriated by the government as a ſecurity for payment of the public debts. See *Fund*, and National *Debt*.

SEEBY. A port-town of the Baltic, ſituated in North Jutland, and ſubject to Denmark. See *Denmark*.

SEED, in botany, is the laſt product of a plant, whereby the ſpecies is propagated.

The ſeed is generally the fruit of the plant; but ſometimes it is only a part incloſed in the fruit, in form either of grain, kernel, or berry.

The ſeed is the natural offspring of the flower, and that for whoſe production all the parts of the flower are intended; ſo that when this is once well formed, the ſeveral parts of the flower dwindle and diſappear. It is produced from the farina of the apices, let fall on the head of the piſtil, and thence forwarded to an uterus, at the bottom thereof divided into ſeveral cells, where, coming to receive the nutritious juice of the plant, it is firſt ſoftened, then ſwelled, increaſed both in matter and bulk, and at length comes to its ſtate of maturity.

That the whole plant is contained in the ſeed, is an opinion as old as Empedocles, and is ſtill the prevailing doctrine among naturaliſts. Experience, the microſcope, and the modern philoſophy, give it great countenance. In

In effect, by the uſe of good microſcopes, we diſcover in the ſeed ſeveral of the parts of the future tree, only in miniature; particularly a little root called the radicle, and the ſtem called the plumule.

The fecundity of plants, in the production of ſeeds, is very ſurpriſing. M. Dodart, in the memoirs of the French academy of ſciences, computes, that an elm living 100 years, ordinarily produces of itſelf 33,000,000 grains: and adds, that had its crown or head been cut off, it would have put forth as many branches, within half an inch of the place where it was cut, as it had before; and that at whatever height it were cut off, the effect would have been ſtill the ſame. Hence he concludes, that the whole trunk is full of little embryo's of inviſible branches, ſeparated by circular rims, half an inch high; each whereof is ready to appear, and will really appear, if the head be lopped off juſt over it: on which footing the tree may be ſaid actually to contain in itſelf 15,840,000,000 ſeeds, wherewith to multiply itſelf as many times. But what ſhall we ſay, if each ſeed or grain of a tree contains in itſelf another tree, containing the ſame number of ſeeds? and if we can never come either at a ſeed which does not contain trees, nor at a tree which does not contain ſeed? By this means we ſhall have an increaſing geometrical progreſſion; the firſt term whereof is 1, the ſecond 15,840,000,000, the third the ſquare of 15,840,000,000, the fourth its cube, and ſo on to infinity.

SEEDS, in gardening and agriculture. Mr. Bradley obſerves, that the ſeeds of plants, though exceedingly good, will degenerate from the mother-plant, if they be ſown on the ſame ground whence they were gathered; ſo that there is a great neceſſity for a yearly change of ſeeds of foreſt-trees, as acorns and maſt. If the place be too cold to ſow them, when gathered in Auguſt, they may be kept barrelled, or potted up, in moiſt ſand or earth, *ſtratum ſuper ſtratum*, during the winter; at the end of which they are found ſprouted, and, if gently ſown, will be as forward as if ſown in autumn, beſides their miſſing the vermin to which the winter-ſeed is much expoſed.

The ſeed is not to be choſen from the moſt fruitful trees, ſo much as from the moſt ſolid and fair; nor are we to covet the largeſt acorns, but the moſt weighty, clean, and bright. Porous, inſipid, mild ſorts of ſeeds are to be ſown as ſoon as ripe; hot, bitter ſeeds, to be kept a year before ſown. The ſhape and weight of ſeeds direct how they are to be ſet; moſt of them, when they fall, lie on the ſide, with the ſmall end towards the earth, which ſhews that poſture to be beſt to ſet any ſtone or nut in: if they be heavy, ſow them the deeper; but acorns, peaches, and the like, are to be ſown three inches deep.

SEEDS, in pharmacy. The medicinal ſeeds, eſpecially thoſe imported from the Indies and Levant, are ſeverally deſcribed under their reſpective articles. Among thoſe cultivated at home, the principal are the four greater hot, and the four greater cold ſeeds, as they are called. The firſt are thoſe of aniſe, fennel, cummin, and caraway; the latter, thoſe of gourd, citrul, melon, and cucumber. The chief uſe of the four cold ſeeds is for the making of emulſions, cool, refreſhing drinks, paſtes for the hands, and oils uſed by the ladies for the complexion.

SEED *of pearls*. See *Pearl*.

SEED-*ſhop-keeper*, is a perſon who ſells all manner of garden and graſs ſeeds, gardeners tools, matts, &c.: and ſome of them are nurſery-men, who furniſh gentlemen with young trees, both fruit and foreſt, with flower-roots, &c.

SEEDLINGS, among gardeners, denote ſuch roots of gilliflowers, as come from ſeed ſown; alſo the young, tender ſhoots of any plants, that are newly ſowed.

SEEL, with the ſailors, is when a ſhip rolls and tumbles about very ſuddenly and violently, by the force of the waves.

SEGNA. A port-town of Morlachia, ſituated on the eaſt-ſide of the gulph of Venice, in 16 deg. of E. lon. and 45 deg. of N. lat. 27 miles eaſt of the iſle of Cherſo; ſubject to Venice.

SEGOVIA *wool*, is Spaniſh wool, brought from Segovia, a town of the kingdom of Caſtile, or from the neighbouring parts.

SEIGNORAGE. A right or due belonging to a ſeigneur or lord.

SEIGNORAGE, is particularly uſed for a duty belonging to the prince for the coining of money, called alſo coinage. See *Coinage*.

This duty is not always the ſame; but changes according to the pleaſure of the prince, and the occaſions of ſtate. It is in ſome meaſure for the diſcharge of this duty that alloy was invented; that is, the mixture of other metals with gold and ſilver.

Under antient kings, for every pound of gold brought in the maſs to be coined, the duty was 5 s.; 1 s. and ſometimes 18 d. thereof, went to the maſter of the mint. Under Edward III. the ſeignorage of every pound weight of ſilver was 18 dwt. which was then equivalent to a a ſhilling. Under Henry V. the king's ſeignorage for every pound of ſilver was 15 d. At preſent the king claims no ſeignorage at all; but the ſubject has his money coined at the public expence; nor has the king any advantage therefrom, but what he has by the alloy.

In France, under Philip Auguſtus, the ſeignorage was 1-3d of the profit made by the coining; St. Louis fixed it at 1-15th part of the value of the money coined; King John, at 3 livres the mark of gold; Charles VII. by reaſon of the diſtreſſed ſtate of his finances, raiſed it to 3-4ths of the value; Louis XIII. fixed it at 6 livres the mark, or 8 oz. of gold, and 10 ſols the mark of ſilver; Louis XIV. took away the right of ſeignorage in 1679; though it was re-eſtabliſhed in 1689, on the foot of 7 livres 10 ſols the mark of gold, and 12 ſols 6 deniers the mark of ſilver.

It muſt be obſerved, that for the levying of this duty of ſeignorage, the juſt value of the money is augmented by the value of the duty.

SEIPOD. A Ruſſian weight, uſed at Archangel, containing 10 pouds, or 320 lb. avoirdupois.

SEIZE, *Seaze*, or *Seaſe*, in the ſea-language, is to make faſt, or bind; particularly to faſten two ropes together, with rope-yarn. The ſeazing of a boat, is a rope tied to a ring, on a little chain in the fore-ſhip of the boat, by which means it is faſtened to the ſhip.

SEIZURE, in commerce. An arreſt of ſome merchandiſe, moveable, or other, either in conſequence of ſome law, or ſome expreſs order of the ſovereign: thus contraband goods, thoſe fraudulently entered, or landed without entering at all, or landed at wrong places, are ſubject to ſeizure.

By the ſtatute of the 13th and 14th of Charles II. ſeizures of ſhips and goods as forfeited, for unlawful importation and exportation, or for non-payment of duties, may be made only by officers of the cuſtoms, or perſons authoriſed by warrant from the treaſury, or by ſpecial commiſſion under his Majeſty's great or privy ſeal; and if made by any other perſons, they are void: except in the caſes of alamodes, arrack, brandy, cattle, fiſh, goods inwards, Ireland, plantations, and wool.

By other ſtatutes, officers making colluſive ſeizures of foreign goods, in order to evade the duties, are to forfeit 500 l. and be rendered incapable of ſerving his Majeſty; and the importers or owners are to forfeit treble the value of the goods.

Officers, or proprietors, diſcovering their offences to the commiſſioners of the cuſtoms, within two months, ſo as to convict their accomplices, are to be acquitted.

Other perſons ſo diſcovering within three months, are to have half of his Majeſty's ſhare.

Not proſecuted to effect for the bringing of them, to trial and condemnation, by the ſeizer or informer; may be ſeized or informed againſt, or an action brought by way of *devenerunt*, by any other officer, &c. who is to be eſteemed as the true informer or ſeizer.

Officers or informers may not compound any ſeizure, for leſs than one third part of the appraiſed value, under forfeiture of office.

In all ſuits and informations upon any act concerning

the importation of goods; if the property be claimed by any perſon as the importer, the *onus probandi* is to lie on the owner or claimer.

Upon entry of claim to any prohibited or uncuſtomed goods, ſhips, veſſels, or boats, the claimer muſt give ſecurity in the penalty of 30 l. in the court where proſecuted, to pay the coſts; in default whereof, within the time limited by the courſe of ſuch court, the goods may be recovered.

Foreign goods ſeized for non-payment of duties, or any other cauſe, in diſputes, whether the duties have been paid, or the goods have been lawfully imported, or legally compounded for, or condemned, or concerning the place from whence imported; the proof is to lie on the owner or claimer.

In ſeizures or informations upon the act of navigation 12th Charles II. c. 18. the defendant may have a commiſſion out of the high court of chancery, to examine witneſſes beyond the ſeas, and a competent time allowed before trial; and ſuch examination is to be admitted for evidence, as if given *viva voce*.

In every action, ſuit, indictment, information, or proſecution commenced againſt officers of the cuſtoms, &c. for any matter or thing done by virtue, or in purſuance, or execution of this, or any other act relating to the cuſtoms and navigation; the defendants may plead the general iſſue, and give thoſe particular acts, and the ſpecial matter in evidence for their defence, in any of the courts of juſtice; and if, upon trial, a verdict paſs for the defendants, or the plaintiffs diſcontinue or forbear their actions, or become non ſuited, or judgment be given againſt them by demurrer or otherwiſe; the defendants are to have full, double, or treble coſts of ſuits awarded againſt ſuch plaintiffs, &c.

Writs of delivery may not be granted out of the exchequer for goods ſeized, but upon good ſecurity, and only for ſuch goods as are periſhable; or where the informer defers or delays coming to as ſpeedy a trial, as the courſe of that court will permit.

Forfeitures and penalties may be ſued for, proſecuted, and recovered by action of debt, bill, plaint, information, or indictment in his Majeſty's court of exchequer, or any other of his Majeſty's courts of record; wherein no eſſoign, protection, privilege, or wager of law, or any more than one imparlance, muſt be allowed or admitted.

Except in the caſes of brandy, coffee, drawbacks, goods inwards, ſalt, ſpirits, and wool.

Upon ſeizures of goods run or prohibited, and of the veſſels, carriages, horſes, &c. which may be tried before the juſtices of the peace, one or more of the ſaid juſtices may adminiſter an oath to perſons ſkilled in the nature of the goods, &c. ſeized, to view the ſame, and to return the ſpecies, quantity, quality, and value thereof to the ſaid juſtices, in a limited time; in order that informations may be exhibited for their hearing and determining ſuch ſeizures.

After condemnation, by the judgment of ſuch juſtices, the goods, &c. are to be publickly ſold to the beſt bidder; at ſuch places and times as the reſpective commiſſioners ſhall think proper.

Seizures of goods liable to duties, forfeited for being ſhipped or put into any boat, &c. with intent to be exported, or for being unſhipped to be laid on land, out of any ſhip from foreign parts, before the ſaid duties are paid, ſecured, tendered, or agreed for, and all forfeitures and penalties; one moiety of the rate or value thereof is to be for the uſe of his Majeſty, his heirs and ſucceſſors; and the other moiety to the perſon that ſeizes, informs, or ſues for the ſame.

Except in the caſes of alamodes, arrac, brandy, callicoes, cattle, Eaſt India, goods coaſtwiſe inwards, muſlins, plantations, South ſeas, tea, tobacco, and wool.

On all trials of ſeizures, the ſeizure, together with the method and form of making it, ſhall be taken to have been done in the manner as ſet forth in the information, without any evidence thereof; and all the judges and juſtices of the peace are to proceed to the trial of the merits of the cauſe, without inquiring into the fact, form, or manner of making the ſeizure.

The produce of the ſeizures of prohibited and uncuſtomed goods, is to be applied towards the ſupport of his Majeſty's houſhold, and of the honour and dignity of the crown.

SELENITE, *Selenites*, in natural hiſtory, *Moon-ſtone*. A ſtone ſaid to be ſtill found in China; which has this remarkable property, that it increaſes and decreaſes, as the moon waxes and wanes. There are ſome of theſe ſelenites preſerved in the palace of Pekin, valued at an incredible rate.

SELENITES, among the ancient naturaliſts, denotes a white, or tranſparent figured ſtone, thus called from its repreſenting the moon as in a glaſs; which is alſo denominated *lapis ſpecularis*.

Some give the ſame appellation to Muſcovy talc, from an opinion that it increaſes and diminiſhes with the moon. See *Talc*.

SELING. A weight and coin uſed and current in the kingdom of Siam, called mayon by the Chineſe. See *Mayon*.

SEMI-*pite*. The ſmalleſt of the French monies of accompt, being the eighth part of the denier, and the denier being 39-1280ths of a penny ſterling.

SEMPITERNAL, or *Perpetuana*. A kind of woollen ſtuff manufactured in England, particularly at Colcheſter and Exeter; their chief deſtination being for Spain and Italy. See *Perpetuana*.

SENA, or *Senna*, in medicine, is a purgative leaf, much uſed in draughts and compoſitions of that intention. The ſhrub which bears it is cultivated in ſeveral parts of the Levant, and grows five or ſix feet high; putting forth woody branches, furniſhed with leaves on one ſide: its flowers are yellow; and its fruit a greeniſh flat pod, containing ſeveral lodges or cells of ſeeds, reſembling grape-ſtones; which pods ſome phyſicians prefer to the leaves themſelves. There is alſo a kind of ſena growing about Florence in Italy; but it is inferior to that of the Levant, as is owned by the Italians themſelves. Father Plumier mentions a third kind, growing in the Antilles iſlands. M. Lemery diſtinguiſhes three ſorts of ſena of the Levant; the firſt brought from Seyda, called ſena of Apalto, that is, cuſtom-ſena, by reaſon of the cuſtom paid to the grand ſignior, for the privilege of exporting it; the ſecond comes from Tripoli; and the third is called ſena of Mocha. The beſt of theſe kinds is the firſt, which Pomet directs us to chuſe, in narrow leaves of a moderate ſize, ſhaped like the end of a pike, of a pale green colour, a pungent ſmell, and ſoft to the touch. The ſena of Tripoli holds the ſecond rank in goodneſs, and differs from that of Seyda in colour, being green, its ſmell very weak, and has a harſhneſs or roughneſs which it diſcovers upon a touch. Beſides theſe three kinds of ſena, and their pods, the druggiſts ſell the duſt found at the bottom of their bales; which is a very poor commodity, and yet much better than what they call ſmall ſena, which comes with it in the bales by way of package, and which many hold to be a plant of no virtue, put in by chance, or as beſt to increaſe the weight. The beſt ſena ordinarily found in our ſhops, Dr. Quincy obſerves, is that which is ſharpeſt leaved, and ſmells freſheſt: the brightneſs of its colour, and quickneſs of its flavour, are alſo indications of its goodneſs; for when it has loſt its ſcent, and grows duſky, it is good for little. Sena, at firſt taking, is apt to nauſeate the ſtomach; and therefore, if a little cinnamon, or a dram or two of its diſtilled water, be added, it paſſes through with leſs ſickneſs. This is exactly conformable to the ſentiments of Ludovicus, who ſays, that the purgative quality of this herb reſides in its mucilaginous or gummy juice; which the more it is divided, gripes the leſs in its operation. Rulandus imagined a ſudorific quality in ſena; and accordingly ordered it in ſome compoſitions of that intention.

SENDWICK. A Daniſh town on the iſland of Bornholm. See *Denmark*.

SENEGA. The gum ordinarily ſold by the druggiſts for gum arabic, which it nearly reſembles, both in form and virtue,

virtue; and is either white bordering upon yellow, or of a deep amber colour, and tranſparent. It oozes out of a prickly ſhrub, common enough in Africa, and is brought from ſenegal, whence it has received its name.

SENEGAL. A river of Negroland in Africa, ſuppoſed to be the north branch of the river Niger, which runs from eaſt to weſt, and diſcharges itſelf into the Atlantic ocean, in 16 deg. of N. lat. at the mouth whereof the French have ſeveral forts which command the navigation of that river; and from hence they import that valuable drug called gum ſenega.

SEPARATION, in navigation. The ſame with what is uſually called departure. See *Departure*.

SEPTIER. A French meaſure, differing according to the ſpecies of the things meaſured.

For liquors, the ſeptier is the ſame thing with the chopine, or half pint. For dry meaſure, the ſeptier is very different in different places, and different commodities; as not being any veſſel of meaſure, but only an eſtimation of ſeveral other meaſures. At Paris the ſeptier of wheat conſiſts of two mines, the mine of two minots, and the minot of three buſhels.

Twelve ſeptiers make the mine; but the ſeptier of oats is double that of wheat.

SEQUIN, *Zechin*, *Zecchino*, or *Chequeen*. A gold coin ſtruck at Venice; as alſo in ſeveral parts of the grand ſignior's ſtates, particularly at Cairo; which laſt are Turkiſh ſequins or zeriffs.

At Conſtantinople, the ducats ſtruck in ſeveral parts of Germany are called Hungarian ſequins. See *Ducat*.

The value of theſe ſequins is different; thoſe of Venice being 9 s. $1\frac{1}{4}$ d. ſterling, and thoſe of Turky 9 s. 9 d. ſterling.

SER. A weight of two ſorts uſed in the Eaſt Indies, particularly in the Mogul's territories; the firſt is employed for weighing the neceſſaries of life, being 1 lb. avoirdupois; but the ſecond is only of 12 oz. avoirdupois.

SERAPH. A Turkiſh gold coin, in value 5 s. ſterling.

SERASSES. Cotton cloths, manufactured in ſeveral parts of the Eaſt Indies, particularly at Cambay.

SERCELLI. A port-town of Algiers, on the coaſt of Barbary in Africa, a little weſt of the city of Algiers, in 4 deg. of E. lon. and 37 deg. of N. lat.

SERGE, in commerce. A woollen quilted ſtuff, manufactured on a loom with four treddles, after the manner of rateens, and other ſtuffs, that have the whale. See *Rateen*.

The goodneſs of ſerges is known by the quilting, as that of cloths by the ſpinning.

Of ſerges there are various kinds, denominated either from the different qualities thereof, or from the places where they are wrought. The moſt conſiderable is the London ſerge, now highly valued abroad, particularly in France, where the manufacture is carried on with good ſucceſs, under the title of *ſerge façon de Londres*.

SERGE *de ſoye*. A kind of ſilk ſerge, brought chiefly from Italy.

SEREGIPPE. A city and port-town of Brazil, in South America, in the province of Baia, or bay of All Saints, ſituated on the Atlantic ocean, in 39 deg. of W. lon. and 11 deg. 12 min. of S. lat. 100 miles N.E. of the city of St. Salvador, ſubject to Portugal.

SERON *of almonds*, is the quantity of 200 weight; of aniſe-ſeeds, from 3 to 400 lb.; of Caſtile ſoap, from 200 and a half to 300 and three quarters.

SERPENT. A muſical inſtrument, ſerving as a baſs to the cornet, or ſmall ſhawm, to ſuſtain a chorus of ſingers in a large edifice. It has its name ſerpent from its figure, as conſiſting of ſeveral folds or wreaths, which ſerve to reduce its length, that otherwiſe would be ſix or ſeven feet. It is uſually covered with leather; and conſiſts of three parts, a mouth-piece, a neck, and a tail; and has ſix holes, by means whereof it takes in the compaſs of two octaves.

SERPENTARIA. A medicinal plant, called by the ancients piſtolochia and dracunculus, and popularly ſnake-root, or dragon's-wort. The ancients were only acquainted with two kinds of this plant, the great and the ſmall; but, ſince the diſcovery of America, botaniſts have added others, as the ſerpentaria Virginiana, or Virginian ſnake-root, beſides that of Canada, and that of Brazil. They are all ſuppoſed to be alexipharmics, or counterpoiſons, and as ſuch are ingredients in Venice treacle. The great ſerpentaria, called by the ancients dracunculus major, has its ſtem very ſtreight, ſmooth, and marked with red ſpots, like the ſkin of a ſerpent; whence probably, as much as from its virtues, it is that it takes its name. The root is big, round, and white, covered with a thin ſkin. The ſmaller ſerpentaria has its ſtalk much like that of the larger, only its leaves are like thoſe of ivy; whereas thoſe of the larger are folded in one another, after the manner of baſtard rhubarb. Its root is round and bulbous.

The ſerpentaria of Virginia, called alſo colubrina Virginiana, aſarum Virginianum, ſerpentaria nigra, and contrayerva of Virginia, has its leaves green and large, almoſt in figure of a heart; its fruit round; and its root, which is of a very ſtrong aromatic ſmell, has at bottom an infinite number of long, ſmall filaments, repreſenting a kind of beard. It was firſt brought into Europe from Virginia by the Engliſh; where it is eſteemed a ſovereign remedy or antidote againſt the bite of the rattle-ſnake. We are told by travellers, that this root not only cures the bite of the rattle-ſnake, but that this animal flies the ſmell thereof: for which reaſon the Indian, and other travellers, always carry it with them on the end of a ſtaff, to preſent towards the ſnake, when, by chance, they meet it.

SERPENTINE *marble*, or *ſtone*. A kind of marble, called by the ancients ophites, as being ſpeckled like a ſerpent's ſkin.

The ground of the ſerpentine is blackiſh; but it is beſet with green and yelloviſh ſtains and ſtreaks; being exceeding hard, precious, and antique.

SERSUKERS. Indian ſilk and cotton ſtuffs, worked much after the manner of muſlin; their length is 7, 9, 13, and 16 ells, and 2-3ds, 3-4ths, and 7-8ths in breadth.

SESELI. A plant much of the nature and quality of fennel, growing in Candia, the Morea, and the ſouth of France. Its ſeed to be good ſhould be longiſh, weighty, greeniſh, and of an aromatic taſte.

SESTE. A corn-meaſure uſed at Siam, weighing 100 catis, or 125 lb. avoirdupois.

SESTOS. A fortreſs of European Turky, ſituated at the entrance of the Helleſpont or Dardanells, in 27 deg. 30 min. of E. lon. and 48 deg. 40 min. of N. lat. lying 24 miles S. W. of Gallipoli.

SETTE, or *Cette*. A port-town of France, in the province of Languedoc, ſituated on a bay of the Mediterranean, in 3 deg. 36 min. of E. lon. and 43 deg. 26 min. of N. lat. 14 min. S. W. of Montpelier.

SETTING, in ſea-language. To ſet the land, or the ſun, by the compaſs, is to obſerve how the land bears on any point of the compaſs, or on what point of the compaſs the ſun is: alſo, when two ſhips ſail in ſight of one another, to mark on what point the chaſed bears, is termed, ſetting the chaſe by the compaſs.

SEVERN. A noble river, which riſes in Montgomeryſhire, runs eaſt till it enters Shropſhire, and having paſſed by Shrewſbury, turns ſouth, paſſing by Bridgnorth, Worceſter, and Glouceſter; after which it diſcharges itſelf into the Britiſh channel. It is a very ſwift ſtream, and navigable from Welchpool in Montgomeryſhire, receiving 40 rivers in its courſe, and frequently overflowing the countries through which it runs.

SEVILLE. A city of Spain, capital of the province of Andaluſia, ſituated on the river Guadalquivir, in 6 deg. of W. lon. and 37 deg. 15 min. of N. lat. 50 miles north-eaſt of Cadiz, and 200 miles ſouth-weſt of Madrid.

SEXLING. A ſmall money at Hamburgh, 24 of which are equal to $1\frac{1}{8}$ d. ſterling.

SEXTANT. An aſtronomical inſtrument, made like a quadrant, excepting that its limb only comprehends 60 degrees; the uſe and application of this inſtrument, being the ſame with that of the quadrant. See *Quadrant*.

SEXTULA. A ſmall weight, uſed by apothecaries for their drugs, which weighs a ſcruple more than the dram.

SEYDAVI. Silk of the produce of Sidon, and ſold by the damaſquin of 600 drachms, or 4 lb. 11 oz. avoirdupois.

SEYNE. A river of France, which riſes near Dijon in Burgundy, runs N. W. through Champagne, and the iſle of France, viſiting Troyes and Paris; then continuing its courſe N. W. croſſes Normandy, paſſing by the city of Rouen, and falling into the Britiſh channel between Havre-de-Grace and Honfleur.

SHACK, in ancient cuſtoms. A liberty of winter-paſturage. In the counties of Norfolk and Suffolk the lord of the manor has ſhack, that is, a liberty of feeding his ſheep at pleaſure upon his tenants lands during the ſix winter-months.

In Norfolk, ſhack alſo extends to the common for hogs, in all mens grounds, from the end of harveſt till ſeeds time; whence, to go a ſhack, is to feed at large.

SHADWELL *water-works*. See *Water*-works.

SHAFT, of a mine, is the hollow entrance, or paſſage into it, ſunk or dug, to come at the ore. In the tin-mines, after this is ſunk about a fathom, they leave a little, long, ſquare place, which is called a ſhamble.

SHAGREEN, or *Chagreen*. A kind of grained leather, chiefly uſed in the covers of caſes and books. It is very cloſe and ſolid, covered over with little roundiſh grains, or papillæ, and brought from Conſtantinople, Tauris, Tripoli, Algiers, and ſome parts of Poland. There is a diſpute among authors, what the animal is whence the ſhagreen is prepared? Rauwolf aſſures us it is the onager; which, according to him and Bellonius, is a kind of wild aſs. It is added, that only the hard part of the ſkin is uſed for this purpoſe. Borel ſays it is a ſea-calf; others, a kind of fiſh called by the Turks ſhagrain, whoſe ſkin is covered with grains, and thoſe ſo hard that they will raſp and poliſh wood.

There is alſo a ſort of ſhagreen made of the ſkin of the ſquatina, in Engliſh the monk or angel-fiſh.

Manner of preparing SHAGREEN. The ſkin being firſt ſlead off, is ſtretched out, covered over with muſtard-ſeed, and the ſeed bruiſed on it; when it is expoſed to the weather for ſome days, and then tanned.

The beſt is that brought from Conſtantinople, of a browniſh colour; the white is the worſt. It is extremely hard, yet, when ſteeped in water, becomes very ſoft and pliable; for which reaſon it is of great uſe to caſe-makers: beſides, it will take any colour that is given it, red, green, yellow, or black, but is notwithſtanding this frequently counterfeited by marquin formed like ſhagreen; which laſt may eaſily be diſtinguiſhed by its peeling off, becauſe the firſt does not.

SHAGREEN *caſe-maker*, is a perſon who makes ſhagreen-caſes for watches, tweezers, &c. and cheſts for plate.

SHALLOP, or *Shalloop*, is a ſmall light veſſel, with only a ſmall main-maſt, fore-maſt, and lug-ſails, to hale up, and let down, on occaſion. They are commonly good ſailors, and therefore uſed as tenders upon men of war.

SHAMMY, *Chammy*, or *Chamois*. A kind of leather, dreſſed in oil or tanned, much eſteemed for its ſoftneſs and pliancy. It is prepared from the ſkin of the chamois, a kind of wild goat, called alſo iſard, inhabiting the mountains of Dauphine, Savoy, Piedmont, and the Pyreneans. Beſides the warmneſs and ſoftneſs of this leather, it has the faculty of bearing ſoap without damage, which renders it very uſeful on many accounts. In France, ſome wear the ſkin raw without any preparation. It is alſo uſed for the purifying of mercury, which is done by the paſſing it through the pores of this ſkin, which are very cloſe.

The true chamois leather is counterfeited with common goat, kid, and even ſheep ſkin; the practice of which makes a particular profeſſion, called by the French chamoiſure: the laſt, though leaſt eſteemed, is yet ſo popular, and ſuch vaſt quantities prepared, eſpecially about Orleans, Marſeilles, and Tholouſe, as may ſeem incredible.

SHANNON. The largeſt river of Ireland; which riſing in the county of Letrim, runs from north to ſouth, dividing the provinces of Leinſter and Connaught; and then turning S. W. runs through the province of Munſter, paſſing by the city of Limeric, diſcharging itſelf into the Weſtern or Atlantic ocean, between the counties of Clare and Limeric.

SHAUB, or *Baffetas*. An Indian cotton and ſilk ſtuff, of different colours; being 7 ells in length, and 3 4ths in breadth.

SHEATHING *of a ſhip*, is the caſing that part of the hull which is to be under water, with ſomething to keep the worms from eating into her plank; which is uſually done, by laying tar and hair mixed together, all over the old plank, and then nailing on thin new boards; but, as this hinders a ſhip's ſailing, of late ſome have been ſheathed with milled lead, which is much ſmoother, and conſequently better for ſailing, and alſo more cheap and durable than the other way. This method was firſt invented by Sir Philip Howard and Major Watſon.

SHEEP. The beſt ſort of ſmall cattle, both for food and cloathing to mankind. See *Wool*.

By acts paſſed in the 3d Henry VI. and 8th Elizabeth, ſheep, lambs, or rams, alive exported, for the firſt offence the exporter, his aiders or abettors, are to forfeit all their goods for ever, and to ſuffer a year's impriſonment without bail or mainpriſe, and then to have their left hands cut off in a market-town, upon a market-day, and be there publickly nailed up.

Perſons offending a ſecond time, are to be adjudged felons, and to ſuffer death accordingly.

SHEER-*hooks*, or *Shear hooks*, are large iron hooks, uſed when a ſhip deſigns to board another.

SHEER-*ſhanks*, or *Shear-ſhanks*. A kind of knots, among ſeamen, by which they tie up and ſhorten a runner when it is too long.

SHEERING, or *Shearing*, in the woollen manufactures. The cloth-worker's, or ſhearman's craft or office; or the cutting off with large ſhears the too long and ſuperfluous nap or ſhag found on the ſurface of woollen cloth, ſtuffs, fuſtians, and cottons, in order to make them more ſmooth and even. Cloth and ſtuffs are ſhorn more or fewer times, according to their quality and fineneſs.

Some uſe the phraſe ſhearing of hats, for the paſſing of hats made of wool over the flame of a clear fire made of ſtraw or ſpray, to take off the long hairs; others call this flaming, and ſome ſindging. Other hats, as caſtors, ſemi-caſtors, and ſuch like, are ſhorn, by rubbing them over with pumice-ſtone.

SHEERING, or *Shearing*, is alſo a ſea-term, for the motion of a ſhip, when ſhe goes in and out, and not right forward; either by reaſon ſhe is not ſteered ſteadily, or on account of the ſwift running of the tide; in which caſe ſhe is ſaid to ſheer, or go ſheering. When ſhe lies at anchor, or near a port, by reaſon of the ſwift running of a tide-gate, ſhe is ſaid to be in danger of ſheering home her anchor, or ſheering aſhore.

SHEERMEN, or *Shearmen*. See *Clothmakers* company.

SHEILDS. A port-town of Durham, ſituated at the mouth of the river Tyne, in 1 deg. of W. lon. and 55 deg. of N. lat. 8 miles E. of Newcaſtle, where the Newcaſtle fleets ride and take on board their coals, and where great quantities of ſalt are made.

SHELF, is what the miners, eſpecially in tin-mines, call the faſt country; by which they mean an imaginary ſurface of the earth, that, at the concuſſion of the waters at the deluge, was never moved; and to the ſhelf they think all the loads or veins at firſt lay even and parallel; though, after the flood, ſome were elevated, others depreſſed.

By ſhelf they mean that hard ſurface, or coat of the earth, which lies under the mould, uſually about a foot deep; for they ſuppoſe, that ſince the flood the earth has joined a new coat of vegetable earth, or ſuch as is made by the corruption of vegetables and animals.

SHELL, in natural hiſtory. A hard cruſt, ſerving to cover and incloſe a kind of animals, hence called teſtaceous.

Naturaliſts have been generally miſtaken as to the manner of the formation of theſe ſhells, the animal and its ſhell

ſhell having been always ſuppoſed to ariſe from the ſame egg. But Mr. Reaumur has ſhewn the ſuppoſition to be falſe; having found, by certain experiments, that the ſhells of garden-ſnails are formed of a matter which perſpires from their bodies, and hardens and condenſes in the air.

It is certain, that all animals perſpire, and are encompaſſed with a kind of cloud or atmoſphere, which exhales from them, and in all probability aſſumes pretty nearly their external figure.

SHELLS, make a conſiderable article in the cabinets of the curious. The fineſt and rareſt are theſe that follow: 1. The papal crown, which takes its name from its form, and is all ſtreaked with red on a white ground. 2. The feather, whoſe whiteneſs, with its carnation-ſtains, have an admirable effect. 3. The Hebraica, which, on a ground as white as ſnow, has ſpots as black as jet, much reſembling Hebrew characters. 4. The Chineſe ſnail, which has a green and black embroidery, on a dark, brown ground. 5. The cloth of gold, remarkable for an admirable tiſſue of yellow, brown, and black. 6. The cloth of ſilver, which does not come behind that of gold in beauty. 7. The leopard, which is all ſpeckled. 8. The tyger, whoſe ſpots exceed thoſe of the leopard. 9. The hart's horn, which has black ſtains on a white ground. 10. The purſe, thus called from its figure, which is embroidered with three or four colours. 11. The ſun-dial. 12. The caterpillar, both denominated from their forms.

SHELL-*gold*. See *Gold*.

SHELL-*ſilver*. See *Silver*.

Tortoiſe-SHELL. See *Tortoiſe*.

SHEPPEY An iſland at the mouth of the river Medway, part of the county of Kent, and ſeparated from the main land by a narrow channel, 7 miles N. W. of Canterbury; the chief town being Queenborough.

SHERBET. A pleaſant Turkiſh liquor, which in England is the lemon, water, and ſugar, that rum or brandy is intended to be put to, in order to make the liquor called punch. See *Punch*.

SHERBRO. A fort at the mouth of Sherbro river on the coaſt of Guinea in Africa, ſituated in 11 deg. of W. lon. and 6 deg. of N. lat. 100 miles S. E. of Sierra Leon, formerly in poſſeſſion of the Engliſh, but abandoned by them.

SHERENESS, or *Sheerneſs*. A fort on the N. W. point of the iſle of Sheppey in Kent, ſituated at the mouth of the river Medway, to defend the entrance of that river.

SHETLAND *iſles*. See *Britiſh* iſlands.

SHILLING. An Engliſh ſilver coin, equal to 12 d. or the 20th part of a pound. See *Pound*, and *Penny*.

It is obſerved there were no ſhillings or twelve-penny pieces coined in England till the year 1504; and theſe Stow calls groats, though Fabian mentions them under the name of ſhillings, 34th Henry VIII.

The Dutch, Flemiſh, and Germans, have likewiſe their ſhillings called ſchelin, ſchilling, and ſchelling; but theſe, not being of the ſame weight or fineneſs with the Engliſh ſhilling, are not current on the ſame foot. The Engliſh ſhilling is worth about 23 French ſols; thoſe of Holland and Germany about 11 ſols and a half. The Dutch ſhillings are alſo called ſols de gros, becauſe equal to 12 gros. The Danes have copper ſhillings, worth about 1-4th of a farthing ſterling.

SHIP. A general name for all great veſſels with ſails, fit for navigation on the ſea; excepting galleys, which go with oars and ſmack-ſails.

The Sieur Aubin defines a ſhip, a timber building, conſiſting of various parts and pieces, nailed and pinned together with iron and wood, in ſuch form as to be fit to float, and to be conducted by winds and ſails from ſea to ſea.

The invention of ſhips is very ancient, and at the ſame time very uncertain. Mythologiſts attribute it to Dedalus; and pretend, that the wings he invented to ſave himſelf from the labyrinth of Crete, were nothing but ſails, which he firſt gave to veſſels, and wherewith he eluded the vigilance and purſuit of Minos. Others give the honour to Janus, on the credit of ſome ancient Greek and Latin coins; on one ſide whereof is repreſented his double face, and on the reverſe a ſhip. Others, and thoſe who go on the ſureſt ground, look on Noah as the firſt ſhipbuilder.

Ships are uſually divided into three claſſes; ſhips of war; merchant-ſhips; and an intermediate kind, half war, half merchant; being ſuch, as though built for merchandiſe, yet take commiſſions for war.

Ships of war are again divided into ſeveral orders, called rate. See *Rate*.

Merchant-ſhips are eſtimated by their burthen, that is, by the number of tuns they bear, each tun reckoned at 2000 lb. weight; this eſtimate being made by gauging the hold, which is the proper place of loading.

The moſt celebrated ſhips of antiquity are that of Ptolemy Philopater, which was 280 cubits long, 38 broad, and 48 high, each cubit being 1 Engliſh foot 5½ inches, and carried 400 rowers, 400 ſailors, and 3000 ſoldiers. That which the ſame prince made to ſail on the Nile, we are told, was half a ſtadium long. Yet theſe were nothing compariſon with Hiero's ſhip, built under the direction of Archimedes; on the ſtructure whereof Moſchion wrote a whole volume. There was wood enough employed in it to make 50 galleys: it had all the variety of apartments of a palace; ſuch as banqueting-rooms, galleries, gardens, fiſh-ponds, ſtables, mills, baths, and a temple to Venus. It was encompaſſed with an iron rampart, eight towers, with walls and bulwarks, furniſhed with machines of war; particularly one, which threw a ſtone of 300 pounds, or a dart 12 cubits long, the ſpace of half a mile, with many other particulars related by Athenæus.

Among modern ſhips, one of the moſt conſiderable is a firſt rate ſhip, built at Woolwich in 1701; the dimenſions whereof, whence thoſe of other rates may be deduced, are as follow: the length 210 feet, number of guns 110, number of men 1250, number of tuns 2300; draught of water 22 feet; the main-ſail in length 54 yards, depth 19; main-maſt in length 39 feet, in diameter 38 inches; weight of the anchor 82 C. 1 qr. 14 lb. cable in length 200 yards, diameter of the cable 22 inches. The expence of building a common firſt rate, with guns, tackling, and rigging, is computed at 60,000 l. ſterling. See *Navigation*, *Navy*, and *Rate*.

In the year 1732, there were 1417 ſhips belonging to the city of London, whoſe burthen were 178,557 tons, and manned with 21,797 men.

As there is a great diſparity of ſeamen in ſhips of the ſame tonnage and burthen, it will be neceſſary to obſerve that all ſhips trading to the weſtern and ſouthern parts of the world, are, on account of their long voyages, obliged to carry a greater number of hands, than thoſe who trade to the eaſtern and northern parts, except ſuch as go to Greenland and Davies's ſtraits on the whale-fiſhery:

Having ſhewn the number of ſhips belonging to London, for the ſatisfaction of the curious, there is alſo ſubjoined the following account of the number of ſhips that arrived at London from all foreign parts, as well as from the ſeveral ports of Great Britain, from Chriſtmas 1727 to Chriſtmas 1728; namely, Britiſh ſhips from all ports beyond the ſea 1839, and foreign ſhips 213, togegether 2052; and from the ſeveral ports of Great Britain the numbers that appear below.

Numbers total,	foreign ſhips	2052
	coaſters	6837
General total		8889

Though this is a prodigious number of ſhips to be imported in one year, yet the ſame is conſiderably increaſed at this time.

For unlading this vaſt number of veſſels, and carrying the amazing quantities of merchandiſe brought to London by them to and from the ſeveral wharfs of the city, ſuburbs, and vicinal parts, which are 144 in number, there are not only employed about 2000 lighters, barges, and boats, but likewiſe 420 great carts, belonging to the city and liberty thereof; beſides 120 to the coal or woodmongers, and 37 in the out-parts, together 607, which are equal in burthen to that of waggons. See *Wharf*, and *Carmen*.

Of owners and maſters of SHIPS. An owner of a ſhip, is the proprietor of the ſame by lawful title, either as the builder of it, or by purchaſe from another perſon entitled thereto. And a maſter of a ſhip, is one appointed by the owners, to have the government and charge thereof, being committed to his care and management, during the voyage to be performed. Alſo the perſons that are in a ſhip may be thus in order; the maſter, the pilot, the maſter's mate, the ſhip-carpenter, the boatſwain, the purſer, the ſurgeon, the cook, and the ſhip's boy; all the reſt being under the name of mariners.

In reſpect to owners of ſhips, where there are divers part-owners therein, if a ſhip be new built, and has never made a voyage, or is newly bought, by the law-marine, ſhe ought to be ſubject to one voyage upon the common hazard, before any of the owners ſhall be permitted to ſeparate and diſcharge their parts; but, by the laws of England, the owners may, before any ſuch voyage, convey away or aſſign over their right. And if there be ſeveral owners of a ſhip, and they happen to diſagree, the ſhip notwithſtanding may make one voyage firſt, at their common expence, before any terms of diſſolving the partnerſhip be ſo much as heard; if after that they cannot agree, the party requeſting to be diſcharged, is to make an offer of his part to the reſt at the price he would either give or take, and he ſhall be allowed to ſeparate; but in caſe he will not make ſuch an offer of ſale, the other owners and partners may forthwith rigg the ſhip a their own charge, and upon the adventure of the refuſer ſo far as his ſhare extends, without any account to be gi ven unto him of any part of the profit at her return; bu they are obliged to bring the ſhip home ſafe, or to an ſwer him the value of his part.

And where the part-owners of a ſhip, who have th greateſt ſhare or part thereof, refuſe to continue the part nerſhip, with one who has but one part, or a ſmal ſhare in the ſhip, who cannot without prejudice ſell hi part at a price ſet, nor has ſubſtance to buy the part of the reſt; in ſuch caſe, all the partners are bound t put the ſhip to an appraiſement, and either ſo to diſpoſ of her by ſale, or to ſet her forth on a voyage accord ingly: and if, for want of buyers in that place, th poor partner cannot avoid the oppreſſion of the richer then may the judge of the admiralty, or the ordinary judge, ſentence and decree the ſame. If the major par of a ſhip's owners and partners proteſt againſt a voyage and there is but one left that is for it; yet the ſame may be effected by that party, eſpecially if there be equality in partnerſhip.

If a man gets poſſeſſion of a ſhip, having no title to th ſame, by the marine law he ſhall anſwer ſuch damage to the rightful owners as the ſhip in all probability might have earned; and the reaſon of that is, becauſe the only end of ſhipping is the employment thereof. A ſhip commits piracy, by reaſon of which ſhe is forfeited; if before ſeizure ſhe be *bona fide* ſold, the property ſhall not be queſtioned, nor the owners diveſted of the ſame; and where a ſhip is freighted out, and accordingly receives in her lading purſuant to agreement, if afterwards any embargo happens, and the lading is taken as forfeited, the owners ſhall notwithſtanding receive freight; for here is no fault in them, but only in the merchant.

In caſe a ſhip be broke up, or taken in pieces, with an intent to convert the ſame to other uſes; and afterwards, upon change of mind, ſhe be rebuilt with the ſame materials; yet this is now another, and not the ſame ſhip, eſpecially if the keel be ript up or changed; and when once the whole ſhip is taken aſunder and rebuilt, there determines the partnerſhip of the owners as to that ſhip: but if a ſhip be ript in parts, taken aſunder in parts, and repaired in parts, there ſhe remains ſtill the ſame veſſel: and it is ſaid, although ſhe has been ſo often repaired, that there does not remain one ſtick of the original fabric. And if a man ſhall repair his ſhip with plank belonging to other perſons; yet the ſhip ſhall maintain and keep her firſt owners: though where a man takes plank and materials that belong to another, and prepared for the uſe of ſhipping, and with them build an entire new ſhip, the property of the veſſel follows the owner of the materials.

And concerning repairs of ſhips, where there is cauſe for it in a voyage, the maſter may take up money to do it; and though he ſpend it another way, the owners and ſhip become liable to the ſatisfaction of the creditor; for as it would be very unreaſonable, that ſuch creditor ſhould be bound to take upon him the care of repairing the ſhip, and ſupply the owners room, which muſt be ſo if it be neceſſary for him to prove that the money was laid out upon the ſame ſhip; ſo, on the other hand, it ſtands with reaſon, that he be ſure he lends his money on ſuch an occaſion, as thereby the maſter's act may oblige the owners, where he knows that the money borrowed was neceſſary for the repair of the ſhip; and therefore if a ſhip want ſome reparation, and a far greater ſum is lent than was needful, the owners ſhall not be liable for the whole.

If any ſhip be taken away from the owners, they may maintain an action of trover and converſion for any part or ſhare.

In the main ſea, or an arm of the ſea, the owners may not loſe their ſhip by any claim of deodand, to be forfeited to the king or lord of the manor, though any body be drowned out of it, or otherwiſe receive their deaths, becauſe on ſuch waters ſhips are by winds and tempeſts unavoidably ſubject to dangers: but a ſhip or veſſel being upon

upon a freſh river, as at Rotherith on the Thames, &c. where there are no ſuch hazards, may become deodand, and forfeited in ſuch caſe.

Where a ſhip is ſold, together with her tackle, furniture, apparel, and appurtenances; by theſe words the ſhip's boat is not conveyed, but that remains ſtill the owner's; and ballaſt is no part of a ſhip's furniture.

The maſter of a ſhip or veſſel is to be choſen by the part-owners in proportion to their concerns, not by the majority; and that man which is moſt able, is to be preferred. As the whole charge of the veſſel and lading are committed to the maſter, the owners ſhould be very careful who they admit to be commander of their ſhip; and he ought to be a perſon of honeſty, as well as ability and experience.

And the law looks upon a maſter as an officer, who muſt give an account for whatever he has under his care and cuſtody, and on failure to render ſatisfaction: therefore, if any misfortune happens by the negligence, wilfulneſs, or ignorance of himſelf or his mariners, he muſt be anſwerable for it. As ſoon as goods and merchandiſe are put aboard the ſhip, whether ſhe be riding in port, haven, or any other part of the ſeas, he that is maſter, or *exercitor navis*, is chargeable therewith; and if the ſame be there loſt or purloined, or ſuſtain any damage, either in the haven or port before, or upon the ſeas, after ſhe is in her voyage, he muſt anſwer the damage; for the very lading of goods on board the ſhip ſubjects the maſter to anſwer the ſame.

Where the maſter is ſubject to anſwer damage, is generally to be underſtood in all ſuch caſes where the lading was brought aboard either by his conſent or his purſer's; for any other, or ſuch goods as ſhall be ſecretly brought in not being entered in his clerk or purſer's book, or in the bills of lading, the maſter ſhall not be compelled to ſee forthcoming; unleſs it be ſuch things as the parties bring into the ſhip about them, as cloaths, money, or the like; which being ſeldom entered, yet moſt commonly are viſible, and the maſter by law is reſponſible for. So likewiſe, if a maſter forewarn a paſſenger to keep his goods, and that he will no way take care of them, and if they be loſt or purloined by the ſhip's crew, he will not be obliged to ſee them forthcoming; here the maſter is not held anſwerable in caſe of a loſs, eſpecially if there be any thing of an agreement concerning it.

But if goods ſhall be ſent aboard a ſhip, and the maſter ſhall appoint a cabin for the ſame, and deliver the key thereof to the lader, and tell him he will not be anſwerable if a loſs happens; yet if the goods are ſtole, he muſt make ſatisfaction. And if a maſter ſhall receive goods at any key, or ſend his boat for them, and they happen to be loſt, he ſhall likewiſe anſwer both by the maritime and common law.

If a maſter commits any offence wilfully, or through negligence, he ſhall be anſwerable to his owners, who may compel him to make ſatisfaction for the damage; and in ſuch caſe they may ſue ſeparately: ſo alſo, if the ſhip has earned freight, and part of the owners have received their parts, and the reſt have not, they may bring an action for their ſhare, without joining with the others.

And when goods are tranſported for hire, and no contract is made with the proprietors of the ſhip, there the maſter is chargeable for the goods in reſpect of his wages; and the owners are ſo in reſpect of their freight, that they receive for the carriage thereof.

It is ſaid, that where goods are once delivered to a maſter, the cargo is not ſubject to be attached in his hands; for they are in law as it were bailed to the ſhip, until the freight and all other charges are paid. And it has been held, that as the maſter or owners of a ſhip may have an action for the freight, either the one or the other are anſwerable, where goods are damaged in a ſhip: but in caſe there are ſeveral owners, and one diſſents from the voyage, he ſhall not be liable to any action afterwards for a miſcarriage, &c.

If goods are ſo embezzled or damnified, that the ſeamen or mariners muſt anſwer, here the owners and maſter are to deduct the amount of the damage out of their freight to the merchants, and the maſters ſhall do it out of the wages of the mariners; for though freight is the mother of wages, it is alſo the very father of damage: and before a mariner can claim his wages out of what the ſhip has earned, the ſhip muſt be acquitted from the damage that the merchant has ſuſtained, by the negligence or fault of the mariners: and the reaſon is, for that the goods being obliged to anſwer the freight, ſo the freight and ſhip are tacitly engaged to clear the damage; and when that is done, the mariners ſhall then be let into their wages.

A maſter of a ſhip has power to freight out the veſſel, take in goods and paſſengers, mend and furniſh the ſhip; and for that purpoſe, if need be, in a ſtrange country, he may borrow money, with advice of his mariners, upon ſome of the tackle, or ſell ſome of the merchandiſe; and if part of the goods ſhall be ſold in ſuch neceſſity, the higheſt price that the remainder are diſpoſed of for muſt be anſwered and paid to the merchant; after which ſuch merchant is to pay for the freight of thoſe goods, as well as for the remaining merchandiſe; but if the ſhip in the voyage happens to be caſt away, then only ſhall be tendered the price that the goods ſo ſold were firſt bought for.

Such is the duty of a maſter of a ſhip that is provident, that he ought not to make ſail, and put forth to ſea, without the conſent of his company; if he does, he ſhall anſwer the damages ariſing thereby. And he is not to ſet ſail without a ſufficient number of able mariners; nor in tempeſtuous weather; neither muſt he ſtay in port or harbour, without juſt cauſe, when a fair wind invites his departure: alſo, he muſt not proceed in his voyage with inſufficient rigging or tackle, or with other or fewer cables than is uſual and requiſite, reſpect being had to the burthen of the veſſel; and if any damage happens by the delivery of the goods into the lighter, as that the ropes break and the like, there he muſt anſwer; but if the lighter comes to the wharf, and then in taking up the goods a rope breaks, the wharfinger is liable.

If a commander of a ſhip ſhall break ground, or endeavour to ſail away, after an embargo is laid upon ſhipping by the ſtate, he ſhall be anſwerable for all damage which ſhall accrue. The reaſon is, becauſe his freight is due, and muſt be paid, though his goods be ſeiſed. He ought not to refuſe payment of the juſt and ordinary duties and port-charges, to the hazard of any of his lading; but if the officers inſiſt upon more than is due, and he offers what is juſt, and which he ought to pay, then he ſhall be excuſed. If by the maſter's default, confiſcation of goods or other damage happen, for non-payment of cuſtoms, or falſe bills of entry in the cuſtom-houſe, or for tranſporting of unlawful merchandiſe, the maſter ſhall anſwer for the ſame, with the intereſt. But concerning the ſuing for ſuch goods, the maſter may well do it; and notwithſtanding, if it be found that the merchant is in any fault, then if the maſter and four of his mariners ſwear that there was no fault in them, he will be cleared thereby.

The maſter of a ſhip, taking linen or cloths aboard, ſhall provide good canvas, leſt the goods be damaged: he muſt not overlade the ſhip above the birth-mark, or take into his ſhip any perſons of an obſcure and unknown condition without letters of ſafe conduct: nor ought he to lade any of his merchants goods on board the ſhip of an enemy, though his own ſhip be in diſtreſs, without ſuch letters of ſafe conduct; for if he does, the ſame may be made prize, and he muſt make good the damage. And he muſt not lade any prohibited goods; in which caſe, he is not only anſwerable, but alſo for any damage happening by any unreaſonable ſtowing or breaking of goods, and therein he and his company may be put to their oath. He ought not to ſhip any merchandiſes, but only at the public ports and keys; and he may not make uſe of any unlawful colours, enſigns, pendants, jacks, or flags, whereby his ſhip or lading would be ſubject to ſeiſure.

He may not deviate in his courſe, without good cauſe, or ſteer a dangerous and unuſual way, when he can have a more ſecure paſſage; though, to avoid illegal impoſitions,

poſitions, it is ſaid he may ſomewhat change his cour nor may he ſail by places infeſted with pirates, enemies, &c. or notoriouſly known to be unſafe; or near rocks, or remarkable ſands, if he be not thereto neceſſitated by violence of wind and weather, or deluded by falſe lights. He ſhall not ſneak into the creeks, or other places, when laden homewards, but come directly into the king's great ports, unleſs he be driven in by tempeſt; for in ſuch caſe he would incur a forfeiture of the merchandiſe, and is obliged to anſwer.

If ſeveral ſhips are in company on the ſame voyage, the maſters are obliged, by the marine laws, to ſtay for one another; or ſhall be liable to the damages that the others ſhall ſuſtain from an enemy, or pirates.

A maſter is to deliver to the owners the names of all the perſons which he is to tranſport, and of his mariners, before he departs the kingdom; and at his return ſhall cauſe a true inventory of the goods of any perſon which ſhall happen to die, to be delivered to them, that his kindred and friends may have intelligence of it, and the goods may be ſafe and forthcoming for one whole year: but of theſe goods, in the mean time, the bedding and appurtenances may be taken by the maſter and mate to their uſes; as alſo the cloathing, and other things upon the deceaſed's body, may be delivered to the boatſman and the company. The maſter ſhall keep his company in peace; and if any ſeaman ſhall be hurt in doing ſervice, he muſt take care that he be healed; and, if done by his companion, the charges ſhall be recovered of the other mariner. In caſe a mariner falls ſick, the maſter ſhall order him to be laid in a houſe, with all ſuſtentation neceſſary and uſual in the ſhip, but ſhall not ſtay until he recovers; and when he is recovered to health, muſt pay him his wages; or, if he dies, ſhall give it to the wife, or his neareſt friends.

If the mariners want money during the voyage, the maſter ought to lend it them; but he ſhall not be anſwerable for the contracts of his men, for in ſuch caſe they may be detained. He ought to give his mariners fleſh three days a week, and the other days fiſh, or ſuch like victuals, with ſufficient drink. If through the maſter's fault the ſhip-boat periſh, with any mariners in it, then ſhall the maſter pay one whole year's hire to the heirs or executors of the perſons drowned.

On a ſhip's arrival ſafe in port, a maſter is firſt to ſee that the ſhip be well moored and anchored; and then he muſt not relade or ſet ſail again, until he has been legally cleared, ſo as to have made ſatisfaction for damage, if any happened by default of him or his men, &c.

By acts paſſed in the 5th, 6th, and 9th of George I. and 2d George II. ſhips inwards of 50 tons or under, laden with cuſtomable and prohibited goods, hovering on the coaſts within the limits of any port, or if laden with brandy within two leagues of the ſhore, pretending to be bound to foreign parts, and not proceeding on their voyages, the maſter may be compelled to give ſecurity in treble the value of the goods, to proceed, and to land them in foreign parts: on default whereof, unleſs permitted by the collector to make a longer ſtay, which muſt not exceed 20 days, the goods muſt be ſecured, and the duties paid; or if they are wool, or ſuch goods as are prohibited, they will be forfeited.

After the goods are brought on ſhore, and ſecured by the officers, the bond muſt be delivered up; or, if not brought on ſhore, upon producing a certificate under the common ſeal of the chief magiſtrate of any place beyond the ſeas, or under the hands and ſeals of two known Britiſh merchants there reſiding, teſtifying the landing, or upon due proof that the goods were taken by enemies, or periſhed at ſea, the ſaid bond is to be vacated and diſcharged.

Maſters of ſuch ſhips ſuffering foreign goods to be put out, or wool, wool-fells, mortlings, ſhortlings, yarn made of wool, wool-flocks, fuller's earth, fulling clay, or tobacco-plpe clay, to be taken in; beſides former penalties, are to ſuffer ſix months impriſonment, without bail or mainprize.

The tonnage of ſuch ſhips is to be meaſured and aſcertained by the following rule: Take the length of the keel within board, ſo much as ſhe treads on the ground; and the breadth within board by the midſhip beam, from plank to plank, and half the breadth for the depth; then multiply the length by the breadth, and that product by the depth, and divide the whole by 94, the quotient will give the true contents of the tonnage.

By the ſtatutes of the 28th of Edward III. and 20th of Richard II. ſhips of foreigners, freighted towards Great Britain, or elſewhere, may not be compelled to come into any port of Great Britain, nor to tarry there againſt the wills of the maſters, &c.; and if ſuch ſhips come voluntarily, or be driven in, part of the goods may be delivered, and the duties paid, and the ſhips be permitted to proceed with the remainder, where the maſters, &c. pleaſe, without payment of duties.

By the ſtatute of the 13th and 14th of Charles II. ſhips inwards arriving in the port of London from foreign parts, may not be above three days in coming from Graveſend to the place of diſcharge, without touching or ſtaying at any wharf, key, &c. adjoining to either ſhore between Graveſend and Cheſter's key, unleſs apparently hindered by contrary winds, &c. or other juſt impediment, to be allowed by the principal officers of the cuſtoms; and in the out-ports, they muſt come directly up to the place of unlading, upon forfeiture of 100 l.

Upon, or before their arrival, and before any goods are unladen, the maſters or purſers for that voyage muſt, upon oath, make a juſt and true entry of the burthen, contents, and lading of their ſhips, with the particular marks, numbers, qualities, and contents of every parcel of goods on board, to the beſt of their knowledge; alſo where laden, of what country built, how manned, who was maſter during the voyage, and who are owners; and muſt anſwer all queſtions concerning the ſame, that ſhall be demanded by the cuſtomer, &c. upon forfeiture of 100 l.

And upon making ſuch declaration upon oath before any two principal officers of the port, bulk may be broke in any port allowed by law, and duty paid for no more goods than are entered and landed: but, upon arrival at the next port, declaration muſt likewiſe be made upon oath, before the cuſtomer, collector, comptroller, or ſurveyor, or two of them, of the quantity and quality of the goods landed at the firſt port, and to whom they did belong.

Ships of war from parts beyond the ſeas, having any goods on board, may not unlade them till the captain has ſignified under his hand, to the cuſtomer, or collector and comptroller inwards, the names of every importer, with the marks, numbers, quantity, and quality of every parcel of goods; and has anſwered upon oath to ſuch queſtions as ſhall be demanded by the ſaid officers, upon forfeiture of 100 l.

Such ſhips are liable to all ſearches and rules as merchant-ſhips are ſubject to, except victualling bills and entring.

Captains refuſing to make ſuch entries, as well inwards as outwards, the officers may bring all cuſtomable and prohibited goods on ſhore to the king's ſtorehouſe.

The maſters of any ſhips from foreign parts ſuffering any package to be opened, and the goods embezzled, carried away, or put into any other form or package, after the ſhip comes into the port of diſcharge, are to forfeit 100 l.

Or knowing of, or conſenting to the unſhipping of any goods inwards, without a warrant, and the preſence of an officer, are to forfeit the value of the goods.

By the ſame ſtatute of the 13th and 14th Cha. II. ſhips outwards, bound for parts beyond the ſeas, may not take in any Britiſh goods, till ſuch ſhips are entered by the maſters in the book of the cuſtomer or collector, and comptroller outwards, with the burthens, the maſters names, the number of guns and ammunition, and to what place bound.

Before departure out of the port, the maſters are to bring to the ſaid officers, a content in writing, under their hands, of the names of every exporter, with the marks and numbers of the goods; and are, upon oath, to anſwer publickly in the cuſtomhouſe to ſuch queſtions as ſhall be demanded concerning the ſame, upon forfeiture of 100 l.

By the ſtatute of the 8th of Queen Anne, ſhips bound to Ireland

Ireland with certificate-goods, the maſters muſt take with them a duplicate of their contents in writing, certified under the hands and ſeals of the collector and comptroller of the port in Great Britain, in order to be delivered to the officers of the cuſtoms in Ireland.

By the 5th and 9th of George I. and 2d of George II. the maſters ſuffering the package of any foreign goods to be opened on board, or put into any other form or package, or unſhipped whilſt the ſhip remains in port, without leave of the principal officers, are to forfeit 100 l. and to ſuffer ſix months impriſonment, without bail or mainpriſe.

Ships may not be detained by the officers above three tides after their arrival at Graveſend, and in the out-ports not above one tide, after they are ready to ſail, upon forfeiture of office, and rendering damage to the merchant and owner.

By the 1ſt of James II. ſhips coaſtwiſe, foreign built ſhips ſo employed, are to pay at the port of diſcharge, for every voyage 5 s. *per* ton; one moiety for the uſe of the cheſt at Chatham, and the other moiety to the Trinity houſe at Deptford-Strond.

By the 12th, 13th, and 14th of Charles II. Britiſh built ſhips, which any where in the book of rates are deſigned to entitle the importers or exporters of goods to any abatement or privilege, are to be underſtood, ſhips built in Great Britain, Ireland, Guernſey, Jerſey, or the Britiſh plantations in Aſia, Africa, or America, and whereof the maſter, and at leaſt 3-4ths of the mariners, are Britiſh; that is, his Majeſty's ſubjects of Great Britain, Ireland, or the ſaid plantations; and have been ſo during the whole voyage, unleſs in caſe of ſickneſs, death, &c.

But by the 1ſt of William and Mary, Britiſh ſhips laden with corn entitled to the bounty, may be ſailed with the maſter, and at leaſt 2-3ds of the mariners, his Majeſty's ſubjects.

Foreign-built ſhips are not to be deemed or paſs as ſhips belonging to Great Britain or Ireland, till the owner has made it appear to the chief officer of the cuſtoms, in the port next to his abode, that he is not an alien; and has made oath before the ſaid officer, that ſuch ſhips were *bona fide*, and without fraud, by him bought for a valuable conſideration, expreſſing the ſum, as alſo the time, place, and perſons from whom bought, and who are his part-owners, if any, all which part owners are alſo liable to the ſame oath; and that no foreigner, directly or indirectly, hath any part, intereſt, or ſhare therein: whereupon the officer is to grant a certificate under his hand and ſeal, which he is to regiſter, and return a duplicate thereof to the chief officers of the cuſtoms in London, with the names of the ſeller and part-owners, and the ſum paid.

But foreign-built ſhips, that is, not built in any of his Majeſty's dominions of Aſia, Africa, or America, are not to enjoy the privilege of ſhips belonging to Great Britain or Ireland, although owned or manned by Britiſh; except ſuch ſhips as are taken at ſea by letters of mart or repriſal, and condemned as lawful prize in the court of admiralty; but are to be deemed aliens ſhips, and to be liable to aliens duties.

Officers of the cuſtoms may not allow foreign-built ſhips, the privilege of ſhips Britiſh built, or belonging to Great Britain or Ireland, until a certificate be produced, or proof of the property be made, or until examination whether the maſter and 3-4ths of the mariners are Britiſh; nor allow a foreign-built ſhip the privilege of bringing in goods of the growth of the country where it was built, till examination and proof; upon forfeiture of office.

Governors of the Britiſh plantations may not ſuffer foreign-built ſhips to lade or unlade any goods, till certificate be produced, and examination be made, whether the maſter and 3-4ths of the mariners are Britiſh, upon forfeiture of government.

Ships belonging to his Majeſty's ſubjects of Scotland, though foreign-built, if regiſtered upon oath, are to be deemed as of the built of Great Britain.

By the 5th of Queen Anne, a duplicate of the regiſter is to be tranſmitted to the chief officers of the cuſtoms in Edinburgh, and from thence to the port of London, in order to be entered in the general regiſter of all ſhips belonging to Great Britain.

By the 38th of Edward III. ſhips are not to be loſt or forfeited for a ſmall thing put therein, not cuſtomed, without the owner's knowledge.

By the 28th of Henry VI. ſhips arreſted for unlawful cauſe; the officer being convicted thereof, forfeits 40 l. to be ſued for within two months.

By the 5th of George I. ſhips wilfully caſt away, burnt, or otherwiſe deſtroyed, to the prejudice of the inſurers, or of the merchant that ſhall load goods thereon; the maſters, owners, &c. directing or procuring the ſame, are to ſuffer death.

SHIPBUILDER. See *Shipwright*.

SHIPBUILDING, or *Shipcarpentry*, is that which teaches the conſtruction of ſhips, galleys, and other floating veſſels, for the water, with ports, moles, docks, and the like, on the ſhore. See *Shipwright*.

SHIP-*money*. An impoſition anciently charged upon the ports, towns, cities, boroughs, and counties of the realm, by writs commonly called ſhipwrits, under the great ſeal of England, for the providing and furniſhing certain ſhips for the king's ſervice.

This impoſition was revived by Charles I. in the years 1635 and 1636; but, by the ſtatute of the 17th of the ſame king, it was declared to be contrary to the laws and ſtatutes of the realm, the claim of rights, and the liberty of the ſubjects.

SHIPPER, or *Skipper*. A Dutch term ſignifying the maſter of a ſhip; but the word is alſo popularly uſed for any ſeaman.

SHIPWRECK. See *Wreck*.

SHIPWRIGHT, *Shipbuilder*, or *Shipcarpenter*. An artificer, whoſe buſineſs it is to build ſhips, or veſſels, to convey perſons or goods from one part of the world to the other, on or through the ſea or water.

SHIPWRIGHTS *company of London*, was incorporated by letters-patent of the 7th of Charles I. dated the 23d of May 1631, by the name of The maſter, wardens, and commonalty of the art or myſtery of ſhipwrights, London; whoſe fraternity conſiſts of a maſter, 2 wardens, and 16 aſſiſtants; but without either livery or hall; the latter whereof, which anciently ſtood at Ratcliff-croſs, being gone, they occaſionally meet at different places to tranſact their affairs.

SHOAL, in the ſea-phraſe, is the ſame as ſhallow, and is applied to flats in the water. They ſay it is good ſhoaling, when a ſhip ſailing towards the ſhore, they find by her ſounding it grows ſhallower and ſhallower by degrees, and not too ſuddenly, for then the ſhip goes in ſafety.

SHOALED. The miners term in the tin-mines, for thoſe fragments of ore, which by rains and currents of water, are torn off from the load, or veins of ore, that are waſhed down from the mountains; and by finding them they gueſs where to look for a load of ore.

SHOE. A covering for the foot, uſually of leather. See *Leather*.

SHOEMAKER. See *Cordwainer*.

SHOPKEEPER. A perſon who rents, and conſtantly attends, in an open ſhop, to ſell goods, particularly in the retail way.

SHORT *ſails*, in a man of war, are the ſame with fighting ſails, being the fore-ſail, main-ſail, and fore-top-ſail; which are all that are uſed in fight, leſt the reſt ſhould be fired and ſpoiled, beſides the trouble of managing them when a ſhip gives chaſe to another. If a chaſe has a mind to fight, they ſay the chaſe ſtrips into her ſhort ſails; that is, puts out her colours in the poop, her flag at the main-top, and her ſtreamers, or pendants, at the yard-arms, furls her ſprit-ſail, peeks her mizzen, and ſlings her main-yard.

SHOT, in the military art, includes all ſorts of ball or bullets for fire-arms, from the cannon to the piſtol; but thoſe for cannon are of iron; thoſe for muſkets, carabines, and piſtols, are of lead.

SHOT, for ordnance, eſpecially in the ſea-ſervice, are of ſeveral ſorts; as,

Round SHOT. Bullets fitted to the bore of the piece.

Bar SHOT. Two bullets, or rather half bullets joined together, by an iron bar, ſerving to cut down maſts and ſails; as alſo,

Caſe SHOT.

Chain-SHOT.

Langrel-SHOT.

Random-SHOT. And

Trundle-SHOT.

SHOT, for fowling, is otherwiſe called *hail*, by reaſon of the figure and ſize.

SHOTTEN *herring*. See *Herring*.

SHROWDS, or *Shrouds*, are great ropes in a ſhip, which go upon both ſides of all maſts, except the bowſprit.

They are faſtened below by chains to the ſhip's ſides, and aloft over the head of the maſt; their pennants, fore-tackle, and ſwifters, being firſt put under them; and they are ſewed there, to prevent their galling the maſt. The top-maſt ſhrowds are faſtened to the puttocks, by plates of iron, and by dead mens eyes, and lanniers alſo, as the others are.

The terms are, eaſe the ſhrouds, that is, ſlacken them. Set taught the ſhrowds, that is, ſet them faſter.

SHRUB. A little, low, dwarf tree, or a woody plant, of a ſize leſs than a tree; which, beſides its principal ſtem and branches, frequently from the ſame root puts forth ſeveral other conſiderable ſets or ſtems. Such are privet, phyllerea, holly, box, honey-ſuckle, and hundreds more.

Shrubs and trees put forth in autumn a kind of buttons, or gems, in the axis of the leaves: theſe buttons are as ſo many little ova, which coming to expand by the warmth of the following ſpring, open into leaves and flowers. By this, together with the height, ſome diſtinguiſh ſhrubs from ſuffrutices, or under-ſhrubs; which are low buſhes, that put forth none of theſe buttons; as roſemary, thyme, and others of the like nature.

SHUTTLE, in the manufactures. An inſtrument uſed by the weavers, which, with a thread it contains, either of woollen, ſilk, flax, or other matter, ſerves to form the woofs of ſtuffs, cloths, linens, and ribbands, by throwing the ſhuttle alternately from left to right, and from right to left, acroſs between the threads of the warp, which are ſtretched out lengthwiſe on the loom.

In the middle of the ſhuttle is a kind of cavity, called the eye or chamber of the ſhuttle; wherein is incloſed the ſpoul, which is a part of the thread for the woof, and is wound on a little tube of paper, ruſh, or other matter.

The ribband-weaver's ſhuttle is very different from that of moſt other weavers, though it ſerves for the ſame purpoſe. It is made of box, ſix or ſeven inches long, one broad, and as much deep; ſhod with iron at both ends, which terminate in points, and are a little crooked; the one towards the right, and the other towards the left, repreſenting the figure of an S horizontally placed.

SIAGBANDER, is a term in Perſia for the receiver of the duties of importation and exportation, paid for merchandiſe throughout the whole extent of the kingdom.

SIAM. A kingdom of India, extending from the firſt to the 25th degree of N. lat. and lying between 96 and 104 degrees of E. lon. See *India*.

SIBIT. A town of Arabia Felix, 370 miles S. of Mecca, and 115 miles north of Moco, ſituated in 45 deg. of E. lon. and 15 deg. of N. lat.

SICILIQUA. A ſmall weight, uſed by apothecaries, weighing 1 ſextula and 2 ſcruples. See *Sextula*.

SICILY. The largeſt of the Italian iſlands, ſituated between 12 and 16 degrees of E. lon. and between 37 and 39 deg. of N. lat. being about 170 miles long, and 100 broad. See *Italy*.

SICK *herring*. See *Herring*.

SIDEN. A port-town of Arabia, ſituated on the E. ſhore of the Red ſea, in 45 deg. 15 min. of E. lon. and 21 deg. 20 min. of N. lat. being the port town to Mecca, and ſubject to the Arabs.

SIDER. See *Cyder*.

SIDMOUTH. A port-town of Devon, ſituated on a bay of the Engliſh channel, 10 miles S. E. of Exeter, in 3 deg. 27 min. of W. lon. and 50 deg. 40 min. of N. lat.

SIDON, or *Sayd*. A port-town of Paleſtine in Aſiatic Turky, ſituated on the Levant ſea, in 36 deg. 30 min. of E. lon. and 33 deg. 15 min. of N. lat. lying 70 miles S. of Tripoli, and as many N. of Jeruſalem. See *Turky*.

SIDRA. An iſland of the Turkiſh Archipelago, lying in the 24th deg. of E. lon. and 37th deg. of N. lat. at the entrance of the gulph of Napoli de Romania, ſubject to Turky.

SIDRA. A ſpacious gulph, or bay, on the coaſt of Barbary, in the kingdom of Tripoli in Africa.

SIERRA LEON. A fort at the mouth of the river Sierra Leon, on the coaſt of Guinea, in Africa, ſituated in 14 deg. of W. lon. and 50 deg. of N. lat. which was once in the poſſeſſion of the Engliſh, who abandoned it.

SIEVE. An inſtrument ſerving to ſeparate the fine from the coarſe parts of powders, liquors, and the like; or to cleanſe pulſe from duſt and light grains: it is made of a rim of wood; the circle or ſpace whereof is filled with a tiſſue of ſilk, tiffany, linen, hair, wire, or even thin ſlices of wood.

The ſieves that have large holes are ſometimes alſo called riddles; ſuch is the coal ſieve, lime ſieve, and garden ſieve. When drugs, apt to evaporate, are to be paſſed through the ſieve, it is uſually covered with a lid.

SIGILLATA *Terra*. A kind of earth or bole, dug in the iſle of Lemnos; and thence alſo called Lemnian earth; of conſiderable uſe in painting and medicine.

It is of different colours, but moſt commonly red, heavy, ſoft, and friable; held very aſtringent, and, on that account, uſed in hæmorrhages; as alſo againſt the plague and poiſons. Pliny attributes ſeveral other virtues, which experience does not juſtify, nor is it in that eſteem it anciently was; yet it is ſtill an ingredient in Venice treacle.

This earth was anciently found in a mountain, in the neighbourhood of the city Hephæſtia; where Diana's prieſts went at certain times, with great ceremony, to dig it up. After a little preparation, they made it up into troches, and ſealed them with Diana's ſeal; whence the appellation of Sigillata. It is now brought from Conſtantinople in little flat cakes, round on one ſide, flat and ſealed on the other. See *Bole*.

SIGN. A painted device to diſtinguiſh the ſhops of tradeſmen; being commonly of wood, and ſometimes of pewter.

In the 14th year of Charles I. a royal charter was granted to the citizens of London, by which, among other privileges mentioned therein, to the ſaid mayor and commonalty, and citizens of the ſaid city, or any of them, and their ſucceſſors, they had full liberty and licence, to expoſe and hang in, and over the ſtreets, ways, and alleys of the ſaid city, and ſuburbs of the ſame, ſigns, and poſts of ſigns affixed to their houſes and ſhops; for the better finding out ſuch citizens dwellings, ſhops, arts, and occupations, without impediment, moleſtation, or interruption of his Majeſty's perſon, attendance, his heirs or ſucceſſors, or any officers or miniſters whatſoever of his ſaid Majeſty, his heirs and ſucceſſors.

SIGNAL. A certain ſign agreed upon, for conveying intelligence where the voice cannot reach.

Signals are given for the beginning of a battle, or an attack; uſually with drums and trumpets; at ſea they are given by cannon, or muſquet ſhot, by lights, ſails, and flags. See *Salutation*.

SIGNALS *at ſea*, are ſigns made by the Admiral, or commander in chief of a ſquadron of ſhips, either in the day or by night, whether for ſailing, for fighting, or the better ſecurity of merchant-ſhips under convoy. Theſe ſignals are very numerous and important, being all appointed and determined by order of the Lord High Admiral, or Lords of the Admiralty, and communicated in the inſtructions ſent to the commander of every ſhip of the fleet or ſquadron, before their putting out to ſea.

SIGNALS *by day*. When the commander in chief would have them prepare for ſailing, he firſt looſes his fore-top ſail, and then the whole fleet are to do the ſame. When he would have them unmoor, he looſes his main top-ſail and

and fires a gun; which in the royal navy is to be answered by every flag ſhip, and every ſhip to get to ſail as ſoon as it can. If with the leeward-ſide, the ſtern-moſt ſhip is to weigh firſt. When he would have the weather-moſt and head-moſt ſhips tack firſt, he hoiſts the union flag at the fore-top-maſt head, and fires a gun, which each flag-ſhip anſwers; but if he would have the ſtern-moſt and leeward-moſt ſhips to tack firſt, he hoiſts the union-flag at the mizzen-top-maſt head, and fires a gun; and when he would have all the whole fleet tack, he hoiſts an union, both on the fore and mizzen top-maſt heads, and fires a gun. When in bad weather, he would have them wear, and bring to the other tack, he hoiſts a pendant on the enſign ſtaff, and fires a gun: and then the leeward-moſt and ſternmoſt ſhips are to wear firſt, and bring on the other tack, and lie by, or go on with an eaſy ſail, till he comes a head: every flag is to anſwer with the ſame ſignal. If they are lying by, or ſailing by a wind, and the Admiral would have them bear up and ſail before the wind, he hoiſts his enſign, and fires a gun, which the flags are to anſwer: and then the leeward-moſt ſhips are to bear up firſt, and to give room for the weathermoſt to wear, and ſail before the wind with an eaſy ſail, till the admiral comes a head. But if it ſhould happen when the admiral has occaſion to wear and ſail before the wind, that both jack and enſign be abroad, he will haul down the jack before he fires the gun to wear, and keep it down till the fleet is before the wind. When they are ſailing before the wind, and he would have them bring to, with the ſtar-board tacks abroad, he hoiſts a red flag at the flag ſtaff, on the mizen-top-maſt head, and fires a gun. But if they are to bring to with the larboard tack, he hoiſts a blue flag at the ſame place, and fires a gun, and every ſhip is to anſwer the gun. When any ſhip diſcovers land, he is to hoiſt his jack and enſign, and keep it abroad, till the admiral or commander in chief anſwer him, by hoiſting his; on ſight of which he is to haul down his enſign. If any diſcovers danger, he is to tack and bear up from it, and to hang his jack abroad from the main-top-maſt-croſs-trees, and fire two guns: but if he ſhould ſtrike or ſtick faſt, then, beſides the ſame ſignal with his jack, he is to keep firing, till he ſees all the fleet obſerve him, and endeavour to avoid the danger. When any ſees a ſhip or ſhips more than the fleet, he is to put abroad his enſign, and there keep it till the Admiral's is out, and then to lower it, as often as he ſees ſhips, and ſtand in with them, that ſo the Admiral may know which way they are, and how many; but if he be at ſuch a diſtance, that the enſign cannot well be diſcovered, he is then to lay his head towards the ſhip or ſhips ſo deſcryed, and to brail up his low ſails, and continue hoiſting and lowering his top ſails, and making a waſt with his top-gallant ſails, till he is perceived by the Admiral. When the Admiral would have the Vice-admiral, or he that commands in the ſecond poſt of the fleet, to ſend out ſhips to chaſe, he hoiſts a flag, ſtriped with white and red on the flag-ſtaff, at the fore-top-maſt head, and fires a gun. But if he would have the Rear-admiral do ſo, he then hoiſts the ſame ſignal on the flag-ſtaff, at the mizen-top-maſt head, and fires a gun. When the Admiral would have any ſhip chaſe to windward, he makes a ſignal for ſpeaking with the captain, and hoiſts a red flag in the mizzen ſhrouds, and fires a gun: but if to chaſe to leeward, a blue flag; and the ſame ſignal is made by the flag, in whoſe diviſion that ſhip is. When he would have them give over chaſe, he hoiſts a white flag on his flag-ſtaff, at the fore-top-maſt head, and fires a gun: which ſignal is to be made alſo by that flag-ſhip which is neareſt the ſhip that gives chaſe, till the chaſing ſhip ſees the ſignal. In caſe of ſpringing a leak, or any other diſaſter, that diſables their ſhip from keeping company, they are to hawl up their courſes, and fire two guns. When any ſhip would ſpeak with the Admiral, he muſt ſpread an Engliſh enſign, from the head of his main, or fore-top-maſt, and keep firing guns till the Admiral obſerves him; and if any ſhip perceive this, and judges the Admiral does not, that ſhip muſt make the ſame ſignal, and make the beſt of his way to acquaint the admiral therewith, who will anſwer by firing one gun. When the admiral would have the fleet prepare to anchor, he hoiſts an enſign ſtriped red, blue and white, on the enſign-ſtaff, and fires a gun; and every flag-ſhip makes the ſame ſignal. If he would have the fleet moor, he hoiſts his mizen-top-ſail, with the clew lines hawled up, and fires a gun. If he would have the fleet cut or ſlip, he looſes both his top-ſails, and fires two guns, and then the leeward ſhips are to cut or ſlip firſt, to give room to the weathermoſt to come to ſail. So if he would have any particular ſhip to cut or ſlip, and to chaſe to windward, he makes the ſignal for ſpeaking with that ſhip; hoiſts a red flag in the mizzen-ſhrouds, and fires a gun: but if the ſhip is to chace to leeward, he hoiſts a blue flag as before. If he would have the fleet exerciſe their ſmall arms, he hoiſts a red flag on the enſign-ſtaff, and fires a gun; but if the great guns, then he puts up a pendant over the red flag.

SIGNALS *by night*, to be obſerved at anchor, weighing anchor, and ſailing, are as follow. When the Admiral would have the fleet to unmoor, and ride ſhort, he hangs out three lights, one over another in the main-top-maſt ſhrouds, over the conſtant light in the main-top, and fires two guns, which are to be anſwered by flag ſhips: but all guns fired for ſignals in the night muſt be fired on the ſame ſide, that they may make no alteration in the ſound. When he would have them weigh, he hangs a light in the main-top-maſt-ſhrowds, and fires a gun, which is to be anſwered by all the flags, and every private ſhip muſt hang out a light in his mizen ſhroud. When he would have them tack, he hoiſts two flags on the enſign-ſtaff, one over another, above the conſtant light in his poop, and fires a gun, which is to be anſwered by all the flags, and every private ſhip is to hang out a light extraordinary, which is not to be taken in till the Admiral takes in his: After the ſignal is made, the leeward-moſt and ſtern-moſt ſhips muſt tack as faſt as they can, and the ſtern-moſt flag-ſhip, after he is about on the other tack is to lead the fleet, and him they are to follow, to avoid running through one another in the dark. When he is upon a wind, and would have the fleet veer, and bring to on the other tack, he hoiſts up one light at the mizen-peek, and fires three guns, which are to be anſwered by all the flag-ſhips, and every private ſhip muſt anſwer with one light at the mizen-peek. The ſtern-moſt and leeward-moſt ſhips are to bear up as ſoon as the ſignal is made. When he would have them, in blowing weather, to lie a try, ſhort, or a hull, or with the head-ſails braced to the maſt, he will form lights of equal height, and fire five guns, which are to be anſwered by the flag-ſhips, and then every private ſhip muſt ſhew four lights: and after this, if he would have them to make ſail, he then fires ten guns, which are to be anſwered by all the flags, and then the head-moſt and weather-moſt ſhips are to make ſail firſt. When the fleet is ſailing large, or before the wind, and the admiral would have them bring to, and lie by with their ſtarboard tacks aboard, he puts out four lights in the fore-ſhrouds, and fires ſix guns; but if with the larboard tacks aboard, he fires eight guns, which are to be anſwered by the flag-ſhips; and every private ſhip muſt ſhew four lights. The windward ſhip muſt bring to firſt. Whenever the Admiral alters his courſe, he fires one gun, without altering his lights, which is to be anſwered by all the flag-ſhips. If any ſhip has occaſion to lie ſhort, or by, after the fleet has made ſail, he is to fire one gun, and ſhew three lights in his mizen ſhrouds. When any one firſt diſcovers land, or danger, he is to ſhew as many lights as he can, to fire one gun, and to tack, or bear away from it: and if any one happens to ſpring a leak, or any be diſabled from keeping company with the fleet, he hangs out two lights of equal height, and fires guns till he is relieved by ſome ſhip of the fleet. If any one diſcovers a fleet, he is to fire guns, make falſe fires, put one light out on the main-top, three on the poop, to ſteer after them, and to continue firing of guns, unleſs the admiral calls him off, by ſteering another courſe, and fire two or three guns; for then he muſt follow the admiral. When the admiral anchors, he fires two guns, a ſmall ſpace of time one from the other, which are to be anſwered by the flag-ſhips; and every

private ſhip muſt ſhew two lights. When the admiral would have the fleet to moor, he puts a light on each top-maſt head, and fires a gun, which is to be anſwered by the flag-ſhips, and every private ſhip is to ſhew one light. If he would have them lower their yards, and top-maſts, he hoiſts one light on his enſign ſtaff, and fires one gun; which is to be anſwered by the flag-ſhips, and every private ſhip is to ſhew one light. When he would have them hoiſt their yards and top-maſts, he puts out two lights, one under the other, in the mizen top-maſt ſhrouds, and fires one gun, which is to be anſwered by the flag-ſhips, and each private ſhip muſt ſhew one light in the mizen-ſhrouds. If any ſtrange ſhip be diſcovered coming into the fleet, the next ſhip is to endeavour to ſpeak to her, and bring her to an anchor, ſo as not ſuffer her to paſs through the fleet. And if any one diſcovers a fleet, and it blow ſo hard that he cannot come to give the admiral notice timely, he is to hang out a great number of lights, and to continue firing gun after gun, till the admiral anſwers him with one. When the admiral would have the fleet to cut or ſlip, he hangs out four lights, one at each main-yard-arm, and at each fore-yard-arm, and fires two guns, which are to be anſwered by the flag-ſhips, and every private ſhip is to ſhew one light.

SIGNALS *uſed when a fleet ſails in a fog.* If the admiral would have them weigh, he fires ten guns; which every flag ſhip is to anſwer. To make them tack, he fires four guns, which are to be anſwered by the flag-ſhips, and then the leeward-moſt and ſtern-moſt ſhips muſt tack firſt, and after they are about, to go with the ſame ſail they tacked with, and not to lie by, expecting the admiral to come a-head: and this is to avoid the danger of running thro' one another in thick weather.

When the admiral brings to, and lies with his head ſails to the maſt; if with the ſtarboard tack aboard, he fires ſix guns; but if with the larboard tack, he fires eight guns, which the flag ſhips are to anſwer. And after this, if he makes ſail, he fires ten guns, which the flag-ſhips muſt anſwer; and then the headmoſt and weathermoſt ſhips are to make ſail firſt. If it grow thick and foggy weather, the admiral will continue ſailing, with the ſame ſail ſet, that he had before it grew foggy, and will fire a gun every hour, which the flag ſhips muſt anſwer, and the private ſhips muſt anſwer by firing of muſquets, beating of drums, and ringing of bells: but if he be forced to make either more or leſs ſail than he had, when the fog began, he will fire a gun every half hour, that the fleet may diſcern whether they come up with the admiral, or fall a ſtern of him; and the flags and private ſhips are to anſwer as before. If any one diſcovers danger, which he can avoid, by tacking and ſtanding from it, he is to make the ſignal for tacking in a fog; but if he ſhould chance to ſtrike and ſtick faſt, he is to fire gun after gun, till he thinks the reſt have avoided the danger. When the admiral would have the fleet to anchor, he fires two guns, which the flags are to anſwer, and after he has been half an hour at an anchor, he will fire two guns more, to be anſwered by the flags, as before, that all the fleet may know it.

SIGNALS *for calling officers on board the admiral.* When the admiral puts aboard an union flag in the mizen ſhrouds, and fires a gun, all the captains are to come aboard him: and if with the ſame ſignal, there be alſo a waft made with the enſign; then the lieutenant of every ſhip is to come on board. If an enſign be put aboard in the ſame place, all the maſters of the ſhips of war are to come on board the admiral. If a ſtandard on the flag-ſtaff be hoiſted at the mizen-top-maſt-head, and a gun fired, then all the flag-officers are to come aboard the admiral. If the Engliſh flags only; then a ſtandard in the mizen-ſhrouds, and fire a gun: if the flag, and land general officers; then the admiral puts aboard a ſtandard at the mizen top-maſt-head, a pendant at the mizen-peek, and fires a gun. If a red flag be hoiſted in the mizen ſhrouds, and a gun fired; then the captains of his own ſquadron are to come aboard the admiral; and if, with the ſame ſignal, there be alſo a waft with the enſign, the lieutenant of each ſhip muſt come aboard. If he hoiſts a white flag, as before, then the vice-admiral, or he that commands in the ſecond poſt, and all the captains of his ſquadron, are to go on board the admiral: if a blue flag, then the rear-admiral, and the captains of his ſquadron, muſt come aboard; and if a waft as before, the lieutenants, and all of the reſt. When a ſtandard is hoiſted on the enſign ſtaff, and a gun fired, the vice and rear admirals muſt come aboard the admiral's ſhip. When the admiral would ſpeak with the captains of his own diviſion, he will hoiſt a pendant on the mizen-peek, and fire a gun; and if, with the lieutenants, a waft is made with the enſign, and the ſame ſignal: for whenever he would ſpeak with the lieutenants of any particular ſhip, he makes a ſignal for the captain, and a waft alſo with the enſign. When the admiral would have all the tenders in the fleet come under his ſtern, and ſpeak with him, he hoiſts a flag yellow and white, at the mizen-peek, and fires a gun: but if he would ſpeak with any partiaular ſhip's tender, he makes a ſignal for ſpeaking with the captain ſhe tends upon, and a waft with the jack. If all the pinnaces and barges are to come aboard, manned and armed, he hoiſts a pendant on the flag-ſtaff, both on the fore-top-maſt-head, and a gun fired; and if he would have them chaſe any ſhip, veſſel, or boat, in open view, without coming aboard him, he hoiſts the pendant as aforeſaid, and fires two guns. When the admiral would have all the boats in the fleet come aboard him, manned and armed, he hoiſts a pendant on the flag ſtaff, both on the fore-top-maſt, and mizen-top-maſt-head, and fires one gun; but if he would have them chaſe, he hoiſts his pendants as before, and fires two guns. When the admiral would ſpeak with the victualler, or his agent, he puts an Engliſh enſign in the mizen-top-maſt ſhrouds; and when with him that hath the charge of the gunners ſtores, he will ſpread an enſign at his main-top-ſail-yard-arm.

SIGNALS *for managing a ſea-fight.* When the admiral would have the fleet form a line of battle, one ſhip a-head of another, he hoiſts an union flag at the mizen peek, and fires a gun; and every flag-ſhip does the like. But when they are to form a line of battle, one a-breaſt of another, he hoiſts a pendant with the union flag. When he would have the admiral of the white, or he that commands in the ſecond poſt, to tack, and endeavour to gain the wind of the enemy, he ſpreads a white flag under the flag at the main-top-maſt-head, and fires a gun; and when he would have the vice-admiral of the blue do ſo, he does the ſame with the blue flag. If he would have the vice-admiral of the red do ſo, he ſpreads a red flag from the cap, on the fore-top-maſt-head, downward on the back-ſtay; if the vice-admiral of the blue, he ſpreads a blue flag, and fires a gun. If he would have the rear-admiral of the red do ſo, he hoiſts a red flag at the flag-ſtaff, at the mizen top-maſt-head; if the rear-admiral of the white, a white flag; if the rear-admiral of the blue, a blue flag, and under it a pendant of the ſame colour, with a gun. If he be to leeward of the fleet, or any part of it be to leeward of him; in order to bring theſe ſhips into the line, he bears down with a blue flag at the mizen peek, under the union flag, which is the ſignal for battle, and fires a gun; and then thoſe ſhips, that are to leeward of him, muſt endeavour to get into his wake or grain, according to his ſtation in the line of battle. When the fleet is ſailing before the wind, and he would have him, who commands in the ſecond poſt, and the ſhip of the ſtarboard quarter, to clap by the wind, and come to the ſtarboard tack, he hoiſts a red flag at the mizen-top-maſt-head: but a blue one, if he would have ſhips of the larboard quarter come to the larboard tack, with a gun. If the van are to tack firſt, he ſpreads the union-flag at the flag-ſtaff, on the fore-top-maſt-head, and fires a gun, if the red flag be not abroad; but if it be, then he lowers the fore-top-ſails a little; and the union flag is ſpread from the cap of the fore-top-maſt downwards; and every flag ſhip does the ſame. If the rear be to tack firſt, he hoiſts the union flag on the flag-ſtaff, at the mizen-top-maſt-head, and fires a gun; which all the flag-ſhips are to anſwer. If all the flag-ſhips are to come into his wake or grain, he hoiſts a red flag at his mizen-peek, and fires a gun; and all the ſhips muſt do the ſame. If he would have him that commands in the ſecond poſt of his ſquadron to make more ſail, tho' he himſelf ſhorten ſail,

fail, he hoiſts a white flag on the enſign-ſtaff: but if he who commands in the third poſt is to do ſo, he hoiſts a blue flag, and fires a gun, and all the flag ſhips muſt make the ſame ſignal. Whenever he hoiſts a red flag on the flag-ſtaff, at the fore-top-maſt-head, and fires a gun, every ſhip in the fleet muſt uſe their endeavour to engage the enemy, in the order preſcribed them. When he hoiſts a white flag at his mizen-peek, and fires a gun, then all the ſmall frigates in his ſquadron, that are not of the line of battle, are to come under the ſtern. If the fleet be ſailing by a wind, in the line of battle, and the admiral would have them brace their main-ſails to the maſt, he hoiſts up a yellow flag, on the flag-ſtaff, at the mizen-top-maſt head, and fires a gun; which the flag-ſhips are to anſwer: and then the ſhips in the rear muſt brace firſt. After this, if he would have them fall their head-ſails, and ſtand by, he hoiſts a yellow flag, on the flag-ſtaff of the fore-top-maſt-head, and fires a gun, which the flag-ſhips muſt anſwer, and then the ſhips in the van muſt fall firſt, and ſtand on. If, when this ſignal is made, the red flag at the fore-top-maſt-head be abroad, he ſpreads the yellow flag under the red. If the fleets being near one another, the admiral would have all the ſhips to tack together, the ſooner to lie in a poſture to attack the enemy; he hoiſts the union-flag on the flag-ſtaves at the fore and mizen-top-maſt-heads, and fires a gun; and all the flag-ſhips are to do the ſame. The fleet being in a line of battle, if he would have the ſhip that leads the van, hoiſt, lower, ſet, or hawl up any of his ſails, he ſpreads a yellow flag, under that at his main-top-maſt-head, and fires a gun, which ſignal the flag-ſhips are to anſwer; and then the admiral will hoiſt, lower, ſet, or hawl up the ſail, which he would have the ſhip that leads the van do; which is to be anſwered by the flag ſhips of the fleet. When the enemies run, and he would have the whole fleet follow them, he makes all the ſail he can after them himſelf, takes down the ſignal for the line of battle, and fires two guns out of his fore-chaſe, which the flag-ſhips anſwer; and then every ſhip is to endeavour to come up with, and board the enemy. When he would have the chace given over, he hoiſts a white flag at the fore-top-maſt head, and fires a gun. If he would have the red ſquadron draw into a line of battle, one a-breaſt of another, he puts aboard a flag, ſtriped red and white, on the flag-ſtaff at the main-top-maſt-head, with a pendant under it, and fires a gun: if the white or ſecond ſquadron is to do ſo, the flag is ſtriped red, white, and blue: if the blue or third ſquadron is to do ſo, the flag is a Genoeſe enſign and pendant: but if they are to draw in a line of battle, one a-head of another, the ſame ſignals are made without a pendant. If they are to draw into the line of battle, one a-ſtern of another, with a large wind, and he would have the leaders go with the ſtarboard tacks, aboard by the wind, he hoiſts a red and white flag at the mizen-peek, and fires a gun: but if they ſhould go with the larboard tack aboard, by the wind, he hoiſts a Genoeſe flag at the ſame place; which ſignals, like others, muſt be anſwered by the flag-ſhips.

SIKINO. An iſland of the Turkiſh Archipelago. See *Turkiſh* Iſlands.

SILESIA *Duchy*. A province of the kingdom of Bohemia, bounded by Brandenburg on the north; by Poland on the eaſt; by Hungary on the ſouth; and by Moravia, Bohemia proper, and Luſatia, on the weſt; claimed both by the Queen of Hungary and King of Pruſſia, but has by treaty been ceded to the latter. See *Germany*.

SILESIA *Loan*, was the ſum of 250,000 l. lent by ſome Britiſh merchants to the Emperor Cha. VI. in 1734, at an intereſt of 6 *per cent.* ſecured on the ſilver mines of Sileſia, which duchy being, in 1742, transferred to his Pruſſian Majeſty, he thereby took upon himſelf the payment of what was remaining due on that loan; though in 1753 he ſtopt the remainder, amounting to 62,000 l. on a pretence of detaining it as an indemnization for the loſſes his ſubjects ſuſtained by Britiſh privateers during the late war.

SILK. A very ſoft, fine, delicate thread; the work of an inſect, called bombyx, or the ſilk-worm.

The ancients were but little acquainted with the uſe and manufacture of ſilk: they took it for the work of a ſort of ſpider, or beetle, who ſpun it out of its intrails, and wound it with its feet about the little branches of trees: this inſect they call *ſer*, from Seres, a people in Scythia who kept it, from whence they called the ſilk *ſericum*: but the ſer has very little affinity with the ſilk-worm; the former living five years; but the latter dying annually, enveloped in a yelloviſh bag, or ball, which, wound out into little threads, make what is called ſilk.

The art of manufacturing ſilk was firſt invented in the iſle of Cos; and Pamphila, daughter of Platis, is honoured as the inventreſs. The diſcovery was not long unknown to the Romans, ſilk being brought them from Serica, where the worm was a native; but ſo far were they from profiting by the diſcovery, that they could not be induced to believe ſo fine a thread ſhould be the work of a worm, and thereupon formed a thouſand chimerical conjectures of their own. This temper rendered ſilk a very ſcarce commodity among them for many ages, inſomuch that it was ſold weight for weight with gold; and Vopiſcus tells us, the Emperor Aurelian refuſed the empreſs, his ſpouſe, a ſuit of ſilk, which ſhe ſollicited of him with much earneſtneſs, meerly on account of its dearneſs. At length, two Monks coming from the Indies to Conſtantinople, in 555, brought with them great quantities of ſilk-worms, with inſtructions for the hatching of their eggs, rearing and feeding the worms, drawing out the ſilk, ſpinning and working it: upon which, manufactures were ſet up at Athens, Thebes, and Corinth. About the year 1130, Roger, King of Sicily, eſtabliſhed a ſilk manufactory at Palermo, and another in Calabria, managed by workmen, who were part of the plunder brought from Athens and Corinth, whereof that prince made a conqueſt in his expedition to the Holy land: Mezerey adds, that by degrees the reſt of Italy and Spain learned from the Siciliansand Calabrians the management of the ſilk-worms, and the working of ſilk; and at length the French, by right of neighbourhood, a little before the reign of Francis I. began to imitate them. The great advantage to which the new manufacture turned, made King James I. very earneſt for its being introduced in England: accordingly it was recommended ſeveral times from the throne; and, in the moſt earneſt terms, to plant mulberry trees for the propagation of ſilk-worms, but unhappily without effect; tho' from the various experiments we meet in the Philoſophical Tranſactions, and other places, it appears, that the ſilk-worm thrives, and works as well, in all reſpects in England, as in any other part of Europe.

The ſilk worm is an inſect, not more remarkable for the precious matter it furniſhes for divers ſtuffs, than for the many forms it aſſumes, before and after its being inveloped in the rich cod or ball it weaves itſelf. From a ſmall egg, about the ſize of a pin's head, which is its firſt ſtate, it becomes a pretty big worm, or maggot, of a whitiſh colour, inclining to yellow. In this ſtate it feeds on mulberry leaves, till, being come to maturity, it winds itſelf up in a ſilken bag, about the ſize and ſhape of a pigeon's egg, and becomes metamorphoſed into an aurelia: in which ſtate it remains without any ſigns of life or motion, till at length it awakes, to become a butterfly, after making itſelf a paſſage out of its ſilken ſepulchre. And at laſt, dying indeed, it prepares itſelf by an egg, or ſeed, it caſts, for a new life, which, aſſiſted by the warmth of the ſummer, it reſumes.

As ſoon as the ſilk-worm is arrived at the ſize and ſtrength neceſſary for beginning his cod, he makes his web: for it is thus they call that light tiſſue, which is the beginning and ground of this admirable work; and this is his firſt day's employment: on the ſecond, he forms his folliculus, or ball, and covers himſelf almoſt over with ſilk: the third day, he is quite hid; and the following employs himſelf in thickening and ſtrengthening his ball, always working from one ſingle end, which he never breaks by his own fault; and which is ſo fine and ſo long, that thoſe who have examined it attentively, think they ſpeak within compaſs, when they affirm that each ball contains ſilk enough to reach the length of ſix Engliſh miles. In ten day's time the ball is in its perfection, and is now to be taken down from the branches of the mulberry-tree,

where the worms have hung it: but this point requires a deal of attention; for there are ſome worms more lazy than others; and it is very dangerous waiting till they make themſelves a paſſage, which uſually happens about the fifteenth day.

The firſt, fineſt, and ſtrongeſt balls are kept for grain; the reſt are carefully wound: or if it is deſired to keep them all, or if there be more than can be well wound at once, they lay them for ſome time in an oven, moderately hot; or elſe expoſe them, for ſeveral days ſucceſſively, to the greateſt heats of the ſun, in order to kill the inſect, which, without this precaution, would not fail to open itſelf a way, to go and uſe thoſe wings abroad it has acquired within.

Ordinarily, they only wind the more perfect balls: thoſe that are double, or too weak, or too coarſe, being laid aſide; not as altogether uſeleſs, but that being improper for winding, they are reſerved to be drawn out into ſkains.

Theſe balls are of different colours; the moſt common are yellow, orange colour, iſabella, and fleſh-colour; ſome of a ſea-green, ſome of a ſulphur-colour, and ſome white: but there is no neceſſity for ſeparating the colours and ſhades, to wind them apart, as the colours are to be loſt in the future ſcouring and preparing of the ſilk.

To wind the ſilk from off the balls, two machines are neceſſary; the one a furnace, with its copper; the other a reel, or frame, to draw the ſilk. The winder then, ſeated near the furnace, throws into the copper of water over the furnace, firſt heated and boiled to a certain degree, which cuſtom alone can teach, a handful or two of balls, which have been firſt purged of all its furry ſubſtance. He then ſtirs the whole very briſkly about with birchen rods, bound and cut like bruſhes; and when the heat and agitation have detached the ends of the ſilks of the pods, which are apt to catch on the rods, he draws them forth; and joining ten or twelve, or even fourteen of them together, he forms them into threads according to the bigneſs required, to the works they are deſtined for: eight ends ſufficing for ribbands and velvets; the reſt requiring no leſs than fourteen. The ends thus joined into two or three threads, are firſt paſſed into the holes of three iron rods, in the fore-part of the reel, then upon the bobbins, or pullies, and at laſt are drawn out to the reel itſelf, and there faſtened, each to an end of an arm or branch of the reel. Thus diſpoſed, the workman giving motion to the reel, by turning the handle, guides his threads, ſubſtitutes new ones, when any of them break, or any of the balls are wound out; ſtrengthens them where neceſſary, by adding others; and takes away the balls wound out, or that having been pierced are full of water.

In this manner two workmen will ſpin and reel three pounds of ſilk in a day; which is a different diſpatch than is made by the ſpinning-wheel, or diſtaff. Indeed, all ſilks cannot be ſpun and reeled after this manner, either by reaſon the balls have been perforated by the ſilk-worms themſelves, or becauſe they are double, or too weak to bear the water; or becauſe they are coarſe. Of all theſe together they make a particular ſilk called floretta, which, being carded or even ſpun on the diſtaff, or the wheel, in the condition it comes from the ball, makes a tolerable ſilk.

As to the balls, after opening them with ſciſſars, and taking out the inſects, which are of ſome uſe for the feeding of poultry, they are ſteeped three or four days in troughs, the water whereof is changed every day to prevent their ſtinking. When they are well ſoftened by this ſcouring, and cleared of that gummy matter the worm had lined the inſide with, and which renders it impenetrable to the water, and even to the air itſelf, they boil them half an hour in a lye of aſhes, very clear and well ſtrained: and after waſhing them out in the river, and drying them out in the ſun, they card and ſpin them on the wheel, and thus make another kind of floretta, ſomewhat inferior to the former.

The ſeveral preparations which ſilks undergo, to fit them to be uſed in the manufacture of ſilken ſtuffs, are the ſpinning, reeling, milling, bleaching, and dying. The two firſt have been already ſpoke of, as they are concerned in drawing the ſilk from off the balls. As to the ſpinning and reeling the raw ſilks from off the balls, which are brought from Italy and the Levant; the firſt is chiefly performed on the ſpinning wheel; and the latter, either on hand reels, or on reels mounted on machines, which ſerve to reel ſeveral ſkains at the ſame time. As to the milling, they uſe a mill, compoſed of ſeveral pieces, which may mill two or 300 bobbins at once, and make them into as many ſkains.

Silk is diſtinguiſhed by different names, according to its different ſtates. Thus,

Raw-SILK, is that taken from the ball, without fire, and wound without any coction: ſuch is moſt, if not all that which is brought into England from the Levant. In the French works, the greateſt part of this raw ſilk paſſes for little better than a kind of fine floretta; yet when ſpun it makes a fine thread, and ſerves for the manufacture of ſtuffs of moderate luſtre. But the raw-ſilks of the Levant, from whence moſt Engliſh ſilk comes, are exceeding fine and beautiful. This difference ariſes hence: in France the beſt balls are ſpun and wound in boiling water, and only the refuſe made into raw ſilk; whereas in the Levant, there is no ſuch thing as ſpinning and winding on the fire; but the ſilks are all ſent in bales or packs, as they are drawn from off the balls: ſo that they are only diſtinguiſhed by their quality of fine, middling, and coarſe.

Boiled SILK, is that which has been boiled in water, to facilitate the ſpinning and winding. This is the fineſt of all ſorts of ſilk manufactured in France, and is ſeldom uſed but in the richeſt ſtuffs; ſuch as velvets, taffaties, damaſks, and brocades. There is alſo another kind of boiled ſilk, which is prepared by boiling, to be milled; and which cannot receive that preparation, without being firſt paſſed through hot water. By the laws of France, it is prohibited to mix raw with boiled ſilk; both as ſuch a practice ſpoils the dying, and as the raw ſilk corrupts and cuts the boiled.

Throwed or twiſted SILKS, are ſuch as, beſide their ſpinning and winding, have received their milling and throwing; which they receive in a different degree, as they are paſſed oftener or ſeldomer over the mill: properly, however, throwed ſilks are thoſe wherein the threads are pretty thick throwed, and are twiſted ſeveral times.

Slack SILKS, are ſuch as are not twiſted; but are prepared and dyed, for tapeſtry, and other works for the needle.

Eaſtern, or *Eaſt India* SILK. That particularly ſo called, is not the work of the ſilk-worms, but comes from a plant that produces it, in pods much like thoſe of the cotton tree. The matter this pod contains is extremely white, fine, and moderately gloſſy: it ſpins eaſily, and is made into a kind of ſilk, that enters the manufacture of ſeveral Indian and Chineſe ſtuffs.

French SILKS. It is only in the moſt ſouthern provinces of France that ſilk is cultivated, mulberry trees planted, and worms bred. The principal are thoſe of Languedoc, Dauphine, Provence, Avignon, and Lyons. The laſt place, indeed, furniſhes very few ſilks of its own growth; but is the great ſtaple whence the merchants of Paris and the other cities are to fetch them: at leaſt, they are obliged to let them paſs through Lyons, if they bring them from elſewhere, either by land or ſea.

There are computed to enter Lyons, one year with another, 6000 bales; the bale valued at 160 pounds weight: of which 6000 bales there are 1400 from the Levant, 1600 from Sicily, 1500 from Italy, 300 from Spain, and 1200 from Languedoc, Provence, and Dauphine.

At the time when the manufactures of Lyons were in their proſperity, there were reckoned 18000 looms employed in the ſilk manufacture; but they are ſo fallen, that even in the year 1698, there were not reckoned 4000. The decay is not leſs remarkable at Tours, where they formerly had 700 mills, for winding and preparing the ſilks; 8000 looms, to weave them; and 40,000 perſons employed in the preparation and manufacturing thereof, which are now reduced to 70 mills, 1200 looms, and 4000 perſons.

Sicilian SILKS. The commerce of the ſilks of Sicily is very conſiderable; the Florentines, Genoeſe, and Lucceſe, being the people who chiefly make it. Great quan-

tities

tities are yearly brought thence, eſpecially from Meſſina; part whereof they uſe in their own manufactures, and ſell the reſt to their neighbours the French with profit. The Italians have this advantage, eſpecially the Genoeſe, over other people, that having large eſtabliſhments in the iſland, they are reputed as natives, and pay no duty for the export. Part of the Sicilian ſilks are raw, the reſt ſpun and milled; of which laſt kind thoſe of St. Lucia and Meſſina are the moſt valued. The raw unwrought ſilks are always ſold for ready money; and the others ſometimes in exchange for other goods.

Italian SILKS. The ſilks brought from Italy are partly wrought, and partly raw and unwrought. Milan, Parma, Lucca, and Modena, furniſh none but the latter kind; Genoa moſt of the former; and Bologna affords both kinds.

Spaniſh SILKS, are all raw; being ſpun and milled in England, according to the ſeveral works they are to be uſed in.

Turky SILKS are all raw. One advantage we have in the commerce of the Levant in ſilks, wanting in thoſe of Sicily is, that the latter are confined to a particular ſeaſon of the year; whereas the former are bought at all times. They are brought from Aleppo, Tripoli, Sayda, and from the iſle of Cyprus, Candia, and other places: but the principal commerce, eſpecially for the ſilks of Perſia, is carried on at Smyrna; from whence the ſilks are brought hither in caravans, from the month of January to September. The caravans in January are loaded with the fineſt ſilks, thoſe of February and March with indifferent ones, the reſt ſtill of a coarſer kind. They all come from the ſeveral provinces of Perſia, chiefly thoſe of Ghilan and Shirvan, ſituated near the edge of the Caſpian ſea; from which three places, a Dutch author aſſures us, there do not come leſs than 20,000 bales of ſilk in a year. Ardeuil, or Ardibil, another city of Perſia, not far diſtant from theſe ſilk countries, is the place where the ſilks are laid up, and whence the caravans ſet out for Smyrna, Aleppo, and Conſtantinople; and it is this city, with Shamachi, that have been always eſteemed the centre of the ſilk trade; which has been ſeveral times attempted to be removed from Smyrna and the Mediterranean, in favour of Archangel and the White ſea, by carrying them acroſs Muſcovy by the Volga and Dwina, two rivers that traverſe the principal provinces of that vaſt empire. This new courſe of the Perſian ſilks into Europe, was firſt propoſed by Paolo Centurio, a Genoeſe, to the Czar Baſil, under the Pontificate of Leo X. The French had the ſame deſign in 1626. The Duke of Holſtein, in 1633, ſent ambaſſadors to the court of Perſia purely with the ſame view: and in 1668, the Czar Alexis Michael attempted the thing himſelf; but was diſappointed by the rebellion of the Coſſacks, and the ſurprize of Aſtracan.

In 1688, the commerce of Perſian ſilks had like to have been removed from Smyrna by an earthquake, which almoſt overturned the whole city: and doubtleſs the removal had been effected, but for the vigorous means uſed by the Turks to prevent it. Smyrna, however, ſtill remains in her ancient poſſeſſion, and the ſeveral nations of Europe continue every year to ſend their fleets to fetch away the ſilks; and matters are like to remain ſo, unleſs the conqueſts made by the late Czar, along the Caſpian ſea, enable his ſucceſſors, as he certainly had ſuch a thing in view, to put this great deſign in execution.

China, *Japan*, and *Indian* SILKS. Several provinces in China are ſo fertile in mulberry-trees, and their climate ſo agreeable to the nature of ſilk-worms, that the quantity of ſilk produced here is incredible. The ſingle province of Tchekiam, might ſupply all China, and even a great part of Europe with this commodity; and the ſilks of this province are moſt eſteemed, though thoſe of Nanquin and Canton are excellent.

The ſilk trade is the principal in China, and that which employs the moſt hands: but the European merchants who deal in it, eſpecially in wrought ſilks, ſhould be careful of the ſpinning, the waſte being uſually very great, as the French Eaſt India company lately found to their coſt. Japan would not afford fewer ſilks than China; but that the Japoneſe, who are a diſtruſtful people, have interdicted all commerce with ſtrangers, eſpecially with Europeans, excepting with the Dutch, who are ſaid to be admitted on certain impious terms, related by Tavernier; but which have not been much credited. The ſilks of the ſtates of the Great Mogul, are brought almoſt wholly from Kaſem-bazar, whence they are conveyed by a canal of 15 leagues into the Ganges.

The ſilk of Kaſem-bazar is yellowiſh; as are alſo thoſe of Perſia and Sicily; there being none that we know of naturally white, but that of Paleſtine. The Indians, however, whiten it, with a lye made of the aſhes of a tree called Adam's-fig-tree; but, as the tree is pretty ſcarce, the Europeans are obliged to take the greateſt part of their ſilks in the native yellow.

Kaſem-bazar alone is computed to furniſh every year 22,000 bales of ſilk, each bale weighing 100 pounds; almoſt all which the Dutch buy up, not to bring into Europe, no more than they do that of Japan; but to change it for other rich merchandiſe, particularly bars of ſilver.

Spider SILK. Within a few years the ſecret has been found in France, of producing and preparing ſilk of the webs of ſpiders; and uſing it in ſeveral manufactures. This diſcovery is owing to M. Bon, who, in 1710, publiſhed a diſſertation on the ſubject, whence what follows is extracted.

Spiders are uſually diſtinguiſhed, either with regard to their colour, as into black, brown, yellow, and white; or with regard to the number and arrangement of their eyes; ſome having ſix, others eight, and others ten. But with regard to the ſilk-ſpider, M. Bon reduces them all to two kinds; thoſe with long legs, and thoſe with ſhort, which laſt are thoſe that furniſh the raw-ſilk.

The ſilk-ſpider makes a ſilk as beautiful, gloſſy, and ſtrong as the ſilk-worm: it ſpins it out of the anus, around which are five papillæ, or ſmall nipples, and behind theſe two others, all muſculous, and furniſhed with ſphincters. Theſe nipples ſerve as ſo many wire-drawing-irons, to form and mould a viſcous liquor, which, when dried in the air, after being drawn through them, makes the ſilk.

The ſpider-bags are of a very grey colour when new, but turn blackiſh when expoſed to the air: one might, indeed, find other ſpider-bags of other colours, and which would afford a better ſilk; but their ſcarcity would render the experiment difficult; for which reaſon, we confine ourſelves to the bags of the moſt common ſpiders, which are the ſhort-legged kind. Theſe always find out ſome place ſecure from the wind and rain, to make their bags; as hollow trees, the corners of windows, or vaults, or under the eaves of houſes.

By collecting a quantity of theſe bags, a new ſilk is made, inferior in nothing to the common ſilk. It takes all kinds of dyes, and may be made into all kinds of ſtuffs. M. Bon had ſtockings and gloves made of it, which he preſented to the academy, and others to the royal ſociety.

Nor is there any venom in the ſilk, or even in the ſpider, as many have imagined. M. Bon has been bit by them ſeveral times without any manner of harm; and as for the ſilk, it is uſed with very good ſucceſs to ſtop bleeding, and cure wounds, the natural gluten thereof acting as a kind of balſam. It likewiſe yields by diſtillation ſeveral ſpecific medicines, particularly great quantities of ſpirits, and volatile ſalt, which being prepared after the ſame manner as that drawn from the bags of ſilk worms, in making the guttæ Anglicanæ, or Engliſh drops, ſo famous over all Europe, may ſerve to make other drops of greater efficacy, which M. Bon calls drops of Montpellier, to be uſed in all ſleepy diſeaſes.

But theſe ſpiders furniſh much leſs ſilk than the worms: the largeſt bags of the latter weighing four grains, the ſmaller three grains; ſo that 2304 worms, produce a pound of ſilk. The ſpiders bags do not weigh above one grain, and when cleaned loſe two thirds of that weight: the work of 12 ſpiders, therefore, only equals that of one ſilk-worm; and a pound of ſilk will require at leaſt 27648 ſpiders. But as the bags are wholly the work of the females, who ſpin them to depoſit their eggs in, there muſt be kept 55296 ſpiders, to yield a pound of ſilk: yet this will only hold of the beſt ſpiders; thoſe large ones uſually ſeen in gardens ſcarce yielding a 12th part of the

ſilk

ſilk of the others. 280 of theſe would not do more than one ſilk-worm, and 663,552 of them would ſcare yield a pound.

By an act paſſed in the 6th Anne, wrought ſilks, mixed with gold or ſilver, or other materials, ſecretly or clandeſtinely imported, are forfeited with 200 l. by every importer, and each of his aſſiſtants, beſides former penalties, and 100 l. by the receiver, ſeller, or concealer. Such ſilks are to be ſold by inch of candle, at the cuſtom-houſe in London or Edinburgh.

By an act paſſed in the 2d Will. and Mary, ſilk thrown of the growth or product of Turky, Perſia, Eaſt India, China, or any other country, except Italy, Sicily, and Naples, brought directly from thoſe places reſpectively by ſea, in ſhips legally navigated, may not be imported on forfeiture thereof.

By the 8th and 9th of King William III. it was enacted, That the royal luſtring company, for making and dreſſing alamodes, renforcez, and luſtrings in England, ſhould continue a body corporate, by the name of the Royal luſtring company, and ſhould enjoy all privileges in the charter of incorporation granted to them. See *Alamode*.

By the ſtatute of the 14th of Geo. II. for opening a trade to and from Perſia, through Ruſſia, the Ruſſia company, excluſive of all other perſons, had a grant to import into Great Britain, from Ruſſia, in Britiſh built ſhipping, navigated according to law, raw-ſilk, or any other goods or commodities of the growth, produce, or manufacture of Perſia; provided ſuch manufacture was made of the growth or produce of Perſia, being purchaſed by barter, with woollen or other manufactures, or commodities exported from Great Britain to Ruſſia, and from thence carried into Perſia, gold and ſilver in coin or bullion excepted, or with the produce ariſing from the ſales of ſuch manufactures, or commodities ſo exported to Ruſſia, and carried into Perſia as aforeſaid, and not otherwiſe; which is directly contrary to the act of the 12th Cha. II. entituled an act for the encouragement and increaſing of trade and navigation: but ſoon after the commencement of the ſaid act of the 14th of Geo. II. a very beneficial trade between Great Britain and Perſia, through Ruſſia, was opened, whereby great quantities of raw ſilk, and other goods and commodities of the growth and manufacture of Perſia were imported, in return for the woollen and other manufactures and goods of Great Britain, upon much eaſier and more advantageous terms than the ſame could have been otherwiſe. But the ſaid trade having been for ſome years interrupted, the ſubjects of Great Britain, not having been permitted to import Britiſh manufactures and commodities into Perſia, through Ruſſia; in conſequence whereof, the importation of raw ſilk and other commodities of Perſia from Ruſſia were diſcontinued: and as it would be of great advantage to the trade of Great Britain in general, as well as contribute to the increaſe and improvement of the ſilk manufactures in particular, if raw ſilk of the growth or produce of Perſia, purchaſed in Ruſſia, was permitted to be imported from thence, in return for woollen and other manufactures exported from Great Britain, although the ſame be not carried from thence into Perſia; it was enacted by the 23d of George II. That perſons free of the Ruſſia company, excluſive of all others, might import into Great Britain from Ruſſia, in Britiſh built ſhipping, navigated according to law, raw ſilk of the growth or produce of Perſia, which ſhould be purchaſed by barter, with woollen or other manufactures, or commodities exported from Great Britain to Ruſſia, altho' the ſame be not carried from thence into Perſia, gold or ſilver in coin or bullion excepted, or with the produce ariſing from the ſale of ſuch commodities, and not otherwiſe; upon paying the cuſtoms and other duties payable for the ſame, according to the directions, and with like allowances and drawbacks, and under like penalties and forfeitures as were preſcribed by law, on the importation of raw ſilk, of the growth or produce of Perſia, imported from the Levant, by any perſons free of the Levant or Turky company.

Some farther obſervations on the ſilk trade, particularly applied to Great Britain, follow.

The northern provinces of Perſia produce the greateſt quantity, and the beſt ſort of raw ſilk; from whence the ſouthern provinces, and the ſilk manufactories at Meſched, as well as thoſe in Turky, are ſupplied. The provinces moſt abounding in ſilk are Ghilan, the principal city in which is Reſhd; Shirvan, the capital of which is Shamakie; Aran, or Erivan, of which the principal city is Ganja: the two former of theſe provinces are on the ſouth-weſt ſhores of the Caſpian ſea, and the latter is adjacent.

When Nadir Shah aſcended the throne of Perſia, he made Meſched, the capital of Khoraſan, his favourite city, and conſequently the ſeat of the Perſian empire: ſo that by the extraordinary privileges with which he endowed that capital, and by other meaſures he took to aggrandiſe it, he in ſome meaſure drained Iſfahan of its inhabitants; the trade of which was transferred to Meſched; and this city is at too great a diſtance from the Perſian gulph, or Eaſtern ocean, for either the Britiſh or Dutch East India company to ſend goods thither round the Cape of Good Hope. From whence it was imagined, that when the Britiſh merchants had eſtabliſhed themſelves in the Caſpian trade to Meſched and Bokhara, it would in a few years become a more beneficial article to Great Britain than the Turky trade ever was: becauſe, a great quantity of woollen goods might be vended at a better price, and to countries where the Britiſh commerce had never yet extended, nor ever could be extended by any other channel; beſides, the very ſame commodities which the Turky company imported into Great Britain, not to mention any new articles, might be brought from Meſched a great deal cheaper, and with much greater advantage to the nation.

The trade between Perſia and Turky is for the greateſt part carried on by the Armenians, of whom there are not leſs than 10,000 ſettled in Turky, who are chiefly employed by the Engliſh, French, and Dutch merchants reſiding in Conſtantinople, Smyrna, and Aleppo: they have long diſtinguiſhed themſelves as the moſt acute traders in all Aſia, and carry to market the products of the eaſt, returning thoſe of Europe.

The wars, and hereditary enmity of the Turks and Perſians, had often obſtructed this commerce between Perſia and Turky, and at length forced moſt of the Armenian traders into the channel of Ruſſia, croſs the Caſpian ſea: but ſhould Perſia recover herſelf again, ſo as to produce any conſiderable quantity of ſilk, it is more than probable, that the Armenian ſubjects of the Grand Signior, who live in and about Tauris and Erzerum, will come in for a large ſhare of that branch of commerce.

According to the uſual courſe of the ſeaſons, the only proper time to ſet out through Ruſſia to Perſia are the months of May, June, and July, for the ſummer caravans; and January for the winter. This muſt neceſſarily create delays, and often prevent the timely exportation from St. Peterſburgh; nor can it be imagined, but that the ſhipping of the ſilk on the Caſpian, and in the ſummer time again on the Volga, as alſo again on the Baltic, muſt be attended with conſiderable expences and inconveniencies; inſomuch, that the Engliſh gentlemen found the charge run to 34 *per cent.* on the invoices from London, delivered to the factory at Reſhd; and on raw ſilk delivered in London, duties and diſcharges paid, about 36 *per cent.* on the invoice.

If we may judge from the duties paid in Reſhd, the trade began to flouriſh on the arrival of the Engliſh factors there; for in 1742, the cuſtoms amounted only to 20,000 crowns, but in 1743 they roſe to 50,000, and made about the ſame ſum in 1744.

The Perſians have ſeveral kinds of ſilk: the firſt is called ſherbaff, or weavers ſilk, becauſe the weavers, particularly in Reſhd and Caſhan, are ſuppoſed to uſe the beſt they can procure; but what generally goes for the Perſian fabrics at Caſhan is the fineſt ſort, the threads of which are more ſplit; this is uſually all white, whereas the other is white and yellow; nor is it wound off ſo ſhort; ſo that, though finer, it is not eſteemed ſo much as ſherbaff: there is alſo a ſort called Arabs, from being bought up for the moſt part by Arabians, who ſend it into Turky, where it

it is afterwards manufactured; and there is likewiſe a ſilk called kedge, which is made from the pods of the ſilk-worms which are permitted to live for the ſake of generation; but this ſilk cannot be prepared like the others, for it muſt be pounded, and ſpun off like cotton yarn; whereas the worms are killed in the other pods, either by ſuffocating them with blankets, or by the heat of the ſun, unleſs they wind off the ſilk immediately, for then warm water anſwers the ſame purpoſe.

The cleanneſs and clearneſs of raw ſilk conſtitute a great part of its goodneſs; inferior ſilk having many knits, and coarſe ſtuff ſticking to the threads. The maſs, or head of ſilk, often appears fair to the eye, when much coarſeneſs is concealed under it; for it is a trick of the Perſian peaſants to hide the defects, as they wind it off from the pod. The beſt ſilk has conſtantly a gloſs or brightneſs: the white or ſilver-coloured is moſt eſteemed; but in Ghilan the greateſt part comes yellow from the worm, which is fed by the leaves of mulberry ſhrubs. White ſilk that is ſoiled is generally found to have lain in a moiſt place, which hurts its ſtrength as well as beauty. Silk ſhould be equal, ſtrong, and round as wire, and alſo clean; the greateſt part ſhould be in a medium with regard to fineneſs, for the fineſt is not the eaſieſt to manufacture to advantage. The threads of ſilk being thus even, that is, as near as poſſible of one ſize, and not coarſe and fine intermixed, can be moſt eaſily ſeparated in the winding; but otherwiſe the coarſe is apt to tear the fine, and make waſte in manufacturing it. The ſize which is uſually moſt eſteemed is wound off 16 or 18 pods or cocoons. A moſs, which is about 60 inches in the round, can be moſt conveniently reeled off; longer is not approved of, and if ſhorter it is apt to break by the quick revolutions of the reel, being glued together with its own gum. It is alſo to be obſerved, that there is a vaſt difference between ſilk cleaned by combing, and that which remains juſt as it came from the pod: the former, to an unſkilful perſon, who does not obſerve the broken threads and the ends of the combings, ſhall look better than the latter, though it is conſiderably worſe.

When the Armenians and Ruſſians pack up their ſilk, they generally comb the heads of their moſſes to deceive the buyer; but this makes it really worſe, becauſe it hurts it in the winding off. Theſe people, who were never famed for probity, have long practiſed the art of falſe package. Hence, at Smyrna and Aleppo, where the Armenians ſell their ſilk to the factors of the Engliſh Turky company, as likewiſe in Ruſſia, it has often been rejected upon that account: eſpecially, as they hold it a conſtant maxim not to ſuffer their bales to be broken up, except at their heads.

The benefits of the ſilk manufacture muſt ever appear conſiderable, even upon the moſt ſuperficial view; when it is conſidered, that a pound of 16 ounces of the plaineſt manufactured ſilk is commonly worth 35 or 40 s. and that rich ſilks increaſe in proportion to the greater labour which is beſtowed upon them. The great pound in Perſia, of 24 ounces coſting 21 s. the ſmall pound is 14 s. let us now ſee what profit ariſes from it, and how much it increaſes in value as it paſſes through the hands of the ſeveral workmen; and here the charge only of throwing the ſmall pound is 5 s.; dying, grain colours included, on a medium, is 2 s. and winding, weaving, &c. 10 s. ſo that allowing 1 s. for the dying materials, the nation gains 16 s. at leaſt on every pound of ſilk manufactured in Great Britain and exported abroad, and in ſome articles much more. To inſtance only in one particular; a pair of ſilk gauze ſtockings weighs about 2 ½ ounces of ſilk, which computed as above is 2 s. 2 d. and 20 *per cent.* breakage, and other contingencies on the ſilk is leſs than 3 s. and yet the ſtockings ſell for 9, 10, or 12 s. Thus this beneficial branch of commerce gives a ſubſiſtence to the induſtrious artificer, and enriches the nation. See *Ruſſia*, and *Ruſſian* company.

His preſent majeſty, in the beginning of his reign, having taken into his royal conſideration the miſerable circumſtances of many of his own poor ſubjects, who were ready to periſh for want; and likewiſe the diſtreſſes of many foreigners, who would gladly embrace any opportunity of ſettling themſelves under his princely protection, to take refuge from perſecution; was graciouſly pleaſed to grant a charter to incorporate a number of diſintereſted gentlemen, by the name of The truſtees for eſtabliſhing the colony of Georgia in America, thereby empowering them to receive and collect benefactions, and to lay them out in clothing, arming, and ſupporting colonies of the poor, as well ſubjects as foreigners, in that new plantation, where, among the many uſeful employments deſigned for thoſe induſtrious people, that of raiſing raw ſilk, was principally intended.

The raiſing of the ſilk manufacture is practicable even in this kingdom, but much more ſo in our American dominions, where both the climate and ſoil are excellently well adapted to the nature of the ſilk worm, and the propagation of the mulberry-tree, whoſe leaves are the natural and moſt beloved food of this inſect, inſomuch that they have been often found feeding thereupon, naturally or ſpontaneouſly; but being there for ſome time diſregarded, except by a few curious perſons, who kept them only for their diverſion, they became the prey of birds and other creatures; and it was on this very account that the care and propagation of this wonderful inſect, whoſe well known uſe is more immediately deſigned by providence for the benefit and advantage of mankind, has been for ſo many paſt ages neglected by the Britiſh nation.

The breeding of ſilk-worms, even in England, would have been doubtleſs eſtabliſhed, if a ſufficient number of eminent perſons had heartily engaged in the undertaking. This would have been the only means to have excited others to follow their laudable example: it was by this method, the ſilk trade was brought to ſuch perfection in Italy, &c. where not only perſons of the firſt rank were engaged in this work, but the magiſtrates alſo aſſiſted, each lending a helping hand, till they ſaw the deſirable and profitable manufacture firmly rooted and eſtabliſhed in their countries; which among many other advantages is attended with this one very great benefit, that it employs a great number of their induſtrious poor: for not only men, but women, children, and impotent perſons may be made uſe of in this work, being a work both eaſy and pleaſant, and performed in as delightful a ſeaſon as any in the whole year. In Carolina the ſilk trade is vaſtly improved, ſome families making 40 or 50 pounds a year, and their plantation work not neglected: little negro children being ſerviceable in feeding and looking after the ſilk worms. Beſides, there is no tree in Carolina thrives better than the mulberry, which in that climate flouriſhes as well as in any country in the known world. This ſufficiently ſhews the great advantages which may be made from the keeping of ſilk-worms; firſt, it takes up but two or three months time from the beginning to the ending of the work: ſecondly, the perſons chiefly employed in attending theſe creatures, are ſuch generally as are unfit for any other employment. Therefore it is to be hoped, from the conſideration of the fitneſs of our American colonies to propagate the ſilk trade in, the buſineſs of its being perfected, the benefit which will accrue therefrom to every individual concerned in keeping of ſilk-worms, and to the nation in general, by relieving ſo many poor unhappy people, that this will incline the hearts of all perſons, of what rank or condition ſoever, towards carrying on ſuch an undertaking.

To what has been already ſaid, about the origin of ſilk-worms, and the introduction of ſilk into Europe, it may be proper to add the following, as a more particular account. No man can doubt but that the ſilk-worm had its original within the ſixth day of the world's creation, when all land inſects and quadrupeds were created, as we are informed, Gen. i. 24. *And God ſaid, let the earth bring forth the living creature after his kind, cattle, and creeping thing, and beaſt of the earth after his kind: and it was ſo.* But whether the Antediluvians had any knowledge of this noble inſect, the manner of its ſpinning of the web, and its uſefulneſs to mankind for clothing, does not appear: neither is it certainly known at what time after the flood, or by what nation they were firſt taken notice of. Some ſay Noah firſt diſcovered the uſe of theſe wonderful creatures, and propagated them in China. Others contend that the knowledge and propagation of the ſilk-worm was altogether as early made known to the Perſians by the ſons of Noah. But, be this as it will, both theſe nations firſt

propagated ſilk, and reaped the profit and benefit of it many hundred years before any other country. For the firſt time any ſilk was brought into Greece, was after Alexander the Great had conquered Perſia, 300 years before the birth of Chriſt, and about 2000 years ſince it was known in theſe parts. From Perſia it came into Italy, in the flouriſhing time of the Roman empire, where it was for a long time very dear, being weight for weight of equal value with gold. Until Juſtinian the Emperor, who began his reign in the reign of our Lord 526, looking on it as a great hardſhip that his ſubjects ſhould buy this manufacture of the Perſians at ſo dear a rate, in order to put an end to the impoſition, ſent two monks into India to bring with them, if it was poſſible to be procured, ſome of the ſpecies, whether vegetable or animal, from which the ſilk was produced, that ſo he might eſtabliſh a manufacture of this rich commodity in his own dominions.

Theſe Monks when returned, told the Emperor that the ſilk was produced by an inſect, which could not be brought ſo long a journey alive, but that its eggs might be brought, and from them the creatures be propagated. The Emperor on this their information ſent them back a ſecond time, to bring him ſome of thoſe eggs; who having effected what they went about, brought great quantities of them to Conſtantinople, which they preſented to the Emperor, incloſed in a roll or horn of paper, with inſtructions how to breed, nouriſh, and draw ſilk from theſe creatures. They were received with great admiration and applauſe; and from them have been propagated all the ſilk-worms, and their ſilk in Europe.

This ſhort hiſtory of the introduction of the ſilk manufacture into Europe, may be ſufficient to ſhew how valuable this commodity was eſteemed by our anceſtors; and how eaſily it might be brought to great perfection in the Britiſh American colonies, by us their ſucceſſors, without any prejudice to the ſtaple commodity of Great Britain, the woollen manufacture. Were we to have all the raw ſilk which is uſed in England from our own plantations, or of our own growth, the money would circulate among ourſelves, and the balance of the trade be wholly on our own ſide, while we found no occaſion for purchaſing it from foreign nations. For the further encouragement of this noble deſign, it is alſo proper, in the next place, to give ſome account of the profits ariſing from keeping of ſilk worms.

Silk-worms produced from an ounce of eggs, eat in their whole time of feeding, from 2 to 300 pounds weight of mulberry leaves: and that number of worms will ſpin from five to ten pounds of ſilk, more or leſs, according as they are in largeneſs and goodneſs. They require the attendance of two perſons for about two months, one to gather and bring leaves, the other to feed, clean, and manage the worms, in which ſpace of time the whole work will be compleated. But it muſt be noted, that tho' two perſons only will attend and feed all the worms that come from ſix ounces of eggs, till they be paſt their fourth ſickneſs, and within a fortnight of their ſpinning: yet, then the worms muſt be more carefully fed, and attended; it being the chief time wherein they make and ſtore up the materials for their ſilk, when there are required five or ſix perſons to aſſiſt in feeding and managing them.

It is eſtimated, that in France a fourth part of the ſilk defrays all charges: and in Italy, where it has been longer improved, a ſixth part will diſcharge all expences, clearing five parts, and they reckon the mulberry leaves the half of the whole charge, if they are obliged to buy them. But it is cuſtomary in many places where great numbers of ſilk-worms are kept, for gentlemen to let out their mulberry-trees to the poor, and to ſuch perſons as make it their buſineſs to nurſe theſe creatures, which turns to a very good account.

The drawback on ſilks, callicoes, linens, and ſtuffs, printed, painted, ſtained, or dyed in Great Britain, was granted by the 10th of Queen Anne for ever, as follows.

Silks, except ſilk handkerchiefs, the yard ſquare	0	0	3
Callicoes, the yard ſquare - -	0	0	3

Note, all callicoes within 1-8th part of a yard, of yard-broad; or not exceeding 1-8th part of a yard, of yard-broad, are to pay as yard-broad, and no more nor leſs.

Linens and ſtuffs the yard ſquare - -	0	0	1

By the 12th of Queen Anne, and 6th of George I.

Silks, except ſilk handkerchiefs, the yard in length, reckoning half a yard for the breadth -			
Silk handkerchiefs, the yard ſquare	0	0	6
Callicoes, the yard ſquare - -	0	0	1
Linens and ſtuffs, the yard ſquare - -	0	0	3
	0	0	1

Except callicoes, linens and fuſtians, dyed throughout of one colour, and ſtuffs made of woollen, or whereof the greateſt part in value, ſhall be woollen.

The exporter, before ſhipping, to give notice to the proper officer appointed by the commiſſioners of the cuſtoms, when and where he intends to pack up the goods; who is to take care that the ſtamps be taken off from each piece, and to return an account of the kinds and quantities, to the officer appointed to receive the ſame.

Which duties are to be repaid upon exportation, under the ſame regulations as Britiſh made paper.

The bounty on Britiſh manufactures of ſilk, &c. exported, was granted by the 8th of Geo. I. and continued by the 20th of Geo. II.

Upon due exportation of the Britiſh manufactures of ſilk hereafter mentioned, there are to be allowed the following reſpective bounties.

Ribbons and ſtuffs of ſilk only, the pound avoirdupoiſe weight - - - - -	0	3	0
Silks and ribbons of ſilk mixed with gold or ſilver, the pound avoirdupoiſe weight - -	0	4	0
Silk ſtockings, ſilk gloves, ſilk fringes, ſilk laces, ſtitching or ſewing ſilk, the pound avoirdupoiſe weight - - -	0	1	3
Stuffs of ſilk and grogram yarn, the pound avoirdupoiſe weight - -	0	0	8
Stuffs of ſilk mixed with incle or cotton, the pound avoirdupoiſe weight - -	0	1	0
Stuffs of ſilk and worſted, the pound avoirdupoiſe weight - - -	0	0	6

To be paid out of the cuſtoms, or other duties upon goods imported, by the collector of the port, with the privity of the comptroller, upon a debenture made out from the entry, the ſhipping verified by the ſearcher, and the oath of the exporter, that they are of Britiſh manufacture, and exported without intention of relanding in Great Britain; he having firſt given ſecurity with one or more perſons in the value of the goods, to the ſame purpoſe; and to produce a certificate from the officers of the cuſtoms in diſcharge thereof, within ſix months, for ſuch goods as ſhall be exported to Ireland, Guernſey, Jerſey, Alderney, Sark, or Man; and within eighteen months for thoſe to the Britiſh plantations. And for what ſhall be exported to any other foreign parts, a certificate under the common ſeal of the chief magiſtrate, or under the hands and ſeals of two known Britiſh merchants there reſiding. But if ſuch goods were ſold on the coaſts of Africa, or other foreign parts, where certificates of the landing cannot be obtained; or were tranſhipped at any of the Britiſh plantations in America, without being there landed, into ſhips bound to Africa, or other foreign parts; the bonds given on exportation may be diſcharged, and vacated upon proof made within eighteen months from the date of ſuch bonds, upon oath of the maſter, mate, purſer, &c. and alſo upon oath of the merchant-exporter, if living, that, to the beſt of their knowledge and belief, the ſaid goods have been diſpoſed of at the places therein to be mentioned, and that they have not been relanded or brought on ſhore again, in any port or part of Great Britain. 1 Geo. II. cap. 17. § 9.

The aforeſaid manufactures may, after entry, be opened and examined by the officers; and, if wrong entred, are forfeited with their value. But if right entered, muſt be repacked at the officer's charge, which may be allowed him by the commiſſioners of the cuſtoms.

SILK *herb*, or *Herba*. See Silk *Herb*.

SILKMEN, thoſe who deal in the thread that is ſpun by

silk worms, and in those curious manufactures which are produced from it: or more properly those who buy raw silk rom the importer, and sell it to the manufacturer.

SILKMENS *company of London*, was incorporated by letters-patent of the 7th of Charles I. dated the 23d of May 1631, by the name of The governor, commonalty, and assistants, of the art and mystery of silkmen of the city of London.

This fraternity consists of a governor, and 20 assistants; but, having neither hall nor livery, they occasionally meet at different places to manage the company's affairs.

SILK-*spinster*, is a person employed in spinning the hard silk and winding it; which business employs a great number of female hands.

SILK-*thrower*, or *Throwster*, one who prepares or makes silken thread, fit to be wove or worked with a needle. The silk throwster does his work by a mill calculated for that purpose, and chiefly employs women, to whom he gives small wages.

SILK-*throwers company of London*. The art of silk-throwing being first practised in London in the reign of Q. Elizabeth by foreigners; their descendants, and others, in 1622 were constituted a fellowship of the city; and by letters-patent of Charles I. dated the 23d of April 1630, were incorporated by the title of The master, wardens, assistants, and commonalty of the trade, art, or mystery of silk-throwers of the city of London: who are governed by a master, two wardens, and 20 assistants; but have neither hall, nor livery.

By the statute of the 13th and 14th of Charles II. it was enacted, That no person should use the art and mystery of a silk-thrower, unless such as should be apprentices to the said trade, or should have served seven years apprentiship thereunto; upon pain that every person offending should forfeit 40 s. for every month he should use the trade.

SILK-*weaver*. See *Weaver*.

SILLEBAR. A port town on the west coast of the island of Sumatra, in the East Indies, a little south of Bencoolen, situated in 101 deg. of E. lon. and 4 of S. lat.

SILVER. A white, rich sort of metal; being the finest, purest, most ductile, and most precious of all metals, except gold. See *Gold*.

There are silver mines in all the four quarters of the world; Europe has its share; nor is Great Britain quite destitute thereof, tho' it has none of much value.

The mines of Peru, and some other parts of America, are much the richest, and appear almost inexhaustible; particularly those of Potosi, which continue to be dug with great advantage: the veins of ore were in the beginning but at a very small depth in this mountain; but, by degrees the miners were obliged to dig deeper into the bowels of the mountain, in order to follow the veins; and at present the shafts are so deep, that it requires upwards of 400 steps to arrive at the bottom.

The veins at this depth are found to be of the same quality as those formerly discovered near the surface: and the mine is full as rich; though the working in it becomes more difficult every day, and often proves fatal to the greatest part of the workmen, by the exhalations arising from the bottom of the mine, and which spread even to the extremities. No person can endure so destructive an air more than one day at a time, nor are the animals which feed on the adjacent places free from its effects. They often meet with metallic veins, which yield such pernicious vapours as kill instantly; those they are obliged immediately to shut up, and leave them entirely: besides, the greatest part of the workmen, after they have wrought in the mines for a considerable time, become disabled: so that it is astonishing to find how many Indians have lost their lives, since they began to work these mines; and the numbers that die still every day.

The silver ore, tho' contained in the same vein, is not always of the same colour and quality: in Peru they call it Minerai; if it be white or grey, mixed with red or whitish specks, they call it Plata-blancha, which is the richest and easiest ore to work. They likewise find a black ore, like the scoria of iron, which they term Plomoronco. There is another species of black ore, to which they have given the name of Bosticler, because it turns red on being wet and rubbed against iron. The ore called zoroche shines like talc, and tho' it looks as if it contained silver, yet they extract but little of that metal from it; the Paco ore is of the red colour, with a cast of yellow in it, and is found in little and very soft pieces, being but a poor ore: the green ore called Cobrisso, is almost friable; the particles of silver in it may be seen with the naked eye; but it is very difficult to extract them. There is also, in the mine of Catamito in Potosi, an ore called Arannea, which consists of threads of pure silver; and this is what they call silver ore in small threads. These filaments are always richer towards the center than towards their extremities; but the silver abounds most where these threads intersect each other. The two first mines of Potosi were opened in the year 1545; the one called Rica, and the other Diego Centeno. The first was raised some distance above the level of the ground, in the form of a cock's comb, being 300 feet long and 13 broad. The ore of this mine was so rich, that almost half of it was pure silver, to the depth of 52 or 60 fathoms, where it began to change a little.

The richest silver mines are only to be found in the cold places of America. The climate of Potosi is so very cold, that formerly the Spanish women could not lie in there, but were obliged to remove 20 or 30 leagues beyond it, in order to have a milder climate: though at present, they lie in as easily at Potosi, as the native Indians themselves. At the foot of the mount of Potosi stands the town of the same name, which is become famous on account of the great riches its inhabitants have drawn from the mountain. There are in this town upwards of sixty thousand Indians, and ten thousand Spaniards. They oblige the neighbouring parishes to furnish a certain number of Indians every year to work in the mines; and this is what they call Mita, or their quota: the greatest part carry their wives or children with them, but they all go thither with the greatest reluctance. This servitude lasts only a year, after which they are at liberty to return to their former habitations; but a great many settle in Potosi, which by that means becomes every day more and more populous. Tho' the mines of Potosi are the least dangerous; yet without the herb Paraguai, which the miners, take by way of infusion, as Europeans do tea, or chew it like tobacco, they must soon quit them. The mines of Potosi and Lipes still maintain their reputation; however, there have been others discovered some years ago that are reckoned richer; such are those of Oruvo, eight leagues from Arica; and those of Ollacho, near Cusco, which were discovered in 1712.

In order to extract silver from the ore, they first break it into pretty small pieces, and then grind it with iron pestles, weighing about two hundred pounds, and which commonly are moved by water. The ore, when pounded, is passed through a sieve of iron or copper, and then kneaded with water to a paste, which they leave to dry a little; afterwards, they knead it a second time with sea-salt; and at last they throw some mercury upon it, and knead it a third time, in order to incorporate the mercury with the silver; being what they call an amalgama. Eight or ten days are sufficient for this process in temperate places; but in cold countries it sometimes requires a month or six weeks. They then throw the paste into large tubs or lavatories, in order to separate the earth from it; these tubs consisting of three basons standing over a current of water, which carries off the earth, after it has been steeped in each bason. In order to facilitate the operation, they constantly stir the paste with their feet, that, when the water comes clear out of the basons, there may remain at the bottom only silver and mercury amalgamated together; and this is what they call Pigna. They endeavour to extract the mercury, which is not incorporated with the silver, by pressing the pigna, beating it strongly, or bruising it in a press or mill. There are pignas of different sizes and different weights; which commonly contain a third of silver and two thirds of mercury. They lay the pigna upon a trivet, placing under it a vessel full of water; and cover the whole with earth in form of a cap, which they surround with burning coals.

The action of the fire cauſes the mercury to evaporate from the pigna, and falls into the water where it is condenſed. The interſtices which the mercury occupied in the pigna continue empty; when there remains only a porous and light maſs of ſilver, compared with its former bulk.

Silver is likewiſe extracted from the ore in the following manner: they firſt break the ore, and ſometimes waſh it, to ſeparate the ſtony particles which have been reduced to a powder: after this they calcine it, in order to extract from it the ſulphur and arſenic: this is what they call roaſting the ore; after which they waſh it again, to free it from the calcined powder. The ore being thus prepared, they fuſe it with lead or litharge, or with copel-heads that have been uſed before: they employ granulated lead for this purpoſe, when the work is but ſmall. The harder the ore is to melt, the more lead they mix with it: about ſixteen or twenty parts of lead to one of ore. This proceſs is called ſcorifying: the ſcoria conſiſt of lead vitrified with the ſtone, and with whatever is not gold or ſilver in the ore; and the metal precipitates into a regulus. If this regulus look pretty fine, and of a metallic colour, they put it into the copel; but, if it be ſtill mixed with ſcoria, and black, they melt it over again with a ſmall quantity of glaſs of lead.

In order to ſeparate the ſilver from the mercury, with which it is amalgamated, they have a furnace with an aperture at the top; this aperture they cover with a ſort of dome made of earth in a cylindrical form, which may be left on or taken away at pleaſure. When they have put the maſs of ſilver and mercury into the furnace, laid on the cover, and lighted the fire, the quick-ſilver riſes in the form of vapours, and adheres to the dome, from whence they collect it, and uſe it again for the ſame purpoſe.

When the ſilver is well purified, ſo that all heterogeneous matter, either metallic or other, that might be mixed with it, is extracted, they ſay it is twelve carats fine. This is the expreſſion they uſe to denote the quality of the pureſt ſilver, without any mixture or alloy; but if there ſhould remain any, they deduct the weight of the mixture from the principal weight, and the remainder ſhews the value of the ſilver. The carat conſiſts of twenty-four grains: ſo that, when to the weight of twelve carats there are twelve grains of mixture, the value of the ſilver is eleven carats twelve grains: and ſo of any other.

As to refining, it is differently performed in different countries, and according to the different intentions of the refiners. The refining of ſilver with lead is performed with a very dry copel, which they make red-hot in a reverberatory furnace; and after this they put the lead into it, uſing more or leſs, according as the ſilver which they would copel is ſuſpected to have more or leſs alloy. In order to know the quantity of lead which ought to be uſed, they put a ſmall piece of ſilver, with two parts of lead, into the copel; and, if they find that the piece of ſilver is not very pure, they put in more lead, by little and little, till the ſilver is refined; after which they compute the quantity of lead they have uſed, and conſequently know how much is requiſite to refine the ſilver: they let the lead melt, and be very clear, before they put the ſilver to it, and even the litharge that is formed over the melted lead, muſt be fuſed likewiſe: this is what they call the opening or napping of the lead. Should they put in the ſilver ſooner, t would cauſe the matter to fly over: but if, on the contrary, they ſhould delay doing this till the lead be opened, they would ſpoil the proceſs, becauſe the lead would be too much diminiſhed by calcination.

After the lead is opened, they put the ſilver to it, which they generally wrap in a thin plate of lead, which is better than paper, becauſe it often ſticks to the copel.

The ſilver in the copel is fuſed, and turns inceſſantly up and down, forming globules which grow bigger and bigger, in proportion as the maſs diminiſhes; and at laſt theſe globules, which ſome call fluors, diminiſh in number, and become ſo large, that they are reduced to one globule covering the whole matter, by cauſing a bright appearance like lightening.

When the ſilver is in this ſtate, they ſay it looks like an opal, and appears to turn round. At laſt it looks red, then grows white, and one can hardly diſtinguiſh it from the copel; in which ſtate it turns no more round. If it be taken out too ſoon, while it rolls round, it vegetates by means of the air, into the form of a tree, and becomes of a ſpiral figure, or turns to a rough maſs, and ſometimes it leaps out of the copel.

There is ſome difference between copelling in ſmall, and copelling in great: for inſtance, when they copel in the great, they blow upon the copel, while the ſilver turns round, in order to ſeparate it from the litharge: whence it happens, that, when the proceſs is not well performed, there is found ſome lead among the litharge, and ſometimes ſilver; which does not happen, when they copel in the ſmall. In this proceſs they muſt allow ſixteen parts of lead for each part of alloy.

The refining of ſilver with ſaltpetre is performed by fuſing the ſilver in a crucible that is laid in a wind-furnace: when the ſilver is fuſed, they ſay the matter is in balneo; and, when it is in this ſtate, they throw ſaltpetre into the crucible, and let the whole fuſe well together; this they call ſoldering the matter well in balneo.

They take the crucible out of the fire, and pour the matter gently into a tub full of water, where the ſilver turns to little grains, provided the water be ſtirred; for, if the water be at reſt, the ſilver falls down in a lump to the bottom.

They likewiſe fuſe ſilver three times, putting ſaltpetre and borax to it each time; and the third time they let the crucible cool without touching it, and pour it into an ingot-mold: after this they break it, and find at the bottom a piece of fine ſilver: the ſcoria or ſcales a-top conſiſt of the ſaltpetre and the alloy that was in the ſilver.

Two ounces of ſaltpetre, and an eighth part of an ounce of borax, calcined with eight ounces of ſilver, are repeated in the proceſs till the ſcoria have no colour.

All the above methods of refining ſilver having been found inconvenient and tedious, induced M. Homberg to attempt the diſcovering a method of ſhortening the proceſs, in which he ſucceeded. It conſiſts in calcining ſilver with half its weight of common ſulphur; and, after fuſing the whole together, throwing upon it at different times a certain quantity of filings of ſteel; by which means the ſulphur quits the ſilver, in order to unite with the iron, when both the one and the other turn to a ſcum that ſwims a-top of the ſilver; and there is found at the bottom of the crucible the purified matter.

To which we ſhall add, that, according to Acoſta, a Spaniſh hiſtorian, this mine was diſcovered by an Indian, who, purſuing his game up the mountain of Potoſi, and in danger of falling, laid hold of a ſhrub to ſave himſelf; but the ſhrub came up by the roots, and expoſed to his ſight the rich metal, which lay juſt under the ſurface. He was wiſe enough to keep this diſcovery ſecret, till he had enriched himſelf and family; but as ſoon as the Spaniards found it out, they divided it among ſuch adventurers as agreed to the propoſals of the government, for digging and refining the ore; and this mine ſucceeded ſo well, that, according to the ſame author, it yielded one hundred two thouſand millions of pieces of eight, regiſtered, beſides what was privately conveyed away without paying duty.

By the ſtatute of the 6th and 7th of Will. III. molten ſilver may not be exported, unleſs marked or ſtamped at goldſmiths-hall, and a certificate be produced to one of the commiſſioners of the cuſtoms, under the hand of one or more of the wardens, of oath having been made before him or them, by the owner, and one credible witneſs, that it is lawful ſilver, and that no part thereof, before molten, was the current coin, nor clippings thereof, nor plate wrought within this kingdom.

If ſhipped without being ſo marked or ſtamped, and without ſuch certificate, is forfeited; and may be ſeized by the officers of the cuſtoms.

By the ſtatute of the 7th and 8th of Will. III. molten ſilver or bullion, either in bars, ingots, wedges, cakes, pinas, or any other form; may not be ſhipped, unleſs a certificate be produced to the commiſſioners of the cuſ-

toms,

toms, or four of them, from the court of the Lord Mayor and Aldermen of London, of oath having been made before the ſaid court, by the owners, and two or more credible witneſſes, that the ſame, and every part and parcel thereof was, and is, foreign bullion; and that no part thereof, before molten, was the coin of this realm, or clippings thereof, nor plate wrought within this kingdom. An entry thereof to be made by the commiſſioners of the cuſtoms in a particular book.

If ſhipped without ſuch oath, certificate, and entry, it is forfeited, and may be ſeized by any perſons; and the proprietor forfeits double the value.

The maſter of any ſhip belonging to a ſubject, knowingly permitting the ſhipping, forfeits 200 l. and if it be a man of war, the captain likewiſe forfeits his employment, and is rendered incapable of any office, civil or military.

Officers granting a cocket, before certificate be produced, and entry made by the commiſſioners, forfeit 200 l. and are rendered incapable of any other place.

When ſeized, proof of its being foreign, &c. is to lie on the proprietor or claimer.

By the ſtatute of the 8th and 9th, and 9th and 10th of Will. III. watches, ſword-hilts, wrought plate, and other ſilver manufactures, of the fineneſs of 11 ounces 10 penny weight to every pound troy; ſo many may be exported yearly, as ſhall be allowed by the commiſſioners of the cuſtoms, or any three of them.

But boxes, caſes, or dial-plates of gold, ſilver, braſs, or other metal, for clocks or watches, may not be exported without the movements made up fit for uſe, with the maker's name graved thereon, upon forfeiture, and 20 l.

ILVER-*leaf*, is that which the goldſmiths have reduced into fine thin leaves, to be uſed by gilders. See *Gold*-leaf.

ILVER-*wire*, is ſilver drawn through the holes of a wire-drawing iron, and by this means reduced to the fineneſs of a thread or hair: but, for the manner of drawing it, ſee *Gold*-wire.

ell-SILVER, is made of the threads of ſilver leaves, or of the leaves themſelves: uſed in painting and ſilvering certain works; being prepared in the ſame manner as ſhell-gold. See *Gold*.

LVER, in chemiſtry is called luna, moon; and ſeveral preparations are made from it; particularly a tincture of

LVER, made by diſſolving thin ſilver plates, or ſilver ſhot in ſpirit of nitre; and pouring the diſſolution in another veſſel full of ſalt-water. By this means the ſilver is immediately precipitated in a very white powder, which they waſh ſeveral times in ſpring-water. This powder, they put into a matraſs; and pour rectified ſpirit of wine, and volatile ſalt of urine upon it; which is left to digeſt in a moderate heat for 15 days; during which the ſpirit of wine aſſumes a beautiful ſky-blue colour, and becomes an ingredient in ſeveral medicines. This is called potable ſilver, *argentum potabile*.

LVER is likewiſe converted into chryſtals, by means of the ſame ſpirit of nitre, which is called vitriol of ſilver.

The *lapis infernalis argenteus*, is nothing but the cryſtals of ſilver melted with a gentle heat in a crucible; and then poured into iron moulds.

LVER-*gros*. A money of accompt uſed in Sileſia; 12 pfennins making the ſilver gros, and 30 ſilver-gros the rix-dollar, or 4 s. 6 d. ſterling.

LVER *Dollar* of Sweden, is the third of the rix-dollar, or 1 s. $6\frac{2}{3}$ d. ſterling.

LVER *Marc*, of Sweden, is the fourth of the ſilver dollar, or $4\frac{2}{3}$ d. ſterling.

ve SILVER. See *Mercury*.

LVERING. The covering of any work with ſilver-leaf. It is uſual to cover wood, metals, paper, or ſuch like; which is performed either with fire, oil, or ſize. Metal-gilders ſilver by the fire, and painter-gilders all the other ways. See *Gilding*.

LVERSMITH. See *Goldſmith*.

LVESTRIS, or *Sylveſtris*. A red grain or ſeed, uſed by ſome to dye in ſcarlet. See *Dying*.

The tree that produces it is peculiar to the province of Guatimala in New Spain; and is not much unlike that which produces the cochineel, only in this, that the fruit, containing the grain, is ſomewhat longer than that of the

cochineel tree. When the fruit of the former is ripe, it opens of itſelf, and caſts out its ſeed upon a gentle ſhaking; when the Indians gather it in earthen plates ſet under the tree for the purpoſe. Eight or ten of theſe fruits yield about an ounce of ſeed; whereas four of the cochineel fruits yield an ounce of inſects. Theſe two drugs are much like one another, as to the eye, but prove very different; the tincture of cochineel being infinitely more beautiful than that of the ſilveſtris. See *Cochineel*.

SIMPLE. Something not mixed or compounded. In pharmacy there are ſimple remedies, and compounds; the former of which are uſually preferable to the latter.

SIMPLE, in botany, is a uſual name given to all herbs and plants; as having each its particular virtue, whereby it becomes a ſimple remedy: but the ſimples brought from the Levant, and the Eaſt Indies, were not known among Europeans till about the year 1200.

SIMPLES, in weaving, thoſe bunches of ſmall threads tied a-croſs the perpendicular lines, or packthread cords, which the draw-boys pull, to make the figure riſe. See *Weaving*.

SINCOPORA. A promontory of Malacca, in the Eaſt-Indies, in Aſia, ſituated in 2 deg. of N. lat. oppoſite to the iſland of Sumatra, which, with this cape, form the ſtreights of Sincopora.

SINICAL *Quadrant*. A kind of quadrant furniſhed with an index, and two ſights to take altitudes by; and beſides, its ſide, or face, covered over with ſines, drawn from each ſide, interſecting each other, whereby the ſeamen can ſolve, by inſpection, any problem in plain-ſailing. See *Sailing*.

SINIGALIA. A port-town of Italy, in the Pope's territory and duchy of Urbino, ſituated on the gulgh of Venice, in 14 deg. 35 min. of E. lon. and 43 deg. 30 min. of N. lat. 37 miles S. E. of Urbino.

SINKING, ſignifies falling, or ſettling downwards; in which ſenſe may be underſtood the ſurpluſſes of ſuch duties as are applicable to the ſinking-fund. See Sinking *Fund*.

SINOPE. A port-town of Aſiatic Turky, ſituated on the Euxine ſea, in 36 deg. of E. lon. and 42 deg. 25 min. of N. lat. 80 miles N. of Amaſia.

SIPHANTO. An iſland of the Turkiſh Archipelago. See *Turkiſh* Iſlands.

SIPHANTO, is alſo a name given to a dimity manufactured in this iſland.

SISTER. A corn meaſure uſed at Bergen-op-zoom; 63 making the laſt of wheat, and 28 $\frac{1}{2}$ that of oats.

SIVADIERE. A corn meaſure uſed in Provence in France, particularly at Marſeilles: 8 of which make the hemina of the country; and the ſivadiere of wheat ſhould weigh about 7 lb. avoirdupoiſe.

SIZE. An inſtrument uſed to find the weight of fine round pearls. See *Pearl*.

This inſtrument conſiſts of five thin pieces or leaves, about two inches long, and half an inch broad, faſtened together at one end by a rivet. In each of theſe are ſeveral round holes drilled, of different diameters. Thoſe in the firſt leaf ſerve for weighing pearls from half a grain to 7 grains: thoſe of the ſecond, for pearls from 8 grains, or 2 carats, to 5 carats: and thoſe of the fifth, for pearls, from 6 $\frac{1}{2}$ to 8 $\frac{1}{2}$.

SKARFED, in ſhip-building, is the joining or letting of one piece of timber into another.

SKELSKOR. See *Denmark*.

SKERRIES. An iſland, or rock, near Holyhead in the county of Angleſea. By the ſtatute of the 3d of Geo. II. it was enacted, That all the powers and duties granted in letters-patent, bearing date at Weſtminſter July 13, in the 13th of Anne, to William French, eſq; for erecting a lighthouſe on this iſland, ſhould have continuance for ever: ſubject to a proviſo, as to the maintaining of the lighthouſe in the letters-patent contained, and to the truſts in the act aforementioned; and ſhould be veſted in Sutton Morgan, clerk, who married the only ſurviving child of the ſaid William French.

That the ſaid Sutton Morgan, his heirs and aſſigns, might demand of maſters and owners of every ſhip or bottom, paſſing, croſſing, or ſailing, in or thro' St. George's

channel, by Holyhead, or Wicklow, to or from any foreign port; or which ſhould paſs, or croſs the ſaid channel, to or from any place in Great Britain ſouthward of Holyhead from and to Wicklow, or any place northward thereof in Ireland; or that ſhould paſs, croſs, or ſail, from any place northward of Holyhead, and ſail between Holyhead and the calf of Man, or any way in St. George's channel to the ſouthward of Dublin: and likewiſe from all coaſters paſſing to and from any place in Great Britain, north of Holyhead, from or to any port ſouth thereof, 1 d. *per* ton coming into, and the like ſum *per* ton going out of the ſaid ports in Great Britain or Ireland, and double ſuch duties for any foreign ſhip. That ſhips loaded with coals in Great Britain north of Liverpool for Ireland, or the greateſt part of their loading being coals, and paſſing from Great Britain to Ireland, ſhould only pay one voyage in every year; the ſame to be paid the firſt voyage yearly, before clearing out of the cuſtom-houſes, either in Great Britain or Ireland. That in conſideration of the benefit which the packet-boats, ſailing between Holyhead and Dublin, receive by the ſaid lighthouſe, the poſt-maſter general ſhould pay to the ſaid Sutton Morgan, the annual ſum of 50 l.

SKIE. One of the greateſt weſtern iſlands in Scotland, divided from the counties of Roſs and Inverneſs by a narrow channel; being upwards of 60 miles in length, and 20 in breadth.

SKIFF, or *Squiff*, the leſs of two ſhip-boats; ſerving chiefly to go aſhore in, when the ſhip is in harbour. See *Boat*.

SKILLING. A Dutch coin, worth 6 $\frac{3}{10}$ d. ſterling; and 3 $\frac{1}{3}$ make the guilder: but the Flemiſh ſkilling is 6 $\frac{3}{4}$ d. ſterling, and 2 $\frac{6}{7}$ make the Flemiſh guilder.

SKIN, in commerce, is particularly uſed for the membrane ſtripped off the animal, to be prepared by the tanner, ſkinner, currier, and parchment-maker. See *Hide*, *Tanning*, and *Currying*.

The uſe of ſkins is very ancient; the firſt garments in the world being made thereof: the Danes, and other northern nations, having a long time dreſſed in ſkins.

Moroccos are made of the ſkins of a kind of goats. See *Morocco*.

Parchment is uſually made of ſheep-ſkins; ſometimes of goat-ſkins. See *Parchment*.

Vellom is a kind of parchment made of the ſkin of an abortive calf, or at leaſt of a ſucking calf. See *Vellom*.

The true ſhammy is made of the ſkin of an animal of the ſame name; tho' frequently counterfeited with goat and ſheep-ſkins. See *Shammy*.

Shagreen is prepared at Conſtantinople, of the hind-part of the ſkin of a mule, or rather aſs of that country, prepared and tanned, and when ſoft and manageable, ſtretched on a frame and expoſed to the ſun. This done they ſprinkle muſtard-ſeed on the ſkin; taking care to rub it ſeveral times over with the hand: by means whereof, and the heat of the ſun, the grain of the leather is raiſed up, and there hardened. See *Wool* and *Shagreen*.

SKINNER. A perſon who buys raw ſheep-ſkins, and takes off the wool; ſelling the pelts to be converted into leather by the tanner, currier, and parchment-maker, for other uſes.

SKINNERS *company of London*, was incorporated by letters-patent of the 1ſt of Edw. III. in 1327, by the appellation of The maſter and wardens of the guild or fraternity of the body of Chriſt, of the ſkinners of London; which was confirmed by Henry VI. in 1438, whereby every perſon, upon his being admitted into the freedom of the company, is to be preſented to the Lord Mayor: and by theſe grants the corporation was reſtrained from making by-laws.

The government of this company is veſted in a maſter, four wardens, and ſixty aſſiſtants, with a livery of 137 members, who pay each, upon their being admitted, a fine of 15 l. having a ſtately hall on Dowgate-hill, to tranſact their buſineſs in.

The members of this company pay no quarterage, which is owing to the great eſtate they are poſſeſſed of; out of which, according to the wills of the ſeveral donors, they annually pay to charitable uſes about 700 l.

SKIPPER. The name given to a merchant, or maſter of trading ſhips coming from Holland.

SKIROS. An iſland of the Turkiſh Archipelago. See *Turkiſh* Iſlands.

SLAB. An outſide ſappy plank, or board, ſawed off from the ſides of a timber tree.

SLATE. A blue fiſſile ſtone, very ſoft when dug out of the quarry, and on that account eaſily cut or ſawed into thin long ſquares, or eſcallops, to ſerve inſtead of tiles for the covering of houſes; ſometimes alſo to make tables of, and for pavements, or grave-ſtones.

The ancients were unacquainted with the uſe of ſlate, and inſtead thereof covered their houſes with ſhingle. Beſides the blue ſlate, there is in England a greyiſh ſlate, called alſo Horſham-ſtone, from a town in Suſſex of that name, where the greateſt quantities of it are found. The blue ſlate is a very light, laſting, and beautiful covering; but expenſive, in regard the roof muſt be firſt boarded over, the ſlates hung on tacks, and laid with finer mortar than tiles. The grey ſlate is chiefly uſed in covering of churches, chancels, and chapels: it is dearer than tiles, but far more durable. The timber of the roof muſt be very ſtrong for theſe grey ſlates, they being almoſt double the weight of tiles.

To judge of the goodneſs of ſlate, Mr. Colepreſs, in the Philoſophical Tranſactions, orders it to be knocked againſt any hard body, to make it yield a ſound; if the ſound be good and clear, the ſlate is firm, otherwiſe it is crazy. Another method of proving its goodneſs, is by weighing it exactly, then letting it lie ſix or eight hours in water, and wiping it very clean; if it weighs now more than it did before, it is of that kind that ſoaks in water, and therefore will not endure, without rotting the lath or timber. Another method of trial is, by placing a ſlate half a day perpendicularly in a veſſel of water, ſo as to reach a conſiderable height above the level thereof: if the ſlate be firm and cloſe, then it will not draw water; that is, the water will not have aſcended above half an inch above the level of the water in the veſſel, nor that perhaps any where but at the edges, the new texture whereof might be looſened by hewing; but a bad ſtone will have drawn the water to the very top, be it as high as it will. There are ſlates in ſeveral places, which the moſt experienced ſlaters, or coverers, conjecture to have continued on houſes ſeveral hundred years, and are yet as firm as when firſt put up.

SLAVE. A perſon in the abſolute power of a maſter, either by war or conqueſt.

The Romans called their ſlaves *ſervi*, from *ſervare*, to keep or ſave, being ſuch as were not killed; but ſaved to yield money either by ſale, or by their work. Tho other authors are of opinion, that the Roman name, *ſervi* might come from that of *Serbi*; as that of ſlaves, from Sclavi, a people.

We find no mention of ſlaves before the deluge; but immediately after, in the curſe of Canaan, Gen. ix. 25, whence it is eaſily inferred, that ſervitude commenced ſoon after that time: for in Abraham's days we find it generally eſtabliſhed. Some will have it to commence under Nimrod; becauſe it was he who firſt began to make war, of conſequence to make captives, and to bring ſuch as he took, either in his battles or irruptions into ſlavery. Among the Romans, when a ſlave was ſet at liberty, he changed his name into a ſur-name, and took the nomen or prænomen of his maſter; to which he added the cognomen, or nick-name, he had been called by when a ſlave.

By the civil law, the power of making ſlaves is eſteemed a right of nations, and follows as a natural conſequence of captivity in war. The Lacædemonians, ſome ſay others that the Aſſyrians, firſt introduced the practice which the Romans not only approved of, but even invented new ways of making ſlaves: for inſtance, a man born free among them might ſell his freedom, and become a ſlave. This voluntary ſlavery was firſt introduced by a decree of the ſenate, in the time of the Emperor Claudius, and at length abrogated by Leo. The Romans had the power of life and death over their ſlaves which no other nations had: but this ſeverity was afterwards moderated by the laws of the emperors; Adrian, particularly, made it a capital crime to kill a ſlave without cauſe. The ſlaves were eſteemed the proper goods

their maſters, and all they got belonged to them; but if the maſter was too cruel in his domeſtic corrections, he was obliged to ſell his ſlave at a moderate price. As ſlavery was not aboliſhed by the goſpel, the cuſtom of keeping ſlaves laſted a long time in Chriſtendom. In the time of Louis the groſs, they were ſo numerous in Egypt, that it was found a difficult matter to quell a body of them who had made head againſt their maſters: yet Bartolus, who lived in 1360, obſerves, there were none left in his days.

Slavery is abſolutely aboliſhed in England and France, as to perſonal ſervitude; where ſervants are not ſlaves, but only ſubject to certain determinate ſervices; and it is ſaid, that the moment a ſlave ſets his foot upon Engliſh ground, he becomes free.

Slaves make a conſiderable article of the traffic in America. See *Negro*, *Africa*, and *Guinea*.

SLEASY-*Holland*. A kind of holland thus called, becauſe made in Sileſia, in Germany; and which, from its ſlightneſs, occaſions all thin, ſlight, illwrought hollands, to be called ſleaſy.

SLESWICK, or *South Jutland*, is bounded by North Jutland on the north; by the Baltic ſea on the eaſt; by Holſtein on the ſouth; and by the German ocean on the weſt; being 60 miles long, and 45 broad, over which the King of Denmark and Duke of Holſtein are joint ſovereigns; only there are ſome towns and bailliages in which theſe princes have a ſeparate juriſdiction. See *Denmark* and *Germany*.

SLIDING *rule*. A mathematical inſtrument, ſerving to work queſtions in gauging, and meaſuring, without the uſe of compaſſes; merely by the ſliding of the parts of the inſtrument one by another; the lines and diviſions whereof give the anſwer by inſpection.

This inſtrument is variouſly contrived, and applied by various authors; particularly Everard, Coggeſhal, Gunter, Hunt, and Partridge; but the moſt uſual and uſeful ones, are thoſe of Everard and Coggeſhal; the deſcription and uſes whereof are as follow:

Everard's ſliding rule is principally uſed in gauging; being ordinarily made of box, a foot long, and an inch broad, and $\frac{6}{10}$ of an inch thick. It conſiſts of three parts; a rule, on each ſide whereof is a groove; and two ſmall ſcales, or ſliding pieces, which ſlide in the grooves: when both theſe pieces are drawn out to their full extent, the inſtrument is three feet long.

Coggeſhal's ſliding rule is principally uſed in meaſuring of the ſuperficies, or ſolidity of timber, and ſtone: it conſiſts of two rulers, each a foot long, which are framed or put together various ways; ſometimes they are made to ſlide by one another, like glaziers rules; ſometimes a groove is made in the inſide of a common two-foot joint rule, and a thin ſliding piece put in, with Coggeſhal's lines added on that ſide: but the moſt uſual and commodious way, is to have one of the rulers ſlide along a groove made along the middle of the other.

SLING, at ſea, means to hang a bowl with liquor ſo in a rope, that it may comply with all motions of the ſhip without ſpilling the liquor.

SLINGING, is uſed variouſly at ſea; but chiefly for the hoiſting up caſks, and other heavy things with ſlings, that is, contrivances of ropes ſpliced into themſelves at either end, with one eye big enough to receive the caſk, or other thing, to be ſlung.

SLOOP. A ſort of floating veſſel, other called ſhallop. See *Shallop*.

In the Britiſh navy ſloops are commonly tenders on the men of war, and are uſually about 60 ton, carrying about 30 men: but ſometimes they are diſtinct veſſels of war, carrying about 16 guns. See *Navy*.

SLOP-*Shop-keeper*, is a perſon who furniſhes ſeamen with all kind of ſhirts, jackets, trouzers, and other marine apparel; which, on ſhip-board, are called ſlops.

SLUICE. A frame of timber, ſtone, or other matter, ſerving to retain, or raiſe the water of a river, and, on occaſion, to let it paſs; ſuch is the ſluice of a mill, which ſtops and collects the water of a rivulet, to let it fall, at length, with greater plenty on the mill-wheel: ſuch alſo are thoſe uſed as vents, or drains, to diſcharge water off

land. And ſuch are the ſluices of Flanders, which ſerve to prevent the waters of the ſea overflowing the lower land, except when there is occaſion to drown them.

Sometimes there is a kind of canal incloſed between two gates, or ſluices, in artificial navigations, to ſave the water, and to render the paſſage of boats equally eaſy, and ſafe, upwards and downwards; as in the ſluices of Briare in France, which are a kind of maſſive walls built parallel to each other, at the diſtance of 20 or 24 feet, cloſed with ſtrong gates at each end; between which is a kind of canal or chamber, conſiderably longer than broad, wherein a veſſel being incloſed, the water is let out at the firſt gate, by which the veſſel is raiſed 15 or 16 feet, and paſſed out of this canal into another much higher. By ſuch means a boat is conveyed out of the Loire into the Seyne, tho' the ground between them riſes above 150 feet higher than either of thoſe rivers.

SLUYS. A port-town of Dutch Flanders, ſituated in 3 deg. 15 min. of E. lon. and 51 deg. 18 min. of N. lat. oppoſite to the iſland of Cadſant, 10 miles N. E. of Bruges, and 21 miles N. W. of Ghent.

SMACK, is a kind of veſſel with one ſail.

SMALL COAL, uſed for lighting of fires, is prepared from the ſpray, and bruſh-wood, ſtripped off from the branches of coppice-wood, ſometimes bound in bavins for that purpoſe, and ſometimes prepared without binding. The wood they diſpoſe on a level floor, and ſetting a part of it on fire, throw on more and more as faſt as it kindles; whence ariſes a ſudden blaze, till all is burnt that was near the place. As ſoon as all the wood is thrown on, they caſt water on the heap, from a large diſh, or ſcoop; and thus keep plying the heap of glowing coals, which ſtops the fury of the fire; while, with a rake, they ſpread it open, and turn it with ſhovels till no more fire appears. When cold they are put up into ſacks and ſold for uſe. See *Coal*.

SMALT. A kind of mineral matter, prepared and purified abroad, and brought to England, ſometimes in form of a blue powder, and ſometimes in cakes; chiefly uſed with ſtarch, to give linens the finer and clearer caſt; and beſt known by the name of ſtone, or powder-blue.

The preparation of ſmalt, as practiſed in Hermanduria, we find deſcribed in the Philoſophical Tranſactions by Dr. Krieg, who tell us, that the matter it is made of, is the mineral ſtone called cobalt, or cadmia, which being pulverized, and the lighter ſtuff waſhed away, the remainder is laid on a furnace, underneath and beſide it, the flames whereof are reverberated over it; a matter is ſeparated from it in form of a ſmoak, which ſticking to the walls, makes what we call arſenic. See *Arſenic*.

When the cobalt has done ſmoaking it is cooled, mixed with pot-aſhes, and powder of white flint-ſtones, the mixture put in pots, and melted for five or ſix hours in a furnace: by this means the matter is formed into a blue glaſs, which being put into cold water, cracks, and grows tender, and is at length powdered by an engine, the fineſt part ſeparated by a ſieve, put into a mill, and ground in water into an impalpable powder, which by waſhing is ſtill further ſeparated from all coarſeneſs, barrelled up and ſent away.

SMARAGD. A precious ſtone of a green colour, very beautiful and brillant, but brittle: called alſo emerald. See *Emerald*.

The oriental ſmaragds are moſt eſteemed, as being the hardeſt, and their ſplendor the moſt vigorous; ſo as even to tinge the air with their greenneſs. Great virtues are aſcribed to the ſmaragd or emerald: Carden, and others ſay, it reſiſts plagues, poiſons, and dyſenteries, and that it refreſhes the ſpirits.

SMELTING, among metalliſts, the melting of a metal in the ore, in a ſmelting furnace; in order to ſeparate the metallic from the earthy and other parts.

Smelting, in propriety, is reſtrained to large works, wherein ores from the mines are melted down and ſeparated: in ſmaller works they do not ſay ſmelting, but melting.

SMITH. A perſon employed in ſeveral branches of manufacturing iron and ſteel; as for grates, locks, jacks, paliſadoes, anvils, files, ſaws, ſpring-curtains, printers work, coach-tyre, and guns. Some of theſe are uſually called

white

white-ſmiths, and the black-ſmith is he who makes ſhoes for horſes and other coarſe work.

SMOKED, or *Red herring*. See *Herring-fiſhery*.

SMUGGLING. A cant word for the running of goods, or the clandeſtine running them without paying cuſtom.

SMUGGLER. One who makes a trade of doing any thing ſecretly, and unjuſtifiably; but the name is more notoriouſly applied to thoſe who import foreign goods into a nation, without paying the duties or cuſtoms appointed.

Tho' the ſmugglers of wool are the moſt prejudicial, they are not the only ſort of men who contribute to the impoveriſhment of their country, and the ruin of the fair trader, to which they have been long incited by the high duties on French wines and brandies, and lately by the prohibition of cambrics and French lawns: for it is evident that deſperate men ſet the danger at defiance for the ſake of the profit; and it is evident, that there is no way ſo effectual to aboliſh the evil, as to remove the temptation. It muſt be granted, that the duties are ſo rigidly levied in the port of London, that it is next to an impoſſibility for any conſiderable fraud to be committed there; but theſe duties are not ſo punctually collected in other places, where there are a ſpecies of importers, little better than licenſed ſmugglers, who have moſt inviting opportunities ſo to manage matters with the officers, that ſometimes goods are landed without any entry at all, and ſometimes fraudulent entries are made, that the officer may ſeem to DO, and the trader to PAY his duty.

That the great number of ſmugglers are of great detriment to trade, is very apparent; becauſe they carry nothing but bullion, or wool, out of the kingdom; and return principally with the commodities of France: they are the neceſſary cauſe of creating ſeveral officers, maintaining ſloops, ſmacks, and other veſſels, for their detection; and they furniſh a pretence for encumbering the nation with the addition of many more. Thus they become doubly pernicious, and tempt others to do the like, for fear of being ruined in their lawful trades by being underſold.

When the brave and honeſt Admiral Vernon, during the late rebellion, ſo prudently and vigilantly protected the Britiſh coaſts, againſt the threatened invaſion of France, he was ſenſible that the Engliſh ſmugglers carried intelligence to the French, and were the moſt perfidious traytors to their country: at that time, according to the Admiral's intelligence, 700 ſmugglers had their reſidence in and about the neighbourhood of Deal, Dover, Ramſgate, and Folkſtone, who perpetually proſecuted an infamous trade with France; a trade which had converted thoſe employed in it, from honeſt induſtrious fiſhermen, to lazy, drunken, and profligate ſmugglers: yet, till there is a proper ſubordination introduced, and the qualification for voting ſomething altered from what it is at preſent, no effectual cure for this growing evil can be ſeaſonably applied; becauſe, theſe very ſmugglers, their relations, friends, dealers, or acquaintance, are the electors for members to ſerve in parliament, and, it muſt be naturally concluded, have ſome conſiderations for their ſervices.

So numerous, ſo deſperate, ſo pernicious, were the increaſing gangs of ſmugglers, and the laws of cuſtoms or exciſe ſo much put in defiance, tnat the legiſlature were under an abſolute neceſſity of concerting ſome preventive meaſures againſt ſo obnoxious an evil. In conſequence of which, an act of parliament was paſſed in 1746 to enforce the laws againſt ſmugglers; the preamble ſetting forth, That divers diſſolute perſons had aſſociated, and entered into confederacies to ſupport one another, appearing in great gangs in ſeveral parts of the kingdom, carrying fire arms and other offenſive weapons, to facilitate the pernicious practice of ſmuggling, to the great diſcouragement of the fair trader, and the loſs of the public revenue, wherein it was enacted, "That if any perſons, to "the number of three or four, armed with ſuch offen- "ſive weapons, ſhould be aſſembled, in order to aſſiſt in "the illegal running of wool, or other goods prohibited "to be exported; or in the running or carrying away "prohibited or uncuſtomed goods, or goods liable to "pay any duties, which had not been paid or ſecured; "or in the illegal relanding of any goods ſhipped upon "debenture or certificate; or in reſcuing the ſame after "ſeizure; or in reſcuing any perſon apprehended for any "of the offences, made felony by this, or any other act "relating to the revenues of cuſtoms or exciſe; or in "the preventing the apprehending any ſuch: or if three, "or more, ſhould have their face blacked, or wear any "vizard, maſk, or other diſguiſe, when paſſing with "ſuch goods; or ſhould forcibly hinder, or aſſault, any "of the officers of the revenue in ſeizing any ſuch goods; "or dangerouſly wound any ſuch in his attempting to "go on board any veſſel, within the limits of any port, "or wound him on board, or in the execution of his "office; the offender being convicted, ſhould be ad- "judged guilty of felony, and ſuffer death as in caſes of "felony, without benefit of clergy: and perſons convicted "within Scotland, ſhould ſuffer death, and confiſcation of "moveables."

By this act, if any perſons, charged with ſuch offences ſhould not ſurrender themſelves, within 40 days after iſſuing a proclamation for that purpoſe, they ſhould ſuffer death. If any perſon, after the time appointed for the ſurrender of any charged with ſuch offences, ſhould harbour or ſuccour them, he ſhould be tranſported for ſeven years. If any officer, in endeavouring to apprehend offenders againſt this act ſhould be beaten, or killed, or the goods ſeized ſhould be reſcued; in ſuch caſes the inhabitants of every rape, lath, or hundred, where the facts ſhould be committed, ſhould make full ſatisfaction for the reſpective damages, and ſhould alſo pay 100 l. to the repreſentatives of each perſon ſo killed: but the ſum for beating is not to exceed 40 l. or for the loſs of goods 200 l. Beſides, for the diſcovering of ſuch offenders, who ſhould be proclaimed, and not ſurrender within time, that every perſon who ſhould take ſuch offender in England, ſhould receive 500 l. for every ſuch perſon.

But, while ſuch large advantages are to be made from any branch of illicit traffic, while the golden branch is in view, and gives an invitation to the reſolute adventurer, ſmuggling will be continued: life will be deſpiſed for the ſake of intereſt, and the fears of death will be ſuperſeded by the hopes of an accumulated heap of treaſure. Penal laws have been found ineffectual: the only way for a total ſuppreſſion of ſuch abominable evils, is to purſue the political rule; and we can never expect to find the abatement of ſmuggling, till there is a diminution of the exceſſive duties: by removing the temptation, clandeſtine trade muſt be ſuffocated; the fair market flouriſh in a happy condition; ſhop-keepers ſupport their credit; bankruptcies add no diſgrace to the nation; and the whole community ſhare the bleſſings of a free, a neceſſary, and advantageous branch of commerce.

By a royal ordinance in France of 1687, penal laws were enacted againſt the guards, that ſhould have an underſtanding with the merchants to favour frauds: and by another of 1701, it was ordained, that every trader or merchant, concerned in defrauding the king of his duties ſhould be declared infamous, and incapable of any buſineſs or traffic during life; in conſequence of which they were prohibited carrying it on, it being alſo enjoined that no perſons whatſover ſhould have any correſpondence with them in point of trade; and that their ſhops ſhould be walled up, their coats of arms and titles eraſed, and their names and ſurnames written upon a tablet to be ſet up in the hall or court of conſular juriſdiction, if there be one in the ſame town, and if not, in that neareſt to it; that their factors, agents, carriers, and others that ſhould be concerned in theſe frauds, be expoſed to public ſhame in the pillory, during three market days; and that the receivers, comptrollers, overſeers, guards, and others employed in the cuſtom-houſes, accomplices alſo in theſe frauds, be condemned to the gallies for nine years, and their places confiſcated.

The penalty of death is alſo, by other ancient edicts, denounced againſt the officers of the revenue, that cauſe falſe regiſters to be made, or give falſe copies of them, ſigned with their hand; or counterfeit the hand of the judges, and other commiſſioners.

That

That any private perſon, on whom the crown has a demand, who ſhould have counterfeited the marks of perſons employed in the cuſtomhouſes, their licences, receipts, paſſports, certificates, or other inſtruments, be condemned for the firſt time, to be whipped and baniſhed for five years, with a fine that ſhould not be leſs than a fourth part of his eſtate, or effects; and in caſe of his offending a ſecond time, to the gallies for nine years, with a fine that ſhould not be leſs than a moiety of his effects.

Above 20,000 l. a year is expended by the Britiſh government, in maintaining cruizers againſt the ſmugglers; who, notwithſtanding the vigilance of the officers, ſtill continue their contraband trade, and particularly from the iſle of Man.

SMUT. A diſeaſe in corn, whereby the pulp or meal thereof is damaged; and its natural ſubſtance, taſte, and colour altered.

The ſmut is uſually aſcribed by the huſbandmen to the exceſſive rankneſs of the ſoil, to the manuring the land with rotten vegetables, as ſtraw, hawn, and fern, and to the ſowing ſmutty ſeed.

SMYRNA. A city and port-town of Aſiatic Turky, ſituated on a bay of the Archipelago, in Leſſer Aſia, in the province of Ionia, in 27 deg. of E. lon. and in 37 deg. 30 min. of N. lat. 100 miles north of the iſland of Rhodes, and 200 miles S. W. of Conſtantinople. See *Turky*.

SNAKE *root*. See *Serpentaria*.

SNATCH *block*, in a ſhip, is a great block, with a ſhiver in it, and a notch cut through one of the cheeks, by which a rope is reeved into it very expeditiouſly, as well in the middle as at the ends: it is commonly faſtened to the main-maſt with a ſtrap, and uſed for the winding tackle.

SNUFF. A preparation of tobacco, made by reducing it into a powder, fit to be taken at the noſe, in order to purge, or clear the head of pituita. See *Tobacco*.

Ordinarily, tobacco is the baſis of ſnuff, other matters being only added to give it a more agreeable ſcent. The kinds of ſnuff, and their ſeveral names, are numerous, and new ones are daily invented: ſo that it would be difficult, not to ſay impoſſible, to give a detail of them: however, the three grand ſorts are, firſt, the granulated; the ſecond, an impalpable powder; and the third, the bran, or coarſe part remaining after ſifting the ſecond ſort.

By acts paſſed in the 1ſt and 5th George I. ſnuff made, mixed, or coloured with oaker, umber, &c. except water tinged with Venetian red, or fuſtick, yellow ebony, touch-wood, dirt, ſand, or tobacco duſt mixed therewith, is forfeited, with 3 l. for every pound weight, by the maker or ſeller.

The powers and proviſions relating to counterfeit tobacco, are to extend to the abuſes in making and mixing of ſnuff.

SNUFF-BOXES, are no inconſiderable article of trade; being made of gold, ſilver, braſs, or tin; as alſo of rich pebbles, wood, or tortoiſe-ſhell, ſet in thoſe metals: beſides, there is a new manufacture of ſnuff-boxes invented in France, made of paper, condenſed to a hard conſiſtence, and painted; but theſe ſnuff-boxes are likewiſe now made in England.

SOAP, or *Sope*. A kind of paſte, ſometimes hard and dry, and ſometimes ſoft and liquid; much uſed in waſhing and whitening linens, and for other purpoſes, by the dyers, perfumers, hatters, and fullers.

The principal ſoaps of Britiſh manufacture, are the ſoft, the hard, and the ball ſoap; the ſoft ſoap again is either white or green. Green ſoft ſoap is made of lees drawn from pot-aſh, and lime boiled up with tallow and oil. White ſoft ſoap is made after the ſame manner as green ſoft ſoap, the oil excepted, which is not uſed in the white. The other ſort of white ſoft ſoap is made from lees of the aſhes of lime, boiled up, at twice, without tallow, which is put out of the copper into the ſame ſort of caſks as are uſed in green ſoft ſoap.

Ball-SOAP, commonly uſed in the North, is made with lees from aſhes and tallow, put out of the copper into tubs or baſkets, with ſheets in them, and immmediately, while ſoft, made into balls.

Hard SOAP, is made of lees from aſhes and tallow, and moſt commonly boiled at twice.

Mr. Tew addreſſes himſelf to the hard ſoap-makers, in the following manner:

The proceſs for making hard ſoap is exceeding plain and eaſy, when certain unerring rules are laid down for the workman to know the certain weight or ſtrength of his lees, on which almoſt every thing depends. As this plan is entirely devoted to the hard ſoap-makers now carrying on the buſineſs, I take it for granted they are all maſters of mixing their wood-aſhes and lime properly to ſet their vats or tubs to extract the alcaline ſalt or lees from the ſaid aſhes.

To reduce this to a certainty, we muſt have recourſe to weights and ſcales; and as water is the body into which the ſalts are infuſed, we ſuppoſe the parts of any given, or certain quantity of water to conſiſt of one hundred and twenty-eight.

For inſtance; take a ſmall ſquare bottle, containing about 4 oz. make a weight with a piece of lead, the exact weight of the bottle; then filling the bottle with water, add in the weight-ſcale as many ſmall ſhot as will exactly balance the water in the bottle: when this is done, lay aſide the bottle and water, and the lead-weight the empty bottle weighed; then divide the ſhot very exactly into two equal parts; this firſt diviſion will be $\frac{64}{128}$; this weight being much too heavy for any uſe, divide your ſhot again; this ſecond diviſion will be $\frac{32}{128}$; this weight is likewiſe too heavy for uſe, divide your ſhot the third time, the weight will then be $\frac{16}{128}$, and is the firſt weight uſed in weighing lees: therefore take a piece of thin milled lead, and make a weight called $\frac{16}{128}$; then divide the ſhot the fourth time, this weight will be $\frac{8}{128}$; the fifth diviſion will be $\frac{4}{128}$; the ſixth diviſion will be $\frac{2}{128}$; and the ſeventh diviſion will be $\frac{1}{128}$ parts. A true and perfect ſet of weights being thus made, it remains now to ſhew their juſt value and uſe; inſtead of thoſe trifling and uncertain obſervations hitherto made uſe of, by an egg ſet afloat in the lees, or by the colour, or the pungency on the tongue, with many other fallacious ſymptoms.

The general run of common wood-aſhes will not increaſe the weight of water above $\frac{10}{128}$, and is too weak to mix with tallow; for which reaſon every ſoap-maker that charges his copper with lees of that weight, will find when the lees and tallow are incorporated in one body, and become ſoap, that the body is very thin, and his copper full of water inſtead of alcaline ſalt, that it is with great labour and trouble prevented from boiling over; and when the workman proceeds to grain the ſoap, that is, by ſeparating the water from the tallow and alcaline ſalt, now become one body, by throwing in common ſalt; the lees being thus weak, it will take a very great quantity of ſalt to ſeparate and raiſe the curd to the ſurface, and will, with great difficulty, be reſtrained from flowing over the copper at the criſis of this ſeparation.

At once, to obviate all theſe troubleſome and expenſive inconveniencies, purſue this plain method.

When a proper quantity of lees are drawn, in order to make them into ſoap, have recourſe to your bottle and ſcales, to know what they weigh, and inſtead of putting in the tallow, boil away the watery part of the lees till they weigh $\frac{15}{128}$ parts more than common water: be cautious in this experiment of breaking your bottle, by weighing the lees too hot: then charge what quantity of tallow you think proper; and when melted, damp the fire, and let it lye all night; in the morning the ſoap will appear under the ſcum of a blackiſh colour; and to know when a due proportion of lees are properly added, obſerve theſe plain ſymptoms.

When the fire is ſtirred up, and the ſoap begins to boil, take a very thin knife finely poliſhed, the blade about five inches long, and near half an inch broad; dip this knife into the ſoap about two inches, holding the edge upwards; if it wants lees, the tail that drops from the point of the knife will appear as thick as a thread, and ſeem full of little knots, eſpecially at the end; and the ſoap on the blade of the knife will appear thin and watery; and, on preſſing the flat of the thumb to the knife, drawing it back haſtily, no point of ſoap will remain on your thumb; but when a due quantity of lees are ſupplied, the following

unerring ſymptoms will appear. On dipping your knife, as before directed, the ſoap will fall from the point as fine as a hair, without knots, and very long; but the rule that never varies is, a fine white liſt will appear on the edge of your knife as broad as the edge of a ſixpence; and on preſſing your thumb as before directed, whilſt the ſoap is warm, againſt the blade of the knife, the ſoap will remain on your thumb with a point quite erect; when theſe ſymptoms appear, proceed to graining, and you will find half the ſalt will do when your lees are charged thus ſtrong.

The ſecond operation is ſo ſimple and eaſy, that it ſcarce deſerves notice; for when the half boil is thus made, it only wants to be re-boiled on clear ſmall lees, weighing two or three 128th parts, in order to clarify and tough the ſoap, to prevent the brittleneſs it would have if finiſhed in the firſt operation on ſuch ſtrong lees: when the light frothy ſcum is all boiled in, and the lees ſpout up clear through the curd, the ſoap is finiſhed, and fit to frame.

Perſons not acquainted with the nature of alcaline ſalt, will perhaps be afraid of boiling away their lees; though they may be aſſured nothing can evaporate but the water; and by boiling three pints of lees weighing ten, in a common ſaucepan, till they are waſted to one quart, they will find by their weight this fact demonſtrated.

July being the proper ſeaſon for cutting fern, nettles, thiſtles, beans, potatoes, peaſe, and every weed of the field, every hard ſoap-maker in the country will do well immediately to hire labouring men to cut all ſuch vegetables whilſt they are full of ſap, and abound with alcaline ſalts, and burn them as green as poſſible on a brick-hearth in ſome old chimney, not ſuffering the fire to burſt into flame; and when a proper heap of aſhes are burnt on ſuch hearths, whilſt they are glowing hot, ſprinkle on wood-aſh lees, weighing four or ſix $\frac{1}{28}$ parts, till the fire is quite extinguiſhed.

This plain, eaſy, cheap method will almoſt form the duſt of theſe vegetables into pot-aſh; and every ſoap-maker will find one buſhel of aſhes thus prepared, worth four buſhels of common wood-aſhes.

The ſame perſon alſo ſaid, that he would addreſs the landed intereſt, and prove paſt all exception, that if the uſe of hard ſoap becomes general, 100,000 l. will be ſaved this nation in two articles, foreign pot-aſhes and olive-oil; and to the people in the exciſe on ſoap, full 1-3d part thereof, being 30,000 l. as it is demonſtrable that 1 lb. of hard ſoap will anſwer all the uſes of 1 lb. and a half of ſoft ſoap. This being proved, every gentleman will perſuade, recommend, or command the uſe of hard ſoap in his family.

By an act of the 10th of Queen Anne, foreign ſoap ſhipped for exportation, and afterwards relanded, is forfeited, or the value, beſides the penalty of the bond; and there is to be paid upon all ſoap imported into Great Britain, 2 d. for every pound avoirdupois; which act is made perpetual by the 3d of George I.

SOAP-*earth*. A ſmooth unctuous ſort of earth found in the Levant, and uſed as a ſoap; which Dr. Smith tells us is only had in two places near Duraclea, ſix leagues to the eaſt of Smyrna. It is in effect a fine ſoap of itſelf, boiling and ſhooting up out of the earth; but ſhould be gathered always before ſun-riſe, and in mornings when there falls no dew; ſo that a ſtock muſt be laid up in the ſummer-months to ſerve all the year. In ſome places it comes up an inch or two above the ground; but the ſun riſing on it, makes it fall again; yet every morning there returns a freſh crop.

SOAPMAKER, or *Soapboiler*. A perſon who makes ſoap.

SOAPMAKERS *company of London*, was incorporated by letters-patent of the 13th of Charles I. dated the 25th of May 1638, by the name of The maſter, wardens, and commonalty of ſoapmakers of London; who conſiſt of a maſter, 2 wardens, and 15 aſſiſtants; but having neither livery nor hall, treat of their affairs in Guildhall.

SOCIETY. An aſſemblage or union of ſeveral perſons in the ſame place, for their mutual ſecurity, aſſiſtance, intereſt, or entertainmeut. See *Corporation*, and *Company*.

Royal SOCIETY. See *Royal* ſociety.

SOCIETY, in trade, is a compact or agreement, between two or more perſons, whereby they bind themſelves together for a certain time, and agree to ſhare equally in the profits and loſſes which ſhall accrue in the affair, for which the ſociety or copartnerſhip is contracted. There are ſeveral very conſiderable ſocieties of this kind in England; as the merchant-adventurers, the Turky, Eaſt India, Ruſſia, Eaſtland, Greenland, African, South-ſea, and Hudſon's bay companies; the inſtitutions and policies whereof ſee under their reſpective articles.

SOCONUSCO. A port-town of Mexico, in North America, the capital of the province of Soconuſco, ſituated on the Pacific ocean, in 98 deg. of W. lon. and 15 deg. of N. lat. 200 miles S. E. of Acapulco.

SOCOTORA. An iſland of the Indian ocean, ſituated in 53 deg. of E. lon. and in 11 deg. of N. lat. 120 miles N. E. of Cape Gardefoy in Africa. See *Zocotora*.

SODDER. See *Solder*.

SOFALA. Capital of the territory of Sofala in Africa, ſituated in 35 deg. of E. lon. and 20 deg. of S. lat. at the mouth of the river Sofala, 400 miles S. W. of Moſambique; where the Portugueſe have a ſettlement, and pretend that the natives are ſubject to them.

SOFT *herbs*. See Soft *Herb*.

SOGBU. See *Philippines*.

SOIL, in agriculture and gardening, denotes earth or ground, conſidered with regard to the quality of its mould for the production and growth of vegetables.

Mr. Bradley reduces all ſoils to three heads or kinds, which are ſand, loam or mother earth, and clay.

Gravels, and all the open ſoils, till we come to loam, are of the ſandy race; and the binding earths, from loam down to the ſtiffneſs of chalk, may be ranged under the clay kind.

Loam, or mother-earth, is the medium between the two, and includes all the intermediate kinds. A mixture of two or three of theſe ſoils is generally better than any ſimple ſoil, eſpecially where the hot and dry are mixed with the cold and moiſt. Clay laid on ſand or gravel, or ſand on clay, is the better manure.

It is not the nature of the ſoil alone, but its depth muſt alſo be regarded, and what ſoil is underneath: for the beſt ſoil, if it be not a foot deep, and lie on a ſtiff clay, or hard cold ſtone, is not ſo fertile as a leaner ſoil of greater depth, or lying on a warm lime-ſtone, ſand, or gravel; through which the ſuperfluous moiſture may deſcend, and not ſtagnate on the clay or ſtone, to chill the roots of the plants. Indeed, regard is to be had to the climate; for even in England, cold and moiſt clays are more fruitful in the ſouth than the north.

Some general rules with reſpect to ſoils are as follow: 1. All land that moulders to duſt with froſt, with all ſorts of warm lands, black mould, yellow clay, if not too wet, and that turns black after rain, are good for corn. 2. Lands bringing forth large trees and weeds, black thorn, thiſtle, and rank graſs, generally prove fruitful. 3. Strawberries, betony, and thyme, give indication to wood, and camomile to a mould diſpoſed for corn. 4. All land that binds after froſt and rain, and turns white, and full of worms, that is extremely moiſt, bears holly, yew, box, broom, heath, or moſs, is of a cold temperature. 5. Black, dun, and yellow ſand, and hot ſtoney gravel, are generally unfruitful.

SOK, or *Soc*. A long meaſure, uſed in the kingdom of Siam. See *Ken*.

SOL, or *Sou*. A French coin of billon, that is, copper, with a little ſilver mixed, worth 39-80ths of a penny ſterling; being equal to 12 deniers, or French pence, and the 20th part of the livre or pound.

The Dutch have alſo two kinds of ſols; the one of ſilver, called ſols de gros, and likewiſe ſchilling; the other of copper, called alſo ſtyver.

The ſol of Savoy is worth 3-4ths of a penny ſterling.

SOLAR. Something belonging to the ſun.

SOLAR *year*, conſiſts of 365 days, 5 hours, and 49 minutes, in oppoſition to the lunar year, which only conſiſts of 365 days. The ſolar year is either tropical or ſidereal.

SOLAR *tropical year*, is the ſpace of time, wherein the ſun returns again to tha ſame equinoctial or ſolſtitial point, which is always equal to 365 days, 5 hours, and about 49 minutes.

SOLAR *ſidereal year*, is the ſpace wherein the ſun comes back to any particular fixed ſtar, which is about 365 days, 8 hours, and 9 minutes.

SOLDANELLA, or *Sea-cabbage*. A ſmall plant of very ſlender roots, and leaves reſembling thoſe of the ariſtolochia. Its flowers are of a purple colour; and the whole plant, which is found abundantly on ſome coaſts of the ocean, and reputed good in the dropſy, ſhould be choſen new, and as little ſhattered as poſſible.

SOLDANIA *bay*. A bay of the Atlantic ocean, ſituated in 15 deg. of E. lon. and in 33 deg. 30 min. of S. lat. on the S. W. coaſt of Africa, a little N. of the Cape of Good Hope.

SOLDER, *Sodder*, or *Soder*. A metallic or mineral compoſition, uſed in ſoldering or joining together other metals.

Solders are made of gold, ſilver, copper, tin, biſmuth, and lead; always obſerving, that in the compoſition there be ſome of the metal to be ſoldered, mixed with ſome higher and finer metals.

Goldſmiths uſually make four kinds of ſolder; namely, ſolder of eight, where, to ſeven parts of ſilver, there is one of braſs, or copper; ſolder of ſix, where only a 6th part is copper; ſolder of four, and ſolder of three. It is the mixture of copper in the ſolder, that makes raiſed plate always come cheaper than flat.

The ſolder uſed by plumbers is made of two parts of lead to one of block tin. Its goodneſs is tried by melting it, and pouring the bigneſs of a crown-piece on a table; for, if good, there will ariſe little, bright, ſhining ſtars.

The ſolder for copper is made like that of the plumbers, only with copper and tin. For very nice works, inſtead of tin, they ſometimes uſe a quantity of ſilver.

Solder for tin is made of 2-3ds of tin, and one of lead: but where the work is any thing delicate, as in organ-pipes, where the juncture is ſcarce diſcernable, it is made of one part of tin-glaſs, and three parts of pewter.

SOLDERING, among mechanicks. The joining and faſtening together of two pieces of the ſame metal, or of two different metals, by the fuſion and application of ſome metallic compoſition on the extremities of the metal to be joined. See *Solder*.

In the ſoldering of metals they generally uſe borax in powder, and ſometimes roſin. As to iron, it is ſufficient to heat it red hot, and in this ſtate to hammer the two extremities together; by which means they become incorporated.

SOLDI, or *Soldis*. Monies of accompt uſed in ſeveral towns of Italy, as alſo in Geneva and Liege, but not of the ſame value; as 58 of Leghorn, 83 of Bologna, 63 of Geneva, 94 of Milan, 60 of Nova, and 96 of Genoa, make 2 s. $5\frac{1}{4}$ d. ſterling.

SOLENDALE. A port town of Norway. See *Denmark*.

SOLES. A ſort of tanned hides. See *Hides*.

SOLICITOR. A perſon employed to follow, and take care of other perſons ſuits depending in courts of law or equity, formerly allowed only to nobility, whoſe menial ſervants they were, but now frequently uſed to others, to the great increaſe of champarty and maintenance.

SOLIMAN-DOSTYN. The Indians ſo call an excellent root for dying, found in ſome provinces of Perſia, and called by the Perſians *ruynas*.

SOLOMON's *iſlands*. A cluſter of iſlands in the Pacific ocean, ſituated between 130 and 140 deg. of W. lon. and between 7 and 12 deg. of S. lat. of which we have very little knowledge; no Europeans having thought fit to ſend any colonies thither.

SOLOTA. A money of Turky, worth about $10\frac{3}{4}$ d. ſterling.

SOLSTICE, in aſtronomy. The time when the ſun is in one of the ſolſtitial points, that is, when he is at his greateſt diſtance from the equator, which is 23 deg. and a half: thus called, becauſe he then appears to ſtand ſtill, and not to change his place in the degrees of the zodiac any way; an appearance owing to the obliquity of our ſphere, and which thoſe who live under the equator are ſtrangers to.

The ſolſtices are two in each year; the æſtival or ſummer ſolſtice, and the hyemal or winter ſolſtice. The ſummer-ſolſtice is when the ſun is in the tropic of Cancer, which is on the 11th of June, when he makes the longeſt day.

The winter-ſolſtice is when he enters the firſt degree of Capricorn, which is on the 11th of December, when he begins to return towards us, and makes the ſhorteſt day. This is to be underſtood as in our northern hemiſphere; for in the ſouthern the ſun's entrance into Capricorn makes the ſummer-ſolſtice, and that into Cancer the winter-ſolſtice.

SOLSTITIAL *points*, are thoſe points of the ecliptic, whereby the ſun's aſcent above the equator, and his deſcent below it, are determinated. The firſt point, which is in the beginning of the firſt degree of Cancer, is called the æſtival or ſummer point; and the latter, which is in the beginning of the firſt degree of Capricorn, the hyemal or winter point.

SOMBERO. One of the Caribbee iſlands in the American ocean, ſituated in 63 deg. of W. lon. and 18 deg. 40 min. of N. lat. 80 miles N. W. of St. Chriſtopher's.

SOMME. A river of France, which runs from eaſt to weſt through Picardy, paſſing by Amiens and Abbeville, and falling into the Britiſh channel near St. Vallery.

SOMPAYE. The ſmalleſt ſilver coin ſtruck and current at Siam, worth about 2 d. ſterling. The ſompaye is divided into 2 payes, and each paye into 2 clams; but theſe are two monies of accompt. The ſompaye, and its diminutions, ſerve alſo for weight; the clam weighing 12 grains of rice, and the others in proportion.

SOMPI. A weight uſed by the inhabitants of Madagaſcar for gold and ſilver, being equivalent to the dram. The diminutions of the ſompi are the vari or half dram, the ſacare or ſcruple, the nanqui or half ſcruple, and the nanque conſiſting of 6 grains.

SONTO, is a term at China for a ſort of tea in great vogue, and brought in conſiderable quantities from Canton to Batavia.

SOOT. An earthy, volatile matter, ariſing from wood, coals, and other fuel, along with the ſmoak, by the action of the fire; or rather it is the ſmoak itſelf, fixed and gathered to the ſides of the chimney.

Soot is found an excellent manure for corn-lands, eſpecially where the ſoil is cold: and the dyers alſo make conſiderable uſe of ſoot, for a kind of dun colour, which, it is true, has no agreeable ſmell, but in return has the property of ſaving cloths and other ſtuffs from moths.

SOOT *of frankincenſe*, is the ſmalleſt and fineſt part of the incenſe, called olibanum, or male incenſe, burnt after the manner of roſin to make lamp-black. See *Frankincenſe*.

SOPE. See *Soap*.

SOPHISTICATION, in chemiſtry and alchymy. A term particularly applied to the counterfeit works of fraudulent alchymiſts, who uſe indirect means of whitening copper, gilding ſilver, and giving other ſuperficial tinctures; as alſo of making augmentations, by divers mixtures, and other illegal operations, to delude thoſe at whoſe expence they are employed. Hence the term is applied to merchandiſes, and other goods adulterated, mixed or altered by the deceit of the ſeller. See *Adulteration*.

Muſk at preſent is almoſt all ſophiſticated, as well as bezoard, balm of Gilead, lapis lazuli, and other valuable drugs. Canary wines are alſo ſophiſticated on the place, before ever they come near the Engliſh ports.

SOR. See *Arabia*.

SORRENTO. A city and port-town of Italy, in the kingdom of Naples, and province of Lavoro, ſituated on the ſouthern ſhore of the bay of Naples, in 15 deg. of E. lon. and 40 deg. of N. lat. 18 miles ſouth of the city of Naples.

SORY. The antients ſo called a kind of vitriolic matter, now reputed to be nothing elſe than chalcitis. See *Vitriol*, and *Chalcitis*.

SOSA, and *Barilla*, are materials Spain abounds with, and in higher perfection than they have been hitherto diſcovered in any other part of the world; of which vaſt quantities are

are exported into other countries, who are in abſolute want of them, for their glaſs, ſoap, and other uſes.

All over the kingdom of Murcia, and in Granada, the poor peaſants ſow a plant they call barilla, which coſts them the labour of two years to reap the advantage of; and, after all this time and pains, they are obliged to carry it from the ſide of Lorca, and even further off, to Alicant, for a market.

They cannot manufacture at Genoa, Marſeilles, Venice, and other places, their glaſs and ſoap without this barilla and ſoſa; inſomuch, that in one year there are ſhipped at Alicant alone 44,692 quintals of barilla, and 8380 quintals of ſoſa.

SOSIA. A cloth made of the bark of a tree, with a mixture of ſilk and cotton, brought by the Engliſh from the Eaſt Indies; whereof the pieces are from 16 to 19 ells in length, and from 3-4ths to 7-8ths in breadth.

SOTOVENTO *iſlands*, are ſituated on the coaſt of Terra Firma, in South America; the chief whereof are Trinidad, Margaretta, Tortuga, and Curaſſo; being alſo a part of the Antilles. See *Spaniſh* America.

SOU. See *Sol.*

SOUAGUZEZ. A kind of cotton cloth brought from the Eaſt Indies, uſually 14 ells in length, and 2-3ds and half an ell in breadth.

SOUDIS. A ſmall coin current at Ormus in the Perſian gulph; being worth 4 payes, and the paye 10 beſorches, which are much of the nature of the Engliſh farthing.

SOVERAIGN. A gold coin, ſtruck and current in Holland, worth 15 florins, or 1 l. 6 s. 3 d. ſterling.

SOUND, in geography, denotes a ſtreight, or inlet of the ſea, between two capes of headlands. See *Streight.*

The ſound is uſed by way of eminence for that famous ſtreight which joins the German ſea to the Baltic. See *Denmark.*

SOUNDING, in navigation. The act of trying the depth of the water, and the quality of the bottom, by a line and plummet, or other artifice. There are two kinds of lines occaſionally uſed in ſounding the ſea, namely, the ſounding line, and the deep ſea-line. See Deep ſea *Line.*

The ſounding line is the thickeſt and ſhorteſt, as not exceeding 20 fathoms in length; and marked at two, three, and four fathoms, with a piece of black leather between the ſtrands; and at five, with a piece of white leather, which may be uſed when a ſhip is under ſail, and the deep ſea-line cannot. The plummet is uſually in form of a nine-pin, and weighs 18 lb.; the end is frequently greaſed, to try of what nature the ground is, whether ſandy or rocky. Near banks and ſhores they are to be continually ſounding.

SOURBASTIS, or *Sourbaſſis.* The fineſt and beſt Perſian ſilks brought from the Levant; being ſent from Iſpahan on camels loaded with two bales each to Bander-Abaſſi, whence they are ſhipped for Europe, Smyrna, Aleppo, and other Levant trading towns.

SOUTHAMPTON. A borough and port-town of Hampſhire, ſituated on a bay of the Engliſh channel, 12 miles S. W. of Wincheſter.

SOUTH *Sea company.* During the long and expenſive war againſt France in the reign of Queen Anne, due care was not taken for the regular payment of ſeamen employed in the royal navy; for, inſtead of money, thoſe very uſeful men had tickets granted them in lieu of pay; which, by their great neceſſities, they were frequently obliged to part with at a diſcount of 40, and ſometimes 50 in the hundred, to avaritious men; whereby the debt due from the government upon this and other accounts not provided for by parliament, amounted to 9,471,521 l. To ſatisfy theſe public and national debts and deficiencies, Mr. Harley, at that time chancellor of the exchequer, and afterwards Earl of Oxford, propoſed to the houſe of commons a ſcheme which he had projected for this purpoſe, by allowing the proprietors of theſe debts and deficiencies an intereſt of 6 *per cent. per annum*, redeemable by parliament, and incorporating them to carry on the trade to the South-ſeas; which project being received with general approbation, a bill was brought in, and an act paſſed, in the year 1710, to that effect.

By this act it was enacted, that the duties upon wines, vinegar, and tobacco, upon India goods, and wrought ſilks, whale-fins, wax and tallow candles; and the ſtamp-duties ariſing from the rates of monies given with clerks, apprentices, and ſervants, ſhould be appropriated for paying an intereſt or annuity, after the rate of 6 *per cent.* for the 9,471,321 l. until the principal ſhould be paid; which intereſt amounted to the ſum of 568,279 l. 10 s. That the queen might, by letters-patent, incorporate all perſons entitled to any of the public debts, deficiencies, or ſums of money provided for by the act, with power to chuſe their governor, directors, and other officers; and the perſons ſo incorporated ſhould be capable in law to purchaſe and retain to them and their ſucceſſors, lands and tenements not exceeding the yearly value of 1000 l. That, over and above the ſaid annual ſum, there ſhould be paid to the company the further annual ſum of 8000 l. for charge of management, out of the ſame funds. That the ſtock and ſhares in the corporation ſhould be a perſonal eſtate, and be exempted from taxes. That it ſhould not be lawful for the corporation to borrow, owe, or take up, any money on their bills or notes, payable at demand, or at any time leſs than ſix months; nor ſhould it be lawful for the corporation to diſcount bills or notes, or to keep books or caſh for any perſon other than the books or caſh of the corporation. That no perſon ſhould be elected governor, ſub-governor, deputy-governor, or director of this corporation, during the time that he ſhould be governor, deputy governor, or director, of the bank, or of the Eaſt India company. That her Majeſty might, by letters-patent, direct a ſtock to conſiſt of 20 s. upon every hundred pounds of the capital ſtock, of the intended company, to be raiſed by the members thereof, in proportion to their ſtock; the ſaid ſtock to be kept apart, and employed in improving and carrying on the fiſhery for the benefit of the company; provided that no money ſhould be called in from the members of the corporation for carring on the fiſhery, or other trade thereby granted, but by order of a general court of the company called for that purpoſe, and whereof there ſhould be 14 days notice given in the London Gazette.

That the company, and their ſucceſſors, ſhould, after Auguſt 1, 1711, for ever be veſted in the ſole and excluſive trade unto and from all the lands on the eaſt-ſide of America, from the river Oronoko to the ſouthermoſt part of Terra del Fuego; and on the weſt-ſide thereof, from the ſaid ſouthermoſt part of Terra del Fuego, through the South ſea, to the northermoſt part of America, within 300 leagues of the ſaid weſtern ſhore; and ſhould be ſole owners of all iſlands, forts, &c. which they ſhould diſcover within the ſaid limits.

The company was accordingly incorporated, by the name of The governor and company of merchants of Great Britain, trading to the South ſeas, and other parts of America, and for encouraging the fiſhery. And as all the public creditors intended to be provided for by the act, and particularly deſcribed therein, were, if they pleaſed, to ſubſcribe their debts into the ſtock of the ſaid company, and to have a ſhare in their capital, each perſon in proportion to the principal and intereſt due to him by the public, the expectation that this company would make great advantages by trade, and by the diſcoveries they might make, induced almoſt all thoſe public creditors to ſubſcribe their reſpective debts; ſo that at the acceſſion of his late Majeſty, the capital ſtock of this company amounted to 9,177,967 l. 15 s. 4 d.; and as the debt to grow due to them at Chriſtmas 1715, for their annuity and allowance for management, would amount to 583,339 l. 8 d. and they were willing to advance 238,693 l. 4 s. for the current ſervice; therefore, by the ſtatute of the 1ſt of George I. it was enacted, That the ſum of 822,032 l. 4 s. 8 d. ſhould be added to the capital ſtock of the company; which would then amount to 10,000,000 l. the intereſt whereof amounted to 600,000 l. annually, and was charged upon the ſame duties chargeable for payment of the original ſtock: that on one year's notice, on repayment by parliament of the ſaid ten millions, and of all arrears of the yearly ſums of 600,000 l. and 1000 l. all the duties appropriated by the 9th

9th of Queen Anne might be diſpoſed of by the parliament, and the ſaid yearly fund of 600,000 l. and 8000 l. ſhould ceaſe; but the corporation ſhould continue for ever.

By the ſtatute of the 3d of George I. the intereſt on the capital ſtock was reduced to 5 *per cent.* ſo that the annual ſum of 600,000 l. was leſſened to 500,000 l. and the company were alſo to advance two millions more to the government, at 5 *per cent.* if required, which it never was.

It was by ſome imagined, that this company was originally intended, rather as a political contrivance for raiſing a fund of money to ſerve the preſſing occaſions of the ſtate, than as a real eſtabliſhment for the ſake of commerce. Be this as it will, it is certain the miniſtry never thought ſeriouſly, during the remaining courſe of the war, about making any ſettlements on the coaſt of South America, which was the thing wherewith the people were firſt flattered; nor was any other trade even undertaken by this company, except the Aſſiento, in purſuance of the treaty of Utrecht, for furniſhing the Spaniards with negroes; of which the company was deprived by a convention executed between the courts of Great Britain and Spain, ſoon after the treaty of Aix-la-Chapelle, in 1748; and except a little of the whale-fiſhery; by both which, it is thought, the company were loſers, though their directors and officers were very conſiderable gainers.

The company, it is certain, ſet out with good ſucceſs, and there was room to hope ſtill better; ſince, beſides that the value of their ſtock, the firſt five years, roſe faſter, in proportion, than that of any other company, his Majeſty, after purchaſing 10,000 l. therein, condeſcended to be their governor in 1718.

By a ſtatute of the 5th of George I. the ſaid company agreed to take in by ſubſcription, at $11\frac{1}{2}$ years purchaſe, the annuities eſtabliſhed by the 8th of Anne, c. 4. amounting to 135,000 l. *per ann.* and alſo the arrears of the ſame at *cent. per cent* of their capital ſtock; the whole value of the ſaid annuities and arrears amounting, by computation, to 1,721,250 l. and moreover to advance 778,750 l. or a proportional part thereof, according to the value of ſuch of the ſaid annuities and arrears as ſhould be ſubſcribed into their ſtock, to be applied towards payment of the national debts incurred before Chriſtmas 1716: therefore, by the ſaid ſtatute, they were to add to their then capital ſuch a ſum as ſhould bear a proportion to the annuities and arrears ſo ſubſcribed into their ſtock, and to the ſum of money ſo to be advanced by them; upon which additional ſtock they were to have 5 *per cent.* till redeemed, together with 2000 l. *per ann.* additional allowance for expence of management; the whole to be paid out of the duties on coals, &c. continued, and the new duties on houſes granted by the ſaid act of Queen Anne, and both now continued for ever: ſo that if the whole had been ſubſcribed, the ſaid company's capital ſtock would then have amounted to 12,500,000 l.; but as 46,260 l. 6 s. 1 d. *per ann.* of the ſaid annuities remained unſubſcribed, their ſtock was proportionably under that ſum, being only 11,746,844 l. 8 s. 4 d. and their annuity was 587,342 l. 4 s. 5 d. with 9397 l. 9 s. 6 d. for charges of management.

By the ſtatute of the 6th of George I. it was declared, that the South ſea company might redeem all, or any of the redeemable national debts, amounting in the whole to 16,546,482 l.; for which liberty they were to pay 4,156,306 l. into the exchequer, towards diſcharging the national debts. And it was alſo declared, that they might purchaſe in the irredeemable annuities, at ſuch prices as ſhould be agreed on between them and the reſpective annuitants; for which liberty they were likewiſe to pay into the exchequer, towards diſcharging the national debts, ſuch a ſum as ſhould bear a proportion to the irredeemable annuities purchaſed in by them, according to the proportion mentioned in the act; that is to ſay, they were to pay 450 l. for every 100 l. *per ann.* ſo purchaſed in by them: and farther, they were to pay into the exchequer, for the ſame purpoſe, 100 l. for every 100 l. *per ann.* of the ſaid annuities that ſhould not be purchaſed in by them.

Then for enabling the company to raiſe the ſaid ſums, and to pay off the redeemable, and purchaſe in the irredeemable annuities, and for exchanging for ready money all exchequer-bills, carrying on their trade, and other purpoſes, it was enacted, that the company might by calling in from their members, or by opening books of ſubſcription, or by granting annuities, or any other method, as they ſhould think proper, raiſe any ſums of money, as in a general court of the company ſhould be judged neceſſary, and ordered to be called in. The company were alſo empowered to borrow money on contracts, bills, bonds, or obligations, under their common ſeal, or on the credit of the capital ſtock. But if the ſub-governor, deputy-governor, directors, managers, aſſiſtants, or other members of the company, ſhould purchaſe any lands or revenues belonging to the crown, upon account of the corporation, or lend money by way of loan, or anticipation, on any branch of the revenue, other than ſuch parts only on which a credit of loan was granted by parliament, ſuch ſub-governor, or other member of the company, ſhould forfeit treble the value of the money ſo lent.

It was moreover declared, that their capital ſtock ſhould be increaſed in proportion to the redeemable and irredeemable annuities which they ſhould pay off or purchaſe; that is to ſay, that they ſhould have added to their capital 100 l. for every 100 l. of the redeemables which they ſhould pay off, and 2000 l. for every 100 l. *per ann.* of the irredeemable long annuities, and 1400 l. for every 100 l. *per ann.* of the irredeemable ſhort annuities, which they ſhould purchaſe; upon the greateſt part of which increaſed capital they were to have 5 l. *per cent.* and upon the reſt 4 l. *per cent.* added to their former annuity, until Midſummer 1727; after which the whole of their old as well as new capital, was to be reduced to an annuity at the rate of 4 l. *per cent.* And, finally, they were to have, on account of their increaſed capital, a proportionable addition made to their allowance for expences of management.

The fatal South ſea ſcheme, tranſacted in the year 1720, was executed upon the laſt mentioned ſtatute; and the impoſitions were ſo enormous, as to occaſion the ſtatute of the 7th of George I. which recites, That the then ſub-governor, deputy-governor, and directors of the South ſea company, under colour of the laſt act, had contrived, and carried on, many notorious, fraudulent, and indirect practices, contrary to the intention of the ſaid act, to the great detriment of the public, in breach of their truſt, and in manifeſt wrong of great numbers of his Majeſty's ſubjects: therefore, that their perſons and eſtates might be ſecured, ſo as to be liable to juſtice in parliament, it was enacted, That the ſaid ſub-governor, directors, and other members, and every of them, ſhould deliver in, upon oath, before one of the barons of the exchequer, inventories of their real and perſonal eſtates, which ſhould be paid into the exchequer, and applied for the benefit of the South ſea company.

By another ſtatute of the 7th of George I. wherein ſeveral proviſions were made for the reſtoration of public credit, it was declared, That the ſum of 4,156,306 l. and the other ſums, which, in purſuance of the 6th of George I. the South-ſea company was to pay into the exchequer, ſhould be remitted and releaſed; and the ſum of two millions, part of the capital ſtock belonging to the company, ſhould be reduced, ſunk, and annihilated; and a proportionable part of their annuities, payable on account of the ſaid two millions, ſhould be no longer paid, but ſhould from thenceforth ceaſe and determine. This part, however, was repealed the ſecond year after, and the two millions revived.

By the ſtatute of the 8th of George I. the company were empowered to ſell 4,000,000 l. of the ſtock in their hands, by lottery, or otherwiſe; which they accordingly ſold to the bank.

By the ſtatute of the 9th of George I. it was enacted, That the whole capital ſtock of the South ſea company,

computed to amount to 33,802,483 l. 14 s. $0\frac{1}{2}$ d. ſhould be divided into two equal parts; one moiety whereof being 16,901,241 l. 17 s. $0\frac{1}{4}$ d. ſhould be converted into a joint ſtock, attended with annuities payable out of the funds of the company, in lieu of all dividends; which annuities were to be 5 l. *per cent.* till the 24th of June 1727, and from thence at 4 l. *per cent.* till redemption by parliament, to be called "The joint ſtock of the "South ſea company." That the other moiety of the capital ſtock ſhould remain in the company as "a joint "ſtock," attended with the reſidue of the yearly funds till redemption; and alſo attended with the ſeveral ſums, for charges of management, and with all benefits of trade.

In 1727, the company was, by an act then paſſed, empowered for ſix years to ſend four ſhips yearly to Madagaſcar, to receive negroes on board ſuch ſhips, to be delivered at Buenos-Ayres: but they were for this purpoſe to have a ſpecial licence from the Eaſt India company; and were beſides laid under ſuch reſtraints, that I believe they never made uſe of this privilege.

In 1728 the government iſſued to the company 500,000 l. part out of the ſinking fund, towards an equal reduction of their capital ſtock, and joint ſtock of annuities. In 1730 a million was iſſued out of the ſinking fund towards redeeming part of their capital ſtock. And in 1731, 1732, and 1733, a million was iſſued yearly out of the ſinking fund towards redeeming part of their capital ſtock, or joint ſtock of annuities.

By the ſtatute of the 6th of George II. it was enacted, That, after the 24th of June 1733, the capital ſtock of the South ſea company, which amounted to 14,651,103 l. 8 s. 1 d. and the ſhares of the reſpective proprietors, ſhould be divided into four equal parts; 3-4th parts whereof, amounting to 10,988,327 l. 11 s. $0\frac{3}{4}$ d. ſhould be converted into a joint ſtock, attended with annuities payable out of the funds of the South ſea company, after the rate of 4 *per cent.* until redemption by parliament, and ſhould be called "The new joint ſtock of South ſea "annuities." And the other 4th part, amounting to 3,662,775 l. 17 s. $0\frac{1}{4}$ d. ſhould remain in the South ſea company as a trading or capital ſtock, attended with the reſidue of the annuities or funds payable at the exchequer to the company for their whole capital, until redemption; and attended with the ſame ſums allowed for charges of management, and with all effects, profits of trade, debts, privileges, and advantages, belonging to the South ſea company, but charged with all the debts of the company. And that the fund of the trading ſtock ſhould not, without the conſent of the company, be liable to be redeemed by parliament, until the new South ſea annuities ſhould be reduced by redemption by parliament to 3,500,000 l.

In 1736 the government iſſued one million out of the ſinking fund for redeeming part of the new South ſea annuities; and in 1737 another million was iſſued out of the ſupplies granted by the parliament for redeeming part of the old South ſea annuities. By which reduction there was left due to the company, upon their trading ſtock, and two joint ſtocks of annuities, 27,302,023 l. 5 s. $6\frac{1}{2}$ d. which remained due to them until 1753, when their unſubſcribed old and new annuities, amounting to 2,325,023 l. 7 s. 11 d. were to be paid off by a reſolution of the committee of ſupply; and of this there was 2,276,893 l. 11 s. 7 d. paid off before Chriſtmas following; ſo that the whole debt then due to that company amounted to 25,025,309 l. 13 s. $11\frac{1}{2}$ d.; the difference between the reſolution and the ſum actually paid off having by an act been allowed to be afterwards ſubſcribed; and by an another act their annuity upon their trading ſtock is to be reduced to 3 l. *per cent.* after Chriſtmas 1757, as the annuities upon all our other public funds are likewiſe then to be.

The South ſea company is under the direction of a governor, ſub-governor, and 30 directors, who are to be reduced to 15, and to be choſen annually by the general court: but no perſon is qualified for being governor, his Majeſty excepted, unleſs ſuch governor has, in his own name and right, 5000 l. in the trading ſtock. The ſub-governor is to have 4000 l. the deputy-governor 3000 l. and a director 2000 l. in the trading ſtock; who are annually elected by the general court; wherein every member, having in his own name and right 500 l. trading ſtock, has one vote; if 2000 l. two votes; if 3000 l. three votes; and if 5000 l. four votes; but annuitants are not entitled to any votes.

The ſtock and ſhares in this corporation are, by the ſtatute of the 8th of Queen Anne, declared a perſonal eſtate, exempted from taxes: which ſtatute alſo declares, that it ſhould not be lawful for the corporation to borrow, owe, or take up any money on their bills or notes, payable at demand, or at any time leſs than ſix months; nor ſhould it be lawful for the corporation to diſcount bills or notes, or to keep books or caſh for any perſon, other than the books and caſh of the corporation; and that no perſon ſhould be elected governor, ſub-governor, deputy-governor, or director of this corporation, during the time that he ſhould be governor, deputy-governor, or director of the bank, or of the Eaſt India company. See *Company*, and National *Debt*.

SOUTH *ſea fund*. See South ſea *Fund*.

SOUTH *ſea trade*. See *Spain*, and *Spaniſh* America.

SOUTH *ſea*, or *Pacific ocean*. See *Pacific*, and *Ocean*.

SOUTHERN, or *European ocean*. See *Ocean*.

SOUTHWOULD. A port-town of Suffolk, ſituated in 1 deg. 55 min. of E. lon. and 52 deg. 28 min. of N. lat. on a bay of the German ſea, 42 miles E. of Bury.

SOUTIS, or *Souris*. A muſlin ſilk, ſtriped with ſeveral colours, brought from the Eaſt Indies, and called muſlin; though no cotton enters their compoſition, upon account of their grain much reſembling muſlin; and none but the Indians are expert in their manufacture.

Their lengths and breadths are different; ſome pieces having 8 ells in length, and 3-4ths breadth; and others 20 ells in length, and 2-3ds in breadth.

SOW *of iron*. See *Forge*.

SOWAUD BUND. The third kind of ſilk gathered in the Mogul's territories.

SPA. A town in the biſhopric of Liege in Germany, famous for its mineral waters. Thoſe of the Pouhon ſpring in Spa are preferred by phyſicians to any others in or near the country of Liege; particularly to the waters of Bru; which they complain have been impoſed on the public, to their frequent diſappointment. See *Spaw*.

SPAAD, *Spaat*, or *Spalt*. A ſpecies of Engliſh talc, or gypſum; being a white, fibrous, ſcaly, ſhining ſtone, ſometimes uſed to promote the fuſion of metals. See *Talc*.

It is found pretty frequent in England and Germany, and ſometimes brought from the Levant. The beſt is in long ſcales, very ſoft, and eaſily pulveriſed; but the Engliſh ſpalt is generally very hard.

SPAIN, including *Portugal*, once a province of it, is the moſt weſtern part of the continent of Europe; being bounded by the ſea, or bay of Biſcay, on the north; by the Pyrenean mountains, and the Mediterranean, towards the eaſt; by the Mediterranean, and the Atlantic ocean, on the ſouth; and by the ſame ocean, on the weſt; lying between 10 deg. of W. and 3 deg. of E. lon. and between 36 and 44 deg. of N. lat. being about 700 miles long from eaſt to weſt, and 500 broad from north to ſouth. The form of it is generally ſaid to reſemble an ox-hide ſpread upon the floor; of which the Pyrenean mountains, dividing it from France on the north-eaſt, may be reckoned the neck. See *Portugal*.

Spain is divided into 15 provinces, excluſive of Portugal; namely, New Caſtile, Old Caſtile, Leon, Galicia, Aſturia, Biſcay, Navarre, Arragon, Catalonia, Valencia, Eſtremadura, Andaluſia, Granada, Murcia, and the iſlands.

The face of the country is rough and uneven, encumbered with abundance of high mountains, ſome of them running the whole length of the country from eaſt to weſt; and are generally covered with oaks, fir-trees, and other excellent timber. It is is ſaid to be watered with 150 rivers; of which nine only deſerve that name, as the Ebro, the Guadalquiver, the Guadiana, the Tagus, Duero,

Duero, or Douro, the Minho, the Guadalaviar, the Xucar, and Segura.

The ſoil of Spain produces excellent wheat and barley; and they have rich paſture-grounds. Their wool is the fineſt in Europe, and uſed by other nations in their fineſt cloths. They abound in wine, oil, and ſilk: no country produces better oranges, lemons, raiſins, citrons, prunes, figs, capers, cheſnuts, almonds, and pomegranates; beſides, the ſoil alſo produces flax, cotton, ſugar, and ſaffron: they have alſo rich mines of quickſilver, copper, lead, allum, ſulphur, and the iron and ſteel of Biſcay is eſteemed the beſt in Europe.

Formerly the Spaniſh mines yielded the Romans more gold and ſilver than any country under their dominion; though now theſe mines are loſt or exhauſted; or the Spaniards have ſuch plenty of theſe minerals in their American colonies, that their mines in Europe are not worth the working.

The dominions ſubject to the King of Spain are the largeſt that are poſſeſſed by any one monarch; being ſo extenſive, that one of the Spaniſh monarchs boaſted the ſun never ſets upon them all. Beſides his territories in Europe, he poſſeſſes the beſt part of America. He is alſo ſovereign of thoſe rich and numerous iſlands S. E. of the coaſt of China, in Aſia, called the Philippines, from whence the Spaniards import all the rich merchandiſe of the Eaſt; and in Africa he is maſter of Ceuta, Oran, and ſeveral other places of conſequence on that coaſt; as alſo of the Canary iſlands. See *Philippines*, *Barbary*, and *Canary* iſlands.

The merchandiſes proper for Spain, of which the greater part are ſent into America, are ſtuffs of gold, ſilver, ſilk, and wool of all qualities and prices; laces, and hats; ſpice, medicinal drugs, dying ſtuffs, and colours for painting; muſk, civet, and ambergreaſe; hard and haberdaſhery wares; ſteel, copper; leathers of ſeveral ſorts, particularly of Ruſſia, all dreſſed; paper, cards for playing, maſts for ſhips, planks, cordage, pitch, and tar; clay for making of pipes; caſks and barrels for their wines and oils; linens of all kinds, and in great quantities; white and yellow wax; herrings, dry and green cod, ſalmon, butter, cheeſe, and even corn, when the harveſt has not been abundant in Spain, which happens but too often. Beſides, the Spaniards are ſupplied with negroes for their American colonies by the Engliſh, French, and Dutch.

All theſe merchandiſes proper for Spain, and for Spaniſh America, are brought in Engliſh, Dutch, and French bottoms; as alſo in ſome belonging to the northern nations, whether of their own manufactures, or the produce of their country, or that they had them elſewhere for this commerce.

The following is an account of what theſe nations freight their ſhips with for Spain.

The French furniſh gold, ſilver, and ſilk ſtuffs; velvets, pluſh, gold and ſilver lace, caſtor, and hats; ſilk and woollen ſtockings; narrow woollen ſtuffs of Amiens, Rheims, Liſle, Arras, and ſome other French manufactures; a great quantity of linens of all ſorts, particularly thoſe of Bretagne, Rouen, Coutance, Morlaix, and Laval; great parcels of paper, for writing, printing, and other uſes; cards for playing; French hard and haberdaſhery wares; thread and ſilk laces, black, and pretty coarſe; dry cod, and ſome other articles. All theſe merchandiſes are ſent by ſea from France into Spain; yet ſeveral go there alſo by land, on the ſide of the Lower Navarre and Bearn; amongſt others, lead, copper, wrought or unwrought iron, which the traders of Oleron ſend into Arragon; linens of hemp and flax, pretty coarſe, but readily bought up by the people of Arragon from the merchants of St. John Pied-de-Porc. Through the Lower Navarre nothing paſſes into Spain, but ſmall horſes, which are very ſerviceable, and eſteemed greatly by the Spaniards. Laſtly, by land, a great number of merchandiſes of French Flanders are ſent into Spain, by croſſing the kingdom with permits; which long and expenſive journey is undertaken chiefly upon the account of dear commodities, and ſuch as are of a ſmall bulk.

It is thought, before the long wars between France and Spain had made room for the Dutch to engroſs the better part of the Spaniſh commerce, whereof they remained maſters till the war about the Spaniſh ſucceſſion in favour of the Duke of Anjou, the ſole article of French linens amounted, one year with another, to about 400,000 l. ſterling.

The traders of Paris, Rouen, St. Malo, Nantz, and Bourdeaux, are thoſe who uſually ſend the greateſt cargoes into Spain; thoſe of St. Malo alone ſending there generally every year 20 ſhips, from 150 to 400 tuns.

The Dutch, for upwards of 20 years together, and till the commencement of the 18th century, having in a manner the whole commerce of Spain in their hands, ſold there all the commodities above mentioned, and whereof partly they eſtabliſhed manufactures among themſelves. But ſince the French entered upon this trade, when Philip V. aſcended the throne, the Dutch trade has greatly declined in Spain.

The principal commodities which the Dutch ſend to Spain, are their ſpices, linens, woollen cloths, and woollen ſtuffs.

As to ſpice, the pepper-trade is divided between them and the Engliſh, the latter ſelling as great a quantity in Spain as the former; but for nutmegs, cloves, and cinnamon, the Spaniards are obliged to receive them from the Dutch.

Cinnamon ſells beſt in Spain; and it is thought that upwards of two-thirds of what the Dutch export from the Eaſt Indies, is ſold and conſumed in Spain and in America, eſpecially at Peru, upon account of the chocolate.

The linens imported by the Dutch for Spain are uſually fine, and manufactured in the province of Overyſſel, or in the neighbourhood of Douay and Valenciennes; which are ſold for cloths of Cambray, or what the French call *batiſte*.

There are others which they call perſeilles, made in Brabant; but they are coarſe, and of a great breadth; ſo are only uſed by the poorer ſort.

Laſtly, the Dutch ſend to Spain cottons and callicoes, fine and coarſe, ſtamped and painted with various colours in Holland.

The other works are table-linen, ribbonds, and thread.

Though ſpice and linen make a great part of the Dutch commerce for Spain, yet the moſt conſiderable they carry on is that of their woollen manufacture; for it can ſcarce be imagined what quantities they import of cloths, ſerges, camblets, and anacoſts; ſo that what other nations furniſh altogether, comprehending even the Engliſh, whoſe trade there is pretty good, is in no reſpect equal to what the Dutch alone ſell there.

The other commodities imported to Spain in Dutch bottoms, are ſilk ſtuffs of the Dutch manufacture; hard and haberdaſhery wares, which they have from Nuremberg, Frankfort, and Liege; Swediſh ſteel and copper; leather and corn from Dantzic; bleached and yellow wax of the north; as alſo maſts, and timber for the building of ſhips.

Laſtly, beſides ſalmon, herrings, and ſalt cod, the Dutch furniſh Spain with butter and cheeſe; of which great quantities are made in Holland.

The Engliſh, beſides the pepper, whoſe commerce, as it has been ſaid they divide with the Dutch, ſend there great parcels of woollen cloths, and other woollen ſtuffs; as ſerges of all ſorts, perpetuanas, bays, flannels, &c.; and, next to the Dutch, they may be ſaid to trade moſt to Spain. They export alſo from the north, the Indies, and Germany, almoſt the ſame merchandiſes with the Dutch, to make up their cargo; but add thereto of their own manufactures, quantities of beaver, woollen, and hair hats; ſilk and woollen ſtockings, ſeveral ſilk ſtuffs, and clock-work not inferior to any in Europe. Laſtly, they import there abundance of tin, lead, ſalt fleſh from Ireland, and ſalt fiſh of their own fiſheries: ſo that an author of reputation, who wrote of the intereſts of England in 1704, aſſerts, that the profits the Engliſh make, one year with another, by the merchandiſes

diſes they either import to, or export from Spain, amount to upwards of 400,000 l. ſterling.

It will be unneceſſary to enter into particulars with regard to the commerce which the Swedes, Danes, or other traders of the north, carry on directly with Spain, as they conſiſt chiefly in naval ſtores.

The principal commodities exported from Spain, of its own growth and produce, are wool, wine, oil, ſoap, kali, ſalt, and iron; olives, figs, raiſins, almonds, capers, citrons, oranges, and cheſnuts.

The wool is chiefly the produce of Andaluſia, Valencia, Caſtile, Arragon, and Biſcay, and is undoubtedly the greateſt object of the peculiar Spaniſh commerce; for not only the French, Dutch, and Italians, cannot do without it, in the manufactures of their fine woollen cloths and ſtuffs, but alſo the Engliſh themſelves, who are poſſeſſed of ſuch fine and beautiful wool, uſe ſuch parcels of it in the greater part of their fineſt cloths, that the ſame author already quoted, thinks it no exaggeration to ſay, that in England, one year with another, there are made 30,000 pieces of fine cloths, of the firſt and ſecond claſs, all of pure Spaniſh wool of Caſtile and Andaluſia. However, the conſumption thereof in the manufactures of France and Holland is ſtill greater. See *Wool*.

Spaniſh wine is of two ſorts, white and red, both excellent. The greateſt quantity is made in the more ſouthern parts; and the ſale thereof is conſiderable, when the Engliſh and Dutch, by the interruption of commerce, cannot have thoſe of France.

There are brandies alſo made in Spain; but not much bought up, unleſs through a want of thoſe of Nantz, Anjou, and Rochelle.

Canary wines are found there alſo in abundance: but the chief ports for the wine-trade are Malaga, Alicant, Cadiz, and St. Lucar. The greater part of the Malaga and Alicant wines are red; and the other white, which are called xerez wines.

Oil of olives is had from Seville and Malaga; as alſo the greateſt ſtores of fruits.

Soap and kali for the making of glaſs, and the bleaching of linen, from Alicant, Carthagena, Valencia, and Murcia.

Salt from ſeveral places, but more particularly from Andaluſia.

Laſtly, iron from the mines of Biſcay, and the Upper Navarre.

Next to the port of Cadiz, Bilboa and St. Sebaſtian are thoſe of the beſt trade; but the following is an account of the trade which is carried on both in the inland and maritime towns.

Madrid, is the capital of the province of New Caſtile, and of the kingdom of Spain, ſituated in 4 deg. 15 min. of W. lon. and 40 deg. 30 min. of N. lat. almoſt in the middle of a large ſandy plain, ſurrounded with high mountains, 800 miles S. W. of London, 680 miles S. W. of Paris, and 700 eaſt of Liſbon; being about 7 miles in circumference, without walls or fortifications; containing ſeveral grand ſtreets and ſpacious ſquares.

Though this city is ſituated in the heart of the kingdom, it promotes a great maritime commerce, by the means of correſpondents and factors employed by its merchants in ſeveral port-towns, eſpecially Cadiz.

The difference of the old and new plata makes that of exchange between ſtrangers and the ſeveral towns of Spain: thus, for inſtance, when the exchange on Cadiz and Seville, where the old coin is current, is at 110 deniers de gros *per* ducat at Amſterdam, it is only at Madrid and Bilboa 80 or 90, where the new coin is uſed.

Seville, the capital of Andaluſia, is the next city to Madrid in magnitude; being ſituated in 6 deg. of W. lon. and 37 deg. 15 min. of N. lat. on the river Guadalquivir, 50 miles N. E. of the port-town of St. Lucar, 70 miles N. E. of Cadiz, and 200 S. W. of Madrid. It is about 8 miles in circumference, and contains about 300,000 inhabitants. No town abounded more in wealth than this in the laſt age, when all the treaſures of America were brought hither up the Guadalquivir from St. Lucar; but now Cadiz, where the galeons rendezvous, comes in for the greater ſhare of this rich traffic.

The principal commodities of Seville are oil of olives, large pickled olives, wines, oranges, lemons, wool, leather, and particularly Morocco leather.

Granada, the capital of the kingdom of the ſame name, is ſituated in 3 deg. 40 min. of W. lon and. 37 deg. 15 min. of N. lat. 200 miles ſouth of Madrid, and 65 N. E. of Malaga; being remarkable for its great commerce with ſtrangers, though an inland town.

The principal commodities for exportation are wines, corn, oils, flax, and hemp; as alſo fruits, either freſh, dry, or pickled; the freſh fruits being pomegranates, oranges, citrons, and olives; the dry are almonds, figs, and raiſins; the pickled are olives and capers.

But its richeſt and moſt important commerce is that of ſilk, as great numbers of mulberry-trees grow there, and nouriſh an abundance of ſilk-worms.

Malaga, is a port town of the kingdom of Granada, upon the Mediterranean, ſituated in 4 deg. 45 min. of W. lon. and 36 deg. 40 min. of N. lat. 66 miles N. E. of Gibraltar: its principal commerce conſiſts in wool, oil of olives, olives, dry raiſins, figs, and excellent wines.

Carthagena, is a port-town of the kingdom of Murcia, ſituated upon the Mediterranean, in 1 deg. 5 min. of W. lon. and 37 deg. 40 min. of N. lat. being eſteemed the beſt of all the ports in Spain. Its commodities are ſome wool, oil, olives, raiſins, figs, and almonds.

Valencia, the capital of the kingdom of the ſame name, is ſituated in a fine plain, on the river Guadalaviar, in 35 min. of W. lon. and 39 deg. 20 min. of N. lat. 180 miles S. E. of Madrid, and 106 north of Carthagena, containing about 12,000 houſes, and 70,000 inhabitants. There are a great many rich merchants in this city, who carry on a conſiderable trade in ſilk, wine, or almonds. The natives are more induſtrious than the reſt of the Spaniards, and the whole country for 20 miles round looks like a garden; the towns and villages being very numerous, where great numbers of women and children are to be ſeen ſpinning of ſilk before their houſes.

St. Sebaſtian, is a port-town, and a great road for ſhipping, in the province of Biſcay, ſituated in 1 deg. 50 min. of W. lon. and 43 deg. 35 min. of N. lat. 55 miles eaſt of Bilboa, and 25 S. W. of Bayonne. The merchants employ about eight or ten ſhips in the cod-fiſhery, and as many more for the whale-fiſhery. They keep their ſhips at Paſſage, an excellent incloſed port, into which but one ſhip can enter at a time; though the port itſelf is very ſpacious; where the King of Spain keeps his ſhip-carpenters, for the building of the galleons, and moſt of his ſhips of war.

The French bring to St. Sebaſtian wheat, beans, peaſe, and ſome linens; the Dutch bring maſts, cordage, pitch, tar, planks, and ſteel; the Engliſh, woollen ſtuffs, and tin. Theſe three nations export from thence hardly any thing but iron, and are paid for the reſt of their merchandiſe in ready money.

The town of St. Sebaſtian is ſmall; and as there are ſcarce any vacant houſes for foreign merchants, and their merchandiſes, they are obliged to lodge with the people of the town, to whom they give 1 *per cent.* of every thing they ſell.

The province of Biſcay abounds in wood for the building of ſhips, and affords alſo a kind of aſh-trees, which are excellent for pikes and lances. Cyder is the uſual drink of the Biſcayners, though the country produces very good wine. Walnuts, cheſnuts, millet, iron, ſteel, and lead, are its other commercial commodities, eſpecially iron and ſteel; for the manufacture of which there are about three hundred forges, and in each forge there are at leaſt yearly made a thouſand quintals, of 150 lb. each, which are ſent into France, England, Holland, and almoſt all the ſtates of Europe.

Bilboa is the richeſt and moſt mercantile town of all Biſcay; being ſituated in 3 deg. of W. lon. and 43 deg. of N. lat. at the mouth of the river Ibaicabal, which a little below falls into a bay of the ſea, and forms a good harbour. It ſtands 66 miles N. E. of Burgos, 60 weſt of St.

St. Sebaſtian, and 200 N. E. of Madrid; having a great trade for its wool, ſword-blades, and other manufactures of iron and ſteel. It has a port only for ſmall veſſels, and of very difficult entrance; ſo that ſhips of any conſiderable burden are obliged to put in at Saint-Toya, or St. Antony; whence the merchandiſes are tranſported in ſmall veſſels to Bilboa.

The Baſques, and the inhabitants of Bayonne, ſend there yearly five or ſix of their ſhips laden with cod; thoſe of St. Malo ten or twelve, and thoſe of Granville four or five; which is paid for, partly in iron, partly in Segovia wool, and partly in money.

All theſe French ſhips arrive at Bilboa in the months of Auguſt and September, returning to their own ports in November and December.

Beſides cod-fiſh, the French import there great parcels of coarſe linen cloths, for the package of Spaniſh wool; as alſo linens of Quintin and Morlaix.

The Engliſh annually ſend to Bilboa, between 20 and 25 ſhips, laden with cod-fiſh. They import there alſo an abundance of woollen cloths and woollen ſtuffs; this town ſerving as a ſtaple for all Caſtile, and as far as Madrid. Their returns are much of the ſame nature with thoſe of the French.

The cargoes of Dutch ſhips for Bilboa conſiſt in linens, thread-lace, camblets, all ſorts of their own woollen manufactures, and ſpice. Their returns are in wool, ſilver, iron, ſaffron, cheſnuts, oranges, and citrons.

It ſhould be obſerved, that all the woollen ſtuffs and linens ſent to Bilboa for the conſumption of Madrid, muſt be by one-fourth ſtronger and better than thoſe brought to Cadiz for Andaluſia and the Indies.

Corunna, or the *Groyne*, is a port town of Galicia, ſituated in 9 deg. of W. lon. and 43 deg. 10 min. of N. lat. on a fine bay of the Atlantic ocean, 32 miles N. of Compoſtella, and 16 S. W. of Ferrol. To this port the Engliſh packet-boat always goes in time of peace; yet its commerce is but indifferent, few foreign ſhips reſorting it. The pilchard-fiſhery makes the greateſt trade for its inhabitants; who alſo ſend freſh fiſh into the neighbouring towns, and as far as Madrid.

Alicant, is a large ſea-port town in the province of Valencia, ſituated in 30 min. of W. lon. and 38 deg. 35 min. of N. lat. 60 miles S. of Valencia, and about as many N. of Carthagena.

It has a very good road for ſhipping; and there are uſually ſold between five and ſix thouſand quintals of cod of the French fiſhery. What is exported to France conſiſts chiefly in kali, ſoap, and wine.

The greateſt trade of this town is in wines called Alicant, though not all of the produce of the neighbourhood of this town. Abundance of dry and pickled fruits are alſo exported from thence, as raiſins, figs, olives, and capers. The ſoap of this place is eſteemed ſome of the beſt in Europe for woollen manufactures. There are alſo ſome ſilk manufacturers, who all live incorporated in one of the ſuburbs. The commodities imported for Alicant are corn, ſtuffs, linen, and ſome precious ſtones.

Barcelona, is the capital of Catalonia, ſituated in a large plain along the ſhore of the Mediterranean, in 2 deg. of W. lon. and 41 deg. 20 min. of N. lat. 300 miles E. of Madrid, 140 E. of Saragoſſa, and 180 N. E. of Valencia. It contains about 15,000 houſes, and 90,000 inhabitants; having a mole running out into the ſea, which ſecures ſmall veſſels; but the larger ſhips lie in the road expoſed to ſtorms. They have manufactures of ſilk and woollen, and excel in thoſe of iron and ſteel; they alſo make good wine, which they export in large quantities. It is from Barcelona that excellent blankets of Spaniſh wool, called *catalognes*, are brought. The brandy made there is of a very bad quality; yet the Dutch take up with it, for want of that of France.

Cadiz, is a city and port-town of the province of Andaluſia, ſituated in 6 deg. 40 min. of W. lon. and 36 deg. 30 min. of N. lat. at the N. E. end of the iſland of Leon, or Lyon, oppoſite to Port St. Mary's on the continent, 270 miles S. W. of Madrid, 60 S. W. of Seville, and 40 N. W. of Gibraltar. The iſland it ſtands upon is about 18 miles long, and 9 broad at the S. W. end, but only 2 at the N. W. end, where the town ſtands. It has a communication with the continent by a bridge, and with the oppoſite ſhore forms a bay 12 miles long, and 6 broad: but about the middle of the bay are two points of land, one on the continent, and the other on the iſland; ſo near together, that the forts upon them, called the Puntal and Matagorda, command the paſſage; and within theſe points is the harbour. The city contains about 5000 houſes, and 30,000 inhabitants. It has the beſt foreign trade of any town in Spain; becauſe the galeons annually take in their loading here, and return hither with the treaſures and rich merchandiſe of Peru and Mexico.

Beſides theſe, there are ſeveral other places in Spain, conſiderable either for trade, or the number of inhabitants.

In the kingdom of *New Caſtile* are the city of *Alcala de Henares*, 15 miles E. of Madrid; having an univerſity founded by Cardinal Ximenes in 1517, which conſiſts of 20 colleges. *Guadalajara* is about 30 miles N. E. of Madrid; the country about it producing corn, wine, flax, and hemp; beſides, the mountains are covered with oaks, of which they make charcoal, and ſupply all the neighbouring country with that kind of fuel. *Brihuega* is 12 miles N. E. of Guadalajara, being conſiderable for its wool and cloth. *Toledo*, formerly the capital of Spain, is 40 miles S. of Madrid, built upon a ſteep rock on the river Tagus: their manufactures of wool and ſilk were once very conſiderable, and the ſword-blades made here have always been in great eſteem. *Talavera de la Reyna* is 35 miles W. of Toledo; remarkable formerly for its wooollen manufacture, and now for its fine earthen ware; as alſo for its corn, wine, cattle, and honey. The other towns are Cuenca, Calatrava, Cividad, Real, Almagro, Mancanares, Las Naves del Merques, Colmenar, Guadarama, Galapagar, Guadalix, Porquerizas, Arganda, Tortoſa, Hita, Cadacra, Medina Celi, Arcos, Monteagudo, Uzeda, Cadahalſo, Eſcalona, Maqueda, Illeſcas, Leganes, Mora, Anover, Fuente Duegna, Paſtrana, Zurita, Yepes, Ocagna, Villa Rubia, Molina, Caracena, Valeria, Moya, Alarcon, Alcarez, Segura de la Sierra, Velez de Rubio, Orgaz, Conſuegra, Miquellurra, Elviſo, Almodavar del Campo, and El Convento de Calatrava.

In the province of *Old Caſtile* are the cities of *Burgos*, 120 miles N. of Madrid; having a briſk trade, and containing 70,000 inhabitants. *Segovia* is 50 miles S. of Valladolid, and 30 N. of Madrid: it contains 30,000 inhabitants; and on the neighbouring mountains they feed large flocks of ſheep, whoſe wool makes the fineſt cloth in Europe: they have alſo a manufacture of paper, and one of the moſt conſiderable mints in the kingdom. The other towns are Miranda de Ebro, Najara, Navarette, Guardia, Baſtida, Eſpinoſa de los Monteros, Lerma, St. Pedro d'Arlanza, Aranda de Duero, St. Eſtevan de Gormaz, Verlanga, Almazan, Soria, Logrogno, Aquilar del Campo, Agreda, Crugna, Roa, Pegnafiel, Mocada, Coca, Arevalo, Olmedo, Madregal, Pegnaranda, Villa Franca on the Tormes, and Cuellar.

In the province of *Leon*, are the cities of *Leon*, 165 miles N. W. of Madrid; conſiſting of 13 pariſhes, 6 monaſteries, and 5 nunneries; but it is neither ſo rich nor populous as formerly. *Salamanca* is ſituated on the river Tormes, 120 miles S. of Leon, and 105 N. W. of Madrid; it contains about 8000 families, and is remarkable for its univerſity, which has 24 colleges, and 4000 ſtudents. *Medina del Campo* was once a rich trading town, though now on the decline. The other towns are Aſtorga, Palencia, Zamora, Medina del Rio Seccio, Cividad Rodrigo, and Ledeſma.

In the province of *Gallicia* are alſo the cities of *Compoſtella*, or *St. Jago de Compoſtella*, 30 miles S. of Corunna, and 40 E. of Cape Finiſterre; containing 12,000 inhabitants, who are a rich trading people, better accommodated with proviſions and neceſſaries than moſt towns in Spain, on account of its neighbourhood to the ſea. *Lugo*, about 69 miles E. of Compoſtella, was once a conſiderable place, but now upon the decline; though it is reſorted to on account of its hot baths. *Orenſe*, 42 miles

S. E. of Compoſtella, is remarkable for its fine grapes, which make excellent wine. *Tuy*, 30 miles S. W. of Orenſe, has alſo good wines. *Betancod*, oppoſite to Corunna, is a little port-town. *Ferrol* is ſituated in 8 deg. 40 min. of W. lon. and 43 deg. 30 min. of N. lat. on a bay of the Atlantic ocean, 20 miles N. E. of Corunna; being a good harbour for the Spaniſh fleet; and the country about it produces good wine. *Vigo* is a port-town, ſituated in 9 deg. 18 min. of W. lon. and 42 deg. 15 min. of N. lat. on a fine bay of the Atlantic ocean, which forms a capacious harbour, 70 miles S. E. of Cape Finiſterre, and 50 S. of Compoſtella. *Bayona* is a port-town S. of Vigo. *Ponte Vedra* is a large town, on a bay of the ſea, to the N. of Vigo. *St. Mary de Finiſterre*, or *Finis-terræ*, is a little town, 46 miles W. of Compoſtella, chiefly remarkable for the neighbouring cape, from whence it takes its name, being the moſt weſterly part of the continent of Europe. *Caſtro de Ortegal* is an open town near Cape de Ortegal, the moſt northerly promontory of Spain, well known to ſeamen. *Padron* is ſituated at the mouth of the river Ulla, near a bay of the ſea, 12 miles S. of Compoſtella.

In the province of *Aſturia* are the towns of *Oviedo*, ſituated in a plain, at the confluence of the rivers Ove and Dava, whoſe united ſtreams afterwards go by the name of Aſta, 48 miles N. W. of Leon, and 195 miles N. W. of Madrid; being more remarkable for its univerſity than for its trade. *Villa Vicioſa* is a little port-town, ſituated at the mouth of the river Aſta, 36 miles N. E. of Oviedo. *Aviles* is a port on the bay of Biſcay, 36 miles N. of Oviedo; and 6 miles N. lies a promontory, well known to mariners, called Cape de Pinas. And *Santillana* is ſituated on the bay of Biſcay, 66 miles E. of Oviedo.

In the province of *Biſcay* are alſo the towns of *St. Andero*, a port-town in the N. W. part of the country, formerly much frequented, but upon the decline at preſent. *Toloſa* is the capital of that part of the province called Guipuſcoa, ſituated at the confluence of the rivers Orio and Araxes, 12 miles S. of St. Sebaſtian; but remarkable for no other manufacture than that of ſword-blades. *Placentia* is ſituated on the river Deva, 13 miles W. of Toloſa; having a manufacture of ſword-blades and fire-arms. *Fontarabia* is the laſt town of Spain towards France, ſituated on a peninſula in the bay of Biſcay, near the mouth of the river Bidaſſoa, which parts the two kingdoms; being commonly called the key of Spain on the ſide of Biſcay. *Vittoria* is ſituated in a fine fruitful valley, 42 miles S. of Bilboa; being well inhabited by tradeſmen, and people of faſhion, on account of its pleaſant ſituation. *Salvatierra* is a little town, 20 miles E. of Vittoria. *Trevigno* is 16 miles W. of Vittoria. Beſides, there are the towns of Porto Galette, Caſtro de Urdecales, Loredo, St. Antonio, Orduna, and Durango; which are of no conſequence in trade.

In the province of *Navarre*, are the towns of *Pampeluna*, ſituated in a plain near the Pyrenees, on the river Arga, 31 miles S. of Fontarabia; but it is remarkable only for its univerſity. *Eſtella*, or *Stella*, is 22 miles S. W. of Pampeluna. *Sangueſa* is 21 miles S. of Pampeluna. *Olita* is ſituated on the river Cidaco, 10 miles S. of Sangueſa, formerly the ſeat of the kings of Navarre; being in a good ſoil, which affords corn, wine, flax, hemp, and fruits. *Taffala* has an univerſity, and the country about affords good wine. But *Tudela*, on the river Ebro, has little trade; though it is a fine town, inhabited by people of faſhion.

In the province of *Arragon*, are the cities of *Saragoſſa*, ſituated in a great plain on the banks of the river Ebro, 90 miles N. E. of Madrid, and 30 W. of the confines of Catalonia; being a large place, with an univerſity, 17 great churches, and 14 fine monaſteries, beſides many others leſs conſiderable; it is well inhabited by people of quality, as well as by a great many merchants and bankers; the latter of whom are generally natives of France: the neighbouring country is full of fine gardens and orchards; and the houſes ſtand ſo thick for 9 miles about it, that they look like one continued village. *Balbaſtro* is ſituated on the river Vero, 35 miles N. E. of Saragoſſa, and contains about 10,000 inhabitants, who have little trade. *Jaca* is ſituated on the river Arragon, 57 miles N. of Saragoſſa; the neighbouring country abounding in corn, fruit, cattle, and all manner of game. *Taracona* is ſituated on the river Queiles, 60 miles N. W. of Saragoſſa; its principal manufacture being ſword-blades, and other arms, which receive a good temper from the water of the Queiles. *Hueſca* is a little handſome town, ſituated on the river Juela, in a fruitful plain, ſurrounded with mountains, 16 miles N. W. of Balbaſtro. *Catalajud* is a large beautiful city, ſituated at the confluence of the rivers Xalon and Xaloca, 53 miles W. of Saragoſſa. *Tervel* ſtands in a large agreeable plain, at the confluence of the rivers Alhambra and Guadalquivir, 75 miles S. of Saragoſſa; being very populous, and a rich place of trade. Beſides, there are the towns of Albarazzin, Daroca, Boria, and Fraga.

In the province of *Catalonia*, are alſo the towns of *Tarragona*, ſituated on the ſide of a hill on the ſea-ſide, 46 miles S. W. of Barcelona; being formerly a good harbour, which is ſo much choaked up at preſent, that nothing but ſmall veſſels can enter it. *Tortoſa* is ſituated on the river Ebro, 12 miles N. of the Mediterranean, and as many W. of the confines of Valencia: it is in general a good town of trade, to which the Ebro very much contributes; this river being navigable here, and affording it a communication with the Mediterranean: they make great quantities of ſilk and oil, as alſo a fine ſort of earthen ware, in imitation of China: it is an univerſity, pleaſantly ſituated in a country abounding in grain and fruits; having alſo mines of ſilver and iron, quarries of alabaſter, and the moſt beautiful jaſper. *Lerida* is ſituated 105 miles W. of Barcelona, and 54 N. of Tortoſa; but it is only remarkable for its univerſity. *Balaguer* is 13 miles N. E. of Lerida. *Vich* is a little town, 37 miles N. of Barcelona; remarkable only for its neighbouring mountains, in which are found amethyſts and topazes. *Gironne* is ſituated at the confluence of the Ouda and the Ter, 60 miles N. E. of Barcelona, and 21 W. of the ſea; having an univerſity, and a flouriſhing trade. *Ampurias* is a little ſea-port town at the mouth of the Fluvia, 30 miles N. of Barcelona; formerly a place of great trade, but it has none at preſent. *Roſes* is a port-town, ſituated on a bay of the ſea, a little W. of Cape Creus, 23 miles N. of Gironne, and 60 N. E. of Barcelona. *Campredon* is 30 miles N. W. of Gironne; in the neighbourhood of which is a mountain where they find chryſtal. *Puicerda* is ſituated in a fine plain between the rivers Carol and Segra, at the foot of the Pyrenean mountains; where there are ſome quarries of jaſper of various colour, and two medicinal fountains. *Urgel* is ſituated on the river Segra, and affords great plenty of wine. *Cardona* is a handſome town, ſituated on an eminence near the river Cardonero, 40 miles N. W. of Barcelona; being remarkable for a prodigious mountain of ſalt of all colours, which becomes perfectly white on waſhing it; and this ſalt-work, though it has been dug 2000 years, yields the preſent owner, the Duke of Cardona, about 18,000 l. ſterling a year. And *Solſona*, 60 miles N. W. of Barcelona; but has no trade.

In the province of *Valencia*, are alſo the towns of *Murviedro*, which is 13 miles N. of the city of Valencia, and 6 from the ſea; it contains about 5000 inhabitants, but has no trade. *Segorba* is 30 miles N. of Valencia, and as many E. of the ſea; it contains about 6000 inhabitants; who have little trade, except for marble, of which there is an excellent quarry near the town. *Alzira* is ſituated on the river Xucar, 18 miles S. of Valencia, and remarkable chiefly for its ſilk manufacture. *Gandia* is ſituated on the little river Alcoy, within a mile and half of the ſea, and 30 miles S. of Valencia; being remarkable for its ſugar-works. *Denia* lies 10 miles S. E. of Gandia, on the ſea coaſt, having a tolerable harbour. *Altea* ſtands about 10 miles farther S. being famous for its bay, where ſhips frequently take in water. *Origuela*, or *Orihuela*, is ſituated in a fruitful plain, ſurrounded with mountains, on the river Segura, about 3 miles from the confines of Murcia; it is an

an univerſity, and the neighbouring country abounds in corn, wine, fruits, honey, flax, and ſalt, Beſides, there are the towns of Xerica, Villa Real, and Xativa.

In the province of *Eſtramadura*, are the following towns. *Placentia*, ſituated on the banks of the little river Xente, ſurrounded with high mountains, about 120 miles S. W. of Madrid; the town contains about 2000 houſes; the neighbouring plains produce excellent grain; and on the mountains are whole foreſts of fruit-trees, as apples, pears, cheſnuts, olives, cherries, peaches, apricots, lemons, oranges, pomegranates, figs, and raiſins. *Truxillo* is 135 miles S. W. of Madrid, and contains about 1000 houſes; but has no trade. *Guadalupe* is 24 miles E. of Truxillo; it is a ſmall town, but the neighbouring country looks like a foreſt of fruit-trees, abounding with grapes, oranges, figs, and other delicious fruits. *Merida* is 165 miles S. W. of Madrid; but has no trade, and few inhabitants; though it was formerly a conſiderable place. *Badajoz* is 180 miles S. W. of Madrid; it contains about 4000 inhabitants, and ſtands in a very fertile ſoil, abounding with fruits. *Xeres de Badajoz* is a little city 24 miles S. E. of Badajoz; its principal trade is in cattle, which are fed in the fine paſtures about it in ſuch numbers, that they ſend annually 50 000 horned cattle to the fairs of Exalona and Villena. Beſides, there are the towns of Medellin, Ellerena, Coria, and Alcantara, which have little trade.

In the province of *Andaluſia*, are alſo the following towns. *Jaen*, 165 miles S. of Madrid, and 60 E. of Cordoua; being well inhabited, and ſituated in a country abounding in ſilk, corn, wine, oil, and excellent fruits. *Cordoua* is ſituated on the north bank of the river Guadalquivir; having the mountains of Sierra Morena on the N. and a ſpacious plain to the S. about 180 miles S. of Madrid, and 72 E. of Seville: it is large and populous, containing 90,000 inhabitants; having a flouriſhing trade by means of the river, which begins to be navigable here; the principal commodities being wine, corn, ſilk, Cordouan leather, and fruits, particularly oranges and citrons; ſo that it is called the granary of Spain. Beſides, there are alſo the towns of Cacorla, Ubeda, Baeza, Alcala-Real, Anduxar or Andujar, Medina-Sidonia, Oſſuna, Ecya, Carmona, Marchena, St. Lucar-Arcos, Port St. Mary, Rota, St. Lucar la Major, Xeres de Guadiana, Aymonte, and Lucena; as alſo Gibraltar, which is now ſubject to Great Britain. See *Gibraltar*.

In the province of *Granada*, are alſo the following towns. *Guadix*, a large town, 30 miles E. of Granada. *Baza* is 21 miles N. E. of Guadix, and contains about 12,000 inhabitants; who have a good trade in corn, wine, honey, flax, and hemp. *Loxa*, or *Loya*, 18 miles W. of Granada, which it furniſhes with great quantities of fruit, herbs, fleſh, and other proviſions. *Antiquera* is 36 miles S. W. of Granada; being a large town, remarkable for its manufactures of ſilk, and its ſalt-pits. *Velez Malaga* is 15 miles E. of Malaga; having a good trade in dried raiſins, oranges, citrons, and other fruits. *Alhama* is 21 miles S. W. of Granada, and is remarkable for its hot baths. *Almeria* is ſituated on a bay of the Mediterranean, 45 miles S. E. of Granada; and has a good trade in oil of olives. And *Ronda* is 19 miles N. E. of Gibraltar, but has no trade.

In the province of *Murcia*, are alſo the following places. *Lorca*, about 18 miles from the ſea; being tolerably large, but in a declining condition, inhabited chiefly by new Chriſtians, or Moreſcos, as they are called, whoſe principal employment is huſbandry. *Murcia*, the capital of the province, is ſituated in a fine plain on the river Segura, 192 miles S. E. of Madrid, and 36 S. E. of Alicant, being four or five miles in circumference; the country about it abounds chiefly in olives and mulberry-trees; the latter of which feed an incredible number of ſilk-worms, whoſe ſilk is the principal manufacture of the place; beſides, they have ſome plantations of ſugar-canes and rice. And *Almacaron* lies on the ſea-coaſt, at the mouth of the river Guadalantin, 18 miles W. of Carthagena; being chiefly conſiderable for its allum-mines.

The Spaniſh iſlands. The principal iſlands belonging to Spain in the Mediterranean, are the Baleares, conſiſting of Majorca, Minorca, Ivica, and Formentera, formerly called the kingdom of Majorca; but Minorca is now ſubject to Great Britain. See *Minorca*.

Majorca, the largeſt of theſe iſlands, has Minorca on the N. E. and Ivica on the S. W. ſituated about 80 miles S. of the coaſt of Catalonia, and 100 miles E. of Valencia; being about 60 miles long, and 45 broad. The face of the country is very rough and mountainous, eſpecially on the coaſt; but there are ſeveral fine plains and vallies in the heart of the iſland, where there are arable lands, meadows, vineyards, and orchards. They abound in corn, wine, oil, ſalt, honey, ſaffron, cattle, wool, game, and fiſh. There are ſeveral good ports and roads for ſhipping on the coaſt; but they have no ſtream worthy the name of a river. The chief towns are Majorca and Alcudia. *Majorca* town is ſituated towards the bottom of a large bay, on the S. W. ſide of the iſland, in 2 deg. 30 min. of W. lon. and 39 deg. 30 min. of N. lat. it contains about 6000 houſes, and has 22 churches, beſides the cathedral; being the reſidence of the viceroy; the harbour is large, and ſecure againſt all winds but the S. W. *Alcudia* is ſituated on a peninſula in the E. part of the iſland, and contains about 1000 houſes.

Ivica, or *Yvica*, is ſituated 50 miles E. of Valencia, and as many S. W. of Majorca; being about 30 miles long, and 24 broad: it is mountainous, but produces ſome corn and fruits; though it is moſt conſiderable for its ſalt, of which great quantities are exported. The chief town is called *Ivica*, ſituated in 1 deg. of E. lon. and 39 deg. of N. lat. on a bay in the ſouth part of the iſland.

The little iſland of *Formentera* lies about 6 miles ſouth of Ivica; being once well peopled, but now almoſt entirely deſerted, on account of the Turkiſh and Barbary rovers, who frequently come on ſhore here.

There is another little uninhabited iſland, called *Cabretta*, a little ſouth of Majorca; as alſo ſeveral others near the mouth of the Ebro, on the coaſt of Catalonia; but they are not worth a particular deſcription.

There is no kingdom on the continent better defended by nature than Spain, which is now more formidable than it was before the Duke of Anjou mounted that throne. As France is the great ſupport of Spain, no doubt the Spaniards make the French ſome return, by favouring their traffic with Spaniſh America. Nor is the alliance of France the only benefit ariſing to Spain, from its having a prince of French extraction upon the throne. The court of Spain have conſiderably improved their revenues, and increaſed their forces by ſea and land: ſince that event, the people are encouraged to apply themſelves to manufactures and huſbandry, ſo as to ſhake off that indolent diſpoſition which had rendered them contemptible in the eyes of other nations; and they will probably, in a few years, make a more conſiderable figure in Europe, than they did under their native princes.

The forces of Spain, in time of peace, are about 40,000 men; and though their fleets were very inconſiderable for many years, the royal navy has lately been increaſed to about 40 ſail of men of war.

The revenues of the crown ariſing in Spain were computed at about 5 millions ſterling a year; but they have been much improved ſince the acceſſion of the houſe of Bourbon; beſides, their American ſilver-mines are inexhauſtible, of which the king has a fifth.

The taxes in Spain, are duties on goods imported and exported; as alſo on goods brought into Madrid, or carried from one province to another. The rents of the firſt floor of all the houſes in Madrid. A kind of land-tax on the peaſants, and thoſe under the degree of nobility. A kind of general exciſe on meat, drink, and other proviſions. Duties on cattle driven from N. to S. A tax on thoſe who eat butter, cheeſe, milk, or eggs, in lent. A tax on the clergy, who are exempt from military ſervice. A tax on the three military orders, for the king their grand-maſter. And a tax on timber. But more money is raiſed by the king's fifth of the treaſure brought from America, than by all other means.

The Spaniards have abundance of fine ports upon the ocean

and the Mediterranean; beſides, the produce of their ſoil is as rich as that of any other nation, if it was properly cultivated. Their wine and oil are in great reputation; their wool and ſilk admirably fine; their fruits are large, and of an exquiſite taſte; they abound in rich minerals, and the Pyrenean mountains furniſh wood and iron ſufficient to furniſh the ſea with their ſhips. Their ſettlements in America furniſh them with prodigious quantities of gold and ſilver, ſilk, wool, ſugar, cochineal, cotton, ambergreaſe, cryſtals, emeralds, turquoiſes, balm, amber, bezoar ſtones, pearls, ſapphires, jaſpers, Brazil wood, oſtrich-feathers, ebony, and a great variety of other rich merchandiſes. But, notwithſtanding their ſoil produces ſuch admirable wine and oil, it is not cultivated ſo much as it ought to be; their fine wool and ſilk is unwrought, and they import the manufactures made of it in England, France, Italy, or Holland. Beſides, the flotas and galeons they ſend to America are laden with the merchandiſes of theſe nations, the Spaniards being generally no more than their factors or agents: ſo that moſt of the plate that is brought from America, is exported again, and diſtributed to foreigners.

SPALATTO. A city and port-town of Dalmatia, ſituated on the gulph of Venice, in 17 deg. 45 min. of E. lon. and 33 deg. 16 min. of N. lat. 65 miles N. W. of Raguſa, ſubject to Venice.

SPAN. A meaſure, taken from the ſpace between the thumb's end, and the tip of the little finger, when both are ſtretched out; being eſtimated at 3 hands breadth, or 9 inches inches. See *Meaſure*.

SPANISH *America*. Spain has ſeveral extenſive dominions, both in North and South America: in North America are the three grand diviſions of Old Mexico, New Mexico, including California, and Florida; and in South America are the grand diviſions of Terra Firma, Peru, Chili, and la Plata or Paraguay.

The Spaniſh iſlands in America, are Cuba, part of Hiſpaniola, Porto Rico, the Virgin iſlands, Trinity, and Margaretta, in the North ſea; as alſo Chilo, the King's or Pearl iſlands, Juan Fernandez, and the Gallipago iſlands, in the South ſea; beſides Golden iſland, Iſle of Pines, Samballas iſlands, and Baſtimentos, near Porto Bello, in Terra Firma.

The Spaniſh territories upon the continent of America lie contiguous; and, according to their accounts, extend from 45 degrees of N. lat. to the ſtreights of Magellan, in 54 deg. of S. lat. or about 7000 miles in length; but the breadth is very unequal, and in many places very uncertain, for in ſome parts it is 1500 miles broad, and in others not 100.

The diviſion of *Old Mexico* has the three audiences of Galicia or Guadalajaras, Mexico, and Guatimala; the firſt contains the ſeven provinces of Guadalajara Proper, Zacatecas, New Biſcay, Cinoloa, Culiacan, Chametlan, and Xaliſco: the ſecond contains the nine provinces of Mexico Proper, Mechoacan, Panuco, Tlaſcala, Guaxaca, Tabaſco, Jucatan, Chiapa, and Soconuſco; and the third audience comprehends the ſix provinces of Verapaz, Guatimala Proper, Honduras, Nicaragua, Coſta Rica, and Veragua.

The diviſion of *New Mexico*, including California, contains the provinces of New Mexico Proper, Apacheira, Sonora, California, and the peninſula.

The diviſion of *Florida* contains the provinces of the Cherokee or Apalachian Indians, and the Cadaquio Indians.

The diviſion of *Terra Firma* has the nine provinces of Terra Firma Proper or Darien, Carthagena, St. Martha, Rio de la Hacha, Venezuela, Comana, New Andaluſia or Pavia, New Granada, and Popayon.

The diviſion of *Peru* includes the provinces of Quitto, Lima or Los Reyes, and Los Charcos.

The diviſion of *Chili* comprehends the provinces of Chili Proper, and Cuyo or Cuito.

And the diviſion of *La Plata*, or *Paraguay*, contains the ſix provinces of Paragua, Parana, Guiara, Uragua, Tucaman, and Rio de la Plata.

Gold and ſilver are the moſt precious commodities of South America, as ſkins and furs are of North America.

The gold is of three ſorts, ingots, ore, and duſt. The ſilver of two ſorts, bars and piaſtres.

The furs and ſkins are thoſe of beavers, otters, elks, lynxes, and ſome others.

The pearls come either from Margarita in the North ſea, or from the iſles De las Perlas, or Pearl iſlands, in the South ſea; and the emeralds from a mine near St. Foy de Bogotta, a town of the new kingdom of Granada.

The other more common commodities are ſugar, either refined or otherwiſe, tobacco, ginger, indigo, caſſia, maſtic, aloes, ſpun or wool cotton, tortoiſe-ſhell, Vigogne wool; buffaloes, cows, and goats hides; the latter dreſſed like Cordouan leather, and the two former green; quinquina, cacao, vanilla, ſeveral kinds of wood for dying, inlaid work, and medicine; amongſt others, Campechy wood, yellow ſantal, ſaſſafras, Braſil, braſletto, guiacum, cinnamon, roſe-wood, fuſtel or fuſtoc, Indian wood, and green ebony, ſalſaparilla; three kinds of balſam, that of Tolu, Copahu, and Peru; occidental bezoar, cochineel of three ſorts; attolt, or rocou; ſilveſtris, ipecacuanha, contra-yerva, dragon's blood, reſin, ambergreaſe, liquid amber, copal gum, wild nutmeg, quickſilver, ſal marinum, ſal gem, ſulphur; ſeveral kinds of dry and liquid confects, as ananas, citrons, oranges, ſyrups of lemons; tallow, wax, honey, the Paraguay herb of two ſorts, jalap, mechoachan, pitch, and tar; olives, and oil of olives; train-oil, cheeſe, wheat, and all kinds of dry pulſe; wines, ſome molaſſes, ſpirits, and Barbadoes water; horſes, mules, and all kinds of cattle; laſtly, woollen cloths, flannels, bays of Peru; a kind of linen called by the Spaniards *lienzo de la tierra*, to diſtinguiſh it from foreign linens; and they make the like diſtinction with all foreign woollen manufactures, called by them *pannos de la tierra*, or cloths of the country.

All theſe commodities neither grow, nor are found every where; but ſome in one place, and ſome in another, according as the ſoil and climate are proper for their production and culture.

Thus the mountains and rivers of Chili and Potoſi afford moſt gold and ſilver; ſugar, tobacco, indigo, and ginger, are found in greater abundance in the Antilles iſlands than elſewhere; the richeſt furs come from Canada, Acadia, Miſſiſſippi, and New England; and Buenos-Ayres, St. Domingo, and the Havannah, yield the beſt leather.

After this general obſervation upon the commerce of America, it may be proper to make two or three particular ones upon that of Spaniſh America; the firſt whereof conſiſts in the entire excluſion, the Spaniards in all times have given to other nations, from all the places in America belonging to the crown of Spain; an excluſion ſo rigorouſly executed, that till the war for the ſucceſſion of Spain, and the eſtabliſhment of Philip V. upon the throne of that monarchy, it endangered the life of all thoſe who were not Spaniards, or ſubjects of Spain, to be detected in trading to the Spaniſh Indies; which ſince the peace of Utrecht has been alſo renewed, even with the conſent of France, and other nations thereby intereſted.

In treating of Buenos-Ayres, a new moderation of this law is mentioned, granted in favour of the Engliſh Aſſiento company.

However, notwithſtanding ſuch a peremptory excluſion, and though none but the Spaniſh galeons and ſhips are ſeen in their American colonies, it is certain that Spain has the leaſt ſhare in this trade; and that the Engliſh, French, and Dutch, whom the Spaniards would exclude, have it almoſt entirely to themſelves, under the name of Spaniſh merchants; who in this reſpect execute only the office of factors, but with an exactitude and fidelity that cannot be ſufficiently praiſed or admired.

The ſecond obſervation regards the three kinds of Spaniſh ſhips that trade to the Weſt Indies, namely, the galeons, the flotas, and the regiſter-ſhips.

What has been ſaid already upon this matter, may be conſulted in the article of the commerce of Spain, *and in the ſequel under the commerce of the* Havannah, Borto-Bello, Buenos-

Buenos-Ayres, Maracaiba, *and chiefly* Panama. *See alſo* Galeon, Flota, *and* Regiſter.

SPANSIH *Iſlands of America.*

a, ſituated in the Atlantic ocean, between 74 and 87 eg. of W. lon. and between 20 and 23 deg. of N. lat. eing 800 miles long, and about 70 broad. A long hain of mountains divides it almoſt into two equal arts: from theſe mountains iſſue ſeveral rivers, and co- ious ſprings, rolling with their ſtreams and gravel a very ne gold, which leaves no room to doubt that there are ines of this metal; but which hitherto have not been pened, no more than thoſe of ſilver and copper, which is ſuppoſed may be found three leagues from St. Jago, he capital of the iſland.

t the foot of the mountains are ſeveral extenſive fields nd meadows, called by the Spaniards *ſavanas*, wherein re grazed an infinite number of large cattle, both tame nd wild; whoſe hides make the chief riches of the land, and are moſt eſteemed of all thoſe brought from he Weſt Indies.

What the Spaniards call coraux, are a kind of parks here they feed hogs; which are uſually kept in the oods, to conceal them from the buccaneers. This akes one of the beſt trades in the iſland, either at home r abroad; no meat being reckoned ſo ſound, and there- ore preſcribed for ſick perſons preferably to all other inds.

t is alſo in the midſt of the woods that the buccaneers rect their materias, that is, the places where they retire, o kill wild beaſts, and dry their hides.

The other commodities of the produce of Cuba, beſides eather, are ſugar, tobacco, tallow, dry confects, gin- er, caſſia, maſtic, aloes, ſalſaparilla, and ſeveral tor- oiſe-ſhells, which, in the ſeaſon for laying their eggs, roud in great numbers about the little iſlands called the Queen's-Garden, not far from the coaſt of the great land.

The beſt hides and leather are brought from Porto del Principe; as is the moſt excellent tobacco, from the little own of the Trinity, and that of the Holy Ghoſt. It is of this tobacco that the Spaniards manufacture what they all Seville ſnuff, giving it the preference to all others; n which account ſeveral ſhips are yearly laden with that kind alone.

There is alſo in theſe two towns a great trade of that ort of tobacco, called by the Spaniards cigarros, that is, he open leaves of this plant, which are ſmoked without pipes, by twiſting them about in the form of horns.

The greateſt traffic of all theſe commodities is at the Ha- anna, the port of Palma, Baracoa, Puerto, Scondido, he Trinity, and eſpecially at St. Jago, where ſhips from he Canaries come and take them in exchange for their ines, making their entire cargo thereof, either for the Canaries themſelves, or for Spain, or for ſome parts of America, where they are not common, particularly dry nd liquid confects, which are readily bought up through- out the whole coaſt of the North ſea.

A kind of ſpice called canica, and which ſells well in the Spaniſh iſlands, may be alſo ranked among the commodi- ies of Cuba; being a kind of wild cinnamon, but whoſe aſte borders more upon the clove than the real cinna- mon. It is alſo uſed in medicine, and ſubſtituted in the oom of caſſia.

St. Jago is the capital city of the iſland; which, not- withſtanding, comes ſhort of the Havanna, both in trade, nd the ſafety and beauty of its port: ſo that the gover- nor-general of the iſland reſides in the latter town, which makes it to be held by ſome as the real capital.

t is at the Havanna, called by the Spaniards St. Chriſto- al de la Havanna, eſteemed by them as the key of ll the Weſt Indies, and the general ſtaple of the Ame- ican merchandiſe, that the galeons, the flota, and all he other ſhips that make the commerce of the continent, nd the Spaniſh American iſlands, are to touch in their eturn, that they may all go together for Spain; after aving taken in refreſhments for this voyage at the Ha- anna: ſo that it might be ſaid, that all the riches of America are aſſembled there, as well what belongs to the revenues of the King of Spain, as to the traders, which often amount to about five millions ſterling.

As long as theſe veſſels are at the Havanna, which are about 50 or 60 of all capacities, a continual fair is held; whereby the inhabitants furniſh the galeons and flota with all neceſſaries, and ſend abroad ſeveral of the commodities produced in their iſland, for their correſpondents in Spain; or which they exchange for other commodities, either European, or of the continent of America: in which commerce abundance of piaſters are met with, brought from the continent, eſpecially of New Spain.

When the time of departure comes, which is uſually in the month of September, the united fleets open the gulph of Bahama, making ſail for the height of the Azores, towards which they direct their rout, to deſcend from thence to Cadiz by the help of the north-weſt and weſt winds.

It is alſo from the Havanna, the ports of the Holy Ghoſt, the Trinity, and Santa Crux, that the greater part of the ſmall veſſels depart, with which the inhabitants of Cuba trade to Campeachy, New Spain, and Florida; ſome even venturing to carry their merchandiſes into Spain, whence they bring back cloths, ſilk ſtuffs, linens, and other commodities.

Hiſpaniola, called more commonly *St. Domingo*, from the name of its capital, is ſituated between 67 and 74 deg. of W. lon. and between 18 and 20 deg. of N. lat. being about 420 miles long from eaſt to weſt, and 120 broad from north to ſouth, 50 miles eaſt of Cuba, 70 miles eaſt of Jamaica, 60 weſt of Porto-Rico, and 300 north of Terra Firma.

Chriſtopher Columbus diſcovered Hiſpaniola in 1492, which was even the firſt eſtabliſhment of the Spaniards in America; this admiral having left there 30 or 40 ſoldiers in a bad ſort of a fort, which he built in haſte out of the remnants of one of his ſhips.

Columbus returned the year following; when, finding his fort deſtroyed, and his men maſſacred by the iſlanders, he built a town, to which he gave the name of Iſabella: ſome time after, he built the town of St. Domingo, which ſoon increaſed from the ruins of Iſabella, and ſome others deſtroyed by the Indians, who could not endure the cruelty and avarice of their new maſters, as they never were at eaſe in their new conqueſt till they had deſtroyed all the antient inhabitants, to the number, as ſome ſay, of upwards of three millions; ſo that at preſent not one of them remains.

The Spaniards, for a conſiderable time, remained ſole poſſeſſors of Hiſpaniola: but, a little before the middle of the ſeventeenth century, the French came to divide it with them; and are now ſo well eſtabliſhed there, as to be capable of expelling the Spaniards in caſe they undertook to trouble them in their eſtabliſhment. *See the commerce of the French in this iſland, under the article of* French *America.*

The principal commodities the Spaniards trade in upon this iſland, are hides, tallow, ſugar, ginger, cacao, wax, honey, ſome ambergreaſe, Braſil wood, and guiacum, which grow or are produced there, and Campeachy wood, which is brought from the continent; laſtly, citrons, oranges, and ſeveral other fruits, either ſold freſh, or of which excellent dry and liquid confects are made.

There are alſo gold mines in Hiſpaniola, from which the Indians had the gold the Spaniards found in the hands of the caciques, when they arrived there; but ſince the entire deſtruction of the Indians, theſe mines became unknown; the gold got there at preſent being found among the ſand and gravel of the rivers and torrents, particularly near the town of St. Jago Cavalleros.

The town of St. Domingo, ſituated in the ſouthern part of the iſland, at the mouth of the river Oſana, is the capital of what belongs to the Spaniards in Hiſpaniola, and the ſtaple of all commodities either foreign or domeſtic; the inhabitants of the other towns coming there to ſupply themſelves with thoſe of Europe, and the continent of America, which arrive there on Spaniſh bottoms, and alſo bring there their own to be embarked for Spain.

The Spaniards, for a conſiderable time, carried on the

principal commerce of these newly discovered lands in the town of St. Domingo: but the conquest of Peru on one side, and that of Mexico on the other, having first weakened it, it gradually declined; so that its present trade is scarce sufficient for the subsistence of the Spanish inhabitants, whose number there is to the amount of 20,000, comprehending mulattoes and slaves.

The other parts of the island where there is any trade, are St. Jago Cavalleros, a country-town, whose inhabitants are almost all hunters, trading chiefly in hides and tallow, which they sell at St. Domingo.

Cotui is to the south of St. Jago, where tobacco and cacao are cultivated; besides, it affords guiacum, cut by the inhabitants in the little island of Sarva, six leagues distant from it.

The town of Asso has some trade in hides and tobacco.

Puerto de la Plata once enjoyed as extensive a trade as St. Domingo; but is now reduced to nothing, upon account of the buccaneers, who have several times desolated these coasts. They also abolished the trade of the Conception, Vega, Monto-Christo, Salva-Leon, Zeybo-Colay, Aqua Jaquana, and some others, which are resorted to no longer by Spanish ships. So that the inhabitants are obliged to carry their merchandise to St. Domingo aboard some small vessels, that venture at no great distance from land.

The salt-marshes of St. Domingo are almost equally divided between the French and Spaniards; but those which are most abundant, and productive of the best salt, are at the bay of Ocoa, and Coridou, to the south; and at Caracol, Limonade, and Monto-Christo, to the north-east. It is thought, if these salt-marshes were as well cultivated as those of Aunis, Bourneuf, Croisil, and such others in France, they might afford more salt than all the salt-marshes in France, Spain, and Portugal together.

Sal-gem is found in some mountains; but neglected with some other minerals, which might make a considerable object of commerce.

Porto-Rico, is the smallest of the three large islands which the Spaniards possess in the North sea; being about 120 miles long, and 60 broad, situated between 64 and 68 deg. of W. lon. and in 18 deg. of N. lat.

It was first simply called the isle St. John by Christopher Columbus, who discovered it on the feast-day of St. John the Baptist in 1493, in his second voyage to the West Indies; but it was afterwards called Porto-Rico; and a Spanish colony was settled there in 1510, either upon account of the port of its capital town, which is one of the most spacious, most commodious, and safest in all America; or upon account of the great quantity of gold then found in the mines of this island.

At this time it affords little gold; the mines having been either exhausted, or neglected for want of workmen; and the Spaniards exterminated, in less than 20 years, all the Indians on the island, who were upwards of 600,000. However, a little of this metal is always gathered there; being found mingled in the sand of some rivers, and especially in the torrents that descend from the mountains, particularly in those of Manatnabon and Cecubo.

The chief trade of this island at present consists in sugar, ginger, ox and cow hides, spun or wool cotton, cassia, mastic, guaiacum, and mace; salt, for which there are excellent salt-marshes; oranges, fresh or confected lemons, and all sorts of cattle.

Its principal towns are Porto-Rico the capital, St. Germain, Arezibo, and Guadiamila: but all the trade with strangers is carried on at Porto-Rico; which is to be understood only of the Spaniards, either European or American, who send their shipping here.

The inhabitants of the island go also themselves with their merchandise to the continent and neighbouring islands: besides, this island serves as a staple for the contraband trade, which the English, French, and Dutch, notwithstanding the severe prohibition, keep on footing with the Spaniards.

What prevents commerce from flourishing in Porto-Rico to the degree that might be expected from the fertility of the soil, are three terribles plagues whereto it is often exposed; namely, drought, which is sometimes very great; hurricanes, which are very frequent; and what the Spaniards formerly dreaded most, the descent of adventurers, or buccaneers, who often committed most terrible ravages.

The Virgin islands, are situated on the east-end of Porto Rico, and are very small; or rather only a cluster of barren rocks, through which the passage is somewhat difficult, and they are scarce worth claiming by any nation; though they are generally said to belong to Spain.

The island of *Trinity*, or *Trinidad*, is separated from the continent of Terra Firma, by the narrow straight of Boco del Drago, 80 miles N. W. of the river Oronoque. It lies between 60 and 62 deg. of W. lon. and between 9 and 11 deg. of N. lat. being 90 miles long, and 60 broad. The air is unhealthful; but the soil is fruitful, producing sugar, tobacco, indico, cotton, ginger, and Indian corn.

Margaretta, *Marguaretta*, or the *Pearl island*, is situated in 64 deg. of W. lon. and 11 deg. 30 min. of N. lat. 60 miles north of the continent of Terra Firma, and 200 west of Trinity; being 50 miles long, and 2[illegible] broad.

This island has for a long time been famous for its pearl-fishery; as also those of Cubagua and Cocha, two other islands between it and the continent: but, since the middle of the seventeenth century, this fishery has greatly dwindled away, and is now resorted only by a few fishermen.

It is thought that this fishery has been destroyed by the avarice of the Spaniards, who fished out of season, and took indifferently all kinds of oysters: besides, the inhabitants of these three unfertile islands, which are destitute even of the benefit of fresh water, have been so harrassed from time to time by the buccaneers, that they abandoned both the forts and plantations they had there, even renouncing the fishery, which they could no longer support without such extraordinary expences, that no profits could be expected.

This fishery is always in the month of July; but not, as formerly, under the inspection of the King of Spain's frigates.

When this fishery first flourished, there was fished, one year with another, to the value of about 50,000 l. sterling; which, not only those belonging to merchants, but also the fifth belonging to the King, were all indifferently brought to Carthagena to be drilled; whence afterwards they were sent into Spain aboard the galeons, that usually touch there in their rout for Porto-Bello, and thence for Europe.

There is still a pearl-fishery on the coast of Ranchiera, and in the river Hacha; where 10 or 12 barques resort every year, accompanied by an Armadilla of 24 pieces of cannon.

Of these barques one is called the capitana; aboard of which all the rest are obliged to carry every night what they have fished during the day; and it is also to Carthagena that these pearls are brought and drilled. See *Pearl*.

Commerce of the coasts of Spanish America, *on the* North sea.

It would undoubtedly be too long, and perhaps useless, to enter into an exact detail of all the maritime towns where any trade is promoted in this part of Spanish America: therefore, it may be sufficient to represent what is only relative to the staple-towns; the principal of which are, Porto-Bello, for Peru, and Castile de Oro; Carthagena, for New Granada, and a part of Guatimala; Vera Cruz, for all Mexico; Porto-Cavallo, for Honduras, and the other part of Guatimala; Maracaibo, for Venezuella, and the neighbouring provinces; Buenos-Ayres, for Paraguay and Chili; as also some others of less consequence, whereof some mention may also be made.

Porto-Bello. This town is not ancient, being built only in 1584, to serve as a retreat for the Spanish galeons, instead of Nombre-de-Dios, whose less advantageous situation, and unwholsome air, proved very inconvenient to the European merchants of the flota; as also to those of Panama, and the other parts of Spanish America.

It is situated on the North sea, in the province of Terra Firma

Firma Proper, or Darien, on the narroweſt part of the iſthmus which joins North and South America; in 82 deg. of W. lon. and 10 deg. of N. lat. 70 miles north of Panama, and 300 weſt of Carthagena.

The Spaniards began to build it about the time that Sir Francis Drake came to deſtroy this colony, after having taken and plundered the town of Nombre-de-Dios.

The Engliſh plundered it in 1591, but without deſtroying it: in 1668 the Engliſh and French buccaneers made themſelves maſters of it, though at this time defended by three forts; but the Spaniards paid the ranſom in a conſiderable number of ſilver bars: laſtly, in 1739, it was taken by the brave Admiral Vernon.

The town is ſmall, and almoſt as unwholſome as Nombre-de-Dios: however, it has eaſily recovered all its loſſes, and may juſtly be eſteemed one of the richeſt places of commerce in the world; which is to be underſtood only during the continuance of its fair; that is, for a month or ſix weeks, while the galeons are there: beſides, the principal merchants reſide at Panama, on the South ſea, during the reſt of the year.

The concourſe of people is ſo great at Porto-Bello, while the galeons remain there, that the ſmalleſt ſhops are often let for 200 l. ſterling during this term, and a very indifferent chamber for 25 l. ſterling; proviſions alſo augmenting their price in proportion.

It is alſo during this time that the air is the moſt unwholſome; there being ſeldom a year, while the fair continues, but 500 perſons at leaſt die, eſpecially thoſe who come from Europe.

Two thouſand mules are uſually employed in carrying the merchandiſes from Panama to Porto-Bello, and return to Panama with thoſe brought from Europe by the flota.

This commerce may be alſo performed by the river Chagre; embarking the goods at Venta de Cruzes, 10 leagues from Panama, upon flat-bottomed boats conducted by the mulattoes and negroes; whereby the very difficult mountainous paſſage over land is avoided; but the journey is longer, eſpecially when the river is low.

During the fair, every thing is ſold by wholeſale; that is, by the peſo and piece, and not by the ell or pound.

The gold and ſilver from Panama, which makes the principal loading of 2000 mules, is ſet down in the midſt of the fair; where it is weighed and marked by the officers; remaining there till the departure of the fleet, with as much negligence as a parcel of ſmall value in the corner of a warehouſe.

As to the European and American commodities, they are all laid up in warehouſes, which make the better part of the buildings in the town; all the Panama merchants having large houſes appropriated entirely for this uſe, as alſo ſeveral ſtables for the convenience of mules, and other beaſts of burden.

While the galeons remain at Porto-Bello, or even before they arrive at Carthagena, a ſhip is detached, called the Royal patache, for collecting the tribute of the coaſt. This ſhip touches uſually at Margarita, Ponta Guyara, Maracaibo, Rio de la Hacha, Santa Maria, and ſeveral other places that have little or no commerce with Porto-Bello.

When the cargo of the galeons is adjuſted, the fleet ſails for Carthagena: but this paſſage, though inconſiderable for its diſtance, was very dangerous when the Engliſh were maſters of the iſle of Providence, which they called St. Catharine's.

Before the departure of the fleet from Porto-Bello, the King's officers viſit the ſhips, that nothing may go aboard but what has paid the King's fifth: though this is properly a mere formality, there being always an underſtanding between them and the merchants; ſo that ſcarce more than the half of the gold, ſilver, and other rich merchandiſe embarked for Spain is declared: beſides, upon the arrival of the fleet in Spain, the European officers are as unfaithful as thoſe of America, ſhutting their eyes againſt the unloading of the ſhips.

The commodities wherewith the Spaniards make up the cargo of their ſhips for America, conſiſt in all kinds of linens and cottons; all ſorts of woollen and ſilk manufactures, beſides hard and haberdaſhery wares; and, in general, all neceſſaries for the uſe of mankind; whereby a large profit is obtained, ſome of them producing 300 *per cent.* and others 100, and 150.

Porto-Bello is one of the ports of Spaniſh America, to which, by the Aſſiento treaty, the Engliſh South ſea company was allowed to ſend a ſhip in the fair-time, to ſell there, in conjunction with the Spaniſh merchants, the commodities of Europe; but this privilege is now retrenched.

The city of *Carthagena* is the capital of the province of the ſame name; ſituated on a peninſula near the ſea-coaſt, 300 miles E. of Porto-Bello; to which it is not inferior for commerce, but much ſuperior in extent, the number of inhabitants, and its riches.

It is one of the beſt ports of the New World, fortified with the greateſt care by the Spaniards, becauſe the galeons are accuſtomed to retire there when obliged to paſs the winter in the Indies.

Beſides this retreat of the galeons which enriches Carthagena, and promotes a conſiderable commerce there, it may be ſaid, that it has a fund of riches in itſelf; there being ſcarce any of the provinces of Mexico and Peru, wherewith it does not drive on a trade, either by ſea or land; without mentioning that of the Engliſh of Jamaica, and the Dutch of Curacao, notwithſtanding all the vigilance of the Spaniſh guarda coſtas.

All the revenues the King of Spain has out of Caſtile de Oro, and all the merchandiſes of private perſons, are tranſported to Carthagena, eſpecially from New Granada, to be ſent into Spain by the galeons.

They deſcend to it by the great river of Magdalena; on the banks of which, at ſix leagues diſtance from the North ſea, is the office of receipt, called by the Spaniards Baranca de Malambo, where all the European merchandiſes deſigned for New Granada are unloaded.

The commodities of Caſtile de Oro conſiſt particularly in gold, ſilver, drugs, medicinal plants, and ſpice.

Granada in particular has emerald-mines near the town of St. Foy de Bogatta; from whence all thoſe came, of which the French made ſo rich a booty when they took Carthagena in 1697.

This town has alſo a direct and regular commerce with Lima, the capital of Peru, by mules, which paſs through the middle of New Granada. It has from Peru great quantities of gold and ſilver, in exchange for European commodities; which it ſends there, and receives, partly by the galeons, and partly by a contraband commerce with Jamaica and Curacao.

To Carthagena is alſo ſent the greater part of the indigo, cochineel, ſugar, and cacao, gathered in the province of Guatimala; the Spaniards reputing it ſafer to tranſport their merchandiſes on the lake of Granada, to Nicaragua, and thence to Carthagena, than to ſend them through the gulph of Olce, in veſſels belonging to Honduras, where they were formerly more expoſed to the ravages of freebooters.

It is alſo in this town that the trade of all the pearls fiſhed for in the North ſea is carried on.

Laſtly, Cuba and Hiſpaniola furniſh it with ſugar, tobacco, confects, and eſpecially marmalades. The coaſt oppoſite the iſlands of Samballas receive from thence hogs, poultry, and other refreſhmonts. It has from the interior part of the country, gold gathered in the torrents and rivers; aromatic gums, excellent balſams, either oozing of themſelves from the trees, or extracted by inciſion; among others that of Tolu, a town five or ſix leagues from the ſea; long pepper, uſually called Brazil pepper; excellent fruits, and even wheat, which notwithſtanding ripens with difficulty, upon account of the intemperature of the air, which is too rainy, and therefore makes the ſoil over marſhy.

Carthagena is one of the beſt peopled towns of the Spaniſh American coaſts, containing generally 4000 Spaniards, and upwards of 14,000 mulattoes and negroes.

Vera Cruz, called alſo *St. John of Ulva*, from the name of its port, is ſituated towards the lower part of the gulph of Mexico,

Mexico, in the creek formed by the Yucatan, in 100 deg. of W. lon. and 18 deg. 30 min. of N. lat. 200 miles S. E. of Mexico city.

But this is not the ſame Vera Cruz, whereby Hernando Cortez began the conqueſt of Mexico, with leſs than a hundred ſoldiers, when he had millions to engage, and where he ſunk his ſhips, to deprive the Spaniards of all hopes of returning to Yucatan or Cuba, and to oblige them to a neceſſity of either conquering or dying: for the ancient Vera Cruz is ſix leagues from the new one; for which it has been abandoned upon account of its corrupt air, and the ſecurity of its port; though that of St. John is alſo ſubject to almoſt the ſame inconveniencies.

The new Vera Cruz might be ſaid to be a town of the greateſt commerce in all Spaniſh America; its merchants ſending ſhips to all parts of the North ſea, and all the iſlands.

The flotilla annually arrives here from Spain, to receive the gold and ſilver of Mexico; as alſo the rich merchandiſe brought from the Philippines by the way of the Pacific ocean.

The number of the inhabitants is not conſiderable, amounting ſcarcely to 3000; but they are all opulent merchants, or factors of merchants in the Mexican trade.

The time of the fair of Vera Cruz begins when the fleet arrives, and continues almoſt as long as the ſhips remain in the harbour: but the principal merchants reſide there only during this time, and retire afterwards up the country, to avoid the wet ſeaſon.

It is alſo at Vera Cruz that the fleet paſſes the winter, when it has been detained at ſea. Moſt commonly it has its cargo in April, to ſet ſail in May; but ſometimes its departure is put off till the month of Auguſt, according as the winds prove favourable, or purſuant to the danger impending from European nations, with whom the Spaniards might be at war.

The embarkment always begins with the merchandiſe; the gold and ſilver, for greater ſafety, being deferred till the laſt. Even when attacks might be apprehended in the harbour, the King's revenue, and merchants money, remain at Pueblo de los Angelos, a large town, 40 leagues from St. John de Ulva, from whence they are not brought till a little before the fleet ſets ſail.

Porto Cavallo, or *Porto Cabelo*, is ſituated on the Caraccas coaſt, in 67 deg. 30 min. of W. lon. and 10 deg. 30 min. of N. lat. where all the commerce of Spain and the North ſea is carried on with Guatalima, or Guatimala; for the inhabitants of this town are almoſt all factors to the merchants of Guatalima; and their houſes are chiefly warehouſes for the reception of merchandiſe.

This port is inconſiderable for the number of its inhabitants, but is the moſt famous for trade of all thoſe in the gulph of Honduras; being ſituated near Rio-dolce, called alſo the river Guatalima; not becauſe it waſhes this province, from which it is ſeparated by high mountains, but becauſe it ſerves for the commerce promoted by it.

Some lighters convey the commodities of Spain as far as a ſmall town built at the foot of theſe mountains; from whence, by a cauſeway cut through rocks, they are tranſported on mules to Guatalima; and, as it is by the ſame way that the commodities of the country arrive at Porto Cavallo, this ſmall ſtaple-town is called the Port de Golfo-dola, or the gulph of Honduras.

The Spaniſh ſhip which brings the commodities of Europe here, is one of thoſe called regiſter-ſhips; becauſe the freighters purchaſe from the India-houſe the privilege of trading to certain American ports, and which privilege is regiſtred.

This ſhip is uſually a hulk of 7 or 800 tuns, laden with moſt kinds of commodities, but eſpecially with iron and ſteel; paper for printing and writing; linens, fine cloths, ſilks, ſaffron, oil, ſerges, ribbands, and thread, with ſome ſmall hard haberdaſhery and glaſs wares; the laſt of which are uſed for treating with the Indians of Honduras and Yucatan; the whole amounting ſometimes to about 50,000 l. ſterling in all theſe commodities.

The commodities from Guatalima are gold, ſilver, cochineel, indigo, leather, ſalſaparilla, jalap, mechoachan, cacao, cotton, balſam, a kind of petrol-oil, and paſtel: But cochineel, indigo, and ſilver, come uſually in an armed patache; being eſteemed the richeſt commodities wherein the European ſhip is to make its return.

It ſhould not be omitted, that cacao, in the province of Guatalima, is both ſold as a merchandiſe, and paſſes for money; for they not only ſerve the Indians, but alſo the Spaniards, in purchaſing ſeveral ſmall commodities; 10, 20, 30, and ſometimes 100 being given purſuant to the value of the thing.

Maracaibo, is a city and port-town of the province of Terra Firma, ſituated on the weſt-ſide of the lake of Maracaibo, in 70 deg. of W. lon. and 10 deg. 45 min. of N. lat. 130 miles E. of Rio de la Hacha.

The town is ſmall, but well built, in the modern taſte: its port is excellent, and its merchants ſo rich, that they build, rigg, and freight ſhips, which trade in all parts of America, and go even to Spain.

As this town has the privilege of a regiſter ſhip, which comes every year to take away the commodities of the country, and brings thoſe of Europe; the inhabitants keep ſeveral barks of 25 or 30 tons, with which they collect along the coaſts of this lake, where they have ſeveral plantations, the various productions of the country; as tobacco, cacao, ſugar, and indigo, with which they fill their warehouſes till the arrival of the Spaniſh ſhips: ſeveral green hides are alſo got there, the paſtures being excellent for large cattle, which are grazed in abundance, and killed only for their ſkins.

This place is likewiſe the ſtaple for the commodities of Merida, and ſome other towns ſituated upon the frontiers of New Granada and Venezuela. But it is from Merida that all the gold, ſilver, and precious ſtones are brought, which are ſeen at Maracaibo; and from Gilbratart are brought the beſt tobacco, and moſt excellent cacao, of the continent of Spaniſh America.

The commodities proper for the bay of Venezuela, and the lake of Maracaibo, are ſilks, linens, wire, huſbandmens implements, with hard and haberdaſhery wares.

Buenos-Ayres, is ſituated in 60 deg. of W. lon. and 36 deg. of S. lat. being one of the moſt conſiderable ports in the province of La Plata: it lies on the ſouth ſhore of the river Plata, 50 leagues within the mouth of it, and yet here the river is ſeven leagues broad.

The Spaniards were at ſome difficulty to eſtabliſh themſelves in this port, which they often abandoned ſince the time they laid the firſt foundation of it in 1535, and which they could not quietly poſſeſs till 1582, when the Indians were obliged to yield to theſe new maſters.

The town contains about 4000 houſes, all built with mud-walls, and covered with tiles; except fifty which are made of brick.

The inhabitants acquire great wealth, by commerce both at home and abroad. Their interior commerce is with Paraguay, Chili, and Peru; the exterior being firſt with Brazil, where the merchants of Buenos-Ayres ſend their ſhips, tho' they receive no goods from the Portugueſe: ſecondly, with the Spaniards of Europe, who ſend there ſeveral of their regiſter ſhips: and thirdly, ſhips alſo from ſeveral parts of Spaniſh America reſort to this town; where the Aſſiento ſhips were at liberty to come.

The principal commodity brought from Buenos-Ayres, and of which the greateſt profit is made, are green hides of wild bulls, that is, the hides of theſe animals with the hair on, and without being tanned; which coſt there uſually but about 4 s. ſterling after all duties are paid, and are ſold in Europe for 1 l. ſterling.

Cochineel from Peru, of an indifferent quality, may be reckoned another of its commodities; as alſo Vigogne wool from Peru; and the copper of Coquimbo.

The other commodities with which the Europeans make up their cargoes are the Paraguay-herb; leaf tobacco tyed up, and ſold by the pound; loaf and powder ſugar; ſpun cotton and yellow wax; all which the inhabitants have from the town of Corientes and Paraguay; the former being 500, and the latter 250 leagues from Buenos-Ayres.

From theſe two towns are alſo brought ſome coarſe cotton cloths, called lienzo della tierra by the Spaniards, and toconnis by the Indians; but they are all conſumed in and

and about Buenos-Ayres, for the ſhirting of domeſtics and ſlaves.

The commodities proper for Corientes and Paraguay, are Flemiſh knives, ſeizzars, ribbands, taffetas, linens, ſilk ſtuffs and ſtockings, Engliſh flannels, caſtor-hats; woollen cloths, and flannels of Peru and Quito; all which are bartered for the above mentioned commodities of Corientes and Paraguay; no money being ever received, or ſeen in either of theſe two towns.

The merchants who carry on the trade of Corientes, load their merchandiſe on carts, and carry them back the ſame way; tho' they have fifteen or ſixteen rivers to paſs, over which they ſwim their oxen, and make uſe of rafts for their merchandiſe, and carts; or even, in caſe of neceſſity, they build theſe rafts by diſmounting their carts.

The town of Corientes is half way from Buenos-Ayres to Paraguay; and the commerce of this laſt town, beſides the difficulties of rivers common to it with the other, has alſo ſome peculiar ones; thoſe who undertake it being uſually two years in the journey; becauſe each crop of the Paraguay-herb, which is the principal object of this trade, and which yearly amounts to about 160,000 l. ſterling, having an advance ſale, they muſt always expect a ſecond, without reckoning the preſents they are obliged to make to the governors, and to thoſe who are maſters of the beſt kind; yet, ſetting aſide the extortions they are expoſed to, they ſell the commodities they give in exchange at more than 300 *per cent.* profit.

The town of Santa-Fé is the ſtaple for the Paraguay herb, and the other commodities that come from Corientes and Paraguay, deſigned for Peru and Chili; the merchants bringing only to Buenos-Ayres what is to be conſumed or ſold there, whereby they avoid a double payment of the duties of importation and exportation, if all was to be tranſported there to be ſent to the South Sea.

All the gold and ſilver found at Buenos-Ayres is brought there by the merchants that trade to Chili and Peru; with which laſt country, the merchants of Buenos-Ayres drive on a conſiderable trade in cows and mules.

Laſtly, the merchants of Buenos-Ayres ſend to the Brazils corn, biſket, ſalt fleſh, or dried before the ſun; and get in exchange ſugar, tobacco, indigo, and other productions of the country, with wine, and ſome commodities from Portugal.

The bay of *Campeachy*, and the coaſt of *Carracos*, may alſo be included among the places of the Spaniſh American commerce in the North ſea.

It is in the firſt that the wood, ſo eſteemed in Europe for dying black and violet, is found.

The town of Campeachy, the metropolis of the country, was formerly the ſtaple of all the wood of this kind; and the Indians of the neighbourhood were employed to cut it at a real, or 5 $\frac{3}{8}$ d. ſterling a day; which was of great profit to the maſter, this wood ſelling then at 120 l. ſterling *per ton.*

When the Engliſh poſſeſſed themſelves of Jamaica, and had known the value and uſe of this wood, they attempted to divide the trade thereof with the Spaniards: but, perceiving that the places where the Spaniards uſed to cut it were well fortified, and the coaſts guarded againſt any attempts of their taking it away as before; they choſe for themſelves a place to continue this trade in the neighbourhood of the lake Triſte, where they engaged in their ſervice the Indian cutters of this coaſt, among whom ſome Engliſhmen eſtabliſhed themſelves.

The commodities wherewith the Engliſh people of Jamaica pay their cutters of Campeachy-wood, are rum, ſaws, hatchets, hats, ſtockings, ſhoes, knives, and other ſmall hard and haberdaſhery wares.

The Spaniards keep always on footing the commerce of this wood, and ſeveral other commodities, in the town of Campeachy, where their ſhips go yearly to be freighted with wood; as alſo with ſeveral kinds of carpenters timber, wax, ſugar, caſſia, ſalſaparilla and leather.

The coaſt of *Carracos* is productive of all kinds of almonds, or of the cocoa-nuts of which chocolate is made; from whence the Dutch have the greateſt part of the cocoa they bring into Europe.

Tho' this coaſt ſeems a long chain of mountains, it has ſeveral vallies where the inhabitants of Carracaos, capital of the country, make the Negroes cultivate the trees that produce the cocoa, whoſe nuts, tho' much ſmaller than thoſe which grow in ſome other places of America, are more eſteemed.

This fruit is almoſt the only merchandiſe of this coaſt: however, hides are another commodity; as alſo ſilver, which in reality is a contraband merchandiſe for ſtrangers; yet exported yearly in great quantities, by the Engliſh of Jamaica, and the Dutch of Curaco, as well as cocoa, eſpecially by the latter, who every year ſend there ſeveral ſhips of 30 and 40 tons.

Cloths of flax and hemp from Europe, and cottons from the Eaſt Indies, are very good articles for this commerce. Brandy, earthen-ware, and ſeveral commodities from England, France, and Holland, are likewiſe brought there, of which great profits are made; tho' the people of Jamaica, and thoſe of Carracaos, have them often, tho' at the ſecond and third hand: but the greateſt profits are for ſuch Dutch veſſels as trade there directy from Holland.

Cocoa ſerves for money upon the coaſt of Carracos, in the ſame manner as it does at Campeachy, and all along the bay.

Commerce of the coaſts of Spaniſh America on the South Sea.

That part of the ocean which is entered from the North ſea, thro' the ſtraights of Magellan, de le Maire, or Brouvers, and which waſhes the ſouth coaſts of America, from theſe ſtraights to the iſle of California, is called the South Sea: it is alſo called the Pacific ſea; the ſea of Cephalonia; and the ſea of Jeſſo: but only ſo when ſome part or other is ſpecified; the name of South Sea, when it is ſpoke of in general, comprehending all.

The principal towns of commerce poſſeſſed by the Spaniards on theſe coaſts, are from Chili to New Spain; being Baldivia, La Conception, Valparaiſa, Arica, Lima, and Callao its port, Panama, Acapulco, and la Navidad.

Among theſe chief places, there are alſo a great number of ſmall ports; which are either ſtaples for the more inland towns, or ſerve for the neighbouring trade of the inhabitants.

Of theſe ſmall towns, the moſt remarkable are, Auroca, Lavelia, Guiarma, Paita, Rio-Tomba, Selaquez, the Trinity, St. Michael, Tomaco, Sanſonat, Sagno, Naſca, Piſca, Pachacama, Barbacoa, Tecoantepeque, Nicoya, Chiricito, and ſome others.

Theſe laſt ſhall be only touched upon, as they merit a leſs detail than the reſt; which, for the better part, are as ſo many publick ſtorehouſes, not only for the commodities of Chili, Peru, and New Spain; but alſo for thoſe of the Eaſt Indies, and the Philippine iſlands, wherewith their commerce is very conſiderable.

The towns of Baldivia, Conception, and Valparaiſa, are ſituated upon the coaſt of Chili; it being in their ports that all the commerce of this kingdom with that of Peru is carried on.

Baldivia, called alſo *Valdivia*, is the firſt town on the coaſt, after having cleared the ſtraights of Magellan: Arauca, where the Spaniards keep a garriſon of 500 men, to ſtop the inroads of the revolting Indians, being more up the country, and having no port.

Baldivia is ſituated two leagues from the ſea, in 80 deg. of W. lon. and in 40 deg. of S. lat. between the branches of the two rivers, which at their mouth form one of the fineſt and ſafeſt ports of all this coaſt.

The gold mines, which are not far diſtant, being the moſt abundant and richeſt of Chili, made it formerly very famous; but the revolt of the Arauca Indians who took it in 1599, and could not afterwards be ſubjected, greatly diminiſhed both its reputation and commerce; tho' the Spaniards are re-eſtabliſhed there, and keep up a garriſon of 200 men.

Its chief trade by ſea is to Lima, the capital of Peru, where it ſends yearly eight or ten ſhips of 4 or 500 tons, laden with all the commodities of the country; particularly dreſſed ox and goat hides, tallow, ſalt fleſh, and corn. The returns of theſe ſhips are wines, ſugar, cocoa, ſpice, and all kinds of European commodities, that arrive at Lima from Porto-Bello by the way of Panama.

Its inland commerce is with St. Jago, the capital of Chili;

whereby it receives from Buenos-Ayres the ſeveral commodities already mentioned in treating of the trade of this town on the North ſea.

La Conception, is 60 leagues from Baldivia, and 70 from St. Jago; being ſituated in 79 deg. of W. lon. and 37 deg. of S. lat. The port is in the form of a horſe-ſhoe, from whence it is called by the Spaniards *Della Herradura*, and is 5 leagues from the town, where lighters come up by the river Andalian that runs thro' it.

The mines of Quilacoya and Quilacura are but four leagues diſtant; and la Eſtancia del Re, where the chief lavaderos of the kingdom are found, is not far off.

The inhabitants of the Conception graze abundance of goats, but chiefly for their tallow and ſkins; of which laſt they make a kind of morocco leather, called *Cordouan:* they are both ſent to Lima, from whence, by Panama and the river Chagre, they are tranſported to the North ſea. The other commodities they trade in are not much different from thoſe of Baldivia; except wool and cloths, and other ſtuffs manufactured in the country.

The ſhips ſent yearly by the inhabitants of the Conception to Peru, amount to ten or twelve, and make almoſt the ſame returns as thoſe of the other town.

La Conception has ſome trade with the nation of the Puelches; which, tho' not ſubject to, are in peace with the Spaniards.

Valparaiſa, is a little town ſituated on a bay of the ſame name, at the mouth of the river Topocalina, in 77 deg. of W. lon. and 33 deg. of S. lat. ſerving as a port to St. Jago, the capital of Chili, which is built upon the ſame river 15 leagues from the ſea.

From the port of Valparaiſa are embarked for Peru all the revenues of the King of Spain at Chili, and all the effects of private perſons deſigned for the North ſea; conſiſting particularly in gold from the mines near Baldivia, and the Conception; or thoſe of Tiſtil, between Valparaiſa and St. Jago.

Turquoiſes alſo are brought to Lima, found in an excellent rock open in the valley of Copiapo, ſituated in the north part of Chili.

As the ſhips which bring theſe treaſures are uſually convoyed by ſome armadillas, merchants are accuſtomed to uſe this convoy for ſending the reſt of their commodities to Lima, and the other ports of Peru; from whence they return with the productions of the country; as alſo a great number of piaſters, which ſerve them in their commerce with Buenos-Ayres; and they likewiſe bring ſuch commodities as arrive there by the way of Panama.

Quintero, and *Coquimbo*, are alſo two maritime towns of Chili, where ſome trade is promoted; eſpecially in the latter, near which there is a mine of the copper called by way of diſtinction Coquimbo copper, of which all the artillery of Peru and Chili is made. The harbour of Coquimbo is excellent, which is what brings it a great trade; its own neighbourhood alone being able to ſupply this trade, as corn, oil, pitch, cotton, the herb that ſerves for cordage, and cloth; beſides moſt kinds of fruit and legumes, which are found there in great plenty.

Arica, is ſituated in 70 deg. 20 min. of W. lon. and 18 deg. 20 min. of S. lat. in the province of los Charcas in Peru. Tho' this town, with regard to the number of inhabitants, and the beauty of its buildings, is one of the leaſt conſiderable of Peru; yet there is ſcarce one where, in as ſhort a time, a richer commerce can be ſet on foot.

It is true, the riches of Potoſi, and the other mines of Charcas, paſs no longer thro' Arica; being tranſported directed to Lima, as the ſureſt way, and leaſt expoſed to the inſults of freebooters: yet this is no impediment to the trade of Arica, which is ſituated 70 leagues from the city of Potoſi, and ſerves it for a port.

The Spaniards call thoſe beaſts of burden uſed at Arica, by the name of pecos. They are of a ſingular figure, and a kind known only in Peru; being ſtronger and higher than the largeſt ſheep in Europe, which they ſomewhat reſemble, and whereby they have acquired the name of Peru ſheep. The weight they can carry is about 150 lb. and if they are overloaded, they would ſooner ſuffer themſelves to be killed than riſe from the ground, where they remain kneeling, till the load is ſettled on their back.

Theſe animals are uſed for tranſporting the merchandiſe ſent by ſea to Arica, for the ſupport of the inhabitants of Potoſi, and the working of the mines. Upon the road to this famous town are ſeen continually caravans of pecos, who are thus employed entirely the whole year. There are every four leagues large villages, or at leaſt ventas, for ſo the inns are called, where care is taken for all neceſſary proviſions for theſe beaſts, and their conductors; for theſe animals are only able to make ſuch a journey in a day.

It is alſo the pecos that are employed to bring the minerals to the mills, and founderies; which greatly augment the number of theſe animals, whereof one Indian alone may conduct a hundred; having this common with ſheep, whom they reſemble, that they love company, and to go in flocks.

The commodities tranſported from Lima, and the other ports of Peru, to Arica for Potoſi, are cloths and ſerges from Europe; others from Quito, where are the beſt woollen manufactures of Peru: gold, ſilver, ſilk, and cotton ſtuffs; the laſt made in the country, and the three firſt brought from Spain in the galleons: flour, corn, and mace; acicoca, an herb uſed inſtead of that of Paraguay; wines of Araquipa, the beſt of Peru, where the king of Spain has allowed the planting of vines: oil, olives, butter, cheeſe, ſugar, ſalt, mercury, confects, and ſyrups: laſtly, all kinds of hard-ware, and iron utenſils for houſehold furniture, and the working of the mines.

All this merchandiſe is paid for in mine-money; the town of Potoſi, called alſo the Imperial city, being ſituated in ſo barren and ingrateful a country, as to furniſh nothing of itſelf for trade; had not the neighbouring mountains been inexhauſtible in mines of ſilver, which have made it the moſt beautiful, the beſt peopled, and the moſt abundant in all neceſſaries of any city in Peru; the number of its inhabitants amounting to upwards of 60,000, among which there are at leaſt 10,000 Spaniards.

As from this town the ſilver circulates throughout all the reſt of Peru, there is ſcarce a place in this extenſive empire that does not contribute to maintain its plenty. Carriages are conſtantly met with on the high roads for Potoſi, conducted at leaſt by 2000 Indians, who keep up its commerce with Arica; and upwards of 10,000 others, who come from Lima, Cuſco, and ſeveral other towns and villages of the country, ſometimes more than 200 leagues of.

Arequippa. A town of Peru, ſituated in 73 deg. of W. lon. and 17 deg. of S. lat. 220 miles S. E. of Lima. The anchorage of its port is good; but the entrance narrow and difficult. It is in this port that the greater part of the produce of the ſilver of los Charcas, and the mines of Potoſi and Porto, are embarked for Lima and Panama; which promotes a very conſiderable commerce, and almoſt the beſt of this coaſt.

Lima and *Callao.* Lima, called in Spaniſh, Cividad de los Reyes, is the capital of Peru. It received the firſt name from the valley wherein it is built; and the ſecond, becauſe the colony which Francis Pizarro ſent there in 1535, arrived on the day of Epiphany, popularly called the day of the kings.

This city is ſituated in 76 deg. of W. lon. and 12 deg. 30 min. of S. lat. on the banks of the river Lima, 6 miles S. of the Pacific ocean, and of the port-town of Callao. It is a place of the greateſt commerce of any in South America; all the riches of Peru and Chili being brought there from the ports of the Conception, and Arica. The greateſt part of the merchandiſe from Europe for Porto-Bello and Vera Cruz are alſo brought there; from the one by the Panama ſhips; and from the other by thoſe of Acapulco.

The inland commerce of Lima is not leſs conſiderable, extending not only into all the provinces of the Peruvian empire; but alſo to Buenos-Ayres and Carthagena.

The inland commerce of Lima is partly carried on by the Spaniards, and partly by the Indians, the latter having more liberty here than in any other part of the Spaniſh dominions; being obliged only to pay a ſlight tribute, of two picos of ſilver, and a pullet, worth about a rial, and half a piece of ſtuff whereof they make their cloaths; all which they pay every ſix months to the king.

The Spaniards trouble themſelves only about what is moſt im-

important in trade, leaving all other particulars to the Indians; together with all the work of arts, trades, and tillage; it being a rare thing with a Spaniard to demean himself in any of these points.

It is also the Indians that work in all the Peruvian woollen manufacture; wherein are employed the precious Vigogne and Pecos wools; of which they make carpets, tapestries, cloths, and serges, not in the least inferior to those of Europe in the workmanship, but much superior in point of industry; especially with regard to those that have no wrong side: but the cloths of Quito are those in most reputation.

The market place of Lima, wherein the Indians trade, is called Pobel-Carcado, from the name of the quarter of the town, where all the Indian artizans have their habitations and shops, to expose to sale their respective merchandise; and where those from the adjacent country sell their legumes, as onions, cabbage, sallads, radishes, cucumbers, melons, &c.

El Sato de los Cavallos is another place where the cattle market is kept, especially of horses, mules and asses; for which there are spacious and fertile pastures in the flat country of Peru.

The cloth-merchants have a market-place of their own; where are none but shops belonging to those of their profession.

The town-house is a place of assembly for merchants to treat of their commerce, and answers to what goes under the denomination in other European mercantile towns of exchange.

The commerce of the Spaniards consist principally in gold and silver; in stuffs, and European commodities; in cloths, and serges of the country; in wines, corn, flour, mercury, oil, olives, sugar, conserves, syrups, confects, India wheat, salts, lemons, oranges, dry fish, cattle, cotton, and timber for house and ship-building; besides pearls and precious stones.

Gold comes to them from Chili, Castile de Oro, Cusco, and some other provinces of Peru; Silver from the mines of Potosi, Oruco, Tarapaca, Chocolocora; and mercury from Europe, as also from Tuanca-Beluca, 40 leagues from Lima.

They have their stuffs from Quito, and the villages of the mountains that border upon their capital; likewise cotton, and the cloths made of it from the neighbouring plains.

Araquippa, Yca, Pisco, and Nasca, furnish them with wines: as do Xaura, Cusco, Caneto, and Guemangua, with cattle.

The sugars, confects, syrups, and conserves, are made at Jamanga and Guara: wheat, flour, and India corn, come from the same place; as also from Varancas and the villages near Lima: dry fish from Paita; carpenters timber from Quiaquil, but cut in the island of Gallo, which is near it; salt from the salt-marshes of Guara, from two other salt pools mentioned elsewhere, and from the mountains.

Lastly, oils and olives from all the ports of the coast, from Arica to Lima.

As for the precious stones and pearls, part of the latter are fished for at the islands de las Perlas, in the South sea; and part is brought by the way of Panama from the fisheries of Margarita or Rancheria, in the North sea: the former being found in several mines, rocks, and rivers of Peru.

Under the denomination of precious stones, which, as well as gold and silver, pay a fifth to the king, are comprehended not only all stones of lustre; but also bezoards, red coal, the loadstone, jet, arcanson, and vitriol.

The silver of Peru is both a coin and merchandise. The coined silver is in piastres, called Peruvian, to distinguish them from those of Mexico, called Mexican.

The mercantile silver is in quinted bars, and stamped at the royal mint, to denote the weight and standard.

This metal, whether money or merchandise, makes a part of what is called at Peru the flota of silver. The other part consists in gold ingots, or coined gold, which comes from Chili, Cusco, some other places of Peru, and Castile de Oro.

The commodities of the Manilles, China, and the East Indies, have not been ranked among those wherein the inhabitants of Lima trade; because the greater part are reputed contraband for Peru: the others being mentioned in the following paragraph.

Callao. The port of Lima, situated on a little island opposite to the city, about six miles below it; being a spacious and very safe harbour, without either shallows or rocks; and has two channels, the one for large ships, by doubling the isle Lobos that covers it; and the other for barks and small vessels, by passing thro' a narrow canal, which lies between the island and the continent.

Two fleets, both having the name of silver fleets, are equipped yearly in this port; one for Arica, and the other for Panama.

The fleet for Arica departs from Callao towards the end of February; and, after having taken in the silver of the mines of Potosi, returns to Lima towards the end of March, or the beginning of April; much about the same time that the ships of Valparaisa bring there the revenues of Chili.

As soon as this fleet is returned, and the ships from Chili arrived, the goods are unloaded till a proper season offers for going to Panama: the least important are deposited in warehouses; the gold, silver, and what is most precious, being carried to Lima on waggons, and beasts of burden, wherewith the road to Callao is full during the whole year; but particularly in the three or four months of the arrival, and departure of the fleets.

It is also during the months of March and April, that the gold, silver, and merchandise from all the provinces of Peru, arrive by land at Lima, for Porto-Bello; to be ready at the departure of the fleet from Panama.

The departure of this second fleet is always in the beginning of May; and it is usually by two thirds stronger, either in merchant-ships or men of war, than that of Arica; because, besides the sole riches of Potosi brought by the fleet of Arica, that for Panama is also laden with all the king's revenues, and the effects of the traders of Chili, Peru, and a great part of the other kingdoms of South America.

It is by the return of this fleet, that all the merchandise for Peru and Chili arrive at Lima; and it is from thence that, by sea or land, they are sent to the places of their destination.

Besides the two fleets for Arica and Panama, a 20 gun-ship is equipped every year at Callao for Acapulco, a famous port of New Spain; by which the Mexican Spaniards drive on a great trade with the Philippine islands, and receive Chinese and East India commodities.

This ship arrives at Acapulco a little before Christmas, with cocoa, pieces of eight, and quicksilver: the merchandise for return received from the hulks that come from the Manilles, are spice, silks, callicoes, white cotton cloths, and a few other East India commodities. But this commerce is contraband with regard to all others not concerned in this ship; and the court of Spain has prohibited it the rest of Peru, under very severe penalties; for fear it should discredit that of South America with Spain, by the way of Panama and Porto-Bello.

Before the English and Dutch, and after them the French freebooters, troubled the profound security which the Spaniards on the coast of the South sea lived in, almost all their trading ships on this sea were mounted with no large arms: but at present the Lima merchants have forty ships, carrying from six to twenty pieces of cannon; besides several other small ships pretty well armed.

It is with these two kinds of ships that they frequent all the coasts of this sea, making use of the light ships for short voyages, and the armed for long ones; that is, to the south as far as Baldivia; and to the north, as far as Realeio in New Spain; Lima trading but little beyond this last place, unless to Acapulco as already mentioned: the longest voyages being about six hundred leagues.

The chief places wherewith the Spaniards of Lima keep up a regular commerce, throughout this vast extent of coast are Leon, Quiaquil, Truxillo, Lesparso, Lavillia, Nicaya, Chiriquita, Paita, Sagna, Nasca, Pisca, and Pacama.

Leon, is the capital of the province of Nicaragua, situated 20 miles E. of the South sea, and in 91 deg. of W. lon. This town, which has scarce less than 1200 houses, trades in both seas; whereby it receives commodities from

Europe, China, and ſeveral places of the Eaſt Indies: Ria-Lixa, called alſo Realeio, being its port-town. From Leon are brought ſugar, wax, honey, pitch, reſin, cattle, hides, and excellent cordage. There is alſo timber in abundance found there for the building ſhips; of which, next to Quiaquil, the greateſt number is uſually built there.

Granada, is a town of Spaniſh America in the province of Nicaragua, ſituated in 89 deg. of W. lon. being one of the richeſt of New Spain, as it trades to ſeveral places, eſpecially to Carthagena, Guatimala, and Comayaga.

The beſt trade of Granada is at the departure of the frigates from the lake to Carthagena; becauſe then ſeveral valuable commodities are ſent there on mules, ſuch as indigo, cochineal, ſugar, leather, and ſilver.

It is alſo by the lake to Carthagena that the king's revenues, and the fifth of the mines are ſent.

Quito, is a town on the South ſea; and the capital of the Upper Peru.

At Quito there are manufactures of cloths, ſerges, and cottons; but, as they are not ſufficient for the conſumption of the town and neighbourhood, great parcels are brought from the adjacent towns and provinces, by the way of Quiaquil, the port of Quito. The abundance of gold, which the torrents, and rivers iſſuing from the neighbouring mountains of Quito roll along with their ſand, attracts great numbers to treat with the Indians that gather them; who get in exchange various European commodities.

Quiaquil, is a town of Peru, in the province of Quito: its commodities are gold, precious ſtones, cocoa, green hides, tallow, ſalſaparilla, woollen ſtuffs of the country, ſaltpetre, ſulphur and carpenter's timber.

The inhabitants carry on a pretty good trade with ſtrangers, who, paſſing from the north into the South ſea, hazard themſelves in a contraband traffic with the American ſubjects of the king of Spain.

The gold is found in the torrents and rivers, gathered by the Indians. The cocoa is cultivated along both the banks of the river, on which the town is ſituated; being gathered in ſuch great abundance, that it is not only ſufficient for all Peru, but alſo ſupplies Acapulco for its trade with the Philippines. The ſtuffs come from Quito, the capital of the province; ſome of them being very broad and coarſe cloths; others indifferent ſerges. Laſtly, the timber is cut in the iſle of Gallo; and it is at Quiaquil that the principal ſhip-carpenters are employed in the building of Spaniſh veſſels.

From Lima to Quiaquil are imported wine, oil, ſpice, and other European commodities; part of which remains there, and the other is ſent to Quito.

The place belonging to Quiaquil where ſhips load and unload is called Puna, an iſland at the mouth of a river of the ſame name, near 20 leagues from the town; where the French carried on a part of their trade with Peru, during the war for the Spaniſh ſucceſſion.

One of the principal objects of the commerce of Quiaquil is its timber, either for houſe or ſhip building; particularly for the laſt; having continually veſſels on the ſtocks, ſo as to furniſh the greater part of thoſe that compoſe the Spaniſh marine in the South ſea.

Cocoa for Quiaquil is alſo a very plentiful commodity, and has an exceeding great vent; being ſold in almoſt all the places of the South ſea; ſcarce a year paſſing without the making up of thirty thouſand bales, and ſometimes double that number, each weighing 162 pounds.

The ſalt, and ſalt-fiſh from St. Helens, make a part of the Quiaquil trade; being ſold in ſeveral places, but particularly at Quito.

The traders of Quiaquil get in exchange from Quito ſeveral woollen ſtuffs of its manufacture; as cloths and bays, much eſteemed throughout Peru; of which, beſides what is neceſſary for their own conſumption, they export a great part to the other ports of the South ſea.

Laſtly, it trades much in rice, cotton, and ſmoaked beef; as alſo, large and ſmall cattle.

What come to it from abroad are wine, brandy, oil of olives, ſugar, and ſuch like commodities.

It is computed that, one year with another, there arrive or depart from the port of Quiaquil to the amount of forty ſhips; without reckoning thoſe that trade along the coaſts.

Truxillo is ſix leagues from the South ſea; its port being one of the moſt difficult and unſafe of all the coaſt: but it trades in corn, flour, wine, brandy, ſugar, confects, ſilks, horned cattle, horſes and mules.

Four ſhips, laden with the commodities of the country, depart every year from Truxillo for Panama; and very often ſhips are wholly freighted with beautiful cotton cloths, manufactured by the Indians.

Panama, is the capital of the province of Darien, ſituated in 82 deg. of W. lon. All the towns hitherto mentioned, with which Lima carries on a trade, excepting Acapulco, ſupply Panama only with the commodities of the country; but Panama ſupplies them with European merchandiſe.

This town, which gives its name to a great bay whereon it is ſituated, and to the Iſthmus, which, ſeparating the two ſeas, joins North with South America, is equally famous for its trade by land, with Porto-Bello on the North ſea; and for that by ſea, with Lima on the South ſea; amaſſing in its warehouſes, all that on one ſide, the galleons bring from Europe; and on the other, all the riches of Peru and Chili that come there on board the ſilver fleet.

Tho' Panama always carries on a conſiderable trade; and tho' its road is always filled with a great number of ſhipping; yet it is at the arrival of the ſilver fleet, and the merchandiſe of the galleons, that the greateſt conflux of merchants is obſerved there; its trade being moſt flouriſhing, upon account of the fair then held there, which brings together all the neigbouring nobility and people.

As ſoon as the galleons have touched at Carthagena, where they remain for ſome time, before they proceed to Porto-Bello; a courier is diſpatched to Lima, who travels by land to Panama, croſſing the ſouth continent of America, and from Panama going by ſea to the capital of Peru.

Upon the advice of the arrival of the galleons at Carthagena, the Viceroy of Lima gives orders for the loading of the ſilver fleet, which he ſends to Panama under the convoy of an armadillas, conſiſting of four or five ſhips; and the preſident of Panama gets ready the mules that are to carry a part of the merchandiſe of Peru to Porto-Bello; alſo preparing the barks of Chagre, whereon the other part is to be embarked; becauſe no time may be loſt, and that they may depart as ſoon as intelligence is received of the arrival of the galleons at Porto-Bello, where they uſually continue but 30 days, during which time all the commerce is to be fully completed.

All the ſhips that arrive with the galleons ſhould be ready to ſail the 30th day, otherwiſe they run the riſque of being left behind. However, they are uſually granted eight days, which is of great advantage to the merchants, and no ſmall profit to the admiral, who is always complimented with a conſiderable preſent.

The European commodities, moſt proper for Peru and Chili, are all kinds of iron inſtruments, but more eſpecially thoſe neceſſary for ploughing, and the working of the mines. A ſufficient ſtock of ſpice, wine, oil, and ſilk; and gold lace, is alſo required there.

The Negro commerce of Guinea, and the other coaſts of Africa, is likewiſe one of the principal objects of the Panama trade: the Engliſh of Jamaica tranſporting numbers to Porto-Bello, from whence they are conducted by land to Panama, and afterwards by ſea to Peru, and a part of New Spain; where they are ſold at a very dear rate, to be employed in the ſervice of the mines, ſugar mills, and the culture and making of indigo.

As almoſt all the inhabitants of Panama apply themſelves to trade, and as the expedition of the ſilver fleets is the moſt important affair the court of Madrid has on this ſide, it is alſo principally for theſe two points that the audience of Panama has been eſtabliſhed; the officers ſupplying the place of conſular-judges, for ſummarily terminating the diſputes ariſing among merchants about commerce; and

the preſident, with his council, taking cognizance of little elſe than the detail of the arrival and departure of the galleons for the North ſea, and the ſilver fleet for the ſouth.

The towns of Realeio, Tecoantepequa, Trinity, and Vatulco, lie along the coaſt between Panama and Acapulco: it being by theſe four ſtaples that all the trade of Guatimala, Leon, Quaxaca, Nicaragua, and ſome other provinces of New Spain is carried on.

Their commerce conſiſts chiefly in cocoa, vanilla, achiolt, indigo, cochineal, hides, wheat, Indian corn, wool, ſugar, cotton, ſalt, honey, caſſia, wax, and in ſome other commodities of the produce of Mexico, particularly of the province of Guatimala, which are brought by land upon mules to the warehouſes the Spaniards have in theſe ports, and afterwards to Panama or Peru by ſea.

Acapulco, is ſituated on a fine bay of the South ſea, in 102 deg. of W. lon. and 17 deg. 30 min. of N. lat. being the port of the town of Mexico, on the weſt-ſide of the continent; as Vera Cruz is on the north ſide.

Acapulco carries on a conſiderable commerce with Peru, the Philippines, and the neighbouring coaſts of Mexico; but it is the commerce with the Philippines, and the Eaſt, which makes the greateſt riches of Acapulco, and gives it moſt reputation; though it is ſupported only by two ſhips, called Hulks, being a kind of large galleons, of 800 or 1000 tons burthen; one of which annually ſails from Acapulco to Manila; and, on its arrival there, the other ſets ſail from Manila to Acapulco.

Their cargo, in departing from Acapulco, is compoſed partly of European merchandiſe, that comes to Mexico by Vera Cruz; and partly of the commodities of New Spain, which are both ſent to the South ſea on mules.

The cargo, for returning, conſiſts in all that China, the Eaſt Indies, and the reſt of the Eaſt are productive of; even in pearls, precious ſtones, and gold duſt.

The voyage of theſe ſhips generally takes up about twelve months; departing moſt commonly towards the end of March, or the beginning of April.

Two months after their departure, they touch at Guam, the chief of the Marian iſlands, where they refreſh themſelves for two or three days, and arrive in the Manillas about the beginning of July.

The ſhip at Manila prepares itſelf for an immediate return; and departs before the end of July, to arrive at Acapulco about Chriſtmas; the difference of the arrival being never more than eight or ten days before or after this feaſt; for the trade-winds, which they are careful to take, are always favourable to them: but the reader may ſee a more particular account of the nature of this trade, in the 10th chap. of the ii. book of Mr. Walter's deſcription of a voyage round the world by the Right Honourable George Lord Anſon.

The Spaniſh government will allow no foreigners to trade with their colonies: but the Engliſh, French, and Dutch, carry on a contraband traffic, greatly to their own advantage, and to the benefit of the American Spaniards, who encourage this illicit trade, as it gives them an opportunity of evading the royal duties, and purchaſing the goods at a much cheaper price than they could do if they were properly to paſs through the hands of the government. The Spaniards pretend to have a right of viſiting all ſhips, and of confiſcating ſuch as have any of their manufactures, produce, or money aboard; which has given riſe to ſeveral quarrels between the crowns of Great Britain and Spain, from 1670 to 1739, when the laſt war was declared only upon this account.

SPARTEL *Cape*, or *Cape Spartel*. A promontory on the coaſt of Barbary, in Africa, at the entrance of the ſtreights of Gibraltar, ſituated in 6 deg. 30 min. of W. lon. and in 36 deg. of N. lat.

SPAWS. Mineral waters ariſing out of the earth, tinged with nitre, ſulphur, alum, bitumen, copperas, or other mineral matter, in paſſing through the ſtrata thereof; and hence endued with ſome medicinal qualities, cathartic, diuretic, emetic, alterant, or the like. See Spa *water*, and *Mineral*.

SPEAKING-*trumpet*. See *Trumpet*.

SPECIALTY, in law, is moſt commonly taken for a bond, bill, or other the like inſtrument in writing.

SPECIES, in commerce, are the ſeveral pieces of gold, ſilver, and copper; which, having paſſed their full preparation and coinage, are current in public. See *Coin*.

SPECIES *decried*, or *cried down*, are ſuch as the ſovereign has forbidden to be received in payment.

Light SPECIES, are thoſe which fall ſhort of the weight preſcribed by law.

Falſe SPECIES, are thoſe of different metal, or alloy, from what they ſhould be.

SPECIFIC, in medicine, a remedy, whoſe virtue and effect is peculiarly adapted to ſome certain diſeaſe; is adequate thereto, and exerts its whole force immediately thereon. Thus quinquina, or the Jeſuit's bark, is held a ſpecific for intermitting fevers and agues, and mercury for the venereal diſeaſe.

SPECTACLES. An optic machine, conſiſting of two lenſes ſet in horn, or any other matter, and applied on the noſe, to aſſiſt in defects of the organs of ſight.

SPECTACLE-*maker*. A perſon who makes ſpectacles.

SPECTACLE-*makers company of London*, was incorporated by letters-patent of the 5th of Charles I. dated the 16th of May 1630, by the ſtile and title of the maſter, wardens, and fellowſhip of ſpectacle-makers of London; who conſiſt of a maſter, two wardens, and fifteen aſſiſtants; but have neither livery nor hall.

SPELL, in the ſea language. To ſpell, is to let go the ſheet and bowlings of a ſail, and brace the weather-brace, that the ſail may lie looſe in the wind. To do a ſpell, is to do any thing by turns, for a ſhort time, and then leave off. To give a ſpell, is to be ready to work in another man's room.

Freſh SPELL, is when freſh men come to work, eſpecially when the rowers are relieved by another gang.

SPELTER, *Speltre*, or *Zink*. A kind of imperfect metal, which ſome erroneouſly confound with biſmuth, and others with ſpaat, making it a ſort of antimony ore. See *Biſmuth*, and *Spaat*.

Spelter is a kind of crude mineral lead, very hard, white, and brilliant; which, tho' not perfectly malleable, ſtretches a little under the hammer; and is otherwiſe called zink, and ſometimes tutanaq. See *Zink*.

This mineral is found in great quantities in the mines of Goſſelaar in Saxony; and is commonly ſold in large, ſquare, thick cakes; whence one would judge it to have been melted as it came out of the mines, and caſt into that figure. It is uſed to purge and whiten tin, in making of pewter; much as lead is uſed to purify gold and ſilver. Thoſe who imagine that the ſpelter is put in to increaſe the weight are miſtaken; ſince, in melting 5 or 600 weight of tin, they ſcarce allow a pound of ſpelter, and that is mixed with turmeric.

SPERMA-*ceti*, or *Parma-citty*, in pharmacy, is a whitiſh, flaky ſubſtance, prepared from an oil, found in the head of a cetaceous fiſh, called by ſome the male whale, by others cachelot, and by the Latins orca; diſtinguiſhed from the common whale, by its having teeth, inſtead of whale-bone; and by a bunch on its back. See *Whale*.

The ancients were great ſtrangers to the nature of this preparation; inſomuch that Shroder ſeems in doubt whether to reckon it an animal or mineral ſubſtance. It had its name ſperma-ceti, ſeed or ſperm of whale, given it, no doubt, to raiſe its value, by a notion of its ſcarcity: the oil it is made from, is found in a large trunk four or five feet deep, and ten or twelve long, filling almoſt the whole cavity of the head, and ſeeming to ſupply the office of brain and cerebellum. It ſhould be choſen white, clear, and tranſparent; of a ſweetiſh ſmell, which ſome fancy to be ſimilar to that of the violet: ſome ſophiſticate it with wax; but the cheat is eaſily diſcovered, either by the ſmell of the wax, or the dulneſs of the colour. Some alſo ſell a preparation of oil gained from the tail of the whale, inſtead of that from the brain; which laſt kind turns yellow as ſoon as expoſed to the air. In the general, there is no merchandiſe that ſhould be kept cloſer from the air than ſperma-ceti.

Sperma-ceti is of great uſe in medicine. Dr. Quincy ſays, it is a noble remedy for the aſthma; tho' chiefly

uſed in bruiſes, hurts, and after delivery in child-bed: but it is certain, that which makes it ſo much in vogue, is its ſoftening the ſkin, and reſolving tumours of the breaſt: whence it comes to be uſed by the ladies in paſtes and waſhes.

SPERMI-CETI *Candles*, are of modern manufacture, and made ſmooth, with a fine gloſs, free from rings and ſcars; being ſuperior to the fineſt wax candles, both in colour and luſtre; and when genuine, leave no ſpot or ſtain on the fineſt ſilk, cloth, or linen.

SPEY. A river of Scotland, which runs N. E. through the ſhires of Badenoch and Murray, and falls into the German ſea, E. of the frith of Murray.

SPEZIA. A port-town of Italy, in the territory of Genoa, ſituated on a bay of the Tuſcan ſea, in 10 deg. 30 min. of E. lon. and 44 deg. of N. lat. 50 miles S. E. of Genoa.

SPHERE, in aſtronomy, that concave orb or expanſe which inveſts our globe, and in which the heavenly bodies, ſun, ſtars, planets, and comets, appear to be fixed, at an equal diſtance from the eye. This is alſo called the ſphere of the world, and is the ſubject of the ſpherical aſtronomy.

SPHERE, in geography, denotes a certain diſpoſition of the circles on the ſurface of the earth, with regard to one another, which varies in various parts thereof.

The circles originally conceived on the ſurface of the ſphere of the world, are almoſt all transferred by analogy to the ſurface of the earth; where they are conceived to be drawn directly underneath thoſe of the ſphere, or in the ſame places therewith; ſo that were the planes of thoſe of the earth continued to the ſphere, they would coincide with the reſpective circles thereon. Thus it is we have a horizon, meridian, and equator, on the earth.

As the equator in the heavens divides the ſphere into two equal parts, the one north and the other ſouth; ſo does the equator on the ſurface of the earth.

With regard then to the poſition of ſome of theſe circles in reſpect of others, we have a right, a parallel, and an oblique ſphere.

Right SPHERE, is that where the equator cuts the horizon of the place at right angles.

Parallel SPHERE, is where the equator is parallel to the ſenſible horizon, and in the place of the rational.

Oblique SPHERE, is where the equator cuts the horizon obliquely.

SPICE. A kind of aromatic drug, that has hot and pungent qualities: ſuch are pepper, nutmeg, ginger, cinnamon, cloves, and mace. Some alſo apply the word to divers medicinal drugs brought from the Eaſt; as ſenna, caſſia, and frankincenſe; all which ſee *under their proper articles*.

By the ſtatute of the 6th and 7th of Will. III. and other ſubſequent ſtatutes, cinnamon, cloves, mace, and nutmegs, may be imported in Britiſh ſhips, whereof the maſter and 3-4ths of the mariners are Britiſh, from any parts beyond the ſeas; upon licence firſt had from the commiſſioners of the cuſtoms, or any three of them, or from the cuſtomer, or collector and comptroller of the port.

The quantity, quality, and the port of importation, are to be expreſſed in ſuch licences; and if more be found than therein mentioned, it is forfeited. The package to be in caſks or bales, unleſs from the Eaſt Indies; the bale of cinnamon to weigh near 70 lb. or upwards; and each caſk of nutmegs, cloves, or mace, 300 lb. or upwards, upon forfeiture thereof.

The licences are to be delivered up by the maſters at entry of their ſhips, and annexed to the reports, with the marks and numbers of each caſk, bale, or parcel, and the quantity and quality endorſed on the back; upon forfeiture of ſhip and goods.

If found on board any ſhip in ſmall parcels, packed in hogſheads, bales, or caſks, are forfeited.

Spice and pictures unſhipped, or laid on land, before payment of the ſubſidy, are forfeited without any compotion whatſoever.

SPICE *Iſlands*, ſituated in the Eaſt Indies, in Aſia, are the Banda iſlands for nutmegs and mace; the Moluccas for cloves; and Ceylon for cinnamon: all now poſſeſſed by the Dutch, who obliged the Portugueſe, Spaniards, and Engliſh to abandon their ſettlements in theſe iſlands. See *India*, *Molucca*, *Banda*, *Celebes*, *Sunda*, and *Ceylon* Iſlands.

SPIDER *ſilk*. See Spider *Silk*.

SPIKENARD. A kind of vegetable ear growing even with the ground, and ſometimes in the ground; warm, ſpicy, cordial, and alexipharmic, and as ſuch uſed in the compoſition of Venice-treacle. The ear, or ſpike, is about the length and thickneſs of a finger, very light, covered with long reddiſh hairs, of a ſtrong ſmell, and a bitteriſh ſharp taſte. There riſe ſeveral of theſe ears from the ſame root, about the thickneſs of a quill. This ear is uſually reckoned in the number of roots; called alſo *nardus indicus*, becauſe brought from the Eaſt Indies; and is accounted a ſtomachic, nephritic, and carminative; proper to ſtrengthen the ſtomach, promote the diſcharge of urine, and diſperſe flatulencies.

There is another kind called *ſpica celtica*, growing in the Pyreneans, and the mountains of Tirol; which has much the ſame virtues with valerian; but by no means of equal eſteem with the former.

SPIKING *up the ordnance*. A ſea phraſe, uſed for faſtening a quoin with ſpikes to the deck, cloſe to the breech of the carriages of great guns; that they may keep cloſe and firm to the ſhip's ſides, ſo as not break looſe when ſhe rolls, and by that means endanger the breaking out of the butt-head of a plank.

SPINDLE, in the ſea-language, is the ſmalleſt part of a ſhip's capſtan, which is betwixt the two decks: thus, the ſpindle of the jeer capſtan hath whelps to heave the viol.

The axis of a wheel of a watch or clock is alſo called the ſpindle, and it ends the pivets.

SPINET. A muſical inſtrument, conſiſting of a cheſt or belly, made of the moſt porous and reſinous wood to be found; and a table of fir glued on ſlips of wood called ſummers, which bear on the ſides: on the table is raiſed a little prominence, wherein are placed as many pins as there are ſtrings to the inſtrument; which is played by two ranges of keys, the foremoſt range being in the order of the diatonic ſcale; and the other range ſet backwards, in the order of the artificial or ſemi-tones.

SPINNING, in commerce, the act or art of reducing ſilk, flax, hemp, wool, hair, or other matter into thread. See *Flax*, *Hemp*, and *Wool*.

Spinning is either performed on the wheel, or with a diſtaff and ſpindle, or with other machines proper for the ſeveral kinds of working. Hemp, flax, nettles, and other like plants, are to be wet in ſpinning: ſilk, wools, and cottons, are ſpun dry, and do not need water; yet there is a way of ſpinning ſilk as it comes off the caſes or balls, where hot and even boiling water is to be uſed. See *Silk*.

SPINNING *of ſilver thread*, is a particular branch of buſineſs, performed after the ſilver is flatted, by a wheel made of ſteel, which winds the ſilver gently about the ſilk; and when the whole thread is covered, it is rolled upon a bottom, and then called ſilver or gold fleyſy, uſed by the lacemen.

SPIRITS. A general name among diſtillers, for all diſtilled liquors that are neither oil nor phlegm. See *Diſtillation*.

SPIRIT *of wine*, is only brandy rectified once, or more by repeated diſtillation. A perfect rectification may be alſo made of brandy into ſpirit of wine, at one ſingle diſtillation, by uſing a chemical inſtrument conſiſting of ſeveral cucurbites, deſcribed by Glaſer. Spirit of wine is uſed in dying, as a non-colouring drug; and, tho' giving no colour itſelf, ſerves to prepare the ſtuffs for taking other colours. See *Dying*.

Its conſumption is alſo very conſiderable in ſeveral other works and manufactures; particularly in the making of varniſh.

Ætherial SPIRIT *of wine*, called by ſome vegetable æther, or the æther of plants, is a denomination given, by ſome modern chemiſts, to a liquor endued with very extraordinary properties, prepared from ſpirit of wine, and oil of vitriol.

Dr. Frobenius, who firſt brought it into England, deſcribes it the pureſt fire; tho' at the ſame time, a moſt fluid water.

SPIRIT *of Sulphur*, is a ſpirit drawn from ſulphur ſet on fire,

fire, the moſt ſubtile part whereof is converted into a liquor, by ſticking to a glaſs bell ſuſpended over it, whence it falls drop by drop into a trough, in the middle whereof is placed the ſtone pot, wherein the ſulphur is burnt.

SPIRIT *of Salt*, is a yellow liquor drawn by chemiſtry from ſea ſalt. The beſt is that prepared in England, which is much uſed in medicine; but has not, perhaps, all the virtues aſcribed to it.

SPIRIT *of vitriol*, is vitriol dried in the ſun, or in defect thereof by the fire, and then diſtilled by chemical operations ſeveral times repeated; firſt by a reverberatory fire, and then in *balneo mariæ*.

It is held excellent againſt the epilepſy, as well as againſt burning and malignant fevers. The laſt ſpirit drawn from vitriol, which is improperly called oil of vitriol, is uſed in the diſſolution of metals and minerals.

SPIRIT *of amber*. See *Amber*.

SPIRIT *of ſal armoniac*. See *Armoniac*.

SPIRITUOUS-*liquors*, are commonly underſtood to be arrack, rum, brandy, and geneva. See *Brandy*, *Arrack*, *Rum*, and *Geneva*.

The following is an account of the ſeveral quantities and ſpecies of ſpirituous liquors imported at London in the year 1733, together with thoſe of the ſeveral ſorts, that were diſtilled in the city and ſuburbs in the year 1727, of which much greater quantities are at preſent retailed.

Arrack - -	56,823 gallons.
Citron water - -	328 $\frac{1}{4}$
Geneva - -	379 $\frac{3}{4}$
Rackee - - - -	103 $\frac{1}{2}$
Vizney - - - - -	12
Malt ſpirits - - -	8,601,293
Molaſſes ſpirits, 1727 -	890,319
Brandy - - -	1,315,352
Cordial water - -	316 $\frac{1}{24}$
